Besides serving as editor of textbooks on Heat, Light, Mechanics, and Electricity, as well as of the *Cambridge Natural Science Manuals*, he was the editor of a *Dictionary of Applied Physics* and the *Transactions* of the Royal and other scientific societies. Also, he wrote a *Textbook of Practical Physics*, with W. N. Shaw (1882); *Textbook of Physical Optics* (1884); *Laws and Properties of Matter* (1893); *Clark-Maxwell and Modern Physics* (1896); and *Science and Industry* (1917).

GOLD. According to preliminary figures issued by the U.S. Bureau of Mines the total mine production of gold in the United States (territories included) amounted to 3,596,991 fine ounces in 1935, which represented an increase of 485,171 fine ounces, or 16 per cent, over the 1934 production of 3,111,820 fine ounces. Based on the average annual value of \$35 per ounce, the 1935 production was worth \$125,894,685, which was \$17,136,626 or almost 16 per cent greater than the 1934 value figure of \$108,758,059, based on the 1934 average value of \$34.95 per fine ounce. The increase in production for 1935 over 1933 was 40 per cent in quantity and 92 per cent in value, and for 1935 over 1932 the increase was 40 per cent in quantity and 137 per cent in value. This disparity between the quantity and value increases reflects, of course, the 69 per cent increase in the value of gold (\$20.67+ to \$35 per fine ounce) that resulted from Government decrees and legislation between Aug. 9, 1933, and Jan. 31, 1934. See UNITED STATES under *Administration*.

Of the total production in 1935, as shown in the accompanying table, California contributed 24 per cent; South Dakota 16 per cent; Alaska 13 per cent; Philippine Islands 12 per cent; Colorado 10 per cent; Arizona 6 per cent; Utah 5 per cent; Nevada 5 per cent, and Montana 4 per cent. In 1934, California contributed 23 per cent; South Dakota 16 per cent; Alaska 17 per cent; Philippine Islands 11 per cent; Alaska 17 per cent; South Dakota 16 per cent; Philippine Islands 11 per cent; Colorado 10 per cent; Arizona 5 per cent;

Utah 4 per cent; Nevada 5 per cent, and Montana 3 per cent.

* Refinery receipts.

The total world production of gold, as estimated by the *American Bureau of Metal Statistics*, reached the record figure in 1935 of about 30,528,000 oz., based on the assumption that the Russian production was expanded in accordance with indications of the previous year. Russia excluded, the total of the world according to this report, was 25,028,000 oz. South Africa continued to lead the world with 10,773,000 oz., the United States in second position, and Canada in third. The Canadian output, according to the Dominion Bureau of Statistics, reached 3,290,664 oz. as compared with 2,972,074 oz. in 1934.

GOLD CLAUSE ACT. See UNITED STATES under *Congress and Judiciary*.

GOLD COAST. A British West African colony consisting of the Gold Coast colony (23,937 sq. m.), Ashanti (24,379 sq. m.), Northern Territories (30,486 sq. m.), and the British mandate of Togoland (13,041 sq. m.). Total area, 91,843 sq. miles; total population, including British Togoland, 3,444,160 (July, 1934, estimate). Chief towns: Accra, the capital (65,136 inhabitants in 1933), Kumasi (38,559), Sekondi (18,630), Cape Coast (18,307), Tamale (14,975), Koforidua (11,691), Winnebah (10,990).

Production and Trade. Cacao, kola nuts, palm kernels, copra, rubber, maize, yams, timber, gold, manganese ore, and diamonds were the main products. The 1935-36 cacao crop was estimated at 235,000 tons. In 1934, total imports were valued at £4,848,400; total exports, £8,117,456 of which cacao represented £4,040,697; gold, £2,421,595; manganese ore, £480,881; and diamonds, £756,816. There were 6200 miles of roads suitable for automobiles in 1934. The new steel suspension bridge over the river Prah, connecting the central and western provinces, was opened on Oct. 1, 1935.

Government. For the year ended Mar. 31, 1935, revenue amounted to £3,740,191; expenditure, £3,516,175; public debt, £11,863,000. The Gold Coast colony was administered by a governor aided by an executive council, and a legislative council. The Northern Territories, Ashanti, and Togoland (British) were administered by the governor of the Gold Coast, and their statistics of trade,

etc., included in the general total for the Gold Coast. Governor in 1935, Sir Arnold W. Hodson.

GOLDEN GATE. See BRIDGES.

GOLD STANDARD. See INTERNATIONAL BANKING.

GOLF. By all means, the outstanding performer of the 1935 golf season was W. Lawson Little Jr., the burly Californian, who in 1934 had won both the British and American amateur titles. In 1935, practically dedicating himself to the sport, Little successfully defended both titles, an unprecedented feat. Bobby Jones had won all four major titles in 1930, but no one before Little had ever repeated on the double amateur throne. Little finished fourth in the British Open with a score good enough to win several times in the past. In conquering Walter Emery, University of Oklahoma law student, in the national amateur final in September, Little brought his string of victories over the leading amateurs of the world to 31, the longest match play stretch in history.

The United States Open championship, for which Little did not compete, was taken by an unknown, Sam Parks, Jr., a Pittsburgh professional. Another unknown, Arthur Perry, was the winner of the British Open at Muirfield. Parks, former member of the Penn State College team, toured the Oakmont layout in 1929, to win by two strokes on a links which had the experts badly baffled. Jimmy Thompson was second and the veteran Walter Hagen third.

Johnny Revolta won the P.G.A. championship as well as the Western Open, succeeding Paul Runyan as the professional leader. Between these conquests Revolta aided the United States Ryder Cup team in repulsing the British in September. The United States golfers won at Ridgewood, N. J., 9 to 3.

By taking the women's national title for the sixth time, Mrs. Glenna Collett Vare made a record difficult to equal. Miss Virginia Van Wie, winner in the three previous years, did not defend her title and gave notice that she has retired for tournament golf. The 1935 tournament, held at Interlachen, Minneapolis, brought out a new star in Miss Patty Berg, who in her first national championship tourney, fought her way to the final round.

Gene Sarazen won the Masters' Tournament at Augusta, Georgia, on Bobby Jones' course in March, winning over Craig Wood on a miraculous spoon shot for a double eagle on the 15th hole on the final round. Gene Kunes, young Pennsylvanian, won the Canadian Open. The intercollegiate title went to Ed White of the University of Texas and Charley Yates of Georgia won the Western amateur.

GOMEZ, gō'mās, JUAN VICENTE. A Venezuelan president and dictator, died in Maracay, Venezuela, Dec. 17, 1935. He was born at San Antonio de Tachira, July 24, 1854, the son of a cattleman, and received the little education he had at home.

His introduction to politics was made through Cipriano Castro, who enlisted his financial aid in an uprising. Successful at the beginning of the 20th century, Castro became the President of Venezuela, and Gomez the vice president and commander of the army. During Castro's incumbency the country was slowly demoralized, and in 1908, while he was in Europe, Gomez placed himself at the head of the government, becoming president, Aug. 13, 1909, and thus began his long control of the country.

His reign began with the establishment of a coalition party to put into use a rehabilitation programme known as *Causa Rehabilitadora*, and inasmuch as he believed that only through his programme could the country be restored, he forbade any other political party. Opposition to his plans was met with the cry of treason, and a loyal and well trained army, together with a system of espionage, soon controlled any opposition, and Gomez began his work.

The country at the time of his grasp of power was bankrupt and without credit, and diplomatic relations with almost every country were broken off. Out of this chaos, Gomez brought forth a stabilized currency, adjusted credit, and accorded a fair treatment for capital. In 1914 he was succeeded by Dr. Victorina Marquez Bustillos as provisional president, and in 1915 he was reelected, but refused that office, taking for himself the control of the army and dictatorial powers. By the end of his first decade of power, one-fifth of the national debt had been paid off, a public works programme had been put into effect, and a special treasury reserve of about \$7,000,000 was established.

In 1918 he again took over the presidency, and was elected in May, 1922, to hold office until 1929. He also retained the control of the armed force. Just previous to this time, the oil boom occurred. An elaborate policy was evolved whereby foreign investors were invited to prospect for oil and satisfactory monetary arrangements were made, the government getting a 10 per cent royalty together with additional taxes. The industry grew by leaps and bounds and 119,000 bbl. were produced in 1917, which by 1930 had grown to 142,000,000 bbl.

After the election of 1929 Gomez retired as president. Reelected by Congress in April, he refused, and on May 30, Dr. Juan Bautista Perez, who had been named provisional president on April 16, was elected to succeed him. Gomez, however, retained his power by accepting the post of commander-in-chief of the army. The constitution was amended to make this office a constitutional one to be filled by Congress at the same time as that of the president and for the same length of time. Its powers were drastic, the incumbent being made head of all the armed forces and given joint authority with the president. In July, 1931, Gomez reassumed the presidency because of the alleged extravagance of Perez. He held the office until his death, and in 1933 celebrated the 25th anniversary of his dictatorship, which was then as firmly entrenched as in the days of his prime.

During his long control of the Venezuelan government, Gomez established friendly relations with foreign countries, which previous rulers had sundered; balanced the budget; built and improved roads; installed a drainage and irrigation system, and encouraged the raising of stock. During the period of world-wide depression, Venezuela had a balanced budget, low taxes, no foreign debt, a sound currency, stable wages, and little unemployment. With all this good, however, the country was not always peaceful, frequent uprisings, particularly on the part of university students, taking place. In 1927 his imprisonment of students reacted against him throughout the world, and the cardinal principal of his government—that of force and espionage—received much criticism.

GOUCHER COLLEGE. A nonsectarian college for women in Baltimore, Md., founded in 1885.

The enrollment for the first term of the year 1935-36 was 643. The faculty had 86 members. The endowment funds of the college amounted to \$2,468,969. The library contained 63,800 volumes. President, David Allan Robertson.

GRAHAM LAND. See FALKLAND ISLANDS under *Dependencies*.

GRAND ARMY OF THE REPUBLIC. A patriotic order, formed at Decatur, Ill., in 1866 so that veterans who had served in the Federal Army during the Civil War might "enjoy a companionship made sacred by common sufferings and sacrifices." Affiliated with it are its auxiliary, the Women's Relief Corps, and the allied bodies, Ladies of the G.A.R., Daughters of Union Veterans of the Civil War, Sons of Union Veterans of the Civil War, and the auxiliary to the Sons of Union Veterans.

The maximum strength of the organization was in 1890 when it had a membership of 408,487. On Jan. 1, 1935, there were 1344 posts with a membership of 6244. The sixty-ninth national encampment was held at Grand Rapids, Mich., Sept. 8-14, 1935. Oley Nelson of Slater, Ia., was elected commander-in-chief; John P. Risley of Des Moines, Ia., adjutant-general; and Samuel P. Town, Philadelphia, Pa., quartermaster-general. National headquarters are at State House, Des Moines, Ia.

GRAZING. See LANDS, PUBLIC.

GREAT BRITAIN. Official designation for the political union embracing England, Scotland, and Wales. Capital, London. Sovereign in 1935, George V. Together with Northern Ireland, the Isle of Man, and the Channel Islands, it forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland are included under Great Britain. See BRITISH EMPIRE; IRELAND, NORTHERN.

Area and Population. The area of Great Britain, the census population of Apr. 27, 1931, and the estimated population on June 30, 1934, are shown by political divisions in the accompanying table.

GREAT BRITAIN: AREA AND POPULATION

Divisions	Area in sq. miles	Population	
		1931	1934
England (including Monmouthshire)	50,874	37,794,003	40,467,000
Wales	7,466	2,158,374	
Scotland	30,405	4,842,980	4,934,000
Isle of Man	221	49,308	145,000
Channel Islands	75	93,205	
Total	89,041	44,937,444	45,403,000

Live births in England and Wales in 1934 numbered 598,084 (14.8 per 1000 of population); deaths, 476,853 (11.8); marriages, 341,284. This showed the first definite increase in the birth rate since 1920, the lowest rate being 14.4 per 1000 in 1933. In Scotland in 1934 births numbered 88,836 (18 per 1000); deaths, 63,741 (12.9); and marriages, 36,949. British emigrants to non-European countries numbered 25,390 in 1934 (22,690 in 1933) and immigrants of British nationality into Great Britain totaled 39,971 in 1934 (48,618 in 1933). Of the 1934 emigrants from the United Kingdom, 2028 went to the United States, 2167 to Canada and Newfoundland, 4572 to Australia, 1191 to New Zealand, 3392 to British South Africa, and 6096 to India and Ceylon.

The estimated population of Greater London in 1934 was 8,360,500 (8,202,818 at the 1931 census); Glasgow, 1,114,100 (1,088,417); Birmingham, 1,011,500 (1,002,413); Liverpool, 859,200 (855,539); Manchester, 758,140 (766,333); Sheffield, 520,680 (511,742); Leeds, 485,000 (482,809). The population of London proper in 1931 was 4,395,821; Edinburgh, 438,998; Bristol, 496,918; Hull, 313,366; Bradford, 298,041.

Education. In 1934 there were 20,842 public elementary schools in England and Wales, with an average attendance of 5,065,963, and 2909 primary schools in Scotland, with an average attendance of 606,600. There were in England and Wales in 1933-34 2068 recognized secondary schools, with 536,260 pupils, and 7267 technical and vocational schools of all kinds, with 993,664 pupils. In Scotland there were 251 secondary schools, with an average attendance of 164,118, and over 740 special and continuation schools, with a total of about 156,180 students. The 15 universities in England, Scotland, and Wales enrolled 54,078 students in 1934-35.

Agriculture. In 1933 there were in the United Kingdom 13,449,000 acres of cultivable land (22.5 per cent of the total), 22,970,000 acres of grass and pasture, and 328,000 acres of orchards and bushes. The estimated value of agricultural production for 1932-33 was £223,060,000, divided as follows: Livestock and products, £171,040,000; farm crops, £33,580,000; fruit, vegetables, and miscellaneous crops, £28,440,000. Livestock in 1934 included 8,742,000 cattle, 24,944,000 sheep, 3,906,000 swine, and 1,126,000 horses, mules, and asses. Production of wool as in the grease totaled 114,000,000 lb. in 1934. Yields of the chief crops in 1934 were (in thousands of units): Wheat, 69,776 bu.; barley, 38,267 bu.; oats, 142,450 bu.; potatoes, 201,114 bu.; turnips and swedes, 9724 long tons; sugar beets (excluding Northern Ireland), 4103 long tons; beet sugar (1934-35, Great Britain only), 655 long tons; hops (England and Wales only), 29,008 lb.; hay, 7458 long tons. The 1934 fish catch landed in Great Britain totaled 931,565 tons, valued at £15,529,792, excluding shell-fish valued at £489,879.

Mining and Manufacturing. The output for the United Kingdom of the chief mine and factory products in 1934, with 1933 figures in parentheses, was (in thousands of units): Coal, 220,954 long tons (207,112); pig iron, 5979 long tons (4136); steel ingots and castings, 8860 long tons (7024); (smelter), 10.7 metric tons (5.6); zinc (smelter), 46.3 metric tons (45.7). The 1934 output of alcoholic spirits was 52,089,000 proof gal. (41,074,000 in 1933); of beer, 15,521,000 bbl. (14,339,000); rayon, 93,100,000 lb. (84,080,000); motor cars, 342,499 (286,287); shipping tonnage launched, 460,000 (133,000). The consumption of raw cotton was 2,449,000 bales in 1934 (2,440,000 in 1933). The production of electricity, excluding Northern Ireland, was 15,889,000,000 kwh. in 1934 (14,176,000,000 in 1933). The 1933 output of other materials was (in 1000 long tons): Salt, 2355; iron ore, 7462; China clay and related clays, 777; oil shale, 1397; limestone, 13,148; sandstone, 3123; slate, 273; igneous stone, 9205. For industrial trends in 1935, see *History*.

Pig iron output in 1935 was 6,426,400 tons; steel, 9,842,000 tons; coal, 226,524 metric tons.

Foreign Trade. The trend of the United Kingdom's foreign trade during the period 1929-35 is shown in the accompanying table.

BRITISH FOREIGN TRADE, 1929 TO 1935 *

[In thousands of pounds sterling]

Calendar Year	Imports ^b	Exports ^c British products ^a	Re-exports (imported merchandise) ^a	Total exports ^a	Excess of im- ports
1929	1,220,765	729,349	109,702	839,051	381,714
1930	1,043,975	970,755	86,835	1,057,591	386,384
1931	861,253	390,622	63,868	454,490	406,764
1932	701,670	365,024	51,021	416,045	285,625
1933	675,016	367,909	49,081	416,990	258,026
1934 ^d	732,331	396,108	51,263	447,371	284,960
1935 ^d	756,936	425,921	55,265	481,186	275,750

* Not including bullion and specie movements ^b C. i. f. value. ^c F. o. b. value. ^d Provisional figures.

The principal 1934 imports were (in 1000 gold dollars): Raw wool, 111,808; raw cotton, 105,006; butter, 100,075; bacon, 90,337; tea, 83,922; wheat, 83,035; sawn wood, 81,683; beef, 56,820; mutton and lamb, 52,753; machinery, 43,079. The chief export items were (in 1000 gold dollars): Machinery (including electric), 122,924; cotton piece goods, 119,705; iron and steel, 105,600; coal, 95,755; woollens and worsteds, 47,724; chemicals, 47,410; cotton yarn, 31,771. Gold imports in 1934 totaled \$797,134,000; silver, \$68,257,000. Gold shipments were valued at \$396,247,000; silver, \$37,746,000.

The principal sources of British imports in 1934 were (in £1000 sterling, 1933 figures in parentheses): United States and dependencies, 82,938 (76,610); India and Ceylon, 53,436 (46,433); Canada, 50,413 (46,216); Australia and Papua, 50,126 (48,655); Argentina, 47,046 (41,687); New Zealand, 40,445 (37,171); the Netherlands, 36,792 (31,497). The distribution of British exports by leading countries in 1934 (1933 in parentheses) was (in £1000 sterling): India and Ceylon, 39,514 (35,533); South Africa, 30,248 (23,355); Australia and Papua, 26,315 (21,413); France and its dependencies, 20,292 (22,058); Canada, 19,725 (17,444); Irish Free State, 19,531 (19,034); United States and dependencies, 18,098 (18,843); the Netherlands and dependencies, 14,867 (15,553). United Kingdom imports from other units of the British Commonwealth of Nations totaled £271,465,000 in 1934 (£249,137,000 in 1933), against £460,862,000 from foreign countries (£425,892,000 in 1933). United Kingdom exports to other British countries were £185,626,000 in 1934 (£163,517,000 in 1933), while exports to foreign countries were £210,472,000 in 1934 (£204,370,000 in 1933).

United States figures for 1935 showed imports from Great Britain of \$155,322,776 (\$115,357,580 in 1934) and exports to Britain of \$433,384,884 (\$382,748,936 in 1934).

Finance. Budget operations for the fiscal years ending March 31 are shown in the accompanying table.

UNITED KINGDOM: BUDGET OPERATIONS

Year	Receipts, ex- cluding loans	Expendi- tures	Balance
1931-32	851,482,281	851,117,944	+ 364,337
1932-33	827,031,000	859,310,173	- 32,279,173
1933-34	809,379,149	778,231,289	+ 31,147,860
1934-35	804,629,050	797,067,171	+ 7,561,879
1935-36 ^a	826,150,000	820,540,000	+ 5,610,000

^a Estimates.

The public debt on Mar. 31, 1935, was £7,800,436,000, or a decrease of £21,861,193 from the total on Mar. 31, 1934. Of the total sum, £1,036,545,184 represented the external debt, £3,368,146,605 the internal funded debt, £12,088,795 terminable annuities, £833,380,000 the floating internal debt, and £2,671,974,510 other unfunded internal obligations.

Shipping. The gross tonnage of merchant ships registered in Great Britain and Ireland on June 30, 1935, aggregated 17,400,400 as against 17,734,900 tons on June 30, 1934. Idle tonnage on June 30, 1935, was 963,000 (1,719,000 the year previous). The net registered tonnage of vessels entering British ports in the year ended Mar. 31, 1934, aggregated 85,359,000, of which 62,671,000 tons entered with cargo and 22,688,000 tons with ballast. Shipping services rendered foreigners by British vessels during 1934 had an estimated value of £64,000,000, as compared with £59,000,000 in 1933 and £130,000,000 in 1929.

Railways. Railway lines open to traffic in 1934 totaled 20,383 miles (divided into four main systems). In the same year they carried 1,123,600,000 passengers (excluding commuters) and 260,390,000 tons of freight, exclusive of 10,434,000 head of livestock. The net revenue was £31,480,816 (£28,804,163 in 1933). In November, 1935, the British Government reached an agreement with the four railway systems for the carrying out of a five-year programme of railway reconstruction and improvements at a cost of about £30,000,000.

Other Communications. Highways in Great Britain at the beginning of 1934 extended 177,347 miles (England and Wales, 151,854; Scotland, 25,493). The principal canals in 1933 carried 11,434,504 tons of freight. Civil air lines in 1933 reported a total distance flown of 2,638,000 miles; passengers, 79,080; goods and mail carried, 2,045,000 lb. Five British air lines were combined into one organization late in 1935, the new company taking over the operation of 2200 miles of routes, chiefly in the United Kingdom. The number of radio licenses outstanding in 1934 was 6,780,569, an increase of 806,811 over 1933.

Government. The United Kingdom is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by male and female suffrage on the basis of one member for every 70,000 of population. The House of Lords has a voting strength of about 768 members. Prime Minister at the beginning of 1935, James Ramsay MacDonald (National Labor), heading a coalition composed of the Conservative and factions of the Labor and Liberal parties. For cabinet changes and the general election in 1935, see *History*.

HISTORY

The collision with Italy over Ethiopia, King George's Silver Jubilee, a general election in which the Conservatives triumphed, the launching of a great rearmament programme, and sustained economic recovery made the year 1935 a memorable one in British history. Surveying the European scene towards the end of the year, such a realistic American observer as Frank H. Simonds reported that "not since the days of Castlereagh and Wellington had British prestige stood so high." And Walter Duranty, in a London dispatch of December 3 to the *New York Times*, presented the following analysis of the British situation:

London presents a striking contrast to Paris. Here is confidence instead of alarm, hope instead of fear, union instead of discord. On the economic side the difference is still more marked to British advantage, and these material and moral factors have a corresponding influence upon the British attitude toward foreign affairs.

London is well aware of the gravity of the present international situation, but faces it without pessimism, the shadow of coming war lies lighter over Britain than over

Continental Europe. Finally, and most important of all, London has an atmosphere of energy and initiative, of determination to act before it is too late, whereas Paris and most of the Continent seem resigned to the inevitable and at best are only trying to postpone the evil day.

The Economic Upswing. The basis of British optimism was the general and continued economic upswing, which had been carefully nursed along by the National Government since 1933. By the end of 1935 the recovery in many lines had surpassed the peak year of 1929. The index of industrial production (Base: 1929 equals 100) stood at 105.7 for 1935, as compared with 98.8 for 1934 and 88.2 for 1933. The number of employed persons increased in 1935 to an average of 10,380,000, against 10,142,000 in 1934 and 10,223,000 in the previous record year of 1929. The average number wholly unemployed was 1,714,844 in 1935, 1,801,913 in 1934, and 994,091 in 1929, indicating that the increase in the number of employed was insufficient to absorb the growing working population. Behind their new tariff walls British industries were making unexpected progress. Sheffield at the end of the year was producing more steel than ever before. The boom in private housing and public slum replacement construction continued. British railways carried more passengers and freight in 1935 than in 1934, although the gross earnings of £150,797,000 were only 1 per cent larger.

While the principal stimulus to industry came from domestic demand, there was a 10 per cent increase in exports in 1935 as compared with 1934, and a similar expansion of imports. Exports of British iron and steel were aided by the agreement of June 4, 1935, between the British Iron and Steel Federation and the International Steel Cartel apportioning the European markets between them. The number of foreign visitors to Britain in 1935 was 315,744, an increase of 27,143 over the previous year. The income from foreign investments, which totaled £158,300,000 in 1934, showed another increase in 1935, but was still only half of the peak total of £300,000,000 received in 1926 and 1927. Gold imports during 1935 exceeded exports by £70,071,000. Against this generally favorable picture there stood out the continued stagnation of economic activity in the so-called distressed areas in Scotland, North England, and Wales, and the discouraging condition of agriculture which was only partly relieved by government subsidies and other aids.

Domestic Affairs. The domestic economic and political situation at the beginning of 1935 was far less encouraging than in later months. The winter brought a slackening of economic recovery and a temporary increase of unemployment. The new Unemployment Assistance Regulations, introduced early in January, produced widespread discontent, accompanied by a series of disconcerting demonstrations and riots. Prime Minister MacDonald's leadership of the government was becoming increasingly distasteful to both the Right wing of the Conservative party and to the Laborites, who had never forgiven his desertion in 1931. There was increasing restiveness at the conduct of the Foreign Office by Sir John Simon. Criticisms of the government for alleged inaction and incompetence were climaxed by a series of addresses delivered by former Prime Minister Lloyd George during January. He proposed the collaboration of all parties in a radical programme of economic reorganization designed to end the paradoxical co-existence of poverty and plenty.

The widespread and favorable public response

to Lloyd George's proposals was a measure of the government's unpopularity and, with a national election in the offing, aroused the anxiety of government leaders. Another shock to public confidence came early in February with the failure of a number of important London brokerage and commercial concerns ruined in a speculative effort to corner the pepper market. The objectionable Unemployment Assistance Regulations were modified by a measure rushed through Parliament and signed by the King on February 15. This failed to calm the agitation among the unemployed, however. Their demands for a more liberal policy and abolition of the hated means test were reinforced by a severe clash between unemployed and the police in South Wales on March 21 and a great demonstration in Glasgow on March 24. The problem of revision of the unemployment relief system, after being studied carefully during the year, was postponed to 1936 for final action.

On March 1, also, Prime Minister MacDonald asked Lloyd George for full details of his "New Deal" proposal and promised to weigh them carefully. It was not until July 22, after renewal of the economic upswing had revived the government's prestige, that the proposals were flatly rejected as "disappointing," "hazardous," and "uncertain."

Presentation early in March of budget estimates for the army, navy, and air forces showed a \$53,000,000 increase over 1934-35 appropriations and aroused an uproar from the Opposition, but this was largely stilled by the Chancellor of the Exchequer's popular speech of April 15 presenting the budget for 1935-36 to Parliament. He promised a balanced budget despite restoration of government salaries to the pre-depression level and a reduction of taxes on smaller incomes equivalent to \$50,000,000 annually. Britain, he declared, had recovered four-fifths of her pre-depression prosperity. The celebration of the 25th anniversary of King George's reign, which commenced on May 6 and continued for a month, enhanced the confidence and good spirits induced by reviving prosperity. All the Prime Ministers of the Dominions journeyed to London for the occasion and tributes from practically all parts of the Empire except the Irish Free State added to the impressive mass demonstrations of esteem for the King and Queen held in London and other British cities.

On June 7 occurred the long-predicted reorganization of the Cabinet. Stanley Baldwin replaced Mr. MacDonald as Prime Minister and First Lord of the Treasury. Sir Samuel Hoare succeeded Sir John Simon as Foreign Secretary and the new portfolio of Minister for League of Nations Affairs was created for the rising young Capt. Anthony Eden. Lord Sankey, Sir John Gilmour, and Sir Edward Hilton Young also were eliminated and the following new members took the vacant places: Lord Zetland, Secretary for India; Malcolm MacDonald (son of the former Prime Minister), Secretary for the Colonies; Ernest Brown, Minister of Labor; Lord Eustace Percy, Minister without Portfolio. Ramsay MacDonald was given the post of Lord President of the Council. The new Cabinet included 15 Conservatives, 4 National Liberals, and 3 National Laborites.

Legislation. Under new leadership the government continued to push forward its extensive legislative programme. When Parliament recessed on August 2 it had passed 95 bills, some of them of more than usual significance. The Housing Bill, supplementing the five-year slum clearance proj-

ect under way, prohibited overcrowding of tenants and extended national subsidies to aid local authorities in new construction. The momentous Government of India Bill, signed by the King on August 2, provided for far-reaching reforms and the extension of self-government in India (q.v.). Subsidization of the British livestock industry was extended to Oct. 31, 1936. Walter Elliott, the Minister of Agriculture, announced that an agreement had been reached with the Dominions whereby, upon the expiration in November, 1936, of the Anglo-Argentine trade agreement, the domestic meat subsidy would be abandoned in favor of a tariff levied on all imported meat, with a preferential rate on meat from Australia and New Zealand.

Another measure guaranteed the principal and interest of securities aggregating about \$175,000,000 issued for the electrification of transportation in London and the suburbs. Laws for the regulation and rationalization of the coal and the Lancashire cotton industries were passed, the latter establishing minimum wages for the protection of both owners and workers against the twin evils of price cutting and wage cutting. The Ribon Development Bill, restricting private housing construction along newly developed government highways, was another important measure designed to enhance the beauty of rural England. Passage of this measure was followed by the government's announcement in November that it would spend the equivalent of \$500,000,000 on road building over a five-year period. At the same time the Exchequer arranged to guarantee loans of \$150,000,000 for railway improvements and reconstruction.

The government also announced its intention of introducing legislation for the rehabilitation of the distressed areas. This great national problem had aroused increasing government concern. Reports of the Commissioners for the Distressed Areas, made public on July 17, indicated the extent of the disaster inflicted by industrial changes upon these blighted areas. Transference of a large part of the population to other more prosperous regions was declared necessary. The commissioners' other recommendations called for the placing of government orders with factories in the distressed areas so far as possible; the abolition of child labor in industry; the extension of social services; shorter working hours, with the aid of a government subsidy, if necessary; etc. By the end of the year the government had already arranged to spend between \$15,000,000 and \$20,000,000 for relief of the distressed areas, but plans for a fundamental attack upon the problem were still being studied.

The Sanctions Issue. The most pressing problem which confronted the Baldwin Government and the British people during the year was that of the policy to be pursued in the face of Italy's attack upon Ethiopia in violation of the League Covenant and the rapid drift towards another great war in Europe. Even before Italy's aggression against Ethiopia had taken place, this problem had been raised by an investigation into the British arms industry conducted by a royal commission and the great peace poll conducted by the British League of Nations' Union. The arms inquiry revealed that prominent members of the government, clergy, and even of the royal family were stockholders in armament firms. Proprietors of certain newspapers agitating for an increased air force were shown to be financially interested

in aviation concerns. These facts contributed to the overwhelming demand for abolition of the private manufacture of arms revealed in the peace ballot.

A total of 11,627,765 votes were cast in this unofficial poll which started in January and was concluded June 27. The final results showed: (1) that 11,090,387 favored British membership in the League of Nations, 355,883 were opposed, and 112,895 were doubtful or abstained from voting; (2) that 10,470,489 favored all-round reduction of armaments by international agreement, 862,775 were opposed, and 225,901 were uncertain; (3) that 9,533,558 favored all-round abolition of national military and naval aircraft by international agreement, 1,689,786 were opposed, and 335,821 were uncertain; (4) that 10,417,329 favored prohibition of the manufacture and sale of armaments for private profit, 775,416 were opposed, and 366,421 were uncertain; (5) that 10,027,608 favored application of collective League economic non-military measures against a nation which attacked another, 635,074 were opposed, and 882,362 were uncertain; (6) that 6,784,368 favored application of collective military measures if necessary to restrain an aggressor nation, 2,351,981 were opposed, and 2,405,334 were uncertain.

This demonstration of overwhelming popular support for the League of Nations and a system of collective security based upon economic and, if necessary, military sanctions was one of the chief factors influencing the Baldwin Government to abandon its hitherto complacent attitude towards the impending Italian assault upon Ethiopia, which had been manifest since the beginning of the year. On September 11 Sir Samuel Hoare, the new Foreign Secretary, made his famous speech before the League of Nations Assembly, pledging that Britain would join in offering steady collective resistance to an aggression carried out in defiance of the Covenant. He thus took the initiative in mobilizing the League powers for strong action against Italy.

The government's stand on this issue won almost unanimous endorsement from all sections of opinion in Great Britain. The Trades Union Congress at its annual meeting at Margate earlier in September had approved application of sanctions against Italy by a vote of 2,962,000 to 177,000. The Labor Party Congress at Brighton on October 2 gave the proposal an even greater majority. The Conservative party conference at Bournemouth on October 3-4 and the Liberals on October 3 also registered their approval. Important leaders dissented from the sanctions idea, but were able to make no headway against the predominantly favorable attitude among the rank and file of all parties. Sir Stafford Cripps, a member of the Labor party executive; Lord Ponsonby, Labor leader in the House of Lords; and George Lansbury, Labor leader in the House of Commons, all resigned in protest against the sanctions policy.

The General Election. The launching of the Italian attack upon Ethiopia beginning October 3 gave the Baldwin Government an opportunity to win still greater popular support and prestige at home by its leadership at Geneva in inducing the League powers to apply economic and financial penalties against Italy. The time was propitious for seeking a renewal of the government's mandate from the electorate. Accordingly Prime Minister Baldwin summoned Parliament on October 22 and prorogued it after three days of debate on foreign

policy, without discussion of domestic problems. The election was set for November 14.

The National Government went before the voters on a platform which declared the League of Nations to be the keystone of British foreign policy, called for large-scale rearmament to safeguard the Empire and "fulfill our obligations toward the League," favored the lowering of trade barriers through bilateral agreements, urged the extension of unemployment insurance to agricultural workers and the creating of further employment by "use of the credit and other resources of the State." The Labor party, now led by Clement R. Atlee, campaigned on a platform of "socialism at home and peace abroad." The party manifesto pledged support of the League against Italy in Africa and maintenance of necessary defense forces pending their reduction by international agreement. It reiterated its previous demands for nationalization of the land, natural resources, and of the transport, banking, iron and steel, coal, and cotton industries.

The campaign was in some respects a sham battle, however, as the Labor party did not wish to take over the government in the face of an international crisis. The result was a complete victory for the Conservative party and its allies. The government won 431 out of 615 seats in the House of Commons, as against the overwhelming majority of 513 secured in the election of October, 1931. The standing of the parties in the government bloc after the November balloting, with the previous standing in parentheses, was: Conservative, 387 (463); Liberal National (leader, Sir John Simon), 33 (35); National Labor (leader, Ramsay MacDonald), 8 (12); Independent National, 3 (3). The respective standings of the Opposition parties were: Labor (leader, Clement R. Atlee) and Independent Labor (leader, James Maxton), 154 (61); Liberal (leader, Sir Archibald Sinclair), 21 (32); Independent Liberal, 4 (4); Independent, 4 (5); Communist, 1 (0). The government's loss was much less than even the Conservatives had expected. The Labor party, however, regained practically all of its voting power, lost in the crisis election of 1931. In fact, the total Opposition vote of 10,209,505 was only 1,582,827 less than the government's total of 11,792,332 votes. The government votes were distributed by parties as follows: Conservatives, 10,488,626; Liberal Nationals, 866,624; National Laborites, 339,811; Independent Nationals, 97,271. The vote of the Opposition groups was: Labor, 8,325,260; Independent Labor, 139,517; Liberals, 1,377,962; Independent Liberals, 65,150; Independents, 274,499; Communists, 27,117.

The elections furthered the trend toward return of the two-party system, with the Conservative and Labor parties dominating the government and Opposition blocs, respectively. The Liberal party was badly shattered, even Sir Herbert Samuel, its leader, being defeated for reelection. Sir Archibald Sinclair was chosen to succeed him. The government's victory resulted in another cabinet reorganization on November 22. Lord Londonderry's place as Lord Privy Seal was taken by Viscount Halifax, the former Secretary for War. Alfred Duff Cooper took over the War portfolio and with it the task of supervising Britain's rearmament. Malcolm MacDonald and J. H. Thomas exchanged positions, the former becoming Dominions Secretary and the latter Colonial Secretary. Sir Philip Cunliffe Lister, Secretary for Air, and Sir Bolton Eyres-Monsell, First Lord of the

Admiralty, both were elevated to the House of Lords with the titles of Viscount Swinton and Viscount Monsell. This was the cabinet line-up when Parliament convened on December 3. Only five days later the revelation of the Hoare-Laval proposals for settlement of the crisis over Ethiopia by giving half of the black empire to Italy aroused a storm which cost Sir Samuel Hoare his post as Foreign Secretary on December 18 and almost upset the entire cabinet (see *Foreign Relations*). Anthony Eden succeeded Sir Samuel in the Foreign Office; his former post of Minister for League of Nations Affairs was not filled. Besides the all-important problem of foreign policy, the cabinet and Parliament as the year closed were wrestling with the questions of the distressed areas, a threatened strike in the coal fields, and the revision of the unemployment assistance regulations.

Foreign Relations. The rearmament of Germany, the Italian attack upon Ethiopia and indirectly upon the League of Nations, and the Japanese advance in North China into an important sphere of British economic interest presented the most serious threats to the British Empire since the World War. The menace of German rearmament, which had been growing since Hitler's advent to power in 1933, became acute with the restoration of German conscription in violation of the Versailles Treaty on March 16. The Italian invasion of Ethiopia commenced October 3, and the extension of the Japanese sphere in North China came to a head in December. Thus Britain was faced throughout most of the year with growing foreign anxieties and mounting dangers which aroused widespread fear of new wars endangering the economic revival at home.

German Rearmament. Realizing that the rapid development of aerial warfare made a policy of isolation from Continental affairs even more impossible than in 1914, the British Government during 1935 wavered between two alternate courses with respect to the resurgent military might of Germany. During the first part of the year, under Sir John Simon's guidance, the Foreign Office strove to reconcile Germany with France and the rest of Europe by offering to recognize German equality and to negotiate a new settlement to replace the Versailles Treaty. It was hoped that under these conditions, Hitler would agree to re-enter the League of Nations and accept proposals for a peaceful settlement of German grievances. To win France, Italy, and the other European nations over to this plan, the British reiterated their pledge to support the independence of Austria against Germany. They also lent powerful aid to the Franco-Soviet proposal for guaranteeing the frontiers of Eastern Europe by a multilateral pact of mutual assistance and of non-interference in internal affairs. Such a general settlement, envisaging maintenance of the territorial *status quo* in Europe but the restoration of Germany to equality in armaments and in position at Geneva, was set forth in the Franco-British communique of February 3, issued after conversations between Sir John Simon and Foreign Minister Laval in London.

Hitler's response to this overture was received on February 14. He welcomed the suggestion for a convention of mutual assistance against unprovoked air attack but ignored the proposed Eastern Locarno and Central European non-aggression pacts. He thus sought to secure the legal abolition of the Versailles military restrictions without committing himself to accept the

status quo in Eastern and Central Europe. He further sought to drive a wedge between Britain and France by proposing direct Anglo-German conversations on the whole problem. Sir John Simon then arranged to visit Berlin on March 7, but the publication of the British White Paper of March 4 attributing the need of rearmament to military preparations by other countries, particularly Germany, aroused indignation in Berlin. It was announced that Hitler would be unable to receive the British Foreign Secretary because of a cold. Two days later the British Cabinet sent Captain Eden, then Lord Privy Seal, to Moscow and Warsaw to discuss the possible development of a European peace system based upon mutual assistance pacts.

On March 16 Hitler's sudden announcement of the reintroduction of conscription in open violation of the Versailles Treaty produced a grave European crisis, which caused a shift in British policy. The announcement that Germany already had an air force equal in strength to Britain's and that she was carrying forward the construction of submarines and other naval craft at an accelerated pace aroused British anxiety even more than the expansion of the German army. Nevertheless Foreign Secretary Simon's note of protest at unilateral repudiation of the peace treaties was mild in tone, in contrast to that of France and Italy. Swallowing Hitler's rebuff, Simon again suggested direct conversations with the Reich Chancellor in Berlin. These exchanges, held on March 25-26, served only to arouse further apprehension in British official circles. Sir John revealed before the House of Commons on March 28 that "a considerable divergence of opinion" between the two governments had been revealed in Berlin. Thereafter the British tended increasingly to accept the Franco-Soviet-Italian thesis that if Germany would not reenter a European system of collective security, it was necessary to establish one without her, and if need be, against her. An agreement along this line was reached during Captain Eden's visit to Moscow on March 30-31 and to Czechoslovakia in April. But the Polish Government proved unwilling to join in an Eastern Locarno without German participation when the British emissary visited Warsaw on April 2-3. The Eastern Locarno project soon collapsed under the weight of German and Polish opposition.

At the Stresa Conference on April 11-14, Britain joined with France and Italy in measures to prevent further treaty violations by the Reich. Britain and Italy reiterated their guarantee of the Franco-German boundary under the Locarno Treaty, and warned Hitler that they would consider violation of the demilitarized zone of the Rhineland as a breach of the Locarno Treaty. Nevertheless the British did not abandon hope of reaching an agreement with Germany which would facilitate her return to the League, and at the same time increase British security. This wavering policy was climaxed by the sudden conclusion of the Anglo-German naval agreement of June 18, by which Britain agreed to the construction of a German navy 35 per cent of the British tonnage. She thus gave direct support to a new German infraction of the Versailles Treaty after having agreed at Stresa to unite with France and Italy in opposing such violations. The British excuse was that the naval agreement merely recognized legally the undisputed fact that the military clauses of the Versailles Treaty were already dead. Nevertheless their action shattered the Stresa front

temporarily, gave Hitler's régime tremendous added prestige at home, and greatly angered France and Italy.

Anthony Eden was sent to Paris and Rome to explain the British point of view. His conversations with Foreign Minister Laval on June 21-22 ended in the restoration of Franco-British co-operation for the purpose of building up "peace by the organization of collective security." In Rome on June 23-24 Mr. Eden met a very cool reception, not because of the Anglo-German naval treaty, but because the conflict between Britain and Italy over Ethiopia was beginning to reach serious proportions. Thereafter the problem of German rearmament was relegated to the background so far as Britain was concerned by the Ethiopian crisis. But it remained a constant threat to British security, and together with the Japanese expansion in China, was responsible for the continuous British efforts to reach an amicable settlement of the Italo-Ethiopian dispute by compromise.

The Anglo-Italian Crisis. Although Mussolini's designs upon Ethiopia had been apparent from the beginning of the year, it was not until Captain Eden's visit of June 23-24 to Rome that Anglo-Italian relations became strained. Mussolini's curt rejection of a British offer to facilitate an Italo-Ethiopian settlement by giving Ethiopia access to the sea through British Somaliland led Eden to warn him that Britain "could not remain indifferent to events which might profoundly affect the League's future." The successive steps by which Britain and Italy reached the verge of armed hostilities are recounted in detail in the articles on ETHIOPIA and ITALY under *History*.

Three objectives motivated the British in their opposition to Mussolini's conquest of Ethiopia. They desired first to save the League, which was both Britain's first line of defense and her main hope of developing an alternative to war. Secondly, they desired to restrict Italian expansion in Ethiopia to regions which did not menace British control of the headwaters of the Blue Nile and the safety of Egypt and the Sudan. They also feared that Italy's complete dominance of Ethiopia would provide a base for expansion into neighboring British territories, give Italy with a great reservoir of Negro fighting men, and menace British communications along the route to India, so-called "life-line" of the Empire. Thirdly, they sought to curb another German bid for military hegemony in Europe by demonstrating—and also testing—the effectiveness of the League's economic weapons in punishing a nation which resorted to the sword to achieve its objectives.

The British were only less anxious than the French to preserve Italy as a possible ally against Germany and to prevent an additional blow to the League's effectiveness through Italy's withdrawal. Moreover the Conservative interests dominating the Baldwin Government feared that the overthrow of Mussolini's régime would result in the triumph of communism, and they greatly preferred a Fascist Italy to a Communist Italy. Furthermore they saw that even a successful war against Italy would seriously weaken Britain and render her less able to defend her interests on the Continent against Germany and in the Far East against Japan. These circumstances explain the seemingly contradictory course of British policy in offering Mussolini increasingly valuable concessions in Ethiopia and at the same time bringing increasing pressure to bear to force him to

accept them. The Anglo-Italian crisis resulted from Mussolini's obdurate refusal to be deterred from his Ethiopian adventure by either inducements or threats.

Following Mussolini's rejection of the Anglo-French proposals at Paris on August 18, the British Cabinet met in emergency session on August 22 and decided to act collectively with the other League members in upholding the Covenant. Additional warships and aeroplanes and garrison reinforcements were sent to British bases in the Mediterranean. But the Cabinet was still divided as to the advisability of taking the lead in urging League sanctions against Italy. A further effort at compromise was made through the conciliation commission appointed by the League Council on September 6. While this commission was at work Foreign Secretary Hoare made his notable speech of September 11 before the League Assembly declaring that Britain stood "for the maintenance of the Covenant in its entirety and particularly for steady and collective resistance to all acts of unprovoked aggression." Having made certain that sanctions would be employed against Italy if Mussolini proceeded with his plans, Sir Samuel went on to intimate that the League must realize international justice as well as establish international order and that it must take the lead in eliminating the grievances which caused nations to resort to war. He thus held out the offer to Italy of League aid in solving the economic problems which Mussolini had declared necessitated more profitable Italian colonies in Africa.

Almost simultaneously with the presentation to Italy on September 18 of the Council committee's proposals for Italian participation in the economic development of Ethiopia, the main British fleet appeared in the Mediterranean. Mussolini curtly rejected the League proposals and instead of submitting to the British naval threat concentrated air and naval squadrons in position to attack Malta and sent several divisions of troops to the Egyptian frontier in Libya, where they threatened to advance upon Cairo. With these developments tension between Britain and Italy reached an acute stage. The British rushed reinforcements to Egypt and hurriedly strengthened the defenses of Gibraltar, Malta, and other Mediterranean bases. In response to Italian protests at these measures, the British stated on September 20 that their military preparations were motivated only by the violent anti-British campaign in the Italian press and that they implied no "aggressive intention."

On September 28 the Italian Cabinet appealed to the British people to disregard "anti-Fascist mystifications" and to grasp the fact that Italy was willing to negotiate further accords "which would harmonize with legitimate British interests in East Africa." But with the Italian invasion of Ethiopia on October 3 the Anglo-Italian crisis deepened. The British cabinet rejected a proposal by Mussolini, supported by France, that Britain withdraw its fleet from the Mediterranean in return for withdrawal of the Italian troops from the Egyptian border. Instead the British, with the active support of the smaller League States and the Soviet Union, prodded the League Assembly into declaring Italy the aggressor on October 11. This paved the way for the first large-scale application of sanctions in League history—an experiment in "putting teeth" into the League peace machinery which promised to have historic significance. See LEAGUE OF NATIONS.

Meanwhile the British were seeking to obtain promises of military aid from France and the other League powers in case the application of League sanctions led to an Italian attack upon the British fleet and bases in the Mediterranean. On September 24 Sir Samuel Hoare inquired if French naval assistance would be forthcoming in such an eventuality. France, fearing that sanctions against Italy would precipitate a European war which would serve Germany as a pretext for satisfying its territorial ambitions, moved with great caution. In a note of October 7 the Paris government offered to assist Britain on condition that the latter agreed (1) not to apply the League Covenant or the Locarno Treaties without previously consulting France and (2) to assist France on land and in the air in the event of a threatened attack upon her by Germany.

The British declined to commit themselves irrevocably to aid France against Germany. The Foreign Secretary replied to the French note by stating that while Britain stood for "collective resistance to all acts of unprovoked aggression," this did not apply to "a negative act of failure to fulfill terms of a treaty." He thus drew a distinction between Italy's threatened aggression upon Ethiopia and possible German violations of the Versailles Treaty, which did not involve an attack upon France. This difference of policy during a time when danger of war loomed steadily nearer aroused much Anglo-French ill feeling. The British charged France with refusing to fulfill her obligations under the League Covenant while the conservative French press bitterly assailed Britain for seeking to precipitate a European war by its intransigence toward Italy. The crisis was relieved somewhat on October 18 when Premier Laval finally promised Britain naval assistance in the Mediterranean provided the British fleet was used only in accordance with the League's decision. On the same day the British Ambassador to Rome assured Mussolini that Britain did not intend to take any action "beyond what might be agreed to or recommended by the League in conformity with the dispositions of the Covenant."

The Anglo-Italian crisis again developed to a grave stage late in November when Mussolini declared that the proposed League oil embargo would be regarded as cause for war. On November 28 Premier Laval relieved the tension by warning Italy that an attack upon Britain would force France and the other League powers to go to Britain's assistance. Yet the British remained dubious of the value of the promised aid, in view of the strong division of opinion on the issue in France and the threatened civil war between the Left and the Right forces which at any moment might eliminate France as a force in European affairs. See FRANCE under *History*.

Facing this critical situation, and with the general election behind it, the Baldwin Government agreed with Premier Laval of France upon another effort to conciliate Mussolini, before proceeding to the proposed application of an oil embargo. The so-called Hoare-Laval peace proposals of December 8 went far beyond previous offers, giving Italy actual or virtual possession of nearly one-half of Ethiopia (see ETHIOPIA and ITALY under *History*). This attempt to buy off Italy at Ethiopia's expense aroused a tremendous storm of protest in Great Britain, as elsewhere among the neutral League powers. Prime Minister Baldwin was forced to bow before the storm to avert threatened defeat in the House of Commons. The

proposals were disavowed and the replacement of Sir Samuel Hoare by Anthony Eden on December 22 was followed by a return to the policy of sanctions and of full support of the League Covenant.

Realizing that this policy might eventually involve Britain in war with Italy, the cabinet late in December announced additional plans for modernization and mechanization of the army and navy. Fresh negotiations between the French and British general staffs took place. On December 21 Foreign Minister Eden announced that Turkey, Greece, Rumania, Yugoslavia, and Czechoslovakia had promised military aid to Britain in the event of an Anglo-Italian conflict over League sanctions. Negotiations for a similar pledge from Spain and Portugal were under way as the year ended. Thus Britain was in a position to push for the application of more drastic economic and even military sanctions against Italy, with the assurance of an overwhelming concentration of military might against Italy should she decide to resist. But the fear of German aggression dominated all diplomatic calculations and threatened to prevent a show down with Mussolini. This fear was increased by an unsuccessful British effort in December to discuss an arms limitation agreement with Hitler's government; by the growing Nazi agitation for the return of Memel and against League control of Danzig; by the German threat to end the demilitarization of the Rhineland, coupled with the charge that the Anglo-French military and naval consultations violated the Locarno Treaties; by the Reich's demand for return of its former colonies; and by its hostility to the Franco-Soviet pact of mutual assistance. Fearing that drastic action against Italy would be the signal for German action, and yet realizing that failure to restrain Italy would serve to encourage Nazi territorial ambitions, France and Britain at the close of 1935 were faced with a dilemma which it seemed impossible to resolve without starting a European conflagration.

London Naval Conference. Dangers threatening Britain from other directions besides the Continent were emphasized by the London Naval Conference, which opened at the British capital on December 9 and was still in progress at the close of the year. The British objective at the conference was to secure a quantitative and qualitative limitation agreement for seven years. But developments during the preliminary stages of the conference aroused little hope of an agreement. Japan immediately pressed her demand for naval parity with Britain and the United States at a time when Japanese expansion in North China was arousing the utmost apprehension in British official circles (see CHINA under *History*). The resumption of German naval construction also added to the difficulty of reaching an agreement with France and Italy. After the Anglo-German naval treaty of June 18, 1935, France had announced that she resumed liberty of action in naval construction and hastened construction of four new capital ships. Italy reiterated her demand for naval parity with France. Great Britain herself had served notice on July 22 that she had abandoned the effort to secure naval limitation by the ratio principle, while Secretary of the Navy Swanson of the United States on October 23 reiterated American insistence upon continuation of the existing naval ratios. See NAVAL PROGRESS.

GREAT PLAINS SHELTERBELT. See FORESTRY.

GREECE. A Balkan kingdom. Capital, Athens. With an area of 50,270 square miles (mainland, 41,652; islands, 8618), Greece had an estimated population on Jan. 1, 1934, of 6,620,000 (6,204,684 at the 1928 census). Living births in 1933 numbered 189,583; deaths, 111,447; marriages, 46,263. The estimated population of Athens in 1931 was 468,000. In 1928 Piræus (Peiræus) had 251,328 inhabitants; Salonika, 236,524; Patras, 61,278. The religious faith of the bulk of the population is Greek Orthodox.

Education. About 31 per cent of the population was illiterate in 1928. In 1931-32 there were 542 infant schools, with 30,631 pupils; 7703 primary schools, with 791,658 pupils; 428 high schools, with 65,217 pupils; and various vocational, professional, and special schools. Two universities in Athens had 6820 students and one at Salonika 962 students in 1932.

Production. About 54 per cent of the population is engaged in agriculture and fishing, 16 per cent in industry, and 8 per cent in commerce. Production of the chief crops in 1934, with 1933 figures in parentheses, was: Wheat, 26,800,000 bu. (28,400,000); barley, 9,600,000 bu. (10,500,000); corn, 7,800,000 bu. (10,700,000); oats, 7,150,000 bu. (9,250,000); tobacco, 44,000 short tons (60,000); currants, 260,000 short tons (150,000); sultana raisins, 25,000 short tons (30,000); wine must, 345,000 short tons (425,000); table grapes, 63,000 short tons (80,000); cotton, 80,000,000 lb. (69,000,000); olive oil, 120,000 short tons (116,000). Livestock in 1933 included 341,165 horses, 913,513 cattle, 7,427,129 sheep, 4,951,584 goats, 506,807 swine, and 169,473 mules.

The mineral and metallurgical output in 1933 was (in 1000 metric tons): Salt (state mines), 73; cement, 200 (248 in 1934); lignite, 99; pyrites, 184; iron ore, 85; lead (smelter), 8.2; zinc, 5.6; chrome ore, 14.8; sulphur, 89. The value of industrial production in 1933 was 7,238,000,000 drachmas (6,445,000,000 in 1932). In 1930 Greece had 77,000 industrial enterprises, utilizing a motive power of 350,000 horse power and employing 250,000 workers. Olive oil, textiles, chemicals, wine, foodstuffs, wool fabrics, etc., are the chief industrial products.

Foreign Trade. Imports for consumption in 1934 were valued at 8,792,417,000 drachmas (8,431,531,000 in 1933) and exports at 5,474,229,000 drachmas (5,141,066,000 in 1933). Calculated in U.S. dollars the respective totals were: Imports, \$82,649,000 (\$61,550,000 in 1933); exports, \$51,458,000 (\$37,530,000 in 1933). The value of the leading 1934 imports was (in 1000 drachmas): Wheat, 739,726; iron and steel, 674,998; chemicals and allied products, 649,615; machinery, 583,834; cotton piece goods, 446,267; coal, 412,998. The chief exports (in 1000 drachmas) were: Leaf tobacco, 2,027,385; currants, 1,103,877; raisins, 315,767; olive oil, 249,002. The United Kingdom supplied 16.7 per cent of the 1934 imports (14.4 in 1933); Germany, 14.7 (10.2); United States, 6.3 (5.8); France, 6.7 (4.3). Of the total exports, Germany purchased 22.4 per

cent (17.9 in 1933); United Kingdom, 17.4 (18.9); United States, 14.7 (12.5); Italy, 9.8 (14.0).

Imports in 1935 totaled 10,679,000,000 drachmas; exports, 7,028,000,000 drachmas. United States statistics for 1935 showed imports from Greece of \$9,977,113 (\$8,298,819 in 1934) and exports to Greece of \$6,577,091 (\$4,650,172 in 1934).

Finance. Actual budget receipts for the fiscal year ended Mar. 31, 1935, totaled 9,238,000,000 drachmas (8,468,000,000 in 1933-34) and actual payments were 8,749,000,000 drachmas (7,706,000,000 in 1933-34). Including 1934-35 revenues to be collected after the close of the fiscal year and funds due for disbursement on account of obligations assumed during 1934-35, the returns were: Receipts, 11,300,000,000 drachmas; expenditures, 10,840,000,000 drachmas.

The public debt at the close of 1934 amounted to approximately 44 billion drachmas, of which about 32 billions were borrowed abroad. Drachma exchange averaged \$0.0094 in 1934; \$0.0073 in 1933; and about \$0.013 in previous years.

Communications. Greece in 1935 had about 1668 miles of railway lines (823 miles operated by the state); nearly 9000 miles of highways; and air lines connecting Athens with Salonika and Epirus as well as with the capitals of Europe and the Near East. In 1933, 5806 steamers of 2,546,849 tons and 2057 sailing vessels of 42,585 tons passed through the Corinth canal. The gross steam- and motor-driven tonnage of the Greek merchant marine, amounting to 1,711,165 tons on June 30, 1935, rivaled that of Sweden for ninth place among the world's merchant fleets.

Government. The republican Constitution of June 3, 1927, provided that the President should be elected for five years by the Chamber and Senate. The Chamber at the beginning of 1935 comprised 248 members elected for four years by universal suffrage. Of the 120 Senators, 92 were elected by direct suffrage, 10 conjointly by the Chamber and Senate, and 18 by various economic groups. President, Alexander Zaimis, who was inaugurated Dec. 14, 1934, for a second successive term. For the overthrow of the republic in 1935, see *History*.

HISTORY

The 11-year struggle between republicans and royalists in Greece ended in a monarchist triumph on Oct. 10, 1935. The republic was abolished and the monarchy reestablished through a military coup d'état led by Gen. George Kondylis, the Minister of War, who became Premier and Regent pending the return of King George II. Restoration of the monarchy was confirmed by a plebiscite held November 3, and George II ended his 12-year exile by returning to Athens November 25.

The Civil War. The overthrow of the republic was a direct consequence of the military and naval revolt, inspired by former Premier Eleutherios Venizelos and engineered by republican military and naval officers in an effort to overthrow the Tsaldaris Government. Formerly an avowed monarchist, Panagiotis Tsaldaris had pledged his word during the 1933 political campaign that he would not overthrow the republican form of government if elected. After his Popular Party had smashingly defeated Venizelos's Liberals in the elections of Mar. 5, 1933, Tsaldaris held to his pledge but included in his Cabinet several extreme monarchists as well as two prominent military men—General Kondylis and Alexander Hadjikyriakos, Minister of Marine—who systematically weeded adherents of Venizelos out of the army and navy. The gov-

the ice. On Oct. 8, 1883, the expedition made camp at Cape Sabine, on the eastern shore of Ellesmere Land, east of Baffin Strait. During the winter of 1883-84 they lived on meagre rations amid untold hardship, and one by one the men died of hunger and cold. The darkest days began on Apr. 5, 1885. On July 22, Com. Winfield S. Schley of the United States Navy arrived off Cape Sabine heading a third relief party. He followed a trail which led to a collapsed tent under which were found the survivors of the expedition—seven in number. The tent had just recently collapsed but the men were too weak to lift it and they decided simply to wait for death.

Scientifically the Greely expedition made the nearest gravity observations to the pole, ascertained the climatic conditions of Grinnell Land, made glaciological studies, determined the hitherto unknown secular magnetic variation of that region, and through its tidal observations first disclosed the conformity of the sidereal day with the diurnal inequality of the tidal waves of the earth. Although primarily scientific, the explorations of the expedition covered unknown lands one-eighth the way round the globe north of the eighteenth parallel. The discoveries included the interior of Grinnell Land, the shores of the western polar sea, and the extension of Greenland to within 15 miles of its extreme northern latitude. The attainment of Lockwood and Brainerd wrested from England an honor held for three centuries; it was the only world's record verified by a later explorer. For his services, Greely was awarded the founder's medal of the Royal Geographical Society and the Roquette medal of the Société de Géographie of Paris. On Mar. 27, 1935, 50 years after the Expedition, he was awarded the Congressional Medal of Honor by the United States Government.

Lieutenant Greely was promoted to captain in 1886, and the following year assigned to active duty, when President Cleveland appointed him a Brigadier-General to succeed Gen. William B. Hagen as head signal officer. He was the first volunteer soldier of the Civil War to reach this rank. During the Spanish-American war, General Greely was in command of all the signal operations and laid thousands of miles of telegraph wires in Cuba and Puerto Rico, and subsequently, in the Philippines. In 1900 he was sent to Alaska to install 4000 miles of telegraph wires, submarine cables and wireless communications. In 1904 he served as a member of the board to regulate wireless telegraphy in the United States, in the previous year having been the United States delegate to the International Telegraph Conference at London and the International Wireless Telegraphy Congress at Berlin. At the time of the San Francisco earthquake and fire on Apr. 18, 1906, he was commander of the Pacific division of the Army and as such had charge of the relief operations there. Two years later he was retired for age. He represented President Taft at the coronation of King George V, in 1911.

General Greely was one of the founders of the National Geographic Society in 1887, and served continuously as a director from 1888. He was a frequent contributor to the Society's magazine and a lecturer at its meetings. His themes covered many subjects, including American discoverers of the Antarctic continent, economic evolution of Alaska, the geography of the Arctic, and accounts of his own Arctic Expedition. He presented to the Society his valuable collection on the Arctic, included in which were 286 volumes of scrapbooks

compiled by him and covering all phases of general polar exploration.

He contributed the article "Polar Research" to the second edition of THE NEW INTERNATIONAL ENCYCLOPEDIA; the articles "Exploration," "Polar Research," and "Alaska" to the NEW INTERNATIONAL ENCYCLOPEDIA SUPPLEMENT, and the article on "Exploration and Polar Research" to the NEW INTERNATIONAL YEAR BOOKS, 1914-27; and wrote *Three Years of Arctic Service* (2 vols., 1885); *American Weather* (1890); *American Explorers and Travelers* (1894); *Handbook of Polar Discoveries* (1896, 5th ed., enlarged, 1910); *Handbook of Alaska* (1912; new ed., enlarged, 1914); *Reminiscences of Travel and Adventure* (1927); *Polar Regions in Twentieth Century* (1928); and numerous reports of much value, among which are: *Diurnal Fluctuations of Barometric Pressure* (1891); *Proceedings of the Lady Franklin Bay Expedition* (1888); *Rainfall of Western States and Territories* (1888); *Discussion of International Simultaneous Meteorological Observations, 1878-87* (1891); and *Climatology of Arid Regions* (1891). He also compiled *Public Documents of the First Fourteen Congresses, 1784-1817* (1900).

GREENLAND. A Danish Arctic colony, second in size among the islands of the world. Area, 836,518 square miles, of which 705,234 square miles comprise the central ice-capped plateau. Population in 1934, about 16,600 Eskimos and 400 Danes. Chief settlements are Julianehaab (3530 inhabitants), Godthaab (1313), Godhavn, and Angmagssalik. Trade is a monopoly of the Danish Government and is chiefly in cryolite, furs, skins, and oil. In 1933 imports from Denmark were valued at 2,143,000 crowns and exports to Denmark at 4,064,000 crowns (1 crown exchanged at \$0.1907 in 1933). The colony is administered by a director in Copenhagen, Denmark.

GRENADA, grē-nā'da. A British colony in the Windward Islands. Area (including South Grenadines, 13 sq. m.), 133 sq. miles; population (Jan. 1, 1935), 83,888. St. George's, the capital, had 4629 inhabitants in 1921.

Production and Trade. Cacao, nutmegs, mace, lime, sugar, cotton, and coconuts were the main products. In 1934, imports were valued at £246,862, exports, £218,850 of which cacao accounted for £100,743; nutmegs, £48,778; mace, £25,103; lime oil, £6862; cotton, £5399.

Government. During the year 1934, revenue amounted to £143,498; expenditure, £153,778; net public debt, £200,602. Grenada was under the Governor of the Windward Islands, whose headquarters were at St. George's, Grenada, but it had its own legislative council. During the absence of the Governor from Grenada the Colonial Secretary becomes Administrator. See WINDWARD ISLANDS.

GRINDING. See GARBAGE AND REFUSE DISPOSAL.

GRINNELL COLLEGE. A coeducational, nonsectarian institution of higher learning in Grinnell, Ia., founded in 1846. The enrollment for the year 1935 was 778. There were 62 faculty members. The productive funds amounted to \$2,081,200. The library contained 95,000 volumes. A new department of sociology was established. President, John Scholte Nollen, Ph.D.

GROSSMITH, GEORGE. An English actor and manager, died in London, June 6, 1935, where he was born May 11, 1874. The son of the actor, George Grossmith, he was educated at University College, London, subsequently studying in Paris. His stage début was made in 1892 at the Criterion

when he appeared in the operetta *Haste to the Wedding*, which was written by his father and Sir W. S. Gilbert. His first success was in *Morocco Bound*, which he played the following year. From that time on he appeared in various musical shows, including *A Gaiety Girl* (1894); *The Shop Girl* (1894); *A Night Out* (1896); *The Vagabond King* (1897); *Great Caesar*, of which he was part author, (1899). In 1899 he appeared, both in England and America, with Mrs. Langtry in *The Degenerates*. Returning to England in 1900 he played in *The Gay Pretenders*, of which he was also part author, and in the following year he went on tour, returning to London in June to appear in *The Toreador*. He then appeared in various parts on the London stage, and in 1904-05 toured America with Edna May in *The School Girl*.

His return to the London stage was made in 1905 in *The Spring Chicken*, and he played various rôles in musical comedy until 1910, when he appeared in the Folies Bergères, Paris and in the Théâtre Rejane there in the following year. In 1913 he again appeared in New York in *The Girl on the Film*. In the following year he returned to England, and in association with Edward Laurillard produced *Potash and Perlmutter*. He himself appeared in the revue *Not Likely at the Alhambra* in 1914, and in December of that year returned to New York where he played the rôle of the Hon. Dudley Mitten in *To-Night's the Night*, also produced with Laurillard. In 1915 he played the same part in the London production. His next producing venture was *On Trial*, which he and Laurillard presented at the Lyric in April, 1915. Five years later this partnership was dissolved. On May 7, 1915, Grossmith delivered the Prologue in the "all star" production of *King Henry VIII* given for King George's Actors' Pension Fund, and during the following year played Lord Brocklehurst in *The Admirable Crichton* for various charities.

During the War he served as a lieutenant in the Royal Naval Volunteer Reserve and the Royal Navy Armoured Cars, and at the close of the War he returned to the stage as Max Touquet in *Kissing Time* (1919). From that time on he played in various successful musical comedies, including *Sally* (1921); *The Gay Lord Quex* (revival, 1923); *To-Night's the Night* (revival, 1924); *No, No, Nanette* (1925); *Princess Charming* (1926); and *The Five O'Clock Girl* (1929). In 1925 the firm of Grossmith and Malone, Ltd., which had been formed after the break with Laurillard, was dissolved, and in 1927 he became the lessee of the Strand Theatre. He retired from the stage in 1929, and until 1931 devoted his time to the cinema. He appeared in the American productions of *Women Everywhere*, *Three French Girls*, *Are You There?*, and *Reserved for Ladies*, all in 1930. He became managing director of the Theatre Royal, Drury Lane, in the following year, but resigned in 1932 to become associated with Alexander Korda in the formation of the London Film Productions. In that year he appeared in *Wedding Rehearsal* and *The Girl from Maxim's*, as well as in other British and French productions. He served also as advisory director of programmes for the British Broadcasting Company. In 1933, he played Touchstone in *As You Like It* at the outdoor theatre in Regent's Park.

Mr. Grossmith was long famous for his impersonation of a "dude," a type of rôle he played successfully on the stage for years, and he was

credited with introducing the Revue into England. Many of his musical works of this type were presented at the Alhambra and Empire Theatres, and to his credit were a long list of musical comedies. He was the recipient of several decorations, and in 1933 his memoirs, *G.G.*, appeared.

GADELOUPE, ga'de-loop'. A French West Indian colony comprising the main islands of Guadeloupe (Basse-Terre) and Grande-Terre, and the dependent islands of Les Saintes, Désirade, St. Barthélemy, St. Martin, and Marie Galante. Total area, 688 sq. miles; population (1932), 267,407. Basse-Terre, the capital (on the island of Guadeloupe), had 9268 inhabitants in 1932; Pointe-à-Pitre, 30,465.

Production and Trade. Sugar (40,954 metric tons in 1933), coffee, cacao, rum, vanilla, logwood, bananas, and manioc were the main products. In 1933, imports were valued at 150,200,000 francs; exports, 188,200,000 francs (franc averaged \$0.0501 for 1933). The United States supplied \$2,787,686 of the imports and received \$183,081 of the exports during 1934.

Government. The budget for 1932 was balanced at 66,220,864 francs; public debt (Jan. 1, 1933), 3,812,282 francs. The colony was administered by a governor aided by an elected council, and was represented in the French Parliament by a senator and two deputies.

GUAM. An insular possession of the United States; the largest and most populous island in the Marianas group in mid-Pacific Area, 210 square miles; population on June 30, 1935, 20,899 (including 19,455 natives, 754 non-natives, and 690 members of the naval establishment). Capital, Agaña, with an estimated population of 12,000 on June 30, 1935.

Primary education is free and compulsory. The school enrollment for 1934-35 was 4176 in 32 primary schools, 1 junior high school, 1 evening high school, and 8 other vocational and special schools. The languages spoken are English, Spanish, and Chamorro. Copra, coconut oil, alligator pears, and kapok are exported and cacao, coffee, corn, rice, sugar, sweet potatoes, and fruit are grown for home consumption. Copra production in the fiscal year ended June 30, 1935, totaled 3,618,910 lb., valued at \$72,440. Imports in 1934-35 were valued at \$586,336; exports, \$87,105. Government revenues were \$186,563; expenditures, \$161,258. A total of 42 vessels entered and cleared Apra Harbor during 1933-34.

Guam is a United States naval station, of which the Governor, who is a naval officer appointed by the President, is commandant. There is a native Congress, with advisory powers. Governor in 1935, Capt. George A. Alexander, U.S.N. Guam's long isolation from the currents of world commerce was ended on Nov. 27, 1935, when a great transpacific airliner arrived at Apra Harbor on its first flight inaugurating regular airmail service between Alameda, Calif., and Manila in the Philippines. The liner covered the 6602 miles from the United States to Guam in four days, including stops at Honolulu and Midway Island. An active programme of agricultural development to make Guam more self-sustaining was carried out under the direction of the naval government in 1935.

GUATEMALA, gwa'tā-mā'la. A republic in Central America. Capital, Guatemala City.

Area and Population. With an area of 45,452 square miles, Guatemala had an estimated population on Mar. 31, 1934, of 2,245,593 (2,004,900 at the 1920 census). The bulk of the population is either

pure Indian or of mixed Spanish and Indian blood, but the small ruling class is largely of European descent. Births in 1934 numbered 92,205; deaths, 60,051. The estimated populations of the chief cities on Mar. 31, 1934, were: Guatemala City, 134,400; Quezaltenango, 30,125; Coban, 26,774; and Zacapa, 18,094. In 1933-34 there were 2066 primary schools, with 95,350 pupils; 16 secondary schools, with 20,620 pupils; and the University of Guatemala at the capital. The population is about 80 per cent illiterate.

Production. Agriculture is the main support of the population and coffee and bananas normally account for more than 90 per cent of the total exports. Sugar, corn, wheat, rice, and potatoes are the other chief crops. Coffee production in 1934-35 was about 193,754,137 lb. (106,041,000 lb. in 1933-34). Banana exports in 1934 totaled 5,367,366 bunches. The 1933-34 sugar crop was 32,500 metric tons. Livestock in 1932 included 369,253 cattle, 165,631 sheep, 65,136 horses, and 89,416 swine. The forests yield chicle gum, hardwoods, and dyewoods. Mining is but little developed due to lack of transport facilities. Industrial establishments are confined largely to coffee-cleaning plants, flour and sugar mills, and shoe, soap, and pottery factories.

Foreign Trade. Imports in 1934 (exclusive of freight and insurance costs) were valued at \$8,073,104 (\$5,340,735 in 1933) and exports at \$14,808,464 (\$9,327,102 in 1933). The chief exports were coffee, bananas, hides, chicle, and honey. In 1934 the United States took 33.7 per cent of the value of all exports (34.3 in 1933) and furnished 50.8 per cent of the imports (51.0 in 1933). Germany supplied 11.5 per cent of the imports and took 37.8 per cent of the exports; Great Britain's share was 9 and 2.3 per cent, respectively.

Imports in 1935, excluding freight and insurance, totaled \$9,599,025 and exports were \$12,471,326. United States figures showed imports from Guatemala in 1935 of \$6,144,435 (\$4,542,552 in 1934) and exports to Guatemala of \$3,917,373 (\$4,069,756).

Finance. Government revenues in the fiscal year 1933-34 totaled 8,602,933 quetzales (8,265,998 in 1932-33) and expenditures were 8,440,464 quetzales (8,592,065 in 1932-33). Budget estimates for 1934-35 balanced at 8,945,184 quetzales; those for 1935-36 at 9,083,300 quetzales. The public debt on Dec. 31, 1934, totaled 14,857,000 quetzales, exclusive of £1,491,000 of the 4 per cent sterling debt outstanding.

Communications. The railway mileage in 1933 was 737, of which 652 miles represented lines of the International Railways of Central America. Highways extended 2523 miles and air lines connected Guatemala City with Quezaltenango, Puerto Barrios, Coatepeque, Flores, Coban, and various other Central American points. The chief ports are Puerto Barrios and Livingston on the Atlantic and San José and Champerico on the Pacific. The first telephone line between Guatemala and El Salvador was opened on Sept. 15, 1935.

Government. The Constitution of Jan. 1, 1928, provided for a President, elected for six years and ineligible for reelection for 12 years afterwards; a single-chambered National assembly, with 69 members in 1935; and a Council of State of 7 members (3 elected by the National Assembly and 4 appointed by the President) which supervises public contracts and concessions. President in 1935, Gen. Jorge Ubico, who assumed office Feb. 14, 1931.

History. President Ubico, who in 1934 had crushed opposition to his régime by wholesale executions and arrests, tightened his increasingly arbitrary

grip upon the country during 1935. With nearly two years of his term still to be served, the President early in the year took steps to insure his continuance in office, despite the provision of the Constitution making the incumbent in the presidency ineligible for reelection for 12 years. On May 5 Ubico's Liberal Progressive Party by the usual governmental manipulation and pressure won a majority of the seats in a convention called to revise the Constitution. The convention, which met on May 15, annulled the constitutional bar to the President's reelection and then held a "plebiscite" in which the voters were reported to have approved overwhelmingly the extension of Ubico's term for six years. Illustrative of Ubico's steady militarization of the country was a decree issued in September placing all telegraph, telephone, and radio communications under the War Department and providing that all employees of these utilities must be enlisted in the army.

The underground opposition against the Ubico Government continued, despite these measures. In April Congress passed legislation imposing more severe penalties for bombing and other terroristic crimes. In May 12 persons were arrested and charged with complicity in another plot against the President. Ubico's agents also brought extradition proceedings against some of his opponents who took refuge in neighboring states.

In January, 1935, the Ubico administration adopted a drastic trade-balancing policy. A decree provided for a 100 per cent increase in the tariff on imports from countries which increased their shipments to Guatemala by 100 per cent in any year (calculating 1934 as the basic year), unless such countries purchased an equivalent value of Guatemalan coffee. This policy was an answer to Germany's trade balancing policy inaugurated in 1934. Germany purchased only 7.84 per cent of Guatemala's coffee exports in the period Sept. 1 to Dec. 31, 1934, as compared with 42.43 per cent in the corresponding period of 1933. In May Congress approved the President's proposal to consolidate the foreign debt by means of bonds bearing 2 per cent interest for five years and 3 per cent thereafter, with a 2 per cent annual amortization, all bonds to be retired in 33 years.

GUTHRIE, WILLIAM DAMERON. An American lawyer, died in Lattington, L. I., Dec. 8, 1935. Born in San Francisco, Calif., Feb. 3, 1859, he was educated in France and England, and from 1879 to 1880 studied at the Columbia University Law School, being admitted to the New York bar in the latter year. He was admitted to the firm of Blatchford, Seward, Griswold, and Da Costa in 1884, which eventually became, in 1902, Guthrie, Cravath & Henderson. He retired from this firm in 1905, and four years later formed the partnership of Guthrie, Bangs, and Van Sinderen, which continued until 1922, when the firm of Guthrie, Jerome, Rand, and Kresel was formed. He retired from general practice in 1934.

During the course of his career, Mr. Guthrie argued many cases before the U.S. Supreme Court, including the income tax, California irrigation, Illinois inheritance tax, oleomargarine, and the

Kansas City stockyard rate cases. Shortly after the World War, he served as a special deputy Attorney-General for the State of New York in the litigation before the Supreme Court concerning the State's emergency housing laws. In 1925, he won the Oregon School law case, which would have put parochial schools in that State under the public school system; served as special counsel for the Brooklyn-Manhattan Traction System, 1927, and in the following year was retained by the Interborough Rapid Transit Company to press the 7-cent fare. In 1929 he was engaged as special adviser to Gov. Franklin D. Roosevelt in his conflict with the New York State Legislature over the state finance law and budget act. The State Court of Appeals unanimously upheld his construction of the budget act. His plan of repeal of the 18th Amendment to the Constitution was accepted by the Republic National Convention for submission to Congress in 1932, and in 1935, he was instrumental in the defeat of the Child Labor Amendment at Albany, New York.

Mr. Guthrie also was interested in education, and from 1907 to 1908 was Storrs lecturer at Yale, and from 1909 to 1922 was Ruggles professor of constitutional law at Columbia University. Also, from 1921 to 1923 he served as president of the New York State Bar Association.

For his services to France he was made a Grand Officer of the Legion of Honor, and for his efforts on behalf of the Roman Catholic Church he was made a Commander of the Order of St. Gregory, and a Master Knight of the Sovereign Order of Malta. Besides writing on political and legal topics, he published *Lectures on the 14th Amendment to the Constitution* (1898), and *Introduction to American Constitutional Law* (1913).

GYMNASTICS. The close battle for the national all-around championship between two Olympic team members, Fred Meyer of the New York Turn Verein and Frank Cumiskey of the Swiss Turn Verein, was the bright spot in 1935 gymnastics. Meyer dethroned Cumiskey, 312.9 points to 311.4. Each garnered two individual titles, also, Meyer on long horse and parallel bars, and Cumiskey in calisthenics and on the horizontal bar. George Gulak won the flying rings event, displacing Arthur Gilmore, three-time victor. The team honors went to the Swiss Turn Verein.

Miss Thera Steppich, of Long Island City, took the women's championship at the tournament held in conjunction with the men's. Miss Steppich dethroned Miss Consetta Caruccio of Baltimore.

HADRAMAUT. See under ARABIA.

HAITI, ha'ti. A West Indian republic, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince.

Area and Population. With an estimated area of 10,204 square miles, Haiti had a population of about 2,600,000 on Jan. 1, 1934. The population, with the exception of some 3000 white foreigners, is entirely Negro and mulatto. The chief towns, with their estimated populations, are: Port-au-Prince, 80,000; Cap Haitien, 12,500; Aux Cayes, 12,500; Gonaives, 10,000; St. Marc, 8000; Jacmel, 7500. French is the language of government and the upper class; the peasants speak a dialect known as Creole French. The Roman Catholic religion prevails, most of the priests being Frenchmen. There are about 1060 primary schools, with 87,000 pupils; 21 secondary schools, with 6000 pupils; 68 farm schools, with 12,200 pupils; and university

courses in law, medicine, applied science, and agriculture.

Production. The prosperity of the country depends largely upon coffee, which is the main money crop. Coffee exports in the fiscal year ended Sept. 30, 1935, totaled 41,870,400 lb., valued at \$3,818,418 (74,861,600 lb., valued at \$7,286,686, in 1933-34). Cotton exports in 1934-35 were 13,590,612 lb., valued at \$1,533,327; raw sugar, 71,626,407 lb., valued at \$692,257; sisal, 4983 metric tons, valued at \$405,881; bananas, 519,719 bunches, valued at \$152,651; cacao, 2,527,536 lb., valued at \$81,592. Logwood, rum, honey, pineapples, goatskins, and corn are produced for export also. The principal manufactured products are refined sugar, alcohol, rum, tobacco products, vegetable lard, and canned fruit.

Foreign Trade. Imports in the year ended Sept. 30, 1935, amounted to 41,161,621 gourdes (one gourde equals \$0.20), compared with 45,685,208 gourdes in 1933-34. Exports totaled 35,629,205 gourdes (\$1,546,191 in 1933-34). The quantity and value of the chief export items are listed under *Production*. The value of the chief import items in 1934-35 was (in 1000 gourdes): Cotton goods, 11,505; wheat flour, 3269; iron and steel and their manufactures, 2860; machinery, etc., 2235; fish, 1610. Of the 1934-35 imports, the United States supplied 48.39 per cent; the United Kingdom, 9.6; and France, 5.49 per cent. France purchased 39.55 per cent of the 1934-35 exports (chiefly coffee); the United Kingdom, 22.33 per cent; the United States, 12.07 per cent.

Finance. For the fiscal year 1934-35, government receipts totaled 30,091,641 gourdes (customs duties, 24,314,959 gourdes) and expenditures were 42,355,011 gourdes, leaving a deficit of 12,263,370 gourdes. For the preceding year, receipts were 36,752,165 gourdes, expenditures 36,802,276, and the deficit 50,110 gourdes. The operating deficit in 1934-35 was met entirely from reserves in the form of cash and investments. The unobligated Treasury surplus was reduced from 15,535,000 gourdes on Sept. 30, 1934, to 3,867,000 gourdes on Sept. 30, 1935. The gross public debt fell from 60,830,000 gourdes on Sept. 30, 1934, to 54,931,000 gourdes on Sept. 30, 1935.

Communications. Haiti's communication and transportation system includes 158 miles of railway line, 1075 miles of highways (including 935 miles of motor roads), air services to North and South America and to the other Caribbean islands, and a government-owned telegraph and telephone system.

Government. A new Constitution went into effect on June 17, 1935, following its ratification at a plebiscite held June 2. The discarded Constitution of July 21, 1932, had provided for a President elected for six years by Parliament and ineligible for reelection; a Senate of 20 members chosen for six years by electoral colleges, and a Chamber of Deputies of 36 members, elected for four years by popular vote. The new Constitution made the presidential term five years and by a special provision extended the term of office of President Stenio Vincent for five years beginning May 15, 1936. In subsequent presidential elections, Parliament was to designate three candidates from among those formally seeking the office and the people were then to choose one of the three candidates through primary electoral assemblies in each commune.

In the new Parliament there were to be 37 deputies elected by universal suffrage for four years and

21 senators, of whom 10 were to be appointed by the President and the other 11 by the Chamber of Deputies for six years. Terms of the existing members of Parliament were extended to permit them to hold office through the year 1936. The new Constitution made ownership of property a requisite for election to the presidency or for membership in Parliament. The powers of the executive were strengthened at the expense of the legislative and judicial branches. Safeguards thrown around the citizen's civil and political rights by the 1932 Constitution were omitted; the communes, which had formerly been declared autonomous, were placed under the Executive's direct control, and only taxpayers were permitted to vote on local questions; popular ratification of amendments to the Constitution made by Parliament was declared necessary before they could become valid. For a more detailed summary of the Constitution, consult the *Bulletin of the Pan American Union*, October, 1935, p. 799-804.

History. The new Constitution proclaimed June 17, 1935 (see *Government*), consolidated the victory of the conservative, pro-Government bloc in Parliament over the radical, anti-Government group. This conflict came to a head late in 1934 when the opposition majority group of 11 radicals in the Senate refused to ratify the American-Haitian agreement negotiated by Presidents Vincent and Roosevelt in Washington on Apr. 16, 1934 (see 1934 NEW INTERNATIONAL YEAR BOOK, p. 289-290). The radicals objected particularly to the terms for the purchase by the Haitian Government of the *Banque Nationale d'Haiti*, a subsidiary of the National City Bank of New York. The agreement called for appointment of a majority of Americans to the bank directorate pending retirement of the Haitian foreign debt in 1944. Partisan hostility to President Vincent apparently played a part also.

President Vincent ended the deadlock in Parliament by submitting the question of the purchase of the *Banque Nationale d'Haiti* to a plebiscite on Feb. 10, 1935. The vote was 454,357 in favor of the proposal and 1172 against it. The opposition Senators, who had denounced the plebiscite as illegal, still refused to ratify the bank agreement. President Vincent then had them expelled from their seats and the Chamber of Deputies on February 23 elected 11 pro-Government Senators to succeed them. These developments gave rise to opposition charges that President Vincent was the tool of American financial interests and of the Washington Government. Nevertheless the sale of the *Banque Nationale d'Haiti* was consummated on July 9, 1935, in accordance with the agreement of Apr. 16, 1934.

During the year the Haitian Government concluded important trade treaties with the United States and France. The American-Haitian treaty, signed in Washington March 28, provided for substantial reductions in Haitian tariff rates on American electrical machinery, radios, automobiles, meat, and various agricultural products. In return the United States agreed to retain on its free list the chief Haitian export products, especially coffee, cacao, sisal, logwood, and bananas. The American duty on Haitian rum and fruits was lowered. The agreement was to remain in force at least three years. The signing of a new Franco-Haitian commercial agreement, guaranteeing continuance of the important French market for Haitian coffee, ended fears that this market would be lost as a

result of the expiration of a previous Franco-Haitian convention on May, 26, 1935.

A law published Oct. 23, 1935, prohibited foreigners and naturalized Haitians from engaging in the sale of a long list of merchandise at retail and limited their activities as wholesale merchants to the larger towns. Scheduled to go into effect Feb. 1, 1936, the law was designed to eliminate Syrians and other foreigners who had secured a virtual monopoly of merchandising. On Aug. 30, 1935, President Vincent signed a contract with a French construction company for a five-year public works programme, to be paid for by a 40-year loan in the sum of 500,000,000 francs.

Economic conditions in Haiti were extremely depressed during 1935, due to low prices for coffee and other export commodities. The depression was reflected in the serious budget deficit for the 1934-35 fiscal year (see *Finance*). The 1934-35 coffee crop was the smallest recorded since 1914-15. However the depressed condition of the coffee industry was offset in part by the rapid expansion of the banana industry and the higher prices for sisal and cotton. A hurricane which swept over Haiti's southern peninsula late in October was reported to have cost 2000 lives and caused extensive property damage.

For the settlement of the Dominican-Haitian boundary dispute on Feb. 27, 1935, see DOMINICAN REPUBLIC under *History*.

HAMBURG, STATE OF. See GERMANY.

HAMILTON COLLEGE. A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 481 students was registered for the 1935 autumn session. There were 45 members of the faculty for the year 1935-36. The productive funds of the college were approximately \$4,123,000 and the income for the year 1934-35 was \$356,000. The library contained 166,572 volumes, and 34,300 pamphlets. President, Frederick C. Ferry, Ph.D.

HAMPTON INSTITUTE. An institution founded in 1868 at Hampton, Va., for the education of Negroes. The enrollment for the autumn term of 1935 was 572 men, 440 women, total 1012, while that for the summer school was 83 men, 498 women, total 581. The faculty numbered 125. The endowment for the fiscal year ending June 30, 1935, was \$10,214,571, from which the income was \$521,700. Gifts to the endowment and investment funds amounted to \$16,316. There were 55,400 volumes in the library. President, Arthur Howe.

HANDBALL. Champions experienced a miserable handball campaign in 1935, five of the 1934 holders falling in the year. Of the holders of the six national senior titles only the Trinity Club's one-wall doubles combination of Dan Levinson and Dave Margolis repeated. Husky Joseph P. Platak, of Chicago, dethroned Sam Atcheson, of Memphis, to win the four-wall singles championship and a pair of 200-pounders, Andrew Barry and Joe Gordon, traveled all the way from Los Angeles to Washington, D. C., scene of the championships, to take the four-wall doubles crown, conquering Johnny Endzwick and Joe Goudreau, of Cleveland, in the final.

In four-wall competition, Angelo Trulio, former national champion, won the New York State singles title for the sixth consecutive year, but was eliminated in the first round of the Metropolitan tournament by Bob Ford, an unranked competitor, who won the championship. In the one-wall game, Jack Londin, of the Trinity Club, defeated Margolis in the national singles laurels. Margolis defeat-

ed London in the final of the New York State tournament later in the year. Cy Alexander and Saul Schmookler, also of the Trinity Club won the New York State doubles titles and Miss Miriam Sperber was victor in the Metropolitan women's one-wall championship tournament.

New champions were also crowned in the hard-ball game, when Eric Peet of the Brooklyn Central Y. M. C. A. won the singles title and James V. and William Ryan of the Brooklyn Handball Club won the doubles award.

HARBORS. See **PORTS** and **HARBORS**.

HARVARD UNIVERSITY. A nonsectarian institution of higher education for men in Cambridge, Mass., founded in 1636. The number of students enrolled for the year 1935-36 was 7871. Of the 3727 registered in the college 721 were seniors, 842 juniors, 1012 sophomores, 1091 freshmen, and 61 out-of-course. Those in the graduate schools were distributed as follows: arts and sciences, 736; business administration, 746; and education, 202. The professional schools reported the following registrations: engineering (undergraduate and graduate), 110; divinity, 61; law, 1466; medicine, 529; dentistry, 156; public health, 32; architecture, 48; landscape architecture, 19; city planning, 11; special students, 28. For the summer session of 1935, the registration was 1637. The officers of instruction and administration for 1935-36 numbered 1822, of whom 280 were professors, 81 associate professors, 157 assistant professors, and 22 clinical professors.

Among visiting professors and lecturers for 1935-36 are: The Most Reverend William Temple, Archbishop of York, who comes as William Belden Noble Lecturer on Religion; Corrado Gini, professor of statistics and biometrics at the Royal University, and director of the Royal Institute of Statistics, both of Rome, Italy, who comes as lecturer on sociology for the second half-year; Charles Cestre, professor of American literature and civilization at the Faculté des Lettres, Paris, who comes as exchange professor from France for the first half-year; Karl Vietor, professor of German philology at the University of Giessen, Germany, who comes as Kuno Francke Professor of German Art and Culture during the first half-year; Lars Valerian Ahlfors, adjunct professor of mathematics at the University of Helsingfors, Finland, who comes as lecturer and tutor in mathematics throughout the year; Leonard Carmichael, professor of psychology and director of the Psychological Laboratory, Brown University, who comes as lecturer on psychology during the first half-year; Oliver Peter Field, professor of government at the University of Minnesota, who comes as lecturer and tutor in government throughout the year; Rudolph Ernest Langer, professor of mathematics at the University of Wisconsin, who comes as lecturer and tutor in mathematics; Herbert Jennings Rose, professor of Greek at the University of St. Andrews, Scotland, who comes as visiting lecturer on Latin during the first half-year; Robert Ulich, professor of philosophy at the Technische Hochschule, Dresden, will remain at Harvard in 1936 as lecturer on comparative education.

Endowment funds of the University in June, 1935, exclusive of land and buildings used for educational purposes, had a book value of \$128,827,068. Total expenses of the year for instruction,

research, and administration were \$9,527,120. Gifts for the year ending June, 1935, totalled \$2,375,494. The library contained 3,696,610 volumes and pamphlets. President, James Bryant Conant, Ph.D., LL.D.

HASSAM, CHILDE. An American artist, died at East Hampton, L. I., Aug. 27, 1935. Born in Dorchester, Mass., Oct. 17, 1859, he received his early training at the Boston Art School and subsequently studied in Paris under Boulanger and Lefebvre. His first work was sketching for newspapers, and his first exhibited work was shown in the National Art Gallery in 1883.

From the first he allied himself with the impressionistic movement and freshness of color ever remained a mark of his work. He evolved a system of his own, composed of primary colors juxtaposed in parallel stripes and dashes, the whole giving a remarkably vibrant and brilliant effect. His work was found to be suffused with light and increasing movement. A passion for living things was characteristic of him, and with an unlimited knowledge and power of execution, his intellectual appreciation of a subject made it worthy of study. His range of subject matter was wide—street scenes, landscapes, with and without nudes, interiors with figures—and often bizarre. During the War he made what were known as his flag pictures of Fifth Avenue, in which he caught the exultant spirit of flowing banners, as in "Allies Day." In later years he devoted much of his time to etching, which was notable for its reticence and subtlety, although he regarded painting as his chief occupation.

Early in his career he became associated with the Society of American Painters, but broke away to found, with Twachtman, Alden, Weir, and others, the Ten American Painters. In 1906 he was elected to the National Academy of Design. Other associations with which he was allied were the Société Nationale de Beaux Arts, Paris; the Secession, Munich; American Water Color Society; National Institute of Arts and Letters, and the American Academy of Arts and Letters.

He was the recipient of many awards including the Webb prize, Society of American Artists (1895); medal, Carnegie Institute, Pittsburgh (1898); Temple gold medal, Pennsylvania Academy of Fine Arts (1899); gold medal, St. Louis Exposition (1904); Thos. B. Clark prize, National Academy (1905); gold medal, Carnegie Institute (1905); Carnegie prize, Society of American Artists (1908); Walter Lippincott prize, Pennsylvania Academy (1906); Jennie Sesnan prize, Pennsylvania Academy (1910); third W. A. Clark and Corcoran bronze medal, Corcoran Gallery (1911); first W. A. Clark prize and gold medal (1913); Altman Prize, National Academy of Design (1918); Hudnut prize, American Water Color Society (1919); gold medal of honor, Pennsylvania Academy (1920); Pennell Medal, Print Club, Philadelphia (1931); Medal, American Art Dealers Association (1934); John Elliott Memorial Prize, "for the greatest poetic imagination," Newport Art Club (1935).

His work is to be found in many art museums in the United States and abroad. His works include: "The Brush House and Street in Portsmouth, New Hampshire," "Colonial Church at Gloucester," "14th July Rue Daunou, Paris," all in the Metropolitan Museum of Art, New York; "Church at Old Lyme" in the Fine Arts Academy, Buffalo; "Cat Boats—Newport" in the Pennsylvania Academy, Phila.; "Contre-Jour," Art Institute, Chicago; "Avenue of the Allies" at the Lux-

embourg, Paris, and the Gellatly Collection of 18 drawings in the National Gallery, Washington.

HAUPTMANN, BRUNO R. See LAW; NEW JERSEY.

HAVERFORD COLLEGE. An institution of higher education under the control of the Society of Friends in Haverford, Pa., founded in 1833. Registration for the autumn term of 1935 totaled 328 students. There were 43 members on the faculty. The productive funds of the institution amounted to \$4,090,000 (book value). The library contained 132,000 volumes. During the year, the Emma Ridgway Comly Fund of \$50,000 and the Ellen W. Lonsgreth Fund of \$20,000 were received by the College. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII, ha-wi'e. A group of islands in the Pacific 2809 miles southwest of San Francisco, forming a Territory of the United States. Capital, Honolulu.

Area and Population. Hawaii has an area of 6407 square miles and a population estimated on June 30, 1935, at 384,437 (368,336 at the 1930 census). Populations of the main inhabited islands in 1930 were: Oahu, 202,887; Hawaii, 73,325; Maui, 48,756; Kauai, 35,806; Molokai, 5032; and Lanai, 2356. The estimated population of Honolulu on June 30, 1935, was 143,590; of Hilo, 15,663. The 1935 population was divided racially as follows: Japanese, 148,972; Filipinos, 54,668; Portuguese, 29,550; Chinese, 27,264; Hawaiian, 21,710; Caucasian-Hawaiian, 18,742; Asiatic-Hawaiian, 17,236; Puerto Rican, 7368; Korean, 6668; other Caucasians, 50,258; Spanish, 1267; others, 754. Of the 384,437 inhabitants, 291,645 were citizens and 92,792 aliens. Living births in 1934-35 numbered 9252; deaths, 3236 (the death rate of 8.42 per 1000 was the lowest recorded for the Territory).

Education. On June 30, 1935, there were 184 public schools, with 2674 teachers and 83,319 pupils. Private schools on Dec. 31, 1934, numbered 80, with 595 teachers and 13,130 pupils. Of the public school pupils, 99 per cent were citizens. Enrollment in the University of Hawaii at Honolulu for 1934-35 totaled 1984, including 1259 candidates for degrees. The summer school enrollment was 1126. The cost of public education during 1934-35 was \$5,010,516.

Production. The value of the chief agricultural products in 1934 was estimated at \$85,090,523, apportioned as follows: Raw sugar, 952,187 short tons, valued at \$57,045,523; canned pineapple and juice, \$27,000,000; coffee, 9,500,000 lb., valued at \$1,045,000. The pineapple pack in 1935 was 10,000,000 cases of fruit and 2,500,000 cases of juice. Production of canned tuna fish was 131,000 cases, valued at \$622,250. Hides, bananas, and wool also are exported. The tourist trade, always an important source of income, increased notably during 1934, the number of tourist arrivals being 16,161, compared with 10,111 for 1933. Deposits in the Territory's six banks totaled \$80,497,015 on Dec. 31, 1934, against \$70,414,487 on Dec. 31, 1933. Savings accounts increased to \$48,298,291 from \$43,399,283 a year earlier.

In 1935 raw sugar production totaled 986,075 short tons, valued at \$63,739,000. The pineapple crop was valued at \$35,625,000; coffee, about \$750,000.

Overseas Trade. Imports in the calendar year 1934 were valued at \$69,234,606 (\$63,127,987 in 1933) and exports at \$95,830,059 (\$94,317,696 in 1933). Imports from the United States were \$63,472,682 (\$57,894,488 in 1933) and exports to the

United States totaled \$94,513,699 (\$93,641,887 in 1933). The chief exports to the United States in 1934 were: Raw sugar, \$53,423,919; canned pineapples, \$34,156,106; United States goods returned, \$2,575,140; molasses, \$1,436,190; coffee, \$642,962; fish, \$542,853.

In 1935 imports from the United States were \$78,924,776; exports to the United States, \$98,695,969.

Finance. The consolidated statement of Territorial budget operations for the fiscal year ended June 30, 1935, showed total revenue receipts of \$13,128,781 and non-revenue receipts of \$10,895,723, while total payments for government costs were \$11,714,842 and for non-governmental costs \$11,251,750. Total receipts were \$24,024,504 and total payments \$22,966,591. The total bonded debt outstanding on June 30, 1935, was \$31,715,000 (\$32,012,000 on June 30, 1934).

Communications. A new era in Hawaiian communications was opened with the inauguration on Nov. 22, 1935, of airmail service from Alameda, Calif., to Manila, via Hawaii, Midway and Wake Islands, and Guam. The swift Pan American Clipper planes brought Honolulu within 18 hours of the mainland. They were to open a passenger service also early in 1936. Planes of the inter-island air service flew 292,109 miles during the year ended June 30, 1935, carrying 11,898 passengers. Railways extended about 1038 miles, including 667 miles of plantation lines. There were 50,070 privately owned motor vehicles in 1935, an excellent highway system, 23,438 telephones with 89,229 miles of wire, and radiotelephone service to the United States. A total of 1211 overseas vessels of 10,402,112 gross tons entered Hawaiian ports during 1934-35.

Government. The Governor and the Secretary of the Territory are appointed for four years by the President of the United States. There is a bicameral legislature, consisting of the Senate of 15 members elected for four years and the House of Representatives of 30 members elected for two years. A delegate, elected biennially, represents the Territory in the United States Congress. Governor in 1935, J. B. Poindexter, who assumed office Mar. 1, 1934. Delegate to Congress, Samuel Wilder King (Republican), elected in November, 1934.

History. Following a formal petition for Statehood submitted to Congress in May, 1935, a committee composed of five members of the U.S. House of Representatives conducted hearings on the question in Hawaii for two weeks during October. Representatives of both the Republican and Democratic parties in Hawaii testified that sentiment there overwhelmingly favored State's rights. Testimony before the committee indicated that the islanders' desire for Statehood had been strengthened by proposals in Congress for the establishment of a commission government for Hawaii and for restriction of the governorship to residents of the mainland. The quota system restricting exports of Hawaiian sugar to the United States and the desire of the islanders to restrict immigration of cheap labor from the Philippines were advanced as additional reasons why Hawaii desired full Statehood immediately. The loyalty to American institutions of the Japanese-American citizens of Hawaii was another problem in which the committee displayed deep interest. Out of 291,645 citizens on June 30, 1935, 108,355 were of Japanese descent, and the high birth rate among them aroused fears that they would eventually attain a voting majority. The recommendations of the committee were to be submitted to Congress in 1936.

Governor Poindexter in his message of Feb. 20, 1935, to the Legislature urged that a memorial for a unicameral legislature be addressed to Congress. He asked territorial legislation tightening restrictions on the sale of liquor, and an amendment of the electoral law which would permit names of candidates to appear on the ballot without political designation. Legislation passed before adjournment on May 1 included a new general (gross income) excise tax law, a bank excise tax law, consumption tax law, and personal property tax law. Other measures enabling the Territory to take advantage of Federal legislation were adopted, as well as joint resolutions asking legislation by Congress authorizing the Territory to issue bonds for public works.

The Territory shared in the emergency relief and recovery measures of the Federal Government. The FERA contributed \$2,358,000 during 1934-35 for unemployment relief, the Territory contributing \$496,557. Projects undertaken with these funds included work on highways, bridges, parks, flood control, school grounds, playgrounds, public health facilities, etc. Up to the end of September, 1935, the sugar industry had received about \$11,500,000 in benefit payments from the sugar processing taxes of the AAA. Ten per cent of these funds, earmarked for the development of agricultural enterprises other than sugar, were devoted to various projects such as the eradication of rats, development of truck farming, improvement of farm marketing facilities, development of tropical fruits and nuts and promotion of the poultry industry. A total of 115,134 man-days of work was done by the Emergency Conservation Work. The Federal Housing Administration and Home Owners' Loan Corporation carried on active campaigns. Before the Supreme Court decision of May 27, 1935, voiding the NRA, application of codes of fair competition to retail trades in Hawaii increased payrolls by \$13,000 a week and provided work for 700 additional persons, according to sworn statements of about half the retailers. Governor Poindexter reported that competent estimates of the total payroll and employment increases ran much higher.

Partly as a result of such emergency expenditures, the increased demand and higher prices for Hawaiian exports, and the larger tourist trade, the islands witnessed a marked economic recovery during 1935. The industrial struggles which disrupted shipping activity on the Pacific coast during 1934 spread to Hawaii in 1935 when the radical International Longshoremen's Union attempted to organize the Hawaiian, Japanese, and Portuguese stevedores at Honolulu. The industrial, financial, mercantile, and shipping interests formed the Industrial Association of Hawaii to combat the union. For the inauguration of air mail service to the mainland, see *Communications*.

Following a sharp earthquake, accompanied by a tidal wave, the 14,000-foot volcano of Mauna Loa on the island of Hawaii began to erupt on November 21. Rivers of molten lava poured down the mountain in several directions. By December 26 one stream 600 feet wide had followed the course of the eruption of 1855 to within 30 miles of Hilo, menacing the city's water supply. On December 27 army aviators dropped 6000 pounds of bombs at the source of the lava stream in an effort to divert its flow. A few days later a slackening of the flow was reported.

HAY. The 1935 hay crop of the United States was estimated by the Department of Agriculture at 87,620,000 tons and the acreage at 64,488,000 acres, the smallest but one in 17 years. This crop, next to

the largest in 10 years, was 9 per cent above the average for the 5 years 1928-32 and 54 per cent above the small crop of 57,028,000 tons in 1934. The yield of all tame hay per acre, 1.45 tons, was with two exceptions the highest in 69 years of record. The yield of all tame hay including clover and timothy, alfalfa (which see), grain, annual legume (soy beans, cowpeas, and peanut vines), sweet clover, and lespedeza hay amounted to 75,619,000 tons and was produced on 52,026,000 acres. The production of the leading states was reported as follows: New York 5,475,000 tons, Iowa 5,292,000 tons, Wisconsin 5,182,000 tons, and California 4,259,000 tons. The 1935 wild hay production was placed at 12,001,000 tons, Nebraska ranking first with an estimated yield of 2,475,000 tons followed by Minnesota with 1,957,000 tons and North Dakota with 1,454,000 tons.

The crop of all clover and timothy hay, not including sweet clover and lespedeza or Japan clover hay, was estimated as 26,611,000 tons and the acreage as 20,378,000 acres. Of the eight States producing over a million tons New York reported a yield of 3,030,000 tons, Pennsylvania of 2,158,000 tons, Ohio of 1,776,000 tons, and Iowa of 1,500,000 tons. For grains cut green for hay a yield of 5,009,000 tons on 4,354,000 acres was reported. In the production of this class of hay California stood first with 1,253,000 tons followed by North Dakota with 655,000 tons, Oregon with 587,000 tons, and Washington with 476,000 tons. The yield of miscellaneous tame hay, comprising hay from Sudan, Bermuda, Johnson and orchard grasses, red top, millet, vetch, mixed cowpeas and sorghum, and old meadows, was estimated at 7,194,000 tons, of annual legume hay at 5,862,000 tons, lespedeza hay at 1,214,000 tons, and sweet clover hay at 663,000 tons. For the fiscal year 1934-35 exports of 3000 long tons and imports of 49,000 short tons of hay are recorded.

HENDERSON, Rt. Hon. ARTHUR. A British Labor leader and peace advocate, died in London, Oct. 20, 1935. He was born in Glasgow, Sept. 15, 1863, but his family eventually moved to Newcastle, England, and he obtained work as an iron-molder's apprentice in Robert Stephenson & Co.'s works. The trades union movement soon interested him and he became an active leader. For a time he served on the Newcastle City Council and Darlington Borough Council, and in 1903 became Mayor of Darlington. Subsequently he was a magistrate of Durham County.

In 1903, Henderson, who had been loosely connected with the Liberal Party, decided to cast his lot in with the Labor movement, and was the successful candidate for Barnard Castle division of Durham in a three-cornered contest for Parliament. He soon won the respect of his few Labor colleagues, and the next year was made treasurer of the Party. In 1908 he was elected chairman of the Parliamentary Labor Party, holding the office until 1910, and being reelected from 1914 to 1917. He was secretary from 1911 to 1914, and for part of that year was chief whip of that Party. He held this position also from 1921 to 1924, and again from 1925 to 1927. He was reelected by the Barnard Castle Division until 1918, and after that was defeated in several general elections, although returned at subsequent by-elections.

The World War almost caused the disruption of the Labor Party, for Ramsay MacDonald, and a few other members, refused to condone British participation in the War, whereas Henderson resolutely favored it and was able to swing the majority of the Party into line. With the formation of the first Coalition Ministry by Herbert Asquith in 1915, Henderson was made President of the Board of Trade and Paymaster-General, his chief function being to advise the Cabinet in regard to labor affairs. At the downfall of this ministry and the formation of Lloyd George's, he became a minister without portfolio, and was successful in throwing the support of labor behind the Compulsory Service Act, which was then bitterly opposed by many labor organizations. In 1917 he was sent to Russia to survey the results of the Kerensky revolution. The Kerensky provisional government was sponsoring an International Labor and Socialist Conference at Stockholm at that time and Henderson came to the conclusion that British labor should be represented. Upon his return he tried to interest organized labor but met with little success and his plans for participation did not materialize. He resigned from the cabinet because of Lloyd George's refusal to approve participation in the Conference, and in subsequent elections met with defeat.

In the first Labor ministry, formed as a result of the 1923 election, Henderson became Home Secretary in MacDonald's cabinet. Several important measures, including an amendment to the factory acts, emanated from his office, and he played a notable part in helping to frame the Geneva protocol for the settlement of internal disputes by arbitration and conciliation. In the 1929 Labor ministry he was appointed secretary for Foreign Affairs amid much criticism, but soon he was considered a worthy successor to the great names that had preceded him. During his administration diplomatic relations were resumed with Soviet Russia, and he shared with Philip Snowden, the laurels won by the British at the Hague Conference on the Young Plan. In August, 1931, the Labor ministry was defeated and MacDonald joined the National Government (Coalition) as Prime Minister, which drew upon him the enmity of the Laborites. Henderson was chosen leader of the Labor Party, but his political fortunes were low and he tried unsuccessfully to be elected to Parliament. He resigned as leader of the Labor Party in the House of Commons in October, 1932, but did retain the office of secretary-treasurer. In September, 1933, he was returned to Parliament in the by-election from Clay Cross Division of Yorkshire.

For many years, Mr. Henderson had been an able and ardent advocate of the cause of peace, and during his tenure as Foreign Secretary endeavored to effect friendly relations with Europe, not always with success. In 1932 he was appointed by the League of Nations chairman of the International Disarmament Conference and his work at Geneva won high praise. In April of 1933 he was awarded the Wateler Peace Prize of the Carnegie Foundation, for "the energy, persistence, ability, and impartiality with which Mr. Henderson has presided over the Disarmament Conference." The Nobel Peace Prize was awarded to him in December, 1934, for his work at the Conference, and in accepting the honor, he said, in part: "You can not use the word failure in reference to the Conference. There is no greater human issue upon which hope concentrates than the cause of disarmament. There is no greater achievement to be realized than that of securing the world's peace. There is no greater

action in the world than that of leading the people to peace, freedom, and security."

HISPANIC SOCIETY OF AMERICA, THE. An international organization founded in New York City in 1904 to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership of the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. President, Archer M. Huntington. Headquarters: 156th St., West of Broadway, New York City.

HISPANIOLA. Official name of the island commonly known as Haiti. See HAITI; DOMINICAN REPUBLIC.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writings, formed in 1884 by a group of scholars and chartered by Congress in 1889. Its membership in 1935 numbered approximately 2991.

The association's 50th annual meeting was held in Chattanooga, Tenn., Dec. 27-30, 1935. Meeting concurrently were the Mississippi Valley Historical Association, Conference of State and Local Historical Societies, Agricultural History Society, American Society of Church History, Medieval Academy of America, and National Council for the Social Studies.

Several round table discussions were held by the association, together with the American Political Science Association, one of the most interesting being that on "Civil Liberties," in which Secretary of the Interior Harold Ickes, Roger Baldwin of the American Civil Liberties Union, and Hamilton Fish of New York participated. The John H. Dunning Prize for 1935 was awarded to Miss Angie Debo for her book, *The Rise and Fall of the Choctaw Republic*.

The official organ of the Association is the *American Historical Review*, a quarterly. The officers for 1935 were: President, Michael Rostovtzeff, Yale University; first vice-president, Charles H. McIlwain, Harvard University; second vice-president, Guy Stanton Ford, University of Minnesota; secretary, Dexter Perkins, University of Rochester; treasurer, Constantine E. McGuire, Washington, D. C.; executive secretary, Conyers Read, Philadelphia, Pa.; and assistant secretary-treasurer, Patty W. Washington. Headquarters are at 40 B Street, S.W., Washington, D. C.

HISTORY. See FRENCH LITERATURE; GERMAN LITERATURE; LITERATURE, ENGLISH AND AMERICAN; PHILOLOGY, MODERN, ETC.; also sections on *History* under each country.

HITCHCOCK, FRANK HARRIS. An American editor and cabinet member, died at Tucson, Ariz., Aug. 5, 1935. Born in Amherst, O., Oct. 5, 1869, he attended Harvard University, receiving his degree in 1891, and later studied law at Columbian,

now George Washington, University in Washington, being admitted to the bar in 1894. Following his graduation he obtained a minor post in the Department of Agriculture and served so well that he was brought to the attention of his superiors, eventually becoming Chief Clerk of the Division of Foreign Markets of the Department of Agriculture in 1897. George B. Cortelyou, secretary of Commerce and Labor in President Roosevelt's cabinet, became interested in him and had him removed to his department in 1903 as chief clerk during which time he also had charge of the Alaskan fur seal service and prepared "Hitchcock's regulations" which not only safeguarded the interests of the United States, but put the care of the seals themselves on an intelligent basis. When Mr. Cortelyou was appointed chairman of the Republican National Committee in 1904, Hitchcock joined him as assistant secretary, and a year later when Cortelyou was made postmaster-general in Roosevelt's cabinet, Hitchcock became first assistant. He served as a member of the Government Exposition Board, 1903-04, and as a member of the Keep commission of 1905-06 to investigate waste in government departments.

In the 1908 campaign for the presidency, President Roosevelt suggested Mr. Hitchcock to William H. Taft as a pre-convention manager and he succeeded so ably in this position that Taft offered him the job of managing the Republican National campaign. With the election of Mr. Taft to the presidency, Hitchcock became postmaster-general, Mar. 5, 1909, and retained the position of chairman of the Republican National Committee. During his tenure, which lasted until Mar. 4, 1913, a surplus of revenues over expenditures resulted in the Department, the present parcel post system was organized, going into effect Jan. 1, 1913, as well as that of postal savings banks. His administration is credited with beginning the first air mail service and he himself known as the "Father of the United States Air Mail," for in 1911 an experimental aerial air service was first authorized and at the aviation meet at the Nassau Boulevard Aerodrome on Long Island, in September, an aerial post box was maintained and the mail was carried to Mineola in an aeroplane and there given to the postmaster. On one occasion the postmaster general was a passenger and personally carried the mail sack.

He made his home in Arizona from about 1907, and held a half interest in *The Daily Citizen* of Tucson, and after the death of his partner managed it himself. Subsequently he bought *The Las Vegas* (New Mexico) *Optic*. He built up a strong Republican organization in the State and was instrumental in obtaining many benefits for it, including the placing of Tucson and Phoenix on the Transcontinental Airways and Federal funds with which to build the mountain road from Tucson to Mount Lemmon.

Always interested in aviation, he was a Lieutenant-Colonel in the Officers' Reserve Corps of the Army Air Corps, and governor for Arizona of the National Aeronautic Association.

HOBART COLLEGE. An institution for the higher education of men in Geneva, N. Y., founded chiefly under the auspices of the Protestant Episcopal Church in 1822. William Smith College, a coordinate institution for the separate instruction of women, was established in 1908. The student enrollment in Hobart College for the autumn of 1935 was 300, while the enrollment in William Smith College was 120. The combined faculty of the two

colleges numbered 43. The library contained approximately 100,000 volumes and 25,000 unbound pamphlets. The endowment amounted to \$1,200,000, and the income for the year was approximately \$350,000, including gifts of \$20,000. President Murray Bartlett, D.D., S.T.D., LL.D., was to retire May 31, 1936, after 17 years of service. William Alfred Eddy, Ph.D., Professor of English in Dartmouth College, was appointed to succeed him.

HOCKEY. The Montreal Maroons brought the Stanley Cup, emblematic of world's professional hockey supremacy, back to Canada in 1935. Guided by Tommy Gorman, manager who in 1934 had piloted the Chicago Black Hawks to the same high estate, the Maroons contributed one of the great surprises of hockey in turning back the heavily favored Toronto Maple Leafs in three straight games to capture the title. Toronto won the National Hockey League championship, beating the Boston Bruins in the post-season playoffs between the winners of the American and International groups. To reach the round with the Maple Leafs, the second place winners in the International division had to beat the Chicago Black Hawks and then eliminate the New York Rangers, winners in the third place playoff.

The Boston Cubs won the Canadian-American League race and also were victorious in the playoff series, defeating Providence in three successive games. The Detroit Olympics won the International League playoffs from the London Tecumsehs. To a Canadian team also went the honor of taking the world's amateur championship, the Winnipeg Monarchs sweeping through the international tournament at Davos, Switzerland, winning seven straight games. The Halifax Wolverines defeated the Montreal Royals for the Allan Cup, emblematic of the amateur superiority of Canada. The Baby Ruth team of Chicago, winner of the Western A.A.U. championship, turned back the Boston Olympics, Eastern winner, for the National A.A.U. title. Canadians were ineligible in this tournament for the first time. Yale captured the Quadrangular League crown and the University of Michigan was best in the Western Conference. The Vancouver Lions topped the Northwestern League and St. Paul won in the Central League.

HOGS. See LIVESTOCK.

HOLLINS COLLEGE. A liberal arts college for women, founded in 1842, located 6 miles north of Roanoke, Virginia. It is nonstate, nonsectarian, with an endowment of \$405,300. The 1935 enrollment is 310. The faculty numbers 44. There are 22 buildings on a campus which includes more than 400 acres. The physical equipment was valued in 1932 at \$1,323,639. President, Bessie C. Randolph, Ph.D.

HOLMES, OLIVER WENDELL. An American jurist, died in Washington, D. C., Mar. 6, 1935. He was born in Boston, Mass., Mar. 8, 1841, the son of Dr. Oliver Wendell Holmes, the poet and essayist, and entered Harvard University in 1857. In April of 1861 the Civil War began and young Holmes volunteered, receiving his degree in June. He served with the 20th Massachusetts Volunteers, later known as the "Harvard Regiment," for three years, being thrice wounded: first, in the chest at Ball's Bluff on Oct. 21, 1861; second, in the neck, at Antietam, Sept. 17, 1862, and third, in the heel at Marye's Hill, Fredericksburg, May 31, 1863. Later he was assigned to the staff of Gen. Horatio G. Wright and was mustered out of the service on July 16, 1864, with the rank of captain.

After considerable thought as to the career he

should follow, he turned to the law and was graduated from the Harvard Law School in 1866, being admitted to the bar in the following year. In 1870 he became instructor in constitutional law at Harvard and in the same year took over the editorship of *The American Law Review*. For three years he edited the *Review*, giving it up in 1873, the same year that he issued his edition of Kent's *Commentaries*. In 1880 he delivered a series of lectures on common law at Lowell Institute, and two years later issued them in book form under the title, *The Common Law*, a book which the London *Spectator* considered the most original work on legal speculation that had appeared since the publication of Sir Henry Maine's *Ancient Law*. The excellence of this work caused the Harvard Law School to offer him the professorship of law, which he accepted in 1882, although a short time later Governor Long of Massachusetts appointed him to the Supreme Court of the State as associate justice, and he became chief justice on Aug. 2, 1899.

While serving on the Massachusetts bench, Justice Holmes issued many decisions that were considered as establishing precedents, especially those that dealt with the status of labor organizations and the legality of picketing. He declared that workmen had a right to combine, and "to support their interests by arguments, persuasion, and the bestowal or refusal of those advantages which they otherwise lawfully control, so long as they do no violence or threaten no violence."

In 1902 President Roosevelt, attracted by Justice Holmes's labor decisions, appointed him to succeed Justice Gray of Massachusetts in the United States Supreme Court, where his profound legal learning, his sound judgment, and humor, and his gifts of literary expression gave him a position of great influence. The first case with which he was concerned was that of the Northern Securities, in which the dissolution of the Northern Securities Company was sought by the Government on the ground that it was a violation of the Sherman Act. The case was won by the United States, 5 to 4, but Justice Holmes, in writing the minority opinion, gave expression to views that were not to become established until almost 20 years had passed. He argued against the assumption that "when a combination reached a certain size it might have attributed to it more of the character of a monopoly merely by virtue of its size than would be attributed to a smaller one." In 1920, when the Railway Act was passed, time had caught up with his thought, for where in the Northern Securities case a comparatively small combination was declared illegal, the Railway Act consolidated many disjointed railroad systems into a few systems, each of them far greater than the one formed by Morgan and Hill.

As Justice Holmes objected to the use of the clause limiting States' rights many of his opinions hinged on the "due process" language of the Fourteenth Amendment. He said, "There is nothing I more deprecate than the use of the Fourteenth Amendment beyond the absolute compulsion of its words to prevent the making of social experiments that an important part of the community desires." The importance of the issues involved, and the arresting quality of the language used, led to the belief that the Justice was generally a dissenter. This however was false, for he concurred with the majority opinion about 10 times more often than he dissented, and seldom dissented alone.

In 1925 he delivered the opinion in the Chicago water case, whereby the city of Chicago was to lessen by half the amount of water it diverted from

Lake Michigan. During the year 1927, he delivered many notable decisions, including the condemnation of the color line in the Texas primary law; the establishment of the fact that bootleggers were subject to income taxes; the upholding of free speech and assembly in what seemed to be extreme cases. In May, 1929, he dissented from the opinion that Rosika Schwimmer should be denied citizenship as she refused to bear arms, saying, in part, "Some of her answers might excite popular prejudice, but if there is any principle of the Constitution that more imperatively calls for attachment than any other, it is the principle of free thought—not free thought for those who agree with us, but freedom for the thought we hate." On Jan. 12, 1932, Justice Holmes retired from the United States Supreme Court at the age of 91, after having served 30 years as a great liberal judge.

Besides *The Common Law*, he published also *Speeches* (1891, 1913); *Collected Legal Papers* (1920), and contributed to *Selected Essays on the Law of Torts* (1924). In 1929 appeared *Dissenting Opinions of Mr. Justice Holmes*, arranged by Alfred Lief, and two years later, *Representative Opinions of Mr. Justice Holmes*, arranged by the same.

HOLY CROSS, COLLEGE OF THE. A Roman Catholic college for men, under the Society of Jesus, in Worcester, Mass., founded in 1843. The enrollment for the autumn of 1935 totaled 1189. The faculty numbered 87. The library contained 115,000 volumes. President, the Rev. Francis J. Dolan, S.J.

HOLY YEAR. See ROMAN CATHOLIC CHURCH.

HONDURAS, hōn-dōō'rās. A Central American republic. Capital, Tegucigalpa.

Area and Population. Honduras has an area of about 44,275 square miles; the population on Nov. 30, 1934, was 962,685 (854,184 at the 1930 census). The people are mainly of mixed Spanish and Indian blood, but there is a considerable Negro population in the north coast banana region, and some 35,000 aborigines. Populations of the chief towns in 1930 were: Tegucigalpa, 47,075; San Pedro Sula, 24,425; La Ceiba, 13,073; Comayagua, 12,703; Choluteca, 12,248. Primary education is nominally free, compulsory, and secular, but in 1933 only 41,689 out of 103,463 children of school age were receiving instruction. About 69 per cent of those over seven years of age were illiterate. In addition there were 814 pupils in 15 secondary schools, 1405 in normal schools, and 372 in commercial high schools. The National University at the capital had 308 students in 1933.

Production. Stock raising and agriculture are the principal occupations. About 30 per cent of the population is dependent upon the banana industry, controlled by the United Fruit and other foreign companies. Coffee, tobacco, and coconuts are the other chief products. Sugar production was discontinued in 1934. Banana exports in 1933-34 totaled 19,462,596 stems (23,493,676 stems in 1932-33). Coffee exports in 1933-34 amounted to about 3,306,900 lb. Coconut exports (1932-33) totaled 5,665,000 nuts, valued at \$53,000. Mahogany and other hardwoods and gold and silver are produced. The chief manufactures are straw hats and cigars.

Foreign Trade. For the fiscal year ended July 31, 1934, imports were valued at \$8,382,084 in U.S. currency (\$6,287,563 in 1932-33). Exports totaled

24,799,259 lempiras (28,554,397 lempiras in 1932-33). The lempira, equal to \$0.50 at par, exchanged at an average of \$0.4878 in 1933 and \$0.49 in 1934. The United States furnished 70 per cent of the 1933-34 imports (73 per cent in 1932-33) and purchased 71.7 per cent of the total exports (67 per cent in 1932-33). The value of the chief exports in 1932-33 was: Bananas, \$11,747,000; coffee, \$304,000; leaf tobacco, \$84,000.

United States figures showed general imports from Honduras in 1935 of \$6,337,225 (\$7,790,924 in 1934) and exports to Honduras of \$5,633,026 (\$5,993,332 in 1934).

Finance. The national budget estimates for the fiscal year ended July 31, 1936, balanced at 11,741,000 lempiras. Actual budget returns for 1933-34 showed receipts of 11,156,000 lempiras and expenditures of 13,038,000 lempiras; for 1934-35 budget estimates balanced at 10,283,000 lempiras.

The public debt on July 31, 1934, amounted to 28,661,422 lempiras (\$14,044,096), of which 21,042,703 lempiras (\$10,310,924) represented the internal and 7,618,719 lempiras (\$3,733,172) the external debt.

Communications. Pack mules and ox carts, long the accustomed means of transportation, are being supplanted by the railways, automobiles, and aeroplanes. In 1934 there were 893 miles of railway lines, about 375 miles of motor highways, 76 landing fields, and air lines linking the capital with many points in the republic as well as with the inter-American air network. In 1935 the Honduran air system averaged 42 flights per week, and more than 80,000 air miles per month, carrying about 1200 passengers and 200,000 lb. of freight.

Government. The Constitution of 1924 vests executive power in a President and legislative power in a Congress of Deputies (59 members in 1935), both elected by popular suffrage for four years. Congress meets annually during January and February. When it is not in session, a Permanent Commission of five members transacts routine and emergency business. President in 1935, Gen. Tiburcio Carias Andino (Nationalist), who assumed office Feb. 1, 1933.

History. As in previous years, the strict censorship in Honduras prevented accurate news of internal political developments from reaching the outside world. Reports of unrest were circulated from Nicaragua and other neighboring states, however, and the provisions of a rural settlement decree signed by President Carias on Mar. 8, 1935, were obviously designed to counteract communistic propaganda among the landless and peon classes. The decree provided for the distribution of lands in tracts of 50 acres and governmental assistance in supplying settlers with farm implements, seeds, cattle, and other equipment. In addition colonists were authorized to import machinery, seeds, and other requisites free of duty. All applicants for land were obliged to swear that they did not belong to communistic or anarchistic organizations and the government retained the right to deport foreign settlers and confiscate their lands if they engaged in subversive activities.

The January-February session of Congress voted to suspend payment on internal public debts contracted between 1926 and 1934. In his message to Congress, however, President Carias Andino pointed out that Honduras was one of the few Latin American countries which had not declared a moratorium on its foreign debt and that during 1934 increased government revenues had permitted the liquidation of part of the foreign debt. The govern-

ment assumed control of foreign exchange transactions on June 1, 1934, but exchange was readily available during 1935 to pay for all imports at the rate of 2.04 lempiras to the dollar in Tegucigalpa and of 2.03 on the North Coast.

Although President Carias Andino's term of office did not expire until Feb. 1, 1937, his announced determination to secure reelection for another term aroused such strong opposition among members of his own Nationalist party as well as among the opposition Liberals that the country late in 1935 was reported on the verge of revolution. Commencing in October a number of prominent political figures were deported from the country when they joined the opposition to the President. The candidate of the anti-Carias faction of the Nationalists was Dr. Venancio Callejas, a former President of Congress. In November Dr. Miguel Paz Baraona, Honduran Minister to Washington and a former President of the country, resigned to oppose General Carias's reelection. By a Presidential order of November 26 Dr. Baraona was barred from entering Honduras. Meanwhile all political meetings were prohibited.

In a trade agreement signed with the United States Dec. 18, 1935, Honduras conceded substantial duty reductions on smoked and canned meat products, condensed, evaporated and dried milk, canned and dried fruits, cotton shirts, and certain soaps, medicines, and drugs. The United States agreed to keep such Honduran products as bananas, coffee, and cacao on its free list and to reduce the existing tariff on balsams, pineapples, mango and guava pastes and pulps, and prepared or preserved guavas.

A hurricane followed by heavy rainfall caused the greatest flood on record in Northern Honduras late in October. More than 100 persons were reported to have perished and property damage ran into the millions of dollars.

HONDURAS, BRITISH. See **BRITISH HONDURAS.**

HONG KONG. A British crown colony in South China comprising the island of Hong Kong (32 sq. m.), Old Kowloon (3 sq. m.), and the New Territories (356 sq. m.). Total area, 391 sq. miles; total population (1934 estimate), 944,492 of whom 923,654 were Chinese. During 1934, there were 20,886 births and 19,766 deaths.

Education. In 1934, there were 1071 schools (155 English and 916 vernacular) for primary, secondary, and vocational education. The total enrollment was 73,348. Hong Kong University, with faculties of arts, medicine, and engineering had 366 students (mostly Chinese) in 1933.

Production. The principal manufactures were cement, refined sugar, preserved ginger (HK\$1,665,406 exported), knitted goods (singlets, HK\$3,011,096 and hosiery, HK\$677,873, exported), flashlight torches and batteries (HK\$2,933,349 exported), rubber shoes (HK\$3,000,000 exported), lard, ropes, and ships. Sea fishing is an important industry. Agriculture is carried on in a limited way.

Trade. For the year 1934, the value of imports (exclusive of treasure of HK\$78,080,869) amounted to HK\$415,918,522; exports (exclusive of treasure, HK\$128,479,428) totaled HK\$325,104,653 (HK\$ averaged \$0.3872 for 1934). China sent 35.2 per cent of the imports and received 48 per cent of the exports. Hong Kong is the chief port for South China and is noted for its transit trade with the rest of the world, as well as Central and North China. The harbor is fortified and is the headquarters of the China Squadron of the British Navy,

Ships entered and cleared during 1934 totaled 93,754 and aggregated 1,129,359 tons.

Government. For 1934, revenue totaled HK\$29,574,286; expenditure, HK\$31,149,156; total public debt on Jan. 1, 1935, amounted to HK\$18,838,000. Administration is by a governor assisted by an executive council of 9 members (6 official, 3 unofficial) and a legislative council of 17 members (9 official, 8 unofficial). Sir Andrew Caldecott was appointed during 1935 to succeed Sir William Peel as Governor and Commander-in-Chief.

On Dec. 5, 1935, the Legislative Council enacted an ordinance providing for surrender to the government of all silver in excess of 10 Hong Kong dollars in exchange for government certificates at the rate of 128 cents (Hong Kong) per fine ounce of bullion. At the same time an exchange stabilization fund was established to protect Hong Kong currency against changes in the currency system in China (q.v.).

HOPPER (WILLIAM) DE WOLF. An American actor, died in Kansas City, Mo., Sept. 23, 1935. Born in New York City, Mar. 30, 1858, he was destined for a legal career but feeling that the stage offered a more glamorous life, he invested his patrimony in the Criterion Comedy Company and made his professional debut as Talbot Champneys in *Our Boys* at New Haven, Conn., Nov. 4, 1878. For two years the Criterion Company existed, and shortly after its disbandment, he organized the Gosche-Hopper Company, the star of which was Georgie Drew Barrymore. The first play produced was *One Hundred Wives*. This company lasted for two seasons, and Hopper, his money gone, was compelled to look for work.

He obtained a part with Edward Harrigan in *The Blackbird*, and in 1884 was on the road with one of the companies playing *Hazel Kirke*. In the autumn of 1885 he was with the McCaull Opera Company, and he began his success in rôles that have since become classics. For five years he was principal comedian with this company, appearing in *The Black Hussar*, *Don Cesar*, *Boccaccio*, *Die Fledermaus*, etc. On May 5, 1890, he appeared in *Castles in the Air*, billed as a headliner. The next year he appeared in what was to be one of his most famous rôles, that of the Regent of Siam in *Wang*. For two seasons he played this part, with Della Fox as his leading woman. He followed it with *The Panjandrum* (1893), *Dr. Syntax* (1894), and in 1896, the Sousa opera, *The Charlatan*, in which he made his London debut in 1899. He appeared also in *El Capitan* in London in this year, having played the part in New York the previous year.

He was associated with the Weber & Fields Company for the next two years and then resumed his starring tours, presenting *Mr. Pickwick*, a revival of *Wang*, *Happyland*, and *A Matinée Idol*, which he opened in New York, Apr. 28, 1910. Two years previous he appeared in the title rôle of *The Pied Piper*. In 1911 he entered a phase of his career that was to bring him new laurels, for he brought to the New York stage a series of the operettas of Gilbert and Sullivan, first producing *H.M.S. Pinafore* on May 29. He followed this with the rôles of Bunthorne in *Patience*, the sergeant of police in *The Pirates of Pensance*, Ko-Ko in *The Mikado*, and the Lord Chancellor in *Iolanthe*. It was, however, in one of the lesser-known rôles that he gave one of his most memorable performances—that of Jack Point in *The Yeoman of the Guard*. He played in *The Passing Show of*

1917 and toured in this, 1917-18, and in 1918 appeared in *Everything*.

In straight comedy parts, he played Falstaff in *The Merry Wives of Windsor*, and David in an all-star revival of *The Rivals*, with Joseph Jefferson. During the season of 1918-19, he played the rôle of Old Bill in *The Better 'Ole*, and in 1921 appeared as Ravennes in a revival of *Erminie*. Thereafter he went on tour in *El Capitan* and *The Chocolate Soldier*, and *The Student Prince*, 1925-28. In 1928 he appeared on the New York stage in *White Lilacs*, and subsequently in several unsuccessful plays. In the early days of the motion picture industry he had tried this new medium but was unsuccessful, and at the time of his death was appearing on the radio.

For all his success as an actor, Mr. Hopper was perhaps best known, at least to a later generation, for his excellent rendition of *Casey at the Bat*, which he first gave at a benefit concert run by Col. McCaull on May 13, 1888. Archibald C. Gunter, a playwright of the time, suggested that this piece, written by Ernest L. Thayer, and which he had clipped from a San Francisco newspaper, would be appropriate for the baseball benefit, and it was given to Hopper to recite. The demand for the recitation of these verses never waned, and as late as 1932 he recited the lines over the radio.

Mr. Hopper was known also for his many marital experiences, for he was married six times, his wives having been Ella Gardiner, Ida Mosher, Edna Wallace, Nellie Bergon, Ella Furry, and Lillian Glaser. He served as shepherd of the Lambs Club from 1900-02, and in 1927, wrote, with W. W. Stout, an account of his life, entitled *Once a Clown, Always a Clown*.

HOPS. Data submitted to the International Institute of Agriculture placed the 1935 hop production of England and Wales at 27,810,000 lb., of Czechoslovakia at 15,432,000 lb., and of Belgium at 3,748,000 lb. The 1935 European crop was reported as generally of good quality and of satisfactory yield. For 1934 Germany reported a production of 14,427,000 lb. and Poland of 3,172,000 lb. International data on hop production are seldom closely up to date and hence are frequently incomplete. The world's production during recent years has ranged from about 84,000,000 to 106,000,000 lb. Ten European countries not including the Soviet Republics in 1933 produced 56,842,000 lb. at an average yield of 794 lb. per acre. The combined production of Australia and New Zealand in the crop-year 1933-34 was reported at 1,654,000 lb. Canada which produces its crop mainly in British Columbia reported a yield of 1,477,000 lb. in 1933.

Estimates by the Department of Agriculture placed the 1935 production of hops in the United States at 47,080,000 lb. and the acreage at 39,200 acres. The total production included 11,513,000 lb. left unpicked because of market conditions, labor shortage, and poor quality. The 1935 production exceeded that of 1934 by 5,885,000 lb. and was approximately 19,000,000 lb. above the average for the five years 1928-32. The acreage and production of 1935 were the largest in the last 19 years. The production by States in 1935 was reported as follows: Oregon 24,700,000 lb., Washington 11,340,000 lb., and California 11,040,000 lb. These yields included unpicked quantities of 5,340,000 lb. in Washington, 5,000,000 lb. in Oregon, and 1,173,000 lb. in California. The average yield per acre for the three States was 1201 lb.

During the fiscal year ended June 30, 1935, the United States exported 6,735,000 lb. of hops. The

world exports in 1933, the latest data available amounted to 36,339,000 lb. Germany, the United Kingdom, the Irish Free State, and Belgium are the principal hop importing countries.

HORMONES. See BIOLOGICAL CHEMISTRY.

HORSE RACING. See RACING.

HORTICULTURE. In line with agriculture in general, horticulture in 1935 showed material improvement in its economical aspects. By regulating shipments and increasing advertising, California disposed of an unusually large citrus crop at reasonable profit to the growers. The freeze in December, 1934, curtailed the prospectively very large citrus crop in Florida. No widespread freezes or droughts marred the 1935 production season in the northern states and the important apple crop was unusually well distributed and the restored confidence and increased buying power in industrial centres helped dispose of fruits, vegetables, and ornamental plants at fairly satisfactory prices.

Horticultural Quarantines. Secretary Henry A. Wallace of the U.S. Department of Agriculture, adopting a liberal policy concerning the movement of nursery stocks, ordered the total abandonment of the domestic narcissus quarantine on Apr. 1, 1935, and of the embargo on foreign grown narcissus bulbs Dec. 15, 1936. The withdrawals were predicated on the belief that the eelworm and bulb flies are now so widely distributed in the United States that these pests cannot be eradicated, thus removing any logical reason for retaining the quarantines.

Miscellaneous Notes. In April, Cornell University received from Dr. Liberty Hyde Bailey, former dean of the college of agriculture, the gift of one of the most extensive herbariums in the country. This collection comprises over 125,000 mounted herbarium sheets, especially rich in cultivated material, and there are also included in the gift 4000 technical books related to horticulture and botany, thousands of photographs, working equipment, etc., the buildings which house the collection, and about 0.25 acre of land. In accepting the gift the university authorized the establishment of an administrative unit in the College of Agriculture to be known as the Liberty Hyde Bailey Hortorium. This will be under the direct supervision of a staff member and with a full-time curator and an advisory board consisting of the supervisor, the curator, representatives of the major fields of plant science, and two members at large. One or more graduate fellowships, to be known as the Liberty Hyde Bailey Botanical Fellowships, will also be established.

Citrus research in Florida received new impetus by a greatly increased support of the Citrus Experiment Station at Lake Alfred. The maintenance funds were enlarged to \$46,451 a year, an increase of over 300 per cent.

The Eleventh International Congress of Horticulture was held in Rome, Italy, September 16-21. Delegates, assembled from all important horticultural regions of the world, presented a large number of papers relating to research, economics, and production practices.

The National Apple Institute, an incorporated association designed to promote the consumption of apples, resulted from a meeting sponsored by the American Pomological Society at Fort Wayne, Indiana, on May 18. Representatives of various fruit growing organizations and societies endorsed a plan of radio and newspaper advertising, hoping thereby to increase the per capita use of apples.

Personnel Changes. Dr. Elmer D. Merrill,

Director of the New York Botanical Gardens and a former director of the California Agricultural Experiment Station, was appointed to the newly created position of Administrator of Botanical Collections of Harvard University. His new duties include direction of the Gray Herbarium, Farlow Herbarium, and Library, Arnold Arboretum, the Harvard Forest, the Bussey Institution, and the Botanical Museum at Cambridge. The vacated position in the New York Botanical Gardens was filled by the appointment of Dr. Marshall A. Howe.

Dr. Leif Verner of the West Virginia University was appointed head of the department of horticulture at the University of Idaho.

Dr. J. H. Beaumont, head of the department of horticulture University of Maryland, resigned in December to accept a corresponding position in the University of Hawaii.

Ornamental horticulturists were gratified with the appointment of Dr. S. L. Emsweller of the University of California to head the U.S. Department of Agriculture's research work in floriculture. Dr. Emsweller had remarkable success in developing disease resistant snapdragons, hollyhock, and other plants for California gardens.

Research Activities. With a total of over 500 research workers in horticulture in the State agricultural experiment stations and in the U.S. Department of Agriculture, there is obviously a substantial output of valuable information each year. This was reflected in a total of 214 papers relating to studies with fruits, flowers, vegetables, and nuts which were presented at the annual meeting of the American Society for Horticultural Science, held in St. Louis, Mo., in late December, 1935. The officers of the society for 1935 were Dr. H. H. Zimmerley, director of the Virginia Truck Experiment Station, president, and Dr. H. B. Tukey of the New York Agricultural Experiment Station at Geneva, secretary. Much of the research work by these horticulturists is necessarily directed toward the solution of urgent problems, such, for example, as the removal of excess spray residues from harvested fruit. Washing in a dilute solution of hydrochloric acid, followed by thorough rinsing in clear water, was found an effective treatment in removing toxic residues.

A conspicuous trend in horticultural research in recent years has been greater attention to floricultural problems, with the result that rust resistant snapdragons, wilt resistant asters, early flowering outdoor chrysanthemums, and reliable cultural information are now available to gardeners.

Domestic Production (United States). Information released by the U.S. Department of Agriculture on Dec. 18, 1935, indicated a 14 per cent increase in total fruit production over the 1934 season and a 5 per cent increase above the 5-year average 1928-32. Apple production was slightly above the average with good distribution among all producing areas. In the eastern fruit growing section, visited by freeze and drought in 1933 and 1934, the increase in apple output over the 1934 crop amounted to 40 per cent. Production of citrus fruits during the 1935-36 season was expected to be 14 per cent less than the large crop of 1934. The value of total vegetables produced in 1935 was estimated at \$223,889,000, an increase of approximately \$30,000,000 above 1934. Yields of vegetables both for market and canning were greater than in any year since 1930. With regard to specific items, total apple production in 1935 was estimated at 168,465,000 bu. as compared with an average of 161,333,000 bu. for the 5 years, 1928-32; peaches

52,380,000 bu. in 1935 compared with 56,451,000 bu. average for the same 5 years; pears 21,255,000 bu. against the 5-year average of 23,146,000 bu.; cherries 117,000 tons in 1935, 108,000 tons for the 5 years; grapes 2,327,000 tons compared with a 2,200,000-ton average; fresh plums and prunes 104,000 tons against 140,000 tons; dried prunes 280,000 tons against 226,000 tons; oranges 55,852,000 boxes as compared with the 5-year average of 48,816,000 boxes; grapefruit 17,988,000 boxes against 14,730,000 boxes; lemons 8,000,000 boxes compared with 7,251,000 boxes; cranberries 486,000 bbl. against 581,000 boxes; pecans 95,340,000 lb. against the average of 59,983,000 lb. and strawberries 11,681,000 crates as compared with 12,127,000 crates.

Data on vegetables show some interesting departures. For market asparagus 4,625,000 crates in 1935 compared with 4,427,000 crates as the 5-year average for 1928-32; market lima beans 602,000 bu. in 1935 against an average of 601,000 bu.; market snap beans 11,824,000 bu. against 9,447,000 bu.; market beets 1,682,000 bu. compared with 1,770,000 bu.; cabbage marketed fresh 790,100 tons in 1935 and a 5-year average of 844,700 tons; cantaloupes 13,322,000 crates against 16,763,000 crates; cauliflower 7,150,000 crates compared with 6,658,000 crates; celery 8,322,000 crates versus 9,168,000 crates; sweet corn for canning 854,600 tons versus 628,000 tons; market cucumbers 4,301,000 bu. versus 4,607,000 bu.; lettuce 19,580,000 crates against 19,163,000 crates; spinach for market 9,839,000 bu. versus 12,580,000 bu.; tomatoes for market 18,903,000 bu. versus 16,891,000 bu.; tomatoes for manufacture 1,673,400 tons against 129,300 tons; early potatoes 38,094,000 bu. versus 42,127,000 bu. and watermelons 57,254 units against a five year average for 1928-32 of 70,053 units.

Foreign Trade. Figures in the September, 1935, number of Monthly Summary of Commerce, published by the Federal Department of Commerce, shows an increase in the values of both exports and imports of horticultural products—including vegetables and preparations, fruit and preparations, nuts, and nursery, and greenhouse stock—for 1935 over 1934. The values of exports of these items was \$104,726,493 in 1935 and \$83,653,178 in 1934. The values of imports during the same periods were \$76,176,578 and \$64,727,131. The much larger increase in imports was rather generally distributed among the various fruits, vegetables, and other items but it is notable that value of banana imports increased from \$24,103,562 in 1934 to \$28,034,426 for 1935. A rather sharp increase was shown in nuts from \$10,932,962 in 1934 to \$15,471,734 in 1935.

The World Situation. Drastic restrictions placed by most European nations on the import of fruits and fruit products continued to exert a depressing influence on the export trade in fresh, dried, and canned fruits from the United States. A succession of spring freezes and frosts in Europe brought about crop reductions that would have normally benefited United States growers were it not for the prohibitive governmental limitations. However, the export season for American deciduous fruits, which closed June 30, was the first in three years in which prices did not have a tendency to decline regardless of size of exports. Fresh and dried apples, and fresh, dried, and canned pear exports were smaller than in 1933-34. Fresh grape shipments were, however, the largest and highest priced since the depression started and represented the one bright spot in the export fruit situation.

The Canadian commercial apple crop was estimated at 12,135,000 bu. by the Fruit Branch of the Canadian Department of Agriculture. This represented a potential export surplus of 6,000,000 bu., a total greater than that exported in the 1934-35 season.

The Australian Apple and Pear Export Control Council coöperating with the Export Council of New Zealand assigned definite export quotas to the several Australasian producing regions and thereby greatly relieved a potentially serious economic situation. A severe freeze in early February caused serious losses to Spanish orange growers not only to the existing crop but to succeeding crops through the killing of many trees. However, due to a bumper crop in Palestine the estimated export crop of oranges and mandarins from the Mediterranean Basin for the 1935-36 season was estimated about the same as for the two preceding years, namely, 35,000,000 boxes.

The 1935 raisin crop in the chief exporting countries of the Mediterranean Basin was 119,000 short tons as compared with 97,200 tons in 1934.

A total of 2801 carloads of fresh vegetables entered the United States and Canada from the West Coast of Mexico during the season ended May, 1935. This was a gain of nearly 1600 cars over the 1934 and 400 over the 1933 periods. Particular gains were shown in tomatoes.

Production of grapefruit continued to increase in the Argentine, attaining a total of approximately 30,000 boxes in 1935. The Puerto Rico crop of grapefruit for the 1935-36 season was set at 700,000 boxes, a gain of 50,000 boxes over the preceding season.

The lowering of the Canadian tariffs on fresh fruits and vegetables as a result of the new reciprocal agreement was expected to greatly stimulate sales of United States products in that country.

Necrology. Dr. David Griffiths, in charge of bulbous flowering plant investigations in the United States Department of Agriculture and widely known for his numerous writings on bulb production and other horticultural subjects, died in Washington, D. C., on March 19.

James A. Neilson, in charge of nut-growing studies at the Michigan State College, died February 11, following an operation for appendicitis. He was particularly well known for his studies in the preservation of nursery plants by paraffining.

E. W. Townsend, one of the leading strawberry plant growers in the United States, died at his home in Salisbury, Maryland, on February 9.

Dr. S. S. Sulliger, president of the American Rose Society and Curator of the International Rose Test Garden at Portland, Oregon, died April 15 at his home in Tacoma, Washington. He was succeeded to the presidency of the rose society by Leonard Barron of Garden City, New York.

O. V. Michurin, often called the Luther Burbank of Russia, died June 7 at the advanced age of 80 years. During his lifetime, he created literally hundreds of new apples, pears, plums, peaches, and berries. The Michurin Fruit Research Station and the city of Michurinsk perpetuate his memory.

Dr. R. C. Knight, Plant Physiologist and Assistant Director of the East Malling Research Station, England, died January 28.

Hugo de Vries (q.v.), world famous for his elucidation of the Mendel theory of inheritance and his own investigations of mutations in plants, died May 21 at the age of 87 years.

Bibliography. A wealth of new horticultural books, particularly relating to ornamental garden-

ing, were published in 1935 and indicated an ever-increasing interest in the subject. Among these were: L. H. and E. Z. Bailey, *Hortus*, New York; L. Barron, *Gardening for the Small Place*, Garden City, N. Y.; M. E. Bottomley, *The Art of Home Landscape*, New York; A. H. Carhart, *Trees and Shrubs for the Small Place*, Garden City, N. Y.; E. E. Keays, *Old Roses*, New York; J. E. Knott, *Vegetable Growing*, Philadelphia; L. H. Leonian, *How to Grow Delphiniums*, Garden City; G. F. Mappin, *Bigger and Better Roses for Garden, House, and Exhibition*, London; H. S. Orloff and H. B. Raymore, *Color and Succession of Bloom in the Flower Border*, Garden City; M. HOWARD UNIVERSITY. A nonsectarian coeducational institution in Washington, D. C., open to students without regard to race but principally for the education of Negroes. The registration for the first semester of 1935 was 1745. The faculty numbered 251. The total endowment amounted to \$910,127. The total appropriation of the United States Government for 1935-36 was \$665,000. The Library contained 92,000 volumes. President, Mordecai W. Johnson, S T M., D D.

HUMANISM. A religious movement emphasizing faith in the supreme value and self-improvability of human personality, instead of belief in the supernatural. In the United States it has arisen largely from and in the left wing of Unitarianism, although it is spreading among other liberal religious groups, including the Universalists and Congregationalists. A careful conservative estimate would indicate at least 15,000 avowed Humanists in the United States. There were in 1934 only seven local societies—in Hollywood and Berkeley, Calif., Kansas City, Mo., Sioux City, Iowa, Chicago (two), and New York City—but some 50 or more Unitarian churches were led by ministers who have openly announced their belief in Humanism. Groups avowing beliefs identical with Humanism, or essentially the same, have been reported in Canada, Australia, England, Germany, Turkey, and India.

In May, 1933, 34 eminent leaders of American thought, including six university professors of philosophy, signed and issued a Humanist Manifesto of 15 theses, setting forth the main points of religious Humanism. The complete text, together with the names of the signers, is available in the book *Humanizing Religion*, by Charles Francis Potter. Among the periodicals of the movement are the *Humanist World*, published weekly in Hollywood, and the *New Humanist*, published bi-monthly in Chicago. At the call of Charles Francis Potter, founder and leader of The First Humanist Society of New York (established, 1929), the first national Humanist Assembly was held at the New York headquarters, 113 West Fifty-seventh Street, Oct. 10-11, 1934.

A library, reading room, and information bureau are maintained at the New York headquarters.

HUNGARY. A kingdom of central Europe. Capital, Budapest. Regent in 1935, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

Area and Population. With an area of 35,875 square miles, Hungary had a population estimated

in 1934 at 8,894,920 (8,688,319 at 1930 census). Of the 1934 total, 2,938,488 resided in urban communities of over 10,000. The 1930 population was 92.1 per cent Magyar, 5.5 per cent German, and 1.2 per cent Slovak. Living births in 1934 totaled 189,562; deaths, 127,779; marriages, 77,672. Populations of the chief cities in 1934 (estimated) were: Budapest, 1,035,665; Szeged, 138,144; Debrecen, 122,817; Kecskemét, 81,363; Pesterzsébet, 77,753; Újpest, 71,535; Kispeszt, 71,060; Pécs, 67,522. In 1930 64.9 per cent of the population was Roman Catholic; 27 per cent Protestant; 5.1 per cent Jews; 2.3 per cent Greek Catholics.

Education. The 1930 census showed that 9.6 per cent of the population over six years of age was illiterate. In 1930-31 there were 1,223,130 persons of school age (6 to 14 years). In 1932-33 primary school enrollment was 997,427; secondary, 65,327; university, 11,034. In addition there were numerous special schools and high schools.

Production. Agriculture is the principal occupation. In 1933 there were 13,832,000 acres of arable land, 793,000 acres of vineyards and gardens, 4,106,000 acres of meadow and pasture, and 2,710,000 acres of woods and forests. Production of the chief crops in 1934, with 1933 figures in parentheses, was (in thousands of units): Wheat, 64,824 bu. (96,356); rye, 24,381 bu. (37,655); barley, 24,983 bu. (38,649); oats, 17,869 bu. (24,637); corn, 82,740 bu. (71,230); potatoes, 77,848 bu. (68,182); sugar beets, 925 metric tons (946); fodder beets, 2974 metric tons in 1933; wine (must), 66,878 gal. (81,455); tobacco, 40,040 lb. (52,583). The production of beet sugar in 1934-35 was 120,000 metric tons (136,000 in 1933-34). Livestock in 1934 included 1,678,000 cattle, 2,502,000 swine, 1,087,000 sheep, 803,000 horses, and 26,000 goats. The estimated value of agricultural production during the economic year 1934-35 was 1,053,000,000 pengős (744,000,000 in 1933-34).

Mineral and metallurgical production in 1934, with 1933 figures in parentheses, was (in 1000 metric tons): Coal, 756 (800); lignite, 6199 (5907); iron ore, 50 (50); pig iron, 140 (93); steel, 315 (228). The value of manufactured production in 1933 was 1,763,429,000 pengős, the most important lines being: Food products and tobacco, 602,961,000 pengős; textiles, 375,842,000 pengős; iron, metal, and machinery, 265,215,000 pengős; chemicals, 178,931,000 pengős.

Foreign Trade. Excluding bullion, imports in 1934 were valued at 344,755,000 pengős (312,643,000 in 1933) and exports at 405,336,000 pengős (391,337,000 in 1933). The value of the principal imports in 1934 was (in 1000 pengős): Raw cotton, 26,373; wood and wood products, 32,950; hides and skins, 17,405; chemicals and drugs, 16,189; non-ferrous metals, 13,210; paper, 12,283. The chief exports were (in 1000 pengős): Wheat, 54,188; electrical machinery, 33,916; poultry, 28,854; cattle, 17,680; swine, 16,407. Austria supplied 23.7 per cent of the 1934 imports by value; Germany, 18.2 per cent; Italy, 12 per cent; Rumania, 8.8 per cent; Czechoslovakia, 7 per cent; United States, 5.7 per cent. Of the 1934 exports Austria purchased 24.5 per cent; Germany, 22.1; Italy, 8.3; United Kingdom, 7.8; Czechoslovakia, 5 per cent.

Imports in 1935 totaled 398,000,000 pengős; exports, 459,000,000 pengős. United States statistics for 1935 showed imports from Hungary of \$3,164,081 (\$1,500,589 in 1934); exports to Hungary, \$350,675 (\$493,695 in 1934).

Finance. Budget estimates for the fiscal year

ending June 30, 1936, placed receipts at 1,100,000,000 pengös and expenditures at 1,176,000,000 pengös. For 1934-35 the respective estimates were 1,085,000,000 and 1,151,000,000 pengös. Closed accounts for 1933-34 showed total ordinary and extraordinary receipts of 1,095,500,000 pengös and expenditures of 1,137,500,000 pengös, the deficit being 42,000,000 pengös. The public debt on Mar. 31, 1935, totaled 1,663,100,000 pengös (domestic, 382,300,000; foreign, 1,280,800,000), compared with a total of 1,623,900,000 pengös on June 30, 1934. The par value of the pengö was \$0.1789 before devaluation of the U. S. dollar in January, 1934, and \$0.2961 afterwards. The exchange value averaged \$0.1741 in 1932, \$0.2236 in 1933, and \$0.2957 in 1934.

Communications. In 1934, there were 5372 miles of railway line (state lines, 4050 miles); about 18,125 miles of highways (state roads, 2642 miles); and six air lines, which in 1933 carried 7565 passengers and 428 metric tons of freight.

Government. Hungary is a constitutional monarchy with the throne vacant, power being exercised by the Regent pending the selection of a monarch. There is a Legislature of two houses—the Lower House of 245 members elected for five years and the Upper House of 252 elected or appointed representatives of various social, economic, and political groups, the term being 10 years. Premier and Minister of War in 1935, Gen. Julius Gömbös, leader of the National Union Party, who assumed office Oct. 1, 1932.

HISTORY

Internal Politics. The parliamentary elections of March 31, which returned Premier Julius Gömbös to power with an overwhelming majority in the Lower Chamber, was the principal development in internal politics during 1935. The election freed the Premier of both the tutelage of Count Stephen Bethlen, the dominant political influence in Hungary for more than a decade, and of dependence upon Tibor Eckhardt's Independent Small Farmers party for majority control of the Lower Chamber. It thus enabled Gömbös to steer his government on a middle course between the powerful but reactionary landed aristocracy led by Bethlen and the more radical groups under Eckhardt and others demanding redistribution of the large estates and the thorough-going reform of Hungary's semi-feudal economic and social institutions.

The struggle between these opposing forces during 1935 revolved mainly around the issue of reform of the antiquated electoral system. Voting in Hungary was secret only in the towns, the landlords having secured retention of the old system of oral voting in the country districts in order to keep the peasants under control. Pressure from the Small Farmers' party, the Social Democrats and others had forced Premier Gömbös during preceding years to promise the extension of the secret ballot to rural communities. Yet Count Bethlen's dominant influence in the government, or National Union party, prevented the Premier from fulfilling his promise.

Early in 1935 it became evident that he had determined to end this dilemma by breaking Bethlen's power. On January 8 he forced Minister of Agriculture Nicholas Kallay, an adherent of Bethlen's, to withdraw from the cabinet. On January 29 he submitted to the government party the draft of a bill for a conditional extension of the secret ballot. While this represented a blow at Bethlen,

it did not go far enough to please the proponents of the secret ballot. Tibor Eckhardt, leader of the Small Farmers, resigned as Hungarian representative at Geneva on January 30 to lead the growing opposition to the Gömbös régime.

When Parliament reconvened on March 5 the government hurriedly introduced its electoral reform bill, coupled with legislation increasing the powers of the Regent and restoring a law enacted in 1914 for control of the Opposition press. Vigorous Opposition attacks upon these measures were answered by the dissolution of Parliament and the calling of new elections. That the election represented a trial of strength between Count Bethlen and the Premier was indicated by the former's statement of March 29 denouncing the Gömbös policies and predicting that the latter would shortly seek to establish a Fascist régime.

The elections were held under the old electoral system, with secret voting taking place in the cities on March 31 and oral voting in the rural districts a week later. The extent of the Premier's victory is indicated by the following results showing the standing of the parties in the new and the old Parliaments, respectively: National Union Party, 172 (148); Independent Small Farmers, 24 (22); Christian Nationals, 14 (26); Social Democrats, 11 (14); Liberals, 7 (7); Legitimists, 3 (7); Nazis, 2 (2); others, 12 (19). Count Bethlen was re-elected but without any parliamentary group behind him. The Legitimist movement suffered a severe setback, the Social Democrats and Christian Nationals were weakened, and Premier Gömbös obtained a firm grip upon the government. The electoral campaign was marked by the large degree of freedom granted all parties to present their cases. The large majorities polled by the Gömbös party in secret as well as in oral voting indicated that it was the unquestioned choice of the majority of the voters.

Legitimist Agitation. Except for a revival of anti-Semitic riots and demonstrations in Budapest in November the issue of the restoration of the monarchy was the principal object of discussion during the remainder of the year. The Legitimists, favoring the restoration of the Hapsburg dynasty in the person of Archduke Otto, were handicapped in their campaign not only by the open opposition of the Gömbös régime, which favored continuation of the Regency indefinitely, but also by Otto's declaration of December, 1934, approving the Fascist-corporative state as against the democratic form of government. Father Nicholas Grieger, leader of the Legitimist Hungarian Populist party, hurried to Otto's residence in Belgium and returned on January 13 with a formal statement from the young Archduke declaring that "as King of Hungary I respect the thousand-year-old Hungarian Constitution and would rule over that country as a constitutional King."

Premier Gömbös reiterated in Parliament on May 28 his stand that the question of restoration of the monarchy could be settled only in a more peaceful atmosphere. When Austria on July 10 repealed the laws for exclusion of the Hapsburgs, Gömbös protested to Chancellor Schuschnigg against permitting Otto to return to Austria, where his presence would increase Legitimist activity in Hungary. As a result the Austrian Government was said to have warned the Archduke not to return to Austria for the time being. See AUSTRIA under *History*. The dangerous implications of the restoration issue were again emphasized by the Foreign Ministers of the Little Entente (q.v.)

during their conference at Bled, Yugoslavia, on August 29-30. They reaffirmed their steadfast opposition to a Hapsburg restoration either in Austria or Hungary.

Foreign Relations. Revision of the territorial clauses of the Treaty of Trianon remained as in previous post-war years the great and all-important aim of Hungarian foreign policy. Hope that Hungary would receive the aid of Italy in securing restoration of its former territories by force faded early in 1935 with the conclusion of the Franco-Italian understanding of January 7 (see FRANCE and ITALY under *History*). Thereafter Mussolini insisted that Hungary should use only peaceful means in regaining its former possessions. His position forced Hungary to accept a friendly settlement of its quarrel with Yugoslavia over the harboring in Hungary of Croat terrorists, a quarrel which produced a serious European crisis late in 1934 (see 1934 YEAR BOOK, pp. 302-303, 756). This incident was officially closed at the May, 1935, session of the League Council, when Yugoslavia accepted a Hungarian report admitting that some minor Hungarian officials had not "kept as close an eye on Croatian emigrants as was desirable and necessary." The report further stated that it was impossible to establish any connection, direct or indirect, between the Hungarian Government and the assassination of King Alexander of Yugoslavia at Marseille, France, in October, 1934. On January 14 a mixed Hungarian-Yugoslav commission was established to settle mutual difficulties and frontier irritations.

While the abortive Franco-Italian plans for a Danubian settlement reconciling Austria, Hungary, and Bulgaria with the Little Entente were still under discussion, a meeting of Hungarian, Italian, and Austrian representatives took place at Venice the first week in May. The other two powers agreed to support Hungary's demand for a larger army in return for Hungary's guarantee of Austrian independence against Germany. Mussolini also reiterated his willingness to give moral support to Hungary's demand for frontier rectifications. In line with this understanding, Premier Gombos stated in Parliament on May 28 that Hungary would not attempt unilateral denunciation of the Trianon Treaty in the German fashion but would wait until the powers granted her equality. At the same time he presented Hungary's desire for the restoration of military conscription and the right to rearm equally with the Little Entente.

Despite severe criticism from the Opposition parties in Parliament, the Gombos Government in October refused to join with the other League states in punishing Italy's aggression upon Ethiopia by the application of economic sanctions. See LEAGUE OF NATIONS. This policy was explained not only on the ground of Hungary's political ties with Italy, but also by economic factors. In the first six months of 1935, Hungary sent 15 per cent of all her exports and 52 per cent of all wheat exports to Italy.

While still cherishing hopes of aid from Italy in achieving Hungary's territorial objectives, Premier Gombos continued his negotiations with Nazi Germany. He visited Berlin late in September, apparently in hope of effecting a reconciliation between Mussolini and Hitler and establishing an anti-treaty bloc including both Germany and Italy.

As Italy became increasingly absorbed in her costly war with Ethiopia and her threatening quarrel with Britain and the League, Mussolini's influence in Central Europe declined. Hungary,

like several neighboring states, turned more and more towards Germany. As the year drew to a close Premier Gombos was reported to be deep in negotiations for the establishment of an anti-Soviet alliance of Germany, Hungary, and Poland. It aimed at carving up Czechoslovakia among these three States and thus eliminating Czechoslovakia as an ally of the Soviet Union and a possible base of Soviet expansion westward. See AUSTRIA, CZECHOSLOVAKIA, GERMANY, ITALY, and POLAND under *History*.

The Standstill Agreement on Hungarian debts owed in the United States and Great Britain, which expired July 4, 1935, was extended to July 15, 1936.

HUNTER COLLEGE OF THE CITY OF NEW YORK. A college of liberal arts and sciences in New York City. Established in 1870 for the higher education of women. Maintained by public funds, it is one of the three municipal colleges governed by the Board of Higher Education, the other two being The City College for men and Brooklyn College for men and women. The enrollment for the fall semester of 1935 included 6906 students in the Day Session and 5093 students in the Evening and Extension Sessions. The enrollment in the summer session of 1935 was 3238. The teaching staff for Day, Evening, and Extension Sessions for the fall semester of 1935 numbered 596. The library contained 76,042 volumes. President: Eugene A. Colligan, Ph.D.

HYDROGEN. See CHEMISTRY.

ICELAND. An island state northwest of Great Britain. Area, 39,700 sq. miles; population (1930 census), 108,861 compared with 113,353 (1934 estimate). Chief towns: Reykjavik (capital), 31,689 persons in 1933; Akureyri, 4243; Hafnarfjörður, 3748; Vestmannaeyjar, 3462. In 1933 there were 2478 living births, 1159 deaths, and 696 marriages.

Production and Trade. The main agricultural crops were potatoes, turnips, and hay. Livestock in the country in 1933: 45,400 horses, 31,900 cattle, 729,000 sheep, and 2800 goats. The sea fisheries in 1932 totaled 212,700 metric tons valued at 23,827,000 krónur. In 1934, imports were valued at 48,482,000 krónur; exports, 44,761,000 krónur. Imports consisted mainly of textiles, metals, machinery, timber, coal, and cereals; the chief exports were canned and fresh fish, tallow, and oils. The Icelandic Exchange Control Office declared that during 1935 imports would be limited to 35,000,000 krónur.

Government. Budget estimates for 1935: revenue, 13,762,990 krónur; expenditure, 13,109,041 krónur. The public debt on Jan. 1, 1934, was 39,958,182 krónur. Iceland is in union with Denmark because of its allegiance to the King of Denmark. Executive power rests with the King who acts through a responsible ministry; legislative power rests conjointly with the King and the Althing (Parliament) of 49 members (one-third elected to the Upper House by the whole Althing, the remainder formed the Lower House). King in 1935, Christian X; Prime Minister, Hermann Jónasson (Progressive).

IDAHO. Population. On Apr. 1, 1930 (Fifteenth Census), 445,032; on July 1, 1934, by latest Federal estimate, 448,000; 1920 (Census), 431,866. Boise, the capital, had (1930) 21,544 inhabitants.

Agriculture. The table on page 314 shows the acreage, production, and value of the principal crops for 1935 and 1934.

Mineral Production. The mining of metals in 1935 was marked by an important rise in the output of silver, which took first rank, for value,

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) ...	1935	1,047,000	2,249,000*	\$14,843,000
	1934	1,016,000	2,095,000*	18,017,000
Wheat	1935	944,000	20,158,000	14,111,000
	1934	906,000	18,696,000	12,878,000
Potatoes	1935	89,000	17,800,000	9,790,000
	1934	106,000	19,610,000	9,413,000
Sugar beets	1935	53,000	561,000*
	1934	34,000	294,000*	1,379,000
Dry beans	1935	128,000	1,306,000*	3,069,000
	1934	122,000	1,342,000*	4,227,000
Apples	1935	5,934,000	3,976,000
	1934	3,312,000	2,716,000
Barley	1935	154,000	5,236,000	2,042,000
	1934	134,000	4,288,000	2,187,000

	1934	132,000	4,488,000	1,750,000
Corn	1935	38,000	1,558,000	1,168,000
	1934	38,000	1,520,000	1,246,000

* Tons. † 100-lb. bags.

among the metals produced; the output of lead, next in importance, increased also, as did that of zinc, but that of gold diminished slightly, and the output of copper remained comparatively small.

The yearly total, by value, of the mines' production of the five metals rose to \$19,453,700 (1935) from \$15,277,669 (1934). The quantity of gold that was produced dropped to 83,800 fine ounces for 1935, from 84,817 for 1934; the corresponding value for 1935 was \$2,933,000. The mines yielded (1935) 10,150,000 ounces of silver, as against 7,394,143 (1934); the total by value of the metal rose, by reason of higher prices, yet more notably, to \$7,490,700 (1935), from \$4,780,052 (1934). The production of lead increased to 152,800,000 pounds for 1935, from 142,648,216 for 1934; by value to \$6,112,000 (1935), from \$5,277,894 (1934). Zinc was produced to the quantity of 59,600,000 pounds (1935), as against 49,598,651 (1934); and to the value of \$2,741,600 (1935), as against \$2,132,742 (1934).

Education. The inhabitants of school age, as reported in 1935, numbered 144,840. For the academic year 1934-35, enrollments in the public schools totaled 118,755. Of these, 87,047 were in common schools or elementary grades, and 31,708 were in high schools. The year's expenditures for public-school education throughout the State totaled \$9,084,878. Teachers' yearly salaries averaged \$902.92.

The Legislature granted funds in 1935 additional to those provided by the equalization law of 1933, according to the *Journal* of the National Education Association; all public schools were enabled to give at least seven months of instruction. A permanent textbook commission was established, and a Statewide alteration of the curriculum was started.

Charities and Corrections. The government of the State, under the system in operation in 1935, included a Department of Public Welfare, headed by a Commissioner (Lewis Williams). This Department held authority over the State's mental hospitals and certain other State institutions; it administered the system of pensions for the elderly, conducted work to combat tuberculosis, and performed the approximate functions of a State Board of Health. It acquired in December a Public Health Adviser (Dr. J. D. Dunshee), obtained with the assistance of the Rockefeller Foundation. A separate prison board composed of the Governor, Attorney-General, and Secretary of State directed the Penitentiary, at Boise.

The institutions under the Department of Public Welfare were: State Hospital North, at Orofino; State Hospital South, at Blackfoot; State School and Colony, at Nampa; Idaho Soldiers' Home,

Boise; School for the Deaf and Blind, at Gooding; and Industrial School, St. Anthony.

Legislation. The regular biennial session of the Legislature created a system for the sale of alcoholic liquor through a State monopoly operating State retail shops. The proposed amendment to the Federal Constitution, dealing with child labor, received the State's ratification. A moratorium of five years was granted to those owing taxes already in arrears (estimated to total \$18,000,000). Banks under State charter were authorized to lend money on obligations of house owners, as insured under the Federal Housing Act. Purchasers of timber lands from the State were required to manufacture in Idaho the timber cut from such lands. Congress was urged, in a memorial, to enact the Townsend plan for the payment of high pensions to the aged. A tax on retail sales was enacted.

Political and Other Events. The FERA notified Idaho on March 1 that it intended to withhold allotments for the support of the State's destitute unemployed until the State should contribute a required part of the needed sum. The FERA was reported to have met over 90 per cent of the cost of such support in the State in 1934, paying \$7,019,373; of the rest, \$6561 came from the State's funds and \$597,480 from those of subdivisions.

Officers. The chief officers of the State, serving in 1935, were: Governor, C. Ben Ross; Lieutenant-Governor, Gainford P. Mix; Secretary of State, Franklin Girard; Auditor, Harry C. Parsons; Treasurer, Myrtle P. Enking; Attorney-General, Bert H. Miller; Superintendent of Public Instruction, John W. Condie; Inspector of Mines, Arthur Campbell.

Judiciary. Supreme Court: Chief Justice, Raymond L. Givens; Associate Justices, Alfred Budge, William M. Morgan, Edwin M. Holden, James F. Ailshie.

IDAHO, UNIVERSITY OF. A coeducational State institution of higher learning at Moscow, Ida., founded in 1889, with a southern branch at Pocatello. The total enrollment at Moscow in the autumn of 1935 was 2475, and at Pocatello 850. The enrollment for the 1935 summer session was 896. The faculty numbered 180. The productive funds amounted to \$2,184,727, and the income for 1934-35 was \$1,048,734. The library contained approximately 100,000 volumes. President, Mervin Gordon Neale, Ph.D.

ILLINOIS. Population. On Apr. 1, 1930 (Fifteenth Census), 7,630,654; on July 1, 1934, by latest Federal estimate, 7,876,000; 1920 (Census), 6,485,280. Chicago, the chief city, had (1930) 3,376,438 inhabitants; Peoria, 104,969; Springfield, the capital, 71,864.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	7,589,000	288,382,000	\$158,610,000
	1934	7,159,000	146,760,000	115,940,000
Hay (tame) ..	1935	2,514,000	5,780,000*	28,350,000
	1934	2,630,000	2,657,000*	37,995,000
Wheat	1935	1,849,000	26,800,000	22,241,000
	1934	1,854,000	29,495,000	25,081,000
Oats	1935	3,847,000	107,716,000	28,006,000
	1934	3,029,000	33,319,000	14,327,000
Soy beans	1935	1,213,000	21,834,000	15,065,000
	1934	542,000	10,298,000	9,268,000
Potatoes	1935	50,000	4,050,000	3,038,000
	1934	52,000	2,704,000	2,650,000

* Tons.

Mineral Production. In 1935 the output of coal totaled 43,845,000 net tons as against 41,272,-

384 net tons in 1934. From 2,445,817 tons of coal consumed in by-product coke ovens in 1934, 1,649,907 net tons of coke, valued at \$9,071,800, were produced. The shipments of furnaces engaged in the production of pig iron, from ores brought into the State, rose to 1,430,841 gross tons for 1934, from 1,269,940 for 1933; in value, to \$25,768,115, from \$20,063,481. The production of petroleum increased to 4,452,000 barrels (1934), from 4,244,000 (1933).

Education. The latest total figures as to the operation of the public schools dealt with the year ended June 30, 1934. For that year the number of inhabitants of school age was stated as 2,788,382. There were enrolled in the public schools 1,384,651 pupils. Of these, 1,043,458 were in common schools or elementary grades; in high schools, 341,183. The year's current expenditures for public-school education in the State totaled \$95,835,729. The salaries of teachers, by the year, averaged \$1305.81. While the amount of State aid to public schools was increased by one-fifth in 1935, this failed to end the financial trouble of the poorer school districts. The revision of the curriculum for schools throughout the State was undertaken, under the leadership of the Superintendent of Public Instruction.

Charities and Corrections. Under the system in force in 1935 a Department of Public Welfare, created by the civil administrative code of 1917, held the central authority over the State institutions of care and custody.

The State institutions under the Department's authority and their populations of November 1, 1935, were: State mental hospitals, at Elgin, Chicago, Kankakee, Manteno, Peoria, Jacksonville, East Moline, Alton, Anna, and Chester, having among them 26,446 patients; penitentiaries at Joliet and Menard, a Boys' Reformatory at Pontiac, a State Farm (for misdemeanants) at Vandalia, and a Women's Reformatory at Dwight, among which were 11,687 inmates; institutions for the feeble-minded, at Dixon and Lincoln, 6899; Illinois School for the Deaf, Jacksonville, 584; Illinois School for the Blind, Jacksonville, 228; Industrial Home for the Blind, Chicago, 93; Illinois Soldiers' and Sailors' Home, Quincy, 749; Soldiers' Widows' Home, Wilmington, 110; Illinois Eye and Ear Infirmary, Chicago, 187; Soldiers' and Sailors' Children's School, at Normal, 660; Research and Educational Hospitals, Chicago, 356; School for Boys (delinquent), St. Charles, 573; State Training School for Girls (delinquent), Geneva, 263. Persons released, but still under parole, from State institutions numbered some 6200.

Legislation. After months of struggle over Governor Horner's proposal to raise the rate of the sales tax, the Legislature enacted, on May 22, an increase of this rate to 3 per cent, from 2 per cent. The higher rate was rendered necessary by the insistence of the FERA that the State contribute at least \$36,000,000 a year to the support of its destitute unemployed. The act was not passed until the FERA had suspended its own grants and the last funds for the purpose had been used up. The antagonism to the higher tax was ascribed partly to the unpopularity of the entire tax, partly to resentment at what was thought Federal dictation to the Legislature, and in some measure to Republican partisan tactics. A separate act applied the 3 per cent sales tax to municipal and corporate public utilities' sales.

A system of State pensions for old people was created, in conformity with the requirements for

qualifying the State to receive Federal grants toward such pensions under the Social Security Act. Employers were compelled by statute to allow employees one period of 24 hours without work in every week, except for a few specified types of employment. The State's fund for distribution to schools was increased to \$13,000,000, from \$10,500,000. The private right of civil action for alienation of affection and for breach of promise to marry was annulled by statute taking effect July 1. The State Senate investigated a charge made by Charles R. Walgreen that the University of Chicago disseminated radical views in its teachings.

Political and Other Events. The public dispensation of support to the unemployed poor was largely suspended for a while in May, after the Federal grants had been halted (see *Legislation*, above), and while the Legislature still delayed passing a higher sales tax to provide for the greater State contribution to the cost of such support. Many whose allowances were cut off or cut down migrated beyond the State's borders in search of public support. The Federal grants were resumed on May 24. In connection with the administration of the amended sales tax the State issued aluminum tokens in denominations of mills, so as to permit purchasers' paying the tax, to fractions of a cent. The question of the State's power to issue such tokens was raised by the Federal Treasury but was not brought into the courts. The sales tax yielded, at the old rate of 2 per cent, \$21,560,197 for the first half of 1935.

As reported by the FERA on March 1, the combined distributions of money for the relief of the needy unemployed in Illinois during 1934 totaled some \$107,000,000, of this the FERA gave \$72,280,869, or 67.6 per cent; the State, \$30,485,359, localities, \$4,241,800.

Peace was disturbed in September and October by disorders in the course of a strike of dairy farmers, for higher prices. Efforts were made to cut off the milk supply of Chicago by stopping tank trucks and milk trains. The State Circuit Court invalidated a statute that sought to allow the payment of taxes for 1932 and earlier years in installments with remission of penalties. After Samuel and Martin Insull had been acquitted in a series of trials based on their alleged acts in connection with the failure of the Middle West Utilities Company in 1932, the State dropped the remainder of its charges against them.

Mayor Edward J. Kelly, Democrat, of Chicago was reelected on April 2, by a remarkable plurality, receiving almost five times as many votes as his Republican opponent, Emil C. Wetten. The Treasurer of Cook County, Robert M. Sweitzer, was removed on June 6 by the county commissioners, on an allegation that a serious shortage had been found in his accounts in his former post of County Clerk.

The Chicago City Council voted in December an ordinance whereby the city, to start with the following March 1, was to adopt Eastern Standard time permanently as an all-year standard. The ordinance did not provide for pushing the clocks a second hour ahead in summer, as would be necessary to synchronize Chicago with New York's summer standard of time.

Officers. The chief officers of the State, serving in 1935, were: Governor, Henry Horner; Lieutenant-Governor, Thomas F. Donovan; Secretary of State, Edward J. Hughes; Auditor, Edward J. Barrett; Treasurer, John Stelle; Attorney-

General, Otto Kerner; Superintendent of Public Instruction, John A. Wieland.

Judiciary. Supreme Court: Chief Justice, Clyde F. Stone; Associate Justices, Norman L. Jones, Paul Farthing, Lott R. Herrick, Elwyn R. Shaw, Warren C. Orr, Francis S. Wilson.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher learning in Urbana-Champaign, Ill., founded in 1867, with professional schools of medicine, dentistry, and pharmacy located in Chicago. The enrollment in the autumn of 1934 was 11,528, of whom 8531 were men and 2997 were women. The summer session enrollment was 2793 of whom 1611 were men and 1182 were women. The number of persons on the teaching staff above the rank of assistant was 700. The income for the year 1934-35 was \$5,968,357, of which \$3,818,093 was from the State. The productive funds from Federal endowment totaled \$649,013 and from private gifts, \$459,641. The library contained 1,006,000 volumes and 250,000 pamphlets. President, Arthur Cutts Willard, B.S., D.Eng., LL.D.

ILLUMINATION. See ELECTRICAL ILLUMINATION.

"I'M ALONE" CASE. See UNITED STATES under *Administration*.

IMMIGRATION. Net Departures Decrease. In 1935 the movement of aliens out of the United States declined sharply once more, confirming the trend which was first observed in 1934. As shown in Table I, the excess of departures dropped from 67,719 in 1932, to 57,013 in 1933, to 10,301 in 1934, and to 3878 in 1935. Nevertheless, in the five years ending with 1935, the total net outward movement of aliens was over 100,000, leaving a net inward movement for the 28 years from 1908 to the present day of 8,300,211. It is interesting to note that not until the present depression did an excess of departures over arrivals appear, and that the outward movement promises to come to a stop if conditions improve in the United States and fail to better themselves in foreign lands.

An analysis of the figures on the movement by States shows that New York continues to be the most important centre of the movement, and that

TABLE I—IMMIGRANT ALIENS ADMITTED TO AND EMIGRANT ALIENS DEPARTED FROM THE UNITED STATES, YEARS ENDED JUNE 30, 1908, TO 1935, SHOWING ANNUAL EXCESS

	<i>During</i>	<i>Immigrant aliens admitted</i>	<i>Emigrant aliens departed</i>	<i>Excess</i>

Total, 28 years		12,639,455	4,339,244	8,300,211

under "No Occupation" (22,488 and 14,267 respectively), but whereas 1705 of the immigrants were laborers, 11,032 of the emigrants fell in this category. At the other end of the scale, there were 2277 professionals among the immigrants and 2040 among the emigrants, this category almost achieving a balance. The details will be found in Table II.

TABLE II—IMMIGRANT ALIENS ADMITTED AND EMIGRANT ALIENS DEPARTED, YEARS ENDED JUNE 30, 1932 TO 1935, BY PRINCIPAL OCCUPATIONS

<i>Occupations</i>	<i>Immigrants</i>			<i>Emigrants</i>		
	1932	1933	1934	1932	1934	1935
All occupations	35,576	23,068	29,470	34,956	103,295	80,081
Professional	2,538	1,631	2,128	2,277	2,827	2,367
Commercial	1,133	785	1,275	1,387	2,771	2,374
Skilled	2,831	2,375	3,180	3,786	13,301	11,125
Servants	1,232	550	805	1,418	5,317	4,979
Laborers	1,372	978	1,346	1,705	35,619	26,499
Miscellaneous	1,406	1,203	1,607	1,895	5,449	4,412
No occupation	25,064	15,546	19,129	22,488	38,011	28,325

in 1935 the arrivals (13,660) nearly balanced the departures (13,675). The only other States showing figures at all comparable were those known to have large Mexican populations and this movement is considerably complicated by the fact that there has been an "involuntary" emigration of Mexican nationals of unknown extent. For example, during 1935 Texas received but 843 immigrants, while there were 4336 emigrants; and California received 2843 immigrants and had 4434 emigrants. Other States showing a high rate of movement were well-known to be industrialized and urbanized areas containing large groups of aliens: Illinois, Massachusetts, Michigan, and Pennsylvania. Occupationally, the largest group of both immigrants and emigrants were classified

Citizenship Petitions. Petitions for citizenship increased from 112,629 in 1933, the low point during the last five years, to 131,378 in 1935, a figure still about 15,000 short of the peak of the last five years, reached in 1931. Certificates of citizenship granted increased from 113,363 in 1933 to 118,945 in 1935. (For details see Table III.) This renewal of an upward movement in the naturalization figures was attributed by the Bureau of Immigration to the following causes: the desire of aliens to become eligible for old age pensions under the social security act; to be eligible for jobs under the WPA programme; to avoid deportation to Europe, accentuated by the unrest in Europe; to improve the chances of gaining employment; and to become eligible for civil service appointments.

TABLE III—DECLARATIONS OF INTENTION AND PETITIONS FOR CITIZENSHIP FILED AND CERTIFICATES OF NATURALIZATION ISSUED, YEARS ENDED JUNE 30, 1907 TO 1935

Period of year	Declarations		Petitions		Certificates	
		Civilian	Military	Total	Civilian	Military
Grand total, 29 years, 1907-35	6,457,511	3,757,991	309,374	4,067,365	3,332,438	307,529
Total, 1907-10	526,322	164,036	164,036	111,738
Total, 1911-20	2,686,909	1,137,084	244,300	1,381,384	884,672	244,300
Total, 1921-30	2,709,014	1,827,073	57,204	1,884,277	1,716,979	56,206
Total, 1931-35	535,266	629,798	7,870	637,668	619,049	7,023
1931	106,272	142,249	3,225	145,474	140,271	3,224
1932	101,345	131,043	19	131,062	136,598	2
1933	83,046	110,604	2,025	112,629	112,368	995
1934	108,079	114,524	2,601	117,125	110,867	2,802
1935	136,524	131,378	131,378	118,945	...

It will be noted that most of these reasons have an obvious economic significance and call attention to the fact that the alien in the United States suffers even more marked employment disabilities in times of depression than in "normal" times.

There must, nevertheless, always remain a sizable alien population within the American borders, for thousands of immigrants are unable to read and write the English language with sufficient skill to qualify for citizenship. On the other hand, the Commissioner of Immigration has announced that he intends to cooperate with the trend by seeking to eliminate the chances of an alien being disqualified for citizenship by the use of "trick" questions and requests for information which few native born citizens could produce on demand. He regards it as of the first importance that aliens be given every opportunity to regularize their status in this period of social turmoil.

Anti-Alien Measures. One of the most formidable anti-alien measures ever proposed was intermittently debated during 1935. Congressman Martin Dies of Texas initiated agitation for a measure whereby approximately 6,000,000 aliens (his calculation) would be deported as a means of solving the unemployment problem. In favor of this bill he instanced the restrictions on the employment in force in France, Germany, Italy, and other European countries, and also the measures taken by these same countries to deport alien workers as the unemployment figures mounted. Congressman Dies's argument is deceptively simple: he asserts that the unemployment problem would never have assumed such serious and unprecedented proportions, and it is not improbable that a large surplus would have been unknown in this generation, if the nation had excluded the 20,000,000 or more aliens that have joined the competitive ranks of labor, agriculture, and business.

In June, 1935, Mr. Dies announced that 155 organizations representing 5,000,000 people supported his measure; that he had received 50,000 unsolicited letters and telegrams in support of it, and that at least 150 Congressmen favored his bill. As planned, this bill would provide that no alien can hold a job in this country that can be filled by a citizen. Mr. Dies hoped to enlist 10,000,000 citizens as voluntary propagandists for his programme. It is worth noting in passing that Mr. Dies comes from Texas, one of the centres of involuntary emigration of Mexican laborers, a movement which has taken an unknown number of American-born children out of the country. The status of these "deported" Americans is at present an unexplored field. Finally, while it is not known how many of those currently employed are aliens, nor how many of those currently unemployed, but it is estimated that but 3 per cent of those on relief are aliens, a "normal" proportion, and an indication of the economic sufficiency of this group in the population.

The Alien Radical. Closely related to the proposal of Congressman Dies are the various and sundry measures suggested and actually taken for the deportation of alien "radicals." This issue is always raised in the case of strikes, and during both 1934 and 1935 the agents of the Bureau of Immigration were repeatedly accused of "breaking" strikes by arresting leaders on the allegation that they were illegally in the country. An important indication of the significance of this activity, both as to its extent and the number of radical aliens actually picked up in this fashion, is furnished by a report on arrests in several strike areas, including the San Francisco general strike of 1934, released during 1935. Of 448 persons arrested, Commissioner of Immigration MacCormack found that 330 were indisputably American citizens "for the most part by birth," 118 were aliens of whom not more than 14 were deportable, and "only one of the 448 was a radical." The fact that foreign radicals are not at the bottom of the strikes could not be more clearly demonstrated, but, according to the title of an article in *The New Republic* for Mar 27, 1935, the "foreign agitator" is "An Old American Institution." This article, written by Sylvia Kopald Selekmán, traces the history of this cry from the earliest days of the American labor movement to the present time, making detailed footnote references to authentic sources. She concludes:

The employers . . . in our present-day America, where mass immigration has ended, will apparently be no more stumped than were those of 1825 in an America where mass immigration had hardly begun. But from that fact we take heart, too. For if the foreign agitator proves too valuable a weapon for the standpatters of mature American industry to relinquish in their defense of "American tradition," it is encouraging to remember that all the foreign agitators whom employers could raise in dawning and developing American industry did not assure their final victory over such "revolutionary, un-American" demands as the 10-hour day, the 8-hour day, factory legislation, better wages, and free public schools . . .

Equally pertinent in this connection is the statement of the Commissioner of Immigration that there are not 6,000,000 aliens in the country, but only 4,992,000 of whom fully 1,500,000 have taken out first papers or as minor children will become citizens on the naturalization of their parents. Moreover, it is estimated that not more than 100,000 are in the country illegally and subject to deportation if detected. And finally, the oft repeated allegation that deserting alien seamen swell the ranks of those illegally in the country at the rate of a quarter of a million a year, is dissolved by the Commissioner's statement that during the last four years the average number of such desertions per year has been 1580.

Deportations. Turning now to the official figures on deportations, it is discovered that whereas 17 individuals classified under the heading "anarchists and kindred classes" were deported during 1935, there were 2824 deported and listed under the rubric "entered without proper visa." The total

number of deportees fell from 19,865 in 1933, the peak year since 1930, to 8,319, the low point for the same period. In connection with the remarks above about the movement of Mexicans out of the border States, it is interesting to note that most of the deportees went to Mexico, more than twice the number sent back to all of Europe. (See Table IV.)

TABLE IV—ALIENS DEPORTED FROM THE UNITED STATES, YEARS ENDED JUNE 30, 1930 TO 1935, BY PRINCIPAL CAUSES, COUNTRIES, RACES, AND SEX, AS SPECIFIED

Foreign Countries. Among the more significant measures for the control of immigration taken by foreign countries during 1934, were the following: *Austria* prohibited naturalization of aliens to protect the national labor market; *Belgium* put foreign workers on a quota basis, either by the country as a whole, particular occupations, or areas; *Brasil*, by constitutional provision, established a quota of 2 per cent of the number of persons of each nationality who have settled in the country during the last 50 years as the maximum yearly increase allowable, and forbade concentration of nationalities in any part of the nation; *France* began to refuse work permits to new alien arrivals, to scrutinize applications for renewals closely, and forbade the employment of aliens on public works; *Mexico* prohibited the entry of

aliens desiring to engage in remunerative activity; and *Rumania* set up the requirement that 80 per cent of the staff of every business house must be Rumanian nationals, and 50 per cent of the directors and members of boards.

IMPORTS. See articles on various countries; and especially articles AGRICULTURE; CORN; IRON AND STEEL, ETC.

INCINERATION. See GARBAGE AND REFUSE DISPOSAL.

INCOME. See PUBLIC FINANCE; STATISTICS; TAXATION.

INDIA. A dependency of the British Empire, consisting of British India, or the territory subject to British law and directly administered by British officials, and the Indian States, ruled by native princes but subject to the control of the British Parliament. Capital, New Delhi. Summer seat of the government (April to October), Simla.

Area and Population. India has an area of 1,819,000 square miles (British Provinces, 1,107,968; Indian States, 711,032) and a population estimated on Jan. 1, 1934, at 363,100,000. At the 1931 census, the population totaled 352,986,876 (British Provinces, 271,749,312; Indian States, 81,237,564). For the area and population of the various Provinces, States, and Agencies in 1931, see 1933 New INTERNATIONAL YEAR BOOK, p. 356. Registered living births in the British Provinces in 1933 numbered 9,678,876; deaths, 6,096,782. Populations of the chief cities in 1931 were: Calcutta, with suburbs and Howrah, 1,419,312; Bombay, 1,147,851; Madras, 647,228; Delhi, 447,422; Lahore, 429,747; Rangoon, 400,415; Hyderabad, 377,000; Ahmedabad, 310,000; Bangalore, 306,365; Lucknow, 276,659; Amritsar, 264,840; Karachi, 260,639; Cawnpore, 243,755; Agra, 229,764; Nagpur, 215,003; Benares, 205,315.

The division of the population by religious faiths in 1931 was: Hindus, 239,195,140; Moslems, 77,677,545; Buddhists, 12,786,806; tribal religions, 8,280,347; Christians, 6,296,763; Sikhs, 4,335,771; Jains, 1,252,105; Jews, 24,141.

Education. The population in 1931 was about 90 per cent illiterate, the census showing 28,138,856 persons able to read and write. In British India in 1932-33 there were 222,566 "recognized" schools, with 12,192,137 pupils, and 34,781 "unrecognized" schools, with 661,395 pupils. These included 199,706 primary schools, with 9,531,970 pupils; 13,761 secondary schools, with 2,297,067 pupils; 252 colleges of arts and sciences, with 75,329 students; and 16 universities, with 10,041 students. There were also 6831 special institutions, with 277,730 students.

Production. About 110,000,000 persons were engaged in agriculture, forestry, and stock raising in 1931. The area under cultivation in 1931-32 was 298,641,000 acres. Provisional yields of the chief crops in 1934-35, with 1933-34 figures in parentheses, were (in 1000 metric tons): Wheat, 9508 (9591); rice, 45,508 (47,084); cane sugar, 3100 (2970); linseed, 383 (412.5); rape and mustard, 967.3 (1,062.8); sesamum, 410.5 (549.7); ground-nuts, 1899 (3,383.4); cotton, 872.2 (919.5); jute, 1445 (1,453.7). Exports of crude rubber in 1934 totaled 12,000 metric tons; production of tobacco (1933-34), 630,000 metric tons; coffee exports (1932-33), 14,700 metric tons; barley production (1933-34), 2,388,700 metric tons. The 1931-32 livestock census showed 159,573,000 cattle, 41,928,000 buffaloes, 43,481,000 sheep, 49,704,000 goats, 4,292,000 horses, mules, and asses, and 947,000 camels.

Mineral and metallurgical production was (in

1000 metric tons): Coal (British Provinces only), 20,431 in 1934; cement, 749 in 1934; salt, 1740 in 1933; coke, 2084 in 1933; petroleum, 1292 in 1934; manganese ore, 221.8 in 1933; iron ore, 1248 in 1933; pig iron and ferro-alloys, 1083 in 1933; steel ingots and castings, 813; copper, 10.9 in 1933; lead, 90.2 in 1934; zinc, 56.7 in 1934; tin, 3.4 in 1934; bauxite, 1.1 in 1933; nickel, 1.2 in 1934. Gold production in 1934 was 9950 kilograms; silver, 180,000 kilograms.

One of the seven leading industrial countries of the world, India produces important quantities of cotton textiles, jute, iron, and steel, and sugar. For the year ended Aug. 31, 1934, there were 352 cotton mills, with 9,613,000 spindles and 194,888 looms, employing an average of 385,000 employees daily. For the same year cotton consumption was 1,292,512,000 lb. and the production of piece goods was 2,945,051,000 yd. There were 101 jute mills, with 50,195 looms operating on Jan. 1, 1935; production during 1934 was 839,094 long tons. Other industrial establishments in 1932 included 2050 cotton ginning and pressing mills, 1498 rice mills, 978 tea factories, 239 vegetable oil mills, 166 sugar factories, 158 saw mills, 343 printing and bookbinding establishments.

Foreign Trade. Sea-borne imports of merchandise (excluding government stores) during the fiscal year ended Mar. 31, 1935, totaled £99,189,000 (1,322,520,000 rupees), compared with £86,518,000 (1,153,573,000 rupees) in 1933-34. Merchandise exports, including reexports, were £116,090,000 (1,547,866,000 rupees) in 1934-35 and £112,300,000 (1,497,348,000 rupees) in 1933-34. In 1934-35 the United Kingdom supplied 40.6 per cent of the total merchandise imports; Japan, 15.7; Germany, 7.7; and the United States, 6.3 per cent. Of the exports, the United Kingdom took 31.4 per cent; Japan, 16; United States, 8.3; and Germany, 4.6 per cent. Values of leading 1934-35 imports were (in £1000): Cotton goods, 13,994; machinery, 9478; mineral oils, 4554; iron and steel, 4002; raw cotton, 3963; instruments, 3545. Values of the main exports were (in £1000): Raw cotton, 25,872; jute manufactures, 16,101; tea, 15,098; raw jute, 8153; oil seeds, 7906; rice, 7776; metals and ores, 4435; leather, 4109.

Imports in 1935 were valued at 1,359,000,000 rupees; exports, 1,607,500,000 rupees (preliminary). United States statistics for 1935 showed imports from British India of \$64,403,655 (\$55,082,367 in 1934) and exports to India of \$31,452,073 (\$27,441,904 in 1934).

Finance. Budget returns for the fiscal year ended Mar. 31, 1934, showed a surplus of 27,200,000 rupees and the revised estimates for 1934-35 showed an anticipated surplus of 32,700,000 rupees. The budget for 1935-36 estimated receipts at 1,249,000,000 rupees and expenditures at 1,234,000,000 rupees.

The public debt of the Government of British India, including the debt incurred on behalf of the provincial governments, amounted to 12,239,700,000 rupees on Mar. 31, 1934. The internal debt was 7,123,700,000 rupees; external, 5,116,000,000 rupees. The rupee, with a par value of \$0.6180 in 1935, exchanged at an average of \$0.2635 in 1932, \$0.3182 in 1933, and \$0.3788 in 1934.

Communications. With 42,953 miles of line, the Indian railways during the year ended Mar. 31, 1934, carried 489,613,000 passengers and 76,513,000 tons of freight, earning gross receipts of 995,800,000 rupees. Highways in British India and the Punjab extended about 225,280 miles. British, French, and Dutch air lines connect India with

Europe and with the other countries of the Far East. The net tonnage of vessels entering Indian ports in the overseas trade with cargo totaled 7,939,000 for the year ended Mar. 31, 1935 (7,354,000 in 1933-34).

Government. Direction and control of the civil and military government of British India were vested in the Governor-General in Council, or government of India. The Governor-General, or Viceroy, is appointed by the British Government, usually for five years. The Legislature in 1935 consisted of the Viceroy and two chambers—the Council of State of 60 members (33 elected and 27 nominated) and the Legislative Assembly of 146 members (105 elected and 41 nominated). For the constitutional reforms for India approved by the British Parliament in June, 1935, see *History*. Viceroy in 1935, the Earl of Willingdon. The appointment of Lord Linlithgow to succeed the Earl of Willingdon upon the expiration of the latter's term in April, 1936, was announced by the King in August, 1935. The six appointed members of the Viceroy's council served as a cabinet.

HISTORY

India Wins Parliamentary Rule. After investigations, round-table conferences, and parliamentary hearings extending over a period of eight years, the momentous Government of India Act passed the British Parliament and received the royal assent on Aug. 2, 1935. It extended parliamentary government to one-fifth of the human family, and formally embodied the conviction of the British Government that complete autonomy and Dominion status was the eventual goal of governmental evolution in India. However the powers of self-government extended to India immediately under the Act were hedged about with formidable safeguards and precautions which left final power in the hands of the British Viceroy.

The text of the bill was published on January 24 coincident with its introduction in Parliament. The bill followed with but slight modification the recommendations of the Parliamentary Joint Select Committee submitted Nov. 21, 1934, after hearings extending over 18 months (see 1934 YEAR BOOK, pp. 307-308 for these recommendations). The debate on the bill was inaugurated with the declaration of Sir Samuel Hoare, Secretary of State for India, that "the natural issue of India's progress is the attainment of Dominion status." The measure was bitterly fought by a strong Conservative diehard group under Winston Churchill which opposed any concession to the Indian agitation for self-government. The Labor minority in Parliament attacked the measure on the ground that it did not go far enough in the grant of partial autonomy. In India opinion was similarly divided, with the Indian Princes asking modifications of the bill to safeguard their sovereignty against invasion by the new Central Government and with the All-India National Congress and other groups opposing it as totally inadequate. In February the Indian Legislative Assembly voted 74 to 58 that the scheme for Provincial Governments outlined in the bill was "most unsatisfactory and disappointing." The provisions for establishment of a Central Government, or All-India Federation, were condemned as "fundamentally bad and totally unacceptable to the people of British India."

With minor concessions to the critics of the bill, the measure passed its final reading in the House of Commons on June 5. The House of Lords introduced further amendments, the most important

of which provided for direct instead of indirect election of the upper chamber of the new Federal Parliament. Four days after the amended bill received the royal assent on August 2, the British Government announced the appointment of the Marquess of Linlithgow as Viceroy of India, to succeed the Earl of Willingdon in April, 1936. The new Viceroy, who had been chairman of the Parliamentary Joint Committee which drafted the India Bill, was selected primarily for the task of inaugurating and administering the new parliamentary system. He was generally considered an ideal choice for the position.

Passage of the India Bill was followed by active preparations to put it into operation some time in 1936 or 1937. As the bill provided for the separation of India and Burma (q.v.), an agreement regulating trade, immigration, and other relations between the two dependencies had to be reached. Such an agreement was published in a White Paper on August 29. A commission was established to lay plans for a new Government of India Secretariat and Sir Otto Niemeyer of the Bank of England was appointed to study and make recommendations for solution of the problem of allocating financial resources among the Federal and the new Provincial governments. Another committee named was the Indian Delimitation Committee, charged with working out in detail and applying the electoral principles incorporated in the India Bill. At the end of 1935 these studies were for the most part well under way.

The Legislative Assembly. While preparations for putting the new Constitution of India into effect were under way, developments in the Legislative Assembly at Delhi indicated the developing force of the Nationalist movement and reflected increasing unrest under the curbs imposed by the British raj. Decisions of this assembly were not binding upon the Viceroy and his cabinet. Nevertheless as the most representative body in British India, its action was considered indicative of Indian sentiment on political issues. The session of the Legislative Assembly which opened at Delhi on Jan. 21, 1935, had special significance because the All-India Congress, or Nationalist party, was represented for the first time in a decade. Abandoning their boycott of the government for the elections of November, 1934, the Congress party candidates won 60 out of 145 seats and with the aid of 16 Moslem independents dominated the Legislature.

In addition to attacking the new Constitution, the Opposition defeated the government bloc in the Assembly on a number of other issues. On January 30 it carried by a vote of 66 to 58 a motion attacking the Indo-British Trade Agreement of Jan. 9, 1935, as "unfair to India" and urging the government to cancel it. In February and March it voiced its disapproval of the government by cutting to one rupee the army and Railway Board appropriations in the Central budget. It likewise voted to reduce the salt tax and other imposts. The Viceroy, however, used his veto powers to disapprove the Assembly's amendments and the bills were put into force as originally submitted by the government.

The Opposition majority administered a new series of rebukes to the government when the Legislative Assembly reconvened at Simla on September 2. It defeated, 71 to 61, a bill to extend the Criminal Law (Amendment) Act of 1932 empowering the government to crush terrorism and control the press. The measure was certified by the

Viceroy over the majority's protest. The Opposition also censured the government for the alleged bombing of women and children during operations against rebellious tribesmen on the North-West Frontier and voted, fruitlessly, to reject as inequitable the proposed financial settlement between India and Burma.

Riots and Rebellions. British defenders of the extensive powers reserved to the Viceroy under the new India Act pointed to the numerous disorders in British India during 1935 as confirming the need for a strong hand at the helm. An outbreak among the unruly Upper Mohmand tribesmen along the Afghan frontier in September was suppressed after some 30,000 British Indian troops had been sent into the region. A number of British officers were killed in the fighting and casualties among their troops totaled more than 100. Peace was restored in October, after the tribal chiefs had made their submission to Sir Ralph Griffith, Governor of the Frontier Province.

The other disorders were mainly of religious origin. On March 19 a Moslem mob in Karachi got out of hand and threatened to attack two platoons of the Royal Sussex Regiment. The soldiers fired 47 shots into the advancing throng, killing 47 persons. Fourteen were killed in a Hindu-Moslem riot at Firozabad in the United Provinces on April 14, and on June 5 more than 40 were wounded during a clash between police and Moslems in Calcutta. A Sikh-Moslem religious clash in Lahore led to disorders on July 20; a Scottish regiment fired upon rioters, killing 10. More than 1200 others were arrested. New disorders, with further deaths, occurred in Lahore in August. In the same month fighting between Moslems and Hindus in Secunderabad, State of Hyderabad, cost additional lives and caused scores of arrests. Anti-tax demonstrations caused minor disorders at several other points.

Bengal, long the seat of Indian terrorism against British officials, remained quiet. An official report revealed that 80 terrorists were confined in jails, 1468 in concentration camps, 229 in the Andaman Islands, and 966 in their homes or native villages. The Bengal Public Security Bill under which these measures were taken were extended for three years on August 26. A two-year trial of terrorists ended at Calcutta on May 1 when 31 Hindus were convicted of conspiring against the government. To the toll of these man-made disasters was added the heavy loss of life and property caused by the great earthquake of May 31 which ruined Quetta in Baluchistan and many villages in that vicinity (see EARTHQUAKES).

Financial Problems. With the inauguration of India's new Central Bank on April 1, the question was raised once more as to the effect upon India's financial structure and internal economy of the heavy outflow of gold and silver caused by the higher prices of these metals resulting from the depreciation of currencies the world over. However the outflow of both gold and silver showed a tendency to decline during 1935 and official reports indicated that vast stores of both metals remained in private Indian hoards. From 1900 through 1931 gold imported into India totaled 89,200,000 ounces (\$3,122,000,000), while exports from April, 1931, through March, 1935, were but 29,300,000 fine ounces (\$1,025,000,000). The gold holdings of the Central Government remained constant at 415,000,000 rupees during the period 1931-35, while its silver holdings declined from 1,230,000,000 rupees on

Dec. 31, 1931, to 572,000,000 rupees on Dec. 31, 1935.

Consult H. B. Lees-Smith, "Self-Rule for India," *Current History*, October, 1935; T. A. Bisson, "A New Constitution for India," *Foreign Policy Reports*, July 17, 1935.

INDIA, PORTUGUESE. The Portuguese possessions in India, comprising Goa, Daman, and Diu. Total area, 1637 sq. miles; total population (1934), 579,969. Capital, Panjim (or New Goa). Coconuts, spices, caju-nuts, salt, fish, and manganese were the main exports. Trade was largely transit. In 1933, imports were valued at Rs15,211,583; exports, Rs2,376,159 (rupee averaged \$0.2489 for 1933). A decree of May 9, 1935, provided that future fiscal years should coincide with the calendar year and approved the budget expenditure of 53,083,787 paper escudos for the 18 months ending Dec. 31, 1936 (escudo equaled \$0.0449 on June 13, 1935). Governor-General, General Graveiro Lopes.

INDIANA. Population. On Apr. 1, 1930 (Fifteenth Census), 3,238,503; on July 1, 1934, by latest Federal estimate, 3,304,000; 1920 (Census), 2,930,390. Indianapolis, the capital, had (1930) 364,161 inhabitants; Fort Wayne, 114,946; Evansville, 102,249; South Bend, 104,193; Gary, 100,426.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod Bu.	Value
Corn	1935	4,038,000	153,444,000	\$76,722,000
	1934	3,883,000	96,298,000	75,112,000
Hay (tame) . . .	1935	1,752,000	2,463,000 ^a	17,241,000
	1934	1,871,000	1,804,000 ^a	24,534,000
Wheat	1935	1,846,000	28,618,000	21,750,000
	1934	1,808,000	32,152,000	27,650,000
Oats	1935	1,485,000	38,610,000	9,652,000
	1934	1,350,000	18,225,000	7,837,000
Potatoes	1935	66,000	5,280,000	3,432,000
	1934	62,000	6,200,000	3,720,000
Tobacco	1935	8,200	6,590,000 ^b	926,000
	1934	7,900	6,438,000 ^b	904,000
Soy beans	1935	347,000	5,899,000	4,070,000
	1934	160,000	2,560,000	2,458,000

^a Tons. ^b Pounds.

Mineral Production. The yearly production of coal again increased moderately, to some 15,440,000 net tons (1935), from 14,793,643 (1934). Using the equivalent of about one-fourth of the yearly output of coal, the coke ovens produced 2,613,437 net tons of coke in 1934, as against 2,089,100 for 1933; by value, \$16,957,287 as against \$12,031,285. Of this coke, 2,136,283 tons, or over four-fifths, went into blast furnaces. These furnaces extracted from iron ore extraneous to the State the quantity of 1,463,350 gross tons of pig iron (1934), as against 1,183,405 (1933). The furnaces' shipments of pig iron for 1934 fell slightly short of the year's production, attaining 1,545,011 tons, but materially exceeded the 1,296,518 tons shipped in 1933; the value of yearly shipments rose to \$27,977,992 (1934) from \$19,989,998 (1933).

The limestone quarries in the State continued to produce more than three-fourths of the domestic superior limestone for building purposes; but their production declined sharply to 387,000 short tons (1934), from 502,400 (1933), and to the value of \$2,779,182 from \$4,898,773, for lack of activity in the type of building that used such stone. The production of petroleum rose to some 810,000 barrels (1934) from 737,000 (1933), in accord with the completion of new wells, largely in Vanderburgh and Gibson counties.

Education. For the academic year 1934-35, the number of inhabitants of school age was stated as 872,842. Those actually enrolled as pupils in the

public schools totaled 694,428. Of these enrollments, 520,581 were in common schools or elementary grades; the remaining 173,847 were in high schools. The total of all expenditures of the year for public-school education in the State attained \$53,644,054; this total exceeded that for the previous year by some 3 per cent. The salaries of teachers averaged, for the year, \$1089.62, a sum about \$9 in excess of the corresponding average for the year previous.

The Legislature provided in 1935, with the aid of State revenue, that a minimum of \$400 be set for teachers' yearly pay. A change in curriculum, the *Journal* of the National Education Association reported, required high-school courses in safety. Federal aid was given to the erection of some 96 buildings.

Charities and Corrections. The Department of Public Welfare, as constituted under the general administrative reorganizing act of 1933, functioned in 1935 as the central administrative authority over institutions containing persons in the State's care.

The State maintained, in 1935, the following 20 charitable and correctional institutions: for mental disorders, State Hospitals at Indianapolis, Logansport, Richmond, Evansville, and North Madison; for the feeble-minded, the Fort Wayne State School, at Fort Wayne, and the Muskatatuck Colony, at Butlerville; a Village for Epileptics, at New-castle; Soldiers' Home, at Lafayette; Soldiers' and Sailors' Children's Home, Knightstown; State Sanatorium (for cases of tuberculosis), Rockville; Indiana University Hospitals, Indianapolis; State School for the Deaf, Indianapolis; School for the Blind, Indianapolis; State Prison, Michigan City; Reformatory, Pendleton; State Farm for Misdemeanants, Greencastle; Women's Prison, Indianapolis; Indiana Girls' School, Indianapolis; Indiana Boys' School, Plainfield.

Legislation. The regular session of the Legislature was occupied with measures for increasing revenues, lowering the direct taxes, controlling the traffic in liquor, and improving social conditions. An act was passed terminating the right of individuals to bring civil suits on grounds of breach of promise to marry and of alienation of affections. The business of selling household appliances was prohibited to public-utility companies. The State's ratification was given to the proposed amendment to the United States Constitution giving Congress power with regard to the labor of the young.

Political and Other Events. The monthly contributions of the FERA to the support of the State's destitute unemployed ceased with September; it was then held that the supply of employment, either of the normal sort or of the kind provided by the Federal work-making agencies, had reduced the number of the idle sufficiently to obviate the need of direct Federal contribution to their maintenance. There had been spent for their support in 1934 somewhat over \$31,000,000, of which the FERA had furnished \$20,787,263.

There occurred in Terre Haute, July 22-23, a general strike, supported by the local organizations of the AFL, which stopped transportation, the movement of goods, the retailing of fuel for automobiles, and the serving of meals at many public eating-places. The strike was designed as a protest against the alleged importation of a body of 58 guards by the Columbian Enameling and Stamping Company, the offices of which had lately been invaded and wrecked by persons in sympathy

with striking employees of that company. Governor McNutt put 2000 National Guardsmen in the city at the outset of the general strike, and no serious violence was reported.

Indianapolis undertook to buy the property and business of the Citizens' Gas Company, which it intended to operate as a municipal plant. It sold for this purpose \$8,000,000 of bonds secured by a pledge of the property's income.

Officers. The chief officers of the State, serving in 1935, were: Governor, Paul V. McNutt; Lieutenant-Governor, M. Clifford Townsend; Secretary of State, August G. Mueller; Auditor, Lawrence F. Sullivan; Treasurer, Peter F. Hein; Attorney-General, Philip Lutz, Jr.; Superintendent of Public Instruction, Floyd I. McMurray.

Judiciary. Supreme Court: Judges, James P. Hughes, Michael Fansler, George L. Tremain, Curtis W. Roll, Walter E. Treanor.

INDIANA UNIVERSITY. A coeducational State institution of higher learning in Bloomington, Ind., founded in 1820. For the first semester of the academic year 1935-36 the registration aggregated 5220 students (3438 men and 1782 women). The faculty had 370 members. The endowment funds amounted to \$2,269,662, and the total income for the year, from State and private sources, was \$2,589,697. The library contained 256,179 volumes. President, William Lowe Bryan, Ph.D., LL.D., L.H.D.

INDIANS. In the Indian Reorganization (or modified Wheeler-Howard) Act, as outlined in THE NEW INTERNATIONAL YEAR BOOK OF 1934, provision was made that each tribe must decide at a special election whether it wanted to accept the benefits of the Act or reject them. Beginning with August, 1934, and extending to June 17, 1935, according to the annual report of John Collier, Commissioner, to the Secretary of the Interior, 263 elections resulted in the decision by 73 tribes, with a population of 63,467 persons, to exclude themselves from the benefits and protection of the Act, and by 172 tribes, with a population of 132,426 persons, to accept the Act.

Where the Act was rejected it was due in the main to energetic campaigns of misrepresentation carried on by special interests which feared loss of advantages through the new law. All the 73 reservations voting against acceptance of the act were small, except the largest reservation, that of the Navajos. Through the aid of false propaganda, exclusion of the Navajo reservation was brought about by a narrow margin of votes—7992 against and 7608 for acceptance.

Indians played a prominent part in emergency conservation work, adding many millions of dollars to the value of land, water, and forests in the last two years through the construction and development of wells, springs, stock-water dams, roads and truck trails, fences, and telephone lines. Invaluable benefits have been derived from the improvement of 20,000,000 acres of range. Likewise, Public Works funds granted for new Indian school buildings, hospitals and sanatoria are a clear gain to the Indians and to many nearby white communities. Despite this the need for such structures is not yet half filled nor is the Indian irrigation programme, financed from emergency funds, more than one-third completed.

A policy of greater utilization of Indians in the Indian Service was begun in the fiscal year. Of a total of 5463 regular classified positions in the field service, 2037 are filled by Indians. Exact figures as to the number of Indians employed on

Public Works and Emergency Conservation Work projects are not available. Through the Employment Division, 11,568 Indians were placed, a gain of 21.7 per cent over the previous year.

Indian livestock industry was given a real impetus through the allocation of \$800,000 by the Agricultural Adjustment Administration for the purchase of purebred cattle from distressed breeders in the drought areas. Arrangements also were made with the Federal Surplus Relief Corporation whereby cattle were turned over to the Indians to establish foundation herds. Also, the number of Indians owning dairy cattle increased throughout the year by 44 per cent, and the number of such animals owned increased 57 per cent.

The income of the Osage Indians of Oklahoma from their oil and gas leases was almost \$5,000,000 during the year, bringing the total received by them from that source to more than \$252,700,000. Oil is also being produced and marketed on the Navajo reservation in New Mexico and on the Blackfeet reservation in Montana.

A total of \$10,000,000 was allotted for the Indian emergency conservation work, \$7,500,000 under the act of Mar. 31, 1933, and \$2,500,000 under the new act. Some 27,000 Indian enrollees have been employed since work began until the end of the last fiscal year. Indians were given preference in supervisory jobs as soon as their training warranted appointment.

The year saw the renewal of activities on several large Indian timber sales, which had been dormant for several years. There were 28 active timber sales on Indian reservations, the volume of timber cut totaling 223,000,000 board feet.

Road construction and improvement of Indian reservations was continued with the \$2,000,000 provided in the Emergency Appropriation Act of June 19, 1934. With this fund, 1120 mi. of road were constructed or reconstructed, 348 mi. of road were surfaced, 3755 mi. of road were maintained, 227 mi. of school roads were constructed or improved, 196 bridges were built and 173 bridges repaired.

Irrigation activities included maintenance and operation on 122 projects in the 11 western States, and domestic- and stock-water development in Arizona and New Mexico. Surveys show that the ultimate irrigation development on the reservations is about 1,160,000 acres, of which 730,000 acres are now provided with irrigation facilities. The estimated cost of completing the various projects to serve the entire 1,160,000 acres adequately is \$60,000,000. Plans have been formulated for completing this work over a 10-year period.

Total Public Works funds available for the year were \$4,581,043, the total expenditures from this amount being \$3,600,000 which left a balance of about \$981,043 available for the fiscal year 1936.

INSURANCE. Insurance interests have no legitimate cause for complaint with their experience during 1935; for the companies generally, and particularly the fire and surety writing offices, profited substantially in both their underwriting and their financial departments. No division of the business, it is true, made appreciable gains in premium income, counting itself fortunate if the returns in such connection equaled those of the preceding year. All, however, advanced materially, through appreciation in the market value of securities carried in portfolios; the average gains in such connection—bonds and stocks included—being approximately 20 per cent over the quotations at the close of 1934. By virtue of the combined favorable underwriting and financial results, companies almost without exception added substantially to net surplus accounts; a number sharing the prosperity with stockholders through the declaration of extra dividends.

While little inimical legislation peculiarly affecting insurance interests was enacted in any of the States, extensive business development campaigns, which otherwise would have been embarked upon, were retarded through the passage of various laws of general application by Congress, the effect of which underwriters desired to study before committing themselves to broad expansion moves.

Little new capital entered the underwriting field during the past 12 months; nor was there any real demand for it, the institutions already operating being equipped to furnish all the liability required by property owners.

That insurance, by and large, is upon a more stable basis to-day than was the case in 1934, not to mention the three immediately preceding years, is sufficiently attested by the absence of important company retirements, voluntary or otherwise. Such reinsurances or liquidations as did take place, were of small concerns. A further evidence of increased financial strength by the carriers was the repayment by several of loans previously had from the Reconstruction Finance Corporation.

The past year, in common with that of the preceding 12 months, witnessed the appointment of an unusually large number of new state insurance commissioners, few of whom had any previous knowledge of the business. Feeling between the governing officials of the eastern and western States as to matters of general administration policy developed and proved the occasion for a lively exchange of views between the two elements at the semi-annual gathering of the National Convention of Insurance Commissioners in New York City in December.

Holding that certain conditions peculiar to their territory obtained and required special consideration, commissioners of a number of commonwealths of the west formed a separate organization, though continuing membership in the national body as well. One of the contentions between the two interests is that of company examinations; an element declaring that the investigation of companies wherever domiciled be undertaken by a committee of the National Convention, while others would have none of it, holding instead that each department examine its home institutions.

So far as managing underwriters were concerned, their position continued to be that examinations, by whomever conducted, should be at the expense of the State departments and not be a further charge upon the institutions, whose annual premium and other tax payments to the States far exceeds the cost of departmental operations.

Appreciating that the insurance laws of their respective States were inadequate in many respects to meet existing underwriting conditions, statutes in a number of the commonwealths were amended, while in several, complete code revisions were either effected or initiated.

As was true in 1934, the safe investment of funds continued to be the major problem of insurance companies during the year. Particularly did it apply to life offices, which limited by law to the type of securities they may purchase, and predicating their premium rates upon an assumed earned rate of interest, were hard pressed in their handling of funds. Government bonds had been bought to a large extent, as had State and municipal obligations, but even so, the market was a restricted one, and extreme care had to be exercised in making long-term commitments. In the farm loan mortgage field, formerly an attractive investment avenue for life companies, competition of the federal government tended to strictly limit the number of desirable offerings. While farm loans are still being made, the trend of the life offices generally is toward loaning upon urban properties, carefully selected and conservatively appraised.

Fire, casualty, and marine writing companies, being free from the rigid legal restriction applied to life institutions, were able to invest in diversified forms of security, the gains from which were appreciable.

Casualty Insurance. Easily the outstanding happening in the field of casualty insurance during 1935 was the creation of a guarantee fund by companies operating in New York for the payment of compensation insurance claims in the event of default by any licensed carrier. The fund, or funds rather (for separate contributions are made by the stock and the mutual companies), will be administered by State officials, independent of the underwriters. This move was the outgrowth of the dissatisfaction caused by the dismal failure of several companies in the preceding two years, leaving in their train a host of unfortunates, many of whom were dependent upon settlement of their just claims in order to pay living expenses.

Yet another important action taken by the compensation writing companies was the formation of a pooling arrangement for insuring the less desirable types of risks, member offices in the associated effort each obligating itself to become liable for a percentage of every risk taken by the pool. A like arrangement was adopted for New Jersey and several other States, and the expectation is the plan will eventually be established in every commonwealth where undesirable individual risks exist to any material extent. In thus providing sound and complete indemnity for many lines that would be unable to get protection otherwise, the need for creating State funds was obviated.

Though the loss experience had under workmen's compensation policies is still excessive, some improvement has resulted, and hope is expressed that with the gain in industrial activity in many sections of the land, there will be additional premium income on the one hand and a reduction in the tendency to malingering on the other.

Adjustment of claims by arbitration, notably in connection with automobile public liability and property damage accidents, continues in favor; consideration of cases through such method expediting settlements and resulting in general satisfaction to all parties interested. Impetus to the arbitration idea was given through extension of the activities of the American Arbitration Association,

a body composed of attorneys, casualty underwriters, and laymen, and of which G. S. Van Schaick, former insurance superintendent of New York, is chairman.

Little or no improvement in automobile public liability losses was had through the year; in fact, it may be said losses were more severe than in 1934, a result chargeable to the growing number of cars on the road; their greater speed possibilities, and laxity in the enforcement of safety regulations by State and municipal authorities. So heavy has the toll of life become, that a nationwide safety five-year campaign has been inaugurated under central direction. The movement has the endorsement of the President, who in a special message urged its support by every one interested in human well-being.

A number of States have under consideration enactment of compulsory automobile insurance laws, New York and Virginia among others. Students of the problem, however, assert such laws will not result in reducing accident frequency, but will increase the number of damage actions. In Massachusetts, where a compulsory statute has been in force for five years, claims for alleged road accident injuries multiplied many fold, so much so that repeal of the law has been seriously proposed from time to time.

In the minor divisions of casualty insurance: personal, accident, and health, burglary, plate glass, and steam boiler, records on the whole were satisfactory. In personal accident and health insurance, improvement resulted through the continued use of standard clause policies, closer underwriting practices, and a determined curtailment of large policy writings. Extended general experience revealed that contracts granting indemnities in excess of \$50 per week were unprofitable. There was talk of forming a pooling arrangement in which companies contributing might place their excess liability. In a determined effort to popularize general accident insurance, companies and agents in different sections of the country inaugurated "accident and health insurance week," making a special drive to write the business during the period. Such success attended the effort that it will likely become an annual event. Because of the high reserves required for claims under noncancellable accident policies, practically every company that previously issued such contracts discontinued the business.

In burglary and hold-up insurance, the premium income for the year will just about equal that had in 1934, the substantial rate reductions effected on certain risk classifications and in different parts of the country, making a gain in income unlikely. The loss record, however, had not been excessive.

Fire Insurance. The outstanding feature of the fire field was the continued diminution in the number and seriousness of fires throughout the country, the monthly tabulations of the National Board, with but four exceptions, recording lower losses than those of the corresponding periods of 1934 which in turn were below those for the preceding year. The largest individual loss suffered by the companies in 1935 was caused by the hurricane that swept southeastern Florida, November 4, as a result of which fire offices paid close to \$3,000,000 under their windstorm policies. Other serious individual losses were the burning of several large whisky warehouses in Illinois. In spite of these and the several thousand other losses, however, the aggregate destruction of property by fire last year showed a commendable reduction, a condition attributed in part to the active fire preven-

tion campaigns waged through the year in the different States under the sponsorship of chambers of commerce and other business organizations acting in cooperation with insurance interests. (See FIRE PROTECTION.) Because of the continued improvement in the loss record, the National Board rescinded its previous rule regarding loss payments, permitting settlement by companies at once after proper claim adjustments were effected.

To meet the demand of business interests for broader forms of indemnity under single contracts, fire companies issued what is known as the "supplemental policy," a number of hazards, in addition to fire being assumed thereunder. Still further development along this line may be looked for, once the laws of the various States be amended to permit the assumption of multiple risks, now either expressly prohibited or unprovided for in the statutes.

Early in the year an organization of American-owned stock fire companies was formed to assume the fire risk of properties upon which funds had been advanced by the Home Owners Loan Corporation of the Federal Government. Policies issued through such medium are credited to agents handling the business, who receive their proper commission.

Other important developments in the fire field were the insistent demand of local agents in many sections for contingent commissions, in addition to the flat or the graded scale of compensation already allowed them; their contention was that they should share in the unusual prosperity enjoyed by the companies during the past two years. While conceding that losses have been unusually light both in 1934 and 1935, managing underwriters yet appreciated there might, and very likely would be, a sharp reversal of form once industrial plants resumed their normal activity. They further maintained that benefits of the reduced losses had and were being credited to assureds through the medium of rate reductions, the effect of which will be to substantially curtail company incomes in 1936; hence their unwillingness to increase expense ratios.

Agents, on the other hand, assert they suffer the loss of considerable business not alone to non-affiliating institutions but to specialty organizations conducted by their own companies. Another, though by no means a new objection of the agents, is to the continued maintenance of branch offices by some companies, holding that managed by salaried men, these branches compete unfairly with the purely commission representatives. Conferences to consider the complaint of the agents and to work out understandings have been held by managing underwriters, and others are in progress or contemplated during the ensuing year.

Life Insurance. Despite the uncertainty that obtained in life circles as to the probable influence enactment of the Federal Social Security Act and the changes in income, estate, and other tax measures enacted by the latest Congress, would have, the life companies wrote more new business last year than in 1934, the aggregates for the two periods being \$8,821,844,000 and \$8,605,432,000 respectively.

By virtue of the difficulty of safely investing their ever-growing reserve accumulations, and the reduced interest earning had from securities already carried, virtually all life companies increased rates for annuities in January, 1935, the mutual companies modifying the advance by agreeing to return as dividends to annuitants under their contracts, whatever gains might accrue from improved mortality experience, saving, in operating costs, and

additional interest earnings, if any. Though still writing immediate as well as deferred annuities, companies, with scarcely an exception, sharply curtail their acceptances of such forms, urging agents instead to develop the sale of straight protection policies.

The large percentage of life proceeds are still paid in lump sums, instead of in monthly installments, despite the manifold advantages to beneficiaries of the latter method.

Conditions in the average life policy with respect to the use of aeroplanes, have been broadened, underwriters holding the hazard of air transportation is far less to-day than formerly, and that a liberalization of previous policy restrictions in such connection is justified. Companies are making constant efforts to improve the character and intelligence of their soliciting staffs, realizing that if the confidence of prospective assureds is to be had, agents must be equipped to present propositions clearly, completely and without loss of time.

Surety Insurance. Companies granting fidelity and surety bonds, report an increase in premiums on the former line, and a slight gain in the latter. The loss experience upon both types of coverage, however, was satisfactory; enabling the earning of a fair profit. The income from contract bonds, considerably greater than that had last year, was largely the result of the public works construction programme of the Federal Government.

Salvages surety underwriters hoped to secure from the liquidation of the many banks and trust companies upon which they paid depository bond losses in the depressed years, 1930-33, have been disappointingly small. Under conditions prevailing prior to 1929, salvages in national bank failures averaged 75 per cent, and those from State bank liquidations close to 50 per cent. Upon neither type of institution has the recovery equaled even the latter figure since 1929. Depository bond indemnity, once a prolific source of premium income (as well as heavy loss) to the surety offices, passed out of the picture with the creation of the federal insurance deposit guarantee fund.

INTERNATIONAL BANKING AND FINANCE.

Although the situation in international banking and finance had reached a discouraging phase at the close of the year 1934, developments during the past 12 months have not been such as to improve conditions in any material degree. Perhaps the best that can be said of them is that they have not become definitely worse during the year 1935. Outstanding among the events of the year, may be noted the following:

(1) The abandonment of the gold standard by Belgium in the spring of 1935, and the devaluation of its currency by about 25 per cent.

(2) The referendum in Switzerland at the opening of June, 1935, in which permission was given to the existing administration of the country to use its own judgment about devaluing the Swiss franc, but such monetary and credit action as was deemed to be in the interest of the country was authorized.

(3) The adoption by Italy, at the opening of September, of policies in the raising of funds for the Ethiopian war which necessitated the release of the note gold reserve for the Bank of Italy and its obligation to employ this gold fund when, and as, needed in paying for foreign war materials. As a result of this policy, the lira fell at times to a figure fully 40 per cent below its quoted value of the preceding six months.

(4) The statement by authorized officials (secretaries of State and Treasury), in the United States, that the Washington government was ready to undertake once more the effort to negotiate a stabilization agreement to which other countries would be parties.

Many other developments of considerable local interest might be enumerated, but the major developments in the field are as set forth above. No account of the events of the year, however, would be satisfactory without calling attention to the unsuccess of all efforts to secure the repeal of the Johnson Act in the United States, and the consequent handicapping of any efforts at international financing in which the American market might have been called upon to take part.

From the time of the enactment of the Johnson Act (May, 1934), it was pretty generally recognized, both in Europe and in the United States, that complete economic recovery from the depression would never be possible without a restoration of international capital markets, and that this could not be expected, so long as the Johnson Act remained upon the statute books. The retention of the Johnson Act by the United States Treasury has thus had an international significance, which ordinarily it might not have possessed. Under its terms, however, it has not been possible to have any new foreign financing floated in the United States; and with economic conditions as they have been throughout the world, this has practically meant that no new financing of considerable size could be arranged in any quarter. Accordingly, the revival of domestic financing which occurred in American markets during the second half of 1935 and the renewal of activity even in the bonds of sundry South American countries, had no effect in bringing back the foreign bond business of the 'twenties; but, on the contrary, it remained practically dead. Foreign flotations on the New York market for the year 1935 were reported by the Federal Reserve Board as nonexistent up to the close of October. This suspension of international financing may have had some influence in preventing active and successful preparation for putting into effect the war plans of Italy in its contest with Ethiopia, and possibly of discouraging other war preparations that might have taken place. These situations, however, are necessarily conjectural and can only be offset against the actual injurious results which were experienced from the inability to continue with international financing, upon even the most modest scale, for the purpose of effecting refundings and readjustments.

With international banking and finance in the localized condition thus described, it was hardly to be expected that much progress can be made in the matter of restoring a condition of monetary or financial stabilization. The gold decisions handed down by the Supreme Court of the United States in February, 1935, were believed, by some, likely to pave the way for stabilization agreements; but apparently they had the opposite effect, by leading foreigners to believe that the reserve power of the President of the United States to devalue the dollar still further, was, potentially, an even greater danger than they had supposed it to be, since apparently he was likely to be successful in obtaining the ratification or approval of the Supreme Court for his action in so doing. Indeed, at about the time that the gold decisions were rendered, various influential, even if not official, interpreters of British monetary policy, took occasion to utter predictions that monetary stabilization was even farther away

than had been expected. During the first half of the year, the early breakdown of the so-called "gold bloc" was frequently predicted, and when this breakdown was confined entirely to the case of Belgium, the crises in Holland and in France being overcome by changes of ministry, there still remained numerous difficulties of various kinds to be smoothed out before any definite advance toward a basis of stabilization could reasonably be expected to be made.

Subsequent to various informal conferences in Washington with representatives of foreign powers, the Secretary of the Treasury visited France in the late autumn, and there had conferences with officials of the Bank of France, the outcome, however, being merely an announcement that stabilization had not been brought nearer. The devaluation in Belgium and the defection of Italy from its gold bloc relationships, were both disheartening factors; while the internal condition of affairs in France, and the apparent growth of the devaluation party in that country, likewise, operated to defer the crystallization of opinion evidently necessary to bring about the attainment of definite results. The so-called "gold decisions" of the Supreme Court, handed down in February, 1935, were, of course, effective against foreign holders of American securities just as they were against American citizens. Their effect, was to impair the credit of the nation and to support the opinion of many foreigners that the demands which the Washington government had made for the payment of war indebtedness, as well as the criticisms that had been leveled against defaulting debtors on war account, were not sincere, inasmuch as a similar policy of default, applied through different methods, had been determined upon and was now upheld, though disapprovingly, by the highest tribunal of the United States. Undoubtedly, the gold decisions had a serious influence in retarding the progress of reorganizing international banking and the settlement of international obligations.

The Johnson Act continued, despite the prevalent feeling on the part of many American public officials that it tended still further to prevent the restoration of the machinery of international finance which had already received so severe a shock. One result of the continued operation of the Johnson Act which was, however, regarded by many as a desirable phase of its operation, was found in the restriction it placed upon the acquisition by Italy of funds for use in the financing of her campaign in Ethiopia. Negotiations for the opening of credits in favor of Italy, in the United States, were sporadically undertaken in the autumn of 1935, but had no result prior to the close of the year, largely owing, it would seem, to the obstacles placed in the way of such loans by the act in question as well as by the Federal neutrality policy. The question, how far the promises of France to furnish Italy with financial support—supposed to have been made during earlier years—were actually carried out during the fore part of 1935 is a matter of controversy; but doubtless, arrangements had been made to open French credits in favor of Italy at a time when the Ethiopian adventure of the latter country had not yet attained its full development.

This inability, on the part of what remained of the international banking mechanism, to function, had a marked effect throughout the world and was particularly noticeable in the foreign trade of the United States. In former years, adverse or favorable balances in international trade had usually been carried by the opening of credits; but during 1935

such credits being unavailable, settlements continued to be made in gold or carried on open account. As the United States was by far the largest creditor country in the world, the difficulties thus engendered necessarily restricted the trade, and export sales of American commodities fell off sharply, their total being reduced by fully one-third, as compared with the preceding year. At the same time, the United States received well over a billion dollars in gold in settlement of international indebtedness which, in normal times, would have been carried by banking methods. The result of this situation was, of course, a serious disturbance of the functioning of the industrial organization at home and a further obstacle to the restoration of employment which continued on a very high level, although somewhat reduced toward the end of the year.

The work of the Bank for International Settlements was still largely of an advisory nature, designed, generally speaking, for the support of ideas rather than for the conduct of financial transactions, during the year in question. The Bank continued to undertake much the same types of operations as before and to confine its transactions to those stated in gold currencies with corresponding limitation of the area in which it could work. Its annual statement showed conditions very little changed, although with some limitation of profits. An alteration of the executive leadership of it resulted from the retirement of its former president and the appointment of a successor in the person of the former Governor of the Netherlands Bank. Hence, the Bank for International Settlements has been able to take no further forward steps in the direction of restoring the gold standard, or of introducing any stable international standard, though it has continued to perform a useful function along the same lines as in former years—those of unifying central banking opinion, maintaining friendly relations between central banks, and actually undertaking financial dealings that were calculated to smooth the current of international trade.

On the whole, the year 1935 thus continued the transition period to which its predecessor—the year 1934—emphatically belonged. The anticipated breakdown, feared in various countries, did not materialize. The transference of Belgium to a devalued standard produced a less decided break with the past than had been expected. There was no diminution in the apparent appreciation of the business man for a stable monetary unit;—indeed, the meetings of the International Chamber of Commerce, at Paris in early autumn, were largely devoted to a consideration of the ways in which the current of international banking operations might be restored upon a basis involving a stabilized standard of value. Nevertheless, the aspirations which had given rise to the Bank for International Settlements at the time of its inception, were still unrealized, and its future continued to be dependent upon prospective action on the part of the several countries.

INTERNATIONAL CHAMBER OF COMMERCE. An international federation of business organizations and business men, established in 1920 as a successor to the more loosely organized International Congress of Chambers of Commerce, which had met at intervals of two years for a considerable period before the World War. It has a membership of industrial, commercial, and financial associations, chambers of commerce, shipping and transportation organizations, as well as an associate membership of individual business companies and business men, in 48 states.

Through 1935 the organization held 8 general congresses—London, Rome, Brussels, Stockholm, Amsterdam, Washington, Vienna, and Paris—the Paris Congress, in June, 1935, being attended by more than 1000 delegates. The congresses declared the policies relating to the numerous problems of trade barriers, and the urgent need of sound commercial policies and adequate facilities for carrying on international business in the postwar period. The declarations at Rome in 1923, and the active follow-up of the recommendations there made, were influential in restoring order in the chaotic conditions which had resulted in international affairs after the brief spurt of trade, released from war restraint, in the immediate postwar years. The present programme deals primarily with the complicated array of restrictions on trade that grew up during the world-wide economic depression of the past few years, and advocacy of international monetary stabilization.

The international chamber maintained committees on coordination of production and markets (industrial ententes), international industrial statistics, commercial policy and trade barriers, monetary matters, double taxation, futures trading on commodity exchanges, commercial documentary credits, merchandise distribution and marketing, transport and communications, road and rail transportation, sea transport, and air transport, international telegraph and telephone communications, international postal service, protection of industrial property, and international commercial arbitration.

The officers in 1935 were: F. H. Fentener Van Vlissingen, industrialist of the Netherlands, president; Pierre Vasseur, secretary-general. Headquarters were at 38 Cours Albert Premier, Paris, France. Thomas J. Watson, of New York, was chairman of the American National Committee; Eliot Wadsworth, of Boston, was American vice-president. The office of the American section was at 1615 H Street, Washington, D. C.

INTERNATIONAL CONGRESS OF SCIENTIFIC AND APPLIED PHOTOGRAPHY. See PHOTOGRAPHY.

INTERNATIONALISM. The seventh biennial meeting of the World Federation of Education Associations was held in Oxford, England, Aug. 10 to 17, 1935. This occasion was notable because it was a joint meeting with the two international bodies that find their chief support in the Continent of Europe. These are the International Federation of Teachers Associations, of elementary class-room teachers, and the Federation of Secondary Teachers Association which includes the leading secondary school associations of practically all European countries. Both organizations have their headquarters in Paris, from which they issue bulletins of information, and the latter organization a well established periodical.

It has been considered desirable, by the leaders of the three organizations which are international in scope, that they should be brought together. This joint meeting was the first step to that end. A tentative agreement was drawn up between each of the two organizations and the W.F.E.A., looking toward a close affiliation, if not amalgamation. The constitution of the W.F.E.A. provides for membership of national bodies and local bodies and even of individual memberships, the goodwill memberships cultivated by Dr. Thomas; but, the constitution makes no provision for the affiliation of international bodies. Two such bodies of international character have long participated most effectively in the work of the W.F.E.A., as sections of that

organization. These are the parent and teachers or home and school sections, and the health section. A notice was given to amend the constitution of the W.F.E.A. at its next meeting, which will provide for the affiliation of international bodies practically as sections of the Federation. Such a proviso is made in the tentative agreement with the I.F.T.A., and the I.F.A.S.T., as the two continental associations are popularly known. Such an affiliation or amalgamation will not prevent these special organizations from holding their own meetings on the years intervening between the meetings of the W.F.E.A., and also on the years at which the W.F.E.A. meets at such a distance that the various European organizations cannot well be represented.

There are other international educational associations that are interested in effecting similar relationships with the W.F.E.A. One is the International Federation of Agricultural Education, which has its central office in Rome. It is also true of the Adult Education Association, which has its central office in London.

The Oxford meeting was notable for several other features, particularly for the very excellent display of the educational work of England and Wales. The exhibition was noteworthy for its excellent organization and arrangement and furnished quite an education in itself, both to the foreign visitor and to the English teacher. The addresses were of a high order but related to no common theme beyond that of international good will, and emphasis upon the part which teachers might play in furthering international amity and the cause of peace.

The United States was well represented at the conference, as it should be, as the originator and the chief proponent of the Federation. The National Education Association was represented by some 350 delegates, though, as in the past, these delegates had the privilege of casting only 50 votes in the delegate assembly.

Probably the most interesting decision made at the conference was the acceptance of the invitation of the Imperial Education Association of Japan, to meet with them as their guests in the summer of 1937.

The Commonwealth Fund Fellowships for British students have now been given annually for 10 years. They have brought nearly 300 graduate students from British universities and from the government service throughout the British Empire to study and travel in the United States. The fellowships provide for two years of study at an American university and for extensive vacation travel. Returned fellows are scattered from Scotland to New Zealand and many hold important posts in British universities, newspapers, business, and the civil service. Forty have married American girls. One returned fellow, A. A. Cooke, ran a radio feature called "An American Half-hour" for the British Broadcasting Corporation. This included travel talks, American music, and comment on American speech and American books. Another, Ronald E. Mitchell, has recently written an informal guidebook for British travelers in this country.

The question of whether foreign nations should be allowed to use radio facilities in this country for their own propaganda has become a serious one since the Mexican Government bought time on a NBC hook-up for this purpose. Congressman Raymond S. McKeough, of Chicago, has introduced a bill in the House (and Sen. David I. Walsh in the Senate) calling for an amendment to Section

317 of the Communications Act of 1934, according to which any radio address or radio programme broadcast by any foreign government or its subdivision shall not be broadcast until such radio address or programme has been submitted to the Department of State and shall have been approved by it.

The creation of an international tribunal with appellate jurisdiction over the decisions of National courts, involving questions of an international character arising in disputes concerning patents and inventions is being urged by Judge Manton, senior United States Circuit Judge of the Second Circuit. In an address to the Patent Bar Association in November, he announced his subject as "Universal Recognition and Protection of Inventions," and discussed ways and means for the more complete protection of inventive thought throughout the world. "The inadequacy of municipal laws to extend this general protection is conceded. This was made quite clear in the unwillingness of foreign inventors to exhibit their products at the Vienna Exposition of 1873 on account of the insufficient protection afforded by Austrian laws and the earlier forms of bipartite treaties." Judge Manton then outlined the general Convention of 1883, which created a Union for the Protection of Industrial Property, and indicated that this convention and those which have succeeded it leave no question "that we are still in the elementary stages of international legislation on industrial property."

For the first time since 1929, the Directors of the Woodrow Wilson Foundation decided to make an Award of the Foundation's Medal. At their annual meeting in May they voted that the medal should be conferred on Thomas G. Masaryk, President of the Czechoslovak Republic.

At the same time money awards were made to The Graduate Faculty of Political and Social Science (usually known as the "University in Exile"), and the National League of Women Voters, Washington, D. C., and the Women's International League for Peace and Freedom, Washington, D. C. The first named organization received \$4000; and each of the others, \$3000. In addition, a contribution of \$5000 was made to the League of Nations Association, to be used in its discretion for the furtherance of its educational work.

The Citation of the Woodrow Wilson Foundation in awarding its medal to President Masaryk calls attention to his steadfast support of the Wilsonian principles of democracy, self-determination, and personal freedom, and to the fact that he has maintained them in practice in the Czechoslovak Republic.

The International Council of the World Alliance for International Friendship through the Churches, assembled at Chamby, Montreux, Switzerland, August, 1935, felt constrained to issue to Christian Churches, their ministers, and members the following appeal:

I. The troubles and dangers of the world today are a grave concern to the Church, both because it is bound in love to humanity and because the very fundamental principles of the Christian religion and morals are at stake. A secular and pagan spirit openly proclaims the egoism of the State dominated by national, party, or class interests, as the highest standard, determining what is right and just. The Church must be true to its calling and therefore it must enter much more decisively than hitherto into a fight for bringing the ideals of our faith to bear upon the affairs of public life. This is a common conflict, in which Christians in all lands must unite, trying to reach a common conception of our duty in this hour of crisis.

II. Against the glorification of the State as the supreme authority, the first commandment must remain: the absolute rule of Christians. Loyalty to the State as an instrument for justice is a divine injunction. But Right is above

the State, not the State above Right; therefore the State must respect the rights both of individuals and of other States. It is only fair that the Churches should make it clear that Christians must always obey God rather than man, so that, wherever a State makes claims which the Christian conscience feels to be against divine law, Christians must refuse to follow or to cooperate. This may involve grave suffering, arising from the reaction of the State and excited popular feelings, as well as inner conflicts between obedience to God and what may seem to be patriotic duty. But ultimately obedience to God is true patriotism, because what is contrary to the laws of God will always in the long run prove to be a curse to the State and not a blessing.

III. It is especially urgent to combat the tendencies making for war. The terrible lessons of the World War should not be allowed to be forgotten. In spite of the fact that, like other great calamities, it called forth personal heroism, sacrifice, comradeship, solidarity, nevertheless it was an unparalleled instrument for destruction, creating millions of victims, killed, maimed, mentally broken, bereaved, filling the minds of men with hatred and lies, destroying sexual purity and family life, in many cases turning religious faith into despair or cynical indifference—not to speak of the immense material losses and the confusion of economic life. A future war would be much more cruel. And still men dare to play with such an idea as this. Solenn pledges not to use war as an instrument for settling international difficulties seem to be neglected; rearmament in many countries has taken the place of promised disarmament. The masses detest war, but are often paralyzed by what to many seems an inevitable destiny. The Christian Churches cannot remain silent in this hour of danger. We sympathize with the efforts of statesmen who seek to preserve peace, but the achieved results are mostly precarious and can be questioned tomorrow. A new foundation must be laid through a firm determination to banish war by promoting arbitration and general disarmament, by engendering respect for treaties and by strengthening and making more effective the League of Nations. Only in such ways can just grievances really be removed, while a victorious war will always cause a reaction. Many Churches and individual Christians have already solemnly declared that they will not countenance any war when their State has declined a bona-fide offer of arbitration. Further steps in this direction may become necessary.

IV. The deepest need is a new will, whose source Christians will always find in God. But we have only a right to protest against a secular and pagan spirit, if we are ourselves willing to be true followers of Christ. All that is noble in modern national and social movements should be taken as a challenge to repentance and renewal. The strong feeling of solidarity in class or nation, which has actually lifted millions out of a petty individualism into a larger life, but which at the same time has constantly encroached upon the freedom of others, should stimulate us to realize the Church Universal as an inspiring reality, binding men and women of all nations and races together in common love and loyalty to the same Master. And as individuals we must enter more deeply into the peace of God through his grace in Christ pardoning sins and changing lives.

We therefore call upon the Churches to support in the spirit of love the work for justice and peace through word and action and above all through prayer to Almighty God, that he may guide the leaders of the nations in their tremendous responsibility, so that they may see the right and in the light of this vision act courageously.

INTERNATIONAL LABOR ORGANIZATION. A permanent diplomatic and administrative association having in its membership 61 nations of the world, including the United States which became a member by Presidential proclamation Aug. 20, 1934, under authorization of a resolution of Congress June 19, 1934. The objectives of the Organization are the improvement of labor conditions within the member countries. The machinery of the Organization consists of an annual *Conference* of representatives of the member nations, and an *International Labor Office* controlled by a *Governing Body*, the latter consisting of 32 persons, 16 of whom represent the governments, 8 the employers, and 8 the workers, and meeting quarterly.

The annual Conferences are composed of 4 representatives of each of the member countries: 2 the government, 1 representing the employers and 1 the workers. These conferences discuss an agenda prepared by the Governing Body and draw up *draft conventions* and *recommendations* affecting industrial conditions which are presented to the competent authorities in each member nation

for ratification or adoption. The Constitution of the Organization imposes an obligation to present the draft treaties for consideration by the appropriate and competent authority in each country. When a convention has been ratified by two or more members it becomes an international treaty between the members so ratifying. All standards adopted are minimum. Up to the present time, the Conference has adopted 49 draft conventions. While 5 of these conventions have not yet come into force, the remaining 44 have received 679 ratifications.

The International Labor Office, which is situated at Geneva, Switzerland, acts as a secretariat for the annual conference, preparing material for the use of the conference and following up the work of the conference. It also acts as a bureau for the collection and dissemination of information bearing on the problems of labor and industry. It edits and publishes several periodicals and numerous reports and studies dealing with problems of industry of international interest. Director of Washington office, L. Magnusson, 734 Jackson Place, Washington, D. C.

INTERNATIONAL LAW. This subject is divided into two parts: PUBLIC and PRIVATE.

PUBLIC

Arbitration and Award. *"I'm Alone" v. United States*, *Am. Journ. of Int. Law*, XXIX, 326. On January 5, the Commissioners—Justice Willis Van Devanter, representing the defendant, and Lyman Poore Duff on behalf of Canada—filed their joint report, finding that the plaintiff ship (British, of Canadian registry), sunk "on the high seas" (Gulf of Mexico), Mar. 22, 1919, by the U.S. revenue cutter *Dexter*, for carrying liquor to be smuggled into the United States, had been, since September, 1928, owned and controlled by a group consisting, with one possible exception, of American citizens (for which reason "no compensation ought to be paid in respect of the loss of the ship or cargo") and that "the sinking . . . could not be justified by any principle of international law." It was recommended that the United States apologize to the Canadian government and pay it \$25,000, "as a material amend in respect of the wrong" (although the treaty under which the case was submitted did not include claims by a government), together with various amounts for the captain and crew, "none of whom was a party to the illegal conspiracy to smuggle." The Commissioners found it unnecessary to answer certain preliminary questions involving "the right of hot pursuit."

On January 21, the League of Nations Council at its 84th session, dealt with certain disputes under its Covenant, article XI, to which it gave the broader interpretation, favorable to the lesser powers, by indicating its willingness to accept jurisdiction of pecuniary claims. The boundary dispute between Iraq and Iran was left to direct negotiation, with Baron Aloisi of Italy as rapporteur. The expediency of hearing two war damage claims, one by Finland against Britain and another by Switzerland against Britain, France, Germany, and Italy, was left to a committee.

On April 6, the Permanent Court of International Justice at The Hague, by a vote of 8 to 3, decided in the plaintiff's favor, the case of *Greece v. Albania*, involving the question of minority schools and holding that the defendant was not justified in its contention that its abolition of private schools was a general measure, applicable as well to the majority. The dissenting judges also filed an opinion.

Italy v. Ethiopia, *Am. Journ. of Int. Law*, XXIX, 690. The Commission to deal with the "Walwal incident" of Dec. 5, 1934 (See YEAR BOOK 1934 under *Ethiopia*) met at Scheveningen on June 25, after a preliminary session at Milan to adopt a plan of procedure. Disagreement over the Commission's authority to inquire into "ownership" of affair's locus, forced a suspension of proceedings until August 20, when the Commission reconvened at Paris with M. W. Politis of Greece as a fifth arbitrator, the other four consisting of two each from the contending nations. After two weeks of deliberation, during which adjournment was taken to Berne "to receive depositions," an award was announced on September 3, to the effect that neither government was "responsible for the actual incident of Dec. 5, 1934." Although that "incident" was the chief ostensible grievance urged by Italy as a *casus belli*, its virtual elimination by the award, failed to prevent the Italian invasion of Ethiopia, a month later. See ITALY and ETHIOPIA under *History*.

Non-Aggression Pacts. On January 16, representatives of Netherlands and Norway signed a treaty providing a permanent conciliation commission to which all disputes between the two countries should be submitted.

On January 29, the Honduran Congress approved without modification, the Saavedra Lamas anti-war pact of the Montevideo Conference. The republic of Honduras ratified the Inter-American Conciliation treaty on February 14; Chile deposited its ratification on March 10, and the United States proclaimed its ratification on May 8.

Switzerland and Turkey adhered to the Geneva General Act for Pacific Settlement in January and were followed by Ethiopia on March 15 and India in July. Honduras and Bulgaria adhered to the "Argentine Anti-War Pact" (YEAR BOOK 1934, p. 320), Cuba's ratification thereof was deposited on January 21, and Nicaragua proclaimed its adherence on February 15. An arbitration treaty between Denmark and Venezuela, came into force on February 5; one between Spain and Panama on February 13, and ratification of such a treaty with Netherlands was recommended by the Japanese Privy Council on May 24. A secret treaty of amity and non-aggression was agreed to in October by Turkey, Iran, and Iraq.

Under the German-Swiss arbitration treaty, the former government, on May 6, accepted the latter's proposal to arbitrate the case of Jakob Salomon, anti-Nazi journalist, who, it was charged, had been decoyed into Germany from Switzerland, but who, Germany claimed, came voluntarily, and was arrested.

On July 1, a conference, opened at Buenos Aires by the Argentine President, with six foreign ministers present, prolonged the existing truce between Bolivia and Paraguay; but by August 15, an impasse had been reached over the status of war prisoners and on the following day it was announced that no further plenary sessions would be held until progress could be made toward settlement of some acute questions.

Commercial Pacts. Under the Reciprocity Act of June 12, 1934 (YEAR BOOK, 1934, p. 320), the United States Government has conducted negotiations with some 20 powers and effected reciprocal trade pacts with 7—Cuba, Haiti, Belgium, Sweden, Brazil, The Netherlands, Canada. The latter, signed November 15, is expected to open the door to a wider extension of the scheme throughout the Western Hemisphere. On January 3, a limited trade agreement between Britain and the Irish

Free State was signed in London; on January 4 at Montevideo, a one-year trade pact between Spain and Uruguay; on January 20, an indefinite extension of the provisional trade agreement between Canada and Austria; on January 28, another between Germany and the Irish Free State; on February 5, another between Peru and Chile, effective in November; on May 31, another between Egypt and Palestine, and on September 12, another between Hungary and Yugoslavia for the balance of 1935.

Extradition. The literature of this important subject has been greatly enriched by the publication (*Am. Journ. of Int. Law*, XXIX, 66-240) of a "draft convention" (proposed treaty) prepared under the auspices of the Harvard Law School Research in International Law. The convention paper consists of 28 articles and, with its appendices, etc., covers nearly 400 pages. There is an ample bibliography, a "chronological list of extradition treaties" (of which there have been over 100 during the present century), texts of selected treaties and "selected extradition statutes" of many countries—almost an encyclopædia of the subject.

On February 6, the United States Senate ratified an extradition treaty with Iraq and supplementary extradition pacts with Bulgaria, Estonia, Latvia, San Marino, and Switzerland, all adding fraudulent bankruptcy as an extraditable offense.

An international conference, called by the Danish Government, met at Copenhagen on August 31 to discuss practical phases of extradition, such as the definition of "political crime," the treatment of "political prisoners," and the suppression of terrorism. Representing 31 countries, 113 delegates were present.

The Costa Rican *Tribunal Supremo*, in October, confirmed a lower court decision refusing extradition of the Guatemalan student, Antonio Garcia Ariza, on the ground that the charge against him was fictitious and that the actual purpose of the proceeding was political.

Extraterritoriality. An article entitled "Extraterritorial Jurisdiction in the Ancient World" (*Am. Journ. of Int. Law*, XXIX, 237) by Shalom Kassan, formerly of the Palestine Government service, tells of the Hebrews in Goshen, living under their own customs and officials, as an early instance of enjoying the privilege; but finds that "the ancient world . . . never permitted members of other communities to enjoy the law of the state."

China. A correspondent from Shanghai writes under date of October 15:

"The Japanese have created a complete legal establishment in Manchukuo, having staffed all the courts with Japanese judges and other officials. Now they have announced that extraterritoriality will be abolished; which means that foreigners will come, not under Chinese, but under Japanese, law as administered by Japanese personnel in the Manchukuo courts.

Doubtless even the Chinese would prefer the present system to such an arrangement, but certain other events have tended to revive the agitation to abolish extraterritoriality—e.g. the new judge of the United States Court for China has broken all precedent by holding a session at Peking, capital of the old Chinese Empire, with which the treaty conferring the privilege was made. That treaty nowhere authorizes foreign courts in Peking; they are permitted only at cities where there is a consulate of the nation exercising the privilege; and no consulate was ever tolerated in Peking. Another was the conduct of the new U.S. Marshal, who came out from Texas "with a ten-gallon hat and a six shooter," and according to the written

complaint of an American citizen to his Consul General, "forcibly took (certain film) negatives from me and handed them over to the Japanese authorities."

But far more serious than these was the collapse of a group of concerns founded by one F. J. Raven, including the "American Oriental Bank" supposedly operating under a Connecticut charter but actually, as it proved, having none at all—a situation possible only under extraterritoriality. Among the bank's directors is the former judge (Purdy) of the U.S. Court for China, and its depositors numbered thousands, including many missionaries and others of small means, whom the bank's officers are now charged with defrauding.

Germany. A decision of the Reichsgericht (Supreme Court) that an assassin might be taken from a foreign legation and tried for his offense, contained the statement that "the offices and dwellings of diplomatic representatives to the Reich, are not to be regarded as foreign territory," which occasioned no little perturbation among the envoys in Berlin. It was later explained, however, as restricted to the special circumstances of the case in judgment and not as indicating that diplomatic extraterritoriality had been abolished.

Mandates. The growing importance of this subject is indicated by the publication of Dr. A. M. Margalith's treatise (Johns Hopkins Univ. Studies in History and Political Science, extra vol. N.S., 8, pp. IX, 242). A by-product of the League of Nations, no mandate has ever been granted to any but a League member. As such, Japan sought and accepted a mandate for the former German South Sea Islands, north of the equator. An article in the *China Law Review* (VI, 296) by Dr. Tan Shao Hwa points out that a mandate does not confer sovereignty and argues that Japan's withdrawal from the League terminated her mandatory privilege. Apparently the Japanese Government considered it advisable to assert its position, and in a statement presented to the League's Mandate Commission on October 28, the Japanese representatives claimed that the mandate really came from "the principal allied and associated powers" and virtually denied the League's right to withdraw it. But, as Dr. Tan suggests, Germany, whose title as former sovereign has never been formally divested, "may present a claim." The Japanese statement was referred to the League Council.

Nationality. On February 6, the United States Senate ratified treaties with Albania and Sweden, exempting from military service naturalized Americans while in foreign territory. The Hague Protocol on military obligations in cases of dual nationality was ratified by El Salvador. Australia's adhesion was deposited on July 8. The Hague Protocol on "statelessness" was ratified by China on February 14 and by Chile on March 20. The Irish Free State measure (1934 YEAR BOOK, p. 320) terminating common citizenship with the British Empire passed the Senate and became the law of the Free State; eligibility of its citizens to posts in the British service, remains unsettled. On June 26 Honduras ratified the Montevideo "Convention on the Nationality of Women" (1934 YEAR BOOK, p. 320) and on July 22 the United States and Albania exchanged ratifications of a naturalization treaty signed in 1932.

Neutrality. The U.S. Congress, which enacted the first neutrality law, adopted on August 31, a Joint Resolution, "providing for the prohibition of the export of arms, etc., to belligerent countries," which was followed on October 5 by a Presidential

Proclamation, enumerating the contraband articles; manufacturers and dealers therein are required to register with the Secretary of State and obtain licenses to conduct business. The resolution has been criticized as having "no relation whatever to the prevention of war" since "it makes no provision for the prohibition of loans and credits to a belligerent, nor for the export of foodstuffs, etc."

Taxation. A serious burden upon American trading in France and a source of irritation between the two countries, was removed (conditionally) by the French Senate's approval on March 29 of a long pending treaty designed to stop double taxation. It consists of 10 articles, the first providing that "enterprises of one of the two contracting states are not taxable by the other except on profits allocated to permanent establishments" in the latter. A similar treaty between Netherlands and Sweden was signed at Stockholm on March 21. Carroll's "Development of International Tax Law" in the *American Journal of International Law*, XXIX, 586, is a valuable contribution to the subject.

Treaties. "Pactomania" is the term applied to recent trends in treaty making, by John Heenan, president of the Independent Labor Party in Scotland, who listed 115 treaties during the past decade; but that upon which we are entering bids fair to become a "treaty-breaking" era. The famous (Kellogg) Pact of Paris, widely acclaimed so late as 1928, has been openly flouted by two of its leading signatories—Japan and Italy—while the Versailles Treaty, embodying the results of the World War, has now been defied by Germany. On March 16, the German Government promulgated a "law for the creation of a defense force," providing for universal conscription and an increase of the "peace army" to 12 corps commands and 36 divisions. Chancellor Hitler, in a lengthy appeal, defended the action (which virtually repudiated the treaty's unconditional disarmament obligations) on the ground that the other signatories had not observed their undertakings, though none of them had ever promised to disarm. Following closely on this episode, the Oxford University Press issued on April 5, *The Treaty of Versailles and After* by various authors, including Lords Riddell and Reading, Professors C. K. Webster and A. J. Toynbee, and Norman Angell. On April 17, the League of Nations Council adopted a resolution condemning Germany's course and naming a committee of 13 to study non-military sanctions against future treaty violations. It met at Geneva during the month of May and named a legal and economic sub-committee to investigate technical difficulties. Meanwhile, on April 29, the British note to Japan frankly charged that the latter "has attempted to justify an action (in Manchuria) that involves a clear breach of these . . . obligations." After the Italian invasion of Ethiopia in October, the League of Nations Council adopted a resolution declaring Italy the aggressor and hence a treaty violator. Sanctions in the form of commercial boycotts were approved by nearly all League members and become nominally effective November 18, though the Vatican was reported seeking postponement.

Other Conventions. On February 27, agreements between Bulgaria and Yugoslavia were signed at Sofia, simplifying the passport regulations and adding border communication points. On April 15, "Pan-American Day," representatives of the American nations joined at the White House in the "Roerich Pact" (named for the New York museum's founder) guaranteeing the inviolability,

in war as well as peace, of monuments and other cultural remains, which are now to be protected by a special international flag. On November 15, the "Tangier Statute," governing the international administration of that demilitarized zone, was automatically extended with modifications until 1948, none of the signatories having objected. Publication at The Hague is announced of *Corpus Diplomaticum Neerlandico-Indicum* (Vol. III, pp. xix, 616) containing treaties, etc., 1596-1691, between Netherlands and Asiatic states.

PRIVATE

Claims. On January 31, after 14 months of negotiation, following the 1933 agreements with Russia, Secretary of State Cordell Hull announced that "we can not encourage the hope that any agreement is now possible regarding unsettled claims." The following day marked exchange of ratifications of the General Claims Convention between the United States and Mexico, extending for two years, the period for disposing of claims arising before Aug. 30, 1927, and of the Protocol of 1934, for commissioners to pass on claims. An agreement was announced on June 28, by which Mexico will pay (in yearly installments of \$600,000) \$5,448,020.14 in full settlement of all American revolutionary claims against Mexico, accruing 1910-1920; similar lump sum settlements having been made by six European powers. On April 15, representatives of the United States and Canada, signed at Ottawa, a convention for the final settlement of claims against the smelter at Trail, B.C.

Copyright. Australia's adherence to the International Copyright Convention (1934 YEAR BOOK, p. 318) became effective January 18; the South African Union's on March 19. On April 19, the U.S. Senate ratified the same convention, but on April 22 the vote was reconsidered and the convention "restored to the executive calendar." On August 7, the Senate passed the Duffy Copyright Bill (then pending over two years) after deleting the provision relieving foreign authors of the necessity of reprinting in this country. In *Hungarian Radio Co. v. Gramophone Co., Ltd.* (*Amer. Journ. of Int. Law*, XXIX, 698), the Royal Hungarian Supreme Court, on May 24, held that the use of gramophone records of foreign artists' performances, by broadcasting or otherwise, infringed neither the Hungarian Copyright law nor the Berne Convention.

Radio. Panama, on March 29, and Venezuela on May 9, deposited ratifications of the "Radio Communications Regulations and Protocol" of Madrid, 1932. In *Radio Corp. of America v. Republic of China*, the plaintiff, on Nov. 10, 1928, entered into a traffic agreement with the defendant government, to make the former's, "the main, direct circuit between China and the United States, enjoying the routing privilege and as such, a preferential treatment." There was an arbitration clause and plaintiff's complaint that the agreement had been violated by another between defendant and the Mackay Company, was thereunder submitted in 1934 to a board of arbitrators who, after hearing the evidence and arguments, found, generally in China's favor, in June; but evidently deemed it necessary to point out certain practical considerations and courses which would constitute a breach of the agreement. Costs were divided equally.

Sea and Air Law. On January 7, an agreement by exchange of notes between Germany and Spain authorized air service to South America, with landings at Barcelona and Seville. On March 21,

Britain exchanged ratifications with Poland of a convention to regulate tonnage measurement of merchant vessels. Another, evidenced by an exchange of letters between the United States and Britain, announced on April 23, grants to aircraft of each country the "right of flight" over the other's territory, subject to local regulations, etc. The approximation of sea and air law appears in the provision for transporting goods on the same basis as by ship. On May 31, Bulgaria ratified the Geneva treaty relative to the "Weight of Packages on Vessels"; in July, China deposited ratification of the Lisbon treaty on "Maritime Signals" and Belgium deposited ratification of the "Safety at Sea" treaty (1933 YEAR BOOK, p. 372).

Necrology. Butler Aspinall, K.C., outstanding maritime lawyer, died in London, November 15, aged 74. He served as counsel or commissioner in many important maritime causes and was chairman of the International Shipping Conference of 1928.

INTERPARLIAMENTARY UNION. The thirty-second annual meeting of the American group of the Interparliamentary Union was held on January 21, Rep. S. D. McReynolds, vice-president of the group, presided. The permanent executive secretary called attention to certain rules and regulations of the Interparliamentary Union, under the terms of which it is the duty of the American group to keep the Congress informed, through its committee or through one of its members, of resolutions adopted at the Conferences which call for parliamentary or governmental action.

Although the American group was unable to send a delegation to the Brussels conference it has continued its interest in the Union and has given tangible proof of it in securing an increase of the American appropriation from \$7500 to \$10,000 a year.

The thirty-first conference of the Interparliamentary Union met for five days, beginning July 26, in the Assembly Hall of the Belgium Senate in the City of Brussels and was marked by thoroughgoing discussions of judicial problems relating to the codification of world law, and to questions of neutrality and assistance. Attention was given to the fact that because of the Briand-Kellogg Pact wars are now waged without the formality of the declaration. To the thesis that lasting peace can be achieved only through the law of world solidarity and automatic mutual assistance there arose definite inquiries. Would not such a system stabilize existing situations and emphasize peace treaties rather than peace itself? Would not automatic multi-lateral plans for assistance require the conclusion of more pacts at a time when new pacts are depreciating those which already exist? Would not any plan involving automatic assistance throw states into war against their will? Repeated discussions of questions such as these resulted in clarifying the minds of parliamentarians upon the part that force must play within the peace structure of the nations. To one who has followed these Conferences for a number of years it is apparent that parliamentarians are losing faith in the possibilities of any international organization to enforce peace.

The discussions of economic and monetary problems dealt with questions of self-sufficiency and international solidarity, and with the stabilization of currencies. While it was agreed that the world economic crisis can be overcome by international agreements, the debate ranged over the dangers of excessive protection to industry in agricultural countries, the necessity for the control of credits, the usefulness of air transport, the importance of

understanding and good will between town and country producers, certain evils of unfair competition, the regulation of the trade in arms, and the like. The resolution as finally agreed upon is a fair summary of the views of the Conference to date upon the world's economic and monetary problems.

The discussions upon certain phases of the parliamentary system dealt mainly with: First, the legislative functions; second, the work of parliamentary committees; and third, legislative documentation. These technical matters, while of less public interest, are peculiarly germane to the purposes of the Interparliamentary Union; for that useful organization exists because of man's faith in the representative system of government, and because that system, like every other human programme, is in constant need of improvement and adjustment. Considering the parliaments represented it is not surprising that the Conference felt called upon to agree that the delegates must scrupulously soft-pedal discussions of representative systems of the various countries to which its members belong.

Delegates were present from Austria, Belgium, Canada, Czechoslovakia, Denmark, France, Great Britain, Hungary, Ireland, Italy, Japan, Netherlands, Norway, Poland, Rumania, Spain, Sweden, Switzerland, Turkey, and Yugo-Slavia.

INTERSTATE COMMERCE COMMISSION. See AERONAUTICS; RAILWAYS; UNITED STATES under *Administration*.

INTERSTATE SANITARY COMMISSION. See SEWERAGE AND SEWAGE TREATMENT.

IOWA. Population. On Apr. 1, 1930 (Fifteenth Census), 2,470,939; on July 1, 1934, by latest Federal estimate, 2,485,000; 1920 (Census), 2,404,021. Des Moines, the capital, had (1930) 142,559 inhabitants.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	9,525,000	352,425,000	\$176,212,000
	1934	8,986,000	195,895,000	154,757,000
Oats	1935	5,946,000	205,137,000	49,233,000
	1934	4,682,000	58,525,000	26,336,000
Hay (tame) ..	1935	3,204,000	5,292,000*	34,927,000
	1934	3,246,000	2,983,000*	46,833,000
Barley	1935	594,000	15,444,000	5,714,000
	1934	410,000	5,125,000	3,792,000
Potatoes	1935	84,000	6,300,000	4,095,000
	1934	80,000	5,280,000	4,330,000
Wheat	1935	371,000	6,118,000	5,261,000
	1934	302,000	3,506,000	3,085,000
Soy beans	1935	400,000	6,800,000	4,692,000
	1934	157,000	1,884,000	2,148,000

* Tons.

Mineral Production. The mining of coal increased to the yearly total of some 3,468,000 net tons for 1935, from 3,194,983 for 1934. There were produced in the State, in 1934, 180,271 short tons of gypsum, of which the total value was \$1,670,356.

Education. For the year ended with June 30, 1935, the number of the State's inhabitants of school age was reckoned as 722,185. The ages of those comprised in this total were from 5 years to 21. The year's enrollments of pupils in the public schools numbered 541,095. Of these, 406,627 were in kindergartens and elementary classes, through the eighth grade; 1872, in ungraded classes; and 132,596, in high schools. The year's expenditure for public-school education throughout the State totaled \$37,524,273.

Charities and Corrections. As in previous years, the State maintained over its institutions for

the care and custody of persons a strong central authority, resting in the statutory Board of Control of State Institutions. This board held broad power to govern and control institutional operation.

The population of the State institutions on Nov. 1, 1935, totaled 15,175. The institutions and their respective populations were: Four State Hospitals for the Insane and Inebriate, at Cherokee (1756), Clarinda (1716), Mount Pleasant (1614), and Independence (1709); Training School for Boys (599), Eldora; Training School for Girls (174), Mitchellville; Men's Reformatory (1136), Anamosa; State Penitentiary (1586), Fort Madison; Women's Reformatory (102), Rockwell City; State Juvenile Home (322), Toledo; Iowa Soldiers' Orphans' Home (655), Davenport; State Sanatorium for Tuberculosis (344), Oakdale; Iowa Soldiers' Home (436), Marshalltown; Institution for Feeble-minded Children (1759), Glenwood; Hospital for Epileptics and School for the Feeble-minded (417 and 860 respectively), Woodward.

Legislation. The regular session of the Legislature served the interest of the mortgaged farmers of the State by extending for a second stretch of two years the life of the State's mortgage-moratorium law of 1933. It imposed a discriminatory tax on the business of chain stores, which included filling stations for automobiles.

Political and Other Events. The support of the destitute unemployed in Iowa in 1934 cost about \$14,250,000, of which the FERA paid 55 per cent, the State 12½ per cent, and the subdivisions 32½ per cent. The opportunities for employment on the farms improved in the summer of 1935. There then came to be an actual shortage of needed farm workers, although at the time the relief rolls were well stocked with unemployed men supported at public expense. Many of the counties, led by Harrison County on July 6, temporarily removed employable persons from the relief lists, in an endeavor to make them return to occupation.

Mayor W. D. Hayes of Sioux City was suspended from authority on July 15 by court order, upon the filing of a petition for his removal, based on the findings of a grand jury, that he had failed to take action against "lawless conditions."

Officers. The chief officers of the State, serving in 1935, were Governor, Clyde L. Herring; Lieutenant-Governor, Nelson G. Kraschel; Secretary of State, Mrs. Alex Miller; Treasurer, Leo G. Wegman; Auditor, C. W. Storms; Attorney-General, Edward L. O'Connor; Secretary of Agriculture, Ray Murray; Superintendent of Public Instruction, Agnes Samuelson.

Judiciary. Supreme Court: Justices, E. G. Albert, John W. Anderson, Maurice F. Donegan, W. H. Hamilton, John W. Kintzinger, Richard F. Mitchell, James M. Parsons, Leon W. Powers, Paul W. Richards.

IOWA, THE STATE UNIVERSITY OF. A coeducational State institution of higher learning in Iowa City, founded in 1847. The enrollment for 1934-35 was 9402. For the autumn of 1935 the enrollment was 7481, including 1049 correspondence students not also registered in residence. The summer session registration totaled 4184. There were approximately 570 members on the faculty. The income for 1934-35 was \$4,607,869. The libraries contained 471,800 volumes. President, Eugene Allen Gilmore, A.B., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women in Ames, Iowa, founded in 1868. The

enrollment for the autumn term of 1935 was 4430. The registration for the first half of the 1935 summer session was 1179, and for the second half, 516. The faculty numbered 504 members. The endowment funds amounted to \$671,500 and the income for the year was \$3,110,000. The library contained approximately 230,000 volumes. President, Raymond Mollyneaux Hughes, LL.D.

IPPOLITOV-IVANOV, ĕp-pŏl'ĕ-tŏf-ĕ-vă-nŏf, MICHAÏL MICHAÏLOVITCH. A Russian composer, died at Moscow, U.S.S.R., January 28. Born at Gatchina, Russia, Nov. 19, 1859, he became a pupil at the St. Petersburg Conservatory in 1875. He remained there until 1882 studying composition under Rimsky-Korsakov. For the 10 years that followed he lived in Tiflis, in the Caucasus, as director of the conservatory and conductor of the symphony concerts, and the opera, both affiliated with the Imperial Russian Music Society. During this stay he became deeply interested in the folk songs of the Caucasian district, especially those of Georgia, and the results of his studies he published later in a book, *The Georgian Folk-Song* (in Russian), that became the standard authority. Through the influence of Tschaiakowsky he became, in 1893, professor of composition at the conservatory in Moscow, and in 1906 succeeded Safonoff as director of that institution. After 1899 he was also conductor of the Moscow Private Opera, through which he greatly encouraged the efforts of the younger nationalist composers, although his personal sympathies inclined more towards the style of Tschaiakowsky. In his later years, Ippolitov-Ivanov had been working upon an opera entitled *Last Barricade*, depicting the Paris Commune of 1870. Although one of the foremost artists under the Czar, he was considered a revolutionary in his musical ideas by the Soviets and honored with the title, "People's Artist." On the 50th anniversary of the beginning of his musical career he received the Order of the Red Banner. His chief works were: the operas, *Ruth*, 1887; *Assya*, 1900; *Yabava Putyatishna*, 1901; *Treachery*, 1911; a concert overture, *Yar Khmel*; a symphonic scherzo; an orchestral suite, *Caucasian Sketches*; a sinfonietta; several cantatas and choral works, a *cappella* and with orchestra; chamber music of a very high order; songs; and compositions for the piano.

IRAN (PERSIA). A kingdom of southwestern Asia. Capital, Tehran (Teheran); reigning Shah in 1935, Riza Khan Pahlevi (crowned Apr. 25, 1926).

Area and Population. With an area of about 628,000 square miles, Iran has a population roughly estimated at 10,000,000, including 3,000,000 nomads. The nomads are estimated in round numbers at 720,000 Turks, 260,000 Arabs, 675,000 Kurds and Ieks, 234,000 Lurs, and 20,700 Baluchis and Gipsies. Estimated populations of the chief cities are: Tehran and its district, 350,000; Tabriz, 180,000; Isfahan, 100,000; Meshed, 85,000; Resht, 80,000; Kermanshah and Abadan, 40,000 each. The people are mainly Moslems of the Shiite sect.

Education. The educational system has been extensively reorganized and improved. A 1932 report placed the number of schools of all categories at 3642, with 182,000 pupils. There are also numerous religious and street schools. Foreign schools are maintained by American, British, Jewish, and French religious organizations and also by the German and Soviet governments, but children of Persian subjects are forbidden to attend them.

Production. The chief occupations are agriculture and stock raising. Estimated production of the

chief crops in 1932-33 was (in metric tons): Wheat, 1,384,200; barley, 625,100; rice, 413,700; tobacco, 16,100; cotton, 15,500. Fruits of various kinds and gums are important products. Wool produced in 1931 was estimated at 22,200 metric tons. Livestock estimates for 1933 were: Cattle, 1,296,800; sheep, 8,544,200; goats, 8,087,800. The petroleum output rose to 52,663,782 bbl. in 1934 from 49,581,000 in 1933. Rug manufacturing, the principal industry, has declined in recent years, but substantial progress in the establishment of textile and sugar mills and other new industries was reported.

Foreign Trade. Foreign trade, since 1931, has been conducted as a government monopoly. The monopoly, designed to balance imports and exports, operates through a system of permits and quotas, the quotas usually being fixed at the beginning of each economic year (June 22) and covering all articles to be imported during the year. For the year ended June 21, 1934, total imports were valued at 605,494,000 rials (U. S. gold \$22,403,000) and exports totaled 1,817,257,000 rials (\$67,238,000). This compared with imports in 1932-33 of 611,665,000 rials (\$21,210,000) and exports of 1,675,055,000 rials (\$58,124,000). Petroleum exports in 1933-34 were valued at 1,336,941,000 rials, or 73.6 per cent of all exports. Wool rugs, ginned cotton, and lamb skins were other leading exports. Cotton textiles, sugar, iron and steel, machinery, and automobiles were leading imports. Of the 1933-34 imports the Soviet Union provided 24.1 per cent; Japan, 13.6; United Kingdom, 10.5; British India, 9.9; United States, 9.6. Excluding petroleum, which went almost entirely to the United Kingdom, the distribution of exports by value in 1933-34 was: Soviet Union, 21.7 per cent; United States, 16.1; United Kingdom, 11.8; British India, 11.8; Japan, 2.6.

United States statistics showed imports from Iran in 1935 of \$3,634,968 (\$3,285,677 in 1934) and exports to Iran of \$4,339,326 (\$3,686,515 in 1934).

Finance. The financial year commences March 22. Actual budget returns for recent years are not available, but estimates of budget receipts showed a marked increase from 400,600,000 rials in 1931-32 to 506,912,227 in 1933-34, 621,413,417 in 1934-35, and 751,123,487 in 1935-36. A small surplus was budgeted for in the latter three years as follows: 1933-34, 7767 rials; 1934-35, 105,552; 1935-36, 295,697. The above general budget figures do not include the Anglo-Iranian Oil Company royalties, held as a special reserve fund, the sugar and tea monopoly tax receipts earmarked for railway construction, and road tax receipts utilized for highway construction and municipal improvements.

The total debt on Aug. 14, 1933, was reported at 113,600,000 rials (foreign debt, 106,900,000 rials at par). The average exchange value of the silver rial in the calendar year 1934 was approximately \$0.063 (\$0.047 in 1933).

Communications. Iran in 1934 had about 467 miles of railway line in operation and some 4000 miles of motor highways. The major transport project under way was the trans-Iranian Railway (801 miles long) which will link the Persian Gulf with the Caspian Sea by way of Tehran. On Mar. 31, 1935, 235 miles of this railway were in operation and an additional 70 miles of line had been completed. Construction is scheduled for completion at the end of 1939. The cost of railway construction is a heavy burden upon national finances. In the year ended June 21, 1933, the tonnage entering Iran's Persian Gulf ports was 5,756,025; Caspian ports, 289,309.

Government. Executive power is exercised by

the Shah, acting through a cabinet appointed and controlled by him. There is a parliament (Medjlis) of 136 members, elected for two years, which gives legislative sanction to measures proposed by the Shah and his cabinet. Premier in 1935, Muhammad Ali Khan Ferozghi.

History. Emulating his eminent neighbor, Mustapha Kemal Ataturk of Turkey, the Shah of Iran continued his work of modernizing his kingdom in 1935 despite sporadic opposition. In July a cabinet decree was issued ordering the people to abandon the Moslem fez in favor of the European hat. Although enforced without great difficulty throughout most of the kingdom, the decree precipitated severe rioting by angry Moslems, incited by their priests, in the city of Meshed, long known for its strongly Moslem sentiment. Scores were reported killed and injured before government troops restored order. Early in August the Irani Cabinet was reported to have approved a bill canceling all feudal titles.

Meanwhile modernization in the economic sphere was being pushed through the establishment of factories for the manufacture of textiles, sugar, and other prime necessities previously imported. In her economic development Iran was receiving vitally important aid from the Soviet Union. In April an economic mission left Tehran to study Russian industry and farming and late in August a commercial agreement was signed in which the Russians agreed to extend further aid in the establishment of Irani industries. Besides supplying Iran with tools, machinery, and technical equipment, the Soviet Government signed a contract to construct in Iran a great flour mill, a mechanical bakery and cereal products factory, 20 grain elevators, five rice-husking plants, and other establishments.

The tightening of economic ties was accompanied by the strengthening of the political bonds between Iran, the Soviet Union, and Turkey. "It may safely be said," Walter Duranty wrote from Moscow to the *New York Times* on Sept. 7, 1935, "that today there exists among Turkey, Iran and the U.S.S.R. an *entente cordiale* that envisages concerted action should occasion arise." The frontier dispute between Iran and Iraq continued during 1935. The dispute, arising from Iraq's claim to sovereignty over all the waters of the Shatt el Arab—the boundary river providing Iraq's only outlet to the sea—was submitted for settlement to the League Council in 1934.

The rise in the price of silver during 1935, caused in part by the silver-buying policy of the United States Government, early in the year produced a sharp increase in the exchange value of the silver rial, with consequent adverse effects upon Irani exports. The banks in Iran, while willing to buy foreign exchange, were unwilling to sell it, with the result that by the beginning of May the import trade was practically paralyzed. The government had permitted a high exchange rate to check smuggling of silver out of the country, but on May 8, with an economic crisis impending, the National Bank reversed this policy and arbitrarily reduced the foreign exchange value of the rial. In ensuing months the large-scale smuggling of silver coins out of the country resulted in a great scarcity of small coins. In September the Irani Government was reported to have begun to export silver in an effort to bolster the rial in foreign centres, as a serious shortage of foreign exchange caused it to depreciate in July and August.

IRAQ (IRAK). An Arab kingdom occupying the basin of the Tigris and Euphrates rivers in

Mesopotamia. Capital, Bagdad. Ruler in 1935, King Ghazi I, who succeeded to the throne Sept. 8, 1933.

Area and Population. The area of Iraq is roughly 143,250 square miles and the estimated population as of Dec. 31, 1933, was about 3,300,000. The population is overwhelmingly Moslem, with small Christian and Jewish minorities. The chief cities, with their estimated populations, are: Bagdad, 300,000; Mosul, 60,000; Basra, the chief seaport, 50,000. Government primary schools in 1933-34 numbered 458, with 53,393 pupils; intermediate schools, 21, with 3029 pupils; and secondary schools, 6, with 425 pupils. There are several technical, professional, and military schools. Al ul Bait University was opened in 1926.

Production. Agriculture is the chief occupation and dates constitute the chief export. Other products are wheat, barley, rice, cotton, oats, linseed, tobacco, fruits, wool, and sheep casings. Oil production (1934) was 340,000 metric tons (115,000 in 1933). Pipelines carrying oil from the Kirkuk fields to the Mediterranean at Haifa and Tripoli were placed in operation in 1934. Some asphalt is produced.

Foreign Trade. Imports for the fiscal year ended Mar. 31, 1935, totaled 6,104,844 dinars (6,025,000 in 1933-34) and exports were 4,785,338 dinars (2,874,000 in 1933-34). Dates, barley, wool, and wheat were the leading exports. United States statistics for 1935 showed general imports from Iraq of \$4,071,029 (\$2,722,379 in 1934) and exports to Iraq of \$1,572,326 (\$1,328,624 in 1934). Iraqi imports from Great Britain in 1934-35 were £1,541,732; exports to Britain, £1,504,052.

Finance. For the fiscal year ended Mar. 31, 1935, general budget receipts were 4,000,940 dinars and capital works budget receipts were 1,008,429 dinars. Against total receipts of 5,009,369 dinars there were expenditures totaling 4,164,426 dinars (general, 3,735,374; capital works, 429,052). Oil revenues amounted to 678,000 dinars. A net surplus of 1,009,900 dinars was reported in the Treasury as of Apr. 1, 1935. There was no public debt. The dinar is equivalent to the pound sterling.

Communications. In 1934 Iraq had 753 miles of state-operated railway lines, excluding sidings; 4652 miles of highways; and was crossed by British, French, and Dutch airlines from Europe to India and the Far East. The Tigris and Euphrates Rivers and the Shatt al Arab were important transport systems.

Government. The Constitution of Mar. 21, 1924, provided for a limited monarchy and a government responsible to Parliament, which consisted of a Senate of 20 members nominated by the King and a Lower House of 88 elected members. In 1935 the number of Deputies was increased from 88 to 107. Great Britain's mandate for Iraq on behalf of the League of Nations was abolished following the conclusion of an Anglo-Iraqi treaty of alliance on June 30, 1930, and Iraq was admitted to the League of Nations as a sovereign state on Oct. 3, 1932.

History. Iraq's lack of well developed political parties with stable organizations was again evidenced during 1935 by repeated cabinet overturns. The two rudimentary political organizations which alternately controlled the government were the Nationalists, led by Gen. Yasin Pasha el Hashimi, and the Progressives, under Jaafar Pasha and Nuri Pasha as Said. Dissatisfaction with government policies expressed by two tribal chieftains in the region of the Middle Euphrates caused the

resignation of Prime Minister Ali Jawdat Beg on February 24. His successor, Jamil Bey al Midfai, proved even less satisfactory to the two discontented tribes, which rose in revolt in the middle of March. Jamil Bey and his cabinet resigned on March 16 and Gen. Yashin Pasha el Hashimi formed a new ministry which ended the tribal rebellion without the use of force.

Asserting that friction between Parliament and the cabinet made it impossible to carry out needed reforms, King Ghazi on April 9 dissolved Parliament and called new elections for early in August. The voting gave Yasin Pasha's government a two-thirds majority in the Lower House. Meanwhile another tribal uprising near Ramaitha in May had disrupted all communications between Bagdad and Basra for nearly a week. Government troops put down the revolt with little difficulty.

While the turbulent Arab tribes were treated with leniency by the Iraqi Government, the non-Moslem minorities did not fare so well. In mid-October troops were sent against the Yezidis, a sect of devil-worshippers inhabiting the Jebel-Sinjar area 80 miles west of Mosul, after they had refused to register for conscription under the National Defense Law. The Yezidis suffered heavy losses in the ensuing fighting and many of those captured were imprisoned for long terms. Plans for transferring from Iraq the remnants of the Assyrians, whose revolt was crushed with much bloodshed in 1933, were finally completed in 1935. The proposals for settling them in British Guiana were abandoned and the French offer to permit their settlement on the Ghab Plain of Syria was accepted by the League Council in December. Great Britain and Iraq each contributed £250,000 to finance their migration and the League also promised financial help.

The opening in 1934 of the pipelines connecting Kirkuk in the Mosul oil fields with the Mediterranean (see map in 1934 YEAR BOOK, p. 38) meant a great increase in Iraqi revenues from oil royalties. These revenues were segregated in a capital works budget and early in 1935 a five-year programme of public improvements was adopted, to be paid for with the royalties. Chief among these projects was one for the reclamation by irrigation of the desolate region between the Tigris and Euphrates rivers below Bagdad, in ancient times renowned for its fertility. Work was begun on a \$6,000,000 dam across the Tigris at Kut-el-Amara. It was announced at London on September 16 that Italian capital had entered the Iraqi oil fields by purchasing majority control of two British companies holding a concession of about 45,000 square miles from the Iraqi Government—the Mosul Oil Fields, Ltd., and the British Oil Development Company.

Other domestic events of the year were the birth of an heir to the throne on May 2 and the conclusion of an Anglo-Iraqi agreement for final transfer of ownership of the Iraq Railways to the Bagdad government. The terms called for payment to the British Government of 40,000 dinars and the retention by the railways of a limited number of British officials for a fixed period.

The legal dispute between Iraq and Iran over their respective rights in their boundary river, the Shatt al Arab, dragged on before the League Council in 1935 without assuming a serious aspect. It was reported from London on October 20 that Iraq, Iran, and Turkey had recently concluded a pact of amity and non-aggression. On December 2 it was reported that Iraq and Saudi Arabia

had concluded a treaty pledging military and economic collaboration. See ARABIA, IRAN, and TURKEY under *History*; *ARCHAEOLOGY*.

IRELAND. An island west of England and Scotland. Total area, 31,837 sq. miles; total population (1934 estimate), 4,273,000 compared with 4,228,553 (1926 census). See IRELAND, NORTHERN; IRISH FREE STATE.

IRELAND, NORTHERN. A constituent part of the United Kingdom, comprising six counties and two parliamentary boroughs in northern Ireland. Capital, Belfast.

Area and Population. With a land area of 3,351,444 acres, Northern Ireland had an estimated population in 1934 of 1,279,000 (1,256,561 at the 1926 census). Living births in 1933 numbered 24,601; deaths, 18,154; marriages, 7630. The population of Belfast was 415,151 in 1926; of Londonderry, 45,159. At the 1926 census there were 781,652 Protestants and 420,428 Roman Catholics. In 1934-35 there were 1790 public elementary schools, with 203,550 pupils; 74 preparatory and secondary schools, with 12,974 pupils; and 121 technical schools, with 23,234 pupils. Queen's University in Belfast enrolled 1570 students in 1934-35.

Production. Agriculture and manufacturing are the chief occupations. Production of the chief crops in 1934 was (in tons): Potatoes, 922,908; turnips, 517,557; oats, 274,254; flax, 3677; hay, 805,466. Livestock in June, 1934, included 698,290 cattle, 474,266 sheep, 295,402 swine, 84,705 farm horses, 7478 asses. Poultry numbered 10,290,000. Farm land was distributed among 97,489 holders. About 2000 persons were engaged in mining. The chief industries are flax spinning and weaving (the linen industry has more than 800,000 spindles and 60,000 employees), ship building, distilling, fruit preserving, food canning, milling, and the manufacture of textile machinery, tobacco products, wearing apparel, etc. Herring fishing is important. Commerce statistics are included in those for Great Britain (q.v.).

Finance. For the fiscal year ended Mar. 31, 1935, revenues of the Northern Ireland Government totaled £12,127,000 (£11,930,000 in 1933-34) and expenditures were £12,119,000 (£11,911,000 in 1933-34). The figures include the cost of Imperial defense and of Northern Ireland services reserved to the British Parliament. Budget estimates for 1935-36 were: Receipts, £12,552,000; expenditures, £12,534,000.

Communications. The railways in 1934 had 755 miles of line, which linked up with the railways of the Irish Free State (q.v.). There were 12,996 miles of highways and a number of navigable waterways (including 180 miles of canals). The Northern Ireland Parliament in 1935 established the Road Transport Board to take over all road transport undertakings and to provide for the complete coordination of all highway and railway traffic.

Government. Northern Ireland exercises autonomy through a Parliament, consisting of a Senate of 24 elected and 2 *ex officio* members and a House of Commons of 52 elected members. It also forms an integral part of the United Kingdom, sending 13 representatives to the British House of Commons. Governor in 1935, the Duke of Abercorn, who was reappointed for a third six-year term in July, 1934. Prime Minister, Viscount Craigavon.

History. A new and serious outburst of religious rioting in Belfast during 1935 rendered more complex and seemingly more insoluble than

ever the difficult problem of Ulster's future relationships with the Irish Free State and Great Britain. Tensions in Northern Ireland between Protestants and Catholics and between Unionists and Nationalists had been growing more acute as a result of the Anglo-Irish trade war and the attitude of both the Irish Free State and British Governments. Early in 1935 both President de Valera and Vice President Sean T. O'Kelly of the Irish Free State reiterated their government's determination to incorporate Ulster in a united Ireland and to break off all ties with the British Commonwealth at the earliest opportunity. To the resentment aroused in Ulster by these tendencies was added the fear that the British Government would reach a secret agreement with the Free State and present it to Northern Ireland as a *fait accompli*.

Lord Craigavon, the Ulster Premier, answered these threats and rumors in April as follows: "Some British Government might possibly possess the power to kick us out of Britain, but they could never kick us out of the empire into the Free State or into a Southern republic."

The annual celebration by Protestant societies on July 12 of the anniversary of the Battle of the Boyne, in which William of Orange defeated the Catholic James II, fanned the deep-seated antagonisms to a flame. Groups of Orangemen and Catholics clashed in the streets of Belfast and mobs of rioters were soon engaged in a fierce battle in which stones, clubs, and firearms were freely used. Despite the efforts of the police and of troops, the Catholic quarter in Belfast was invaded by Protestants who burned or wrecked Catholic dwellings and forced about 3000 Catholics to flee to the homes of friends or to unfinished houses on the outskirts of the city. Before quiet was restored on July 19, nine persons had been killed (eight Protestants and one Catholic), scores had been seriously injured, and claims for damages amounting to nearly \$500,000 were lodged with the municipality. See IRISH FREE STATE under *History*.

IRISH FREE STATE. A self-governing unit of the British Commonwealth of Nations. Capital, Dublin.

Area and Population. With an area of 26,601 square miles, the Free State had an estimated population in 1934 of 3,013,000 (2,971,992 in 1926). About 30 per cent of the population was in towns of over 2000. Living births in 1934 numbered 57,841; deaths, 39,112; marriages, 14,158; overseas emigration, 1178. Populations of the chief cities in 1926 were: Dublin, with suburbs, 418,981 (424,000 in 1934); Cork, 78,490; Limerick, 39,448; Waterford, 26,647. The 1926 census showed 2,751,269 Roman Catholics and 220,723 Protestants.

Education. Education is compulsory and there is practically no illiteracy. Attendance in elementary schools in 1933-34 was 502,661; secondary, 32,384; university, 3540. Higher education is provided by Trinity College, Dublin, and by the University of Ireland, with constituent colleges at Dublin, Cork, and Galway.

Production. In 1933 a total of 3,699,000 acres, or 22 per cent of the total area, was under crops; there were 7000 acres of orchards, 8,003,000 acres of meadows and pasture, and 244,000 acres of forest. Production of the chief crops in 1934 was (in thousands of units): Wheat, 3803 bu.; rye, 67 bu.; barley, 6779 bu.; oats, 39,262 bu.; potatoes, 94,999 bu.; turnips, 2793 long tons; sugar beets, 484 long tons; mangels, 1617 long tons; hay, 4338 long tons;

flax, 997 lb. Beet sugar production in 1934-35 totaled 75,000 long tons. Livestock statistics for 1934 were: Cattle, 4,086,000; sheep, 2,931,000; swine, 968,000; horses, asses, and mules, 635,000. The sea-fish catch in 1934 amounted to 13,908,000 lb., valued at £127,771; shell-fish, £36,111.

A total of 248 new companies were registered during 1934, bringing the number in existence to 2289 with a nominal capital of £60,363,425. The production of electricity in 1933-34 was 138,503,000 kilowatt-hours; of malt liquor (1933), 1,798,000 bbl.; of distilled spirits (1934), 776,000 proof-gallons. In 1931 the net value of industrial production was £25,630,702. The principal industrial lines were the manufacture of flour, bread and biscuits, dairy products, margarine, brewed and malted beverages, sugar, confectionery, tobacco products, etc.

Foreign Trade. Imports of merchandise in 1934 were valued at £39,065,849 (£35,789,153 in 1933) and exports at £18,253,526 (£19,069,219 in 1933). In U. S. gold dollars (conversions made on basis of depreciation of pound sterling from gold), the imports totaled £117,432,000 in 1934 (\$118,584,000 in 1933) and exports were \$54,870,000 (\$63,184,000). Leading 1934 imports were (in 1000 gold dollars): Wheat, 8113; coal, 7177; iron and steel, 6353; machinery, 5734; tea, 4745; corn, 4489; timber and lumber, 3756. The principal exports were (in 1000 gold dollars): Cattle, 12,799; porter, beer, and ale, 12,728; butter, 3997; bacon and hams, 3693; horses, 2982. General imports from the United Kingdom totaled \$72,358,000 (gold) in 1934 (\$76,036,000 in 1933) and exports to the United Kingdom were worth \$44,609,000 (\$52,152,000 in 1933).

Imports during 1935 totaled £37,328,000 and exports were £19,614,000. United States statistics for 1935 showed imports from the Free State of \$583,980 (\$683,549 in 1934) and exports to the Free State of \$7,260,396 (\$7,179,818 in 1934).

Finance. Net ordinary revenues for the fiscal year ended Mar. 31, 1935, totaled £28,771,000 (£30,229,000 in 1933-34) and expenditures were £31,203,000 (£31,550,000 in 1933-34). The public debt on Mar. 31, 1934, totaled £49,572,911, but government assets amounted to £25,070,778, leaving a net debt of £24,502,133. The Irish Free State pound (par value, \$4.8665) was linked to the pound sterling through convertibility into British legal tender. The average exchange rate was \$4.2179 in 1933 and \$5.0393 in 1934.

Communications. The Free State railways, with 2999 miles of line, during 1934 carried 20,534,000 passengers and 3,405,000 long tons of freight. Motor roads extended 5057 miles. There were 650 miles of navigable rivers and canals. During 1934 a total of 10,378 vessels of 8,726,000 net register tons entered the ports and 10,380 vessels of 8,715,000 tons cleared.

Government. The Irish Free State became a coequal member of the British Commonwealth of Nations under the Constitution of Dec. 6, 1922. Irish and English are the official languages. The Legislature (Oireachtas) consists of the King, represented by the Governor-General, the Chamber of Deputies (Dáil Eireann) of 153 members elected for five years by popular suffrage under proportional representation, and the Senate (Seanad Eireann) of 60 members elected for nine years by the members of both houses of the Legislature in joint session. The President of the Executive Council is chosen by the Dáil and in turn nominates other members of the Council, or cabinet, who

must be approved by the Dáil. President and Minister of External Affairs in 1935, Eamon de Valera. Governor-General, Donal Buckley. Other members of the cabinet in 1935 were: Vice President and Minister for Local Government and Public Health, Sean T. O'Kelly; Lands, Senator Joseph Connolly; Industry and Commerce, Sean F. Lemass; Finance, Sean MacEntee; Agriculture, Dr. James Ryan; Defense, Frank Aiken; Education, Thomas Derrig; Justice, Patrick Rutledge; Posts and Telegraphs, Gerald Boland.

HISTORY

Internal Politics. Eamon de Valera continued to ride the turbulent seas of Free State politics with consummate skill and sagacity during 1935. By the close of the year the sole check on his power was the recalcitrant Senate, in which former President Cosgrave's United Ireland party retained a slight majority. With the abolition of the Senate scheduled for early in 1936, President de Valera appeared to stand on the threshold of a benevolent but virtually absolute dictatorship. There was little doubt that he retained the support of a majority of the voters and it was the consensus that he would probably control the Free State's destinies for at least another five years.

The split within the United Ireland party's ranks, which in 1934 ended the most serious threat to de Valera's power, continued unhealed throughout 1935. Gen. Owen O'Duffy, organizer of the semi-Fascist Blue Shirts and deposed leader of the United Ireland party, in May, 1935, organized his faction of the Blue Shirts into the National Corporate party, with a frankly Fascist programme aiming at the establishment of a corporative state on the Italian model. His following was relatively unimportant. The remnants of the Blue Shirts under Comdt. Edward Cronin functioned as an adjunct of the United Ireland party, of which Cosgrave was re-elected President early in 1935. The United Ireland party stood for Free State membership in the British Commonwealth and the termination of the Anglo-Irish economic war, which broke out in 1932 when the de Valera Government withheld land annuities due the British Government.

By breaking openly with the Irish Republican Army in June, 1935, arresting and imprisoning many of its leaders, and committing himself to strictly constitutional methods, de Valera deprived the United Ireland party of its most potent political appeal. In September his support of League sanctions against Italy caused a new split in the ranks of the Cosgrave adherents, some of whom denounced the President for failing to obtain compensation from the British in return for his support at Geneva. Frank MacDermott, an influential member of the United Ireland party, resigned in protest at these attacks upon what he termed the correct attitude of Mr. de Valera on this issue. De Valera defended his position on sanctions as being designed to maintain the League of Nations intact as the guardian of the rights of small nations. The anti-Italian sanctions were approved by the Dáil on November 8 with but two dissenting votes, despite the protests of Irish clergymen in Rome.

While these developments strengthened de Valera's position among the conservatives, they increased the antagonism of the radical wing of the I.R.A. Moderate republicans were content with the steady progress Mr. de Valera was making in severing Anglo-Irish ties, but the radicals denounced him for his failure to declare a republic immediately. The growing tension between the President and

his former allies came to a head in connection with a strike of Dublin street car and bus drivers, which tied up traffic in the capital for a period of 11 weeks and was ended on May 17 with a victory for the strikers. On March 24 the I.R.A. Council formally offered to join forces with the strikers in view of the government's action in providing the Free State army trucks for passenger transportation in Dublin. The I.R.A. denounced this as using the army for "strike-breaking purposes."

President de Valera met this defiance with unexpected firmness. About 80 leaders of the republican movement were arrested on March 26 and sentenced to prison under the Public Safety Act passed by the Cosgrave Government. The republican news organ was suppressed and continued arrests and imprisonments of party members forced many into hiding in the hills. The Republican Army remained a formidable threat, however. Consisting of some 30,000 active members, it was reported to be well armed and trained. With the defection of its conservative wing, the Republican movement assumed increasingly a class rather than a nationalistic aspect. The Republican Congress, newly organized political branch of the I.R.A., declared itself for a workers' and farmers' republic, under Marxian leadership.

Another source of opposition to de Valera was the cattle growers and horse breeders whose market in Britain had been greatly curtailed by the Anglo-Irish tariff war. These producers and other farmers whose prosperity was being undermined by Mr. de Valera's policy of economic self-sufficiency joined in a movement for non-payment of land annuities to the government. Efforts of the police to force payment of the annuities led to some riots and clashes, although on a smaller scale than in 1934.

The opposition of these relatively weak and mutually antagonistic groups did not deter President de Valera from moving steadily towards his major objectives—the creation of an economically self-sufficient nation and complete independence from Great Britain. Behind one of the highest tariff walls in Europe many new industries were established to provide manufactured articles formerly imported from Britain and other industrial countries. At the same time much land formerly devoted to livestock raising was planted to wheat and sugar beets, and this, together with the establishment of flour and sugar mills, ended the Free State's dependence upon outside sources of supply for these important foodstuffs. New factories for stoves, bricks, shoelaces, razor blades, cigarettes, etc., were also designed to provide employment for Ireland's idle workers and farmers. Yet the Free State statistics for the number of applicants for work registered showed a steady rise from an average of 62,817 in 1932 to 72,255 in 1933, 103,671 in 1934, and 133,214 for the first half of 1935.

Another result of de Valera's economic policy was the high cost of commodities, making the Free State one of the most expensive countries in Europe to live in. This double burden of high taxes and high tariffs fell most heavily upon the middle classes, but in the main they bore it without great protest as a sacrifice needed to secure economic independence. The tariff war with Britain had a disastrous effect upon foreign trade. The value of foreign commerce had fallen some 60 per cent in four years, while the excess of imports over exports had nearly doubled. In 1935, however, the value of exports increased while imports declined. The Minister of Finance justified the higher taxes levied on tea, sugar, foreign wheat, tobacco, and movie tick-

ets in the 1935-36 budget on the ground that more revenue was needed to withstand the strain of the tariff war with Britain. Despite this and the deficit of nearly £2,500,000 in the 1934-35 budget, the conversion of a £7,000,000 loan from 5 to 4 per cent in November was greatly oversubscribed.

Constitutional Revision. Mr. de Valera was at work during much of the year on plans for a thorough-going revision of the Constitution. The reforms contemplated the merging of the offices of Governor-General and President of the Executive Council to eliminate the last symbol of British dominion, and the replacement of the Senate with a new upper chamber composed of representatives of the major economic, industrial, and agricultural interests. The new Senate, however, was to be shorn of the veto power and was to be mainly an advisory and deliberative body, with certain rights of revising the legislation submitted to it.

After the Senate in May had vetoed a bill reducing the time within which it might delay action on government legislation, the President renewed his campaign for abolition of the upper chamber. His motion to that effect was carried by the Dáil on December 12 for the second time. Under the Constitution, the resolution was to go into effect within 60 days, regardless of the Senate's action in again vetoing the proposal.

Anglo-Irish Relations. The revision of the Free State Constitution was a problem closely related to the question of Anglo-Irish relations, since the Constitution of 1922 was complementary to the Anglo-Irish treaty of Dec. 6, 1921, and had required the approval of both the British Parliament and the Free State Provisional Parliament. It was reported on good authority that although the new Constitution was designed to end all evidences of British overlordship it was nevertheless being framed in consultation with British government officials. At the close of 1935 sources close to President de Valera reported that the negotiations for a settlement of all Anglo-Irish issues were on the verge of success.

The terms of this agreement, as forecast by the Dublin *Independent* late in November, included a republican form of government for the Free State, treaty associations with the United Kingdom, some form of federal association of the Free State and of Northern Ireland with mutual local autonomy, the evacuation of the British naval bases at Queenstown (Cobh) and Berehaven, and the creation of a Free State navy through the sale of about 10 warships by Britain for about £5,000,000. Although this report was officially denied by the de Valera Government, it was believed that it contained the basic proposals on which negotiations were proceeding.

A number of encouraging steps towards a rapprochement earlier in the year raised the hopes of those in both countries who desired a mutually satisfactory settlement of the costly economic warfare. It was announced on Jan. 3, 1935, that an informal understanding had been reached whereby the Free State would buy all of its coal from Britain in return for a larger British quota on imports of Irish cattle. This agreement was ratified by the Dáil in June, although not without strong criticism. It promised to restore to the former level the interchange of coal and cattle. Between 1931 and 1934 Free State imports of British coal had declined from 2,500,000 to less than 1,000,000 tons while the number of Irish cattle shipped to Britain declined from 800,000 to less than 400,000.

The adoption in April of the Irish Nationality and Citizenship Act, 1935, and the Aliens Act, 1935,

severed another relationship with the Empire. The significance of the Aliens Act with regard to the British Commonwealth was modified considerably by the de Valera Government's simultaneous issuance of an order exempting the citizens, subjects, or nationals of the Commonwealth from its restrictive provisions. These restrictions prohibited the ownership by aliens of certain types of property, such as ships of Irish registry.

Another important step towards a settlement was the ruling of the British Privy Council on June 6 that under the Statute of Westminster the British dominions were no longer subject to British law. Consequently the treaty of 1921 and the related Constitution of 1922 could be abrogated at will by the Free State Parliament. The highest British Court thus concurred in the assumption upon which Mr. de Valera had been proceeding. A few days later the Free State President gave assurances that in case the Free State received its full independence, it would never be used as a base of attack against Britain in time of war between Britain and foreign nations.

With the development of the Italo-Ethiopian crisis, the British were faced with the urgent desirability of putting their relations with the Free State in order and their disposition to do so was furthered by President de Valera's sturdy support of the League, and incidentally of Britain, against Italy at Geneva. Consequently the replacement of J. H. Thomas by Malcolm MacDonald as Dominions Secretary in the British Cabinet on November 22 was regarded in Dublin as a friendly and significant gesture. Mr. Thomas had found it difficult to establish an amicable basis of negotiation with the Free State representatives.

See IRELAND, NORTHERN, and GREAT BRITAIN under *History*.

IRON AND STEEL. The iron ore mined in the United States in 1935, exclusive of ore that contained 5 per cent or more manganese in the natural state, was estimated by the United States Bureau of Mines at 30,484,000 gross tons, an increase of 24 per cent as compared with the quantity mined in 1934. The ore shipped from the mines in 1935 was estimated at 33,308,000 gross tons valued at \$82,864,000, an increase of 29 per cent in quantity and 25 per cent in total value compared with the figure for 1934.

The average value of the ore per gross ton at the mines in 1935 was estimated at \$2.49; in 1934 it was \$2.58. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, decreased 26 per cent from 10,340,690 gross tons in 1934 to 7,616,000 tons in 1935.

During 1935, U.S. imports of iron ore amounted to 1,492,435 tons valued at \$3,482,438 (1,427,521 tons valued at \$3,307,504 for 1934); U.S. exports of iron ore amounted to 678,553 tons valued at \$1,913,463 (608,922 tons valued at \$2,243,066 for 1934). These statistics of imports and exports were compiled from the records of the Bureau of Foreign and Domestic Commerce.

The production of pig iron in the United States in 1935, as reported to *The Iron Age*, aggregated 21,007,802 tons as compared with 15,911,188 tons in 1934. The year closed with a production of 2,106,453 tons in December, the highest output for the year, against 1,027,622 tons in the same month of the previous year. The *American Metal Market* composite price for the year averaged \$19.37 a ton, closing the year at \$19.36. The estimate of world production in 1935, as compiled by the German economic group "Iron and Steel In-

dustry," was 73,300,000 metric tons, as compared with 62,900,000 metric tons in 1934. For the leading producing countries other than the United States, the estimates were: Germany, 12,800,000 metric tons; Russia, 12,470,000 metric tons; Great Britain, 6,520,000 metric tons; France, 5,800,000 metric tons; Belgium, 3,040,000 metric tons; Japan, including Korea and Manchuria, 2,690,000 metric tons; Luxembourg, 1,850,000 metric tons. The production of entire Europe was estimated at 46,210,000 metric tons.

Steel production in the United States, including both electric and crucible ingots, was estimated by *American Metal Market* at 33,800,000 gross tons, a gain of about 30 per cent over the 26,055,000 tons produced in 1934. A statement of conditions in the United States during the year by Walter S. Tower, Executive Secretary of the American Iron and Steel Institute, is thus reported, in part, in *American Metal Market*:

The termination of the Steel Code in May, following the Supreme Court's decision, and the sustained recovery of demand and output which began in July, were two developments of outstanding importance in the steel industry in 1935.

Any early fear that the ending of the Code would have an adverse effect on steel mill activities or employment soon disappeared. Actually, production of steel ingots in the last half of the year exceeded that of the first six months by almost 9 per cent.

One factor making for improvement in the closing quarter was the advance in the date for introducing new automobile models and the increase in automobile production which resulted.

Operations for the year served for the first time in five years to take the industry out of the red. However, with activities still limited to approximately one-half capacity, net profit margins continue to be uncomfortably narrow.

Although the rate of operations has failed to get back to a satisfactory level, the number of persons on the payroll has reached a total close to the top which marked the peak years of 1928-29. In October, the latest month for which figures are available, 436,500 persons were employed in the iron and steel mills, compared with 381,400 in October, 1934, and with a low point of 210,000 in 1932. Total payrolls for the year are estimated at \$550,000,000 compared with \$457,843,000 for 1934.

The average hourly wage rate in the industry during the year was 65.5 cents or approximately 10 per cent higher than the average for all other industries, and 38 per cent higher than in June, 1933. Because of the continued below-normal activities, the large number of employees on the payrolls reflects the extent to which work sharing was still a factor in the industry in 1935. Average weekly earnings of employees for the year increased 20 per cent over 1934, but as a result of limitation on hours, they still remained below 1929 levels.

As reported by the United States Bureau of Foreign and Domestic Commerce, the United States established a new post-war record in the export of iron and steel in the shipment of 3,067,336 gross tons, higher by 29,479 tons than the 1929 total. Some 69 per cent of the shipments was made up of iron and steel scraps—2,107,814 tons. The Far East, chiefly Japan, was the heaviest buyer for the year, with 46 per cent of the total, or 1,413,519 tons, of which about 1,200,000 tons were scrap. Imports for the year aggregated 469,954 tons, higher by 48 per cent than in 1934.

World steel production, as estimated by the German "Iron and Steel Industry," totaled 98,200,000 metric tons, a gain of 18.7 per cent over the 82,700,000 metric tons produced in 1934. Leading producing countries following the United States are: Germany, 16,400,000 metric tons; Russia, 12,100,000 metric tons; Great Britain, 10,200,000 metric tons; France, 6,200,000 metric tons; Japan, including Korea and Manchuria, 4,500,000 metric tons; Belgium, 3,000,000 metric tons; Italy, 2,200,000 metric tons; Luxembourg, 1,800,000 metric tons; Czechoslovakia, 1,170,000 metric tons. Preliminary official figures from London, however, show the total output of the United Kingdom at

9,842,400 tons, a new all-time high record. Canadian steel production for 1935 rose to 935,682 tons from the 1934 level of 656,695 tons.

ITALIAN ART. See **ART EXHIBITIONS.**

ITALIAN LITERATURE. The 1935 season was accentuated by elaborate celebrations of the Carducci centenary (1835-1935). Despite the fact that this lion-hearted classicist has fallen somewhat into discard among some of the Italian intellectuals under contention that his fame has surpassed his genius, he has had, none the less, a vigorous and enthusiastic following. His name and creation have assumed renewed importance vis-à-vis of the fact that the Fascist régime sees in him a poet consonant with the ideals of modern Italy. His creation embodies the aspiration for a strong and vigorous Italy, politically and culturally: it needs but to look back into its glorious history for its lessons to emerge enlightened and vitalic. Parallely, the aspirations of Fascist Italy are to emerge in a strong and dignified nation worthy of her splendid heritage and noble traditions. Bearing in mind that this reciprocal aspiration is the emotive factor, small wonder, then, that Fascist Italy should hail Carducci as her own and find justification in the widespread celebrations. The commemorating festivities, regardless of the value one may attach to them, have been productive of various volumes on the poet, notable among which is Giovanni Papini's study. These volumes will be discussed in more appropriate premises below.

Fiction. In which direction is the cult for literature turning? It is a foregone conclusion that interest in literary creations is visibly on the wane everywhere. Italy alone does not suffer from this organic disturbance. Where is that feverish interest that not so long ago the public in Italy showed toward literary production? Think of the stir that the novels of Fogazzaro, Verga, D'Annunzio created. And, if this interest is vanishing, what are the deducible factors? Has literary creation become less potent? Or could one at this moment inject the sinister accusation that literary formulae have in some measure alienated the public? Or could it be said also that the public, by and wide, subjected to life's more accelerated tempo has yielded more to the pleasurable rhythm offered by sports, the automobile, the cinema, and the radio?

How much subversive influence can be attributed to these factors is disputable, yet to make light of them would seem unreflective. The public in general has, perforce, not only failed of late to renew reasonable interest in literature, but has actually showed impatience to genres which in the past decade have assumed complex formulae. Before proceeding with this discussion it would obviously be better to qualify the definition of general public. Granting that the intellectuals set off the standard for literary consumption, it follows that the public rallying about this standard falls into various classes,—the well-educated, the quasi-intellectual, and the individual of moderate instruction. The man of education or the quasi-intellectual reads for whatever enlightenment and esthetic enjoyment he can extract from a literary creation, whereas the man of limited instruction reads principally for enjoyment. No inclusion is made in these groups of the type of person whose elemental education has not elevated him beyond the possibility of reading the putrid and infectious trash, written expressly for him.

The intellectual, then, who constitutes a negli-

gible minority, is the only one who may be considered a staunch and steady consumer of literary creations. The other categories of readers, not having this deep-rooted affinity for literature, may increase or decrease variably with external influences and internal changes in criteria for artistic creations. In the past 15 or 20 years criteria as regards a work of art has not been conducive to production of universal appeal. Rather, the appeal has been limited to a sort of intellectual aristocracy. In point of fact, contemporary creation has tended to alienate its general public. When a literature becomes too introspective, too moody, too analytical, or, if you will, too metaphysical, is the public to be condemned if it reads less and turns more towards sports, the cinema, the radio for its leisure hours?

Contemporary literature had better look to a more composite structure, assume a loftier objective. It should offer less problems, less cerebration, but more dignity, more esthetic values, and, if one may be so bold, let it offer more interest. Otherwise it may estrange even the more intelligent type of reader. Obviously, the world economic crisis and political unrest are also disturbing factors, yet, constituting as they do so common a denominator throughout the world, they can be summarily dispensed with in this discussion. The foregoing observations will facilitate the study of Italian prose creations which follow.

A novel of considerable importance, not of the moody or subjective variety, is to be found in young Alberto Moravia's *Le ambizioni sbagliate* (*Mistaken Ambitions*; Milan). Moravia has progressed in more ways than one since he put out his sensational *Gli Indifferenti* (*The Indifferent Ones*) in 1929. He has injected in his writing a style with subtle analysis and delicate coloration. There is in evidence a more compelling force which drives the characters of *Mistaken Ambitions* hopelessly and inevitably to tragedy. Nevertheless this progress on the part of the author has been rather in the direction of form and composition and toward a definite sense of finality which his previous creation lacked.

Notwithstanding these admirable qualities, the novel has an organic ailment: the author persists in his thesis of sordid immorality to which all his characters succumb. Does young Moravia see nothing else in life except all this sordidness? No rule is implied here that Moravia should not depict the repulsive side of life. Rather, he should observe it with theme and attitudes slightly reversed perhaps. If Mr. Moravia must insist on his note of condemnation, despair, and futility as regards morality in general, then let this viewpoint contain its element of dignity and let it lead to some worthier end: not every ship is without rudder at the mercy of a tempest, nor every human life a piece of wreckage caught in a mountain torrent.

If Moravia leaves one somewhat cold and bewildered, Bonaventura Tecchi creates quite an opposite atmosphere in *Villatauri* (Milan), a meritorious novel dealing with the mental rehabilitation of Guido Villatauri, the last of his line. Guido, a young man brought up in mortal fear of an overbearing father, suffers for years from complex inhibitions and distorted psychological perspectives. Guido is on the verge of succumbing to a fatal nervous derangement, to certain death, where his brother has preceded him, when with the passing of his father, he emerges as if reborn, gathering strength and fortitude of char-

acter as he assumes his duties and takes his place in life as a man of courage and conviction. There is something wholesome and convincing about this novel which, in spite of a somber theme, rises to stateliness with hope and encouragement the dominant notes. This type of novel, to be sure, is more healthful and is to be preferred to the hopelessly introspective and broody variety of which Italy has had her share. Tecchi is to be congratulated for adhering to the fundamental principles of novel composition. His scenes in town and country are refreshing, indeed, and the moral in which the novel is couched indicates that from abjection and weakness the individual can rise to strength and morality (a reversal of the Moravian formula in which dissolution and utter collapse accompany the dénouements).

Carlo Linati uses a country setting for his novel, *Cantalupa* (Milan). Notwithstanding Linati's skill as narrator, it must be said that as yet he has not succeeded in giving the public a novel of architectonic proportions and characterizations of length and breadth. To be sure, Linati delineates with interest, and yet his characters seem to lack red blood of the palpitating variety. That an artist chooses to delineate ordinary human beings is his prerogative. But this is where art and genius comes in: it is not so much a matter of the type of character selected but the manner in which he is painted on the canvas that makes him stand in relief. *Cantalupa*, episodic and lacking organic plasticity, as a whole, is the story of an intelligent young man of multiple capacities, moderate ambitions, and of no outstanding achievements. He represents, in short, the well-to-do young man of the transitional period of the past century (1890-1915),—a period in which the novel is couched. The episodes undoubtedly contain reminiscences of the author's youth. That the novel possesses charm and serenity is undeniable, and yet, it ends with little to stimulate the imagination, but leaves much to be desired.

In *Auime in cammino* (Milan), Gino Vitalba gives a popularized version of the life of Christ and his Disciples. This type of literary treatment of a sacred or quasi-sacred topic seems always destined to have a small, but enthusiastic following. The author has developed his story with sincerity and directness—qualities which both the devout and the learned reader can enjoy. This story of Christ, far from being formalized, has all the elements of human love and broad interests. Even the religiously formal episodes of the Miracles, the Sermons, Mary Magdalene's Conversion, the Scourge, the Crucifixion, have their simple but sympathetic narration. To those especially whose religion is remote and nebulous, this novel must have been unconsciously dedicated. It may have a limited public, yet it is a book which will stand on its merits.

Orsini Ratti chooses a musical setting for his novel, *Giovanna da Milano* (Milan), which revolves about a girl singer and various musicians. Unfortunately, the plot, if it may be called one, spins about trivial and commonplace incidents in the lives and aspirations of three or four characters. Every indication in the novel points to the futility of a musician's efforts to carve a name for himself in the musical circles of this day and age.

Of two novels written by women authors, the first, *L'Argine* (Milan) is the story of a lonely man's unrequited love for a middle-aged widow. The story does not measure up to the usual intensity and interest of the Deleddian novel. (Grazia Deledda, be it recalled, was recipient of the Nobel

Prize in Literature some seasons back.) For the most part, the novel is composed of a series of letters, in which the protagonist, Franco Franci, relates his activities in a town where he endeavors to make a fresh start in life. Marise Ferro, the other woman writer, although a youngster compared to Deledda, contributed as her novel of the year, *Barbara* (Milan). Several years ago her talent was discovered in a literary prize-competition (Mondadori Academy) in which she was "runner-up." It is to be noted that her *coup d'essai*, *Disordine*, though a novel of absorbing interest, lacked a certain amount of maturity and background. How much progress can be conceded to Miss Ferro in this new creation? There is still lacking in her work a more absorbing portrayal of life with its pathos, its dignity or indignity. *Barbara* is a finely worked-out analytic sketch of a girl and her friendship for Victoria, the second heroine of the novel, yet it lacks *materia prima*, the flesh and bone, as it were, that is a prerequisite for a novel of merit.

In the short story output first mention should be made of benign Francesco Chiesa, poet and author, hailing from the Italian-Swiss Ticino. *Racconti puerili* (*Youthful Stories*, Milan), fancies and reminiscences of his own youth perhaps, are delicately interwoven with poetry and benevolence. The collection of stories, soberly treated, are commendable to the young, and to the grown-up, too, if he has a feeling for grace and tranquillity. Luigi Chiarelli better known for his memorable contribution to the "Grotesque Theatre," *The Mask and the Face*, took time out from the theatre to assemble *La mano di Venere* (Lanciano). These are stories in the provocative and abstract moods, reëchoing his grotesque and paradoxical outlook on life. Alberto Moravia in addition to his long novel found time to put out a volume of short stories, *La bella vita* (Lanciano), some of which date back to 1928. The stories are somewhat disappointing. The fault lies within the subject matter: it is the ever-recurrent theme of lover and mistress, both inevitably smitten with nausea and morbidity.

Poetry. The Italian Academy Prize of 50,000 lire was recently awarded to Ada Negri, the dean of women poets. It is now over 40 years since the appearance of *Fatalità*, during which time it has been perhaps the most popular volume of poetry. The vogue of *Fatalità* must be attributed chiefly to its sentimental strain, which, admitting all possible objections, has a sense of refinement. Her volume of poems of recent date, *Vespertina* (Milan), has been republished. Though the leitmotif contains strains of various schools of poetry, there is ever-present sincerity and autumnal reflection. It can be said that from the obvious sentimentality of *Fatalità* and other volumes, Ada Negri, in *Vespertina*, has passed to a delicate and artistic outlook on life which she views with Olympian serenity. The extract below should best exemplify this point:

"Saluta all'alba il ritornante sole
come il più grande bene a te concesso,
o creatura: del sentirti in vita
ringrazia il giorno: il dolor vecchio e il nuovo
riprendi al lato, pallidi compagni
ma forti, e dolci senza sapienza
che sol viene dal pianto; e va con Dio
per la tua strada. . . ."—(*Preghiera dell'alba*, p. 16).

Margherita Sarfatti, better known internationally for her *Life of Mussolini*, reassembled some of her poems and added new ones to *I vivi e l'ombra* (*The Living and the Shadow*, Milan). The verses

are marked with overtones of sensitivity and emotions; the "thought is progressive and modern." One must turn to Trilussa for poetry in the comique vein. He calls his last book a mute one, *Libro muto* (Milan), a collection of fables in Roman dialect, which under guise of hilarity, contain all the wisdom and eloquence of a philosopher. Giovanni Pascoli's *Odi e Inni* (Milan) were republished as the ninth volume in the series "Opere di Giovanni Pascoli." The edition is gotten up in handsome format with notes by Maria Pascoli and Angelo Sodini. The XIX Biennale d'Arte Prize went to Cesare Meano, R. Laurano, and N. Vernieri for their *Liriche d'oggi* (Milan), poems in conservative moods as against the cerebral. P. L. Mariani included some 70 poets in his anthology of contemporary poets, *Poeti del tempo nostro* (Rieti). A *de luxe* and feature volume of poetry (in reality some of the poems of Carducci in the original manuscript reproduction) was prepared by Albano Sorbelli along with his introductory essay, *Poesie di Giosuè Carducci nei loro autografi* (Bologna).

Theatre. Luigi Chiarelli, the innovator of the "Teatro Grottesco," continued along the thesis of *The Mask and the Face* in his latest offering, *Carne bianca* (Lanciano). This time he unmasks the white race as exemplifying decadence and disintegration. Camillo Pellizzi made a careful study of the English theatre and wrote *Il teatro inglese* (Milan). Pellizzi continues in the sober criticism and fine standard he set off in his recent study on contemporary literature, *Le lettere italiane del nostro secolo*. Fascism was the motif of L. Vannata's *L'altra luce* (Trieste). An historical drama in three acts is to be found in *Beatrice d'Aragona* (Piceno), by M. Battistrada and F. Bonnell. Luigi Pirandello's *Così è se vi pare, Tutto per bene, and La ragione degli altri* were republished from his series *Maschere nude*. B. Cellini wrote a brochure on Pirandello's theatre, *Il Teatro di Pirandello* (Rome). The scenery of the early Italian sacred drama was treated by Virginia Galante Garrone in her study, *L'apparato scenico del dramma sacro in Italia* (Turin). Lastly, there was a study on the French theatre by A. Cecchi, *Il teatro francese* (Milan) which contains a preface by Italy's leading dramatic critic, Silvio D'Amico.

Criticism and Varia. The Carducci centenary celebration was fruitful of several volumes, notably among them, Giovanni Papini's study, *Grandezze di Carducci* (Florence). This little volume consists of three essays, "L'umanità del Carducci," originally a lecture which Papini gave at Bologna (Carducci's beloved city); "Carducci alma sdegnosa," also a lecture later published in *Nuova Antologia* (Sept. 1933); and, "Il Carducci Poeta" appearing first in *Scuola e Cultura* (March-Sept., 1935) (See also author's note, p. 15). In these essays Papini has endeavored to give fresh evaluations on the poet without having recourse to the material of his exhaustive study of the poet, *L'Uomo Carducci*, a volume of some four hundred pages. In these three essays one should not look for detailed study and documentary material. The values, rather, lie in the literary and philosophic veins, and in the admiration and the reverence that Papini shows for the poet.

Now, if Papini's essays are to be appraised primarily from the artistic point of view, an essay of considerable research, of penetrating criticism, and extensive documentation is to be found in the study of 122 pages, *Il Grande Artiere*, which serves as a preface to *Prose Scelte* (Selected Prose,

Bologna), by Lorenzo Bianchi and Paolo Nediani. In this study the authors stress these dominant traits in Carducci: *Italianità, sincerità, virilità*. The authors have assembled 350 pages of Carducci's prose-writings of which the articles on criticism and polemics constitute the highlights of the collection. The notes are elucidating. In all, the volume has been decorously put out, the fine paper and the illustrations are a feature.

Two volumes which will reach the general public in spite of being prepared principally as school texts deserve recording here. The first, Massimo Bontempelli's *Oggi* (Today, Milan), contains prose selections from over a hundred authors. The volume of 633 pages is divided into five parts. Book i, *Ieri* (Yesterday) contains prose of the pre-Risorgimento period figuring among its authors, Edmondo de Amicis, Ippolito Nievo, Renato Fucini, Giuseppe Giusti. Book ii, *Risorgimento d'Italia*, is accentuated, in the main, by the prose-writings of Silvio Pellico, Giuseppe Mazzini, Giuseppe Garibaldi, Antonio Fogazzaro, Giosuè Carducci, Alfredo Panzini, and Giuseppe Giaccosa. Book iii, *Intermezzo*, is represented by poems and extracts from Ugo Foscolo, Giacomo Leopardi, Alessandro Manzoni, Giovanni Verga, Luigi Pirandello. Book iv, *La Rivoluzione Fascista*, is made up of extracts from several score of writers of which Gabriele D'Annunzio, F. T. Marinetti, Benito Mussolini, Massimo Bontempelli, Antonio Baldini constitute the vanguard. Book v, *Oggi*, several hundred pages of excerpts, features writings by Ugo Ojetti, Corrado Alvaro, G. A. Borge, Giovanni Papini. The other volume, Demetrio Ferrari's *L'Arte del Dire (Stilistica ed Estetica)* (Milan), could be called in reality a handbook on writing, emphasizing rhetoric, style, and esthetic interpretations of literature. It is to be noted that this is the 11th edition considerably reorganized and revised by Prof. Alfredo Azzoni. The text is accompanied with a very useful compendium of Italian Literature (pp. 190-250) with chapters on the origin of the language, the 13th Century, the Renaissance, the Baroque, the Arcadian, and contemporary periods.

And now, *pêle-mêle*, the following volumes should be recorded. Luigi Tonelli, ever active in literary criticism, completed a rather comprehensive study of *Tasso* (Turin). Salvatore Breglia made a study on the poetry and structure of Dante's creation, *Poesia e struttura nella Divina Commedia* (Genoa). Alfredo Galletti made an historical-literary survey of contemporary literature, *Il Novecento* (Milan). Francesco Flora prepared a *de luxe* edition of the poetry of Torquato Tasso, *Poesie* (Milan). And lastly, there was an augmented and revised edition of the letters of Giacomo Leopardi, *Epistolario* (Florence), with comments by Francesco Moroncini.

ITALIAN SOMALILAND. See SOMALILAND, ITALIAN.

ITALY. A kingdom of southern Europe, upon which a Fascist dictatorship is superimposed. Capital, Rome. Sovereign in 1935, King Victor Emmanuel III, who ascended the throne July 29, 1900.

Area and Production. Italy has an area of 119,759 square miles and a population estimated on Jan. 1, 1935, at 43,096,000 (41,230,047 at the 1931 census). In 1931 16 per cent of the population lived in communes of less than 3000; 33 per cent in communes of from 3000 to 10,000, and 51 per cent in communes of over 10,000. Living births in 1934 numbered 983,254 (995,979 in 1933); deaths, 557,013 (574,113); marriages, 309,152

(289,910); emigrants, 175,740 (194,772); repatriates, 106,975. The number of Italians residing abroad in 1934 was estimated at 9,600,000. Estimated populations of the chief cities in 1934 were: Rome, 1,008,803; Milan, 992,036; Naples, 839,390; Genoa, 608,096; Turin, 597,260; Palermo, 389,699; Florence, 316,286; Venice, 260,247; Trieste, 249,574; Bologna, 246,280; Catania, 227,765; Messina, 182,508; Bari, 171,810; Verona, 152,923; Padua, 131,066; Leghorn, 124,391. According to the 1931 census 99.6 per cent of the population were Roman Catholics; there were 82,481 Protestants and 47,435 Jews.

Education. The 1931 census revealed that 21 per cent of the population over six years of age was illiterate. In 1932-33 there were 4,968,542 pupils in elementary schools, 476,929 in secondary schools, and 51,108 in institutions of higher education. The 21 State and five free universities enrolled 34,094 students.

Production. Of the working population in 1931, 46.3 per cent were engaged in agriculture and fishing, 30.4 per cent in mining, quarrying, and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. The acreage devoted to cereals in 1934 was 17,966,641; woods and forests, 13,741,230; forage and pasture, 12,184,500; vines, 2,436,400; olive trees, 1,991,620; vegetables, 1,284,920. The chief crops in 1934, with 1933 crops in parentheses, were (in thousands of units): Wheat, 233,036 bu. (298,548); rye, 5607 bu. (6739); barley, 9347 bu. (10,401); oats, 34,297 bu. (39,562); corn, 125,694 bu. (101,988); rice, 30,226 bu. (29,772); potatoes, 99,451 bu. (87,232); sugar beets, 2652 metric tons (2144); wine, 807,021 gal. (872,679); citrus fruits, 2652 metric tons (2144); tobacco, 90,831 lb. (97,842); silk cocoons, 63,618 lb. (75,431). Beet sugar production in 1934-35 was 358,000 metric tons (305,000 in 1933-34); olive oil in 1934-35, 62,839,000 gal. (47,458,000 in 1933-34). Livestock estimates for 1932 were: Cattle, 7,000,000; swine, 3,000,000; sheep, 9,000,000; goats, 1,500,000; horses, 925,000; mules and asses, 1,410,000.

Mineral and metallurgical production in 1934, with 1933 figures in parentheses, was (in 1000 metric tons): Coal, 367 (334); lignite, 388 (383); coke, 593 (730); iron ore, 502 (526); pig iron, 573 (567); steel ingots and castings, 1850 (1771); zinc, 24.4 (23.3); lead, 41.9 (24.8); sulphur, 370 (402). The value of all mineral production in 1933 was 292,801,000 lire; of quarry output, 334,495,000 lire. On Jan. 31, 1935, Italy had 5,473,000 raw cotton-spinning spindles. The hydroelectric plant capacity in 1934 was 3,760,000 kilowatts and the output was 11,560,000,000 kilowatt-hours. The production of raw silk in 1934 was 6,887,000 lb. (7,239,000 in 1933); of rayon, 106,375,000 lb. (81,911,000 lb. in 1933). In 1933 the output of cotton yarn was 420,565,000 lb.; of cotton cloth, 838,396,000 yards. In 1934 46,000 automobiles were manufactured (42,000 in 1933).

Foreign Trade. The trend of Italian foreign trade during the period 1929-35 is shown in the accompanying table based upon the U. S. *Foreign Commerce Yearbook, 1935*. The figures represent imports for consumption and exports of Italian products.

In 1934 Germany supplied 15.8 per cent of the total imports for consumption (14.7 per cent in 1933); United States, 12.5 per cent (15.0); United Kingdom, 9.2 (9.8); France, 5.7 (5.5); Argentina, 3.6 (3.4). Of the 1934 exports Germany purchased 15.9 per cent (12.2 per cent in 1933); United King-

ITALIAN FOREIGN TRADE, 1929-35

Year	Millions of lire		Millions of gold dollars	
	Imports	Exports	Imports	Exports
1929	21,665	15,236	1,140	801
1930	17,347	12,119	912	637
1931	11,643	10,210	607	532
1932	8,257	6,811	424	349
1933	7,432	5,991	386	312
1934	7,667	5,225	392	267

dom, 10.2 (11.4); United States, 7.4 (8.7); France, 6.7 (7.7); Argentina, 4.1 (6.4). Imports from Italy's African colonies in 1934 were \$7,927,000 (\$6,666,000 in 1933) and exports to the African colonies were \$6,208,000 (\$6,986,000). The value of the leading 1934 imports was (in 1000 gold dollars): Coal, coke, and briquets, 43,798; raw cotton, 36,860; machinery, 22,233; iron and steel, 20,620; wool, greasy, 20,176. The value of the chief exports was (in 1000 gold dollars): Fruits and nuts, 18,302; cotton fabrics, 16,040; rayon, raw or dyed, 15,283; rayon fabrics, 10,460; wool fabrics, 10,079; lemons, 9659; cotton yarn and thread, 9622.

United States figures showed general imports from Italy in 1935 of \$38,671,829 (\$35,748,733 in 1934) and exports to Italy of \$72,450,043 (\$64,577,707 in 1934).

Finance. The budget estimates for the fiscal year ending June 30, 1936, placed receipts at 17,988,000,000 lire and expenditures at 19,645,000,000 lire. However, the development of the Ethiopian war during the year made the budget an inaccurate guide to actual financial operations. Preliminary budget returns for 1934-35 showed a deficit of 2,030,000,000 lire on revenues of 18,614,000,000 lire. For 1933-34, the final returns showed receipts of 17,790,000,000 lire; expenditures of 24,609,000,000 lire; and a deficit of 6,819,000,000 lire.

The public debt on June 30, 1935, totaled 105,389,000,000 lire (funded, 93,827,000,000; floating, 11,562,000,000), compared with 102,622,000,000 lire on June 30, 1934. The foreign debt was confined to war debts to the United States and British Governments and to the dollar loan of 1925, of which \$82,033,100 was outstanding June 30, 1935. The par value of the lire previous to dollar devaluation in January, 1934, was \$0.0526; after that date it was \$0.0891. The lire exchanged at an average of \$0.0671 in 1933, \$0.0856 in 1934, and \$0.0825 in 1935.

Communications. Italian railways in 1934 reported 14,313 miles of line, of which 10,568 miles were government owned and operated. There were 2433 miles of electrified lines. During 1933 the government railways carried 81,213,000 passengers and 33,669,000 metric tons of freight (excluding livestock). Gross receipts for the 1932-33 fiscal year were 3,129,000,000 lire. National highways in 1934 extended 12,854 miles and civil airlines 10,350 miles (1933). During 1934 the civil airlines carried 40,090 passengers, 124,518 lb. of mail, 236,000 lb. of newspapers, 1,300,000 lb. of baggage, and 406,830 lb. of merchandise. The Italian merchant marine on June 30, 1935, aggregated 2,884,400 gross tons measurement (2,928,400 on June 30, 1934). During 1934 209,247 vessels of 68,097,000 tons entered Italian ports, their cargoes totaling 21,464,000 tons.

Government. The Fascist régime has been superimposed upon the constitutional monarchy established by the Constitution of Mar. 4, 1848. Under the law of Dec. 9, 1928, the Fascist Grand Council, consisting of (1) life, (2) *ex officio*, and (3) extraordinary members appointed by the head of the government, acts as "the supreme organ co-ordinating and uniting all the activities of the

régime." There is an appointive Senate of some 374 members and a Chamber of Deputies of 400 members nominated by the Fascist Grand Council and elected by restricted suffrage. The Cabinet, as reconstituted Jan. 24, 1935, was as follows: Prime Minister, Chief of the Government, Minister of Interior, of Foreign Affairs, of Colonies, of War, of the Navy, of the Air, and of Corporations, Benito Mussolini; Public Works, Luigi Razza; National Education, Count Cesare Maria de Vecchi; Agriculture and Forests, Edmondo Rossoni; Finance, Paolo Thaon de Reval; Justice, Arrigo Solmi; Communications, Antonio Stefano Benni.

HISTORY

The year 1935 was a momentous one in the history of the Italian people. Starting auspiciously with the Franco-Italian accord of January 7, which ended 15 years of mutual hostility and rivalry, the year closed with Italy engaged in a costly and difficult war of colonial expansion in Ethiopia (q.v.), in which discouragingly slow progress was recorded. Formally branded as the aggressor and subjected to economic boycott by some 53 member States of the League of Nations, Italy was placed under formidable pressure. The already low standard of living of her people rapidly deteriorated and the national economy in general functioned under a terrific strain. Il Duce's bid for "a place in the sun" appeared to have endangered not only the freedom of the last independent native kingdom in Africa but also the stability of the Fascist régime itself and the peace of all Europe.

The Franco-Italian Accord. The breach between Italy and Germany which grew out of Hitler's thinly veiled efforts to Nazify Austria in 1934 bore fruit in the rapprochement of Italy and France. By a series of agreements signed by Premier Mussolini and Foreign Minister Laval of France in Rome on Jan. 7, 1935, France secured Italy's collaboration against Germany in Central and Eastern Europe in return for the settlement on terms favorable to Italy of the African questions which had disturbed the relations of the two Latin powers since the Paris Peace Conference. France and Italy agreed (1) jointly to oppose further Nazi efforts to absorb Austria, (2) to support a multilateral pact by which Austria and its neighbors would undertake to respect their mutual frontiers and refrain from interfering in one another's internal affairs, and (3) to oppose German rearmament unless it was carried out in agreement with the other chief European powers. In Africa France agreed to cede Italy an area of 44,500 square miles in French Equatorial Africa adjoining the Anglo-Egyptian Sudan and a strip of French Somaliland providing Italy with an outlet on the Gulf of Aden. Italian sovereignty over the island of Doumerrah in the Red Sea was recognized by France, who also granted Italy a share in the ownership and management of the railway from Djibouti, French Somaliland, to Addis Ababa, capital of Ethiopia. The long dispute over the status of Italians in the French protectorate of Tunis was ended by granting them, under certain limitations, the right to retain their Italian nationality, to retain Italian schools, and to be admitted to the liberal professions.

This far-reaching agreement promised to have the most beneficial effects in promoting the pacification and rehabilitation of Europe, which since 1930 had been rocked by a series of increasingly grave crises. Whereas France and Italy had pre-

viously egged on their rival satellites in Central and Eastern Europe against one another, they now undertook to smooth out the difficulties obstructing peaceful relations among the Danubian and Balkan States. An important case in point was the temporary reconciliation of Italy and Yugoslavia, whose intense hostility constituted a standing menace to peace. In March Mussolini sent a Minister to Belgrade whose friendly remarks upon the occasion of the presentation of his credentials was hailed as marking a revolution in Italo-Yugoslav relations. Similarly the Franco-Italian accord paved the way for an even more ambitious effort by Britain and France to conciliate Germany and lay the foundations for a "new deal" in Europe. These negotiations were initiated by the Franco-British communiqué of Feb. 3, 1935 (see FRANCE, GERMANY, and GREAT BRITAIN under *History*).

Unfortunately the Franco-Italian understanding of January 7 contained one point which proved its partial undoing and which effectively reversed the favorable trend of European affairs. In addition to the written pledges enumerated above, France and Italy entered into some sort of a secret agreement regarding Ethiopia which later gave rise to conflicting interpretations in Paris and Rome. Mussolini clearly believed that he had obtained a free hand to carry out his plans for the conquest of the black kingdom. M. Laval formally denied he had made such a promise, although the reluctance with which he supported the League in its efforts to stop Italy seemed to belie his words. At any rate Mussolini's "precautionary mobilization" of February 10 and accompanying pronouncements made it obvious that he was determined upon a military adventure in Ethiopia. From that moment his challenge to the collective security system of the League of Nations and to the imperial interests of Britain in the Mediterranean, the Nile valley, and the Red Sea loomed as an increasingly menacing cloud on the European diplomatic horizon. By October 3, when the invasion of Ethiopia commenced, Mussolini's policy had forced Europe into the most acute crisis since the World War and inaugurated a realignment of the European powers scarcely less profound than that caused by the triumph of Hitler's Nazis in Germany in 1933.

The Stresa Conference. During the first half of the year, however, the Franco-Italian accord made possible close collaboration between Britain, France, and Italy in an effort to curb the rapidly growing power of Nazi Germany. Following Hitler's speech of March 16 announcing the restoration of military conscription in defiance of the Versailles Treaty, Italy joined France in presenting strong notes of protest at Berlin. Soon afterwards Il Duce recalled 250,000 men to the colors, while France reinforced the troops on its eastern frontier. Then the heads of the governments of Britain, France, and Italy met at Stresa, Italy, on April 11-14 to discuss a common policy in the face of open German rearmament.

The so-called "Stresa front" arranged for joint opposition to further unilateral treaty repudiation by Germany and reiterated its common support of Austrian independence. The three powers again proposed that the negotiations initiated by France in 1934 for an "Eastern Locarno"—a multilateral treaty mutually guaranteeing existing frontiers in eastern Europe—should be carried to a conclusion. They also urged the conclusion of the Central European or Danubian agreement for the peace-

ful adjustment of the Austrian and other related questions. A conference in Rome to discuss the latter question was tentatively fixed for May 20, but subsequent developments forced the abandonment of these plans.

The Stresa powers further agreed, in collaboration with the Little Entente (q.v.), to consider the requests of Austria, Hungary, and Bulgaria for revision of the military clauses of the peace treaties. To forestall German military reoccupation of the demilitarized zone of the Rhineland, Britain and Italy reaffirmed their support of the Locarno treaty and announced their intention to fulfill their military obligations thereunder. Finally, the three powers declared that their aim was the collective maintenance of peace within the framework of the League, and that they would oppose "by all practicable means," any unilateral repudiation of treaties which might endanger the peace of Europe. Six months later Italy was to embark upon a war in defiance of the League's collective security system and in violation of the League Covenant, the Kellogg-Briand Pact, and the Italo-Ethiopian Arbitration Treaty of 1928.

In line with the policy agreed upon at Stresa, Britain, France, and Italy introduced a resolution in the League Council condemning German rearmament as a violation of the Versailles Treaty. This was unanimously adopted on April 16, with only Denmark abstaining. Hitler replied by denying the right of the League powers to set themselves up as judges concerning Germany's course.

These developments led to another threatening situation in Europe at a time when Italian troops were being sent to East Africa in growing numbers. To reassure both his own people and his Stresa allies that Italy would not be unduly weakened by his Ethiopian adventure, Mussolini issued a communiqué stating that the African force represented less than half of 1 per cent of the nation's total military reserves, which he placed at 7,938,000 men. During June and July the annual field manoeuvres were held in the region of the Brenner Pass leading to Austria, with 500,000 to 600,000 troops participating. Mussolini viewed this demonstration as a warning to the whole world that Italy, "despite the African situation, is present and powerful in Europe."

The Breach with Britain. Confident of his power, the Fascist leader carried forward vigorous preparations for the conquest of Ethiopia in the face of increasing opposition from Great Britain. He apparently had good grounds for believing during the first months of 1935 that the British would throw no obstacles in his way. But as the extent of his ambitions, comprising the whole of Ethiopia, became apparent, the menace to British imperial interests reinforced the strong pacifist and liberal sentiment in Britain and led the Conservative Government to warn Mussolini of its increasing concern. On June 23-24 Capt. Anthony Eden, British Lord Privy Seal, was sent to Rome to attempt to dissuade Mussolini. He offered the latter British help in securing minor territorial and economic concessions in Ethiopia, stating that Britain was ready to offer Ethiopia an outlet to the sea at Zeila in British Somaliland as an inducement for Ethiopian concessions to Italy. When Mussolini rejected the offer, Eden warned him that Britain "could not remain indifferent to events which might profoundly affect the League's future."

Thereafter the relations between Britain and Italy grew steadily more tense. While the British continued their efforts at conciliation they made

it plain that they would urge the imposition of League sanctions against Italy if these failed and prepared to back their stand with a naval demonstration in the Mediterranean. Mussolini maintained throughout a completely intransigent and defiant attitude towards Britain, meanwhile waving aside Italy's obligations and pledges under the League Covenant with unconcealed contempt. Britain and France, anxious both to save the League and to preserve the Stresa front against Germany, were obliged to offer Mussolini larger and larger territorial bribes, mainly at the expense of Ethiopia, in their efforts to prevent war in Ethiopia (see ETHIOPIA under *History*). Meanwhile the controlled Fascist press had unleashed a furious anti-British campaign, arousing the nation to resist British "dictation."

After Mussolini on August 18 had rejected another Franco-British proposal, the League Council convened September 4. Under Eden's leadership, the Council made a new effort at conciliation but at the same time prepared to apply the provisions of Article XV of the Covenant to the Ethiopian dispute, thus insuring eventual application of sanctions if Italy remained obdurate. In the Council as in the League Assembly, which convened a few days later, the British pressed for firm action. At the same time they began to strengthen their naval, military, and air forces throughout the Mediterranean. Sir Samuel Hoare's speech of September 11 before the Assembly demanding collective League action against Italy was followed by the secret movement of the powerful British home fleet to the Mediterranean. The fleet's arrival at Gibraltar September 17 was probably timed with the presentation of latest League conciliation formula to Italy and Ethiopia on September 18.

Mussolini was quite unmoved by this formidable pressure. He rejected the League peace formula on September 21 and took extensive measures to meet the threat of the British main fleet. Malta was rendered obsolete as a naval base by powerful Italian air and submarine concentrations at nearby points. Two full divisions of Italian troops were concentrated in Libya along the Egyptian border. The 200,000 troops in Eritrea menaced another flank of the Nile valley, where the British forces were greatly outnumbered. Italian bases in the Dodecanese were likewise strengthened and improved. Meanwhile the British had concentrated their naval forces at both ends of the Mediterranean and were feverishly rushing work on defenses and new bases in Egypt, Palestine, and Gibraltar. They were thus in a position to close both the Strait of Gibraltar and the Suez Canal and to cut off supplies and reinforcements from the Italian troops in East Africa.

Italy at War. In the face of these ominous preparations, Mussolini boldly staked Italy's future on the Ethiopian adventure. On October 2 he mobilized his people in public squares throughout Italy to hear a fighting radio address in which he declared that Italy, moved by "irresistible destiny," could have no more patience with Ethiopia. He expressed doubt that "the authentic French people" would join in sanctions against their ally of the World War or that the British people would "send Europe to its catastrophe" to defend a barbarous country. But should the League "dare" to apply sanctions, Italy was prepared for all eventualities. To economic sanctions it would respond "with our spirit of discipline, with our spirit of sacrifice, our obedience"; to military measures with military measures; and to acts of war with acts of war.

Il Duce's speech was the signal for the invasion of Ethiopia the following day. On October 4 Prime Minister Baldwin announced a great British rearmament plan. On October 6 President Roosevelt dealt Italian shipping a blow by warning Americans not to travel on belligerent ships. The following day the League Council declared Italy guilty of having attacked Ethiopia in violation of its obligations under the Covenant and this verdict was reaffirmed by the Assembly on October 10. Steps for the application of sanctions under Article XVI were immediately taken and they were placed in effect by all League States with the exception of Austria, Hungary, and Albania on November 18. See LEAGUE OF NATIONS.

The Anglo-Italian crisis reached its height during the week ended October 18. Peace between the two nations seemed at the mercy of an incident, with the certainty that if war occurred it would involve most of Europe and the Near East. Rival military and naval preparations were matched by the war of diplomacy and propaganda which raged at Geneva, Paris, and throughout the Mediterranean countries. The Italians incited the Egyptian nationalists against the British (see EGYPT under *History*), while the British began the intricate negotiations which before the end of the year brought them formal pledges of military aid from France, the Little Entente, and the Balkan Entente in case the British fleet was attacked as a result of the application of League measures.

A temporary lull in the Anglo-Italian crisis began on October 18 when the British Ambassador in Rome assured Mussolini that Britain would not take any action "beyond what might be agreed to or recommended by the League in conformity with the dispositions of the Covenant." Mussolini declared that his plans in Ethiopia and elsewhere did not threaten British interests. He also offered to withdraw his troops from the Egyptian border in Libya if Britain would withdraw its fleet from the Mediterranean. The British cabinet, however, declined to move the fleet while the Italian press continued its violently hostile attacks upon Britain. Moreover on October 21 the British announced a "neutrality" policy regarding the Italo-Ethiopian conflict which placed severe obstacles in the path of Italian shipping engaged in supplying the army in Eritrea and Italian Somaliland.

A week later the League Sanctions committee met and fixed November 18 for the application of comprehensive sanctions. This aroused Mussolini to a bitter speech at the University of Rome on October 31 in which he declared Italy would resist the sanctions "with indomitable will and supreme contempt." His speech incited mobs of students and others to riotous demonstrations against English hotels, shops, and other establishments in Rome. On November 11 a strong Italian note protesting against sanctions and threatening counter measures was sent to all members and non-members of the League. By the decree of November 12 the Fascist Government established a virtual foreign trade monopoly and prepared to divert foreign purchases from countries participating in sanctions.

Italy in the Grip of Sanctions. Despite these threats of reprisal, League sanctions against Italy went into effect November 18. It was the first time in the League's history that economic penalties had been enforced against an aggressor. Fifty States normally purchasing 60 per cent of Italy's exports barred all Italian exports except money, gold, silver, books, newspapers, maps, and music.

Fifty-two States placed an embargo on shipments to Italy of all raw materials needed for war except coal, oil, cotton, iron and steel, which were produced in large quantities by the United States and Germany—both non-League States.

This process of economic strangulation had already made itself felt in a general lowering of the standard of living before the end of 1935. Despite rigorous government restrictions, prices in Italy rose steadily, while the quantity and quality of goods declined. With export markets closed and raw materials unavailable, many factories shut down and unemployment increased. There was a scramble among other exporting nations to secure the trade which had been lost by Italy, the prospect being that even when sanctions were ended Italy would find it difficult to renew many of the severed economic ties which had been built up by generations of Italian traders. In November meat consumption was restricted to two days a week and the growing of all luxury crops was curtailed in favor of staples such as wheat, beans, and potatoes. Although many of the unemployed were enrolled in the armed forces—nearly 1,200,000 men were under arms at the end of the year—and many factories found employment in supplying the needs of the armies in Italy and Ethiopia, the grip of sanctions steadily restricted the economic life of the country. Vigorous efforts to render Italy more self-sufficient were only partly successful, in view of the poverty of natural resources.

A government order suspending publication of all Treasury, trade, public debt, and Bank of Italy statistics concealed the extent of the damage from general view. As early as July, 1935, the government's need for ready cash and foreign exchange led to the suspension of the 40 per cent minimum reserve requirements of gold and foreign exchange. In August the government had requisitioned all foreign securities and credits held by Italians in Italy and abroad. Later a big conversion loan involving additional cash payments by subscribers was made and finally in December the government was reduced to the necessity of collecting the wedding rings and other private gold supplies of private citizens. New loans and higher taxation were in prospect as the year closed. Nevertheless the bulk of the population seemed to stand solidly behind Mussolini and to be prepared for further sacrifices. Some foreign observers in Italy, however, reported signs of domestic discontent and of distrust of Mussolini's leadership. It was felt that a cleverer and perhaps less belligerent leader might have secured room for Italian expansion in Africa without arousing a veritable hornets' nest and exposing Italy to League sanctions. This feeling was particularly noticeable after Mussolini had failed to seize the favorable opening presented by the Hoare-Laval peace proposals in mid-December.

While the League Sanctions Committee had been studying the application to Italy of additional economic sanctions, including the delicate question of an embargo on oil, France and Britain had again attempted to negotiate a peace settlement. The formula submitted to Mussolini by Sir Samuel Hoare and Premier Laval went far beyond previous offers and practically gave Italy half of Ethiopia (see ETHIOPIA under *History*). Although the offer was much more liberal than could be justified on the basis of Italian military conquests in Ethiopia, Mussolini delayed his acceptance of it until publication of the Hoare-Laval formula caused it to be speedily repudiated at London and Geneva. The door to further diplomatic concessions was

suddenly slammed shut in Il Duce's face. The negotiations were taken out of the hands of Britain and France and entrusted to a League Committee of Thirteen, on which small States antagonistic to the idea of buying off the aggressor were heavily represented. Worse than this, Sir Samuel Hoare was sacrificed in Britain for his part in the affair, and Anthony Eden—regarded as a champion of the League and as an enemy of Mussolini—was appointed to the key post of British Foreign Secretary. In Italy it was realized that no solution of the Ethiopian situation satisfactory to Mussolini could now be achieved except by force of arms and the Italian armies were retreating rather than advancing in Ethiopia (q.v.). On December 30 Mussolini was obliged to admit that the war in Ethiopia could not soon be brought to a successful issue, inasmuch as the Ethiopians evaded a decisive battle, and that the war would extend into another year.

Moreover Italy's allies in Central Europe—Austria and Hungary—showed a distinct cooling of affection for her now that her future seemed so dark. Hungary began to make new advances to Germany, while Austria appeared to be turning towards the Little Entente as her main support against absorption by Germany. The return of George II to the Greek throne on November 25 with a treaty of alliance with Britain in his pocket had upset Mussolini's plan to control Greece through Marshal Kondylis. Turkey, openly hostile, had mobilized additional troops opposite the Italian bases at Rhodes and the other Dodecanese Islands. Italian prestige, long so dominant among Near Eastern peoples accustomed to admire strong and colorful leaders, was rapidly on the wane as a result of the diplomatic and military morass into which a headstrong dictator had led his people. There was thus substantial basis for the gloom which pervaded Italy at the close of 1935—a gloom in marked contrast to the almost hysterical enthusiasm with which the capture of Adowa was hailed on October 6.

Other Events. By a cabinet reorganization announced Jan. 16, 1935, Premier Mussolini took over the Colonies portfolio, thus releasing Gen. Emilio de Bono for service in East Africa. Il Duce now held 7 out of the 13 cabinet posts. New appointees to the other 6 posts were named on January 24, as follows: Press and Propaganda, Count Galeazzo Ciano di Cortellazzo, Mussolini's son-in-law; Justice, Arrigo Solmi; Finance, Count Paolo Thaon de Revel; Public Education, Count Cesare Maria de Vecchi di Val Cismon; Public Works, Luigi Razza; Agriculture and Forestry, Edmondo Rossoni; Communications, Stefano Benni. Signor Razza (q.v.), together with the noted African explorer, Raimondo Franchetti, and five others, was killed in the crash near Cairo, Egypt, on August 7 of an aeroplane in which he was flying to Eritrea.

The bursting of a dam near Ovada, in Piedmont, on August 13, caused a loss of life estimated at between 115 and 120. Hundreds of houses were swept away and several entire villages were destroyed as the flood swept down the valley of the River Orba.

For the attitude of the various powers towards Italy in connection with the Ethiopian war, see ARABIA, ARGENTINA, AUSTRIA, BRAZIL, BULGARIA, CZECHOSLOVAKIA, EGYPT, ETHIOPIA, FRANCE, GERMANY, GREAT BRITAIN, GREECE, HUNGARY, MALTA, PALESTINE, RUMANIA, SWEDEN, TURKEY, UNITED STATES, YUGOSLAVIA, ETC., under *History*; also LEAGUE OF NATIONS.

IVORY COAST. See FRENCH WEST AFRICA.

JAMAICA, *ja-mā'ka*. A British West Indian colony. Area, 4450 sq. miles; population (Dec. 31, 1934, estimate), 1,104,775 compared with 858,118 (1921 census). The Cayman Islands (see below), Turks and Caicos Islands (see below), Morant Cays, and Pedro Cays are dependencies of Jamaica. During 1934 there were 34,247 births, 4294 marriages, and 18,731 deaths. Kingston, the capital (with Port Royal), had 63,711 inhabitants in 1921; Spanish Town, 8694; Port Antonio, 6272; Montego Bay, 6580; Savanna-la-Mar, 3442; Port Maria, 2481. The total enrollment in elementary schools for 1933-34 was 142,141.

Production and Trade. The main products are listed below under exports. During 1934, imports (c.i.f.) totaled £4,777,069 and consisted of food-stuffs, manufactured goods, coal, and lumber; exports (f.o.b.), £3,219,072 of which bananas (15,974,906 stems) represented £1,665,082; sugar (54,227 long tons), £448,160; coffee (3184 long tons); rum (459,798 gal.), £135,803; coconuts, £96,746; pimento, £96,348; grapefruit, £78,370; logwood extracts, £78,256; ginger (2,394,669 lb.), £64,579; cocoa (4,439,480 lb.), £42,708; oranges, £32,572; logwood, £32,137. In 1934, 1326 vessels aggregating 3,844,127 net tons entered the ports and 1291 vessels aggregating 3,812,128 net tons cleared. During 1934, 39,262 tourists visited Jamaica.

Government. For the fiscal year ended Mar. 31, 1935, revenue totaled £2,260,352; expenditure, £2,255,502; public debt, £3,835,637. Government was vested in a governor aided by a privy council of 8 members, and a legislative council of 30 members (the governor, 5 ex-officio, 10 nominated, and 14 elected members). Captain-General and Governor-in-Chief in 1935, Sir Edward Denham.

Cayman Islands. A dependency of Jamaica, comprising Grand Cayman, Little Cayman, and Cayman Brac. Area, 104 sq. miles; population (1934), 6009. Georgetown, the capital, had 1321 inhabitants in 1934. Coconuts, green turtle, thatch rope, hides, and turtle shell were the main products. In 1934, imports were valued at £23,145; exports, £13,315; revenue, £5695; expenditure, £6995. Budget estimates (1935): revenue, £7250; expenditure, £7880. A meteorological and wireless station was under construction on Grand Cayman during December, 1935. The dependency was administered by a commissioner under the direction of the Governor-in-Chief of Jamaica.

Turks and Caicos Islands. A dependency of Jamaica. Area, 166 sq. miles; population (1932), 5300. Salt, conchs, turtle shell, sisal, were the main products. In 1934, imports were valued at £21,114; exports, £12,973 (salt, 522,568 bushels); revenue, £7024; expenditure, £8959. Government was administered by a commissioner (with headquarters at Grand Turk) assisted by a legislative board, under the Governor-in-Chief of Jamaica.

History. On Sept. 27, 1935, a tropical hurricane, which reached a velocity of 120 miles an hour, swept across Jamaica and uprooted about 2,000,000 banana trees. A second storm struck the eastern part of Jamaica on October 21, two persons were drowned, communications were disrupted, nearly all standing fruit-bearing banana trees were blown down, and younger banana trees were damaged.

JAPAN. A Far Eastern empire, comprising (1) Japan proper, or the four main islands of Honshu, Kyushu, Shikoku, and Hokkaido, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); and (4) Karafuto (southern Sakhalin). In addition Japan controlled the leased

territory of Kwantung and the South Manchuria Railway zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. During 1931-33 it established a protectorate over Manchuria and Jehol in North China, the new State being designated Manchoukuo. Capital of Japan, Tokyo; Emperor in 1935, Hirohito, who ascended the throne Dec. 25, 1926. See separate articles on FORMOSA, KOREA, KARAFUTO, JAPANESE PACIFIC ISLANDS, KWANTUNG, and MANCHOUKUO.

Area and Population. The area and population of the empire in 1930 (census figures) and at the end of 1933 (estimates) are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

Island	Area, sq. miles	Population, 1930 census	Population, 1933 estimates
Japan proper	147,593	64,450,005	69,881,759
Korea	85,288	21,058,305	20,791,321
Formosa	13,889	4,592,537	5,060,507
Karafuto	13,934	295,196	300,298
Japanese Empire .	260,614	90,396,043	96,033,885
Kwantung *	1,438	1,328,011	1,408,755
Mandated Pacific Is.	830	69,626	80,884

* Including South Manchuria Railway Zone.

The population of Japan proper on Jan. 1, 1935, was 70,782,384, of which 35,721,303 were males and 35,061,864 were females. The increase of population during 1934 was 900,625, compared to 1,016,054 in 1933. The movement of population for Japan proper in 1933 was: Births, 2,121,253; deaths, 1,193,987; marriages, 486,058; divorces, 49,282. There were 749,158 Japanese subjects residing abroad in 1933 and 29,642 foreigners residing in Japan. In proportion to the extent of arable land, Japan is the world's most densely populated country, with some 70,000,000 living in an area the size of California. Populations of the chief cities as estimated in 1934 were: Tokyo, 5,662,900; Osaka, 2,722,700; Kyoto, 1,107,700; Nagoya, 1,017,700; Kobe, 853,800; Yokohama, 703,900. There were in Japan proper 34 cities of more than 100,000.

Education. Elementary education is compulsory and less than 1 per cent of the adult population is illiterate. In 1931-32 there were 1622 kindergarten schools, with 126,564 pupils; 25,665 primary schools, with 10,381,290 pupils; 15,083 preparatory technical schools, with 1,271,971 pupils; 558 boys' middle schools, with 356,478 pupils; 980 girls' high schools, with 362,265 pupils; and various other special institutions. The six imperial universities had 20,196 students and 40 other institutions of university grade had 69,985 students.

Production. Manufacturing accounts for about 32.7 per cent of the national income, commerce for 25.4 per cent, and agriculture for about 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper, although only 14,775,000 acres, or 15 per cent of the total area, is suitable for cultivation. Rice is the main crop and chief article of diet. Production of the chief crops in 1934, with 1933 figures in parentheses, was (in 1000 bu.): Rice, 265,377 (362,677); wheat, 48,379 (41,020); oats, 12,986 (10,437); barley, 66,327 (62,786). Silk cocoon production in 1934 was 326,743,000 kilograms, valued at 203,849,000 yen, while the output of raw silk was about 98,475,000 lb. Japan normally supplies about three-fourths of the world supply of silk, and about 95 per cent of its output is sold to the United States. Fish ranks second to rice as a staple article of diet. In 1933 the fish catch totaled about 4,100,000 metric tons, valued at 260,000,-

000 yen. The livestock census of 1932 showed 1,541,086 horses, 1,529,309 oxen, 228,998 goats, and 926,010 swine. The 1935 rice crop was 287,000,000 bu.

Deficient in minerals, except for coal and copper, Japan is obliged to import most of her requirements from abroad. Mineral production in 1934 was: Coal, 33,062,000 metric tons; copper, 149,450,000 lb.; petroleum, 1,458,300 bbl.; gold, 15,072 kilograms; silver, 215,300 kilograms. The value of industrial production in 1933 was 7,829,319,152 yen, or 31 per cent higher than in 1932. There were 81,949 industrial establishments in 1933, with 1,901,328 operatives. Of the total 1933 value of production, textiles accounted for 37 per cent; chemicals, 15.6; food and drink, 12.9; machinery and apparatus, 11.3; metals, 11.2. The 1934 output of pig iron was 2,401,700 metric tons; steel, 3,811,200 metric tons; electric power, 18,160,000,000 kwh. (in 1933); rayon, 150,000,000 lb.

Foreign Trade. Imports into Japan proper in 1934 were valued at 2,282,531,000 yen (1,917,219,000 yen in 1933) and exports at 2,171,925,000 yen (1,861,045,000 yen in 1933). The 1934 trade balance was unfavorable by 142,000,000 yen (86,000,000 yen in 1933) and in addition invisible trade suffered an adverse balance of about 7,600,000 yen, due to military and other expenditures in Manchuria and the repatriation of Japanese bonds held abroad. The merchandise imports and exports in 1934 increased 19 and 17 per cent, respectively, over 1933. The distribution of the 1933 and 1934 trade by principal foreign countries is shown in the accompanying table.

JAPAN PROPER: DISTRIBUTION OF TRADE [Thousands of yen]

Country of origin or destination	1933		1934	
	Imports	Exports	Imports	Exports
United States	620,779	492,237	769,359	398,928
British India	204,737	205,154	289,671	238,220
Kwantung and Manchuria	168,058	303,139	191,431	403,019
China and Hong Kong	115,444	131,672	121,043	150,559
Netherlands India	55,709	157,487	63,464	158,450
Australia	211,391	65,380	214,295	79,885
Great Britain	82,558	87,849	70,036	109,269
Germany	95,797	12,411	109,583	19,677

The value of the principal 1934 imports was (in millions of yen): Raw cotton, 731.4; foodstuffs, 197.3; iron and iron products, 191; raw wool, 186.5; drugs and chemicals, 144.3; machinery, 143.6; oils and fats, 136.6. The chief exports items (in millions of yen) were: Cotton textiles, 541.8; raw silk, 286.8; silk textiles, 226; food products, 172.7; metals and manufactures, 158.4; clothing, etc., 154.3; machinery, 125.

Japan's 1935 imports totaled 2,472,000,000 yen; exports, 2,499,000,000 yen. United States statistics for 1935 showed imports from Japan of \$152,886,270 (\$119,251,106 in 1934) and exports to Japan of \$203,260,465 (\$210,480,173 in 1934).

Finance. For the fiscal year ended Mar. 31, 1935, total governmental revenues were 2,247,000,000 yen, including proceeds of bond issues amounting to 742,000,000 yen. Expenditures totaled 2,163,000,000 yen. In the previous year receipts were 2,331,700,000 yen (loans, 783,000,000) and expenditures 2,254,600,000 yen. Excluding loan receipts, the deficit was about 658,000,000 yen in 1934-35 and 801,000,000 in 1933-34. The national debt on June 30, 1935, stood at 9,103,900,000 yen (domestic, 7,701,000,000; foreign, 1,402,900,000), compared with a total of 9,090,400,000 yen on Mar. 31, 1934. The yen (par value, \$0.8440) exchanged at an average of \$0.2554 in 1933 and \$0.2972 in 1934.

The budget estimates for 1935-36 balanced at

2,215,413,809 yen, including extraordinary receipts and expenditures of 879,825,965 and 905,111,281 yen, respectively.

Communications. Railways open to traffic in 1933 had a total of 13,931 miles of line (state lines, 9485 miles). In the fiscal year 1932-33 all lines carried 1,208,817,830 passengers and 83,945,270 metric tons of freight. Operating revenues of the state lines in 1934-35 were 495,500,000 yen (425,954,073 yen in 1933-34). Highways extended 591,228 miles in 1932. In 1932-33 commercial airplanes made 51,984 flights and covered a distance of 2,807,113 kilometers. On June 30, 1935, the tonnage of the Japanese merchant marine was 4,085,700. The net tonnage of vessels entering the ports in the overseas trade with cargo and in ballast in 1934 was 63,374,000; tonnage cleared, 63,230,000.

Government. Executive power is vested in the emperor, who acts with the advice and aid of a ministry appointed by and responsible to him, but every law requires the approval of the Imperial Diet of two chambers. The Upper Chamber (House of Peers) of 403 members includes 184 life members chosen on the basis of rank, wealth, and other qualifications; the other Peers are elected for seven years by special groups. The House of Representatives consists of 466 members elected for four years. There is a Privy Council, consulted by the Emperor on important national problems. The national cabinet appointed July 8, 1934, included members of the Seiyukai and Minseito parties, the military, and non-party groups. Premier in 1935, Adm. Keisuke Okada. Other leading cabinet members were: Foreign Affairs, Koki Hirota; Home Affairs, Fumio Goto; Finance, Korekiyo Takahashi; War, Gen. Senjuro Hayashi, Marine, Adm. Mineo Osumi.

HISTORY

Expansion on the Mainland. Taking advantage of the growing European crisis, which rendered the Western powers impotent in the Far East, Japan during 1935 extended her sphere of control into Mongolia and China proper. The programme of expansion on the Asiatic mainland, inaugurated with the annexation of Korea in 1910 and resumed with the conquest of Manchuria and Jehol in 1931-33, was thus carried a long step forward. As in Manchuria, the Japanese avoided outright annexation, exercising their newly won political and military control through a puppet native government—the Hopei-Chahar Political Council. Nevertheless they effectively erased the influence of the Nanking Government in Mongolia and North China and secured for Japan a position of great economic, political, and military significance.

Japanese control of North China and Inner Mongolia placed the Soviet republic of Outer Mongolia between the pincers formed by Manchoukuo and Inner Mongolia and offered Japan a new base for an attack upon Soviet Siberia in the event of war with the Soviet Union. Moreover Japan's new position in Peiping, the Manchu capital of China, established a centre of gravity in China proper, greatly facilitating the expansion of Japanese influence southward into the rich provinces of Central China. No sooner was Japanese political and military control established in Hopei and Chahar than steps were taken to corner the North Chinese market for Japanese manufactures. A wholesale reduction of taxes was announced, and government-supported Japanese companies were formed for the exploitation of North Chinese markets and resources. It appeared certain that

cheap Japanese manufactures, and the short haul from Japan, coupled with governmental discrimination against foreign concerns, would give Japan complete economic control of North China. Another important result of Japan's expansion was that it promised to check the spread of communism in China and established a barrier to Communist penetration into Manchoukuo, Korea, and Japan itself.

While advancing in North China and Mongolia, Japan continued the wholesale political and economic reorganization of Manchoukuo needed to convert that rich region into a more profitable field for economic exploitation. The transference of Soviet interests in the Chinese Eastern Railway to Manchoukuo by an agreement signed Mar. 23, 1935, in Tokyo gave Japan undisputed control in Manchuria. Despite official British and American protests, the government oil sales monopoly in Manchoukuo was put into effect, forcing British and American oil companies to withdraw from that territory. On June 17 both the British Foreign Secretary and the American State Department reiterated their charge that the monopoly violated the Nine-Power Treaty and other agreements guaranteeing the "open door" in China.

Gradual abandonment of the pretense that the government of Manchoukuo represented the spontaneous will of its 30,000,000 subjects was seen in the resignation of Prime Minister Cheng Hsiao-hsu, a highly respected Chinese who had lent prestige to the Manchoukuoan régime. He was succeeded on May 22 by Chang Ching-hui, described as one of the least-respected henchmen of Chang Tso-lin, the former war-lord of Manchuria. In order "to insure the free operation of Japanese policy," the Tokyo Cabinet on August 9 approved a plan for relinquishment of all extraterritorial rights in Manchoukuo by the end of 1937, foreign as well as Japanese.

Friction with the Powers. The Japanese advances on the mainland naturally evoked repeated protests from the Western powers, whose commercial and financial interests in China proper were menaced. The expansion of Japanese control into North China directly threatened the great British investments and commercial interests in North China and the Yangtze valley. In September Sir Frederick Leith-Ross, British treasury adviser, arrived in China and apparently played an influential rôle in China's departure from the silver standard on November 3, a move which constituted a direct check to Japanese economic domination of China (see CHINA under History). On November 25 the Japanese Foreign Office spokesman sharply warned Sir Frederick not to interfere with the Japanese-inspired "autonomy movement" in North China. News that Japanese troops had occupied stations along the North China Railway, which was partly built with British capital, was followed on November 28 by an immediate British protest and an inquiry at Tokyo as to Japan's real intentions in China.

The United States Government on December 5 likewise rejected Japan's claim to hegemony in China. Reiterating that the United States had not abandoned its treaty rights and its economic interests in China, Secretary of State Hull declared "an effort is being made—and is being resisted—to bring about a substantial change in the political status and conditions of several of China's northern provinces." These protests by Britain and America were recognized as mere legal moves to keep the record straight and pave the way for a

reassertion of treaty rights under more favorable conditions. As was expected, Japan ignored the protests and neither Britain nor the United States were prepared to back their protests by armed force. It was realized in Japan, however, that there must eventually be a show down with Britain, the United States, or both combined, if the Japanese expansion continued to endanger Anglo-American interests in China. It was with the aim of maintaining Japanese predominance in the Far East against this threat that the Japanese delegation to the London Naval Conference, opening in December, 1935, demanded absolute naval parity with the two great naval powers. See *GREAT BRITAIN under History*; *NAVAL PROGRESS*.

The Japanese advance in Inner Mongolia and the sporadic frontier clashes between Japanese-Manchoukuoan and Outer Mongolian troops aroused a more determined and effective reaction from the Soviet Union. Although the sale of the Chinese Eastern Railway had removed an important source of Soviet-Japanese tension, relations between the two powers remained highly strained throughout the year. The Soviet Government rushed work on its strategic railways and defensive works in the Far East and evidenced its determination to fight Japan rather than permit her to absorb Outer Mongolia. See *CHINA, MONGOLIA, and UNION OF SOVIET SOCIALIST REPUBLICS under History*.

Another source of friction with the powers, and particularly with the United States, was the reported fortification of the former German Pacific islands obtained by Japan under a mandate of the League of Nations. Although Japan's withdrawal from the League, effective in March, 1935, left the status of these islands in doubt, the Japanese representative before the League Mandates Commission insisted on October 28 that Japan's withdrawal from the League in no way affected her rights in the islands. The strategic value of the islands in case of a naval war with the United States was stressed by Japanese naval authorities during the year, but reports of their fortification were officially denied. It was admitted, however, that large sums were being spent in improving the harbors, establishing air fields, etc., and that efforts of foreign visitors to determine the nature of these works were frustrated by the Japanese authorities.

Japan's Trade Drive. The phenomenal expansion of Japanese foreign trade, continuing during 1935, increased the outcry against Japanese competition which had been raised in Britain and other industrial countries in 1933-34. The British erected new tariff barriers against cheap Japanese goods in Egypt and other parts of the empire. Canada and Japan engaged in a severe trade war over the question of alleged tariff discriminations, which was not ended until the advent of the new Liberal Government in Canada (q.v.). Japanese trade and goodwill missions were active in Australia, Latin America, and practically all parts of the world.

American manufacturers during 1935 joined in the agitation against the flood of cheap Japanese goods, and with some effect. A ruling of the United States District Court at Los Angeles on May 4 barred Japanese electric light bulbs from the United States on the ground of infringement of American patents. After representations by the United States Government, Japan early in October agreed to limit her exports of cotton piece goods to the Philippines to 45,000,000 square meters

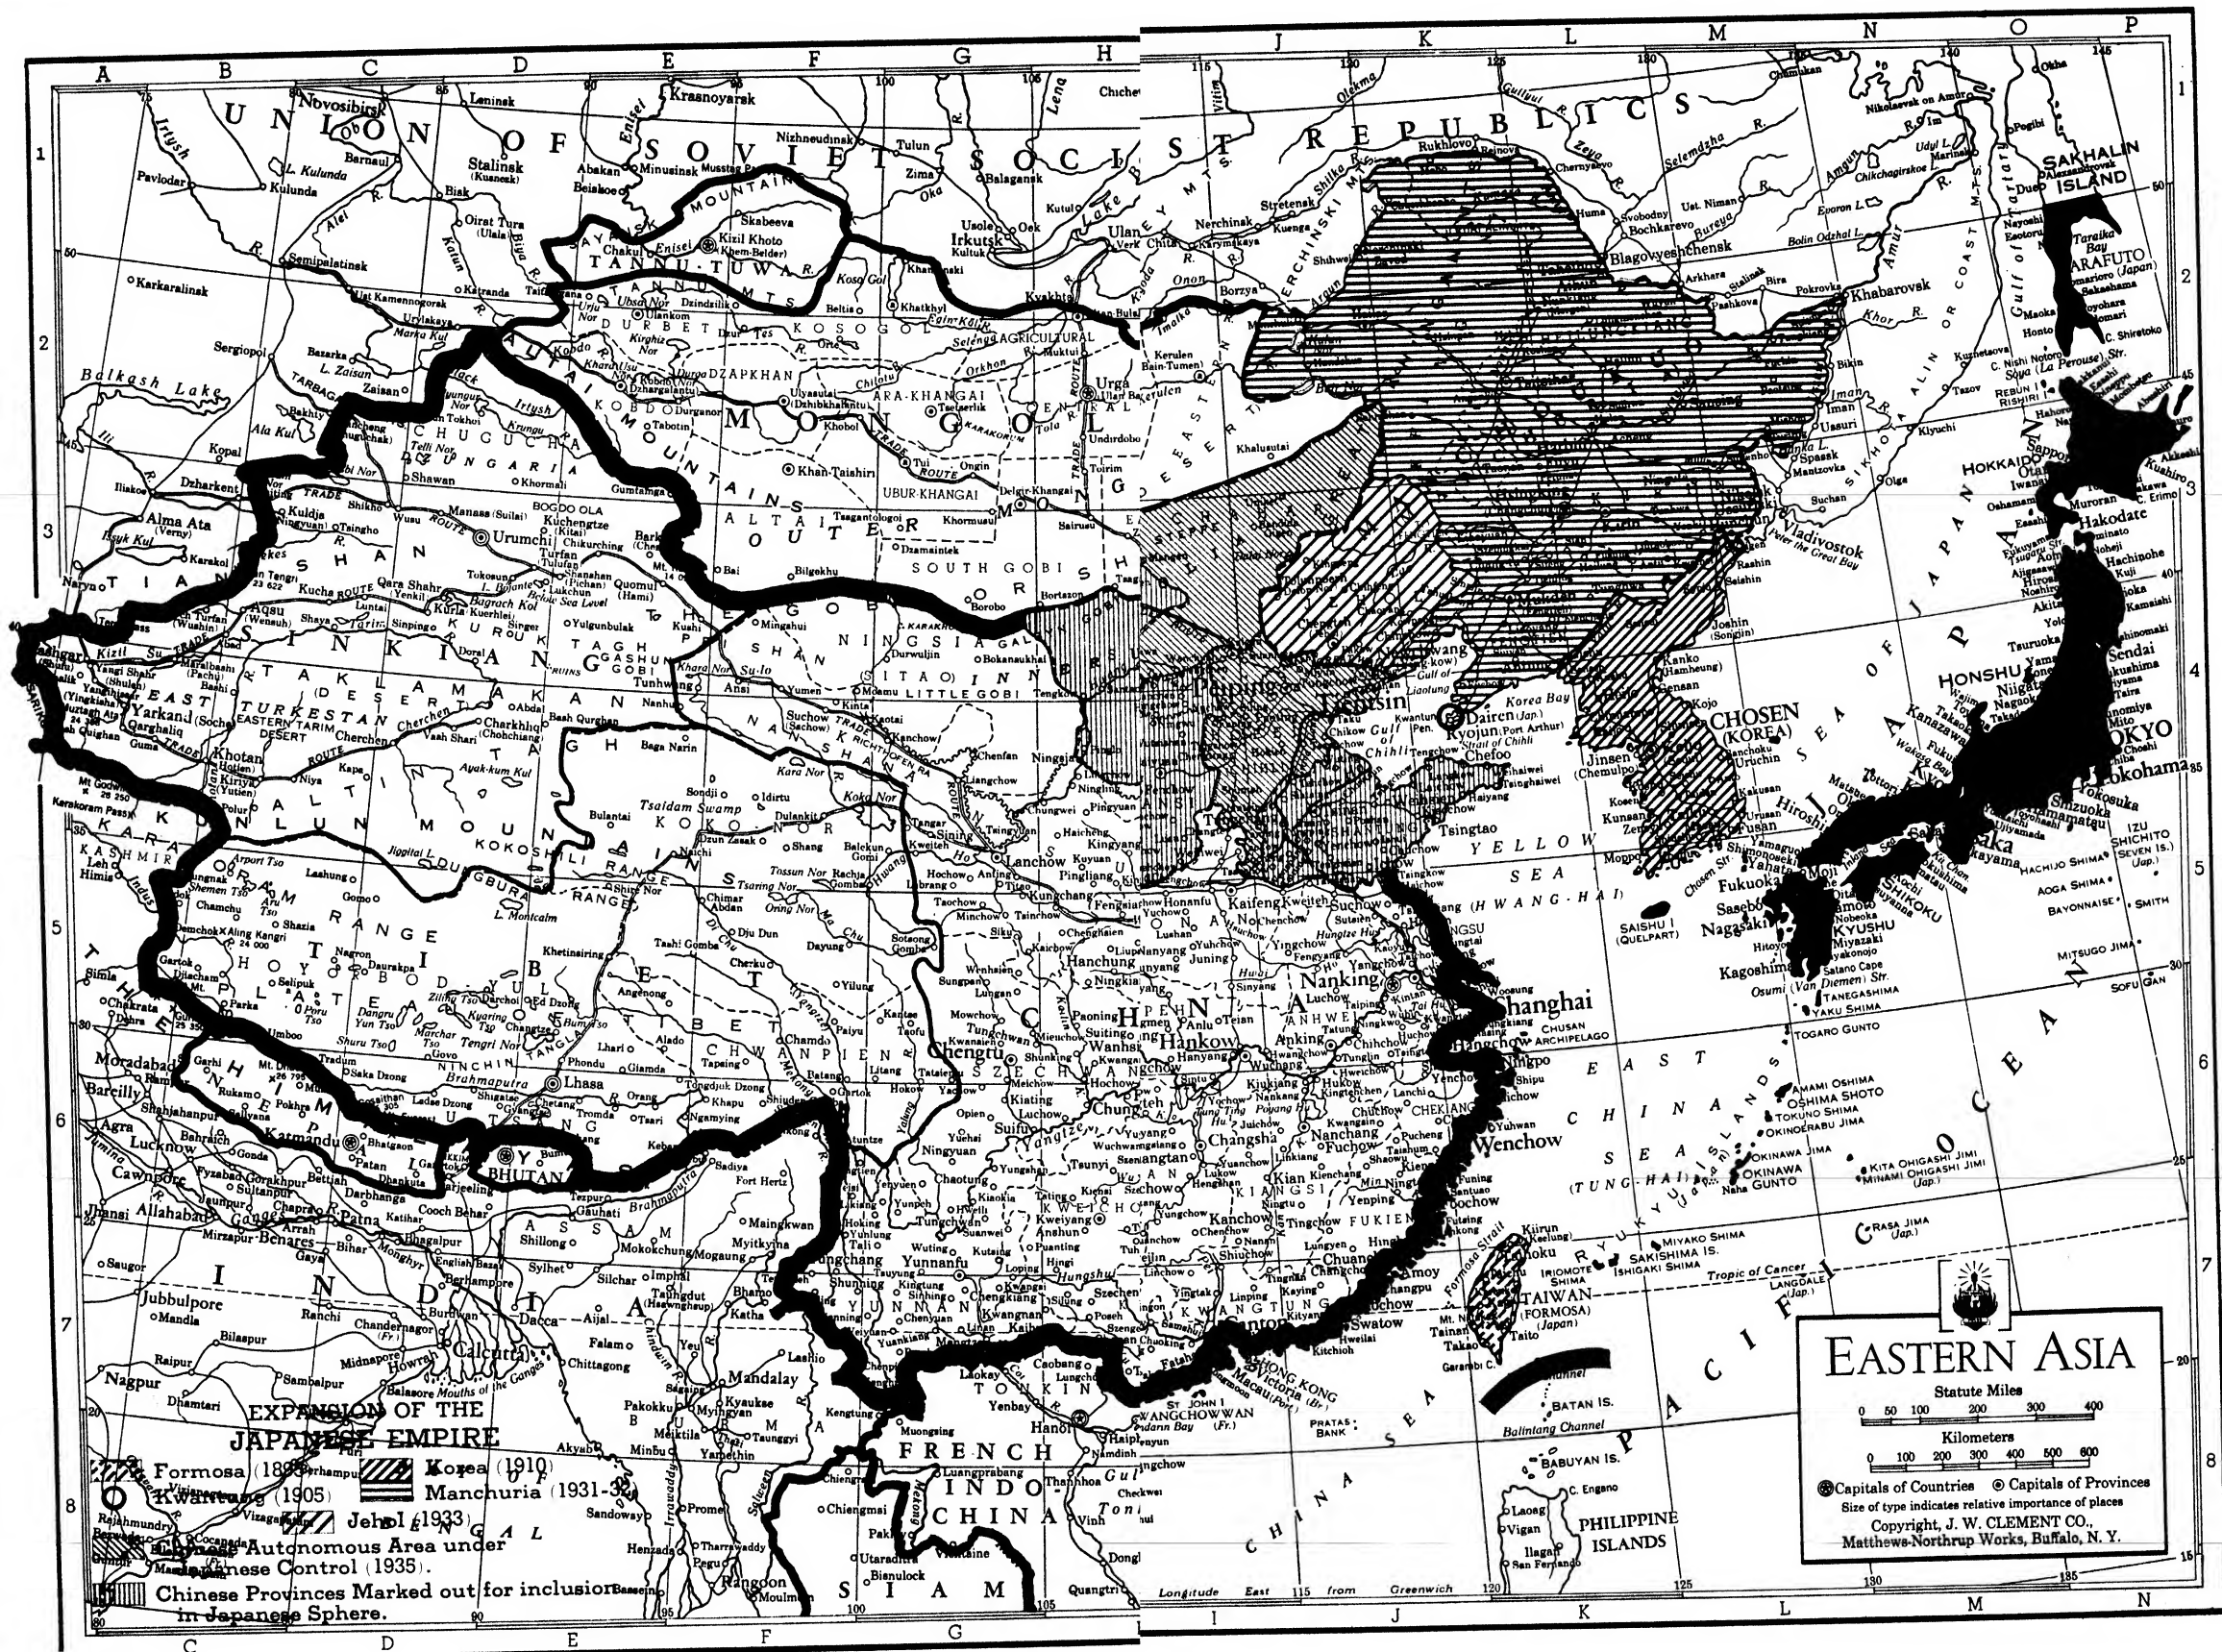

annually, provided the Philippine tariff on piece goods was not raised. On December 23, the American State Department announced another agreement under which Japan promised to restrict to "moderate levels" her exports of cotton textiles to the United States. The Japanese hoped, by not pushing their competition to the extreme, to check the movement for higher tariffs against Japanese goods entering the United States. At the same time Japanese officials were making strenuous efforts to free their textile industry of dependence upon American cotton by encouraging the growing of cotton in South China, Brazil, and other territories. See *NETHERLAND INDIA under History*.

Internal Affairs. It became increasingly obvious during 1935 that the struggle behind the scenes between the liberal and reactionary forces in Japan was approaching a climax. Since the military advocates of expansion by the sword took the bit in their teeth in 1931 and launched the attack upon Manchuria in defiance of the civil government, the moderate statesmen of Japan had been gradually reasserting their authority over the extreme militarists. With the support of Prince Saionji, the last of the Elder Statesmen, and indirectly of the Emperor, the moderate party succeeded in seating the liberal Viscount Saito as Premier in 1932 and in naming Admiral Okada, a person of similar moderate views, to succeed Saito when the latter's cabinet fell in 1934.

In the Saito Cabinet the extremist General Araki, Minister of War, generally had his way. He was spokesman of the military party that carried through the rape of Manchuria and Jehol, withdrawal from the League, the denunciation of the Washington and London naval treaties, and the Japanese penetration of 1935 into North China and Mongolia. While the moderates were not opposed to Japan's military expansion, they feared that the reckless rate at which the extremists were proceeding jeopardized the gains already made and placed an undue strain upon Japan's economic and financial structure. They also wished to proceed without unduly provoking the stronger Western powers. The extremists, on the other hand, were determined to proceed immediately with the establishment of complete control over China and to launch an attack upon the Soviet Union before the Russians completed their new bases for heavy industry in central and eastern Siberia.

The extremist programme called for an expansion of military and naval armaments at a rate which the capitalist system in Japan was patently unable to sustain. Accordingly they favored the establishment of "a new economic system which can provide the expenditures necessary for defense without threatening the national life." A series of pamphlets issued in 1934 and 1935 by the publicity bureau of the army bluntly stated that the extreme militarists aimed at a Fascist economic and political system. The series of assassinations of moderate and liberal cabinet officers and financiers by military and naval extremists during 1932-35 indicated the grave nature of the struggle.

Despite all efforts of the army extremists the inner group of Imperial advisers continued to be dominated by the moderates. Both the Saito and Okada Cabinets, however, not only included influential spokesmen for the extremists but were pressed in the direction of extremist policies by the fact that the Seiyukai party, holding a majority in the lower house of the Diet, had strong nationalist and Fascist leanings. The replacement

of General Araki by General Hayashi as Minister of War in January, 1934, gave the moderates another key post in the cabinet. But Hayashi's attempts to curb the extremist army officers were in large part foiled by the opposition of General Mazaki, Director General of Military Education. In July, 1935, the War Minister ordered wholesale changes in army personnel at the annual August promotion period in order to give moderate officers the key posts. Dismissing Mazaki, who refused to approve these changes, General Hayashi transferred many extremist officers to unimportant posts and elevated the moderates.

The bitterness aroused by these events were reflected in the assassination on August 12 of Lieut.-General Nagata, administrative director of personnel changes, by an extremist lieutenant-colonel who had been ordered to Formosa. This was the first instance of a political murder in which both assassin and victim were army officers in active service, and consequently aroused grave apprehension in official circles. A series of army conferences were held, at which abstention from politics was urged upon all officers, and on September 4 General Hayashi resigned to placate the extremists. General Kawashima succeeded him. Meanwhile the extremists had won another victory by the appointment of Yosuke Matsuoka as president of the South Manchuria Railway. Leader of a Fascist anti-party movement, he was also an advocate of active expansion on the mainland and of a strung policy against the Soviet Union.

The moderate-extremist struggle continued unabated, however. In China the extremist clique of the army and the Japanese Foreign Office were frequently found working at cross purposes, the one striving to gain by force what the other sought by diplomacy and peaceful negotiation. The appointment of Viscount Saito as Keeper of the Privy Seal on December 27 represented a severe setback for the extremists inasmuch as the holder of this office wields strong influence over the Emperor. The Japanese press and the Opposition Minseito party likewise showed more open resistance to extremist ideas. The issue of fascism versus Japan's modified form of representative government was thus bound to come before the voters when the quadrennial elections to the Diet were held early in 1936.

The deep ramifications of this issue was indicated by the purging of Japanese universities of liberal professors and books which challenged the extremist doctrine of a totalitarian state. A statement by Dr. Tatsukichi Minobe, eminent Japanese authority on constitutional law, that the Emperor was "the highest organ of the State" aroused such a furor that he was forced to resign from the House of Peers. The extremists declared this statement an insult to the Emperor, inasmuch as it implied that sovereignty rested with the people.

See AUSTRALIA, CANADA, CHINA, GREAT BRITAIN, MONGOLIA, PHILIPPINES, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*.

JAPANESE PACIFIC ISLANDS. By the treaty of Versailles Japan was given the mandatory right over the former German South Sea Islands north of the equator. They include (1) **MARIANA** (or **LADRON**) group of 14 islands, the main ones being Saipan, Tinian, Rota; (2) **CAROLINE** group of 549 islands, the main being Yap, Palau, Angaur, Spring, Summer, Wednesday, Ponape, Kusaie; (3) **MARSHALL** group of 60 islands, the most important being Jaluit. Total area, 960 sq. miles; to-

tal population (Sept. 1, 1934), 85,605 compared with 69,626 (1930 census).

Production. Sugar, tapioca, bananas, coffee, yams, taro, copra, alcohol, and phosphate were the main products. In 1933, imports were valued at ¥8,989,740; exports, ¥18,739,675. The exports of refined phosphate during 1933-34 totaled 66,442 tons valued at ¥1,308,840 (yen averaged \$0.2972 for 1934, and \$0.1907 for 1933).

Government. Budget estimates were balanced at ¥5,635,675 for 1934-35, and at ¥5,977,696 for 1935-36. A governor, with headquarters at Koror in the Caroline group, administered the islands under the Japanese Minister of Overseas Affairs. Governor, Kisao Hayashi. See JAPAN under *HISTORY*. Nanyo is the Japanese name of the islands.

JELlicOE, jĕl'ī-kō, JOHN RUSHWORTH JELlicOE, 1st EARL. A British naval officer, died in London, Nov. 20, 1935. Born in Southampton, Dec. 5, 1859, he was educated at Rottingdean and in 1872 entered the British Navy. Commissioned as a sub-lieutenant in 1880, two years later he saw service in the Egyptian War, and received the Khedive's bronze star. In 1883 he studied gunnery at the Royal Naval College, becoming an expert in this branch of the service, and from 1886 to 1888 he saw service as a gunnery lieutenant on the *Monarch*. In the latter year he was returned to shore duty and served on the staff of the gunnery school until 1890. On June 22, 1893, he commanded the *Victoria*, which was sunk during manœuvres off Tripoli, Syria, narrowly escaping death by drowning. Shortly after he was appointed to the *Ramillies*, and later did shore duty again. Appointed captain in 1897, the following year he was sent to China as commander of the *Centurion*, and during the attempted relief of the Peking Legations, commanded a Naval Brigade and served as chief of staff to Vice Admiral Sir E. Seymour. He was severely wounded during the operations, and in 1900 was made a Commander of the Bath.

In 1901 he was again returned to shore duty and served as naval assistant to the Controller of the Navy, but within two years was made commander of the cruiser *Drake*. From 1905 to 1907 he was Director of Naval Ordnance, and while holding that office furthered the advance of long range firing, and assisted in the development of naval gunnery on lines which more closely approximated to real war conditions. The year 1907-08 found him as a Rear Admiral of the Atlantic Fleet, commanding the *Albemarle*. At the end of the year he was appointed a Lord Commissioner of the Admiralty and Controller of the Navy. He held this post until 1910 when he was made acting Vice Admiral in command of the Atlantic Fleet, and the year after, Commander of the 2d Division of the Home Fleet. While serving in this capacity he carried on gunnery experiments which resulted in the adoption of a new system of ordnance operation—a milestone in the history of the navy.

Jellicoe was appointed Second Sea Lord of the Admiralty in 1912 and two years later second in command to succeed Admiral Sir George Callaghan, Commander of the Grand Fleet. He was given the acting rank of Admiral, which was confirmed in 1915. He held this post until 1916, when he was transferred to the Admiralty as First Sea Lord for the purpose of coping with the German submarine menace.

As Commander of the British Grand Fleet, Admiral Jellicoe conducted the Battle of Jutland, which took place on May 31, 1916, in the North

Sea—the only time during the War that the British Grand Fleet and the German High Seas Fleet met. Much adverse criticism was directed at Jellicoe's failure to follow up the advantages gained during the battle and sink the German fleet, but his belief, concurred in by high naval authorities, that to follow in the path of an enemy's battle fleet, which could advantageously use mines and torpedoes, was foolhardy and the unfortunate events of the night, whereby he was at times unfamiliar with the enemy's position, led him to pursue a course that enabled the German fleet to make its way homeward. Inasmuch as the German High Fleet, though not destroyed, was effectively silenced for the remainder of the War, the policy of Jellicoe has been held justified.

In 1917 he was appointed Chief of Naval Staff and two years later Admiral of the Fleet, during which time he visited the Dominions and advised the colonial authorities on naval matters. In 1920 he was appointed Governor-General and Commander-in-Chief of the Dominion of New Zealand, and at the end of his term in 1924 was placed on the retired list. Always a big navy man, he attended the naval parley at Geneva in 1927 and fought the terms of the limitations of arms treaty.

He was created Viscount Jellicoe of Scapa (1918) and, in 1919, received the thanks of Parliament and a grant of £50,000. In 1925 he received the additional title of Viscount Brocas of Southampton, and was created an Earl for his services in New Zealand. Many honors were conferred upon him, including Knight Commander of the Royal Victorian Order (1907), Knight Grand Cross of the Bath (1915), Knight Grand Cross of the Royal Victorian Order (1916), Order of Merit (1916). He succeeded Earl Haig as head of the British Legion in 1928.

Lord Jellicoe inspired loyalty in his subordinates and was a man of singleness of purpose and great personal courage, albeit cautious in his conduct of naval warfare. He published *The Grand Fleet, 1914-16: Its Creation, Development, and Work* (1919), a defense of his conduct of the Battle of Jutland; *The Crisis of the Naval War* (1920); *The Submarine Peril; the Admiralty Policy in 1917* (1934).

JEWISH AUTONOMOUS TERRITORY. See BIRO-BIDJAN.

JEWS. The Crisis in World Jewry. The position of the Jews in the western world showed no improvement during 1935 and in some respects became markedly worse, especially in the area of most intense persecution, Germany. This raises the question of the meaning of the contemporary crisis in Jewish affairs, a matter which has engaged the thought of some of the finest Jewish minds. An excellent statement of the matter in economic terms which not only takes into account the general economic condition of western capitalism but also the economic relations within the Jewish community, was made by Mr. Jakob Lestshinsky in the *Jewish Frontier* for October, 1935.

After calling attention to the fact that "there is a crisis in world Jewry because all Jews in virtually all countries are undergoing the ravages of a common set of conditions from which they vainly seek relief," Mr. Lestshinsky points out that:

Though in some places political rather than economic factors aggravate the Jewish condition, everywhere Jews are experiencing the same stages of declassing, displacement, and pauperization. . . . Notwithstanding the wide diversification of Jewish life under differing political and economic conditions, both the intensity and the peculiarity of the Jewish crisis sprang from identical sources: detachment from the soil, extra-territoriality, and the state of

being a minority in every country. The "unnatural" social structure of Jewry (a result of two thousand years of exile) is responsible for the disproportionate number of Jews to be found in those social classes which become the first and greatest victims in our transition period.

Contending that the Jew has been able to achieve a rational relation to the societies of which he finds himself a member only during those periods when the general economy is expanding, and wide opportunities to enter new occupations and professions are offered, Mr. Lestshinsky insists that in the present era, when the opposite tendency is to be observed on all sides—that is, the general economy is contracting and efforts are constantly being made by avowed and pseudo-fascist groups to stabilize the existing society by forcing an equilibrium—the Jews are the first and foremost victims of any "eliminations" that must be made. As Mr. Lestshinsky concludes:

. . . whereas the social differentiation during the first period of capitalism created conditions favorable for economic absorption of the several classes of Jewry, the Fascist national integration in the period of capitalistic decay again displaces the Jews from the state framework of the majority nation, isolates them economically and politically from the related social classes, and excludes them from the culture of the majority. . . . As the misery of the Jewish masses grows in scope and intensity and assumes the aspects of catastrophe for whole groups and classes, it becomes more evident that the basic economic foundations of Jewry have been shattered.

It is but natural that the consequences of this general drift should appear unevenly in the western world, their intensity being directly related to the state of health or decay of the surrounding economy. Nevertheless, since the Jews are, as a group though not uniformly as individuals, exceedingly responsive to the situation of their fellows in foreign lands, the carrying of the process to its ultimate culmination in one land, Germany, has its repercussions in all lands. In those nations where conditions are best, this may take the form of an intensification of what can only be described as Jewish "national" feeling—a return to the Jewish culture and to "Jewishness" generally on the part of individuals previously wholly or partly assimilated into the surrounding population on the one hand, and an emotional concentration on the construction of a Jewish state in Palestine on the other. The third line has, as yet, enlisted the sympathies of but a limited proportion of the Jewish people, the joining of movements whose ultimate aspiration it is to reconstruct the world along new lines and set in train the forces of expansion once more. This is to be expected among a people which is, as Mr. Lestshinsky also emphasized in his argument, to an extraordinary degree "middle class."

Continued Anti-Semitism. The economic basis of the contemporary Jewish crisis is thus clearly underlined but that does not explain away the fact of anti-Semitism. This form of social neurosis would seem as impervious to argumentation and dissolving analysis as other social neuroses of similar scope and intensity. The criminal libel case at Berne, Switzerland, arising out of the circulation by Nazi groups in Switzerland of the "Protocols of Zion," to which reference was made on page 342 of THE INTERNATIONAL YEAR BOOK for 1934, came to a close on May 14, 1935, when President Justice Mayers found the documents to be "obvious forgeries" and "libellous," and the libel of a criminal nature because it was "intended to incite popular passion against a portion of the population and hence calculated to lead to agitation and violence." The action was brought by the Union of Jewish Communities in Switzerland and the Jewish Community of Berne against the Swiss National Socialist Party.

In the course of the trial, Col. Ulrich Fleischer, as a Nazi expert, testified that the Stresa agreement among Great Britain, France, and Italy, the Kellogg-Briand Pact, and President Wilson's fourteen points at Versailles were "the work of Jews" and evidence of Jewish determination to dominate the world. In tracing the history of the forgeries from 1905 when they were concocted by Sergius Nilus by plagiarizing a French satirical attack upon the government of Napoleon III, printed in Belgium in 1864, the prosecution pointed out that they had been freely used by the White Russians, especially General Denikine, to explain the fall of Czarism and by Adolf Hitler in *Mein Kampf*. It was pointed out also that they had been printed in the United States as late as 1920 (at Boston), and had been translated into Greek, Lithuanian, Hungarian, Spanish, Egyptian, and Arabic. In present-day Germany they are freely used as authentic material by Alfred Rosenberg and Julius Streicher. Nothing better illustrates the world-wide nature of anti-Semitism, nor the quality of the arguments used to advance it.

Palestine. Jewish affairs in Palestine continued to prosper during 1935, the three outstanding "issues" of the year being (1) the general protest against the limitations upon the number of immigrants that could be legally admitted, as determined under the mandate by the British authorities, the contention being that the condition of the land was now such that demand for population exceeded the supply; (2) the related problem of securing adequate capital to continue the economic developments underway or planned and considered necessary and feasible; and (3) the political issue of whether or not the Jews would vote for members of a legislative council.

High Commissioner Sir Arthur Grenfell Wauchope took over the government of the mandate five years ago with the purpose of bringing about an understanding between the Jews and the Arabs, and establishing the legislative council. In launching the latter, the High Commissioner said:

I wish to recall to your minds that, ever since the statement I made at Geneva three years ago, I have given much thought and have sought the opinions of others before deciding the lines on which the legislative council should be formed.

He summoned the Arab and Jewish leaders before him on separate days and laid the proposed scheme before them. Under it the council will consist of 28 members, made up of 14 Arabs, 7 Jews, and 7 British, a division based upon the population ratio of the various groups in the country (there are currently 750,000 Arabs and 350,000 Jews in Palestine). The Arabs asked for time to consider the matter and were expected to give their answer in January, 1936, while the Jews flatly refused to accept.

In subsequent press discussion, the Arabs alleged that the council lacked sufficient power to be of very great importance, since it is not to have the power to enact laws and hence is advisory only, and because the introduction of a budget is the exclusive privilege of the government. The Arabs also claimed that they were proportionately underrepresented. The Jews, on the other hand, raised both general and specific issues. Of the former, the most important was the claim that the proposed council will make it impossible any longer for the Jews of the world to think of Palestine as the place in which they are to find a national home under their exclusive rule; and deriving from this is the contention, advanced by Dr. Chaim Weizmann, leader of the Zionists, that the council will

undoubtedly jeopardize Jewish aims by interfering with the sale of lands, and immigration, both important to continued development. Specifically, the Jews advanced the arguments that the proposed council was contrary to the League of Nations mandate, and that the proviso that no revision be made in the composition of the council for five years is definitely hostile to the Jewish group which is now expanding rapidly and would do so even more if immigration restrictions were removed. The Jews therefore refused to participate in the elections.

Late in December, 1935, however, the Palestine government proclaimed the Council and announced that the High Commissioner would have wide veto powers over its acts. The proclamation was accompanied by the statement that if any section of the Palestinian population refuses to participate in the election of members, the High Commissioner is empowered to name British officials or other representatives to sit on the council. This latter announcement was interpreted as a direct reply to the Jewish leaders.

In spite of this political impasse and the dissatisfaction over the restrictions on immigration, the Jewish community in Palestine made considerable progress during the past year. It is announced that 52,000 Jews entered Palestine during the first ten months of 1935, and that the total number of German refugees, received during the last two years, reached 25,000 of whom 7000 have gone on the land. A special phase of this effort to relieve the pressure on the German Jews was the bringing of children to Palestine under the direction of Miss Henrietta Szold of the Haddassah. It is estimated that approximately 25 per cent of the total Jewish population earns its living by agriculture. Those on the land are organized into 358 communities scattered through Palestine proper, Emek, Judea, Samaria, Lower Galilee, Upper Galilee, and the Jordan Valley. Half of them are organized on the voluntary cooperative principle, whether in Kvutzah, in which all property is held in common, or Moshav, in which there is private property in all things except the land.

All members of the cooperatives must be members of the Histadrut (General Federation of Labor). The Histadrut had a membership of 72,000, according to a census taken late in 1935, or one-fourth of the Jewish population of Palestine, if wives and children are added in. In addition to its work in the cooperatives, the Histadrut engages in general labor organizing, and during the last year organized the upholsterers, broommakers, food workers, photographers, musicians, and maritime workers. It pressed the government to enact a minimum wage act, a bill compelling employers to give notice before discharging a worker, and a bill obligating the employer to provide the worker with a certificate stating whether the worker left voluntarily or was discharged.

It was promised that these laws would be enacted in the near future. Several strikes were held during the year, including those among clerks in stores, hotel and restaurant workers, municipal workers, women cardboard workers, workers employed by the Iraq Petroleum Company, and by the Haifa quarry. This organization seeks to strike up an alliance with the Arab workers through the Brit Poalei Eretz Is'rael (Alliance of Arab and Jewish Workers), and made progress during 1935 because of the importation of Arab workers from surrounding areas to keep down wages. The number of workers in manufacturing in Palestine in-

creased to 20,000 in 1935. In addition to its labor organizational activities, the Histadrut engages in social insurance, banking, consumer coöperation, housing, workers education, and publishing, as well as production coöperation as previously mentioned.

The Zionist Congress. A note of optimism was struck at the 19th Zionist Congress, held at Geneva in the fall of 1935. This Congress brought about the union of the various Zionist factions by agreeing to a coalition World Zionist Executive. Its composition was as follows: Dr. Chaim Weizmann, World Zionist President, David Ben Gurion (labor), Moshe Shertok (labor), Prof. Selig Brodetsky (General Zionist A), Isaac Gruenbaum (General Zionist A), Dr. Rischel Rottenstreich (General Zionist B), and Rabbi J. L. Fishman (Mizrachi). Dr. Arthur Ruppin was named director of Economic Research, Dr. Nahum Goldmann, representative at the League of Nations, and Louis Lipsky, representative of the Executive in the United States.

Among the more significant resolutions adopted at this Conference were those vigorously condemning "the systematic deprivation of German Jews of their rights"; reaffirming "the determination of the Jewish people to live and cooperate in harmony with the Arab population throughout the East"; refusing to coöperate in the establishment of the legislative council in Palestine (see above); regretting that "the facilities for the admission of Jewish immigrants (into Palestine) lag considerably behind the country's actual requirements"; calling for the coördination of Hakshara work (preparatory agricultural training for immigrants); appealing to all Jewish employers to adhere to the principle of employing Jewish labor in Palestine; deploring the rise of land speculation in Palestine; urging the centralization of Palestine schools with autonomy for those of the principal educational groups; affirming that all Zionists must, to remain in the organization, accept the principles laid down in the resolutions; and declaring that "in view of the catastrophic economic position of the Jewish masses in Eastern Europe," a world Jewish Congress, the first in Jewish history, should be arranged in 1936.

Germany. On Sept. 15, 1935, it was announced that the Reichstag meeting at Nuremberg had passed a series of laws which would indicate the nature of the measures to be taken finally to "liquidate" the Jews in Germany. Although the year ended without a formal and official promulgation of these laws, speculation as to their content was constant, and it was openly alleged that the delay was attributable to the reluctance of the Nazi leaders (a) to indicate that Dr. Hjalmar Schacht, Minister of Economics, had suffered final defeat in his campaign to make the point that continued persecution of the Jews was intensifying economic difficulties; and (b) to reveal the extremes to which the Third Reich was prepared to go when anti-Olympic participation agitation was running high in foreign countries.

Nevertheless, it was generally understood that the laws embodied the following points: (1) Jews are no longer to be considered citizens of the Third Reich; (2) Jews are no longer to be permitted to hold public office, including judgeships, notaryships, positions as public auctioneers or even memberships in civil or criminal juries; (3) membership in the state will be granted to all persons except "open enemies of the state, criminals and Jews"; (4) no male can achieve citizenship with-

out labor camp and army service, both of which are denied to Jews. However, whether or not these points adequately cover the Nuremberg laws, the fact that Jews are suffering increasing economic disabilities in Germany is beyond question.

Reports indicate that while the Reich authorities disapprove of the continued persecution of the Jews before the content of the Nuremberg laws is made public, it goes on with steadily increasing virulence and is especially destructive in provincial towns and cities with Jewish groups so small that they cannot maintain a self-sufficient life. This circumstance is forcing many Jews into starvation as they cannot purchase the necessities of life at local stores. Moreover and increasingly the Jews are being forced out of business without being given an opportunity to sell their properties, thus reducing them to beggary. The leading German anti-Semite, Julius Streicher, has even advocated that his followers boycott all newspapers offering Jewish properties for sale.

While this campaign is chiefly applicable to petty shopkeepers, it is also known to have extended to the expropriation of the Jewish owners of an arms plant employing 3000 persons and specializing in peace time in the production of bicycles and baby carriages. This property was taken over by the State of Thuringia from the Simson Company and to commemorate the event 1000 baby carriages were distributed to local families having four or more children. Jews are also being driven out of business by refusing to renew licenses as they expire, a measure recently applied to traveling salesmen, and by the application of stringent coördination measures to special categories of business, such as drugs, art objects, and moving pictures. Since the limitations on Jews in the professions have become so extensive, the quotas established for university attendance have become a minor issue, as there is no longer much incentive to attend.

However, the increasingly common policy of segregating Jewish and "Aryan" students in the lower schools is causing great hardships and is increasing the anti-Semitism among children and adolescents. At the end of the year a severe unemployment crisis developed in the field of domestic and personal service as the law forbidding any Jewish household to employ an "Aryan" domestic under 45 years of age went into effect and thousands were discharged. While all received one month's pay on the conclusion of service, they do not come under the unemployment insurance benefits and their condition will shortly be serious. At the other end of the economic scale, it was observed that the pressure on Jewish businesses to quit operations was having a depressing effect on the stock exchange and that the "flight of capital" from Germany was continuing unabated in spite of official measures to stop it.

The Olympics Boycott. In the world at large, the efforts to ease the situation of the German Jews assumed two forms, (a) a wide-spread protest against participation in the Olympic Games to be held at Berlin in 1936; and (b) assisting the victims of the Nazi measures to emigrate. The former agitation took the form of a highly organized campaign in the United States, both within and without the official Olympics organization. In the latter, the forces working for a boycott of the games met with defeat, in spite of the fact that the protest was in effect a united front of Jews, Catholics, Protestants, and non-sectarian groups, as well as political liberals, Socialists, and Communists. Some effort was

made to stem the rising tide of opposition to coöperation with the Nazi's by alleging that *all* opposition was Communist-inspired, a statement that led to jeers in conservative church journals. But while the official Olympics committee decided in favor of participation, and laid its plans to carry out its decision, the campaign continued as the year came to a close in an effort to influence individual contestants.

Assisted Emigration. With regard to assisted emigration, the work of two organizations may be reviewed. The American Joint Distribution Committee announced that between the spring of 1933 and September, 1935, it spent \$902,000 on its relief programme within Germany and \$947,000 in the refugee countries which included Holland, Belgium, France, Poland, and Czechoslovakia. It estimated that 65,000 Jews have left Germany since the Hitler régime came to power. In addition to relief work, this committee gave educational training to 20,000 Jewish children in Germany and vocational training to 13,000 Jewish youths. Employment bureaus established found work for 16,000 applicants.

Early in 1935 the League of Nations High Commission for Refugees from Germany announced that it had a discouraging situation on its hands. The position of the refugees was made difficult not only by their appalling destitution but by the fact that the police were not well-advised as to the status of these persons, and, because of unemployment, it was difficult to obtain work permits for them. The only country excepted from these observations was the United States. There seems little prospect of absorbing the refugees permanently in European countries, but the High Commissioner, James G. McDonald, was hopeful of finding outlets in Latin America during 1935. An especially difficult problem was that posed by old people unable to work even if work can be found. At the time of this report (February, 1935) it was estimated that there were 80,000 refugees under care, including 3000 from Saarland, of whom about 28,000 were to be settled overseas, 6000 absorbed in Western Europe, 18,000 repatriated to Central and Eastern European countries, and 25,000 for whom no provision was in sight.

The McDonald Report. That the situation did not clear up was apparent when Commissioner McDonald resigned in December, 1935. His resignation took the form of a long letter to the Secretary General of the League of Nations and it was in effect a devastating indictment of the German Government. Some selections from this document follow.

Apart from all questions of principle and of religious persecution, one portentous fact confronts the community of states. More than half a million persons, against whom no charge can be made except that they are not what the National Socialists choose to regard as "Nordic," are being crushed. They cannot escape oppression by any act of their own free-will, for what has been called "the membership of non-Aryan race" cannot be changed or kept in abeyance. . . .

Progress has been made during the last three years in settling the refugees from Germany. Of the more than 80,000 who have already left the Reich, approximately three-fourths have now found new homes—more than half of these in Palestine—or have been repatriated to their countries of origin. This accomplishment has been primarily the work of refugees themselves and of the philanthropic organizations—Jewish and Christian—whose devoted labors have been ceaselessly carried on in many parts of the world. Probably not more than 15,000 refugees now remain unplaced. . . .

The care and the settlement of these remaining thousands of refugees could and would be borne by the already heavily burdened private organizations were they not fearful that the number of refugees may be increased many times by new flights from Germany.

The facts which arouse these apprehensions are indisputable. They are evidenced clearly in the German laws, decrees, judicial decisions and party pronouncements, and practices during the last two years. The culmination of these attacks on the Jews, the Christian "non-Aryans," and the political and religious dissenters was the new legislation announced at the Party Congress at Nuremberg last September. The core of that enactment was the law limiting citizenship to those who are "of German or cognate blood, and who also conform to the National Socialist conception of loyalty to the state. As the direct result in Germany not only the Jews, who now number about 435,000, but also tens of thousands of Christian "non-Aryans," who are classified as Jews, lost their citizenship, were disfranchised, and made ineligible to hold public office. Indirectly, through this new law, a constitutional basis was laid for unrestricted discriminations against all those whom the party may wish to penalize.

The denationalization by the German Government of thousands of German citizens has added to the hardships both of those remaining in Germany and of the refugees, and is an increasing burden on states which have admitted the refugees while in possession of German nationality.

Relentlessly the Jews and "non-Aryans" are excluded from all public offices, from the exercise of the liberal professions, and from any part in the cultural and intellectual life of Germany. Ostracized from social relations with "Aryans," they are subjected to every kind of humiliation. Neither sex nor age exempts them from discrimination. Even the Jewish and "non-Aryan" children do not escape cruel forms of segregation and persecution. In party publications, directly sponsored by the government, "Aryan" children are stirred to hate the Jews and the Christian "non-Aryans," to spy upon them and to attack them, and to incite their own parents to extirpate the Jews altogether.

It is being made increasingly difficult for Jews and "non-Aryans" in Germany to sustain life. Condemned to segregation within the four corners of the legal and social Ghetto, which has now closed upon them, they are increasingly prevented from earning their living. Indeed, more than half of the Jews remaining in Germany have already been deprived of their livelihood. In many parts of the country there is a systematic attempt at starvation of the Jewish population. In no field of economic activity is there any security whatsoever. For some time it has been impossible for Jewish business men and shopkeepers to carry on their trades in small towns. The campaign against any dealings with Jews is now systematically prosecuted in the larger towns. Despite the restrictions upon migration from the provinces into the few largest cities where Jewish economic activity is not yet completely excluded, the Jews are fleeing to those cities because there only can they hope to escape, at least for a time, from the more brutal forms of persecution.

This influx has exhausted already the resources of the Jewish philanthropic and educational institutions in Germany. The victims of the terrorism are being driven to the point where, in utter anguish and despair, they may burst the frontiers in fresh waves of refugees.

Again, as so often during their long heroic and tragic history, the Jewish people are used as the scapegoat for political and partisan purposes. The National Socialists level against them charges of the most outrageous and untenable kind. They ignore all of the facts of the continuous loyalty of the Jews in Germany; for example, during the empire when Jews helped to unify Germany and to make it strong; during the war, when a percentage of Jewish youth as high as that of any other religious community in the Reich gave their lives for the Fatherland, and Jewish scientists and men of affairs helped so notably to enable Germany to prolong the struggle; and under the republic, when Jewish leaders aided in saving Germany from some of the worst effects of defeat.

Instead, it has been found useful to attribute to the Jews the responsibility for the misery and dejection which the German people suffered during the last years of the war and the decade that followed. Though less than a one-hundredth part of the total population, the Jews are held responsible for all the adversity which the German people had to undergo. As in the Middle Ages, when they were massacred and expelled from German states as the cause of the Black Death, so today they are eliminated from the economic and cultural life of Germany and degraded on the ground that they were the cause of the German humiliation. So far does this hatred extend that even the Jewish war veterans, who fought and were wounded in the front-line trenches, have been forced from their positions in the public services, and the names of the Jewish war dead may no longer be engraved on war memorials.

The developments since 1933, and in particular those following the Nuremberg legislation, call for fresh collective action in regard to the problem created by persecution in Germany. The moral authority of the League of Nations and of states members of the League must be directed toward a determined appeal to the German Government in the name of humanity and of the principles of the public law of Europe. They must ask for a modification of policies which constitute a source of unrest and perplexity

in the world, a challenge to the conscience of mankind, and a menace to the legitimate interests of the states affected by the immigration of German refugees.

Pity and reason alike must inspire the hope that intercession will meet with response. Without such response, the problems caused by the persecution of the Jews and the "non-Aryans" will not be solved by philanthropic action, but will continue to constitute a danger to international peace and a source of injury to the legitimate interests of other states.

This document was not published in Germany, the government maintained an official ignorance of its contents, and the semi-official *Nazi Party Correspondence* summed up the probable attitude that would be taken in the declaration, "Germany is a sovereign state like other powers and will not endure interference with her internal problems."

Other Countries. The U.S.S.R. has set aside 18,000,000 acres in Biro-Bidjan, located in south-eastern Siberia on the Manchurian border as a refuge for Jews and has promised to erect it into a "Jewish autonomous region" when the Jewish population reaches 25,000. This region is described as being comparable in climate to southern Canada, having a rainy season of six or eight weeks in mid-summer, and plenty of snow. At present the population of the region is 50,000 of whom 12,000 are Jews and the rest, in descending order of importance, Russians, Koreans, Ukrainians, and Chinese. In December the American Committee for Settlement of Jews in Biro-Bidjan announced that it was initiating a campaign to raise \$500,000 to aid in settling German, Polish, and other non-Russian Jews in the area.

The intensity of the German anti-Semitic campaign has tended to deflect attention from conditions in Poland, Hungary, Rumania, Austria, and other countries where the attitude, while not official with the government, is persistent and destructive. Anti-Semitic activities in Poland reached the stage of riots closely resembling pogroms at several times during the year under the leadership of a group known as Endeks, the members of which are associated with the National Democratic Party of Poland. The usual methods of attack used are the picketing of Jewish shops and assault.

From the spring of 1933 to September, 1935, the American Jewish Joint Distribution Committee expended \$805,000 on relief in Poland and other Eastern European countries. The January, 1936, issue of the magazine *Fortune* carried the results of a nation-wide poll on various questions one of which read, "Do you believe that in the long run Germany will be better or worse off if it drives out the Jews?" The summary of the findings on this point was as follows:

Obviously, in no part of the country is anti-Semitism at present strong enough to count politically. The smallest amount was to be found in the Southeast and the West, where there are very few Jews. On the other hand, in the Northeast, where 70 per cent of the American-Jewish population is concentrated, the percentage opposed to the Jews was only 15.1, and was actually less than that in the Midwest.

JOHNS HOPKINS UNIVERSITY, THE. A nonsectarian institution of higher education for men and women in Baltimore, Md., founded in 1876. The enrollment for the autumn of 1935 was 4291, distributed as follows: School of higher studies of the faculty of philosophy, 364; school of higher studies in education, 35; school of engineering, 24 (graduate), 251 (undergraduate); college of arts and sciences, 474; school of business economics, 86; school of medicine, 283; school of hygiene and public health, 113; afternoon and evening courses, 2392. The enrollment in the 1935 summer session was 940. The faculty numbered 680. The

productive funds amounted to \$26,834,827.39, and the income from all sources for 1934-35 was \$2,454,408.62. The main library contained 472,024 volumes. President, Isaiah Bowman, Ph.D., LL.D.

JOHNSON ACT. See INTERNATIONAL BANKING.

JOHORE. See UNFEDERATED MALAY STATES.

JOUVENAL, zhōō'v-nāl', HENRI DE. A French diplomat, died Oct. 4, 1935, in Paris, where he was born, Apr. 2, 1876. In 1900 he was secretary of the committee of democratic conferences, becoming head of the cabinet of the Ministry of Justice in 1902 and director of the cabinet in the Ministry of Commerce, three years later. Subsequently he entered the journalistic field, becoming a special correspondent for *Le Matin*, and eventually the editor of that paper. From 1927 to 1932 he edited *Revue des Vivants*.

In 1921, M. de Jouvenal was elected senator for the Corrèze, and the following year named as a delegate to the League of Nations, being instrumental in electing Abyssinia (Ethiopia) to the League. He served in this capacity also in 1924 and 1925. In the second Poincaré cabinet of 1924 he was Minister of Education, and in the following year was appointed successor to General Sarraill as High Commissioner in Syria. During his incumbency, he suppressed the revolt of the Druses in a high-handed manner and refused to treat with them unless they surrendered unconditionally. He served for one year being replaced by Auguste Henri Bonsat. In the following year he addressed the War Danger Conference in London, saying in part that 1935 would be a crucial year in Europe.

M. de Jouvenal became secretary-general (1931) of the Congress on Disarmament held in Paris, and in 1932 was appointed Ambassador to Italy. As such he signed the four-power pact of Italy, Great Britain, France, and Germany at the Palazzo Venezia in Rome, July 15, 1933. This pact represented somewhat of a triumph for him as on his entry into Rome in 1932 he was received with considerable coolness. In the second Daladier cabinet, January-February, 1934, M. de Jouvenal served as Colonial Minister, and later in that year became head of the French Congress for the Defense of Peace.

He was the author of *La vie orageuse de Mirabeau*, which was translated into English; *Huit cent ans de Révolution Française*, 1789-1789; *La Paix Française*. His first wife was Mme. Colette, the novelist, but the marriage was ended by divorce.

JUNIOR COLLEGES. See UNIVERSITIES AND COLLEGES.

JUNKERS, yōōngk'ers, HUGO. A German engineer, died at Munich, February 3. Born at Rheydt, Prussia, Feb. 3, 1859, he received a gymnasium education and attended engineering schools in Berlin, Karlsruhe, and Aachen. At the age of 25 he became a government engineer, and during his spare time devoted himself to making experiments in the field of heating engineering, becoming a partner of the German engineer Oechelhaeuser in 1889. One of his inventions in this field was the Junkers-Kalorimeter, a thermometer for measuring minutely a motor's heating power during combustion, which he patented in 1892. In 1895 he started Junkers & Company at Dessau to make heating apparatus, particularly portable gas stoves. In the following year, his business not being very successful, he accepted a professorship at the Technical High School at Aachen, where he lectured on radiation and pyrotechnics for 14 years. In 1902 he founded the Research Institute for oil engines at Aachen,

and in 1908 established the Kalorifer Works there, which were removed to Dessau six years later. With his combined incomes, he again devoted himself to experimentation, specializing in oil-driven motors and heavier-than-air designs.

In 1907, Junkers patented a motor, which although not entirely successful, proved to him certain theories relating to motors operated by petroleum products. In 1911 he gave up his professorship in order to devote all his time to combining an oil-driven motor and an aeroplane, the result being the first all-metal plane to fly successfully. Subsequently, he experimented with gas motors, and in 1913 he was satisfied that he had a motor which could compete with any in the aeronautical world. He established a motor plant at Magdeburg, from which the Junkers Motor Works at Dessau grew, and at the outbreak of the World War he was able to supply the German Government with convincing blueprints and equipment. An agreement made at this time, gave the Government a share in the Junkers Aircraft Company until 1926. His first metal plane was made of sheet iron, but because of the need of light, speedy planes, their production was curtailed. In 1915 he established a Research Institute at Dessau, and two years later the Junkers-Fokker Works were organized, from 1919 being known as Junkers-Flugzeugwerk Aktien-Gesellschaft.

According to the terms of the peace treaty at the end of the War, Junkers was compelled to close his works at Dessau for one year, yet by 1924 he was able to take over the Lufthansa, one of the major German air lines, and to become foremost in commercial aviation. He was instrumental in forming one of the first regular mail and passenger air lines in the world in an agreement between Germany and several other European governments.

The output of the Works for 1928 was 1000 machines, and in April of that year the flight of Capt. Hermann Koehl, Comdt. James Fitzmaurice, and Baron Gunther von Huenfeld in the Junkers monoplane *Brennen* from Europe to America (see NEW INTERNATIONAL YEAR BOOK, 1928) assured their fame. In the 1920's these planes were standard equipment on commercial aviation routes, and when passengers increased, Junkers began to build larger planes to meet the demand. One of these was the G-38, the largest in the world, built to carry 100 passengers, a pilot, a navigator, a crew of 10 and hundreds of pounds of mail. Another was the "flying restaurant," G-31, and another the smaller F-13, the standard on all air routes until a newer model replaced it. In 1930, he designed an oil motor capable of lifting the G-38 with her 240-foot wing spread. In 1932, as a result of the general industrial depression, the Junkers firm applied for a one-year moratorium. At the end of this time, all the creditors were satisfied, and shortly afterwards, Dr. Junkers retired to private life. He published a number of aero-technical papers in German and American publications.

KANSAS. Population. On Apr. 1, 1930 (Fifteenth Census), 1,880,999; on July 1, 1934, by latest Federal estimate, 1,905,000; 1920 (Census), 1,769,257. Kansas City (1930) had 121,857 inhabitants; Wichita, 111,110; Topeka, the capital, 64,120.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Mineral Production. Despite the restrictions imposed by Federal authority, the production of petroleum in the State mounted in 1934 to a yearly total of 46,555,000 barrels, from 41,976,000 for 1933.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1935	6,589,000	59,951,000	\$53,359,000
	1934	8,669,000	79,700,000	66,946,000
Corn	1935	4,608,000	34,560,000	24,192,000
	1934	3,777,000	10,576,000	10,259,000
Hay (tame) ...	1935	1,155,000	1,816,000*	11,804,000
	1934	950,000	861,000*	14,034,000
Oats	1935	1,548,000	41,022,000	13,947,000
	1934	1,238,000	16,094,000	7,886,000
Grain sorghum .	1935	1,988,000	9,940,000	6,461,000
	1934	1,205,000	3,615,000	3,904,000
Barley	1935	313,000	4,538,000	2,405,000
	1934	265,000	1,988,000	1,272,000
Potatoes	1935	35,000	2,625,000	1,444,000
	1934	37,000	1,480,000	1,184,000

* Tons

The total for 1934 established a record, exceeding the 45,451,000 barrels of 1918. The increase resulted mainly from the bringing of 591 new wells into production. Their aggregate initial flow was stated as approximately 300,000 barrels a day. Reno County led in successful drilling, chiefly in the prolific Haury-Burton field. The production of coal in 1934, stated in the figures of the Federal Department of the Interior jointly with that of Missouri showed a rise of 2.7 per cent above the joint total for 1933, in which year 2,717,622 net tons were mined in Kansas. The quantity of Kansas salt sold or used by producers rose to 768,133 short tons (1934) from 732,947 (1933); the corresponding value, however, fell off slightly to \$2,949,930 (1934) from \$3,039,343 (1933). There were mined, in 1934, 38,261 short tons of zinc, as against 40,947 in 1933; the totals by value were \$3,290,446 (1934) and \$3,439,548 (1933).

Education. Schools in the State, according to the *Journal* of the National Education Association, still widely suffered need of money in 1935, for lack of sources of income outside the tax on property. The schools participated in a movement, among many States, to instruct pupils in matters pertaining to physical safety.

Charities and Corrections. A Board of Administration exercised central control over State institutions, charitable, correctional, and of special educational types, under the system in force in 1935.

The charitable institutions, and their approximate populations in 1935 were: State hospitals for mental disorder, at Topeka (1841), Osawatimie (1653), and Larned (1058); State Hospital for Epileptics (799), at Parsons; State Training School (feeble-minded: 1105), Winfield; State Sanatorium for Tuberculosis (264), Norton; State Orphans' Home (191), Atchison. The correctional institutions were: State Penitentiary (1980), Lansing; State Industrial Reformatory (ages from 16 to 25: 678), Hutchinson; Women's Industrial Farm (100), Lansing; Boys' Industrial School (from 11 to 16 years: 250), Topeka; Girls' Industrial School (from 11 to 18 years: 150), Beloit. Educational institutions under the Board were: School for the Blind (118), Kansas City; School for the Deaf (250), Olathe; Western University (Negroes: 130), and Kansas Vocational School (Negroes: 114), both at Topeka.

Legislation. The application of the State's farm-mortgage moratorium was extended. The Legislature voted to restore capital punishment for murder in the first degree. The "time privilege" of State prisoners, by which they could reduce their terms by mining more coal than their quotas, in the Penitentiary mine at Lansing, was rescinded.

Political and Other Events. The policy adopted by Governor Landon in 1933, of making no expenditures in excess of the State's actually received

revenue, was continued and proved its merit. The accounts of the fiscal year ended with June 30 showed that in spite of the State's experience of drought within that period, expenditure had kept within revenue. It had been necessary to reduce the expenditure of the State departments by 25 per cent, a step that had been feared as likely to impair their operation.

A group of 347 convicts mutinied on June 18, seized guards as hostages and held the interior of the Penitentiary coal mine. They were smoked out the next day by the guards' reversing the ventilating fans and forcing back into the mine the smoke from fires that the mutineers had set in the interior. The mutiny was attributed in part at least to the Legislature's cancellation of the prisoners' "time privilege." See DUST STORMS; FLOODS.

Officers. The chief officers of the State, serving in 1935, were: Governor, Alfred M. Landon; Lieutenant-Governor, Charles W. Thompson; Secretary of State, Frank J. Ryan; Auditor, George Robb; Treasurer, J. J. Rhodes; Attorney-General, Clarence V. Beck; Superintendent of Public Instruction, W. T. Markham.

Judiciary. Supreme Court: Chief Justice, R. A. Burch; Justices, John S. Dawson, W. W. Harvey, William E. Hutchison, William A. Smith, Walter G. Thiele, Hugo Weddell.

KANSAS, UNIVERSITY OF. A State institution of higher education in Lawrence, Kan., founded in 1864. The 1935 enrollment was 4246, of whom 2919 were men and 1327 women. The 1935 summer session had an enrollment of 1210. The full-time teaching staff, exclusive of deans, numbered 240. The endowment fund amounted to \$240,000, and the income for the year was \$1,500,000. There were 268,000 volumes in the library. Important gifts during the past year: \$60,000 for Children's Ward and \$35,000 for Research Laboratory at School of Medicine. Chancellor, Ernest Hiram Lindley, Ph.D.

KANSAS WESLEYAN UNIVERSITY. A coeducational institution under the auspices of the Methodist Episcopal Church, in Salina, Kan., founded in 1885. The enrollment for the autumn of 1934-35 was 393. The faculty numbered 25. The endowment amounted to \$226,000, while the budget for the fiscal year ending July 31, 1935, showed an income of \$67,000. President, L. B. Bowers, LL.D.

KARAFUTO, ka'ra-fō'ō. The Japanese part of the island of Sakhalin, south of 50° N. Area, 13,934 sq. miles; population (1933), 300,298. Chief towns: Toyohara, the capital, 33,744 inhabitants; Otamari, 30,561; Esutoru, 21,043; Shirutoru, 18,887.

Production, etc. For 1934, farm products were valued at ¥5,325,000; marine products, ¥15,673,760; coal produced totaled 1,196,647 tons. In the same year, 141,842 metric of pulp and 146,832 metric tons of paper were produced. Livestock (1934): 12,649 horses, 8592 swine, 4929 cattle, and 7137 foxes. In 1933, total imports were valued at ¥31,689,774; exports, ¥73,563,407. Budget estimates were balanced at ¥25,929,056 for 1934-35, and at ¥28,703,053 for 1935-36 (yen averaged \$0.2871 for 1935, and \$0.2972 for 1934). Governor, Takeshi Imamura.

KENDAL, DAME MADGE (MRS. MARGARET ROBERTSON GRIMSTON). An English actress, died at Chorley Wood, Herts., Sept. 14, 1935. Born in Grimsby, Linc., Mar. 15, 1848, of a theatrical family, her first appearance was made at the old Marylebone Theatre, Feb. 20, 1854, as the child Marie in *The Struggle for Gold*. She played children's rôles for several years, appearing as Eva in *Uncle Tom's Cabin* at the Theatre Royal, Bristol, in 1885. Her London début was made at the age of 17, when she played Ophelia opposite Walter Montgomery as Hamlet at the Haymarket Theatre, July 29, 1865.

She remained with Montgomery for several seasons, playing Desdemona in *Othello*, Blanche in *King John*, and Jessica in *The Merchant of Venice*. In 1867 she was married to W. H. Kendal (Grimston), and appeared in London in various rôles, including that of Georgina in *Our American Cousin* with E. A. Sothorn. In the following year, at the opening of the Gaiety Theatre, December 21, she played Florence in *On the Cards*. She then toured with the Haymarket Company and portrayed such rôles as Viola, Rosalind, Lady Teazle, Kate Hardcastle, and Lydia Languish, remaining with that Company until 1874. In November of that year she and her husband went on tour, appearing in the following year at the Opéra Comique and the Gaiety theatres.

Mrs. Kendal then appeared at the Court Theatre with John Hare, her husband's partner, playing *A Scrap of Paper* and other plays. Her next appearance was with the Bancrofts at the Prince of Wales's Theatre in 1876, where she played in various rôles, including one of her greatest, that of Dora in the English version of Sardou's *Diplomacy*. She returned to the Court Theatre in January, 1879, and in October appeared under the management of her husband and Hare at the St. James's Theatre. On Feb. 1, 1887, she appeared in a command performance of *Uncle Will* for Queen Victoria. The agreement with Hare was ended in July, 1888, and in the autumn of that year she and her husband went on a tour that began many years of travelling throughout the provinces and America, with a return home every year or two to play on the London boards. In 1889, Mr. and Mrs. Kendal came to America, where Mrs. Kendal played in *A Scrap of Paper* at the Fifth Avenue Theatre in New York City. During this period she added such rôles as Paula in *The Second Mrs. Tanqueray*, Miriam Chisholm in *The Fall of the Leaf*, and Mrs. Armitage in *The Greatest of These*—to her repertory. In June of 1902 she was back in London and appeared with Beerbohm Tree and Ellen Terry as Mistress Ford in *The Merry Wives of Windsor*. She now divided her time between the road and London, retiring from the stage in 1908, her last rôle being that of Madame Armirès in *The House of Clay*.

She returned to the stage in 1911 to appear as Mistress Ford in a scene from *The Merry Wives of Windsor* at the Gala Performance. In 1926 she was made Dame Commander of the British Empire, and the following year received the Grand Cross of the Order. Her memoirs, *Dame Madge Kendal by Herself*, were published in 1933.

KENTUCKY. Population. On Apr. 1, 1930 (Fifteenth Census), 2,614,589; on July 1, 1934, by latest Federal estimate, 2,657,000; 1920 (Census), 2,416,630. Louisville, the chief city, had (1930) 307,745 inhabitants; Frankfort, the capital, 11,626.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco	1935	311,000	247,429,000*	\$37,481,000
	1934	323,000	250,605,000*	36,677,000
Corn	1935	2,566,000	59,018,000	44,264,000
	1934	2,618,000	62,832,000	50,894,000
Hay (tame)	1935	1,152,000	1,374,000*	12,916,000
	1934	1,175,000	1,202,000*	16,227,000
Wheat	1935	326,000	3,097,000	2,540,000
	1934	308,000	4,250,000	3,782,000
Potatoes	1935	67,000	5,762,000	4,322,000
	1934	64,000	4,480,000	3,584,000
Sweet potatoes ..	1935	22,000	1,760,000	1,232,000
	1934	19,000	1,805,000	1,318,000

* Pounds. † Tons.

Mineral Production. The mining of coal increased for the State as a whole, to a total quantity of 40,478,000 net tons for 1935, from 38,525,235 tons for 1934. The eastern field shipped in 1934 some 3,500,000 tons of coal to other States for coking.

The completion of some 236 new producing wells, for the most part in Ohio County, brought the year's yield of petroleum up to 4,851,000 barrels for 1934, from 4,608,000 for 1933. There was a growing industry in the mining of fluorspar, chiefly for use as a flux in metallurgy and as a source of hydrofluoric acid. Forty-three thousand, one hundred and sixty-three short tons of fluorspar were shipped from the mines in the state in 1934; in value, \$690,990. More than half of the year's shipments from domestic mines came from Kentucky.

Education. The number of persons of school age in the State was reckoned, for the academic year 1934-35, as 762,810. The enrollments of pupils in the public schools in that year numbered 625,776. Of these, 529,210 were in the common schools or elementary grades, and 96,566 were in secondary grades, or high schools, which in some cases included the seventh grade. The year's expenditure for public-school education throughout the State totaled \$21,057,846. The year's salaries of the 18,126 teachers, principals, and supervisors totaled \$14,225,876 and averaged \$784.83.

Charities and Corrections. A Department of Public Welfare, as ordained by an act of 1932, managed in 1935 the State's seven institutions for the care or custody of persons. These institutions and their respective average populations for the year ended on June 30, 1935, were: Eastern State Hospital, Lexington, 1864; Central State Hospital, Lakeland, 2336; Western State Hospital, Hopkinsville, 1902; Feeble-Minded Institute, Frankfort, 740; Houses of Reform, Greendale, 543; State Reformatory, Frankfort, 2713; State Penitentiary, Eddyville, 1225.

Political and Other Events. Politically the State was disturbed by a conflict in the Democratic party over the nomination of a candidate for Governor, to succeed Laffoon in that office. Governor Laffoon backed Thomas S. Rhea. Lieut.-Gov. Albert B. Chandler sought the nomination in a primary campaign in which he attacked Laffoon, who had become unpopular because of his having brought about the imposition of a sales tax. Factional bitterness ran high in Harlan County, where the United Mine Workers of America, seeking to unionize the coal mines, complained of lawless conduct by the authorities. Laffoon sent 700 National Guards into the county, ostensibly to prevent violence and fraud at the primary election. His opponents charged him with a contrary purpose. The troops' interference with the election was enjoined by Cir-

cuit Judge Gilbert. The primary, held August 3, gave Rhea a slight State plurality over Chandler, not sufficient for nomination.

Troops were then withdrawn from Harlan County; some weeks later, on September 4, the county attorney, E. C. Middleton, who had given aid to the military, was assassinated by a bomb. On September 7 was held a run-off primary for the Democratic nomination, in which Chandler decisively defeated Rhea. Governor Laffoon and Rhea, resentful of what they considered aid given Chandler in the campaign by the Federal Administration, refused to meet President Roosevelt when he passed through the State on September 27, on his tour to the West. The Governor again sent troops into Harlan County on September 29, alleging lawless acts of violence on the part of deputy sheriffs in the pay of operators of coal mines.

Although the State continued to maintain, in name, until November, its constitutional prohibition of traffic in alcoholic liquor, that traffic was active throughout the year. Distilleries had gone back into business on a great scale (represented by an estimated investment of \$100,000,000) after the State's popular vote for repeal of Federal prohibition in 1933. A State act of 1934 had nullified the effect of the constitutional prohibition by classing liquor as medicine and allowing every man to prescribe this medicine for himself. There sprang up a widespread retail traffic in liquor, largely in areas where sentiment favored prohibition. Many such areas voted on local option in November. See **FLOODS**.

Elections. In the State elections of November 5 Lieut.-Gov. Albert B. Chandler, Democrat, was elected Governor, defeating King Swope, Republican, by a plurality of 80,000 or more votes in a total vote of over 1,000,000. The repeal of the State's constitutional prohibition of traffic in alcoholic beverages, proposed to the electorate by the Legislative session of 1934, was approved. Constitutional authority for the Legislature to enact a system of pensions for the aged was voted by a sweeping majority. A prevaillingly Democratic Legislature was elected.

Officers. The chief officers of the State, serving in 1935, were: Governor, Ruby Laffoon (succeeded Dec. 10 by A. B. Chandler); Lieutenant-Governor, A. B. Chandler (succeeded Dec. 10 by Keen Johnson); Secretary of State, Sara W. Mahan; Treasurer, Elam W. Huddleston; Auditor, J. Dan Talbott; Attorney-General, Bailey P. Wootton; Commissioner of Agriculture, Labor, and Statistics, Eugene Flowers; Superintendent of Public Instruction, James D. Richmond.

Judiciary. Court of Appeals: Chief Justice, William Rogers Clay; Associate Justices, William H. Rees, James W. Stites, Gus Thomas, J. Basil Richardson, Wesley Vick Perry, Alex L. Ratliff.

KENTUCKY, UNIVERSITY OF. A coeducational State institution of higher learning in Lexington, Ky., founded in 1866. The enrollment in the autumn of 1935 was 3175. There were 2145 students registered in the 1935 summer session. The faculty numbered 261. The productive funds amounted to \$184,075, and the income for the year was \$1,186,092.67. The library contained 145,000 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA, kē-nyā' or kēn'ya. A British colony and protectorate. Area, 224,960 sq. miles; population (1934 estimate), 3,094,279 including 3,024,975 natives, 34,955 Indians, 17,501 Europeans, 12,131 Arabs, 3316 Goans, and 1401 others. Chief towns:

Nairobi (capital), 70,960 inhabitants; Mombasa, 52,700.

Production and Trade. Coffee, wheat, maize, tea, sugar, hides and skins, cotton, sisim, wattle bark, sodium carbonate, and gold (12,110 fine oz. produced during 1934) were the main products. Timber production (1934) from the forest reserves totaled 735,731 cu. ft. Kenya and Uganda were one administrative unit for customs purposes. During 1934, imports (Kenya and Uganda) totaled £5,708,025; exports (Kenya only), £1,909,871 of which coffee (186,759 cwt.) represented £491,759; sisal 24,016 tons), £311,371; hides and skins, £195,915; sodium carbonate, £141,000; maize, £104,754.

Government. For 1934, revenue amounted to £3,181,939; expenditure, £3,180,795; public debt (Jan. 1, 1935), £17,205,600 of which £13,251,808 was the capital debt of Kenya and Uganda railways and harbors. Government was vested in a governor aided by an executive council of 12 members, and a legislative council of 40 members including the governor as president. Governor in 1935, Brig.-Gen. Sir J. A. Byrne.

History. The proposals of the East African Unofficial Conference (held at Arusha during March, 1935) for partial union in East Africa (Kenya and Tanganyika) were rejected by the British Secretary of State for the Colonies on Oct. 28, 1935. He pointed out that, in 1931, the Parliamentary Joint Select Committee had thoroughly examined the question of the union of Kenya, Tanganyika, and Uganda and had decided against it. The government was of the opinion that no adequate grounds existed at the present time for reopening the matter.

On Oct. 7, 1935, the British Colonial Office announced that Sir Alan W. Pim had been appointed to investigate and report on the financial affairs of Kenya.

KENYON COLLEGE. A college of arts and sciences for men in Gambier, O., established in 1824 by the Protestant Episcopal Church. The enrollment for the autumn term of 1935 was 227. The faculty numbered 26 members, including a speech instructor, added in 1935. The endowment funds amounted to \$2,018,422 and the income for the year was \$180,339.

Gifts of a swimming pool, four new tennis courts, and a lectureship in art were received. A system of honor courses leading to the "A.B. with honors" for the best juniors and sophomores was introduced. The library contained 84,000 volumes. President, William F. Pierce, D.D., LL.D.

KIDNAPING. See CRIME.

KINGSFORD-SMITH, Air Commodore Sir Charles Edward. An Australian aviator, lost en route to Singapore in an attempted flight from England to Australia, Nov. 7-8, 1935. Born in Hamilton, Brisbane, Australia, Feb. 9, 1897, he attended the Sydney, N.S.W., Technical High School. At the outbreak of the World War he enlisted in the Signal Engineers of the Australian Imperial Force, and served in Egypt and Gallipoli. Subsequently he was transferred to the Royal Flying Corps, and during an engagement was wounded and later awarded the Military Cross. In 1918 he was assigned as an instructor in the Royal Air Force and retired with the rank of captain to devote himself to commercial flying (1919). He was one of the original six pilots of the West Australian Airways, and in 1926 became a partner in and a pilot of the Interstate Flying Service at Sydney.

For almost 10 years he occupied himself with his commercial work, and it was not until 1927 that

he was brought into the public eye with his record flight around the Australian continent, with Charles T. P. Ulm—7539 miles in 10 days. In the following year he piloted his plane, the *Southern Cross*, a Fokker monoplane with three Wright Whirlwind engines, on a transpacific flight from Oakland, Calif. to Brisbane, Australia. He left on May 31 and arrived at Brisbane on June 9, his flying time for the trip being 3 days, 11 hours, and 19 min. The relay from Honolulu to Fiji was the longest overwater flight yet attempted. He was accompanied on the flight by Charles Ulm as copilot, Lieut. Harry W. Lyon as navigator, and James Warner as radio man. The flight was characterized by accurate navigation and constant radio communication, and for this feat he was awarded the Air Force Cross and was made Squadron Leader of the Royal Australian Air Force. In September of 1928 he made the first return flight from Australia to New Zealand.

In 1929, Kingsford-Smith, accompanied by Captain Ulm, H. A. Litchfield, and T. A. McWilliam, set a new world's record for an Australia to England flight, bettering Captain Hinkler's record by more than two days. They left Derby, Australia on June 25 and arrived in London on July 10, their elapsed time being 12 days, 21 hours, and 18 minutes.

From this time forward, Kingsford-Smith was frequently in the news for his long-distance and record-breaking flights. In 1930, with John W. Stannage, J. Patrick Saul, and Evert Van Dyke, he made a successful east to west Atlantic crossing in the rebuilt *Southern Cross*, equipped with three Wright 5-5 engines. They left Port Marnock, Ireland on June 23, and landed at Harbor Grace on June 25. Thus he became the first man to fly around the world by direct routes over the Pacific and Atlantic oceans. The party continued on to New York and thence across the continent, arriving in Oakland, Calif. on July 4. Kingsford-Smith then returned to England, and in October broke the record made by Squadron Leader Hinkler, by flying from England to Australia in a light Avro-Avian Sports machine equipped with a 120 h p. Gipsy engine, the *Southern Cross, Jr.* He left Heston, England on October 9 and arrived at Pt. Darwin, Australia, on October 19, flying 12,000 miles in 9 days, 23 hours. In this year (1930) he was promoted to Wing Commander and then to Air Commodore.

During 1931 Sir Charles abstained from long-distance flying, and in 1932 made an unsuccessful attempt at breaking the record for an Australia to England flight. In 1933 he made a record breaking solo flight from Lympe Airdrome, England (October 4) to Wyndham, N. Australia (October 11) in a Percival Gull monoplane. His flying time was 7 days, 4 hours, and 43 min., 40 hours less than the previous record made by C. W. A. Scott in 1932. In 1934, with Capt. P. G. Taylor, Sir Charles, flying a Lockheed Altair, *Lady Southern Cross*, left Brisbane on October 20, arriving in Oakland, Calif., on November 4, and covering 7318 miles in 52 hours' flying time.

The first plane, the *Southern Cross*, was purchased by the Commonwealth Government of Australia in June, 1935, and in August, Kingsford-Smith redeemed his plane *Lady Southern Cross* at San Pedro, Calif., which had been impounded for debt. He flew it to New York and there shipped it to England where he intended to try to better the record set at the MacRobertson Air Race, 1934. Before leaving America he announced his intention of retiring from long-distance flying and de-

voting his time to administration and research. In September it was announced that the British Pacific Trust was to back him in the establishment of a new Australia-New Zealand air route.

Desirous of bettering the MacRobertson Race time, he, accompanied by Thomas Pethybridge, left London on November 6 on the first leg of his journey. When no word was received from them for 24 hours, they were reported missing on November 8, and on December 6 the report was made official.

As one of the world's leading airmen, Sir Charles carved a niche for himself in the world of aeronautics by his many flights remarkable for their distance and speed. He was the holder of the Gold Medal of Honor of the International Aviation League, and author (in part) of *Southern Cross Trans-Pacific Flight* (1928) and *The Old Bus* (1932).

KIWANIS INTERNATIONAL. An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civic and social service to the community. The first club was organized in Detroit, Mich., in 1915; by 1917 the organization had spread into Canada. At the close of 1935 the international organization consisted of 1865 clubs, with an approximate membership of 86,000. The objectives for the year 1935-36 were: service to underprivileged children, citizenship, urban-rural relations, vocational guidance, and boys and girls work. Special objectives are: 1. adequate educational facilities, especially those making for character development; 2. simple economical and efficient government; 3. directive education for proper use of the new leisure; 4. support of churches in their spiritual aims. The 1936 convention will be held in Washington, D. C. The officers elected for 1935-36 were: President, Harper Gatton, Madisonville, Ky.; American vice-president, Clinton S. Harley, Seattle, Wash.; Canadian vice-president, Gordon S. Dodington, Toronto; treasurer, H. G. Hatfield, Oklahoma City, Okla.; secretary, Fred. C. W. Parker, Chicago. Headquarters are at 520 North Michigan Ave., Chicago, Ill.

KLAIPEDA. See MEMEL.

KNIGHTS OF COLUMBUS. A society of Roman Catholic men organized under a special charter, granted by the Connecticut General Assembly in 1882, permitting it to do business as a fraternal benefit society and to promote and conduct educational, charitable, religious, and social welfare work. The four principles of the order are charity, unity, fraternity, and patriotism.

The order is composed of a supreme council, the governing body and highest authority; a supreme board of directors, the executive body; 61 State councils; and 2473 subordinate councils. The total membership as of June 30, 1935, was 450,629, which represented an associate membership of 218,384 and an insurance membership of 232,245. In the 53 years of its existence the society has paid out more than \$43,000,000 to the beneficiaries of its members. Death claims paid during the fiscal year amounted to \$2,494,362.87.

At the annual convention held in New York City, Aug. 21-23, 1935, continued protest against the persecution of the Church in Mexico was pledged. Martin H. Carmody of Grand Rapids, Mich., was reelected supreme knight. William J. McGinley of New Haven, Conn., was supreme secretary in 1935, and D. J. Callahan of Washington, D. C., supreme treasurer. The order publishes *Columbia*, a month-

ly magazine. Headquarters of the supreme council are in New Haven, Conn.

KODACHROME. See PHOTOGRAPHY.

KONDOURIOTIS, PAUL. A Greek naval officer and president, died at Athens, Aug. 22, 1935. He was born on the Island of Hydra in April, 1855. As a young man he entered the navy, and first distinguished himself in the War with Turkey in 1897, when he was instrumental in the bottling up of the Turkish fleet in the Gulf of Salonika, and during the Balkan War of 1912-13, he commanded the Greek fleet and forced the Turkish fleet to retire behind the Dardanelles.

His first political appointment of importance was as Minister of Marine in 1915. He cast his lot with Venizelos and Danglis in the following year and sided with the Allies in opposition to King Constantine, who was dealing with the Central Powers. Three of them set up a provisional government at Salonika, a key position, and organized a state militant. The King was expelled by the Allies and in 1917 Venizelos again became Premier, with Kondouriotis serving as Minister of Marine. In 1919 he resigned from the ministry and was created an admiral for life.

In October, 1920, upon the death of King Alexander, who had succeeded his father, Constantine, Kondouriotis was named regent. Venizelos was defeated at the polls in November and Constantine returned to the throne, the Admiral going out of office. On Sept. 27, 1922, the King was forced to abdicate and was succeeded by his son, George II. Republican propaganda was rife in Greece at this time, and on Dec. 16, 1923, a plebiscite was held, the people voting for a republican form of government. Two days later the King and Queen left for Rumania and Kondouriotis was named regent. On Mar. 25, 1924, the Greek Republic was proclaimed and Kondouriotis was named provisional president.

As a coincidence, it may be noted that his grandfather had been president of Greece at the time of the War of Independence, one hundred years before. On Mar. 19, 1926, Kondouriotis resigned because of the dictatorship of General Panglos. On August 22, however, a bloodless coup d'état was effected by General Kondyles, and he was returned to office. He tendered his resignation on Apr. 20, 1927, but was persuaded to reconsider. Again in June, 1929, he offered to resign but was again persuaded to remain in office. However, on Dec. 10, 1929, his health rapidly failing, he resigned and brought to an end his long and strenuous career.

KOREA (CHOSEN). A former empire of eastern Asia, annexed by the Japanese Empire on Aug. 22, 1910, and incorporated as an integral part of Japan by an Imperial Rescript of 1919. Capital, Keijo (Seoul).

Area and Population. With an area of 85,228 square miles, Korea had an estimated population on Jan. 1, 1934, of 20,791,321, including 20,037,273 natives, 523,452 Japanese, and 39,151 foreigners. Births in 1932 numbered 618,277; deaths, 457,518; marriages, 130,550; divorces, 6712. Populations of the chief cities on Jan. 1, 1933, were: Keijo (Seoul), 355,426; Heijo (Pyongyang), 136,927; Fusan, 130,397; Taiku, 101,078; Jinsen (Chemulpo), 63,658.

Education. About 60 per cent of the population is illiterate. In March, 1934, there were 484 elementary schools, with 91,521 pupils; 2216 common schools, with 636,958 pupils; 11 middle schools, with 6550 pupils; 70 higher common schools and high schools, with 29,451 pupils; and

various technical, normal, and vocational schools. The Imperial University of Keijo had 621 students. Korean students studying in Japan proper numbered 4087.

Production. Korea is a predominantly agricultural country, with rice as the staple product, followed by barley, Italian millet, soy beans, wheat, and red beans. The value of the chief products in 1934 (in 1000 yen) was: Rice, 415,546; barley, 55,290; soy beans, 44,558; foxtail millets, 41,629; cotton, 25,718; wheat, 18,763. Straw manufactures in 1933 were valued at 34,286,118 yen; cattle products, 21,231,326 yen; mineral products (chiefly gold, silver, zinc, copper, lead, iron, tungsten ore, graphite, coal), 48,301,468 yen; marine products, 51,378,000 yen. The chief native industrial products are textiles, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather. Factories for spinning silk, milling, and the manufacture of wood pulp, cement, matches, iron, and fertilizer have been established.

Foreign Trade. Korea's trade is largely with Japan. Imports from Japan proper in 1934 totaled 439,622,621 yen (339,817,196 in 1933) and exports to Japan were 407,693,582 yen (315,854,449 in 1933). Imports from foreign countries in 1934 were 79,527,309 yen (64,368,264 in 1933) and exports to foreign countries were 57,673,853 yen (52,773,273 in 1933). The bulk of the latter trade was with Manchoukuo (imports from Manchoukuo in 1934, 46,681,998 yen; exports, 48,358,325 yen).

Finance. The budget estimates of the Korean Government for the fiscal year ended Mar. 31, 1936, balanced at 290,267,414 yen (1934-35 estimates: Receipts, 278,284,452; expenditures, 274,634,642). In 1933-34, actual receipts were 252,073,261 yen; expenditures, 229,224,139 yen. The public debt on Mar. 31, 1935, stood at 498,830,524 yen.

Communications. On Mar. 31, 1935, there were 1908 miles of state and 774 miles of private railway lines open to traffic, and 204 miles of government line were under construction. Highways extended 13,430 miles; they were mainly graded earth and gravel. An airline linked the chief cities with Japan proper and with Manchuria.

Government. Korea is governed as an integral part of Japan through a governor-general with extensive powers. Governor-General in 1935, Gen. Kazunari Ugaki.

KU KLUX KLAN, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. "The membership is made up of white, Gentile persons, native-born American citizens, 16 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people or person, their allegiance, loyalty, and devotion to the government of the United States of America in all things being unquestionable." At the biennial legislative meeting held in August, 1934, Dr. Hiram Wesley Evans was reelected president, or Imperial Wizard, this being his fourth consecutive term. H. C. Spratt was secretary; and Sam H. Venable, treasurer. National headquarters are in Atlanta, Ga.

KUWAIT. See under ARABIA.

KWANGCHOW. See FRENCH INDO-CHINA.

KWANTUNG, kwán'dóong'. The territory at the southern extremity of the Liaotung Peninsula,

Manchuria, leased from China by Japan. Area, including adjacent islands, 1337 square miles; population, excluding the armed forces, 1,051,358 (Jan. 1, 1935) of whom 898,117 were Chinese and 152,200 were Japanese. Chief towns (with Sept. 1, 1934 estimated populations): Dairen, the capital, 444,688; Port Arthur (Ryojun), 141,291; Pulantien, 166,809; Chinchou, 125,701.

Production, etc. Maize, groundnuts, pulse, kaoling, and vegetables were the chief agricultural products. The salt output for 1934 amounted to 277,049 short tons. In 1934, imports totaled ¥470,919,748; exports, ¥333,872,147; Japan supplied ¥333,946,547 of the imports and received ¥128,773,133 of the exports (yen averaged \$0.2871 for 1935, and \$0.2972 for 1934). Budget estimates were balanced at ¥23,079,542 for 1934-35, and at ¥24,828,187 for 1935-36. Governor, Gen. Jiro Minami. See JAPAN and MANCHOUKUO under *History*.

LABOR. In the general field of labor in the United States in 1935, the most significant happening was the action of the Supreme Court declaring the National Recovery Administration codes unconstitutional (see Senate Document No. 65, 74th Congress, First Session). This decision, which was rendered as of the calendar day May 27, 1935, splits the year into two unequal parts. When the decision was handed down, organized labor immediately indicated that it would fight to retain the gains made under the codes, even to the point of planning and carrying into execution great strikes. It was the conviction of the leaders that only through aggressive labor action could the gains made be sustained and extended. While in the first days of confusion following the action of the Supreme Court, many employers indicated that they would continue to observe the regulations under their code, it was not long before labor, employer, and Government sources reported widespread breakdown in code standards. The breakdown naturally took place in those industries suffering most from internal disorganization as, for example, cotton textiles.

The losses labor contended it was sustaining were in the fields of wages, hours, and union recognition. There was a widespread feeling that those industries which had accepted, with whatever reluctance, the provision of the NIRA known as Section 7a, were now about to return to the *status quo ante*. It also became immediately apparent that hours were to be increased in almost every industry where competition was rife, and that the short-hour schedules would be retained only in those industries where they had been characteristic before the institution of the NRA. The wage situation was the subject of special discussion by President William Green of the A. F. of L. in August when he attacked a statement made by the Department of Commerce to the effect that "labor is receiving a larger portion of total income to-day than it did in 1929." (See STATISTICS.) It was Mr. Green's allegation that the section of the National Income report entitled "Labor Income" included many high salaried individuals acting in directive and managerial capacities. He stated:

When figures are shown separately for wage earners, we realize that they have lost more heavily than any other group. Their income had declined by 1932 to 40.8 per cent of what it was in 1929 and, even with the effort to raise wages for the minimum groups under the NRA they are still receiving scarcely more than one-half their 1929 income (52 per cent). While these wage earners in 1934 received only 52 per cent of their 1929 income, property owners received 61.4 per cent, men in business for themselves received 65.2 per cent of their 1929 income.

Section 7a of the NIRA was seemingly designed to encourage the organization of workers in industry into unions. In April, 1935, the Twentieth Century Fund released a study which indicated that the total trade union membership in the United States was 4,200,000 and that an additional 2,500,000 employees were organized in so-called company unions. The vast extension of company unionism was one of the significant events of this period. The study referred to pointed out, however, that company unions were not adequate agencies for genuine collective bargaining. However, their existence became a matter of considerable agitation to employers in the fields of steel, rubber, and automobiles, as the workers made moves to turn the company organizations to their own ends. Employers in these lines began to fear that they had created a "Frankenstein" but the total significance of this type of labor organization has not yet appeared, though it is significant that its dangers were first perceived in those industries not under the control of A. F. of L. unions, and in which the development of so-called industrial unions is advocated by leaders like John L. Lewis.

Several significant special studies of labor conditions appeared during the year. These studies indicate the existence of an excess labor supply which promises to be the basis of permanent relief population on the one hand and a reserve which employers may find themselves able to tap in times of difficulty, on the other. Three examples of such studies may be profitably cited here: those of automobiles, coal and cotton textiles. The study of the automobile industry was made by the National Recovery Administration and was released on Feb. 28, 1935. The Recovery Administration's principal findings concerning labor conditions in the automobile industry were as follows:

- 1 Labor unrest exists to a degree higher than warranted by the depression
- 2 The foreman's power and the gap between the workers and the executive are important causes of labor unrest
- 3 Espionage systems exist.
- 4 Irregularity of employment has increased in recent years
- 5 Depression competition has spurred the speed-up beyond economic capability to produce day by day.
- 6 Automobile workers are considered old at 40
- 7 Hourly earnings are high, annual incomes are low.
8. Relatively few employees obtain supplementary earnings from other sources during lay-offs.
- 9 The privilege of averaging hours on an annual basis is neither necessary nor desirable.

With regard to cotton textiles, the following passages from the report of the Cabinet Committee on the conditions and problems of the cotton textile industry relate specifically to labor:

There has been a considerable decline in the number of wage earners in the cotton textile industry during the past eight years. From an annual average of about 468,000 workers in 1927 there was a decline to about 330,000 in 1931 and an increase to about 380,000 in 1933. The average employment from January to June, 1935 was 408,000 . . . New England bore the burden of the decline from about 195,000 workers in 1923 to 90,000 in 1933. Some years the South increased from 220,000 to 257,000. . . .

Employment records of individual mills which closed in the decade of the 1920's show that employment tends to fall from year to year, resulting in a gradual rather than a sudden displacement of labor. Under certain conditions, the bankruptcy route may cause less serious dislocation than a control process of readjustment such as would follow the proposed liquidation of possibly 5,000,000 excess spindles within a period of a few years. Nevertheless, the total process of liquidation has given rise to stranded populations of such magnitude that the problem can no longer be met through

individual efforts of the displaced workers. Gradual as the decline of employment may have been in some of the textile manufacturing centres, the displaced workers have not been absorbed in other industries, and further displacement at this time would almost certainly lead to an enlargement of the stranded populations.

The bituminous coal industry was the subject of a report made by the Federal Emergency Relief Administration under the title *The Bituminous Coal Industry with Survey of Competing Fuels*. With regard to labor the significant remarks in this report read:

On the basis of the rate of increase in mechanization during the period 1927 to 1931, and assuming a maximum production of 500,000,000 tons when business conditions are similar to 1929, it is estimated that mechanization and loss in demand for bituminous coal will displace 75,000 to 137,000 men. At that time employment is estimated to be between 428,000 and 490,000 men. The lower limit presupposes no change in productivity between the eight and seven hour day, whereas the upper limit prepostulates the mechanism decrease in productivity.

The conclusions cited are intended to give an indication of the nature of the problems faced by workers in the specific industries mentioned, and by extension to indicate the nature of the labor problem at large in the coming decade. The studies were made with the idea of illuminating both of these points.

Reports from foreign countries during 1935 almost uniformly indicate that labor lost ground in the field of wages. A study made by the National Industrial Conference Board and released during the year indicated that between 1929 and 1934 wage rates fell 26 per cent in Poland, 21 per cent in Germany, and 18 per cent in Italy. On the other hand in countries in which conditions were less unsettled, labor experienced lesser declines as, for example, declines of but 2 per cent in Sweden and 3 per cent in Switzerland. Wage declines were also reported in Austria. From the other side of the world, from China, there also came reports of declining wage levels, and while no information is available as to conditions in Japan on this point, it is well-known that relief construction projects were initiated to care for the unemployed and the impoverished farmers. To offset the general pessimism which could be derived from this picture, it may be said that there have been marked increases in many countries in the number of persons employed, and several agencies for economic studies lately predicted imminent world recovery.

LABOR, AMERICAN FEDERATION OF. The fifty-fifth annual convention of the American Federation of Labor was in session at Atlantic City, N. J., Oct. 7-19, 1935. It was characterized by President Green as the "most historic" convention in the Federation's history; while the description of it by William P. Mangold, writing in the *New Republic* for October 30, sums up the evaluation of outside observers: "the stormiest and perhaps most momentous convention in its [the Federation's] history." When the convention opened it was apparent that four highly controversial issues were bound to be raised: (a) the question of forming a labor party; (b) the matter of craft unions vs. industrial unions; (c) the internal war in the building trades; and (d) the matter of demanding a constitutional amendment removing from the Supreme Court power to declare economic and social welfare legislation unconstitutional. As it turned out, the second of these prospective issues was most vigorously debated and the conclusion arrived at in

the convention was not, it is clear, one which brought the disputation to an end.

Division in the Leadership. There were 16 resolutions in favor of a labor party, introduced into the convention, as contrasted with 3 the preceding year. In his opening address President Green indicated the line of the ruling group in the Federation. He said: "It [the A. F. of L.] will not take that action because some order comes from some gathering in a foreign country directing the workers of the nation to form an independent labor party. No government in a foreign land, no camouflaged organization meeting on foreign soil can tell the American Federation of Labor what to do." This, of course, was a thrust at the Third International which previously had called on all labor sympathizers to support independent political action by labor, and it not only epitomized the official attitude on the question immediately at issue, but the attitude toward the Communists as a general issue.

The labor party proposal was defeated, but it is immensely significant that no amount of "red-baiting" on the part of the official group could quiet the push from the liberals in the Federation ranks. They persisted in their course of challenging the authority of the old guard on crucial issues and in turning what was intended to be a routine convention into a battle ground of diametrically opposed approaches to the fundamental problems of unionism and labor action. Prominent in the ranks of the liberals were such leaders as John L. Lewis of the United Mine Workers, the reputed leader of the group, Sidney Hillman of the Amalgamated Clothing Workers, Francis Gorman of the United Textile Workers, David Dubinsky of the Ladies' Garment Workers, Charles P. Howard of the Typographical Union, Harvey C. Freming of the Mine, Mill, and Smelter Workers, and many of the younger delegates from recently organized unions in mass production industries.

The Anti-Red Position of the Executive Council. The convention began, and for several days continued, on an even tenor with the Executive Council leadership seemingly in control. The anti-red attitude of President Green and his close associates was underlined by an exchange of compliments with the American Legion and a promise of cooperative action in combating the red menace. It was not until the beginning of the second week of the sessions that John L. Lewis clearly indicated the line he intended to take by suddenly introducing a resolution reading: "RESOLVED: That no officer of the A. F. of L. shall act as an officer of the National Civic Federation or be a member thereof."

This resolution created a storm, for it was obviously an attack on Vice Pres. Matthew Woll, acting president of the Civic Federation, a creation of the late Mark Hanna, notoriously anti-red, and reputedly anti-labor. After a brief period of jockeying the Lewis resolution was sent to the relevant committee, and Woll anticipated the probable action by resigning from the Civic Federation, in which course he was followed by all other labor leaders holding membership. That all was not well had been indicated earlier when President Green's recommendation that J. W. Williams be recognized in preference to his rival, M. J. McDonough, and seated as the delegate representing the building trades department, thus making him the officially accepted leader of this important group of trade unions, was defeated. The proposal was rejected by a vote of 18,092½ to 10,062. The whole controversy was eventually handled by referring it to a com-

mittee of six, representing both groups and if this committee is unable to agree, each group will suggest candidates of a seventh member to George M. Harrison, who arranged the proposed method of conciliation. Until this committee has finished its work, neither group will be given official recognition by the Executive Council of the Federation.

But while the opposition was able to gain these minor victories, it was not able to achieve an unbroken success. After its power had been clearly emphasized, however, the so-called anti-red resolution was considerably diluted by the Executive Committee. Originally designed rigidly to exclude Communists from membership in the Federation, it was finally passed in a form which excludes them from seats in State labor Federations and central labor bodies, if they are known Communists. The more drastic version was defeated on the ground that it was an undue interference with the affairs of affiliated national unions on the part of the parent body; and it was held that the national unions were the exclusive judges of their own memberships. Of the other controversial issues raised by the liberals, the proposal for a labor party was, as remarked, defeated, and the suggestion for a constitutional amendment to restrict the powers of the Supreme Court in the matter of social legislation was tabled.

Attack on Fascism. That there is a good deal of confusion in the minds of the leaders is apparent when the action of the convention with regard to the two Fascist countries is considered in the light of their anti-communism. A strong resolution was passed condemning the Italian adventure in Ethiopia, reading in part as follows:

Labor is always the major sufferer in every war, this being true of victor and vanquished alike. The civilized nations since the World War have used their utmost efforts to prevent the adjustment of any international dispute by the arbitrament of war. . . . Italy because of her present acts of aggression against Ethiopia has been justly convicted as being an outlaw nation . . . which all civilized countries should refuse to assist commercially, financially, or in any other manner.

The convention also denounced the Hitler government of Germany for stamping out the German trade union movement in "blood and fire," reaffirmed the boycott of German goods and services first voted two years previously, advocated the continued support of the Labor Chest for Relief and Liberation of Workers in Europe (of which William Green is president, Matthew Woll, chairman, and David Dubinsky, treasurer), and urged that "all American sport organizations be prevailed upon not to participate in the 1936 Olympic Games in Berlin."

The Routine Resolutions. More of a routine nature were the resolutions on questions of national policy. Racketeering was condemned. A Federal investigation of strike breaking and private detective agencies was asked. Revival of NRA work-codes was demanded, the feeling being that the losses sustained since their abandonment were more serious than the deficiencies of the codes. The Southern tenant farmers were applauded for their efforts at organization to resist the oppression of the landlords. The Liberty League lawyers were attacked for their extended declaration against the Wagner Labor Disputes Act. Aid in the struggle to accomplish the ratification of the Child Labor Amendment was promised. The Lundeen social security bill was rejected as Communist-inspired. The 30-hour week was once more endorsed.

Craft versus Industrial Unionism. But the struggle over the craft vs. industrial unions issue,

which came to a head on October 15, really dominated the convention and promised to be the outstanding issue of 1936 in trade union circles. The precipitating cause was the effort to get the minority report on the industrial unionism issue adopted. Six of the 15 members of the committee on resolutions had endorsed this report which declared in part that "the time has arrived when common sense demands the organization policies of the American Federation of Labor must be molded to meet present-day needs," especially in "the great mass-production industries and those in which the workers are composite mechanics, specialized and engaged upon classes of work which do not truly qualify them for craft-union membership."

Such a programme was to provide "for the organization of workers in mass-production and other industries upon industrial and plant lines, regardless of claims based upon the question of jurisdiction," and the executive council was "expressly directed and instructed to issue unrestricted charters to organizations formed in accordance with the policy. . . ." On the other hand, the majority report recalled the decision of the 1934 convention which had "provided that the workers classified as 'mass production employees' should be granted charters in the mass-production industries which would include all of the mass-production workers employed in such industries," and demanded that the 1935 convention reinstate this principle. In this connection it is important to know that in the "Report of the Executive Council" to the 1935 convention the following remarks are to be found:

A survey made of the strength of organizations established in the cement, aluminum, gas, coke and by-products, and radio convinced the Executive Council that the time had not yet arrived when international unions could be established in these named industries with any reasonable hope that they would prove to be well-founded and self-sustaining. It is the opinion of the Executive Council that the time has not yet arrived for the establishment of organizations in these industries. The Executive Council, however, has taken preliminary steps to the organization in these industries.

Over against this position, the contention of the industrial unionists may be placed, the summary being that of Julius Hochman, vice president of the International Ladies Garment Workers' Union: ". . . since 1933 of the million workers who have entered the Federation in the last two years, 65 per cent have joined this type of union, 22 per cent have joined craft unions, and 13 per cent have entered local and Federal unions. Further analysis of membership figures shows that the 33 industrial unions have, during the same period, increased their own membership by 75 per cent, that 76 craft unions have increased theirs by 13 per cent, and that the Federal unions have gained 146 per cent." When this issue was brought on the floor of the convention, it precipitated what was described as "one of the bitterest debates in the history of the Federation."

The advocate of the minority report was John L. Lewis. Mr. Lewis pointed specifically to the need of organizing the workers in steel, automobiles, cement, rubber, and other mass production industries, especially in view of the fact that but 3,500,000 of the 39,000,000 wage earners of the country were now in the Federation. He was supported by the liberal elements in the convention and specifically by Charles P. Howard of the Typographical Union and Thomas McMahon of the United Textile Workers. The craft union forces were led by Matthew Woll of the Photo-engravers Union, John P. Frey of the Metal Trades Department, and Arthur Wharton of the International

Association of Machinists. These craft unionists argued chiefly for the acceptance of the 1934 position and for faith in the good intentions of the executive council in accomplishing the end in which both sides were interested. When the vote was taken, it was found that the minority report had been rejected by the convention, 18,025 to 10,924.

The Plan to Organize on Industrial Lines. This did not end the matter, however, for Mr. Lewis made it clear that he did not consider it possible to settle so important an issue once and for all on the floor of the convention. The vote was more in the nature of a preliminary test of strength than a decision. This was made clear when, on Nov. 9, 1935, it was announced that seven internationals had formed a special organization to push industrial unions. The internationals were the United Mine Workers, the Typographical Union, the Amalgamated Clothing Workers, the International Ladies' Garment Workers Union, United Textile Workers, Oil Field, Gas Well, and Refinery Workers, United Hatters, Cap and Millinery Workers International Union, and the International Union of Mill and Smelter Workers. The membership of the committee selected to direct the work was as follows: John L. Lewis, president, John Brophy of the Mine Workers, director, Charles P. Howard of the Typographical Union, secretary, Sidney Hillman of the Clothing Workers, David Dubinsky of the Ladies' Garment Workers, Thomas E. McMahon of the Textile Workers, Harvey C. Freming of the Oil Workers, M. Zaritsky of the Cap and Millinery Workers, and Thomas H. Brown of the Mine, Mill, and Smelter Workers. The organization styled itself the "Committee for Industrial Organization." The statement of purposes follows:

It is the purpose of the committee to encourage and promote organization of the workers in the mass production and unorganized industries of the nation and affiliation with the American Federation of Labor. . . . Its functions will be educational and advisory and the committee and its representatives will cooperate for the recognition and acceptance of modern collective bargaining in such industries. Other organizations interested in advancing organization work along the lines of industrial unionism will be invited to participate in the activities of the committee. . . .

The struggle was carried a step further when, on November 23, John L. Lewis resigned as vice-president of the A. F. of L. in a one-sentence letter to President Green. It was understood when the resignation was submitted that Mr. Lewis might have a free hand in his campaign for the principle he supports and for the defeat of his opponents in the Executive Council. The step was immediately countered by a warning from President Green that the campaign might "create a line of cleavage" in the Federation that would have "grave consequences." He therefore pleaded for the general acceptance of the verdict of the convention. Mr. Lewis replied that Mr. Green's warning would not influence him to drop his campaign. Early in December literature in favor of industrial unionism was sent out to every labor organization in the country. Mr. Lewis announced that his move was designed to bring into being a powerful and comprehensive labor movement which could resist those forces in the nation "that would wipe out, if they could, the labor movement in America, just as it was wiped out in Germany or just as it was wiped out in Italy."

The Report of the Executive Council. The prospect for 1936 was, therefore, for a rough and tumble fight for control of the organizational policy of the A. F. of L. It is interesting, in the light of this, to review the points selected for emphasis

in the "Report of the Executive Council" to the 1935 convention. This document began with the statement that "The past year has been one of momentous consequence to the labor movement of this country. The enactment of Federal substantive law recognizing Labor's right to organize in unions so as to have the machinery for collective bargaining, with the consequent obligation devolving upon employers to respect this right and do their part in putting it into effect, was an event of great importance." The reference was, of course, to the Wagner Labor Relations Bill.

Elaborating the point, the Report stated, "Under the National Labor Relations Act, we have every reason to believe that new goals in the field of labor relations will be achieved. The one outstanding question in connection with this legislation is to what extent will the National Labor Relations Board be permitted to protect the right to organize and bargain collectively under the commerce clause of the Constitution."

The final verdict of the A. F. of L. on the NRA codes, a revival of which was demanded in the convention, was as follows: "In general it may be stated that Labor had no voice in the determination of code provisions, in code administration, or in adjustments in code provisions as they were found necessary. United action of Labor and management was the exception not the rule. . . . It cannot be denied that the NRA resulted in certain economic and social benefits. Minimum standards were adopted as a base upon which to build a better economic structure. Child labor was virtually eliminated. Unfair trade practices which had been eating into the very core of our industry and trade were brought under some degree of control. The way was cleared for progress. On the other hand, it must be recognized that those steps which were taken did not go far enough and that there were certain major insufficiencies which must be remedied in our next programme for national economic control. These may be summarized as follows. (1) Insufficient formulation of policy and adherence thereto; (2) Insufficient labor participation in code making, code administration and code reformation; (3) Insufficient statistics on which to base the entire programme; (4) Insufficient powers of enforcement."

The following laws were selected from the great number passed as being of particular benefit to labor: Labor Disputes Act (Wagner National Labor Relations); Security Act; Law to stabilize the coal industry (Guffey Bill); Air Mail Act providing rates of compensation and working conditions for all pilots; Forty-hour week for 121,069 postal employees with no reduction in wages; Railroad Retirement Act (later declared unconstitutional); The four billion dollar relief bill; Repeal of the last 5 per cent cut in Federal salaries; The appropriation for the repatriation of the Filipinos in U.S.; The prison labor law prohibiting the transportation of prison-made products into States having State use systems.

Membership. The total membership of the American Federation of Labor in the month of August, 1935, as reported to the convention by Secretary Morrison, was 3,153,913. This is an increase of 545,902 over the membership reported for the same month in 1934. The average paid membership for the 12 months ended Aug. 31, 1935, was 3,045,347 in 109 national and international unions and 1354 directly affiliated local trade and Federal labor unions. In the preceding year, as reported to the 1934 convention, there were 2,608,011 members

in 109 national and international unions and 1788 directly affiliated local organizations. Thus the gain in average paid-up membership in the past year was 437,336. Part of the decrease in the number of directly affiliated groups was due to the transfer to the United Brotherhood of Carpenters and Joiners of all directly affiliated local unions in logging and timber operation and sawmills. The disbanding or suspension of 620 local trade and Federal labor unions in direct affiliation with the American Federation of Labor during the year 1934-35 was offset in part by the organization of 272 new groups of this type chartered during the year.

Although the number of affiliated national and international unions reported to the convention was the same in 1935 as in 1934, a change in make-up took place during the year. The Friendly Society of Engravers and Sketchmakers, a small group of skilled craftsmen making designs and plates for the textile and wall-paper industries and others using similar processes, which had affiliated with the American Federation of Labor in 1933 after years of independent activity, withdrew its affiliation in 1935. During 1935 the International Union of United Automobile Workers was chartered as an affiliate. After the close of the fiscal year covered by the executive council's report (Aug. 31, 1935), another international charter of affiliation was issued, in this instance to the United Rubber Workers. While these charters were not issued in time for the organizations of automobile workers and rubber workers to participate in the 1935 convention as internationals, their admission raised to 110 the number of national and international unions affiliated with the American Federation of Labor. At the meeting of the executive council held immediately upon the adjournment of the convention, decision was reached to charter as a national union in the near future the organized sleeping-car porters, now formed into directly affiliated local unions.

Make-up of the Executive Council. The executive council for the year 1935-36 thus constituted was: President, William Green, United Mine Workers; first vice president, Frank Duffy, United Brotherhood of Carpenters and Joiners; second vice president, T. A. Rickert, United Garment Workers; third vice president, Matthew Woll, International Photoengravers' Union; fourth vice president, John Coefield, United Association of Plumbers and Steamfitters; fifth vice president, Arthur Wharton, International Association of Machinists; sixth vice president, Joseph N. Weber, American Federation of Musicians; seventh vice president, G. M. Bugnizet, International Brotherhood of Electrical Workers; eighth vice president, George M. Harrison, Brotherhood of Railway Clerks; ninth vice president, Daniel J. Tobin, Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers; tenth vice president, William L. Hutcheson, United Brotherhood of Carpenters and Joiners; eleventh vice president, John L. Lewis, United Mine Workers; twelfth vice president, David Dubinsky, International Ladies' Garment Workers Union; thirteenth vice president, Harry C. Bates, Bricklayers, Masons, and Plasterers' International Union; fourteenth vice president, Edward J. Gainer, National Association of Letter Carriers; fifteenth vice president, W. D. Mahon, Amalgamated Association of Street and Electric Railway Employees; secretary-treasurer, Frank Morrison, International Typographical Union. With the exception of the president and the secretary-treasurer, who are not officers of their respective unions, the members of the executive council

of the American Federation of Labor are also elected officials of their respective organizations, all except Frank Duffy and Matthew Woll being international presidents.

LABOR ARBITRATION. Among the confusions incident to the declaration by the Supreme Court that the National Recovery Act was unconstitutional, none was more serious than that in the field of government control of labor disputes. In recent years three boards have acted in this field, the National Labor Board, appointed in August, 1933, with Sen. Robert Wagner as chairman; its successor, the National Labor Relations Board, appointed on July 9, 1934, pursuant to authority contained in a joint congressional resolution, which was affected by the Schechter decision; and its successor of the same name, appointed in August, 1935, under a new act of Congress popularly known as the Wagner Act.

The First Labor Relations Board. The first National Labor Relations Board had two chairmen during its lifetime, Lloyd K. Garrison, dean of the Law School of the University of Wisconsin, who resigned, and Francis Biddle of Philadelphia, who also resigned to allow the reconstitution of the Board under the new act. The Board was active until June 16, 1935, and prepared and published two volumes of its decisions, vol. i covering the period from July 9, 1934, to December, 1934, and vol. ii from Dec. 1, 1934, to June 16, 1935 (U.S. Government Printing Office, 1935). These volumes report a total of 386 cases covering all aspects of the field of labor disputes and give the decisions of the Board in full, thus constituting one of the most interesting body of formal labor law material in existence. A cursory examination of the decisions reveals that the recurring difficulties dealt with were: (a) contention over the right of labor to bargain collectively; (b) the question of company unions; (c) charges of discrimination in firing, usually with the alleged purpose of defeating an attempt at unionization; (d) "interference, restraint, and coercion," usually on the part of the employer; (e) the question of majority rule in determining what employee-group should be recognized for purposes of collective bargaining; and (f) the determination of the meaning of the phrase, "representatives of their own choosing" with regard to employees.

Outstanding Cases. In the course of dealing with these and other difficulties, the Board rendered numerous decisions of a routine character, many of them essentially reiterations of decisions made in similar cases earlier, but others, for one reason or another, were dramatized in the press and assumed the proportions of national issues. Among the latter, the following were perhaps the most spectacular: the Donovan case, the Houde Engineering Corporation case, the Colt's Patent Fire Arms Manufacturing case and the Jennings case. The first named was undoubtedly the most extraordinary, for it involved a dispute between an employee and a government organization, the National Recovery Administration. The Board's decision (No. 39) begins and ends as follows:

On June 18, 1934, effective June 30, 1934, John L. Donovan, who had been serving as President of the NRA union affiliated with the American Federation of Government Employees, was discharged by General Johnson from his position as technical advisor to the Labor Advisory Board. This discharge precipitated a controversy in which the Government maintained that Donovan had been discharged for inefficiency and other sufficient reasons, while Donovan and the union asserted that he had been discharged for union activity. After a considerable history . . . General Johnson, the union, and Mr. Donovan submitted the case to this Board for arbitration, and agreed to abide by its ruling. . . . The Board . . . rules that John L. Donovan

should be immediately reinstated to his former position on the staff of the Labor Advisory Board.

This case caused more than ordinary stir because it involved the government itself in a labor dispute circling around the vexed question of discrimination against union leaders; because it was, prior to being submitted to the Board, the occasion for the mass picketing of NRA headquarters, and fairly constant heckling of General Johnson; and because it afforded the spectacle of the dramatic General Johnson suffering defeat at the hands of a governmental agency operating under powers derived from the National Recovery Act of which he was one of the architects!

The Houde case (No. 68) gained its importance from the fact, as phrased in the decision, that the Houde Corporation "declined to recognize the Union as the collective bargaining agency for all the employees eligible to vote in the election. The company insisted that under Section 7(a) of the Recovery Act it was obligated to bargain collectively not merely with the Union but also with the organization voted for by the minority of employees." It is obvious that this carried the Board to the heart of several of the problems which were to be most vexing to it. The decision rendered, therefore, was a matter of considerable interest to both employers and employees. It was handed down on Aug. 30, 1934, and read in part as follows:

. . . when a person, committee, or organization has been designated by the majority of the employees in a plant or other appropriate unit for collective bargaining, it is the right of the representative so designated to be treated by the employer as the exclusive bargaining agency of all employees in the unit, and the employer's duty to make every reasonable effort, when requested, to arrive with this representative at a collective agreement covering terms of employment of all such employees.

The Colt case (No. 248) held especial interest because it concerned a company engaged in the manufacture of munitions and therefore was a subject of investigation by the Senate Munitions Committee at or about the time the case was being tried. The matter at issue was the effort of the company to avoid dealing with the regular unions by attempting to form a company union with which to bargain. The efforts of the regular unions to obtain recognition continued for over a year without a strike being called. The Board held that the Colt Company had clearly violated Section 7(a).

The Jennings case (No. 195) was one of the most persistently debated cases in the history of the Board. It originally involved the discriminatory discharge of Dean S. Jennings, an editorial worker on the San Francisco *Call-Bulletin*, who had arranged with his employer that his vacation coincide with a convention of the Newspaper Guild that he might attend the convention as a delegate, and who was later notified that the arrangement was canceled, whereupon, on his registering objections, he was compelled to resign. The case as argued involved the question of the jurisdiction of the Board, which was decided in the affirmative. On Dec. 3, 1934, the Board held that Jennings had suffered discriminatory discharge and ordered him reinstated. The case was reopened on Dec. 7, 1934, at the request of Mr. Blackwell Smith, acting at the request of Mr. Donald R. Richberg, head of the National Recovery Administration. The purpose was to question the jurisdiction of the Board, it being alleged that the case more properly belonged to the authorities administering the Newspaper Code. The Board denied this interpretation and reaffirmed its original decision, on Dec. 12, 1934. But Mr. Jennings was never reinstated. In fact, speaking at the hearings on the Wagner Bill, Chairman

Biddle asserted that action in accordance with decisions was obtained in but 34 out of 86 disputed cases. While 33 cases were referred to the Department of Justice, no action was taken on them.

Other Labor Boards. Other boards handling labor disputes cases during the year were the so-called Textile Labor Board, the Automobile Labor Board, and the Petroleum Labor Board. All went out of existence when the NRA was declared unconstitutional except as they were continued for one reason or another by executive order of the President. Few of these boards have as yet rendered reports of their activities during the first six months of 1935, but some idea of the extent of them can be gained by reference to material of earlier date. From Sept. 26, 1934, to the end of the year, the Textile Labor Board received 1600 cases involving 579 mills, all complaints about failure to rehire following the great textile strike of 1934 in the settlement of which the employers agreed not to practice discrimination. The Automobile Labor Board, from Mar. 29, 1934, to Feb. 5, 1935, received a total of 2035 cases of which 1061 were settled informally, over 500 were withdrawn, and 199 were carried to a decision by the date specified. These cases chiefly involved questions of discrimination, improper discharge, and misapplication of seniority rules. Up to the adverse decision on the Schechter case, the Petroleum Labor Board chiefly handled cases alleging violations of the wages and hours provisions of the Petroleum Code, discrimination, and disputes over the choice of representatives for collective bargaining. The relative volume of these cases can be seen from the fact that 3945 cases fell in the first category, 77 in the second, and 64 in the third.

The Second Labor Relations Board. The second effort to establish a National Labor Relations Board was made in August, 1935, under an act passed on July 5. The Board members appointed were Joseph Warren Madden, chairman, professor of law in the University of Pittsburgh, John M. Carmody, former member of the National Mediation Board for the railway industry and later associated with the FERA as labor adviser, and Edwin S. Smith, a member of the original Board of this name. The new setup differed, in one major respect, from the previous one in that the new law contained thoroughgoing enforcement provisions. Its most significant tasks may be summarized as follows: (1) it was to guarantee to labor its right to join organizations and bargain collectively; (2) it was to protect labor against discriminatory hiring and firing which has as its object the interference with labor organizations; and (3) it prohibited the formation of employer-controlled company unions if they are used as a means of circumventing the act and the formation of regular employee unions.

In reviewing the new act (*Survey Graphic*, December, 1935) Lloyd K. Garrison, a chairman of the first board of this name, pointed out that these three points were not new but received judicial sanction in the famous case of *Texas and New Orleans Ry. Co. v. Brotherhood of Ry. and Steamship Clerks* decided by the Supreme Court in 1930. But a fourth point covered is the most debated of all: that which provides that the employer must negotiate with the bargaining representative selected by the majority of the employees. As pointed out above, this was a matter with which the previous board had great difficulties. However, it is important that the principle has been accepted by earlier governmental boards handling labor disputes such

as the National War Labor Board, the Railroad Labor Board, the National Labor Board, the original National Labor Relations Board, and the Petroleum, Steel, and Textile Boards. Nevertheless, the decisions rendered on this point will be crucial to the success of the new Board. In connection with point (3) above, it is significant to note that late in December the National Industrial Conference Board reported that employee representation plans were spreading rapidly, especially in iron and steel, automobiles, rubber, and petroleum refining, or precisely where trade union representation is weakest.

The Constitutionality of the Act. Unfortunately, the constitutionality of the Board was immediately called into question, first by the Subcommittee on Industrial Relations and Labor Legislation of the National Lawyers Committee of the American Liberty League in a report issued on Sept. 5, 1935, and generally taken to reflect the opinion of the more recalcitrant employers of the nation, and, second, and most importantly by District Judge Merrill E. Otis of Kansas City on Dec. 21, 1935, ruling on the so-called Majestic Flour Mills case involving the right of the employees to organize without employer interference. Judge Otis argued that the act was unconstitutional because "Manufacturing is not commerce nor any part of commerce. . . . Congress, therefore, under the commerce power, cannot regulate manufacturing. Hence it cannot regulate the relations between employers and employees in manufacturing as commerce." On December 24 the Board announced that it would appeal the decision to the Circuit Court of Appeals and point out that a decision of the latter may be reviewed by the Supreme Court of the United States.

The Work of the Department of Labor. Under the new National Labor Relations Board conciliation and arbitration plays no part, work of this character being chiefly centred at present in the hands of the conciliation service of the Department of Labor. During the first nine months of 1934, this service reported that it had handled 944 disputes involving 469,265 employees. It is expected that the volume of work will grow now that the boards operating under the codes have ceased to exist. A second permanent organization existing apart from the NLRB, and dealing with labor disputes, is National Mediation Board handling labor relations on the railroads, and consisting of William Leiserson, chairman, James W. Carmalt and Otto M. Beyer. The board reported that in 1935 all disputes had been settled amicably. It also pointed out that there were 3021 contracts between the carriers and the different crafts and groups of employees, 73 per cent of which were with national labor unions, and 77 per cent of which were in force on the Class I railroads which employ 90 per cent of all railroad workers.

LABOR LEGISLATION. The year 1935 was a landmark in the history of labor legislation. Besides the far-reaching programme adopted by Congress, every one of the 44 States holding regular legislative sessions enacted at least some new legislation for the protection of the safety, health, or security of labor. In addition, more than a dozen States—including three of the four not holding regular sessions this year—had special sessions, thus adding to the number of labor laws adopted.

By far the most important new labor law of the year is the Social Security Act adopted by Congress. Besides setting up a Federal contributory

system of old age benefits, this Act provides Federal encouragement and aid to the States for unemployment compensation, old age assistance, mother's pensions, pensions for the blind, maternal and child health, child welfare, public health, and vocational rehabilitation. Other new Federal labor laws of leading significance are the National Labor Relations Act, the new Railroad Retirement Act, and the Bituminous Coal Conservation Act. Congress also adopted unemployment compensation and old age pension laws covering the District of Columbia.

In the States, chief significance attached to the adoption of unemployment compensation laws by nine States—Alabama, California, Massachusetts, New Hampshire, New York, North Carolina, Oregon, Utah, and Washington—and new old age pension laws in 11—Alabama, Arkansas, Connecticut, Florida, Illinois, Mississippi, Missouri, Oklahoma, Rhode Island, Texas, and Vermont. At the end of 1935 there were 10 States having unemployment compensation laws (Wisconsin enacted such a law in 1932) and 39 with old age pension laws. Kentucky, Oklahoma, and Texas submitted to referendum constitutional amendments authorizing old age pension legislation, and they were adopted. Closely related as social insurance measures were the new accident compensation laws adopted by Florida and South Carolina, leaving only two States—Arkansas and Mississippi—without this modern social legislation. An accident compensation measure designed to cover workers engaged in interstate transportation, the largest single group still unprotected, was introduced in Congress by Senator Robert F. Wagner as prepared by the American Association for Labor Legislation in cooperation with compensation administrators and representatives of the groups directly affected. Twenty-five additional States gave formal legislative acceptance to the terms of the Wagner-Peyser Act for cooperation in the nationwide system of public employment offices, leaving only seven States—Kansas, Maine, Maryland, Michigan, Mississippi, Montana, and South Carolina—without such laws. Four more States ratified the Child Labor Amendment to the Federal Constitution, making a total of 24 State ratifications and leaving only 12 more needed to make this Amendment part of the Constitution.

Amendments to accident compensation laws were made in about 30 States. Several of these changes are especially noteworthy. New York, after some years of experience with limited-list coverage, extended its law so as to cover all occupational diseases; North Carolina made compensable a list of 25 diseases, including silicosis; and West Virginia made special limited provision to compensate workers who contract silicosis. Growing interest in the occupational disease problem was also shown by the creation of special investigating commissions in four States—California, Maryland, Michigan, and New Hampshire. Another significant development in accident compensation was the growing demand for exclusive State insurance funds. Such a bill received the strong support of Governor Lehman in New York. Partly to meet the serious problem of insolvency, which recently has been one of the chief causes of complaints against insurance by private carriers, four States—Minnesota, New York, New Jersey, and North Carolina—adopted schemes for assuring payment of benefits by means of special funds raised by assessment upon the carriers. The cost of administering accident compensation was as-

sessed upon insurance carriers in the new laws of Florida and South Carolina and by amendment in Idaho and Nebraska. Injured employees were given the right to select their physicians from panels of doctors chosen by county medical societies and the industrial commissioner under a New York amendment which also included other important changes affecting medical treatment and care.

Although in the leading industrial States detailed safety and health regulations are now issued as administrative rules under general statutory authorizations, a dozen State legislatures adopted statutory safety and health laws. Maine and North Carolina created boards of boiler rules empowered to adopt and enforce regulations for the prevention of boiler explosions. North Carolina authorized general safety rule-making by the division of standards and inspection. Illinois created a mining investigating commission to recommend changes in the State mine safety laws, and Indiana appointed a commission to study the accident problem in the smaller coal mines. North Dakota provided for the licensing of coal mines to provide funds for the enforcement of mine safety regulations. Oregon strengthened its electrical code.

The prevention of fee-charging employment agency abuses was the purpose of a law requiring State licensing and regulation enacted in Maryland. Illinois also revised and reenacted its State licensing law and Colorado adopted special regulations covering theatrical employment agencies. In New York, one of the few States with local licensing of employment agencies, a bill for State regulation was defeated by only a narrow margin. Operators of company stores and labor camps, however, were required to obtain permits from the Industrial Commissioner.

Interest aroused by the movement for the Federal Child Labor Amendment was in part responsible for several important advances in State laws regulating the employment of minors. Connecticut and Pennsylvania raised the age of employment to 16, and New York and Texas provided that minors must attend school until 16. In Wisconsin, minors, if unemployed, must under a new law attend school until 18.

Laws further limiting the hours of employment of women and minors were adopted in a dozen States. These included Connecticut, where the weekly maximum was reduced from 55 to 48 hours and the daily maximum from 10 to 9 for both women and minors; New York, where the hours limit for male minors was reduced from 54 to 48 a week and from 9 to 8 a day, and certain overtime provisions were eliminated from the women's 48-hour law; and Massachusetts, where the existing 48-hour law for women was extended in coverage. Delaware repealed all laws prohibiting the employment of women at any time of the day or night where such laws hinder operations of any establishment where continuous processes are necessary; and Massachusetts extended until April, 1936, the power of the Commissioner of Labor and Industries to permit the employment of women in textile mills until 10 p.m.

In several States hours laws affecting men as well as women were adopted. Illinois for the first time adopted a one-day-of-rest-in-seven law; and Massachusetts extended its existing law on this subject to cover firemen and watchmen. Idaho and Montana strengthened their laws regulating hours in mines and dangerous employments. Congress enacted a 40-hour week law giving postal

service employees a five-day week. The increasingly serious problem of excessive hours of duty required of some commercial motor vehicle drivers resulted in regulatory legislation in five more States, making a total of 17 which have such laws in addition to the score of States which deal with this subject by administrative regulations.

Despite the introduction of minimum wage proposals in several State legislatures and passage through one house in Michigan and Pennsylvania, the only legislation enacted on this subject was in Illinois where the expiration date in the 1933 act was removed to make the law permanent; in Massachusetts where decrees issued under the "voluntary" act of 1912 were brought under the new mandatory act of 1934; and in New Hampshire which, following Massachusetts' action in 1934, ratified the interstate compact on minimum wages. About 15 States, however, adopted laws on the subject of wage collection and wage payment. Thus the labor department's power to aid workers to collect unpaid wages was strengthened in California, Michigan, and Washington; and the Massachusetts and New York weekly wage-payment laws were extended to cover all except agricultural and private domestic employments. Several States enacted laws providing for payment of the prevailing wage rate on public works.

Important improvements were made by Connecticut and New York in the regulation of industrial homework. Certificates must now be obtained from the State labor department by all Connecticut homeworkers and provision is made for control of the giving out of such work. In New York, the existing law was extended to cover all homes in the State where homework is carried on and employers who wish to give out homework were required to secure permits from the Industrial Commissioner who may refuse them in the event that such work is found to jeopardize either standards of employment in factories or the homeworker's welfare.

Laws restricting the issuance of injunctions in labor disputes were enacted in four States—Maryland, Massachusetts, New York, and North Dakota; and in Connecticut a board of mediation and arbitration was created in the labor department. Commissions on interstate compacts were created in Connecticut, New Jersey, New York, and Vermont. Two States—Alabama and Rhode Island—enacted laws creating new State departments of labor; and Florida and South Carolina created State industrial commissions to administer their new workmen's compensation laws. Commissions were created in Alabama, California, Massachusetts, Washington, and the District of Columbia to administer unemployment compensation laws. In New Hampshire, New York, Oregon, and Utah this duty was assigned to existing labor departments. Amendments directly affecting labor law administration were enacted in several other States.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, consistently attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. Progress of the Association was recorded in its substantial quar-

terly, the *American Labor Legislation Review*. A cumulative index to the first 20 volumes of this *Review* was published in 1931.

The Association from the beginning has given special attention to social insurance legislation, and to laws for the prevention of industrial accidents and occupational diseases, the mitigation of the evil effects of unemployment through long-range planning of public works, the regulation of fee-charging employment agencies and the development of public employment offices, and for the provision of one day of rest in seven. It places special stress upon effective administration of the laws.

In 1935 the Association's quarterly *Review* completed its 25th annual volume, an event celebrated in the December issue by publication of comments from numerous "old subscribers."

The Association's 29th annual meeting was held in New York City, December 27-30, several sessions being held jointly with the American Sociological Society, the American Statistical Association, and the American Farm Economic Association.

The president in 1935 was Joseph P. Chamberlain; the secretary, John B. Andrews, and both were re-elected. Headquarters is at 131 East 23rd Street, New York City. See **LABOR LEGISLATION**.

LABOR RELATIONS BOARD. See **LABOR ARBITRATION**.

LABOR TROUBLE. See **TRADE UNIONS**.

LABRADOR. A dependency of Newfoundland, forming the most easterly part of the North American continent. Area, 118,400 sq. miles; population (Jan. 1, 1934), 4411 compared with 4324 (1931 census). Capital, Battle Harbour. See **NEWFOUNDLAND**.

LABUAN. See **STRAITS SETTLEMENTS**.

LACHAISE, là'shāz', GASTON. An American sculptor, died in New York City, Oct. 18, 1935. Born in Paris, France, Mar. 19, 1882, he attended the Barnard Palissy School of Industrial and Applied Arts and later l'École Nationale des Beaux Arts. In 1906 he came to the United States and for a time was a sculptor's assistant in Boston, later becoming associated with Paulanship. During this association he worked on many important projects, and did the carving on the Manship Memorial to J. Pierpont Morgan, now in the Metropolitan Museum of Art. In 1916 he became a naturalized American citizen and opened his own studio.

He first exhibited at the Bourgeois Gallery, New York in 1918 and again in 1920. It was here that the critics discovered him and predicted his establishment as one of the foremost sculptors in the country. He exhibited also at the Intimate Gallery of Alfred Stieglitz, 1927, at the Brummer Gallery in 1928, and at the Museum of Modern Art in 1935. His work is represented in many American museums, including the Cleveland Museum of Art, the Newark Museum, the Pennsylvania Museum, Philadelphia, the Morgan Memorial Museum, Hartford, Conn., the Phillips Memorial Gallery, Washington, the Smith College Art Museum, as well as in many private collections, notably those of Adolph Lewi-sohn, Alfred Stieglitz, A. E. Gallatin, and Mrs. John D. Rockefeller, jr.

Although not to be considered the outstanding American sculptor, there was no doubt that he made significant contributions to American sculpture. His series of monumental female figures were his best known works. Critics differed as to the quality of these, some considering them sublime, others gross. His heroic figures were said to fol-

low the tradition of fine art and were compared to those of Michaelangelo. His delicate figurines of dolphins, sea gulls, and peacocks, and his interesting portrait busts, which combined character analysis and surface verisimilitude to an extraordinary degree, were perhaps better known to the general public.

Among his well known works were a decorative frieze in the American Telephone and Telegraph Building, New York; the bronze sea gull on the pyramid of granite of the National Coast Guard Memorial in Arlington Cemetery, and four sculptural panels representing "Understanding, the Spirit of Progress"; "The Conquest of Space"; "Gifts of Earth to Mankind," and "Invention Seizing the Light of the Sun," for the R.C.A. Building in Rockefeller Center, New York. Not long before his death he was commissioned to do a group symbolizing the amalgamation of the races in America to be placed in Fairmont Park, Philadelphia. He had completed only the first small model when taken ill.

LACROSSE. Canada regained the Lally Trophy and international lacrosse supremacy in 1935, defeating a United States fifteen in three successive games in Western Canada in the summer. The series, in which the Americans lost, 15-7, 14-9, 14-9, was played under box lacrosse rules which call for play indoors on a wooden floor, where the distance between goals is 60 yards as compared to the 90 yards in the outdoor game played in the United States. The United States players experienced difficulty in performing well in the cramped quarters but were tremendously successful after the Lally Trophy matches in a series of exhibitions through Western Canada.

Although no champion is named by the ruling body and the game is played almost exclusively in the East, the Mount Washington Club of Baltimore must be given top honors for the campaign. The clubmen, who in 1934 shared laurels with Johns Hopkins, were undefeated in 1935, and Johns Hopkins was beaten by St. John's of Annapolis, 10 to 9. St. John's later fell before Mount Washington, which also downed Yale and Harvard. Princeton was one of the finest college teams, unbeaten in seven games, with Army and Stevens also strong.

In an effort to foster the game which had been dropped as a demonstration sport at the 1936 Olympics, the United States Intercollegiate Association made plans to send a team to Vancouver in 1936 for the Golden Jubilee series there. Another squad will go to England and a combined Oxford-Cambridge team will play in the United States.

LAFAYETTE COLLEGE. An institution for the higher education of men in Easton, Pa., founded in 1826. The registration in the autumn of 1935 was 834. The faculty numbered 94. The productive funds amounted to \$3,835,000 in 1935, and the income for the previous year was \$140,760. The number of volumes in the library was 90,000. President, William Mather Lewis, A.M., LL.D., Litt.D.

LANDS, PUBLIC. According to the annual report of the Commissioner of the U.S. General Land Office for the fiscal period ended June 30, 1935, the vacant, unreserved, and unappropriated public lands in the United States are not now subject to disposition under the nonmineral public land laws, having been temporarily withdrawn from settlement, location, sale, or entry, and reserved for classification. The lands in the States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South

Dakota, Utah, and Wyoming were withdrawn by Executive order of Nov. 26, 1934, pending determination of the most useful purpose to which such lands may be put in consideration of the provisions of the Taylor Grazing Act of June 28, 1934, and for conservation and development of natural resources, and the lands in the States of Alabama, Arkansas, Florida, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Nebraska, Oklahoma, Washington, and Wisconsin were withdrawn by Executive order of Feb. 5, 1935, pending determination of the most useful purpose to which said lands may be put in furtherance of the land programme. Executive order of May 20, 1935, amended the order of Nov. 26, 1934, so as to permit the completion of exchanges authorized by section 8 of the Taylor Grazing Act.

The area of the unappropriated and unreserved public lands as of June 30, 1934, was approximately 165,695,497 acres, not including Alaska. The area of the unappropriated and unreserved public lands in Alaska was approximately 346,174,242 acres.

Because of the withdrawals made by the Executive orders there were no unreserved public lands at the close of business on June 30, 1935. The areas which were included in entries, selections, filings, etc., during the fiscal year were 1,752,010 acres in the public-land States and 7068 acres in Alaska, a total of 1,759,078 acres. However, the net area of the public land was not decreased to that extent as considerable areas were restored to the public domain through the rejection of applications and the cancelation of entries.

There also remained subject to lease or disposal 38,915,684.62 acres of patented lands in which the Government had reserved some or all of the mineral deposits.

The total cash receipts from sales, leases, and other disposals of public lands (including receipts from copies of records, sales of Government property, etc.) were \$4,700,135.47, and from sales of Indian lands \$100,026.77, an aggregate of \$4,800,162.24, all of which was deposited in the Treasury; whereas the total expenditure from operations was \$1,142,393, as hereinafter shown, making a net return of \$3,657,769.24.

Receipts from bonuses, royalties, and rentals under laws providing for the leasing of mineral rights on the public domain (including royalties and rentals from potash deposits and royalties on coal leases in Alaska) aggregated \$4,004,054.54, of which \$3,924,652.44 was received under the act of Feb. 25, 1920 (41 Stat. 437). The largest receipts under this act were from lands in California, the amount being \$1,984,603.95. Wyoming was second, with receipts amounting to \$1,391,220.92. Under the provision of the mineral leasing act cited, each State receives 37½ per cent of the receipts thereunder from the public lands within its borders, the reclamation fund receives 52½ per cent, and the other 10 per cent remains in the Treasury of the United States as miscellaneous receipts.

Division of Grazing. The director of the Division of Grazing, F. R. Carpenter, in his first annual report to the Secretary of the Interior for the fiscal year ending June 30, 1935, stated that the act of June 28, 1934 (48 Stat. 1269), commonly known as the "Taylor Grazing Act," is a new development in the national policy for conservation of natural resources in accord with the traditions of the Department of the Interior.

The U.S. Director of Grazing was authorized, with the concurrence of the agencies concerned and the approval of the Secretary, to select such as-

sistants as were required for the administration of the Taylor Grazing Act from the staffs of the Geological Survey, the General Land Office, and the Division of Investigations. At the close of the year a total personnel of 35 people were thus assigned to the Division—21 from the Geological Survey, 8 from the Division of Investigations, and 6 from the General Land Office.

The primary task in the administration of the public domain under the Act contemplates establishment of grazing districts where the area of public land is adequate to warrant such action for (1) conservation of natural resources, and (2) stabilization of the livestock industry dependent upon the range. Over a long period of years grazing use in excess of carrying capacity has caused a progressive deterioration of that land through displacement of the more palatable forage plants by species of low palatability or of no worth for grazing. In this transition natural erosion processes have been accelerated, causing loss of soil fertility, and in places even actual removal of soil cover, thus rendering the land incapable of producing a density of any vegetative growth equivalent to natural conditions. This deterioration has been in progress over a period of 35 to 40 years.

Following a series of State-wide hearings the committees elected at such hearings considered the range problems of their respective States and recommended the establishment of 50 districts involving an aggregate area of approximately 142,000,000 acres of vacant, unreserved, unappropriated public land. The action of these committees was taken without reference to the provision in the existing law limiting the creation of such districts to 80,000,000 acres of vacant, unappropriated, unreserved public land. Accordingly, in the absence of further authority from the Congress, only 32 of the districts proposed could be established. The districts selected for establishment included areas in which range administration was most urgently needed and the lands were conveniently located for administration.

Division of Grazing, Circular no. 1, entitled *Rules Providing for Special Elections for District Advisors to Assist in the Management of Grazing Districts*, was approved by the Secretary, Apr. 23, 1935. Circular no. 2, entitled *Rules for the Guidance of District Advisors in Recommending the Issuance of Grazing Licenses*, was approved by the Secretary, May 31, 1935. These circulars contain the general regulations issued during the year for the administration of grazing districts.

In the preparation of these regulations an effort has been made to take immediate steps for range regulation in a manner that would permit needed readjustments to be made gradually and on the basis of thorough investigations. Furthermore, some time must be allowed to permit all interested persons to file applications for grazing permits and for the examination and rating of such applications under the terms of the Taylor Act.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body, commonly known as the Mormon Church, organized in 1830 at Fayette, N. Y., by Joseph Smith. Its membership is largely in the Mountain States, owing to the early migration of Mormons and their final settlement in Utah. For history see THE NEW INTERNATIONAL ENCYCLOPEDIA under MORMONS.

In 1935 the organization of this church included 115 stakes, 971 wards, and 80 independent branches, with a membership of 579,118. Each stake organization is a pattern of the general Church organization, with a stake presidency of three men and a high council of 12 men. Each stake comprises several wards. A bishop and two counselors preside over the ward. A branch presidency of three men presides over a branch. There were 13 missions in America with 416 branches and a membership of 110,271; the missions in Europe had 318 branches and a membership of 31,169, and those in the Pacific Islands with 158 branches and a membership of 17,297. Of the 1383 missionaries, 475 were at work outside the United States. The administrative affairs of the church and the performance of all church ordinances are attended to by the priesthood, consisting of the Melchizedek Priesthood, a senior order, with 90,028 male members and the Aaronic Priesthood, a junior order, with 92,771 male members.

Practically all wards have suitable buildings for worship, class instruction, and recreation. Stake conferences are held quarterly for church business and worship. Ward conferences are held annually.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptism, endowments, and marriages. It also maintains Brigham Young University (q.v.), Latter-day Saints Business College, 5 collegiate institutes, 1 high school, 88 senior seminaries (schools adjoining high schools and providing special religious instructions), and 262 junior seminaries (schools for the religious training of junior high school students). Enrollment in senior seminaries, 16,759; in junior seminaries, 13,956.

The auxiliary bodies include a women's relief society, numbering, in 1935, 70,515 members, who care for the sick and poor. The Sunday schools in 1935 had an enrollment of 302,817 pupils and 29,539 officers and teachers. The two mutual improvement associations, composed of young people, had an enrollment of 129,530. The primary association for those under 12 had 115,945 members.

The church holds in Salt Lake City, Utah, two general conferences each year, one during the first week in April and the other the first week in October, at which the work of the general authorities is reviewed. In 1935 these authorities were: First Presidency: Heber J. Grant, president; J. Reuben Clark, Jr., first counselor; David O. McKay, second counselor. Quorum of the Twelve Apostles: Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, Joseph Fielding Smith, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, John A. Widtsoe, Joseph F. Merrill, Charles A. Callis, and Alonzo A. Hinckley, apostles. First Council of Seventy: J. Golden Kimball, Rulon S. Wells, Levi Edgar Young, Antoine R. Ivins, Samuel O. Bennion, John H. Taylor, and Rufus K. Hardy. Presiding Bishopric: Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

LATTER-DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844, several factions developed among the Latter-day Saints. In 1852, in Wisconsin, one of these scattered congregations effected a partial reorganization, which was completed in 1860 under the name of "Reorganized Church of Jesus Christ of Latter-day Saints."

In 1935 the church reported a membership of 114,300, which included members throughout the United States and in Canada, Great Britain, Aus-

tralia, Germany, Isle of Pines, the Netherlands, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. There were 745 churches, 7000 ministers, and 730 Sunday schools with 50,000 pupils. The church maintains Graceland College at Lamoni, Iowa, and homes for the aged and the Independence Sanitarium at Independence, Mo. The official periodical, the *Saints' Herald*, is issued weekly.

Dr. Frederick M. Smith has been a member of the First Presidency since 1902 and president since 1915. Frederick A. Smith has been Presiding Patriarch since 1913 and L. F. P. Curry Presiding Bishop since 1932. Headquarters are at the Auditorium, Independence, Mo.

LATVIA. A Baltic republic, established Nov. 18, 1918. Capital, Riga.

Area and Population. Latvia has an area of 25,402 square miles and a population estimated in 1934 at 1,939,350 (1,900,045 at the 1930 census). About 35 per cent of the population was concentrated in urban communities of 2000 or more. Populations of the chief cities in 1930 were: Riga, 377,917 (1934 estimate, 379,044); Liepāja (Libau), 57,238; Daugavpils (Dvinsk), 43,226; Jelgava (Mitau), 33,048. The division of the 1930 population by nationality was: Letts, 73.42 per cent; Russians, 12.52; Jews, 3.68; Germans, 3.12; Poles, 1.36 per cent. By religious affiliation the division was: Protestants, 56.58 per cent; Roman Catholics, 23.69 per cent; Greek Catholics and Orthodox, 8.93 per cent.

Education. About 13.6 per cent of the population over 10 years of age was illiterate in 1930. The school attendance in 1933-34 was: Elementary, 219,551; secondary, 20,167; University of Latvia at Riga, 8585

Production. A total of 4,813,000 acres, or 30 per cent of the area, was under cultivation in 1930; 4,246,000 acres were meadow and pasture; and 4,100,000 acres were woods and forests. Production of the chief crops in 1934, with 1933 figures in parentheses, was (in 1000 units): Wheat, 8051 bu. (6725); rye, 16,210 bu. (13,979); barley, 10,002 bu. (8955); oats, 26,770 bu. (22,783); potatoes, 53,123 bu. (51,534); linseed, 597 bu. (485); flax, 35,671 lb. (27,337). The 1934 livestock statistics were: horses, 375,200; cattle, 1,147,600; sheep, 1,208,900; swine, 686,400. State and private forests in 1932-33 produced 5,959,000 cu. meters of timber. Industrial enterprises on Jan. 1, 1934, numbered 3788 and the number of employees was 59,853. The chief industrial lines were metallurgy, chemicals, textiles, mineral working, woodworking, and foodstuffs.

Foreign Trade. Imports for consumption in 1934 were valued at 94,888,000 lats (91,368,000 lats in 1933) and exports of Latvian products at 85,431,000 lats (81,504,000 lats in 1933). The leading imports were (in 1000 gold dollars): Metal manufactures, 1971; machinery, 1778; coal and coke, 1477; raw cotton, 999; wool yarn, 891; cotton fabrics, 766; other textiles, 796. Leading exports were (in 1000 gold dollars): wood (including pulpwood, mine timbers, and boards), 5881; butter, 2789; wood manufactures, 1850; flax, 909; clover seed, 836. Germany in 1934 supplied 24.5 per cent of the imports; United Kingdom, 22.6 per cent; United States, 7.1 per cent. Of the exports the United Kingdom purchased 37.8 per cent; Germany, 29.3 per cent; United States, 2.9 per cent.

Finance. For the fiscal year ended Mar. 31, 1936, budget estimates placed receipts of all kinds at 150,990,207 lats and expenditures at 150,975,099 lats. For 1934-35 budget estimates balanced at

142,162,832 lats, but preliminary returns indicated a deficit of 2,500,000 lats. In 1933-34 actual revenues were 129,500,000 lats and expenditures 137,300,000 lats. The public debt on Apr. 1, 1934, amounted to 84,650,000 lats (internal, 11,170,000; external, 73,480,000), compared with 105,478,000 lats on Apr. 1, 1933. The lat's par value previous to Jan. 31, 1934, was \$0.193; after that date, \$0.3267.

Communications. In 1934 there were 1836 miles of railway line, 770 miles of surfaced highways, and 2775 miles of navigable waterways. In 1933 the railways carried 12,327,000 passengers and 2,806,884 tons of freight while the waterways handled 968,087 tons. The net tonnage of vessels entering the ports with overseas cargoes in 1934 was 705,000 (677,000 in 1933).

Government. The Constitution of Feb. 15, 1922, vested executive power in a president, elected by Parliament for three years, and legislative power in the Saeima (Parliament) of 100 members, elected by direct popular suffrage for three years. On May 15, 1934, the government headed by Premier Karlis Ulmanis established a *de facto* dictatorship pending reform of the Constitution. Parliament was dissolved, its functions were assumed by the Ulmanis Cabinet, and the activities of the political parties were banned. President in 1935, Albert Kviesis.

History. The Fascist dictatorship established May 16, 1934, by Premier Karlis Ulmanis and his Minister of War, Gen. J. Balodis, continued in power during 1935 without a serious challenge to its rule from either the Leftist groups or the pro-Nazi element among the German minority. Parliament remained dissolved, political parties were banned, and those newspapers which were not suppressed were closely censored. Politically the government aimed at the elimination of all minority cultures and the development of a purely Lettish national state. It continued during 1935 its deflationary economic policy, based upon retention of the gold standard, maintenance of a balanced foreign trade through import restrictions and stimulation of exports, and the protection of agriculture by government subsidies and tariffs. Establishment of the Latvian Credit Bank to further these policies was approved by the cabinet Apr. 9, 1935.

As a member of the Baltic Entente (q.v.), Latvia participated in the conferences of the Foreign Ministers of the Baltic states held at Kaunas on May 6-8 and at Riga on December 10-11. See ESTONIA under *History* for the results of these conferences. Like the other Baltic states, Latvia during 1935 appeared to be wavering with regard to the alliances it should seek in the event of a war involving Germany and the Soviet Union. Besides the development of its relations with Estonia and Lithuania, Latvia explored the possibility of military coöperation with Sweden and Finland. Toward the end of 1935 the action of the dictatorship in lifting the ban on Hitler's autobiography, *Mein Kampf*, and the conclusion of a Latvian trade treaty with the Reich were regarded as indications of rapprochement with Germany. The related questions of defense and foreign policy were carefully considered at a conference of all Latvian representatives in European capitals and officials of the Foreign Office held in Riga during July.

LAW. The article LAW is divided into three parts: ADMINISTRATION, CONSTITUTIONAL AND PUBLIC LAW, and PRIVATE LAW. For developments in allied fields, see CRIME, INTERNATIONAL LAW,

REFERENDUM, MARRIAGE AND DIVORCE, LABOR ARBITRATION AND CONCILIATION, LABOR LEGISLATION, MEDICAL JURISPRUDENCE, ETC.

ADMINISTRATION

Courts. The British House of Lords, for the first time in a generation, sat on December 12, with Lord Chancellor Hailsham presiding as a Court for the trial of a member—young Lord de Clifford—on the charge of manslaughter, arising from an automobile collision. He had claimed the ancient privilege, guaranteed by *Magna Carta*, of "trial by his peers." After the prosecution's case was presented, the defense counsel submitted that there was nothing to answer, the peers retired for deliberation and upon their return, each rose, as his name was called, and announced "Not guilty, upon my honor."

The ancient office of Coroner has recently come under severe criticism in England for subjecting apparently innocent persons to grueling inquests, without the safeguards which attend the ordinary trial, such, e.g. as the exclusion of hearsay. Lord Chief Justice Hewart, *ex officio* Chief Coroner of all England, has pointed out, however, that the office retains considerable other jurisdiction beyond holding inquests.

The U.S. Supreme Court opened its October term on the 7th of that month, sitting for the first time in its new building. Despite the expenditure of nearly \$10,000,000 thereon, the court room capacity is but a little over 300, which was practically reached at that session, when admissions to the bar numbered 114. The docket included about 500 cases, among which were several which vitally affected the "New Deal," as they involved the constitutionality of some of its leading measures. The chief ones affected adversely by the court's decisions were the Railway Retirement Act (May 6) and the National Industrial Recovery Act (May 27). See *Public and Constitutional Law*. The Court's work for the preceding term, beginning October, 1934, is exhaustively treated in an article by Professors Frankfurter and Hart (*Harvard Law Rev.*, XLIX, 68), which presents numerous tables showing its character and quantity.

The Federal judicial conference, created by the act of 1922, met in Washington on October 3, all of the Federal circuits, except the 10th, being represented by the respective circuit judges. The Attorney General's report showed 123,758 cases pending in the Federal district courts—a decrease appearing in private suits only. Provision for additional judgeships was recommended and reference of cases to masters in chancery discouraged.

The New York City Domestic Relations Court, which includes a children's and a family division, completed the first two years of its existence in October, the number of its judges having been increased from 7 to 9. The report of Presiding Justice, John Warren Hill, showed 98,162 hearings in the preceding year. Although the city's Negro population is but one-twentieth of the whole, it furnished one-sixth of the children arraigned. Of the 4897 children investigated, all but 178 were native born, though only one-fourth of the parents were. In "promoting" Deputy Police Commissioner Sweeney, on the force since 1903, to the city magistrates bench and naming as chief city magistrate, Jacob Gould Schurman, son of the former Cornell University president, Mayor La Guardia announced a policy and set a precedent which may well be studied by those who tackle the puzzling problem of judicial selection.

Movements are reported from 11 States to supplant the elective system and to remove the judiciary from politics; but the alternatives heretofore proposed are far from satisfactory. One of them is choice by the legislature, a demonstration of which was afforded in Rhode Island at the beginning of the year. At the opening of the session, a party floor leader's resolution, declaring vacant all Supreme Court posts, was adopted by the Senate, and later in the day, after the Lieutenant Governor of the same party had refused to seat two Senators of the opposite party, whose election had been certified by the State returning board, the legislature proceeded to elect an entire new group of justices and over 30 cases which had been submitted to the court were required to be reargued. The whole affair has been severely criticized. (*A.B.A. Journ.* XXI, 306) The Philippine legislature also passed an act "reorganizing" the judiciary, and, according to dispatches from Manila, legislated out of office the five remaining American Supreme Court justices.

All of this renders very timely an article on "The Career of Judges and Prosecutors in Continental Countries," *Yale Law Journ.*, XLIV, 268, by Morris Ploscowe of the New York Bar (Soc. Sc. Research Council Fellow, 1931-32), which describes the system prevailing in Germany, France, and Italy (it actually exists in most other continental countries) whereby university graduates in law are admitted to the examinations for the state's legal career service. If successful in passing, they may be appointed first to a minor post and later, as vacancies occur and their service is satisfactory, are advanced to a higher one; but are removable or transferable for cause only and by a special tribunal. The author deplores the small salaries and the favoritism sometimes displayed in promotions; but finds it

almost impossible to escape the conclusion that the European method of examination and apprenticeship is more successful in drafting competent and honest inferior court judges than the American method of leaving the choice of magistrates to politicians.

In line with this is a movement to reform the Ontario primary courts (described in the *A.B.A. Journ.*, XXI, 91) which has already resulted in reducing the number of magistrates from 151 to 62 and the justices of the peace from about 6000 to 300, with non-political appointment, tenure, and inspection.

The Soviet government, on April 8, owing to the increase of serious crimes among juveniles, issued a decree for the trial of all minors over 12, by the regular criminal courts and under ordinary law; repealing the criminal code provisions for the trial of those under 14 by a special board of the Education Commissariat, which, however, during the previous year, allowed 1200 cases of juvenile delinquency to go unheard.

On April 2, the unification of the German judiciary through the absorption of the former state courts by the Reich judicial system, was formally inaugurated in Berlin, according to the formula, *ein Reich, ein recht*. The scheme has trebled the number of Reich judges, all of whom are now appointed and removable by the chancellor. A decision of the highest Prussian administrative court holds that acts of the secret police are not subject to judicial review.

On June 1, President Mendieta signed a decree "reorganizing" the Cuban judiciary because, as a result of the two years' revolution, incompetent judges had been appointed, displacing others who

had served long and faithfully. It does not appear, however, that the latter were reinstated; for while 25 judges were removed by the decree, 31 new ones were appointed, 41 transferred, 6 demoted, and 32 promoted. From another Spanish-American country came loud complaints of cruel delays in the administration of criminal justice. *El Tiempo*, published at Bogota, Colombia, lists 31 prisoners who have been waiting from 15 to 114 months for disposition of their cases, the average being 3 years; but one is reported as waiting 4 years and 8 months, another 4 years and 10 months, and a third 9 years and 6 months.

Personnel. Sir William Mulock, Chief Justice of the Ontario Supreme Court, celebrated his 91st birthday on June 19; Justice Brandeis of the U.S. Supreme Court his 79th on November 13; William A. Johnston (89) completed his 51st year on the Kansas Supreme Court bench. Judge Ben. B. Lindsey (1934 YEAR BOOK, p. 363) of the Los Angeles Superior Court, founder of the Denver Juvenile Court, was reinstated on November 25 (his birthday) as a member of the Colorado bar, by a vote of 6 to 1 of the State Supreme Court justices.

Necrology. Of the judges who died in 1935, easily the most eminent were O. W. Holmes (q.v.), 94 on March 6 and the Marquis of Reading (q.v.), 75 on December 30. The former, in addition to numerous biographies during his lifetime, is the subject of articles in the *Harvard Law Review* (XLVIII, 1277, 1279) by Sir Frederick Pollock and Professor Frankfurter, respectively, and in the *A.B.A. Journ.* (XXI, 211) by W. W. Cook. Other deceased judges include: James Owens, former judge of the Supreme Court in Ireland, 90; James Pennewell, former Chief Justice of the Delaware Supreme Court, 81; Cuthbert W. Pound (q.v.), 70, former Chief Judge of the New York Court of Appeals; William C. Wait, 81, former justice, Massachusetts, Supreme Judicial Court; W. S. Metcalfe, 81, former Chief Justice of the Ohio Court of Appeals; Edward A. Newcomb, 77, Presiding Judge of the Lackawanna (Pa.) County Courts; Dr. Bernard J. C. Loëer (q.v.), 86, of Netherlands, first President of the World Court; Francis N. Thayer, 89, former Chief Justice of the Worcester (Mass.), 2d district court; Louis Fitzhenry, 65, of the U.S. 7th Circuit Court of Appeals; C. A. Nye, 74, brother of the famous American humorist, "Bill" Nye, and for 24 years on the Minnesota District court bench; Joseph H. Gaskill, 84, former New Jersey Common Pleas Judge.

Juries. "The traditional jury has never given satisfaction anywhere," writes Morris Ploscowe in the *Harvard Law Review* (XLVIII, 433) where he learnedly traces "The Development of Present Day Criminal Procedures in Europe and America." In another article on "Jury Reform in Italy" (*Journ. of Crim. Law & Criminology*, XXV, 577) he discusses the same institution from its introduction into that country in 1848 but deals mostly with changes under the Fascist régime. Five "assessors . . . considered on the same plane as professional magistrates" are now substituted for the ten jurors of former times, to pass on law as well as facts. The reform, he says, "took the middle road between . . . retention of the jury and . . . its complete abolition." The mode of selection and operation gives the government too much authority, he thinks, but, "because of the general dissatisfaction with the jury, the Italian reform bears watching." British attachment to the jury is shown in the trial of an Indian subject at Addis Ababa, Ethiopia, by

a jury of five British residents of Aden brought in for that purpose.

In *Norris v. Alabama*, 294 U.S. 587; *Patterson v. Alabama* ib. 600; and *Hollins v. Oklahoma*, 295 U.S. 394, the Supreme Court reversed convictions of Negroes on the ground that jurors of their race had not, for a long time at least, been called for service in the counties where the trials were held. Four days after the Alabama cases were decided, Governor Graves, in a letter to circuit judges and solicitors, interpreted the decision as meaning "that we must put the names of Negroes in jury boxes in every county." In New Orleans, for the first time in 47 years, a Negro sat on a criminal jury on November 15. While the decisions above cited were generally commended by the northern press, it is well to remember that, if we are to retain the jury system, a racial qualification for service thereon can hardly be expected to improve it. To secure jurors of intelligence and character is difficult enough already.

By a pronounced majority (see REFERENDUM), the New York State electorate, on November 5, adopted a constitutional amendment authorizing the legislature to "provide that the verdict of a jury in any civil case may be rendered by five-sixths. . . ." Such is already the law in 5 western States; 12 others allow verdicts in civil cases by three-fourths and one (Montana) by two-thirds. New York thus becomes the 19th State to authorize such verdicts by less than the full number; and such is the rule, even in criminal cases in four States. Nor is this a recent innovation; rather is it a return to the ancient and general practice. Thus "the Roman verdict was by ballot and unanimity was manifestly unnecessary." (Williams, *Justinian*, 332) It "was not enjoined upon the English jury during the early ages. . . . A majority sufficed" (Esmein), as it did in colonial Connecticut (and still does in France) where, in case of a tie, the magistrate decided (in France, the tie constitutes an acquittal). In Hawaii, verdicts by three-fourths were authorized from 1847 to 1898, when a backward step was forced as a result of annexation. A New Hampshire statute of 1859, providing for such verdicts, was declared unconstitutional by the State Supreme Court, but we may look for further progress in that direction. (See Best, *Juridical Soc. Papers*, I, 7; Weinstein, *United States Law Rev.*, LXIX, 513; 1934 YEAR BOOK, p. 361.)

Two Federal prosecutions of the year illustrate the need of such a provision if not something more. The case of *U.S. v. Bob* (a mining promoter charged with mail fraud) had been pending over four years when the third deadlocked jury was discharged after "deliberating" 31 hours. In *U.S. v. Flegenheimer* ("Dutch Schultz"), charged with income tax evasion, after the discharge of a jury (out for nearly 28 hours), a second, out more than that period, brought in a verdict of acquittal, which, the presiding judge told the jurors, before dismissing them, "shakes the confidence of law-abiding people in truth and integrity." The New York legislature, at its recent session, considered an act providing for women jurors and passed one authorizing the selection of alternate jurors to avoid retrial in case of death or disqualification of one of the regular panel.

Our Judicial Senate. (See 1934 YEAR BOOK, p. 362) In *Jurney v. MacCracken*, 294 U.S. 125, the Court upheld the Senate's power, conceding it narrow in scope, to punish failure to produce for a legislative inquiry, papers which, after service of the subpoena, were destroyed. "Where the of-

fending act was of a nature to obstruct the legislative process," observed Justice Brandeis, in a unanimous opinion, replete with citation of historical precedents, "the fact that the obstruction has since been removed or that its removal has become impossible, is without legal significance."

Administrative Tribunals are recognized as at least quasi-judicial in two Supreme Court decisions of 1935. In *Humphrey's Ex'r v. U.S.*, 295 U.S. 602, the attempted removal of Federal Trade Commissioner Humphrey was held invalid on the ground (1) "that the intent of the (organic) act is to limit the executive power of removal to the causes enumerated, the existence of none of which is claimed here" and (2) that such limitation is valid except as "to purely executive officers" (as in *Myers v. U.S.*, 272 U.S. 52) which do not include such a commissioner. In *U.S. v. B. & O. R. Co.*, 293 U.S. 454, the Court unanimously upheld a lower tribunal in vacating an I.C.C. order, requiring a certain type of locomotive, without a basic finding that the one in use involved "unnecessary peril to life or limb." The Commission's power is not legislative, said the Court, but judicial; a finding is essential. On the other hand, Frank B. Fox, in his "Administrative Tribunals" (*A.B.A. Journ.*, XXI, 276), objects to the rule, common to such commissions, which renders conclusive their findings "as to facts if supported by testimony." As pointed out by the *American Judicature Soc. Journal* (XIX, 5) "These commissions and administrative courts, obviously determine facts and adjudicate rights; but they have been freed from the incubus of a broken-down jury system."

The Securities and Exchange Commission (1934 YEAR BOOK, p. 360) filed its first annual report, covering the period ending June 30, containing *inter alia* the Rules of Practice in proceedings before it, effective September 13. "The Securities Act and Its Foreign Counterparts" is discussed by Friedrich Kessler in the *Yale Law Journ.*, XLIV, 1133; "The Constitutionality of Federal Regulation of Stock Exchanges," by P. Tennent Norton, Jr., in *Georgetown Law Journ.*, XXIV, 20; "The Securities Exchange Act and the Commerce Clause" by Jacob Lippman, *U.S. Law Rev.*, LXIX, 18. "Administrative Legislation and Adjudication," by Blachly and Oatman, is reviewed in the *A.B.A. Journal* (XXI, 299).

Criminal Law. The outstanding *cause célèbre* of the year was the trial of Bruno R. Hauptmann (1934 YEAR BOOK, p. 363) which opened at Flemington, N. J., on January 2, and ended on February 13 with a death sentence by Justice Trenchard, following a verdict of guilty without recommendation of clemency. This was "cheered" by thousands outside, which, with other spectacular features of the trial, such as the throngs of reporters with their cameras and the installation of a gigantic battery by the Western Union Telegraph Company, were criticized by the press and legal periodicals (see, e.g. *Am. Judicature Soc. Journ.*, XVIII, 186; *United States Law Review*, LXIX, 167). Albert H. Robbins, formerly a Chicago lawyer but now a member of the English bar, discussing "The Hauptmann Trial in the Light of English Criminal Procedure" (*Am. Bar Ass'n Jour.*, XXI, 301), quotes "an eminent English barrister" as writing "that the evidence adduced at the trial would have been sufficient to prove him (Hauptmann) guilty here; though, according to our standards, he did not have a fair trial." On February 27, at the Yorkville Casino,

a crowd of 2500, with an overflow of 3000 outside, gave Mrs. Hauptmann an ovation while she and other speakers declared her husband's innocence. Hauptmann appealed to the Court of Errors and Appeals, which, on October 9, affirmed the conviction (*State v. Hauptmann*, 180 Atl. 809), and in the following month, Hauptmann's attorneys applied to the Federal Supreme Court for a writ of *certiorari*. This was denied on December 9; but meanwhile Governor Hoffman of New Jersey was pursuing a special investigation of the case, preparatory, it was explained, to action by the Board of Pardons, of which he is a member. Hauptmann's execution was, however, set for the week of Jan. 13, 1936.

Probably next in popular interest was the case of Thomas J. Mooney, who, in 1917, was convicted of murder and sentenced to incarceration at San Quentin Prison (Calif.), where he has remained since. *Habeas corpus* applications to Federal courts of all grades, including the highest, were denied, the last named holding that he should have applied to the State courts. (*Mooney v. Holohan*, 294 U.S. 103) In June, the California Supreme Court, which had uniformly ruled against Mooney, found, in the language of the decision just cited, a "mandate" for relief, granted a preliminary writ and appointed a referee to conduct hearings which continued during the last three months of the year. Among other witnesses, the Superior Court Judge (Griffin), who sentenced Mooney, testified that he had since concluded that the prosecution's chief witness was a perjurer.

In May, the New York Supreme Court's Appellate Division upheld conviction of seven Armenians for the murder of Archbishop Tourian (1933 YEAR BOOK, p. 422). Two others, convicted by the General Sessions Court, had failed to appeal after Governor Lehman commuted their sentences to life imprisonment. The Court of Appeals, two judges dissenting, in *People v. Burke*, 267 N. Y. 69, upheld the Appellate Division in reversing the conviction of certain "nudists," who appeared unclad in a basement gymnasium to which the public was admitted for a fee. Less than two weeks later, on May 11, the legislature amended the New York Penal Law in an attempt to include such cases. An editorial in the *U.S. Law Rev.* (LXIX, 346) expresses doubt that the purpose has been achieved.

On November 6, the Texas Court of Criminal Appeals reversed the sentence of a district judge, imposing a fine upon newspaper men for publishing, contrary to his order, the testimony in a pending murder trial which involved others (separately indicted) than defendant. The appellate decision was based on the guaranty, common to many State constitutions, of freedom of the press. On March 18, the Cook County (Ill.) Criminal Court, on a motion by the State's Attorney, entered a *nolle prosequi* of all the untried embezzlement charges against the two Insull brothers. (1933 YEAR BOOK, p. 371; 1934 YEAR BOOK, p. 319).

On August 30, President Roosevelt denied the application for a pardon of Victor Seymour, serving the very brief sentence imposed by District Judge Munger at Lincoln, Neb., for perjury in connection with the attempt to deceive the voters by running an unknown person of the same name against Senator Norris in the primary campaign of 1930. The Senator declined to recommend clemency for one who "has never expressed any willingness . . . to assist in bringing to justice other perpetrators who were undoubtedly behind him in

his attempt at disfranchisement of the voters." The pseudo-Norris was convicted of perjury on December 13.

A Soviet decree of April 8 imposes a minimum penalty of five years' imprisonment for adults who induce crimes by minors. On June 29, Hans Frank, President of the "Academy for German Law," declared, at the close of its annual session at Munich, that "National socialism has completely abolished the principle of false humanitarianism." Premier Siebert of Bavaria added that "a judge must also be a lawgiver, to reconcile old law with national socialist philosophy." A new Estonian statute allows the convicted murderer to choose between hanging and poison. The first to exercise the option chose the former. The Montana legislature considered substituting the lethal gas chamber for the gallows.

The Kansas legislature, in March, restored the death penalty, abolished in 1907, for first degree murderers over 18. But in England, the movement against capital punishment seemed to be making headway. On April 2, a wealthy London widow, long interested in the movement, caused three aeroplanes to fly, with streamers reading, "abolish the death penalty," just as a condemned man was led to the scaffold. Three days later, the House of Lords Judicial Committee, for the first time in its history, it is said, quashed a conviction for murder and freed a 21-year-old Dorset farm laborer, sentenced for murdering his wife. Substitution of castration for capital punishment of desperate criminals and degenerates was recommended by the Kentucky Special Prison Advisory Commission, in its report filed November 23, on the ground that such criminals are "more afraid of desexing than of death."

Legal Education. New Goals. In addressing the Association of American Law Schools (*A.B.A. Journal*, XXI, 141), J. G. Rogers, Master of the new (Yale) Timothy Dwight College, while assuming only "to bring home the extent and reality of changes" now in progress, envisaged these possible results: (1) Fewer and better law schools, with (a) wider scope, even at greater expense, (b) minimum rather than maximum requirements, (c) "some sort of scholarship support . . . on a large scale" for talented though indigent students, (d) closer cooperation with the bar; (2) Fewer and better lawyers, with (a) specialized fields, (b) a cultural outlook, so that "the law will rejoin its old companions, literature, history and the arts," (c) a social outlook, promoting and achieving fundamental reforms in substance and administration, (d) less litigation of the "fake" variety (1934 *YEAR BOOK*, p. 365) and results more expeditious and less erratic, even if more expensive.

Sec. 21 of the Indiana Constitution (of 1851-52), providing that "every person of good moral character, being a voter, shall be entitled to admission to practice law," has long been a stumbling block to advocates of higher standards. In *re Todd*, Ind., 193 N. E. 865, affirms the adoption of an amendment, submitted in 1932 which repeals the above and puts in force an act of 1931 giving the Supreme Court "exclusive jurisdiction to admit attorneys to practice." This is hailed as "the brilliant achievement of bar leaders," by the *Journal of the American Judicature Society* (XVIII, 178).

Dean Green's plan (1934 *YEAR BOOK*, p. 364) for "boards of admission" to replace State "examiners," received approval and amplification by Dean Harold Shepherd, of the Washington State

University Law School, chairman of the A.B.A.'s Legal Education Section's Committee, in an address before the Seattle Bar Association (*Bar Examiner*, IV, 366). He would have "all applicants register at least when they begin legal training," with the boards "continuously functioning, periodically, checking the progress of candidates," assembling all relevant data and evaluating these in their recommendations." Under this plan, which leaves technical examinations to the law schools, the disgraceful situation could hardly have arisen which forced the Kentucky Court of Appeals to order, for January, a special State bar examination, from which 14 candidates at the June, 1934, examination were excluded after it was discovered that the questions, printed in Frankfort, had been obtained in advance and sold. On May 9, the A.B.A.'s Council on Legal Education and Admission to the Bar, announced "provisional approval" of the Loyola University Law School at Los Angeles and the University of San Francisco Law School, both Jesuit institutions.

The Council also announced that the Louisiana State University Law School, which was "placed on the approved list in 1926," had now "been placed in a probationary status . . . by reason of an adviser's report . . . that a law degree has been granted on the direction of the University President and Board of Supervisors, without recommendation by the law faculty and before completion of the course."

The recipient was Kemble K. Kennedy, protégé of the late Senator Huey Long, who had been suspended from the University by its former President, after conviction of criminal libel, reprieved by Long while governor and subsequently pardoned. Kennedy had been denied admission by the Supreme Court; but the "self-governing bar," created by Long-dictated legislation, admitted him to practice on March 2. Just four days earlier, the California Supreme Court (*In re Larine* [Cal] 41 Pac. [2nd.] 161) had denied the application for reinstatement of a disbarred and subsequently pardoned felon, and referred him "to the Board of Governors of the State Bar."

The Vermont supreme court, on May 14, adopted a requirement, effective Aug. 31, 1938, of prelegal training to the extent of one-half the work accepted by an approved college for the bachelor's degree. The Ohio supreme court announced that after July 1, 1939, an applicant for admission must present a diploma or certificate from a law school approved either by the A.B.A. or the League of Ohio Law Schools. After July 1, 1937, pursuant to a recent act of the Texas legislature, the privilege now extended to graduates of 21 law schools, of admission without further examination, will expire. About the end of November, the Georgetown (D. C.) University law faculty, announced the requirement, effective September, 1936, of a college degree for entrance, being the 8th American law school to adopt such a standard. The almost obsolete scheme of local bar examinations, which has lingered on, hitherto, in Arkansas, has at last been supplanted by a state board of examiners, functioning at the capital, though composed of one member from each of the seven congressional districts. Nevada was the 25th State to adopt the two-year's college work requirement for prelegal study.

Among the eminent law teachers who passed away in 1935 were Burr W. Jones, Wis., 87, author of a work on Evidence and former Judge of the Wisconsin Supreme Court; and George

P. Costigan, 64, Professor of Law in the University of California from 1922; Dean Wm. M. Lile, 76, of the Virginia State Univ. Law School.

Legal Profession. The slogan "fewer and better lawyers" seems timely in view of the 175,000 estimated by President Ransom of the A.B.A. as the present membership of the legal profession in the United States, including, of course, many not in active practice. New York State had 18,473 lawyers in 1920 and 27,593 in 1930. In the latter year there were in the whole country 131 lawyers to every 100,000 of the population, as against 22 in France, Germany, and The Netherlands; 40 in other continental countries; and 47 in England, Wales, and Canada. In Colombia, according to *Education* (Bogota), the nine law schools, all but two being subsidized by the government, graduate about 100 lawyers annually, which is more than the country can absorb. Dean Lloyd K. Garrison of the Wisconsin University Law School, writing in the *Wisconsin Law Review* for February, claimed that legal business and opportunities in that State have increased faster than lawyers or population. But Sidney Teiser in the *A.B.A. Journal* (XXI, 42) advocates limiting admissions to the number sufficient to supply losses; and such a plan was actually approved by a referendum of the Philadelphia bar. "The Administrative Bar" which "the United States Government has been slowly, and, perhaps, unconsciously creating" is discussed in an article by William H. Robinson Jr., in *A.B.A. Journ.*, XXI, 277. In a practical discussion of "Brief Writing," Howard C. Westwood, formerly Justice Stone's law clerk, tells us that "nine times out of ten, the statement determines the case" (*A.B.A. Journ.* XIX, 122).

American Bar Association (q.v.). The 57th annual meeting opened at Los Angeles on July 9. The Secretary reported the membership as of June 30 at 27,178—a net gain, over the preceding year, of 1227, but still less than the 1930 figure of 28,667. Of course hardly 10 per cent of these attended the meeting. A new "municipal section" was authorized, as well as a "junior bar" and various pending legislative measures were indorsed. Among the meeting's notable features were the attention devoted to criminal law reform and the contest over the association's presidency. Theretofore nomination by the General Council had been equivalent to election; and that body had nominated William L. Ransom of New York City; but at the general session to which the nomination was reported, James B. Beck of Pennsylvania was also nominated from the floor. The supporters of each candidate passed in procession before the tellers who announced the result as 209 for Ransom and 178 for Beck; only about one-seventieth of the total membership participated.

A third feature was the careful discussion of four plans for coordinating the association with State and local organizations, which have a total membership of over 80,000, none of whom belong to the A.B.A. The plan most favored was a federalization, with a "House of Delegates" and a General Council elected by State organizations, the national association's mass meeting to continue as an assembly or "popular branch." President Ransom actively advocated this plan, speaking on September 19 before the California State Bar at San Francisco and on November 23, before the bars of eight southeastern States in Atlanta. None of this discussion, however, seems to reach a glaring defect in the present constitution and by-laws under which the editor of the *A.B.A. Jour-*

nal is able to perpetuate himself in that position, and also as ranking member of the Association's powerful Executive Committee, without ever coming before the membership for election.

American Law Institute. The 13th annual meeting was held at Washington, May 9-11, President Wickersham presiding. Chief Justice Hughes, as usual, made an address at the opening and President Roosevelt sent a letter approving the suggestion of a model code of criminal law. The proposed final draft of the "Trusts" restatement and a "Double Jeopardy Statute" were approved and parts of restatements of "Property," "Torts," "Restitution," "Unjust Enrichment," and "Land Sales" were discussed.

American Judicature Society. Coincidentally with the last-named, but separately, this organization "to promote the efficient administration of justice" held its annual meeting at Washington on May 8, Pres. Newton D. Baker presiding. Addresses were delivered by Dean Clark of the Yale Law School, Solicitor General Reed, and others. Under the careful editorship of Sec. Herbert Harley, the Society's *Journal*, now in its 19th year, is doing much needed educational work in the field of law reform.

In Soviet Russia, where lawyers are organized into "cooperatives" (unions) and these into "collegia," the latter's "presidium" (council) fixes fees; but the plan has not worked to the satisfaction of either the lawyers or the government, according to Kenneth M. Thorpe (*A.B.A. Journal*, XXI, 60). The "Social Honor Court" of Northmark, Germany, refused to recognize a Jewish attorney, though regularly licensed, and chided the client for employing him and thus failing "to think like a National Socialist and to show respect for racial principles." The New York Legal Aid Society, criticized by Justice Brennan of Brooklyn for accepting nominal fees (ranging from 50 cents to \$10), replied that the practice "tends to maintain self respect, prevents pauperization and gives the client a greater sense of responsibility." Charges of unethical agreements to defend protégés of racketeers, on a prearranged basis, were preferred by the Philadelphia Bar Association against State Senator Samuel W. Salus and five other criminal lawyers, and heard for 11 days by the Court of Common Pleas. Disbarment of Lucius J. M. Malmin and C. W. Larsen (see 1934 *YEAR BOOK*, p. 365) was recommended to the Illinois Supreme Court by the Chicago Bar Association's Grievance Committee.

The "National Lawyers' Committee" of the "American Liberty League" includes about 60 lawyers, a few of them eminent; but, according to Charles Michelson, Democratic Publicity Director, "only about a dozen of them have appeared in the highest court" and but one of these (John W. Davis) has won more cases than he has lost there. The committee was criticized for inviting Justice Carew of New York to join it in passing on the Labor Relations Act (which it pronounced unconstitutional) and also for an offer in its behalf by one of its members (James M. Beck) to "defend the rights of the individual . . . without compensation from any source," referring, according to a press report quoting the League's President, Jouett Shouse, to "litigation over New Deal Laws." The A.B.A.'s Committee on Professional Ethics and Grievances, to which the last-named complaint was referred, expressed the opinion that the said offer was "not unethical" as tending "to stir up litigation," contrary to the

A.B.A.'s Canons of Ethics, 28 (*A.B.A. Journal*, XXI, 776).

Necrology. Charles A. Boston, 71, President, A.B.A. 1930-31; Jeremiah Smith, 64, of the Boston bar, "financial savior of Hungary"; Martin W. Littleton, 63, eminent New York lawyer; Walter R. Henry, 78, noted New York criminal lawyer, formerly of North Carolina and reputed scion of Patrick Henry; William D. Guthrie (q.v.), 77, long a leader of the New York bar, specialist in constitutional and canon law; Ferdinand A. Winter, 91, Indianapolis, once a partner of Benjamin Harrison; Frederick Cobb, 94, a New York practitioner for over a half century; Arthur H. Masten, 81, utility lawyer, nephew of President Arthur, also of the New York bar; Bernard S. Deutsch, 51, President of the N. Y. Board of Aldermen; John Cromwell Bell, 74, of the Philadelphia bar, former Pennsylvania Attorney General and District Attorney; Andrew Sheriff of the Chicago bar; F. Dumont Smith of the Hutchinson, Kan. bar; and George T. Weitzel 62, of the Washington City bar, former Minister to Nicaragua.

"Procedure is important," writes Herbert Harley, of the American Judicature Society, "but not so important as the agents who employ it." Steps have been taken to exercise the authority conferred on the Supreme Court to formulate procedural rules for the lower Federal courts (1934 YEAR BOOK, p. 366). On May 9, before the American Law Institute, Chief Justice Hughes announced the Court's intention "to proceed with the preparation of a unified system of rules for cases in equity and actions at law." An order to that effect was promulgated in June and a committee of 13 lawyers was appointed to assist in such preparation, headed by George W. Wickersham and including two law teachers who had specialized in Procedure—Dean Clark of Yale and Professor Sunderland of Michigan State University. It was announced in November that the committee had just completed its preliminary work. Dean Clark, in a broadcast address before the American Judicature Society (*Journal*, XIX, 11) on May 8, had sketched briefly the history of procedural reform in England and the United States and suggested as a basis of the new draft "the equity rules of 1912, extended to all actions, legal and equitable, and supplemented by provisions taken from the most successful state systems." Dean Clark and J. W. Moore had also contributed two comprehensive articles to the *Yale Law Journal* (XLIV) on "A New Federal Procedure": (I) "The Background" (387); (II) "Pleadings and Parties" (1291). Professor Sunderland, on June 6, before the 4th judicial circuit conference, discussed at some length the "Character and Extent" of the Supreme Court's power in this matter (*A.B.A. Journ.* XXI, 404). The new Philippine Const. (VIII, 13) makes all procedural statutes "Rules of court subject to the Supreme Court's power to alter and modify them."

An electrical voice-producing machine, for reporting trials and other proceedings, was demonstrated before the Chicago Bar Association on October 31, enabling, it is claimed, the reviewing court to reproduce a trial at an expense no greater than the present reporting system. By way of contrast it appears that British trial judges are without even shorthand reporters, a movement to supply the latter having just been initiated. Under the new California law permitting the trial judge to comment on the evidence, a jury in a murder

case was advised from the bench to convict the female defendant.

Proof. "Rules of evidence are intended neither as regulations in a game, where the most skilful technician wins, nor as barriers to the simple, straightforward and complete development of the facts," observes Kenneth Dayton in his "Program for Law Reform" (*The Consensus*, XVI, iii). He criticizes particularly witness-badgering and the generality of objections. A loose-leaf book was recently excluded from evidence, as unreliable, by Justice Bennett in London.

In an article in the *Virginia Law Review* (XXI, 763), R. Carter Pittman traces "The Colonial and Constitutional History of the Privilege Against Self-Incrimination in America" (see 1933 YEAR BOOK, p. 429), and finds it established in England in the 1650's and brought to America by the Puritan colonists; but that the only constitutional document which recognized it before 1776 was the Scotch "Claim of Rights." On the other hand the privilege is ascribed to an Act of Parliament in 1641, by W. Earl Smith (*Am. Jud. Soc. Journ.*, XIX, 114) who pronounces it "one of the greatest anomalies of the law . . . and of all our out-moded machinery should be the first to go." Incidentally, however, it was incorporated into the recently adopted Philippine Constitution (III, 1 (18)). "Rules Governing the Allowance of the Privilege" is the subject of an article by M. P. Rapacz in the *Minnesota Law Review* for March.

Blood tests of suspected parties, and comparison thereof by judges with other evidence, are authorized in an act approved by Governor Lehman of New York, March 26, after the practice had been disapproved by some Courts (1933 YEAR BOOK, p. 430; 1934 YEAR BOOK, p. 367). Hailing the New York statute as "a signal light and . . . another forward step in medico-legal jurisprudence," Wm. L. Flack, in an article on "Evidential Value of Blood Tests to Prove Non-Paternity" (*A.B.A. Journ.* XXII, 680), summarizes the scientific data, literature, and judicial authority on the subject, and concludes that, if certain difficulties can be overcome, "the demonstrable value of such tests . . . will be amply confirmed."

Circumstantial Evidence. The Talmudic law required direct evidence, and the conviction of Bruno Hauptmann upon purely circumstantial evidence (for no one claims to have seen him in any act of committing the crime charged) evoked considerable discussion of the reliability of such evidence. On the one hand it is claimed (by Attorney-General Cummings among others) to be often stronger than direct; but Professor Borchard of the Yale Law School, author of *Convicting the Innocent*, relates "how the error occurred and how it was later discovered" in 65 cases where conviction rested upon circumstances.

"Expert Testimony is obsolete," Souder tells us; but the Duke University School of Law, in its illuminating series on "Law and Contemporary Problems," devotes an entire number (II, 4, Oct.) to Expert Testimony. A. S. Osborn in the *A.B.A. Journal* (XXI, 151) shows the need of "Cooperation of Attorney and Expert Witness," and the outstanding witness in the Hauptmann case was Koehler, the dendrologist. Clearly, the trend is toward scientific evidence, for at best human testimony is fallible and often wrong, even with the best intentions. The U.S. Bureau of Investigation, with its "Crime Laboratory," is doing much to develop a really scientific scheme of proof. Its Director, J. Edgar Hoover, discusses its work in

the *Tennessee Law Review* for April, and "Scientific Methods of Crime Detection" in the *George Washington Law Review* (IV, 1).

Fingerprinting (see 1934 YEAR BOOK, p. 366), which is claimed to have been the subject of a Bologna professor's treatise in 1686, is discussed in a small but informing volume (Chicago, 1935; rev., *A.B.A. Journ.* XXI, 820) by T. G. Cooke, a teacher of the art and former student at Scotland Yard which claims 500,000 fingerprints. "Attempts to Alter and Obliterate Fingerprints" is treated by Harold Cummins in the *Journal of Criminal Law & Criminology* for March-April. It is claimed that forged fingerprinting may always be detected and that the identity of two distinct fingerprints is practically impossible. The subject is pursued in a series of valuable pamphlets issued by the U.S. Bureau of Investigation whose criminal fingerprint file now numbers 5,000,000, "the largest collection of current value in the world," and its "civil identification file," only three years old, more than 60,000. Fingerprinting figured in the Hauptmann defense, when Dr. E. M. Hudson testified to 500 prints on the "kidnap" ladder, although the police had reported none; in the trial of the "Barker gang" at St. Paul and in the detection of "job seekers" with criminal records. Universal fingerprinting is advocated by Governor Lehman of New York (who was himself fingerprinted on December 12) and Attorney-General Hartigan of Rhode Island. All applicants for licenses, passports, receipts, etc., in Brazil, must be fingerprinted and photographed. Palm prints of newborn children were urged as the surest mode of identification by Dr. G. P. Pond, before the Illinois Homeopathic Medical Association on May 10.

"Lie Detector." Use of this unique instrument (1934 YEAR BOOK, p. 367; *Scientific Monthly*, XL, 81, article by Fred E. Inbau) was extended during the year. It was received as corroborating evidence in court (for the fourth time) in an action by a stevedore for disability compensation at Buffalo; to offset the scent of bloodhounds in a prosecution for burglary at Monroe, Wis.; and to obtain a confession from a murder suspect in Chicago. See MEDICAL JURISPRUDENCE.

CONSTITUTIONAL AND PUBLIC LAW

America (UNITED STATES OF). Amendments. The proposed "Child Labor" amendment (1934 YEAR BOOK, p. 367) has now been ratified by 24 of the required 36 legislatures, Idaho, Indiana, Utah, and Wyoming having done so during the year; 16 have rejected it. On the opening day of the 74th Congress, Senator Costigan of Colorado offered a proposed amendment, which was referred to the judiciary committee, empowering Congress "to regulate hours and conditions of labor . . . establish minimum wages . . . and . . . prevent unfair methods" in industry. This was much discussed after the NRA annulment.

Constitutional Decisions of the year have been numerous and important. The National Industrial Recovery Act of June 16, 1933, was construed in two Supreme Court decisions, each finding invalid the portion construed. In *Panama Refining Co. v. Ryan*, 293 U.S. 388, the court, Justice Cardozo dissenting, held sec. 9c of the act, purporting to authorize the President to control interstate and foreign traffic in petroleum above a certain limit, an unwarranted attempt to delegate legislative power. In *Schechter Poultry Corp. v. U.S.* 295 U.S. 495, provisions of the "Live Poultry

Code," promulgated under sec. 3 of the act, were unanimously declared invalid, not alone for the reason just mentioned, but also as an "attempted regulation of intrastate transactions which affect interstate commerce only indirectly." In consequence, Congress, on June 14, by joint resolution, repealed "all provisions of Title I of such act, delegating power to the President to approve or prescribe codes of fair competition," etc. On December 31, the NIR Administration was terminated by executive order. The last cited decision is the subject of several articles in law reviews, including one in the *St. Louis Law Review* for June. The Frazier-Lemke moratorium amendment of the Bankruptcy Act was held, in *Louisville, etc. Bank v. Radford*, 295 U.S. 555 to offend "due process of law" in depriving the mortgagee of his (1) lien before payment; (2) right to foreclose upon default; to control the mortgaged property pending foreclosure; and to bid at the sale. Justice Brandeis, writing the unanimous opinion, found it unnecessary to "consider the occupations of the beneficiaries" (farmers). The Railroad Retirement Act of June 27, 1934, was declared by a bare majority of the Court, in *R.R. Retirement Board v. Alton R. Co.*, 295 U.S. 330, "an attempt, for social ends, to impose by sheer fiat, non-contractual incidents upon the relation of employer and employee," not as a regulation of commerce between States. The Chief Justice and Justices Brandeis, Cardozo, and Stone dissented. In *Grovy v. Townsend*, 295 U.S. 45, the court found no State action, and hence no ground for Federal interference in a party committee's resolution limiting to "white citizens" the privilege of participating in a party primary. (See also *Courts, Contracts*.)

Interstate Cooperation. Compacts between American colonies were not unknown before the Revolution. As early as 1725 the boundary between New York and Connecticut was delimited by their respective commissioners. But the Federal Constitution (1, 10) required "the consent of Congress" for such compacts and about 70 of them have been so validated. The year 1935 was marked by renewed activity in that field, which was aided by the "Council of State Governments" organized for "promoting regional agreements," etc., which provides regional secretaries and to cooperate with which state commissions have been created in Colorado and New Jersey. Jointly with the American Legislators' Association, the Council sponsors an interstate assembly, whose second annual session opened in Washington on February 28. Among its recommendations were: "a general enabling and consenting act respecting compacts negotiated between . . . States, affecting interstate tax conflicts"; cessation of State taxes on beer and tobacco and of Federal taxes on motor fuel and electrical energy; abolishing exemption of salaries, securities, and private property on government reservations. (See *A.B.A. Journ.*, XXI, 207)

Boundary disputes occasioned no less than 17 of such compacts before 1900, as well as various actions in the Federal Supreme Court. (See 1934 YEAR BOOK, p. 368.) *Wisconsin v. Michigan*, 295 U.S. 455, was a proceeding to correct "the Green Bay section of the boundary between these States," the whole of which had been fixed previously (270 U.S. 295). It involved a "triangular area at the Menominee's mouth" (over which "neither State has ever exercised jurisdiction") and certain waters of the bay, through the middle of which the Court directed the new boundary to be drawn.

In *Ackerman v. Clarke*, 278 N. Y. Suppl. 75, the Appellate Division, reversing Justice Collins, held that, despite the interstate compact of 1834, the New York courts had no jurisdiction of an injury incurred on the George Washington Bridge, 800 feet west of its centre.

Criminal jurisdiction has been extended into another State, over boundary waters, in eight of these compacts. Further extension to authorize arrests by pursuing officers, return of witnesses, supervision of paroled persons and maintenance of joint detection agencies, was advocated in a paper before the Crime Conference in Washington by Gordon Dean. (*A.B.A. Journ.* XXI, 89.)

Petroleum conservation was the object of a compact adopted at Dallas, Tex., on February 16, following the decision in *Panama Refining Co. v. Ryan*, 293 U.S. 388, later ratified by the legislatures of Colorado, Illinois, Kansas, New Mexico, Oklahoma, and Texas, recommended for ratification by representatives of Arkansas and Michigan and approved by joint resolution of Congress in the closing days of its 1935 session.

Waters. The New York and New Jersey legislatures joined in a compact (into which Connecticut was also invited) to prevent the pollution of New York harbor waters. Joint commissions were created.

A resolution was also pending in Congress approving a compact between four States "for an equitable division . . . of the water supply of the Little Missouri" and a bill approving a compact between Wyoming and Montana for dividing the Yellowstone's waters. Nebraska and Wyoming, having failed to agree regarding apportionment of the North Platte's waters, the former brought suit against the latter in the Federal Supreme Court, which refused to dismiss it at the defendant's instance (295 U.S. 40).

Legislation. The volume of the legislative output was among the greatest of any year. Besides the voluminous acts of Congress, during a session of 235 days, and the acts of the State legislatures, most of which were in session during the year, there was a vast number of executive and administrative orders and regulations, of which the NRA alone issued thousands, before its enabling act was declared unconstitutional. This phase of the subject is treated from a hostile standpoint in an article on "Government in Ignorance of the Law," *Harvard Law Review*, XLVIII, 198, by Edwin N. Griswold, whose retirement from the Department of Justice was an incident of the "New Deal."

Local Government. There are over 3000 organized counties in the United States, with no uniformity in area, population, or economic status. The American County Association, composed of county officials from the country at large, discussed, at its recent meeting in Chicago, the question of retaining the present system. The movement for county consolidation (1934 YEAR BOOK, p. 368) is gaining in the South and the adoption of the "home rule" amendment in New York (See REFERENDUM) opens the way there to important reforms in county government. Monroe County (containing Rochester) adopted the county manager plan, which was also extended in Virginia. The Pennsylvania legislature approved the submission of a constitutional amendment providing for the consolidation of the city and county of Philadelphia and the Delaware legislature passed an act for extending the Wilmington city limits to low water mark on the Jersey shore of the Delaware, in accordance with the Federal Su-

preme Court's decision (1933 YEAR BOOK, p. 431). Toledo adopted the city manager plan and has already selected a manager; but in Cincinnati, where it has worked with marked success for over a decade, partisanship threatened its continuance. Not only was the plan defeated, three to two, for Hamilton county, but of the nine councilmen chosen November 5, four are partisans and, presumably, opposed to the whole scheme.

Philippines. The constitutional convention closed its labors in Manila on February 8, after sessions lasting nearly six months, although important changes were effected in the instrument (17 arts.) adopted the night before adjournment. It was ratified by popular vote on May 14 and requires (VIII, 8) two-thirds of the Supreme Court to adjudge unconstitutionality. The new commonwealth was inaugurated on November 15. See PHILIPPINES.

British Commonwealth and Empire. Australia. On May 24 (Empire Day) the British parliamentary joint committee on Western Australia's petition to secede from the Commonwealth, reported that Parliament could take such action only upon a request from the Commonwealth itself.

Canada. On June 6, the Judicial Committee of the Privy Council (final court of appeal for the colonies and dominions) denied the *Petition of the British Coal Corp.* for an appeal from conviction by a Quebec court, of illegal combination to maintain prices; thus upholding the 1932 act of the Dominion Parliament, abolishing appeals in criminal, though not in civil, cases. The conference of Dominion and provincial premiers, which closed at Ottawa on December 13, resolved *inter alia* to seek a revision of the British North America Act, so that changes therein might be effected without appealing to the British Parliament.

Irish Free State. On June 6 the Judicial Committee (*supra*) also construed the Statute of Westminster (1931 YEAR BOOK, p. 454) as so modifying the Anglo-Irish treaty of 1921 as to permit the Dail to abolish appeals to the Privy Council in all cases. On December 12, the Dail, for the second time, and after an acrimonious debate, voted (76 to 57) to abolish the Irish Senate. The latter body, on December 18, deferred consideration of the measure until Jan. 15, 1936. See IRISH FREE STATE under History.

Newfoundland. The Overseas Trade Department reported encouraging evidence of business improvement, promising resumption of dominion status in the not distant future.

Palestine. On December 21, the long-expected announcement was made at Jerusalem, by High Commissioner Wauchope, of the proposed Legislative Council, to consist of 11 Moslems, 7 Jews, 3 Arabic-speaking Christians, 2 "merchants" (one of whom was expected to be a Jew) and 5 government appointees, all holding for 5 years. The Arab leaders reserved answer; but the Jews of all shades rejected the plan. The World Zionist Organization had already declared against it and the head thereof, Dr. Chaim Weitzmann, on December 26, called for a mobilization of world Jewry to combat it as a "régime which gravely jeopardizes the freedom of our development and the progress of immigration and settlement." The High Commissioner is empowered to nominate representatives of non-participants.

Other Countries. A translation of the new Brazilian Constitution (186 arts. with 26 transitory) is one of the year's many valuable publica-

tions by the Department of Commerce (Commercial Laws' Div.). In a brief but thoughtful "Foreword," the translator, H. P. Crawford, pronounces it exceptional as a "grant of power, enumeration of restrictions, bill of rights and source of law."

On April 29 the Supreme Tribunal of Ecuador declared unconstitutional the Guayaquil municipal ordinance requiring pasteurization of milk. On March 21 the Greek cabinet issued decrees abolishing the Senate and effecting other constitutional changes. The new Polish Constitution came into force on April 24.

PRIVATE LAW

American law is not the only system which is undergoing restatement; a movement to that end, even more intensive and characterized by the national trait of thoroughness, has been for some time progressing in Germany. Not only is the objective unification—*ein Reich, ein recht*—but all features of the pre-Nazi régime are being eliminated as fast as possible. It is estimated that over 80,000 laws, many of them police regulations, have been examined for that purpose and some have already been abrogated, including provisions enacted less than a decade ago. "The Laws of England, in the 13th Century" are the subject of an article by Charles S. Lobingier, in the *China Law Review*, VIII, 153-191.

Conflict of Laws. The American Law Institute's Restatement "is a matter of the highest importance for all practitioners and students of this branch of law, not merely in the United States but also in all the British dominions where the Common Law holds," according to A. B. Keith, University of Edinburgh (*A.B.A. Journ.* XXI, 237), who further asserts that "it concerns even those territories . . . where a different system prevails" but where "the Privy Council, as the final arbiter, inclines to apply the (same) doctrines." A recent instance is *Alaska Packers' Ass'n. v. Cal. Accident Comm'n.*, 294 U.S. 532, affirming 34 Pac. (2d) 716, where an employee under a contract made in California, to be performed in Alaska (where he was injured), was given the benefit of the California Workmen's Compensation Law. Other recent works of importance in this field are, Cheshire, *Private International Law* (rev. *Law Quar. Rev.*, LI, 537; *Harvard Law Rev.* XLIX, 198); Schoch, *Actionability, Procedural Rights and Proof in International Law* (rev. *A.B.A. Journ.* XXI, 374).

Contracts. The American Law Institute's "Restatement" is discussed, in the *Temple Law Quarterly* for April, by its principal author, Prof. Samuel Williston of Harvard Law School, who has also recently published a text book on the subject. Outstanding developments in this field have been the varied interpretations of the clause in contractual obligations, requiring payment in gold coin. Netherlands courts led the way by deciding that when such obligations were subject to American law, they were payable in the devalued dollar and not in the gold dollar, although calling for gold coin.

On February 18, the United States Supreme Court rendered three decisions (*Norman v. B. & O. R. Co.*, 294 U.S. 240; *Norts v. U.S.*, *ib.* 317; *Perry v. U.S.* *ib.* 330) likewise affirming the debtor's right to discharge such obligations with the devalued dollar. (See also 1934 *YEAR BOOK*, p. 369.) "The contention that these gold clauses are valid contracts and cannot be struck down,"

wrote the Chief Justice, who prepared the opinions in all three, "proceeds upon the assumption that private parties . . . may limit that authority . . . of Congress to establish a uniform currency and parity between different kinds of currency." Articles in the following periodicals reflect the wide interest, professional and lay, in these decisions: *Georgetown Law Journal* for March and May, by Phanor J. Eder; *University of Penna. Law Review* for April by John Dickinson; *Harvard Law Review* for May by Henry M. Hart, Jr.

On the day following these "gold clause" decisions, President Mendieta of Cuba issued a decree (a recognized mode of legislation there) legalizing the contract of "option," which, it is explained, the preexisting law "neither defines nor regulates." It provides a summary remedy in the nature of specific performance. The contract of insurance in Denmark is treated from the commercial standpoint in a bulletin of the Department of Commerce (Commercial Laws Div.), issued on December 5. A recent enactment of the New York legislature (Sec. 793 of the Civil Practice Act) seems to have revived imprisonment for debt which was abolished there in 1831. The Brooklyn Appellate Division of the Supreme Court has upheld the constitutionality of the new act but it has yet to be passed upon by the Court of Appeals.

Corporations. Probably the year's most important piece of corporate legislation was the "Public Utility Holding Company Act" of Congress, approved August 26, after a long and bitter controversy. Title I, which consists of 33 sections, many quite long and with numerous subdivisions, is the part affecting "holding" (restricted to gas and electric) companies (Title II contains only "Amendments to Federal Water Power Act") which were required to register with the Securities and Exchange Commission, administering the act, before December 1; in fact only about 60 companies did so. Sec. 11 is the most controversial one, being known as the "death sentence clause," for it empowers the Commission "to limit the operation of the holding company system . . . to a single, integrated public utility." On November 7, at Baltimore, U.S. Dist. Judge Coleman, in an opinion covering over 100 printed pages (*In re Amer. States Public Service*, 12 Fed. Supp. 667), declared void the entire act (Title I) as unwarranted by the commerce or postal clause of the Federal Constitution and as infringing due process of law. The case then was carried to the Court of Appeals of the 4th circuit. If the act is upheld even in part, it may mark a step toward Federal supervision, if not organization, of all corporations (1934 *YEAR BOOK*, p. 370) and thus facilitate the much needed restoration of corporate control to stockholders. A large number of companies affected by the act combined in various other proceedings to test its validity. "Sec. 77B, added to the Bankruptcy Act, June 7, 1934, is a corporation reorganization law," writes John Hanna, introducing an informing article (*A.B.A. Journ.* XXI, 73) to which a valuable bibliography of the subject is attached. Another is "Corporations Amenable to Sec. 77B," by Jacob I. Weinstein (*Univ. of Penna. Law Rev.*, May). But a transfer of assets by one corporation to another, for the purpose of evading income tax, is not a "reorganization" under the Revenue Act of 1928 (112g). (*Gregory v. Helvering*, 293 U.S. 465.)

The Canadian premiers' conference at Ottawa in December adopted a programme including an uniform companies act for the whole Dominion.

"Company and Corporation Law of Brazil," the "Corporation Laws of the (Five) Central American States," and "Japanese Export Guild Law" are among the year's valuable publications of the U.S. Department of Commerce (Commercial Laws Div.). "The Juridical Status of Non-Registered Foreign Corporations in Ecuador" is discussed by V. E. Greaves in the *Tulane Law Review* for April.

Delicts (Torts). The American Law Institute's "Restatement" of the Law on this subject (1934 YEAR BOOK, p. 370) called forth several informing reviews, e.g. in the *Illinois Law Review* for January, by Dean Leon Green; in the *University of Pennsylvania Law Review* for June by A. L. Goodhart; in the *A.B.A. Journal*, XXI, 236 by L. W. Feezer. "The Obscurity of Tort" is the subject of an article by R. E. Ireton (who appears to overlook the "delictual obligations of the Civil Law") in the *United States Law Review* for June. In the *Minnesota Law Review* for May, Vold discusses "The Basis of Liability in Radio Defamation." An instance of that subject's growing importance is the \$100,000 libel action by a Pittsburgh hotel company against the National Broadcasting Company and "Al" Jolson (comedian) for the latter's remark, "that's a rotten hotel," during a nation-wide radio programme on June 19. The Trinidad libel law, in force for nearly a half century, was amended, April 5, by granting the privilege of reporting public meetings. The Montreal Superior Court allowed recovery by a mother against her 19-year-old daughter, for an injury caused by the latter's excessive speed in driving her car.

Among recent publications in this field by the Department of Commerce (Commercial Laws Div.) are the new Workmen's Compensation Law for Grenada, amendments of the Argentine law on that subject, and a summary of that of Hawaii.

Domestic Relations. Under an act of the Connecticut General Assembly, effective Jan. 1, 1936, an applicant for a marriage license must submit to a blood test, present a physician's report thereof, and wait five days for the license. A sure result is the reduction of applicants from other States. Governor Curley has virtually effected a repeal (at least temporarily) of the civil marriage law of Massachusetts by warning all justices of the peace that they will not be considered for reappointment if they perform marriage ceremonies. A bill in the Ontario legislature makes the Dionne "quintuplets" "wards of the King." A decision of the Soviet Supreme Court, supposed to be directed at grandparents, on June 2, penalized those who teach religion to children without their parents' consent. A surplus of spending money advanced to the wife belongs to the husband under a recent New Jersey decision. The new Siamese law, in force October 1, requires registration of all marriages and declares the husband to be the head of the household.

Breach of Promise, etc. A notable feature of current State legislation is the outlawry of actions for breach of promise, alienation of affections, criminal conversation, and seduction which was enacted in Illinois, Indiana, and New York and was considered in Michigan, Minnesota, Missouri, Nebraska, Ohio, Oklahoma, Oregon, Texas, and Wisconsin. Only in Missouri was it definitely rejected. The arguments of James Schouler (1933 YEAR BOOK, p. 435) are meeting with *post-mortem* acceptance. The whole subject

is treated by Prof. N. P. Feinsinger in *Wisconsin Law Rev.*, X, 417.

Divorce. Grounds added by an act of Congress for the District of Columbia (August 7) are: desertion for two years, voluntary separation for five (virtually permitting divorce by mutual consent), conviction of felony and cruelty (effective two years after decree). A German court in Koeslin granted a divorce to a husband because his wife refused to bear children. The new Siamese law (q.v. *supra*) provides for divorce by mutual consent or for the wife's (but not the husband's) infidelity. A new Florida statute reduces to 90 days the required residential period for divorce; but decrees based on the corresponding Nevada statute were declared void in Kentucky and France.

A Soviet divorce was denied recognition in Illinois and a Mexican divorce in New Jersey. A bill to bar use of the mails to further such a divorce was introduced into the lower house of Congress. In May, the Jewish Rabbinical Assembly approved divorce to a deserted wife (*agunah*) without the husband's consent; but the "Union of Orthodox Rabbis" repudiated the action as "absolutely contrary to Jewish Law." Anglican bishops in Canada protested against the Quebec practice of annulling marriages on the sole ground that the parties were not of the same religious faith. The demand for a Federal divorce law in the United States is voiced by Louis A. Stone, attorney for the Legal Aid Bureau. The new divorce law of Ecuador requires one year's residence acquired by actual domicile or by "entering into contracts with the government"—a process not yet fully explained.

Property. Feudal Tenures, whose vestiges linger in some parts of the world, lost more ground in 1935. The remaining incidents of "copyhold," described by the *London Law Times*, as "perhaps the most ancient, and certainly the most diversified, of our tenures," practically ceased to exist as the result of legislation enacted in 1922, but whose enforcement was postponed. In Quebec, where the feudal régime has lasted longer than elsewhere (see Lobingier, "The Rise and Fall of Feudal Law," *Cornell Law Quarterly*, XVIII, 229), the final negotiations for repurchase of seignories and abolition of feudal rents were being conducted by a Commission appointed during the year.

Industrial. April 30 saw the issue of Patent No. 2,000,000 by the U.S. Patent Office, which reaches its first centenary in 1936. Up to 100 years ago but 9957 patents had been granted by the United States—the first bearing date July 31, 1790. The year ending June 30, 1930, saw the largest number of patent applications—91,430. About 90,000 United States patents are issued each year; but there are loud complaints from inventors and demands for reform. In view of the uncertainties of patent litigation (1934 YEAR BOOK, p. 372) and of the fact "that the Supreme Court has invalidated 65 per cent of the patents considered since 1880," the proposal for a single Court of Patent Appeals, equipped with experts in engineering and law, with technical advisers whose findings will be conclusive, seems justified. Publishing applications before issue of patents is also advocated by the Science Advisory Board as a means of settling conflicts in advance.

The Trappist monks who brought an action in the Antwerp Commercial Court against a brewer who made and sold beer similar to theirs, were non-suited on the ground that their charter, and the purposes of their organization, precluded their classification as traders, doing business for profit.

The Chinese Administrative Court at Nanking holds that a trade-mark, registered without designation of color, is not protected as to that element and that the size of the mark is not a factor in determining infringement. A Nevada trade-mark bill, withdrawing protection as a penalty for non-compliance, was vetoed by Governor Kirman on the ground that it was confiscatory and would lead to unfair competition. Similar bills were before the legislatures of Maryland, New Jersey, and New York. Peru has adhered to the Pan-American Trademark Protective Convention of Feb. 20, 1929.

Torrens Land Registration System (1934 YEAR BOOK, p. 372) needs more funds to make it effective in New York, according to testimony before committee now investigating the subject. The system has been in vogue in Hawaii since 1903 and about one-third of Oahu's total area has been registered according to P. C. Morris of the Honolulu bar, in a paper before the visiting delegation of the A.B.A. (*Journal*, XXI, 649).

Wills. Royal testaments of ancient date were discovered and translated by a young Persian, cataloguing a collection of oriental MSS. recently presented to the Philadelphia Free Library. That of Ahmed Pasha, Grand Vizier of two Turkish Sultans, was executed in 1512 and devoted a vast estate, including whole villages in both European and Asiatic Turkey, to alms and mosque building. Another, executed in 1706, by Shah Muhammed Hussain, provided a funeral parlor for indigent Moslems. The Canon Law has contributed so much to the Anglo-American law of wills, that it is a privilege to notice a work on *The Canon Law of Wills* by Rev. Jerome D. Hannan (1935; reviewed *Georgetown Law Journal*, XXIV, 320).

The last testament of Henryk Sienkiewicz, famous Polish novelist, was recently probated at Warsaw, nearly 19 years after his death, having been discovered in a summer house occupied by him during his last year. Restrictions in the wills of the late Mrs. Elbert H. Gary and John E. Andrus occupied the attention of New York Surrogate Courts during the year. A provision in the last named (whose trust funds aggregated \$30,000,000) requiring beneficiaries' written approval of all acts of the trustees, was pronounced an unprecedented *in terrorem*, contrary to public policy and to the State and Federal constitutions. The equitable doctrine of *cy pres* (as near as) applied in construing a testator's intent, has been found workable and helpful in promoting the purposes of the New York Community Trust, according to its current report.

The difference in concept and content between the civil law testament and the Anglo-American "will," is well illustrated by the instrument executed, some 2¼ years before his death, by the late Dr. Alfredo Colmo, Argentine jurist and sociologist, which fills a column of print in the *United States Law Review* (LXIX, 502). The testator recites his ideals and aspirations, admonishes his surviving relatives, but, in disposing of his property, makes no change in the course of intestate succession except as to his library. By way of contrast, we have the following direction regarding an \$11,000 estate, probated at Pittsburgh: "Everything I have to Arthur." The civil law practice of authentication during the testator's life, thus avoiding *post mortem* contests, with their inevitable expense and uncertainty, is advocated by Harry Kutscher in an article on "Living Probate" (*A.B.A. Journ.* XXL, 427) but op-

posed by the Law Reform Committee of the New York City Ass'n of the Bar. (*U.S. Law Rev.*, LXIX, 623).

LAWRENCE, COL. THOMAS EDWARD. A British scholar and soldier, known as "Lawrence of Arabia" and "T. E. Shaw," died at Wool, Dorsetshire, May 19, 1935, the result of a motorcycle accident. He was born at Portmadoc, Carnarvonshire, Wales, Aug. 15, 1888, and educated at the High School, Oxford, whither his parents had moved, and at Jesus College, Oxford University, winning first class honors in modern history in 1910. In that same year he went on a walking tour through Syria and while there he picked up a knowledge of Arabic which was later to stand him in good stead, and which, with his interest in and knowledge of archaeology, brought him to the attention of D. G. Hogarth, then preparing an expedition to Jerablus on the Euphrates to excavate Carchemish for the British Museum. Through the aid of a postgraduate endowment from Magdalen College, Oxford, he was enabled to join this expedition in 1911, remaining with them until 1914, except for the winter of 1913-14, when he was assigned to the Palestine Exploration Fund and was attached to the Survey of North Sinai.

At the outbreak of the World War he was assigned to a post in the geographical section of the War Office, but after Turkey had joined the Central Powers, he was sent by Lord Kitchener to Egypt and attached to the Military Intelligence Service. He became a moving spirit in the Arab revolt and in the establishment of the Arab Bureau early in 1916, and acted as staff and intelligence officer for the Arab campaigns. In the autumn of that year he asked for leave to go to Jidda and effect a closer liaison between the British and the Arabs. Permission was granted and he was transferred to the Arab Bureau under the Foreign Office.

Believing that Feisal was the strongest of Sherif Hussein's sons, he persuaded the Sherif to let him go into the interior to visit Feisal and his force, which had been driven back from Medina. He soon won the confidence of Feisal and induced him to reorganize his army and move north to attack the Hejaz Railway, thereby threatening Medina. With Feisal at Wejh, and the army of another brother, Abdulla, at Wadi Ais to cooperate, Lawrence went farther into the interior to raise the northern tribes against the Turks. With his forces he pushed beyond Baalbek—behind the enemy lines in Syria—and on coming back picked up a Huweitat force under Auda Abu Tayyi, defeated a Turkish battalion near Maan, and forced a passage to Akaba, which was occupied for Feisal in August, 1917. For his exploits here he was promoted to field rank and awarded decorations by the British and French Governments, which he refused.

Colonel Allenby, assisted by Lawrence, organized and led an armed force in battle at Wadi el-Hesa near Esh Shobek, where the enemy suffered its worst defeat in the open. He soon isolated Medina by his train-wrecking expeditions, and early in 1918 attempted to cut the Turkish Palestine army's railway communications with Damascus, but failed by a small margin. By the summer, with the cooperation of Allenby, he had persuaded Feisal to move to Qasr Azraq and organize a new attack on Damascus. In the autumn, Feisal's forces moved up with Allenby's, and together they broke up the enemy's trans-Jordan Army,

and the Arabs, reaching Damascus before Allenby, entered the city and held it for his arrival.

Invited to the Peace Conference at Paris in 1919, Lawrence became one of its outstanding figures by merit of his legendary fame. However, because he was unsuccessful in his plans for an Arabian kingdom he left the Conference. He was elected a research fellow of All Souls, Oxford in that same year. In 1921, Winston Churchill called him to the Foreign Office as an adviser in Arabian affairs. In the following year, feeling that the Allies failed to fulfill their moral obligations toward the Arabs, and disgusted at his own part in what he considered their betrayal, he quit the government service, abjuring all honors and enlisting as a mechanic in the Royal Air Force under the name of "Ross." His identity soon became known and in 1923 the unwelcome publicity attendant led to his transfer to the Tank Corps, being retransferred to the Air Corps in 1925. Two years later he had his name legally changed to T. E. Shaw. He served in India on the northwestern frontier but rumor again credited him with revolutionary exploits, and in 1928 he was recalled. From that time until his death he remained in the Air Corps.

In 1926, Lawrence wrote his account of his Arabian campaigns under the title of *The Seven Pillars of Wisdom*, which he published privately, and which received great praise from the critics. In the following year, in order to defray the expenses of his publishing venture, he issued a popular version under the title, *Revolt in the Desert*. A trade edition of *The Seven Pillars* was published posthumously in September, 1935. His translation of Homer's *Odyssey* was published in 1932.

The legend of Colonel Lawrence has caused considerable controversy, although no one denies his evident genius. He has been considered a *poseur* who claimed he wanted anonymity, when his own envelopment of himself in mystery brought him further into the spotlight. Others claimed that he was sincere in his desire for a private life, but that circumstances over which he had no control raised obstacles in his path to this end. Regardless of whether or not he sought notoriety, his was a life that few men have the opportunity of living, and one that will become more securely a legend as the years roll on.

LAWRENCE COLLEGE. A coeducational institution in Appleton, Wis., founded in 1847. For the autumn term of 1935, 705 students were enrolled in the college of liberal arts, 312 in the conservatory of music, and 38 in the institute of paper chemistry, a graduate school affiliated with the college. There were 65 members on the faculty of the college, 19 on that of the conservatory, and 45 on the staff of the Institute. The endowment, exclusive of buildings and equipment, amounted to \$1,732,931; the income from endowments for 1935 was \$61,932. The library contained 110,608 volumes. President, Henry Merritt Wriston, Ph.D.

LEAD. The production of recoverable lead in the United States in 1935 amounted to 330,680 short tons, as compared with 287,432 short tons in 1934, according to a preliminary report of the U.S. Bureau of Mines. The major production, as usual, was in Missouri with 97,520 tons, followed by Idaho with 76,400 tons, and Utah with 64,090 tons. Oklahoma was fourth in the list of producing States with 24,260 tons. For the first four weeks of the year the average weekly price for lead concentrates was \$36 a ton. In the next two weeks it dropped to \$32 a ton, rising gradually to the

highest level, \$47 a ton, for the last 15 weeks of the year.

According to the American Bureau of Metal Statistics the refined lead production of the world in 1935 amounted to 1,569,670 short tons, as compared with 1,494,743 short tons in 1934. By countries the production of refined lead, in short tons, was distributed among the leading producing countries as follows: United States, 376,646; Australia, 245,052; Mexico, 198,077; Canada, 162,992; Germany, 142,535; Burma, 80,710; Spain, 76,893; Italy, 39,477; Tunis, 27,288.

LEAGUE OF NATIONS. Italo-Ethiopian Dispute. Relations between Italy and Ethiopia reached a critical stage late in 1934 (see 1934 YEAR BOOK, p. 219) and early in 1935 after a series of encounters between their garrisons stationed along the undefined frontier between Ethiopia and Italian Somaliland. Both governments sent protests to the League of Nations at Geneva. The government of Ethiopia charged the Italians with "aggression in the territory," while Rome sent a blunt denial of the Ethiopian charges, and asserted that the border incidents had been provoked by actions of the Ethiopian troops. See ETHIOPIA under *History*.

On Jan. 3, 1935, an appeal was made by Ethiopia to the League of Nations asking it to take action under Article XI of the Covenant to safeguard peace between Ethiopia and Italy. This article authorizes the League to take action in case of a threat of war, and gives to each member the "friendly right" to bring threats to the League's attention. The message from the Foreign Minister of Ethiopia complained of new Italian acts of aggression at Gerlogubi. While some fear was felt that the border incidents would put the League to a sharp test, there was also feeling that the political agreement of Jan. 7, 1935, between Italy and France would help to smooth over the situation. See FRANCE and ITALY under *History*.

Ethiopia requested the Council of the League to consider its dispute with Italy at the extraordinary session that was to open on April 15. The council, after hearing the representatives of the two parties, who gave assurance of the peaceful intentions of their governments and of their desire to settle the dispute in conformity with the provisions of the Treaty of 1928, took the view that this question should not be placed on the agenda of the extraordinary session, seeing that it would appear on that of the ordinary session in May.

On May 25, the Council brought to a conclusion five days of grave tension. Premier Benito Mussolini yielded to the will of the League on vital points relative to the Italo-Ethiopian trouble and so postponed actual war to the autumn. A sword-in-hand speech by Il Duce only a matter of hours after his submission to the League showed the situation still to be dangerous, but the members of the Council exercised energy and courage in dealing with Mussolini's intransigence from May 20 to 25 and so for the time being brought the dispute under control of the League, with Mussolini's official consent.

The Council adopted resolutions on the subject. In the first, the Council observed that, direct negotiations having failed, the parties had appointed their arbitrators in accordance with Article 5 of the Italo-Ethiopian Treaty of Aug. 2, 1928; that they agreed to entrust to these arbitrators the settlement of the incidents that had occurred on the Italo-Ethiopian frontier; that the Italian Government no longer objected to the nationality

of the arbitrators appointed by the Ethiopian Government; and that the two Governments agreed in fixing Aug. 25, 1935, as the date on which the conciliation and arbitration procedure shall have finished. In the second resolution, the Council, while leaving the parties free to settle the dispute in conformity with Article 5 of the Treaty, decided to meet (a) if, in the absence of an agreement terminating the dispute, no understanding had been reached before July 25 between the four arbitrators as to the choice of the fifth arbitrator; (b) if a settlement by conciliation and arbitration had not been reached by August 25.

On July 19 the Secretary-General received a communication from the Ethiopian Government which observed with regret that the Italian Government was still sending troops and war material to Africa. The former government protested against the publication in the Italian press of information concerning frontier incidents, with the purpose of disturbing the good relations between the two countries. In order to prove its pacific intentions, the Ethiopian Government suggested that the Council should send neutral observers to Ethiopia to inspect the districts bordering on Italian Somaliland and the other colonies, to make an investigation into the incidents, actual or alleged, and to report to the Council.

Failure of Arbitration and Conciliation. Meanwhile the Arbitration Commission proved unable to come to a conclusion. The agent of the Ethiopian Government contended that the question of whether Ualual was Ethiopian or Italian territory must be considered in connection with establishing responsibility for the Ualual incident. The agent of the Italian Government objected to this view. The arbitrators appointed by the Italian Government were of the opinion that this question was excluded from the terms of the arbitration agreement, and therefore was not within the jurisdiction of the Commission. The arbitrators nominated by the Ethiopian Government maintained that the Commission would be surrendering its independence were it to forbid the agent of the Ethiopian Government to state the reasons which led him to consider the Commission free to judge all the relevant circumstances of the incident, notably the question of the ownership of Ualual.

Following these divergencies of opinion, the two arbitrators appointed by the Ethiopian Government considered that the time had come for the selection of a fifth arbitrator in accordance with the Council resolution of May 25. The Italian Government proposed to the Ethiopian Government that the work of the Commission should be resumed within the limits of the arbitration agreement, which in its view excluded the question of frontiers. Ethiopia denied ever having agreed to any restriction of the powers of the Arbitration Commission, and asked that the Council be convened to interpret its terms of reference. In these circumstances, and in conformity with its resolution of May 25, the Council met in extraordinary session on July 31.

At the opening of the session the Italian representative, Baron Aloisi, drew attention to the Italian telegram of July 27 to the Secretary-General, in which it was declared that "should the Ethiopian Government make its intentions officially known, the Italian Government would have no difficulty in taking part in the extraordinary session of the Council, of which the only object must be that of considering the most suit-

able methods of enabling the Commission of Conciliation and Arbitration to resume its work."

The representative of Ethiopia, M. Jeze, explained that Ethiopia had asked the Council of the League of Nations to meet, when it had been proved at Scheveningen, on July 9, that the arbitral procedure which had been begun had no chance of succeeding, because the conditions in which the agreement of May 25 had been drawn up could not be fulfilled owing to the attitude of Italy. That is why, on July 9, the Secretariat of the League had received a request that the Council should be summoned with all urgency in order that it might intervene.

The Ethiopian representative further suggested that for the moment it might be desirable merely to note that Ethiopia had appealed to the League in order that this problem, which had been before the Council since January, 1935, might be finally settled. The Ethiopian Government was determined to do all it could to reach a peaceful solution.

Baron Aloisi, the Italian representative, said that with regard to the statements of the Ethiopian representative, whereby he attributed to the Italian Government the responsibility for the failure of the work at Scheveningen, he must make full reservations. Britain's spokesman, Capt. Anthony Eden, said that it must first be made clear whether their work was limited in the sense which the President had suggested, or whether the Council could extend its agenda.

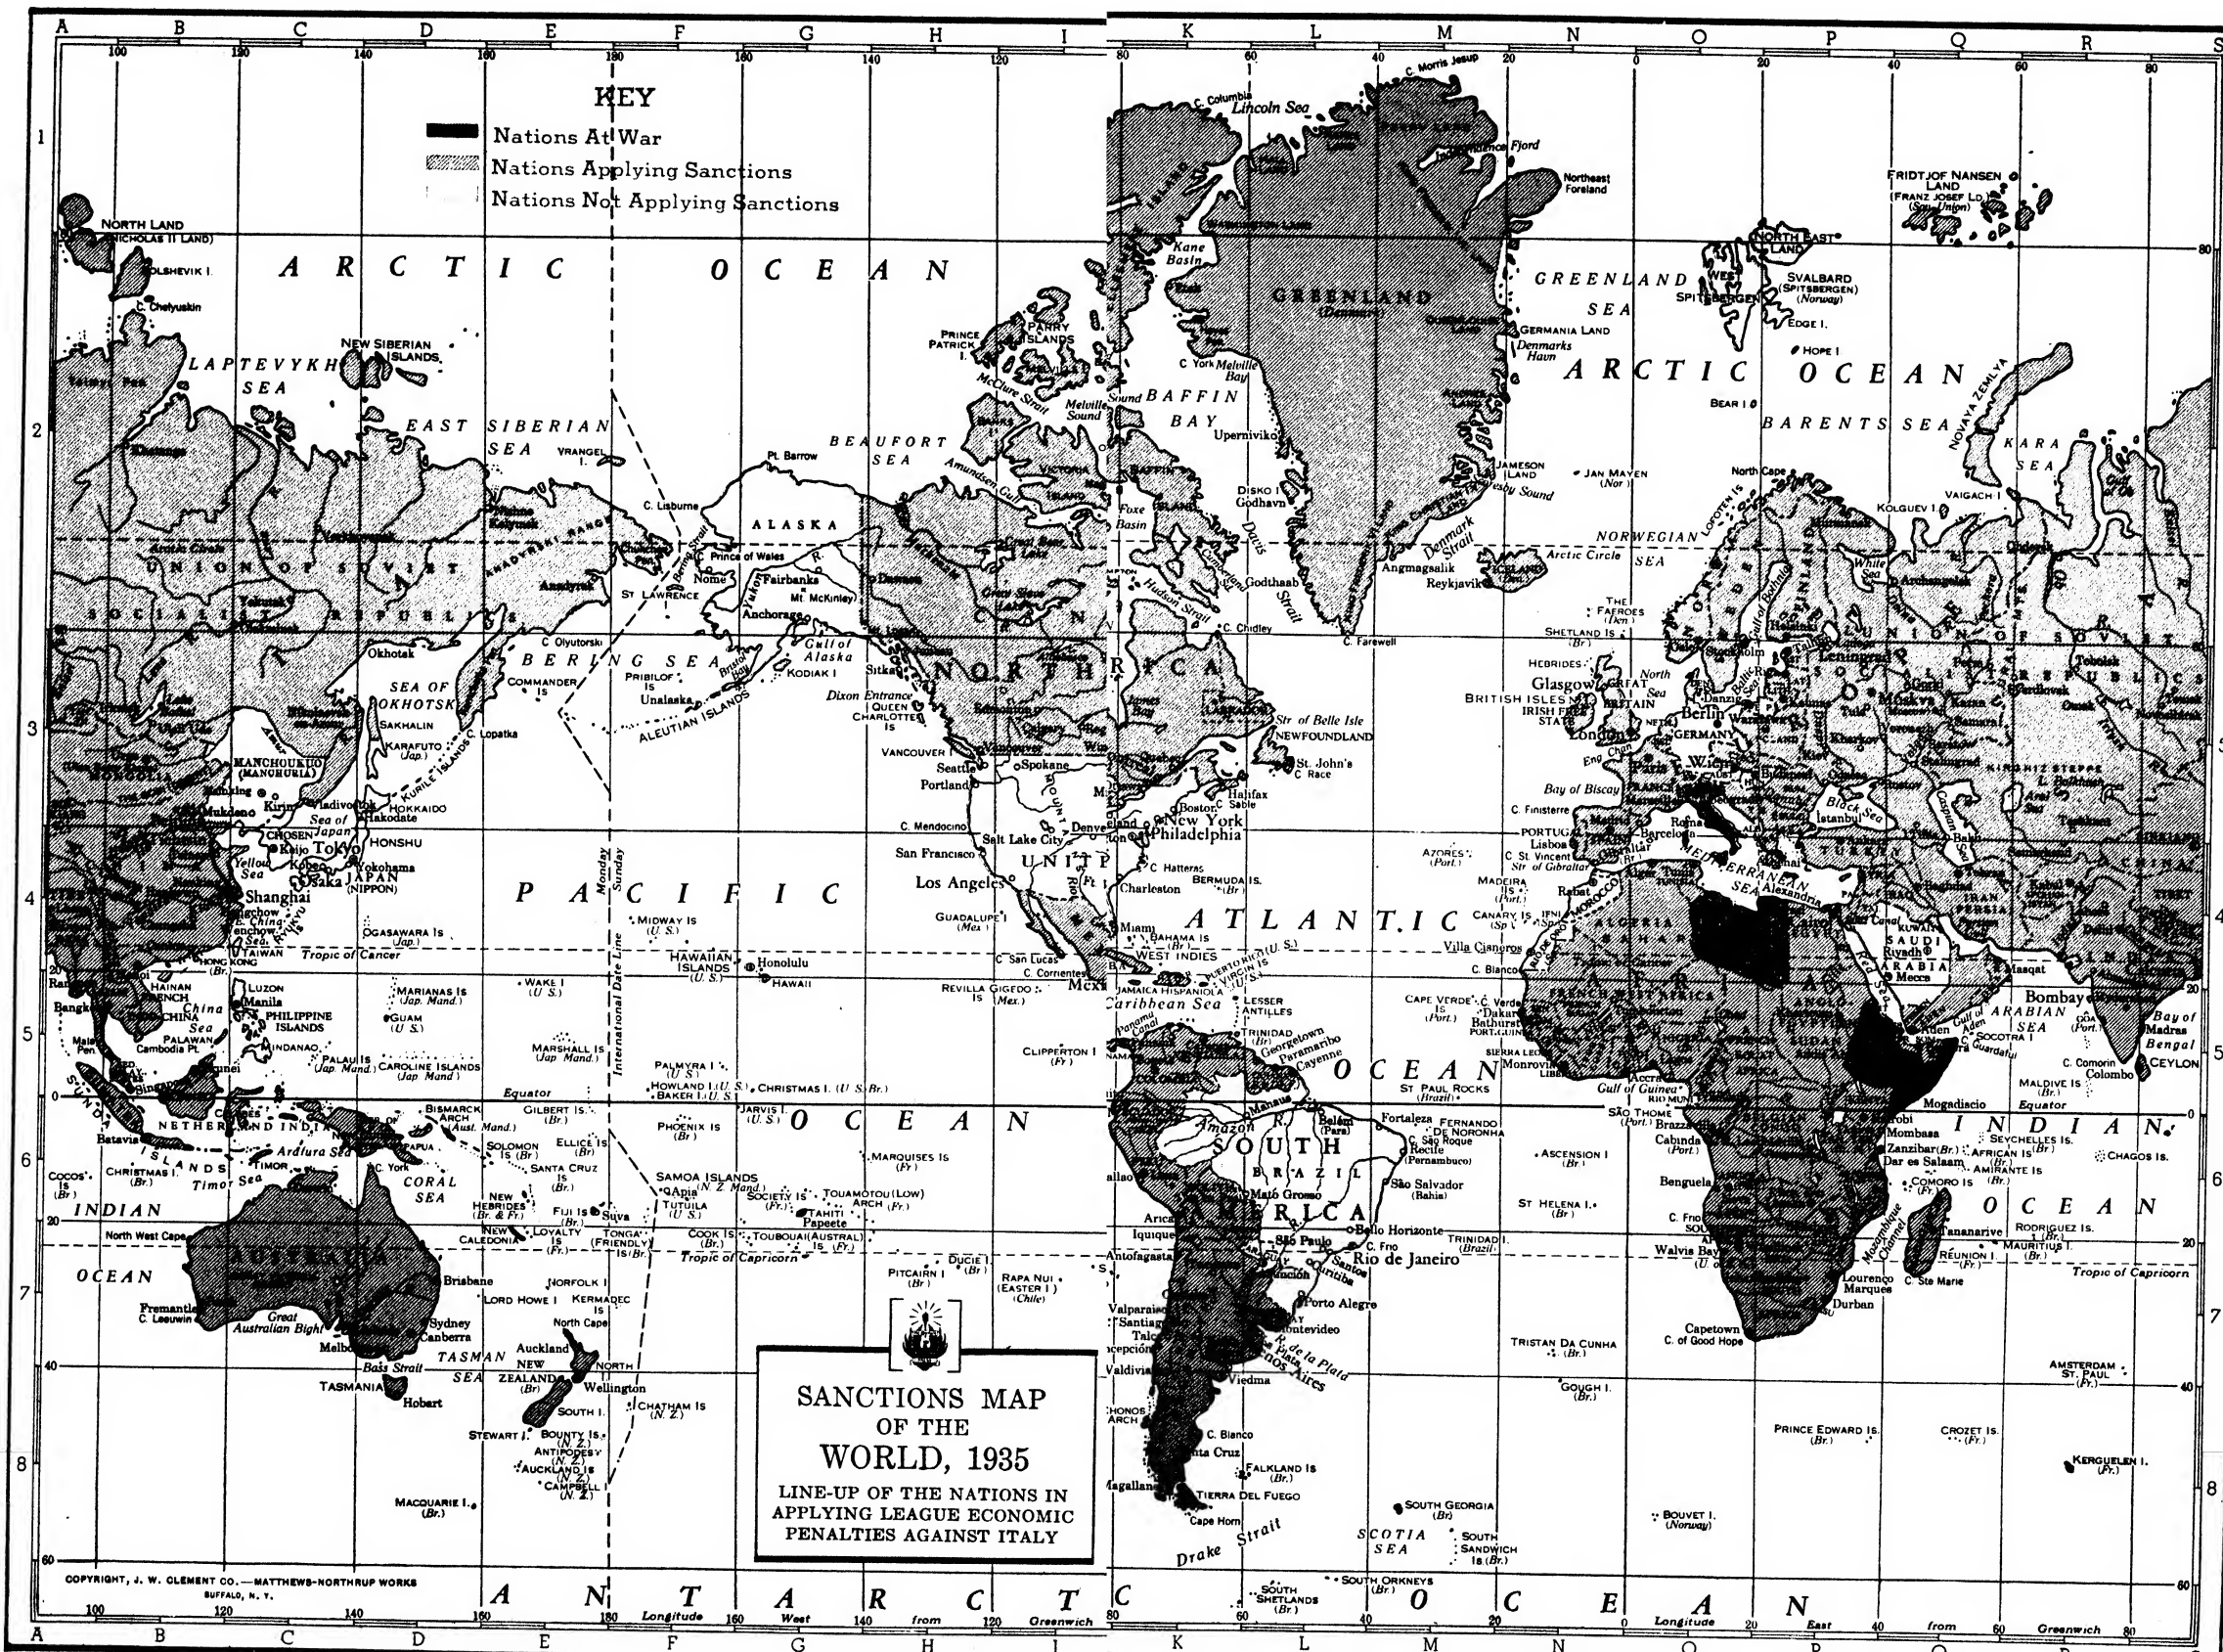

Premier Laval of France pointed out that the Council, by its resolution of May, did not otherwise define what its attitude would be in the event of an interruption of the conciliation and arbitration procedure. The Italian representative had asked the Council to limit its consideration to the Ualual incidents, while the Ethiopian representative had not asked for an extension of the discussion or for any different interpretation of the resolution. M. Laval therefore proposed that the Council should adjourn, to enable the representatives of the United Kingdom and France, who were particularly interested in the matter, to endeavor to find a formula enabling the Council to give full effect to its resolution.

The Ethiopian representative replied that M. Laval's statement did not entirely coincide with the Ethiopian view in regard to the interpretation of Ethiopia's appeal to the League Council. There seemed to be an impression that:

The Ethiopian Government expressed the view that the question should be limited to the mere subject of procedure. That is not the case. There are two questions, or rather one question with two aspects. On the one hand there is arbitration, and on the other there is everything that is connected with arbitration. There is the question of the Italian Government's general attitude which, as the Ethiopian Government believes it is in a position to show, has had the effect of preventing a solution by arbitration. Accordingly, the problem with which you are confronted is the problem of deciding whether this procedure is to be a dilatory procedure or a procedure aiming seriously at a settlement of the dispute between Ethiopia and Italy. The problem goes further than the appointment of a fifth arbitrator or the question of what is to happen in the event of the arbitrators failing to agree upon the appointment of the fifth arbitrator. The point is whether it is desired to continue to follow procedures which have so far yielded no result except that of aggravating a conflict which is every day becoming more critical, or whether, on the contrary, the Council desires to take a decision to consider the situation as a whole with a view to ascertaining whether there is a possibility—and I may say at once that the Ethiopian Government will cooperate in that effort—of finding a pacific solution.

With this reservation, and with apologies for any misunderstanding to which my first statement may have given rise, I support M. Laval's proposal to proceed to negotiations with a view to finding a formula.

The Italian Representative declared that:

A form of conciliation and arbitration procedure exists to which the dispute has been submitted in accordance with the agreement reached between the two parties. The Council, in its resolution of May 25, 1935, noted the existence of this agreement and the opening of the procedure. The procedure has been suspended, a difference having arisen between the agents of the two Governments in regard to the interpretation of the arbitration agreement.

The Italian Government attaches the utmost importance to the success of that procedure, which, in its view, must determine who was the aggressor at Ualual on Dec. 5, 1934. The aggression at Ualual was the origin of the present situation.

The Italian Government expects that, in the first instance, all possible light will be thrown on the events at Ualual, which involve very grave responsibilities. Accordingly, the Italian Government cannot as matters stand enter into a discussion on a wider basis, an essential element of which must in any case be information as to the conclusions of the Conciliation and Arbitration Commission. Moreover, the Italian Government desires to recall that, under the terms of the Covenant, the Council cannot proceed to an examination of the dispute, since the latter is at the moment submitted to arbitral procedure. The Council has always conformed to this rule. In view of existing precedents, the Italian delegation has not even contemplated the possibility of a wider discussion, and could not therefore take part in any such discussion in the course of the present session.

I repeat that I am ready, in conjunction with the other members of the Council, to consider the most appropriate means of enabling the Conciliation and Arbitration Commission to resume its work and bring it to a successful issue.

On these grounds, I agree with M. Laval's suggestions.

The United Kingdom representative wished it to be clear that there was no question of the decision taken in regard to procedure limiting the agenda for the present session of the Council. The Council adjourned till August 3, to enable members, and especially those representing countries particularly interested in the matter, to endeavor to find a formula of agreement. On August 3 the Council met again and adopted the two following resolutions submitted to it by the President:

RESOLUTION No. 1

Referring to its resolutions of May 25, 1935, concerning the settlement of the dispute which has arisen between the Italian Government and the Ethiopian Government in consequence of the Ualual incident, which settlement was to be effected by the method specified in Article 5 of the Italo-Ethiopian Treaty of Aug. 2, 1928;

Whereas the proceedings of the Commission of Conciliation and Arbitration have been interrupted and, in order to ensure their resumption, the two Governments concerned have applied to the Council to interpret the agreement reached between those two Governments with regard to the exact scope of the task entrusted to that Commission;

Without offering any opinion on the attitude of the agents of the two Governments before that Commission or the views expressed by the members of the Commission itself;

Considering that the competence of the Commission rests upon the agreement reached between the parties to the dispute;

Considering that it appears both from the notes of May 15 and 16, 1935, and from the declarations made before the Council at its meeting on May 25 that the two parties did not agree that the Commission should examine frontier questions or give a legal interpretation of the agreements and treaties concerning the frontier, and that this matter therefore does not fall within the province of the Commission;

Considering, in consequence, that the Commission must not, by its decision on the Ualual incident, prejudice the solution of questions which do not fall within its province, and that it would be prejudging that solution if it founded its decision on the opinion that the place at which the incident occurred is under the sovereignty either of Italy or Ethiopia;

Declares that—while it is always open to the Commission to take into consideration, without entering upon any discussion on the matter, the conviction that was held by the local authorities on either side as to the sovereignty over the place of the incident—it is clear from the foregoing considerations that the Commission has not to take into account the circumstance that Ualual is under the sovereignty of one or other of the two parties, but must concern itself solely with the other elements in the dispute relating to the Ualual incident;

Takes note that the representatives of the two parties

have declared that they intend to pursue the procedure of conciliation and arbitration under the conditions laid down in Article 5 of the Treaty of 1928;

Takes note of the declaration of the two parties to the effect that the four members of the Commission of Conciliation and Arbitration will proceed without delay to designate the fifth arbitrator whose appointment might be necessary for the carrying through of their work;

Confident that the procedure will have brought about the settlement of the dispute before Sept. 1, 1935, invites the two Governments to inform it of the result not later than Sept. 4, 1935.

RESOLUTION No. 2

The Council decides to meet in any event on Sept. 4, 1935, to undertake the general examination, in its various aspects, of the relations between Italy and Ethiopia.

The representative of Ethiopia declared that for political reasons of expediency his government was called upon to make a considerable sacrifice in the interests of world peace. It wished once again to give the Council proof of its loyalty and good faith. He continued:

The Ethiopian Government is firmly convinced that, even after this sacrifice, which weakens its position before the arbitrators by the abandonment of a very important part of its case, impartial arbitrators under the chairmanship of a fifth arbitrator enjoying world-wide prestige will recognize the justice of the Ethiopian cause. The Imperial Ethiopian Government declares to the world, here and now, that it will unreservedly accept the decision of the arbitrators and will loyally abide by it.

The Ethiopian Government hails with joy and gratitude the Council's decision to meet in any case on Sept. 4, 1935, to undertake a general examination of Italo-Ethiopian relations in all their aspects. It entertains the firm hope that this full and general examination will enable the Council to establish once and for all, and on a solid basis, permanent friendly and trustful relations between Ethiopia and Italy.

Baron Aloisi said that the Italian delegation accepted the first resolution proposed to the Council. As regards the second, which fixed a date for the examination of the relations between Italy and Ethiopia in their various aspects, he would abstain from voting. The reasons for this abstention were clearly shown in the statements which he had made at the meeting of July 31, 1935. M. Laval said that the Council had accomplished its immediate task, but that the situation remained serious.

In its first resolution of August 3, the Council expressed confidence that the procedure of conciliation and arbitration entered upon in conformity with Article 5 of the Italo-Ethiopian Treaty of Aug. 2, 1928, would have brought about a settlement of the dispute between Italy and Ethiopia before September 1.

In accordance with this resolution, the Committee of Conciliation and Arbitration, which on July 9 had suspended its work, resumed it on August 20. It unanimously appointed M. Politis, Minister of Greece in Paris, as a fifth arbitrator. After hearing a statement by the Agent of the Ethiopian Government, the Commission moved to Berne and on August 23-25 received the evidence of a number of persons who had been called as witnesses by the Italian Government.

The Committee came back to Paris on August 26 and began to discuss the questions before it. The four arbitrators were unable to agree either on the facts of the Ualual incident or on the responsibilities arising therefrom. The intervention of the fifth arbitrator thus became necessary, and he was called in on August 29. Having noted the general contents of the dossier, the fifth arbitrator proceeded to discuss, in conjunction with the other members of the Commission, the pleadings of each side on the questions in dispute, and as a result, the Commission, on September 3, arrived unanimously at the following decision as regards the Ualual incident itself and the subsequent events:

That neither the Italian Government nor its agents on the spot can be held responsible in any way for the actual Ualual incident; the allegations brought against them by the Ethiopian Government are disproved in particular by the many precautions taken by them to prevent any incident on the occasion of the assembling at Ualual of Ethiopian regular and irregular troops, and also by the absence of any interest on their part in provoking the engagement of December 5; and

That although the Ethiopian Government also had no reasonable interest in provoking that engagement, its local authorities, by their attitude and particularly by the concentration and maintenance, after the departure of the Anglo-Ethiopian Commission, of numerous troops in the proximity of the Italian line at Ualual, may have given the impression that they had aggressive intentions—which would seem to render the Italian version plausible—but that nevertheless it had not been shown that they can be held responsible for the actual incident of December 5.

From Dec. 6, 1934, to May 25, 1935, various incidents occurred between the Italian and Ethiopian forces, some following upon the Ualual incident, and others unconnected with it.

A careful examination of the facts alleged, on both sides shows that of these incidents, the first-named, which followed upon the Ualual incident, were of an accidental character, while the others were for the most part not serious and of very ordinary occurrence in the region in which they took place.

In these circumstances, the Commission is of opinion that in respect of these minor incidents no international responsibility need be involved.

The Arbitration Commission's award was immediately communicated by the Italian and Ethiopian representatives to the Secretary-General of the League. In accordance with the second resolution of August 3, the Council of the League met on September 4 "to undertake the general examination, in its various aspects of the relations between Italy and Ethiopia."

On the motion of the President, the Council (the Italian representative having announced that he abstained) set up a Committee consisting of the representatives of the United Kingdom, Spain, France, Poland, and Turkey, to examine as a whole the relations between Italy and Ethiopia with a view to seeking a peaceful solution. The Committee of Five that had thus been set up, after appointing M. de Madariaga (Spain) as chairman, pointed out at once to the parties that "conscious of its responsibilities for seeking a peaceful settlement of the dispute, it relied upon the governments concerned to see that nothing was done which might disturb or endanger its work."

The Ethiopian delegation replied that "nobody could appreciate the Committee's recommendation more highly than that delegation." The Committee then set up a sub-committee, under the chairmanship of M. Lopez Olivan, to study the documentary material furnished by the two governments and to submit to it the results of that study. The Committee of Five, after examining the two sets of documents, decided to abstain from any criticism. As an organ of conciliation, it was not called upon to deliver judgment, but to consider the situation and to seek to devise means of remedying it.

The Committee observed that Ethiopia, in conformity with her rights under the Covenant, was asking the League for international assistance. After M. Jeze's declaration in the Council, the first delegate of Ethiopia had in fact declared in the Assembly on September 11, that "any suggestion for improving the economic, financial, and political condition of Ethiopia would be welcomed," provided that it came from the League and was carried out in accordance with the spirit of the Covenant. This international assistance, in the Committee's view, seemed to offer a solution acceptable to both parties. The independence and territorial integrity of Ethiopia would be respect-

ed. Italy would have the possibility of resuming relations with Ethiopia based on good understanding and confident collaboration.

The Council received the report of the Committee of Five on September 26. The President, M. Ruiz Guinazu, observed that the efforts of the Committee of Five to find a peaceful settlement had been unsuccessful. But he was unwilling to believe that the path of conciliation was finally closed, and thought it wiser not to announce that the task of the Committee was at an end. It should be in a position, should any suggestions be made to it, to consider whether they might justify a further attempt at conciliation.

The President referred to the fact that the moment had come for the Council to contemplate the preparation of its report in virtue of Article XV of the Covenant. The unanimous award of the arbitrators, in conformity with the Italo-Ethiopian Treaty of 1928, had not put an end to the dispute brought before the Council. On September 4, Article XV of the Covenant, therefore, became applicable. The President proposed to entrust to a Committee consisting of representatives of all the members of the Council, except the parties, the drafting of the report referred to in Article XV, paragraph 4. He suggested that the Council session should not be closed.

The Council Committee met on September 27 and appointed M. de Madariaga as chairman. It noted a telegram from the Emperor of Ethiopia announcing that, several months ago, the Ethiopian troops had received the order to withdraw 30 kilometers from the frontier to avoid any incident. At the same time the telegram asked for the dispatch of impartial observers to note the facts in regard to any aggression or incident that might occur and decide who was responsible for them. The Committee decided to consider whether the state of affairs would enable impartial observers to carry out their duty.

On September 28, in a further telegram, the Emperor of Ethiopia announced that while continuing to collaborate with the Council for a pacific settlement in accordance with the Covenant, he would be failing in his duty if he delayed any longer the general mobilization necessary to ensure the defense of his country. The telegram added that the contemplated mobilization would not affect previous orders to keep Ethiopian troops at a distance from the frontier.

Application of Sanctions. During the month of October the Italo-Ethiopian dispute again called for the urgent attention of the Council and of the Assembly. On October 2 the Emperor of Ethiopia informed the Council that Italian troops had violated the Ethiopian frontier to the south of Mount Mussa Ali near French Somaliland. On the following day the Italian Government replied that the warlike and aggressive spirit in Ethiopia had succeeded in imposing war against Italy, and that the Italian Government had been obliged to authorize the high command in Eritrea to take the necessary measures of defense. The same day the Ethiopian Government informed the Council that Italian military aeroplanes had bombarded Adowa and Adigrat, that a battle was taking place in the province of Agame, and that these events occurring on Ethiopian territory involved a violation of the Covenant by Italian aggression.

Thereupon a Committee consisting of representatives of all members of the Council except the parties drew up the report referred to in paragraph 4 of Article XV of the Covenant and recommend-

ed that any violation of the Covenant should be brought to an end. On October 5 the Council, after hearing the parties, instructed a Committee of Six to examine the situation. This Committee reached the conclusion that the Italian Government had resorted to war in disregard of its obligations under Article XII of the Covenant, which conclusion the Council adopted on October 7.

The Assembly, which had adjourned on September 28, met again on October 9. The delegates of 50 States out of 54 countries represented in the Assembly agreed with the Council that Italy had had recourse to war contrary to her engagements under the Covenant. Having regard to the obligations incumbent on Members of the League under Article XVI, and the desirability of coordinating the measures which each proposed to take, the Assembly decided to set up a Committee consisting of one delegate for each state, with the exception of the parties; it then again adjourned.

After Italy was found guilty by the League Council in making war in violation of the Covenant and 50 nations of the Assembly had agreed to apply economic sanctions, a committee of all League countries, except Italy and Ethiopia, was set up. Called the Coördination Committee, it decided what sanctions should be applied, and how. Fifty-two nations took part in the work of this Committee, including Austria, Hungary, and Albania, which, however, would not agree to participate in sanctions. Eighteen of these countries were named as a bureau or steering committee for the larger body; it was known as the Committee of Eighteen. After adopting five specific proposals for economic sanctions, the Coördination Committee recessed until October 31, while the Committee of Eighteen remained in session. The five proposals were:

- (1) Placing an embargo on sale of arms and ammunition to Italy and lifting existing embargoes against Ethiopia.
- (2) Discontinuance of loans and bank credits for Italy.
- (3) Forbidding purchase or importation of any goods from Italy.
- (4) Forbidding exportation of certain war materials, chief supplies of which are controlled by the 50 League countries that have agreed to apply sanctions.
- (5) Providing for mutual support in trade readjustment during the application of sanctions in an effort to prevent any country from suffering unendurable losses.

Nations of the League were urged to put the first two proposals into effect as soon as possible after their adoption. It was agreed that each government would notify Geneva not later than October 28, when it could put into effect proposals three and four. The plan was for all participants to make these operative simultaneously.

There are three things of significance to be noted in connection with this programme. (1) It covers all of the specifications for economic sanctions in Covenant Article XVI, except where refusal of non-League countries to participate would defeat export embargo measures and where there were humanitarian considerations. (2) On the humanitarian score, no embargo was proposed on exports of foodstuffs to Italy, so that it could not be said that sanctions were directed against the civilian population. (3) No proposals were made for military measures. There was authority for these, but they were not made mandatory by Article XVI, as were economic sanctions.

The *League of Nations Chronicle* described these proposals as follows:

Proposal No. 1 is self-explanatory. As far as it concerns Italy, it is of no great importance, since the Italians can manufacture all of the arms and ammunition they need. But lifting embargoes on sale of arms and ammunition for Ethiopia is already proving of help to the Ethiopians in

defense of their country. They had been able to buy almost no arms until sanctions were applied; now it is said the Emperor is beginning to equip his army.

Proposal No. 2, forbidding loans and bank credits, is of small practical consequence. Italy's financial condition has been such that its credit was exhausted before invasion of Ethiopia was started. Most goods exported to Italy for some time have been sold on a cash basis.

Proposal No. 3 is probably the most important of the five measures so far agreed upon. It was the one about which there was the most hesitancy. The idea of the British, who sponsored the proposal, was that if the other countries stopped buying of Italy, the Italians would have no exchange with which to pay for exports of raw material required for prosecuting war. It would then be necessary to pay in gold; and Italy's gold supply is running low. Also, it was argued, it would help sanction-imposing nations by making it possible for them to buy of each other things they have been importing from Italy.

Switzerland, in particular, hesitated about this sanction, making a reservation on its account in the Coördination Committee. The Swiss import a great deal from Italy, and feel that suddenly to stop would badly disorganize their trade system. Moreover, if sanctions are long continued, Proposal No. 3 will have the effect of making Proposal No. 4 much more drastic than it could be otherwise. That is, if all imports from Italy are cut off it will ultimately be impossible for the Italians to buy of other countries those things that are not on the embargo list.

Probably, it was this very fact that the British had in mind in pushing for the import boycott. And it is indicative of the serious purpose of 50 countries to make sanctions work that the Proposal was finally adopted.

Proposal No. 4, forbidding export to Italy of certain raw materials, falls short of potency it could have were Germany and the United States cooperating in its application.

Nothing would be gained by the League countries refusing to sell to Italy war materials that the Italians would have no trouble in buying elsewhere. For instance, there would be no point in nations of the League stopping export of cotton that could be bought in quantities to supply all Italian demands from the United States. To refuse to sell the Italians coal that they could get from Germany would achieve nothing beyond financial loss for countries imposing sanctions.

Consequently, the League embargo list includes only such war materials as can not be secured in adequate quantities from non-League countries. The list can be expanded should the United States, Germany, and possibly Japan decide to cooperate. As it stands now it includes:

- (A) Horses, mules, donkeys, camels, and all other transport animals.
- (B) Rubber.
- (C) Bauxite, aluminum, alumina (aluminum oxide), iron ore, scrap iron.

Chromium, manganese, nickel, titanium, tungsten, vanadium and their ores, and ferro-alloys (and also ferromolybdenum, ferro-silicon-manganese and ferro-silicon-manganese-aluminum).

Tin and tin ore; also all crude forms of the minerals and metals mentioned and their ores, scrap and alloys.

Proposal No. 5 is essential to the success of the entire economic sanctions programme. Without some mutual support arrangement, faithful execution of sanctions would come near being disastrous to some of the smaller countries, through their loss of trade with Italy. And the sacrifices entailed, even for the countries that could meet them without disaster, would be unevenly, and hence unfairly, distributed.

Different schemes for financial compensation of smaller countries suffering heavy losses because of sanctions were considered and rejected as impracticable. Instead, experts are working on the idea of turning the purchases normally made from Italy to those countries which suffer most on account of the export embargo.

The League moved forward in its preparation for the application of sanctions against Italy. The first of the various sub-committees set up by the Assembly Coördinating Committee to finish its task was the sub-committee of jurists, which, after examining the constitutional difficulties in the way of applying the League's decisions, presented the following resolution, which the Assembly Coördinating Committee adopted on October 16:

The Committee of Coördination, considering that it has met to ensure rapid and effective application of the measures which have been and may subsequently be proposed by the committee; considering that it rests with each country to apply these measures in accordance with its public law and in particular the powers of its government in regard to the execution of treaties; calls attention to the fact that members of the League, being bound by the obligations which flow from Article XVI of the Covenant, are under a duty to take necessary steps to enable them to carry out these obligations with all requisite rapidity.

The Coördinating Committee also adopted at the same time a report of the sub-committee of military experts on the arms embargo which had made some changes in the list of articles considered as "arms, ammunition, and implements of war."

Egypt notified the League on October 31 that "The Egyptian Government has decided in principle to adhere to the application of economic and financial sanctions in connection with the Italo-Ethiopian conflict and execute within the limits of possibility such measures as may be decided upon by the League of Nations." In his reply in behalf of the United States, Secretary of State Hull recounted first the measures already taken by this country and concluded as follows:

The course thus pursued in advance of action by other governments, most of which are parties to one or more of the peace pacts to which I have referred, represents the independent and affirmative policy of the government of the United States and indicates its purpose not to be drawn into the war and its desire not to contribute to a prolongation of the war. Realizing that war adversely affects every country, that it may seriously endanger the economic welfare of each and that it causes untold human misery and even threatens the existence of civilization, the United States, in keeping with the letter and spirit of the Pact of Paris and other peace obligations, undertakes at all times to not only exercise its moral influence in favor of peace throughout the world, but to contribute in every practicable way within the limitations of our foreign policy to that end. It views with sympathetic interest the individual or concerted efforts of other nations to preserve peace or to localize and shorten the duration of war.

During the month of November, the dispute between Italy and Ethiopia was still the main preoccupation of the League. The Committee appointed to draft measures in application of Article XVI of the Covenant took several decisions with a view to completing and tightening up the sanctions system. A committee of experts was instructed to give assistance to the chairman of the Committee of Eighteen in supervising the measures agreed on. In the Coordination Committee, stress was laid by the various representatives on the necessity that, at the same time as sanctions were being applied, the League should continue to make every effort at conciliation with a view to restoring peace. They emphasized that the spirit of the Covenant required of all that they should endeavor to secure within the framework of the League a fair and friendly settlement of the dispute.

On November 2 the Assembly Coördinating Committee set November 18 as the date for application of sanctions against Italy. In a speech to the Committee Premier Laval reminded the nations that they had another duty to perform—the duty "to seek as rapidly as possible for a friendly settlement of the dispute." Both M. Laval and Sir Samuel Hoare, who addressed the Committee, referred to the efforts their governments had made to this end and declared their intention to continue to strive "for a speedy and honorable settlement . . . acceptable to all three parties of the controversy—the League of Nations, Ethiopia, and Italy."

During the Committee's discussion of the sanctions question, Dr. Walter A. Riddell, Canadian delegate, proposed that petroleum, coal, iron, and steel be added to the list of raw materials banned for export to Italy. On November 4 the Committee's sub-committee of 18 adopted this suggestion "in principle" with the proviso that the plan would not come into force "until conditions for rendering it effective appear to be realized"—which was understood to mean that such an embargo could not be effective unless Germany and the United States cooperated with the League members.

A note of protest against the application of

sanctions against her was addressed by Italy to all countries members of the League of Nations and copies of the note were also delivered to non-League members for their information. Declaring that Italy's side of the question had not been given sufficient consideration before the League decided upon the coercive measures, the note went on to say that Italy's charge of the existence of slavery in Ethiopia had been corroborated by the religious authorities of the communities in northern Ethiopia occupied by the Italian army and that the League ought to take these facts into consideration. The sanctions, said the note, had been hastily voted by the Coordination Committee "which is not by any means an organ of the League" and therefore "the various governments remain individually the judges and are responsible to Italy both as regards the scope of the measures they adopt and as regards their legal justification."

The arms embargo, according to Italy's note, "far from facilitating a termination of the conflict and promoting a settlement thereof in the spirit of the Covenant, adds to its gravity and threatens to prolong its duration." Sanctions had not been provided in previous conflicts of a more serious nature, the note went on to say, and their application against Italy under "conditions which the Italian Government and people regard as unjust and arbitrary" must therefore be opposed by Italy in the most determined manner. Calling attention to the adverse effect application of the coercive measures will have on the economic system of the world, the note declares that should the nations persist in their declared intention, Italy will be justified in taking counter-measures. The possibility of Italy's withdrawal from the League is broached in the final section of the note which closes with a request for the governments involved to inform the Italian Government in what way they intend "in their free and sovereign character to conduct themselves in view of the restrictive measures proposed against Italy."

With the actual application of economic sanctions on November 18, began the third of four crucial tests of the League of Nations procedure for stopping war by non-military means. First, was the test of whether the nations could and would collectively pass judgment on one of their number at the beginning of an armed conflict for making war illegally. Second, was the test of whether, in face of the grave risks and great sacrifices involved, the nations would undertake application of economic sanctions to stop the war. Third, was the test now beginning of whether the nations would carry through with the sanctions programme that had been undertaken. Of course the supreme test was whether, especially in view of the weakening effect of countries outside the League, economic sanctions would have the efficacy to stop aggression.

When the League Council convened on the Italo-Ethiopian dispute two and a half months before the application of sanctions few persons had the temerity to predict that, at this time, any one of these tests could be met successfully. Within a few days after Italy invaded Ethiopia the League Council declared Italy guilty of making war illegally. Without hitch or hesitancy the first test was passed and then followed the other steps with surprising rapidity.

The League Assembly Coördinating Committee's sub-committee of Eighteen was called December 12 to discuss the proposal that petroleum, coal, iron, and steel be added to the list of prod-

ucts barred from export to Italy. The attitude of the United States Government toward the shipment of raw materials to the belligerent countries was indicated in a statement issued by Secretary of State Hull on November 15 which read in part as follows:

The American people are entitled to know that there are certain commodities such as oil, copper, trucks, tractors, scrap iron, and scrap steel which are essential war materials although not actually arms, ammunition, or implements of war, and that according to recent government trade reports, a considerably increased amount of these is being exported for war purposes. This class of trade is directly contrary to the policy of this government as announced in official statements of the President and Secretary of State, as it is also contrary to the general spirit of the recent neutrality act.

The Committee of Experts appointed by the Committee of Eighteen, which had already met in November, held a second session in December and studied the replies sent in by Governments concerning the application of the Coordination Committee's proposals. Proposal I had been accepted by 52 governments, and 50 of these had notified its entry into force; Proposal II had been accepted by 52 governments (47 entries into force); Proposal IV by 51 (45), and Proposal V by 46 governments.

The Committee also made a study of the area covered by the measures taken by governments members of the League. It appears from this study that all colonies, protectorates, dependencies, and mandated territories of countries which have applied measures are covered by those measures, with the exception of the Spanish colonies, of Morocco (with reference to which conversations were to be initiated), and of Spitzbergen, which is ice-bound at this time of year. The Committee did not consider that it fell within its functions to review the situation in non-member states or the action which had been taken to draw their attention to the Coordination Committee's proposals. The Committee's report came before the Committee of laws and decrees which had been communicated by governments.

Hoare-Laval Peace Proposals. The Expert Committee's report came before the Committee of Eighteen on December 12. At the opening of the meeting the representatives of France and the United Kingdom, M. Laval and Mr. Eden, announced that in accordance with the hope expressed by the First Delegate of Belgium in the Coordination Committee their two governments, as the result of conversations between M. Laval and Sir Samuel Hoare in Paris on December 7 and 8, had made suggestions to the Italian and Ethiopian Governments for a friendly settlement of the dispute. They stated that these suggestions would shortly be communicated to the Council of the League.

As M. Laval said: "Our task will then be at an end, and it will be for the League itself to decide what is to be done." Mr. Eden said: "They are suggestions which it is hoped may make possible the beginning of negotiations. If the League does not agree with these suggestions, we shall make no complaint. . . . Any final settlement must be acceptable to the League as well as to the two parties in conflict." The Committee of Eighteen approved the Expert Committee's report, and decided to draw the attention of members of the League to the points set out in the last part of that document. But in view of the communications from the representatives of United Kingdom and French Governments, the Committee decided to await the development of the negotiations before proceeding with its work.

The Franco-British suggestions were communicated on December 13 to the members of the Council. In their covering letter to the Secretary-General, the two governments announced that in working out the bases of a settlement they had borne in mind the deliberations of the Committee of Five. They had reached an agreement, and on December 10 they had instructed their representatives at Rome and Addis Ababa to lay before the Italian and Ethiopian Governments certain suggestions, entitled "Outline of an Agreed Settlement of the Italo-Ethiopian Conflict." For these proposals, see ETHIOPIA, FRANCE, and GREAT BRITAIN under *History*.

On the same day, in a communication to the Secretary-General, the Ethiopian Government said that in the present circumstances it was its imperative duty to do nothing which could contribute towards creating a precedent prejudicial to any of the states members of the League. Before replying to the proposal submitted to it, the Ethiopian Government asked that the Assembly of the League be convened immediately. The President of the Assembly, Eduard Beneš (Czechoslovakia), was consulted. He held the view that, as the Council had been summoned to take cognizance of the Franco-British proposals, and as it remained, under the Covenant, the organ to which the dispute had been duly submitted, it was advisable to await the result of the Council's deliberations before taking a decision in regard to the Ethiopian request.

The Council met on December 18. Mr. Eden said that the Paris proposals had been put forward solely to ascertain the views of the two parties and of the League. If it transpired that these proposals did not satisfy the essential condition of agreement by the two parties and the League, His Majesty's Government could not continue to recommend or support them. The French representative, M. Laval, stated that as the parties had not yet made known their replies the Council would no doubt itself desire to avoid expressing a view. In his opinion even if this attempt were not approved by all parties concerned, the Council would not be relieved of the duty incumbent on it to neglect no means of attaining a just and honorable solution, as was required both by the interests of peace and by the true spirit of the League. M. Wolde Mariam (Ethiopia) declared that before replying to the Franco-British suggestions, Ethiopia would wish to know the views of members of the League. There was danger that a precedent would be created whose consequences would be incalculable. Ethiopia relied on the wisdom of the Council to safeguard the rights of all members of the League.

On December 19 the members of the Council other than the parties, after a discussion, decided to submit to the Council the following draft resolution, which was adopted:

1. The Council thanks the delegates of France and of the United Kingdom for the communication which they have made to it concerning the suggestions which they have put before the two Parties with a view to conciliation.
2. In view of the preliminary character of these suggestions, as emphasized by the two Powers which took the initiative of putting them forward, the Council does not consider that it is called upon to express an opinion in regard to them at present.
3. The Council instructs the Committee of Thirteen, bearing in mind the provisions of the Covenant, to examine the situation as a whole, as it may appear in the light of the information which the Committee may procure.

On the same day the Committee of Eighteen met and observed that it was in the same position after the Council's resolution as it had previously been.

It would therefore continue to follow the application of the sanctions in force, and accordingly instructed the chairman to remain in touch with the chairman of the Committee of Thirteen with a view to the fixing of the date of its next meeting.

LEATHER. The production of leather, other than furs, in the United States in 1935, according to the Trade Survey Bureau of the Tanners' Council of America, amounted to 122,846,000 hides and skins, as compared with 111,450,000 in 1934. By major types the production as compared with 1934 was:

LEATHER PRODUCTION
[000 omitted]

	1935	1934
All Cattle Hide Leatherhides	21,995	19,771
Calf and Kid Leatherskins	14,136	12,442
Goat and Kid Leatherdo.	48,250	44,982
Sheep and Lamb Leatherdo.	38,465	34,255

During the year, according to U.S. Department of Commerce reports, the imports of hides and skins other than furs into the United States amounted to 303,475,633 lb., valued at \$45,576,877 as against 200,765,917 lb., valued at \$35,259,249 in 1934; imports of leather were valued at \$8,186,049, and imports of leather manufactures, including footwear, gloves, bags, etc., were valued at \$7,820,724. In 1935, hides and skins exported amounted to 42,309,659 lb., valued at \$4,151,393, as compared with 52,076,133 lb., valued at \$4,304,276 in 1934. The value of leather exports amounted to \$17,254,885, and of leather manufactures, \$16,791,656.

LEBANON REPUBLIC. See SYRIA.

LEEWARD ISLANDS, BRITISH. A colony in the West Indies, politically divided into five presidencies (1) Antigua, with Barbuda and Redonda; (2) St. Christopher-Nevis, with Anguilla; (3) Dominica; (4) Montserrat; (5) British Virgin Islands, with Sombrero. Total area, 726 sq. miles; population (Jan. 1, 1935), 135,528. Chief towns: St. John's (the capital), 10,000 inhabitants; Basseterre, 8000; Roseau, 8000; Plymouth, 2000; Charlestown, 1200; Road Town, 400.

Production and Trade. Sugar, cotton, limes, bananas, avocado pears, bay oil, oranges, molasses, cacao, tobacco, rum, salt, and tomatoes were the main products. In 1934, imports were valued at \$578,067; exports, \$577,176 of which sugar (48,997 tons) accounted for \$456,534.

Government. For 1934, revenue amounted to £257,519; expenditure, £259,309; public debt, £94,500 against which the sinking fund was £56,061. A governor headed the central government which consisted of a Federal executive council and a Federal legislative council. The four larger presidencies also had separate executive and legislative councils; the Virgin Islands had an executive council. Sir Gordon Lethem was appointed, during 1935, to succeed Sir Reginald St. Johnston as Governor and Commander-in-Chief.

History. A severe earthquake occurred in Montserrat on May 6, 1935, and many buildings were damaged but no lives were lost.

LEEWARD ISLANDS, FRENCH. See OCEANIA, FRENCH ESTABLISHMENTS IN.

LEGAL EDUCATION. See LAW.

LEGISLATION. See AUTOMOBILES; BANKS AND BANKING; CHILD LABOR; LAW; RAILWAYS; REFERENDUM; UNITED STATES, and articles on the separate States.

LEHIGH UNIVERSITY. A nonsectarian institution for the higher education of men in Beth-

lehem, Pa., founded in 1866. The University is divided into a College of Arts and Science, a College of Business Administration, and a College of Engineering. The enrollment for the autumn of 1935 was 1535. The enrollment for the summer session of 1935 was 379. The faculty numbered 169, including 15 persons on the administration staff. The endowment amounted to \$5,352,070, and the total income for the year was \$977,841. There were 218,000 volumes in the library. President, Clement Clarence Williams, B.S. in C.E., LL.D., inaugurated Oct. 2, 1935.

LETICIA PROTOCOL. See COLOMBIA and PERU under History; PAN AMERICAN UNION.

LÉVI, là'vè', SYLVAIN. A French Orientalist, died in Paris, Oct. 31, 1935, where he was born, Mar. 28, 1863. Educated at the Lycée Charlemagne, the Faculté des Lettres, and the École des Hautes Études, he became interested in the Sanskrit language and letters, and through the influence of Bergaigne, his teacher, specialized in their study. He became a lecturer in the section of history and philology at the École des Hautes Études in 1886 and two years later lectured in the section devoted to religion and science. Upon the death of Bergaigne in 1889 he received the appointment of assistant professor at the Sorbonne, and in the following year he took the doctor's degree. In 1894 he succeeded Foucaux in the chair of Sanskrit at the Collège de France. From 1897 to 1898 he traveled extensively in Japan and India, at the behest of the French Ministry of Public Instruction, and in 1921 lectured at Tagore's University in Santiniketan, Bengal, India. Shortly afterward he took charge of the Franco-Japanese Institute at Tokyo.

A prominent historian and Orientalist, Dr. Lévi was particularly an authority on the religion and life of the Indians, and in 1935 he announced that about 2800 years before the Christian era, northern India had a culture of its own. An honorary member of the Royal Asiatic Society and the American Oriental Society, he was president of Société de Linguistique de Paris and Société des Études Juives, and a member of the Imperial Academy of Japan, the Russian Academy of Science, and the Belgian Royal Academy. Also, he was a knight of the French Legion of Honor.

His many works on Oriental subjects include *Le Théâtre indien*, a standard work (1890; 83d fascicule of La Bibliothèque de l'École des hautes études); *La Doctrine du sacrifice dans ces Brâhmanas* (1898); *Le Népal* (3 vols., 1905-08); *Literary History of Sanskrit Buddhism*, with Winternitz and Huber (1920); a translation and introduction to *La Légende de Nalac Damayanti* (1920); a preface and vocabulary for E. Chavannes' *Contes et Légendes du Bouddhisme Chinois* (1921); *Dans l'Inde* (1925); *L'Inde et le Monde* (1926), and *L'Inde* (1931). Also, he translated and edited *Mahâyâna Sûtrâlaṅkāra* (1907-11) and *Vṃśikā* and *Trīṃśikā* (1925-31), and contributed to *Revue Critique* and *La Grande Encyclopédie*, articles dealing with the literature and religion of India.

LIBERIA. A Negro republic on the west coast of Africa. Area, about 43,000 square miles; estimated population on Jan. 1, 1934, 2,500,000 (other estimates range as low as 1,000,000). Of the total population about 60,000 coast Negroes, including some 12,000 American-Liberians, may be considered as civilized. Capital, Monrovia (population, about 10,000). In 1932 there were 51 state schools and 121 mission schools, with a total attendance of

about 7000 pupils. Monrovia has a government college and a Methodist Episcopal college.

Production and Trade. Native coffee is the principal agricultural product. Production of rubber on the Firestone Plantation Company's extensive new plantations began in 1934, but in general the country's agricultural, forest, and mineral resources remain unexploited. Cacao, cotton, piassava fibre, palm oil, palm kernels, kola nuts, rice, and oil seeds are produced in small quantities. The natives collect beeswax. Imports in 1934 were valued at \$1,180,601 and exports at \$571,793. Imports from the United Kingdom in 1934 were \$409,294; from the United States, \$232,595 (\$388,168 in 1935). Exports to the United Kingdom were \$112,733; to the United States, \$39,088 (\$178,522 in 1935).

Finance. Budget receipts in 1934 totaled \$479,296; expenditures, \$468,808. The external bonded debt in 1934 amounted to \$2,192,000, on which interest and amortization charges were in arrears from July, 1931. The unsecured internal debt on Sept. 30, 1933, was \$600,000.

Communications. There are no railways and highways extended only 234 miles in 1935. The rivers are the main arteries of traffic. Native porters carry all goods in the interior. There is a government wireless station at Monrovia and cable communications with America and Europe, but there is no telephone or telegraph service.

Government. The Constitution, modeled on that of the United States, vests executive power in a president, assisted by a cabinet of 8 members, and legislative power in a legislature of two houses—a Senate of 10 members and a House of Representatives of 21. All branches of the government had been controlled continuously since 1878 by the True Whig party, which was dominated by a small group of descendants of American and West Indian slaves. Suffrage is restricted to Negroes owning land. English is the official language. President in 1935, Edwin Barclay, who assumed office in 1931.

History. In May, 1935, the Legislature passed a Constitutional Amendment extending the Presidential term from 4 to 8 years and then reelected President Barclay for the eight-year term commencing Jan. 6, 1936. The State Department at Washington on June 11, 1935, extended recognition to the Barclay régime, and on October 4 formal diplomatic relations were reestablished after a lapse of five years. On that date Lester A. Walton presented his credentials as U.S. Minister to President Barclay at Monrovia. The breach between the two countries was precipitated in 1931 by the reluctance of the Monrovia government to abolish slavery and forced labor. On June 17 C. McCaskey was appointed financial adviser to the Liberian Government. As a result of an agreement between the Liberian government and the only existing bank in the country the Bank of Monrovia, Inc., was opened on July 1, 1935. It took over the entire banking business of the country and functioned as the depository for the government.

LIBRARY ASSOCIATION, AMERICAN. The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1935 it was more than 12,300. The activities of the association are carried on by its officers; by more than 70 voluntary committees and boards, engaged in studying such problems as book buying, book selection, cataloguing, and library work with the blind and with the foreign-born; by hundreds of voluntary workers; and by

the members of the headquarters staff, which numbered approximately 60 in 1935.

The association issues various books and pamphlets for libraries and in the interest of library progress. Among the 1935 publications were: *Gifts for Children's Bookshelves*, a buying list for the parent and a reading list for the child; *One Thousand Books for the Senior High School Library*, a compilation by a joint committee of the American Library Association, National Education Association and National Council of Teachers of English; *Graded List of Books for Children*, a third edition prepared by a joint committee of the A.L.A., N.E.A., and N.C.T.E., which includes over 1600 books for grades 1-9, with buying information, descriptive note, and specific grades for each title; *Catalogers' and Classifiers' Yearbook No. 4*; *Buying List for Small Libraries*, a basic list of books; *Helps for Club Program Makers*, a list of subjects and source material; *Canadian Government Publications*, the first published checklist of Canadian documents; *Public Documents 1934*; *Guide to Reference Books, Sixth Edition*, by Isadore G. Mudge.

The association issues three periodicals: *Bulletin of the American Library Association*, a monthly which includes the annual reports, the conference proceedings, and the yearly handbook; *The Booklist*, published monthly as a guide to the selection and purchase of current books; and the *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents.

The fifty-seventh annual conference of the association was held in Denver, Colorado, June 24-29, 1935, with more than 1500 librarians present. On this occasion, the John Newbery Medal, awarded annually by the section for library work with children for the most distinguished children's book of the year, was presented to Monica Shannon for her book, *Dobry*.

At the annual Midwinter Conference of the association held in Chicago Dec. 27-29, 1934, the council indorsed national and state planning, advocated federal aid in the form of an annual appropriation, approved the establishment of a federal library agency, registered a protest against tax limitation laws, and adopted minimum requirements for teacher-librarian training agencies.

During the Denver conference the council voted to defer negotiations looking toward permanent federal aid to libraries for a year until a special committee created by the council shall have given further study to the subject and reported at the next annual conference; to continue activities concerning state and national planning and support of the establishment of a federal library agency; and to express appreciation to the German government for reducing by 25 per cent the export prices of books and periodicals to libraries.

The officers for 1935-36, elected at the Denver Conference, were: Louis Round Wilson, Graduate Library School, University of Chicago, president; Franklin F. Hopper, New York Public Library, New York City, first vice president; Essae M. Culver, State Library Commission, Baton Rouge, Louisiana, second vice president; Matthew S. Dudgeon, Public Library, Milwaukee, treasurer. Headquarters of the association are at 520 North Michigan Avenue, Chicago.

LIBRARY ASSOCIATION, THE. An organization of libraries and librarians throughout the British commonwealth of nations, founded in 1877 and incorporated by Royal charter in 1898.

Its primary objects are: to unite all persons engaged or interested in library work by holding conferences and meetings for the discussion of bibliographical questions and matters affecting libraries; to promote the better administration of libraries; to promote whatever may tend to the improvement of the position and qualifications of librarians; and to hold examinations in librarianship, and to issue certificates of efficiency. It maintains a professional register of more than 1100 qualified persons, classified as Fellows (F.L.A.) and Associates (A.L.A.); candidates for senior positions in libraries are selected from amongst those who have been elected to fellowship or associateship. The school of librarianship at the University of London is conducted under the joint auspices of the university and of the association. Among the association's publications are: *The Library Association Record*; *The Library Assistant*; *The Library Association Year Book*; *The Year's Work in Librarianship*; and *The Subject Index to Periodicals*. The president elected for 1936 was Ernest A. Savage, F.L.A. The secretary is P. S. J. Welsford, F.I.S.A. Headquarters are at Chaucer House, Malet Place, London, W.C. 1.

LIBRARY PROGRESS. Reading needs of 45 million people in the United States who now lack library service was the chief concern of librarians and the American Library Association during 1935. In spite of a 100 per cent increase in public library use during the last 10 years, 45 million people are still without access to a local public library. More than 80 per cent of the rural population in the United States is without library service, compared with 12 per cent of the urban population.

During their 1935 legislative sessions, Illinois and Ohio recognized that the state as well as the local community has a definite part in building up an intelligent citizenship. Ohio made an emergency grant of \$100,000 and Illinois, \$600,000, for books to supplement the budgets of local public libraries which had been drastically reduced during the past four years.

Twelve states reported increased appropriations for state library agencies ranging from a few thousand dollars to more than 250 per cent. The states with increased revenue are Idaho, Iowa, Minnesota, Missouri, Nebraska, New Hampshire, Ohio, Oklahoma, Oregon, North Carolina, Texas, and Vermont.

Assistance in the form of labor from relief workers and funds for buildings and improvements continued to be received by libraries during the year.

The New York Public Library received a Works Progress Administration grant of \$2,500,000 and the Boston Public Library \$1,800,000. Public Works Administration allotments include \$685,787 for 13 new public library buildings as well as many grants to colleges for library buildings.

Adult Education. The A.L.A. Board on Library and Adult Education instituted studies on the relation of the library to such projects as public forums, community adult education, councils, recreational reading and study clubs, organized adult education, and recreation in newly established planned communities such as those in the Tennessee Valley Authority. This Board also issued a 10-year summary, *The Library and Adult Education*, covering accomplishments of 1924-34. The work on Readable Books continued to receive special attention, particularly in a project at Teachers College, Columbia University.

In addition to the adult education services offered by public libraries in over 60 cities, effective in-

formal reading programmes have been or are being instituted in many localities through the cooperation of libraries and the educational directors of Emergency Education Programme, Works Progress Administration, Civilian Conservation Corps, National Youth Administration, Federal Emergency Relief Administration, and others.

Many libraries are lending the Talking Book Records for the use of the adult blind. A list of Talking Books for the adult blind was compiled by librarians, and is available through the Library of Congress. During the year an appropriation of \$75,000 was made by Congress for the purchase and distribution of Talking Book Records and \$211,500 for the manufacture of 5000 Talking Book machines for the 120,000 adult blind.

Carnegie Centennial. Observances of the one-hundredth anniversary of the birth of Andrew Carnegie were held throughout the United States and the British Dominions. Carnegie's gifts to libraries amounted to approximately \$65,000,000 for establishment, endowment, or equipment of nearly 3000 libraries in all parts of the world. It is estimated that at least 35,000,000 people have been given access to free public library privileges through Carnegie buildings.

Certification. Legally required certification, designed to assure future appointment of only qualified personnel in tax-supported libraries, was endorsed by many state library associations and legislative committees, which were commissioned to draft bills for submission to state legislatures in 1936.

Circulation. According to A.L.A. reports of statistics received in 1934 there were 6235 free public libraries housing 100,470,215 volumes and circulating 449,998,845 volumes, as compared to 5954 free public libraries in 1926 with 65,561,796 volumes and a circulation of 226,142,926 volumes.

Coöperative Study of Secondary School Standards. Dr. Louis R. Wilson represented the library profession on the advisory committee to the Executive Committee of the Coöperative Study of Secondary School Standards at work on a nationwide study of standards, under a grant from the General Education Board.

Education for Librarianship. A 10-year review of professional training, *Education for Librarianship; the Last Decade and the Next One*, was published by the Board of Education for Librarianship of the A.L.A. It considered specialization in a subject field antecedent to the study of library science, internship, exchange of positions, and the continuing professional education of librarians as subjects of further study. Training below library school level, distinction between professional and semiprofessional service, and the separation of clerical and professional library work are immediate problems of library training.

A Conference on Education for Librarianship in the South, called by the Southeastern and Southwestern library associations, was held in Atlanta, and was attended by more than 60 educators and librarians. Their recommendations urged that instruction be given in the use and functions of libraries for college students, teachers-in-training, and school administrators; that requirements, of the Southern Association of Colleges and Secondary Schools, for teacher-librarians be raised and enforced; that the careful selection of students, continued limitation of enrollment, and efforts to secure adequate financial support and funds for scholarships be given particular attention by the library schools; and that instruction for Negro

librarians be studied by the A.L.A. Board of Education for Librarianship.

Teacher-librarian courses of less than a full year but at least a half year in length were studied and visited in 22 colleges and teachers colleges for information by the A.L.A. Board of Education for Librarianship from a grant by the Carnegie Corporation of New York.

Employment. During the year there was a considerable increase in the number of positions available in the library field. Many of them, however, were temporary or offered very low salaries. Salaries showed an upward trend in the partial or full restoration of salary reductions in a number of libraries.

Fellowships. The A.L.A. Committee on Fellowships and Scholarships awarded fellowships to eight American and two Canadian librarians for advanced study in library science for 1935-36, from funds provided by the Carnegie Corporation of New York.

Gifts. Numerous gifts from individuals and organizations were received by libraries. Some of the larger gifts include: rare books and manuscripts valued at \$500,000, to the Lockwood Library of Buffalo University by Thomas B. Lockwood; the estate of Dr. Elizabeth B. Cassidy, \$60,000-\$100,000, to Knox College Library; \$50,000 to Michigan State College for books and periodicals on chemical subjects, by Dr. Frank S. Kedzie; and \$250,000 to the Portland (Ore.) Public Library staff pension and retirement fund by the late Winslow B. Ayer.

The Carnegie Corporation of New York has granted Smith College \$175,000 for library development and Vassar College \$160,000 for library endowment. A \$75,000 memorial library and laboratory is being added to the Michael Reese Hospital, Chicago, as the gift of Louis Florsheim.

Grants to Library Schools. Approximately \$83,000 was given to library schools of California, Chicago, Denver, Emory, North Carolina, and Western Reserve universities and Hampton Institute for the year 1935-36 from the Carnegie Corporation of New York. The General Education Board continued its support of the library schools of Louisiana State University, George Peabody College for Teachers, and the College of William and Mary, and of the school library supervisors in several southern states.

Junior College Libraries. The Carnegie Corporation of New York has set up an Advisory Group on Junior College Libraries which probably will publish a list of desirable books and standards and make a survey of junior college libraries similar to the work done five years ago by the Advisory Group on College Libraries.

Legislation. Washington and Georgia made legal provision through their 1935 legislatures for large unit library service. Washington enacted a complete new library law permitting the establishment of county and regional, as well as municipal libraries, while Georgia passed a permissive county library law with provision for contracts between adjacent counties for joint service. At present only two states (outside of New England where the county is not an important governmental unit), Idaho and North Dakota, lack such legislation. South Carolina strengthened its library law by giving authority to the State Library Board to create large library districts.

Publications. Outstanding publications of the year 1934-35 in addition to those mentioned under LIBRARY ASSOCIATION, AMERICAN, were: *American Library Directory 1935*, published by the R. R.

Bowker Company; *Living with Books*, by Helen E. Haines; *Government of the American Public Library*, by Carleton B. Joeckel; *College Library Publicity*, by Guy R. Lyle; *Public Library Buildings*, by Dana Q. McComb; *Australian Libraries*, by Ralph Munn and John Barr; *Origins of the American College Library, 1638-1800*, by Louis Shores; *Special Libraries Directory of the United States and Canada, 1935*, published by the Special Libraries Association; *County Library Service in the South*, by Louis R. Wilson and Edward A. Wight; *What Makes a Book Readable*, by William S. Gray and Bernice E. Leary; *Woodside Does Read! A Survey of the Reading Interests and Habits of a Local Community*, by Grace O. Kelley.

See LIBRARY ASSOCIATION, AMERICAN.

LIBYA, lib'y-a. An Italian colony (Cyrenaica and Tripolitania) in North Africa. Area, 711,012 sq. miles; population (1931), 717,663 including 29,749 Europeans. Chief towns: Tripoli (capital), 91,000 inhabitants in 1934; Bengasi (Benghazi), 43,000; Misurata, 43,000; Homs, 31,000.

Production and Trade. Dates, olives, oranges, lemons, wheat, barley, tobacco, salt, sponges, fish, and almonds were the main products. Livestock in the colony (1931): 650,000 sheep, 380,000 goats, 55,000 cattle, 50,000 camels, and 42,000 donkeys, mules, and horses. The 1933 trade through Tripoli was: imports, 153,043,072 lire; exports, 28,608,247 lire (lira averaged \$0.0667 for 1933).

Government. In 1934-35, revenue proper of the colony was estimated at 70,200,000 lire; state contribution, 165,500,000 lire; special administration, 2,253,000 lire; civil expenditure, 97,175,000 lire; military expenditure, 137,000,000 lire. On Jan. 1, 1934, the country was divided, for administrative and military purposes, into the four provinces of Tripoli, Misurata, Bengasi, and Derna. Governor in 1935, General Italo Balbo. For troop movements in Libya in connection with the Anglo-Italian crisis of 1935, see ITALY under History.

LIEBERMANN, lē'bēr-man, MAX. A German painter and etcher, one of the foremost artists of his time, died at Berlin, Feb. 8, 1935. Born in that city on July 29, 1847, of Jewish parentage, he studied under Steffek in Berlin, under Thumann at Weimar, and under Munkaczy in Paris. The strongest influences in the formation of his art came from the Barbizon painters, with whom he spent the summer of 1873, particularly from Millet, and later from Josef Israels, with whom he was associated during frequent sojourns in Holland. There he copied the works of Frans Hals and studied the life of the peasantry, who long furnished the theme of his finest productions. Following his return to Munich in 1878, his picture "Christ in the Temple," created a controversy as some of the clergy declared it to be irreverent. Thereafter he devoted himself to the study of light and the painting of peasants. In 1884 he settled in Berlin, and there his work did not follow traditional lines.

In spite of adverse criticism he became the leader of the Secessionist movement in northern Germany. The first to introduce the *plein air* methods of the Barbizon school, modified later by impressionistic principles, Liebermann's art was individual, simple, and direct, and although at first labored in technique, it showed great power of rendering movement and effects of atmosphere and light. He favored genre and for this reason was frequently styled an "apostle of ugliness." It may be said that he did for Germany what Millet did for France. Liebermann's first exhibited picture "Woman Plucking Geese" (1872, National Gal-

lery, Berlin), was a striking contrast to the art of the time, and inclined to heaviness and darkness in color, but his development, starting with "Laborers in a Turnip Field" (1876) was steady, and in later years he worked in bright impressionistic colors.

Included in his Dutch themes were: "The Asylum for Old Men," 1881, his first success; "The Cobbler's Shop," 1881, Berlin; "The Flax Barn, Laren," 1887, Berlin; "The Net Menders," 1889, Hamburg; "Woman with Goats," 1890, New Pinakothek, Munich; "The Hog Market, Haarlem," 1891, Mannheim. A good example of modern genre is his "Country Tavern, Bavaria," 1893, Luxembourg, Paris. His later works include "Polo Players," 1902; "Going to School, Edam," 1904, Königsberg; "Summer Evening on the Alster," 1910, Dresden; "Dutch Landscape," 1912, Munich; and many convincing portraits, such as Dr. Bode (National Gallery, Berlin), Professor Virchow; Burgomaster Peterson of Berlin, and Gerhart Hauptmann, 1913. His etchings are masterly yet simple combinations of lines and strokes and are to be found in the leading print-rooms of Europe.

Liebermann became professor at Berlin Academy, and was awarded gold medals at Berlin, Munich, Paris, Dresden, Antwerp, and Venice, was created Knight of the French Legion of Honor, and received Italian, Swedish, Belgian, and other orders. He was a member of the Prussian and Saxon academies, and honorary member of the Société Nationale des Beaux-Arts, Paris, the Société Royale, Brussels, and the Bavarian Academy.

On the anniversary of his 80th birthday Liebermann received the highest decoration conferred on civilians by the German Government—the eagle plaque. Also he was the first to receive the Prussian State gold medal when the custom of conferring this was revived under the Republic. The Prussian Academy of Art held a special exhibition of 100 of his choicest paintings in his honor, and in the catalogue of the Exhibition he wrote a homily for young artists recommending "the Goethean principle of 'eating at every table' and endeavoring to digest every new idea and movement. . . . The 'new' in art, about which we hear so much in the present century, is merely the new artist revealing to us the hitherto unknown soul in an art work."

Because he was a Jew the Nazi press repeatedly assailed him in his later years, and in 1933 he resigned from the presidency of the Prussian Academy of Art, an office he had held for 12 years, saying that, although he still believed that art had nothing to do with politics or race, he could no longer hold his office as he could not conform to the prevailing idea. In December, 1935, a memorial showing of his etchings and lithographs was opened at the New York Public Library.

LIECHTENSTEIN, lîk'ten-shûn. An independent European principality between Austria and Switzerland. Area, 61 sq. miles; population (1930), 10,213. Capital, Vaduz (1715 inhabitants).

Production and Trade. Agriculture and textiles were the main industries. Cattle rearing, for which the Alpine pastures are well adapted, was highly developed. Liechtenstein was included in the Swiss Customs Union in January, 1924, and Swiss currency has been in use since February, 1921. The posts and telegraphs were administered by Switzerland.

Government. In the budget for 1935, revenue was estimated at 1,432,790 francs; expenditure, 1,424,157 francs (Swiss franc averaged \$0.3253 during October, 1935). The public debt on Jan.

1, 1935, was 4,383,000 francs. According to the constitution of Oct. 5, 1921, the monarchy was hereditary in the male line. It provided for a Diet of 15 members elected for 4 years by general and secret ballot. Citizens over 21 years were entitled to vote. The foreign interests of Liechtenstein were represented by Switzerland. Reigning Prince in 1935, Francis I. Administrator, Dr. Joseph Hoop.

LIFE INSURANCE. See **INSURANCE.**

LIGGETT, LIEUT. GEN. HUNTER, U.S.A., RET. An American army officer, died in San Francisco, Calif., Dec. 30, 1935. Born in Reading, Pa., Mar. 21, 1857, he was graduated from the U.S. Military Academy at West Point in 1879. He was then assigned to the 5th Infantry as a second lieutenant, and received his first military experience in the Indian Wars. He also served during the Spanish-American War and during the Philippine insurrection as a major of volunteers. His rise was rapid, and in 1909 he entered the Army War College. Upon the completion of his course in the following year he was appointed director of studies. In February, 1913, he was made a brigadier-general, and a few months later was named director of the War College. In this year he had charge of the reunion of Civil War Veterans—Union and Confederate—at Gettysburg, Pa., and represented the Secretary of War.

During the Mexican border trouble in 1914, General Liggett was sent to Texas to command the 4th Brigade of the 2d Division, during which time he put into effect the theories formed at the War College. In the following year he was made commander of the Provisional Infantry Brigade and Post Ft. William McKinley in the Philippines, and from Apr. 15, 1916, until Apr. 15, 1917, was commander of the Department of the Philippines.

At the entrance of the United States into the World War he was given command of the Western Department. In September he was given command of the 41st Division of the American Expeditionary Force, serving until Jan. 20, 1918, when he was selected to command the 1st Army Corps, then being organized. He held this position until October 12, again from October 15 to November 11 as lieutenant general, and later until Apr. 20, 1919.

The First Army Corps, under his leadership, participated in the 2d Marne Campaign (July 14 to August 7) and played a prominent part therein. They were then shifted east to participate in the St. Mihiel salient from September 12 to 17. General Liggett showed his sound judgment by arguing against a long artillery bombardment because of the absence of the surprise element of battle. After St. Mihiel was taken, his Corps was moved westward to take part in the Meuse-Argonne Offensive and by November 8 the Argonne forest was in the hands of the Americans. On October 15th he was promoted to lieutenant general and was given command of the 1st Army to succeed General Pershing. As head of the First Army he directed the final phase of the Meuse-Argonne offensive, and his troops reached the hills north of Verdun held by Germany from the beginning of the war. At the close of the War he was given the honor of commanding the 3d Army of Occupation of Germany, and was returned home in 1919. He was then given command of the Western Department at San Francisco, and was automatically reduced to the rank of major general. He retired from active duty in March, 1921. By act of June 21, 1930, he was restored

to the rank of lieutenant general on the retired list.

General Liggett was a brilliant commander in the field and a master of tactics and strategy, as well as a firm disciplinarian. His discipline was tempered, however, with a sincere interest in the well being of the private soldier. For his services in the War he received the Distinguished Service Medal of the United States, the Order of Leopold, Belgium, Order of St. Lazarus, Italy, Order of the Sun, Peru, the War Medal, Panama, and was made a commander of the French Legion of Honor.

LIGHTHOUSES. In the annual report of the Secretary of Commerce for the year ending June 30, 1935, the retirement on May 31 of George R. Putnam, Commissioner of Lighthouses since 1910 and the appointment of H. D. King as his successor were noted. The report stated further that the Lighthouse Service is becoming increasingly mechanized through the application of modern mechanical devices and equipment. This equipment has resulted in better aids to navigation and has been a factor in making possible the extension of the Service to meet the growing needs of navigation at a minimum of cost and with a gradual reduction in operating personnel.

Allotments from the Public Works Administration totaling \$5,620,334 from funds provided by the National Industrial Recovery Act have enabled the Lighthouse Service during the past two years to materially improve its plant and carry out a considerable number of desirable and economical projects more rapidly than heretofore possible of accomplishment under the normal Public Works appropriations. During the two-year period this Public Works programme has been under way no direct appropriations for special works for the Lighthouse Service have been made by Congress, as has been done in prior years.

This work has included the following: The erection of 10 major light-station structures, 4 in replacement of lightships, 3 in replacement of former structures, and 3 new ones, 6 of these new stations being on submarine sites; the provision of 5 new lighthouse depots and improvements of 10 others; the construction of 2 new district-office buildings on sites at depots, effecting a desirable concentration of administrative and supply operations; the construction of 3 new lighthouse tenders and 2 derrick barges and the extensive overhauling of 16 lighthouse tenders, including reboiling, change to oil burning, etc.; similar overhaul of 6 lightships; the improvement of housing facilities by new construction at 10 stations and repairs at a number of others; improvement of the mechanical equipment of stations and particular improvements in the character of radiobeacon transmitting equipment, some 30 stations having been provided with modern equipment, replacing obsolete units and securing the great advantages of frequency stability and freedom from interference resultant therefrom. It was anticipated that all projects would be completed during the construction season of 1935.

During the year continual progress was made in the improvement of aids to navigation; 59 lights were changed from fixed to flashing or occulting, the illuminant of 87 lights was changed to electric, and the illuminant of 27 to acetylene. Sodium-vapor lamps are in use experimentally at two stations. Three new radio beacons were established, increasing the total number of such installations to 108.

On June 30, 1935, there were 24,459 aids to navigation maintained by the Service, a net increase

over the previous year of 862. There were 1013 aids discontinued during the year as being no longer necessary or as having been replaced by more suitable aids.

LIME. The sales of lime in 1935 by producers in the United States amounted to 2,955,000 short tons valued at \$21,438,000, according to preliminary figures furnished by lime manufacturers to the U.S. Bureau of Mines. This was an increase of 23 per cent in quantity and 25 per cent in value compared with sales of 2,397,087 tons valued at \$17,164,024 in 1934. The average value per ton in 1935 was \$7.25; in 1934 it was \$7.16. The total sales of lime in 1935 included 990,000 tons of hydrated lime valued at \$7,764,000, an increase of 19 per cent in quantity and 23 per cent in value compared with 1934 (829,430 tons valued at \$6,324,623). The average value per ton of hydrated lime in 1935 was \$7.84; in 1934 it was \$7.63.

Preliminary reports of sales of lime in 1935, according to classes, were as follows: Building lime, 677,000 tons valued at \$5,716,000, compared with 511,419 tons valued at \$4,260,865 in 1934, an increase of 32 per cent in quantity and 34 per cent in value; chemical lime (not including dead-burned dolomite), 1,570,000 tons valued at \$10,255,000, compared with 1,338,723 tons valued at \$8,726,617 in 1934, an increase of 17 per cent in quantity and 18 per cent in value; dead-burned dolomite (refractory lime), 430,000 tons valued at \$3,600,000, compared with 324,868 tons valued at \$2,698,414 in 1934, an increase of 32 per cent in quantity and 33 per cent in value; agricultural lime, 275,000 tons valued at \$1,857,000 compared with 222,077 tons valued at \$1,478,128 in 1934, an increase of 24 per cent in quantity and 26 per cent in value.

Sales of 717,000 tons of lime valued at \$5,628,000 were reported for Ohio, the leading State in the production of lime. This was an increase of 28 per cent in quantity and 31 per cent in value over 1934. Pennsylvania ranked next to Ohio in annual production of lime, with an output of 502,000 tons valued at \$3,587,000, an increase of 16 per cent in quantity and 13 per cent in value over 1934—434,519 tons valued at \$3,165,539. Virtually all the other lime producing States showed increased production, and the number of plants in operation in 1935 was practically the same as in 1934.

Figures compiled from records of the Bureau of Foreign and Domestic Commerce show that for 1935 exports of lime amounted to 3939 short tons valued at \$64,085, of which 43 per cent went to Canada and the remainder in small lots to various other countries. There was also shipped to United States island possessions 2013 tons of lime valued at \$30,015. The imports during 1935 were as follows: Quicklime, 3413 short tons valued at \$36,032, of which 3376 tons valued at \$34,355 came from Canada; hydrated lime amounting to 1030 tons valued at \$10,571, of which 917 tons valued at \$8746 came from Canada, and 7519 tons of dead-burned dolomite valued at \$189,714, of which all but 32 tons came from Canada.

LIMNOLOGY. See ZOOLOGY.

LINDENTHAL, GUSTAV. An American engineer, died at Metuchen, N. J., July 31, 1935. Born at Brünn, Austria, May 21, 1850, he was educated at the Provincial College in his native city and at the Polytechnical Institute in Vienna. He began his engineering career in 1870, and from that time until 1874, when he arrived in the United States, he was engaged as a railroad engineer in different parts of Europe.

His first employment in the United States was

as a mason on the Centennial Exposition in Philadelphia. Later he became an engineer with the Exposition and at its close in 1877 went with the Keystone Bridge Company, where he was consulting engineer in the construction of western railroads and bridges. During the period 1877-90, he was a consulting engineer with offices in Pittsburgh, being associated with the Atlantic and Great Western Railroad (now the Erie), 1879-81, as engineer and made a specialty of bridge work, and with the Monongahela Bridge Co., 1881-89.

The year 1890 saw him in New York, when he became chief engineer and president of the North River Bridge Co. Some time before this he had proposed the bridging of the Hudson River to the Pennsylvania Railroad, and as the plans had been approved by the War Department, the Company was formed. The plans called for the largest span and the heaviest bridge yet proposed, for it was to be a two-deck suspension bridge, with river span, 3240 ft. long and each of the two shore spans, 1650 ft., the whole, including approaches, to be 7340 ft. Elaborate plans were developed and its feasibility was accepted by engineering experts called in to pass upon the project, but though considered a bold and interesting engineering conception, it was questionable whether from an economic standpoint it could compete successfully with a system of tunnels. Because of the economics involved, the Pennsylvania decided to build tunnels, and Mr. Lindenthal's plans were not carried out, but he served the Pennsylvania lines as consulting engineer from 1902-03.

During that same period, Mr. Lindenthal served as Commissioner of Bridges under Mayor Low, and during his administration plans were made for the Blackwell Island Bridge (now known as the Queensborough), the Manhattan Bridge (in which he introduced the eyebar chain suspension design), and the reconstruction of the old Brooklyn Suspension Bridge. Subsequently, he designed and built the large wharf and steamer piers at Baltimore.

In 1904, he became consulting engineer to the New York Connecting Railroad, a short road but 10 miles long, which was to connect the New York, New Haven, and Hartford Railroad with the Pennsylvania. The problem to be solved was the carrying of passengers and freight from New England through New York to the west without change of trains. The bridging of Long Island Sound and Hell Gate in connection with this project proved a difficult and costly undertaking. The curved approach to Hell Gate made the use of a cantilever or a suspension bridge impossible, so Mr. Lindenthal designed a braced steel arch type of bridge. The design of this bridge included a main span of 1000 ft., which at that time was the longest and heaviest arch span in the world. The roadway, on which four railroad tracks were laid, was 140 ft. above the water in the clear, while the top of the arch was 265 ft. above the water. The abutment towers were of granite masonry and concrete, 200 ft. in height. For the bridge alone, 18,000 tons of steel were required, and for the viaducts and other approaches for the whole structure, which totaled some 3½ miles in length, there were required about 70,000 tons, the cost approximating \$25,000,000.

Because of the tides and the condition of the river bottom, temporary support could not be laid, so the bridge was built in cantilever fashion, with temporary weights added to the shore foundations, to counterbalance the weight of the projecting arms. The bridge was first opened to traffic during March, 1917.

Before the completion of the Hell Gate project, Lindenthal became consulting engineer of the bridge of the Chesapeake and Ohio Northern Railroad over the Ohio River at Sciotoville, O., a bridge of two spans, each 775 ft. long of continuous riveted trusses, and the longest span of its type then conceived. This bridge was completed in 1917. In 1919 he was named consulting engineer for the proposed bridge crossing the Detroit River from Detroit, Mich., to Windsor, Can. The following year the subject of a suspension bridge across the Hudson River from mid-town New York to the New Jersey shore was revived, and Mr. Lindenthal discussed his plans for such a bridge (for illustration, see YEAR BOOK, 1921) in a paper read before the annual meeting of the American Society of Mechanical Engineers in New York, Dec. 8, 1920. However, this project was not pressed to construction. Before the Philadelphia chapter of the American Society of Civil Engineers, in 1921, Lindenthal read a paper that contained a remarkable outline of long-span bridge fundamentals. Until shortly before his death he was connected as a consulting engineer with various bridge building programmes throughout the United States.

A frequent contributor to technical and scientific journals, and the recipient of many honors conferred for his outstanding work in the engineering field, Lindenthal was awarded the Thomas Fitch Rowland prize by the American Society of Civil Engineers in 1883 for his paper on the Monongahela Bridge, and in 1922 he received the same award for his paper on "The Continuous Truss Bridge over the Ohio River at Sciotoville, O., of the Chesapeake and Ohio Northern Railway." In 1930 he received the first award from the Society of the Phebe Hobson Fowler Architectural Award, which has since been discontinued. The Polytechnical School at Dresden, Germany, conferred the degree of Doc. Eng. *honoris causa* on him in 1911. He was the first American so honored. Two years later he received the gold medal of the International Technical Art Exhibition at Leipzig for his plans of Hell Gate Bridge.

LINNÆAN SOCIETY. See BOTANY.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business and professional men's clubs, formed in Chicago, Ill., in 1917 for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and the professions. In 1935 it was composed of 2712 clubs, with a membership of approximately 80,000. At the international convention in Mexico City, Mexico, the following officers were elected: President Richard J. Osenbaugh, Denver, Colo.; vice-presidents, Edwin R. Kingsley, Parkersburg, W. Va., Frank V. Birch, Milwaukee, Wis., and Walter F. Dexter, Sacramento, Calif. Melvin Jones, the founder of the association, has been secretary-treasurer from the first. The official magazine is *The Lion*. Headquarters are at 332 South Michigan Avenue, Chicago, Ill.

LIQUOR REVENUE. See PROHIBITION; TAXATION.

LITERATURE, ENGLISH AND AMERICAN. The destruction of NRA may have been a boon to American business, but it seems not to have benefited American publishers and booksellers. Though during 1935 the book business improved the country over, both publishers and booksellers worried about the New York City war with the department stores over their practice, resumed on the collapse of NRA, of selling books below cost. At the end of

the year, attempts to curb the practice under state law had thus far been defeated.

"Proletarian" literature of radical tendency increased notably during the year. A new left-wing book club appeared.

Some fluttering among the critical magazines and their reviewers was caused by attacks in *The Nation*. The magazines, it was said, pandered to advertisers; the reviewers had no genuine standards. These charges, however, concerned almost exclusively the treatment given novels and their authors.

The British book trade was reported to be depressed during the year, first by the King's Jubilee, and then by the general election and foreign crisis.

Biography. Biographers were very attentive to British literary figures during 1935, especially poets. Two books were called simply *Milton*, one by Hilaire Belloc, one by Rose Macaulay. With Peter Quennel's *Byron: the Years of Fame*, came Frances Winwar's *The Romantic Rebels*, about Byron, Shelley, Keats, et al. Ernest de Selincourt edited *Early Letters of William and Dorothy Wordsworth, 1787-1805*, with which might be associated Edith J. Morley's *Life and Times of Henry Crabb Robinson*. Stephen Gwynn published *Oliver Goldsmith*, and Charles Williams *Rochester*. Claude C. Abbott edited *The Letters of Gerard Manley Hopkins to Robert Bridges*. And H. W. Donner cleared up mysteries about *Thomas Lovell Beddoes*.

Concerned with British novelists were: *Letters of Laurence Sterne*, edited by Lewis Perry Curtis; vols. viii and ix of *The Letters of Sir Walter Scott*, to 1826, edited by H. J. C. Grierson; *The Sentimental Journey*, an attack on Charles Dickens, by Hugh Kingsmill; *D. H. Lawrence*, by E. T., the "Miriam" of *Sons and Lovers*, Arnold Bennett, by Dorothy Cheston Bennett; *Joseph Conrad and His Circle*, by Jessie Conrad; and *Epitaph on George Moore*, by Charles Morgan. Other British writers were dealt with in *The Letters of Charles Lamb*, edited by E. V. Lucas; *The Letters of Jonathan Swift to Charles Ford*, edited by David Nichol Smith; Arthur Bryant's *Samuel Pepys the Years of Peril, 1669-1683*; Samuel Shellabarger's *Lord Chesterfield*; Gwyn Jones' *Richard Savage*; Frank Hird's *I. M. Stanley*; and, about William Hazlitt, *The Fool of Love*, by Hesketh Pearson, who also published *Gilbert and Sullivan*. Autobiographies were: J. Middleton Murry's *Between Two Worlds*, and Francis Stuart's *Things to Live For*.

Books about British political persons were scattered and scanty, strange to say. There were: E. F. Benson's *Queen Victoria*; Roger Fulford's defense of *George the Fourth*; and Agnes Mure Mackenzie's *Robert Bruce, King of Scots*, about royalty, as well as a number of Jubilee books about George V. About the less well born were: *Buckingham, 1592-1628*, by M. A. Gibb; *Thomas More*, by R. W. Chambers; *Strafford, 1593-1641*, by C. V. Wedgwood; *Strange Destiny*, by A. Mervyn Davies, about Warren Hastings; *Haig*, by Duff Cooper; *Lord Brougham*, by G. T. Garratt; *Sir Walter Raleigh*, by Edward Thompson; and *Down the Years*, autobiography by Sir Austen Chamberlain.

Concerning other Britishers were: *God's Soldier: General William Booth*, by St. John Ervine; *John Nash*, the architect, by John Summerson; *Gerald*, by Daphne du Maurier, about her actor father; *Randall Davidson*, by G. K. A. Bell; *Mungo Park and the Quest of the Niger*, by Stephen Gwynn; and *I Write as I Please*, by Walter Duranty.

Stanley T. Williams' *The Life of Washington*

Irving stood out among biographies of American literary figures. Autobiographies were: *The Living of Charlotte Perkins Gilman*; *If This Be I*, by Margaret Deland; *A Footnote to Folly*, by Mary Heaton Vorse. The centenary brought *Mark Twain*, by Edward Wagenknecht, and *Mark Twain's Notebook*, edited by Albert Bigelow Paine. S. Foster Damon published *Amy Lowell*; Nancy Hoyt *Elinor Wylie*, and Edgar Lee Masters *Vachel Lindsay*, about recent poets.

With vols. iii and iv, Douglas S. Freeman's *Robert E. Lee* completed the outstanding work about American political figures during the year. Burton J. Hendrick contributed *The Lees of Virginia*. Ray Stannard Baker published vol. v of *Woodrow Wilson, 1915-1917*, and *War Memoirs of Robert Lansing* also appeared. The post-Civil War period was covered in William B. Hesseltine's *Ulysses S. Grant, Politician*, Thomas Frederick Woodley's *Thaddeus Stevens*, and Donald Barr Chidsey's *The Gentleman from New York*, Roscoe Conkling. Other American politicians: *Dwight Morrow*, by Harold Nicolson; *John Jay*, by Frank Monaghan; *The American Talleyrand*, Van Buren, by Holmes Alexander; and *George Washington*, by Michael de la Bedoyere.

Americans neither political nor literary were popular as usual, and of remarkable interest. Autobiographies by journalists were conspicuous, such as: Vincent Sheean's *Personal History*; Franklin P. Adams' *The Diary of Our Own Samuel Pepys*; Marguerite Harrison's *There's Always Tomorrow*. A prize-winning biography was *Old Jules*, by Mari Sandoz, about a Nebraska pioneer. Clarence Day's *Life with Father* was delightful; Tom Kromer's *Waiting for Nothing* made a sensation in England, the autobiography of a down-and-out; William Seabrook's *Asylum* described modern treatment of the insane. Other important American biographies and autobiographies were: George H. Doran's *Chronicles of Barabbas*, a publisher; *Autobiography of John Hays Hammond*; Harold E. Stearns' *The Street I Know*; Allan Nevins' *Abram S. Hewitt*; Hugh Morrison's *Louis Sullivan*; Ralph Barton Perry's *The Thought and Character of William James*; Thomas Boyd's *Poor John Fitch*, reputed inventor of the steamboat; George Kitchin's *Prisoner of the Opium*. Three books about the wealthy were: *The Magnate*, William Boyce Thompson, by Hermann Hagedorn; *"King Lehr" and the Gilded Age*, by Elizabeth Drexel Lehr; and *The Du Pont Dynasty*, by John K. Winkler.

About people not British or American: Francis Hackett's *Francis the First*; vols. ii and iii of *The Story of My Life*, by Marie, Queen of Rumania; *Joan of Arc*, by Milton Waldman; Evarts S. Scudder's *Mirabeau*; J. M. Thompson's *Robespierre*; Stephen Graham's *Tsar of Freedom, Alexander II*; G. R. Richards' *Cicero*; Shidzué Ishimoto's *Facing Two Ways*, Western life versus Japanese; Margaret Goldsmith's *Seven Women Against the World*, from Corday to Goldman; *Restless Days*, by Lilo Linke, a fugitive from Nazidom; *My Old World*, by Ernest Dimnet. Vols. xv, xvi, and xvii of *The Dictionary of American Biography* appeared, edited by Dumas Malone.

Criticism and the History of Literature. Discussion of Shakespeare was prominent in the year's work, as shown in Caroline F. E. Spurgeon's *Shakespeare's Imagery and What It Tells Us*; J. Dover Wilson's *What Happens in "Hamlet"*; Richard David's *The Janus of Poets*, because poet and dramatist; Sir John Squire's *Shakespeare as a Dramatist*; M. C. Bradbrook's *Themes and Con-*

ventions of *Elizabethan Tragedy*; and Gerald H. Rendall's *Personal Clues in Shakespeare's Poems and Sonnets*, and G. W. Phillips' *Sunlight on Shakespeare's Sonnets*, which were two mutually contradictory anti-Shakespearean works.

About poetry and poets were: Sir Arthur Quiller-Couch's *The Poet as Citizen*; W. J. Calvert's *Byron: Romantic Paradox*; Willard L. Sperry's *Wordsworth's Anticlimax*; Gilbert Thomas' *William Cowper and the 18th Century*; F. W. Bateson's *English Poetry and the English Language*, asserting that the history of poetry is the history of language changes; Thomas Gilby's *Poetic Experience*, examining Thomistic definitions; *This Modern Poetry*, by Babette Deutsch.

General works included: I. A. Richards' *Colebridge on Imagination*; Elizabeth Drew's *The Enjoyment of Literature*; Edwin Valentine Mitchell's *The Art of Authorship*. Fred Lewis Pattee published *The First Century of American Literature, 1770-1870*. About foreign literature appeared: Havelock Ellis' *From Rousseau to Proust*; W. H. Bruford's *Germany in the 18th Century: the Social Background of the Literary Revival*; and F. C. Green's *Minuet: a Critical Survey of French and English Literary Ideas in the 18th Century*.

About the drama: Harley Granville-Barker's *The Study of Drama*; George Jean Nathan's *Passing Judgments*; M. Joan Sargeant's *John Ford*. About the novel: David Cecil's *Early Victorian Novelists*; Harlan Hatcher's *Creating the Modern American Novel*; Ernest A. Baker's vol. vi of *The History of the English Novel: Edgeworth, Austen, and Scott*.

Drama. The most promising American playwright in some years, Clifford Odets, published *Three Plays*, "proletarian." Albert Maltz' *Black Pt* could also be so described. But the year was marked by a revival of the poetic play, for examples: T. S. Eliot's *Murder in the Cathedral*, about Becket; W. H. Auden and Christopher Isherwood's *The Dog Beneath the Skin*, superficially farce, fundamentally serious; Archibald MacLeish's *Panic*, about the depression; Maxwell Anderson's *Winterset* and *Valley Forge*; W. B. Yeats' *Wheels and Butterflies*. Mr. Yeats also published his *Collected Plays*. Notable discussion plays were: S. N. Behrman's *Rain from Heaven*; John Haynes Holmes and Reginald Lawrence's *If This Be Treason*; Elmer Rice's *Two Plays*; and *White Man*, by Samson Raphaelson, in the same volume with *Accent on Youth*, a slick comedy. H. G. Wells published a prophetic movie *Things to Come*. Good farces were: John Cecil Holm and George Abbott's *Three Men on a Horse* and Lawrence Riley's *Personal Appearance*. Sidney Howard adapted *Paths of Glory*, and Zoe Akins *The Old Maid*, Pulitzer Prize winner. Lennox Robinson published *More Plays*; Sinclair Lewis and Lloyd Lewis *Jayhawkers*; Noel Coward *Point Valaine*; James Bridie *The Black Eye* and, with Claud Gurney, *Mary Read*; R. C. Sherriff and J. de Cassalis *St. Helena*; R. E. Sherwood *The Petrified Forest*; Paul Green *Roll, Sweet Chariot*; Denis Johnston *Storm Song* and *A Bride for the Unicorn*; J. B. Priestley *Duet in Floodlight*. Notable anthologies were: *A Treasury of the Theatre*, by Burns Mantle and John Gassner; and *Continental Plays*, by Thomas H. Dickinson.

Economics. Frederick Lewis Allen's *The Lords of Creation* was entertaining financial and corporate history, 1893-1933. Stuart Chase's *Government in Business* advocated its extension as inevitable. Lewis H. Corey's *The Crisis of the Middle*

Class and John Strachey's *The Nature of Capitalist Crisis* were Marxian programmes. Paul H. Douglas, in *Controlling Depressions*, offered an elaborate non-Marxian programme. With *The Economic Consequences of the New Deal*, Benjamin Stolberg and Warren Jay Vinton attacked from the left, while Hugh S. Johnson, in *The Blue Eagle from Egg to Earth*, defended the NRA. George F. Warren and Frank A. Pearson, in *Gold and Prices*, still insisted the first governed the second. *The Chart of Plenty*, by Harold Loeb and associates, showed the possibility of \$4300 annual income per family in America. Walter B. Pitkin had the middle class saving capitalism in *Capitalism Carries On*. Clark Foreman and Michael Ross' *The Consumer Seeks a Way*, Arthur Kallet's *Counterfeit*, exposing frauds, and E. F. M. Durbin's *The Problem of Credit Policy*, dealt with consumers' problems. Charles A. Beard's *The Open Door at Home* advocated a planned economy. Sir Walter Layton and Geoffrey Crowther published *An Introduction to the Study of Prices*. A. C. Pigou's *Economics in Practice* discussed many modern problems.

Education. Vol. ii of Rexford G. Tugwell and Leon H. Keyserling's *Redirecting Education* was a survey of European and Canadian practice. Merle Curti published *The Social Ideas of American Educators* from the colonies to John Dewey. W. B. Curry's *Education in a Changing World* advocated education for freedom even if freedom diminishes. James Wechsler's *Revolt on the Campus* showed what students think and feel.

Essays. Kenneth Roberts' *For Authors Only* poked fun at foreigners and other things. Heywood Broun's *It Seems to Me* was the product of daily column-writing. Bertrand Russell's *In Praise of Idleness and Other Essays* was mind-disturbing. Sherwood Anderson, in *Puzzled America* and *No Swank*, gave the fruit of travels and interviews. Carl Becker's *Everyman His Own Historian*, and Katharine Garvin's *The Great Tudors* were historical. Communist satire of the contemporary appeared in Robert Forsythe's *Redder than the Rose*. An anthology of similar tendency was *Proletarian Literature in the United States*, edited by Granville Hicks. Feliciano, by Stark Young, gave the Southern scene. Tirades and panegyrics marked Osbert Sitwell's *Penny Foolish*. Walter de la Mare's *Early One Morning in the Spring* was about childhood. Don Marquis's *archy does his part* was humorous. Geoffrey Grigson edited *The Arts Today*, literary and graphic. Sir J. G. Frazer published anthropological gleanings in *Creation and Evolution in Primitive Cosmogonies and Other Pieces*. Joseph Wood Krutch's *Was Europe a Success?* was political and philosophical. Carl van Doren edited *An Anthology of World Prose*. Also: *Pleasure Trove*, by E. V. Lucas, and *Avowals and Denials*, by G. K. Chesterton.

Fine Arts. National or period studies were numerous, as: Laurence Binyon's *The Spirit of Man in Asian Art*; D. Talbot Rice's *Byzantine Art*; C. Leonard Woolley's *The Development of Sumerian Art*; Roger Hinks' *Carolingian Art*; C. R. Morey's *Christian Art*; Eric Maclagan's *Italian Sculpture of the Renaissance*; Arthur Gardner's *A Handbook of English Medieval Sculpture*. Modernism received attention in: R. H. Wilewski's *The Modern Movement in Art*; Edward F. Rothschild's *The Meaning of Unintelligibility in Modern Art*, explaining it as a kind of psychic chaos; James Thrall Soby's *After Picasso*. Sir Reginald Blomfield discussed *Six Architects*, Wren the latest. Kenneth Clark published the notable

Catalogue of the Drawings of Leonardo da Vinci at Windsor Castle. A history was *Art in the Western World*, by David M. Robb and J. J. Garrison. Others were: *Concerning Beauty*, by Frank Jewett Mather, Jr.; *Progress of Archaeology*, by Stanley Casson; *The Art of Renoir*, by Albert C. Barnes and Violette de Mazia.

History. Western civilization was a favorite subject, as witness: *The History of Western Civilization*, by Harry Elmer Barnes and Henry David; vol. ii, *Rome and Christendom*, of *European Civilization: Its Origin and Development*, edited by Edward Eyre; *The Story of Civilization*, by Will Durant, vol. i, *Our Oriental Heritage*; *A History of Europe*, three vols., by H. A. L. Fisher. In ancient history appeared: *A History of the Roman World from 146 to 30 B.C.*, by Frank Burr Marsh; *The Achievement of Rome*, by William Chase Greene; vol. x of *The Cambridge Ancient History*, *The Augustan Empire*, edited by S. A. Cook and others; and *Ancient Ireland*, by R. A. S. Macalister. In medieval history were: *The Kingdom of the Crusaders*, by Dana Carleton Munro; *A History of the Anglo-Saxons*, by R. H. Hodgkin; *The Rise of the Stewarts*, to Flodden, by Agnes Mure Mackenzie; *The Birth of the Middle Ages, 395-814*, by H. B. Moss.

In modern British history appeared: *Early Victorian England*, edited by G. M. Young; *English Radicalism 1832-1852*, by S. Maccoy; *The Harvest of Victory, 1918-1926*, by Esme Wingfield-Stratford; two Jubilee books: *The Reign of George V*, by D. C. Somervell, and *The People's King*, by John Buchan; *The Strange Death of Liberal England, 1910-14*, by George Dangerfield; vol. ii of *Our Own Times, 1913-35*, by Stephen King-Hall; a diplomatic history: *Israeli, Gladstone, and the Eastern Question*, by R. W. Seton-Watson; and a city history: *Brighton*, by Osbert Sitwell and Margaret Barton.

In American history: vol. i, *The Settlements*, of Charles M. Andrews' *The Colonial Period of American History*; Frederick Jackson Turner's *The United States, 1830-1850*; Andrew C. McLaughlin's *A Constitutional History of the United States*; Alfred B. Williams' *Hampton and His Red Shirts*, South Carolina 1876; *Road to War: America 1914-1917*, by Walter Millis; vol. vi of *Our Times. The United States 1900-1925. The Twenties*, by Mark Sullivan; Walter Prescott Webb's *The Texas Rangers*; *Documents of American History*, edited by Henry Steele Commager; *Privileged Characters*, by M. R. Werner, about recent government and financial scandals; *Ordeal by Fire*, informal history of the Civil War, by Fletcher Pratt; *Canada and the American Revolution*, by George M. Wrong; *The Spanish Conquistadors*, by F. A. Kirkpatrick; *The Conquest of the Maya*, by J. Leslie Mitchell, mostly pre-Spanish history, despite title; *The Mexican Adventure*, Maximilian's, by Daniel Dawson.

Other histories were: vol. iv, *Philip the Prudent*, of Roger Bigelow Merriman's *The Rise of the Spanish Empire in the Old World and the New*; J. Hampden Jackson's *The Post-War World*; C.R.M.F. Cruttwell's *A History of the Great War*; R. T. Clark's *The Fall of the German Republic*; William Henry Chamberlin's *The Russian Revolution, 1917-21*; Hendrick Willem van Loon's *Ships and How They Sailed the Seven Seas*; Leonard Outhwaite's history of exploration, *Unrolling the Map*; and Henry Osborn Taylor's *A Layman's View of History*.

Novels. Thomas Wolfe's eagerly awaited sec-

ond novel, *Of Time and the River*, showed a young man living tumultuously, in America and abroad. Sinclair Lewis' *It Can't Happen Here* described an American Fascist Revolution. Robert Brif-fault's *Europa* revealed the disintegrating pre-war world. Humphrey Cobb's *Paths of Glory* angered against war. A. J. Cronin's *The Stars Look Down* gave a mining community between 1903 and 1933. The social interest of these last four was evident.

And the same tendency could be seen in the large group of proletarian novels. James T. Farrell published the trilogy of a Chicago tough boy, *Studs Lonigan*. Grace Lumpkin's *A Sign for Cain*, about share-croppers, advocated communism. William Cunningham's *The Green Corn Rebellion* showed farmers revolting against war in 1917. *The Furies*, by James Hanley, were an Irish family in an English seaport. A harassed negro was shown in Robert Rylee's *Deep Dark River*. Jack Conroy's *A World to Win* dealt with four people in the depression. Other proletarian novels were: Edward Anderson's *Hungry Men*; Henry Roth's *Call It Sleep*, a New York East Side small boy; Walter Greenwood's *The Time Is Ripe*, English slums; Thomas Boyd's *In Time of Peace*; Walter Havig-hurst's *Pier 17*, a seamen's strike.

Regionalism remained popular with novelists. About Maine: Rachel Field's *Time Out of Mind*; Mary Ellen Chase's *Silas Crockett*; Robert P. Tristram Coffin's *Red Sky in the Morning*; Gladys Hasty Carroll's *A Few Foolish Ones*. About the South: Berry Fleming's *Siesta*; Elizabeth Madox Roberts' *He Sent Forth a Raven*, Kentucky; William Faulkner's *Pylon*, barnstorming aviators; Erskine Caldwell's *Journeyman*, Georgia; Marjorie Kinnan Rawlings' *Golden Apples*, Florida; Paul Green's *This Body the Earth*, and Fielding Burke's *A Stone Came Rolling*, North Carolina. The West: H. L. Davis' *Honey in the Horn*, Oregon; John Steinbeck's *Tortilla Flat*, California; Hope Williams Sykes' *Second Hoeting*, Colorado. Other regional novels: Edna Ferber's *Come and Get It*, Wisconsin; and John Peale Bishop's *Act of Darkness*, West Virginia.

Successful novels by women about women were: Willa Cather's *Lucy Gayheart*, a Nebraska music teacher; Ellen Glasgow's *Vein of Iron*, a long-sufferer; Enid Bagnold's *National Velvet*, a girl and a horse; Margaret Ayer Barnes' *Edna, His Wife*, married to a success.

The vogue for history almost disappeared. In *Solomon, My Son!* John Erskine followed his formula. *Free Forester*, by Horatio Colony, was about frontier days in Kentucky. Harry Sackler's *Festival at Meran* dealt with a Jewish revolt against Romans.

Fantasy was more notable: E. R. Eddison's *Mistress of Mistresses*, a land after death; Algernon Blackwood's *The Fruit Stoners*, a little girl's dreams; Eugene Lohrke's *The First Bus Out*; Charles G. Finney's *The Circus of Doctor Lao*; Joseph O'Neill's *Land Under England*.

Maybe Thornton Wilder's *Heaven's My Destination* was satire on the American brand of Christianity. Anyway, Phil Stong satirized Hollywood in *The Farmer in the Dell* and New York sophisticates in *Week End*. And Thomas W. Duncan's *O, Chataqua* was satirical, as was T. S. Stribling on politics, in *The Sound Wagon*.

John Masefield's *Victorious Troy* gave a ship in a storm. John O'Hara's *Butterfield 8* was about a speakeasy girl. In *The Inquisitor*, by Hugh Walpole, a cathedral town was melodramatized. George Santayana's *The Last Puritan* and L. H. Myers'

The Root and the Flower were philosophical novels. MacKinlay Kantor's *The Voice of Bugle Ann* showed American fox-hunting. In *Road of Ages*, Robert Nathan imagined Jews expelled from civilization. Pearl Buck's *A House Divided* showed China today. William McFee's *The Beachcomber* was a sea-captain ruined by women. Thomas Hardy's *An Indiscretion in the Life of an Heiress*, was his "lost" first novel. Lloyd C. Douglas' *Green Light* was religious therapeutics. Mazo de la Roche's *Young Renny* took place before the White-oak saga began. *The Man Who Had Everything*, by Louis Bromfield, was a successful playwright. Christopher Isherwood showed a thorough scamp in *The Last of Mr. Norris*. Parts of trilogies or tetralogies were: *Love in Winter*, by Storm Jameson; *We Are Betrayed*, by Vardis Fisher; *Smith*, by Branch Cabell; *Grey Granite*, by Lewis Grassic Gibbon; *Shining and Free*, by G. B. Stern.

Picture Books. A vogue this year, worthy of separate notice, was for large volumes of pictures, with a little text. Two such were of news: *The Breathless Moment*, by P.V.D. Stern and Herbert Asbury, and *Eyes on the World*, by M. Lincoln Schuster. Three were of history: *The American Historical Scene*, by Stanley Arthurs and fifty authors; *The Story of America in Pictures*, by Alan C. Collins; and *Lincoln in Portraiture*, by Rufus Rockwell Wilson. The U.S. Navy was presented in *Men and Ships of Steel*, by Wayne Francis Palmer. Katherine Mayo published *The Face of Mother India*. Wendell MacRae's *Willingly to School* showed educational processes.

Poetry. C. Day Lewis, the latest young English sensation, published *Collected Poems* and *A Hope for Poetry* and *A Time to Dance*. William Butler Yeats, of the Old Guard, matched him with *A Full Moon in March* and *The King of the Great Clock Tower*. Edwin Arlington Robinson's posthumous book was *King Jasper*, and AE's *Selected Poems* appeared after his death. Robinson Jeffers' *Solstice and Other Poems* were on his familiar themes. Merrill Moore's *Six Sides to a Man* were psychological sonnets. Laurence Whistler's *Four Walls* won a prize in England. William Rose Benét's *Golden Fleece* was his collected verse. Horace Gregory's *Chorus for Survival* added to his reputation. Good light verse was found in *Death and General Putnam*, by Arthur Guiterman; *The Primrose Path*, by Ogden Nash; and *Scenes from the Mesozoic*, by Clarence Day. John G. Neihardt continued his epic of the west in *Song of the Messiah*. Muriel Rukeyser's *Theory of Flight* brought in aviation. Others were: Mark van Doren's *A Winter Diary*; Lola Ridge's *Dance of Fire*; W. H. Davies' *Love Poems*; Winifred Welles' pleasant narratives, *A Spectacle for Scholars*; Edgar Lee Masters' *Invisible Landscapes*; Herbert Read's *Poems 1914-1934*; Kenneth Fearing's *communist Poems*; Joseph Auslander's *No Traveler Returns*; *Selected Poems of Marianne Moore*; *Selected Poems of Robert Nathan*; John Gould Fletcher's *XXIV Elegies*; Leonard Bacon's *The Voyage of Autoleon*; Conrad Aiken's *Landscape West of Eden*; MacKinlay Kantor's vernacular *Turkey in the Straw*.

Politics. If democracy fails, we shall have been warned by this year's books. Harold J. Laski gave the choice between democracy and capitalism in *The State in Theory and Practice*. Francis W. Hirst's *Liberty and Tyranny*; Sir John A. R. Marriott's *Dictatorship and Democracy*; Robert C. Brooks' *Deliver Us from Dictators!*; R. Bassett's *The Essentials of Parliamentary Democracy*;

C. Delisle Burns' *Democracy*; J. S. Fulton and C. R. Morris' *In Defence of Democracy*; all advocated democracy's retention. Lewis Broad and Leonard Russell studied *The Way of the Dictators*. And Rexford Guy Tugwell, in *The Battle for Democracy*, said the New Deal fought for it.

But Ogden L. Mills, in *What of Tomorrow?* attacked the New Deal from the right, as Mauritz A. Hallgren did from the left in *The Gay Reformer*. Harold L. Ickes' *Back to Work* described PWA; and H. G. Wells surveyed the New Deal's progress in *The New America—The New World*. Other American problems were considered in Edward S. Corwin's *The Twilight of the Supreme Court*; A. N. Holcombe's *Government in a Planned Democracy*; W. Y. Elliott's *The Need or Constitutional Reform*; Raymond Gram Swing's *Forerunners of American Fascism*; "Unofficial Observer's" *American Messiahs*; Frank H. Simonds' *America's Foreign Policy in the Post-War Years*; Charles Seymour's *American Neutrality 1914-1917*; J. T. Salter's *Boss Rule*; Drew Pearson and Constantine Brown's *The American Diplomatic Game*.

Against war were: *Mars His Idiot*, by H. M. Tomlinson; *The Power of Non-violence*, to create peace, by Richard B. Gregg; *Challenge to Death*, by fifteen British authors; *Peace and the Plain Man*, by Sir Norman Angell. But Frank H. Simonds and Brooks Emeny's *The Price of Peace* was eliminating nations' inequalities; and John W. Wheeler-Bennett's *The Pipe Dream of Peace* surveyed past peace manoeuvres cynically.

Everett Dean Martin's *Farewell to Revolution* attacked its utility. Harold D. Lasswell's *World Politics and Personal Insecurity* explained political change psychologically. *Labor and the Government* was edited by Alfred L. Bernheim and Dorothy van Doren. *The Foreign Policy of the Powers* was explained by an author from each nation.

About specific nations: Sidney and Beatrice Webb's *Soviet Communism*; George Selde's *Savdust Cacsar*, Mussolini; Herman Finer's *Mussolini's Italy*; Robert Sencourt's *The Genius of the Vatican* and George Selde's *The Vatican, Yesterday, Today, and Tomorrow*; Alexander Werth's *France in Ferment*; Ladislav Farago's *Abyssinia on the Eve*; Frederick L. Schuman's *The Nazi Dictatorship*; Lin Yutang's *My Country and My People*, and Grover Clark's *The Great Wall Crumbles*, about China; Nathaniel Pfeffer's *Must We Fight in Asia?* answering yes; and Lothrop Stoddard's *Clashing Tides of Color*, the machine versus racialism.

Religion. Bertrand Russell's *Religion and Science* located the battle ground. Corliss Lamont uncovered *The Illusion of Immortality*. Bernard Idings Bell defended the universal church in *Preface to Religion*. Paul Elmer More and Frank Leslie edited *Anglicanism*, an anthology of 17th century writings. A Christian view of the present world was presented in Henry P. Van Dusen's *God in These Times*. M. C. D'Arcy's *Mirage and Truth* attacked modern unbelief. Histories were: Christopher Dawson's *Medieval Religion*; Arthur Cushman McGiffert's *A History of Christian Thought*; Arthur C. Headlam's *Christian Theology*. Paul F. Douglass' *God Among the Germans* showed Nazis versus the churches. Louis Wallis' *God and the Social Process* was a sociological study of the Old Testament.

Science. Hans Zinsser's *Rats, Lice, and History* dealt with the social effects of typhus fever. Sir Arthur Eddington's *New Pathways in Science* led

him to philosophy again. Alexis Carrel's *Man the Unknown* speculated widely. H. S. Jennings' *Genetics* revealed its present standing. Gerald Heard's *Science in the Making* and Bernard Jaffe's *Outposts of Science* dealt with latest advances, while Jonathan Norton Leonard's *Tools of Tomorrow* showed what applied science might do. A. W. Haslett discussed *Unsolved Problems of Science*. J. W. N. Sullivan gave *Science: a New Outline*. John H. Bradley's *The Autobiography of Earth* was geology, while H. Spenser Jones' *Worlds without End*; E. A. Milne's *Relativity, Gravitation, and World Structure*; and Henry Norris Russell's *The Solar System and Its Origin* were astronomical. Sir J. A. Thomson published *Biology for Everyman*; Joseph Needham *A History of Embryology*. But seven British essayists, in *The Frustration of Science*, attacked its uses.

Short Stories. A notable first appearance was T. O. Beachcroft's *A Young Man in a Hurry*. Erskine Caldwell's *Kneel to the Rising Sun* dealt in bestiality and horror. Clemence Dane's *Fate Cries Out* was historical. Peter Neagoe's *Winning a Wife* was Rumanian. Booth Tarkington's *Mr. White, The Red Barn, Hell, and Bridewater* dealt with the after-life. James Thurber's *The Middle-aged Man on the Flying Trapeze* was burlesque. Others were: Thomas Wolfe's *From Death to Morning*; *Selected Short Stories of Sinclair Lewis*; Rebecca West's *The Harsh Voice*; Tess Slesinger's *Time: the Present*; Josephine Johnson's *Winter Orchard*; Oliver La Farge's *All the Young Men, Indians*; Thyra Samter Winslow's *My Own, My Native Land*; William March's *The Little Wife*; John O'Hara's *The Doctor's Son and Other Stories*.

Sociology. About America: Alfred M. Bingham's *Insurgent America*, what the middle class wants; Herbert Agar's *Land of the Free*, for small properties; Erskine Caldwell's *Some American People*; Alexander Micklejohn's *What Does America Mean?*; John L. Spivak's *America Faces the Barricades*, interviews; Charles Morrow Wilson's *Backwoods America*; Clarence Cason's *90° in the Shade, the South*; Stanley Walker's *Mrs. Astor's Horse*, New York; Caroline F. Ware's *Greenwich Village 1920-1930*. About race: Willis D. Weatherford and Charles S. Johnson's *Race Relations*; Zora Hurston's *Mules and Men*, Negro folk lore; Robert H. Lowie's *The Crow Indians*; Julian Huxley and H. C. Haddon's *We Europeans*, a scientific examination of the concept.

About crime: Courtney Riley Cooper's *Ten Thousand Public Enemies*; Henry Morton Robinson's *Science Versus Crime*; Fanny Alexander and William Healy's *Roots of Crime*; Lewis E. Lawes' *Cell 202*; Harry Soderman and John J. O'Connell's *Modern Criminal Investigation*. General works: Julian Huxley's *Science and Social Needs*; A. T. K. Grant's *Society and Enterprise*, workability of reforms; Walter Lippmann's *The New Imperative*, to combine industrialism and freedom; Graham Wallas' *Social Judgment*, the harmony of clear thought and warm feeling; Kenneth Burke's *Permanence and Change*, purpose of modern society; Leonard Woolf's *Quack! Quack!* what society encourages dictatorship; Huntington Cairns' *Law and the Social Sciences*; W. A. Robson's *Civilisation and the Growth of Law*; John Dewey's *Liberalism and Social Action*.

Travel. Anne Morrow Lindbergh's *North to the Orient*, by aeroplane with her husband, was a sensation. W. Somerset Maugham's *Don Fernando* was about Spain, as was Walter Starkie's *Spanish*

Raggle-Taggle. Admiral Richard E. Byrd reported his second Antarctic expedition in *Discovery*. Rockwell Kent described Greenland in *Salamina*. Ernest Hemingway went hunting in *Green Hills of Africa*. Christopher Morley visited Latin America in *Hasta La Vista*. Hugh Rutledge reported *Attack on Everest* and H. M. Tomlinson *Below London Bridge*. About Ethiopia: L. M. Nesbitt's *Hell-Hole of Creation*; C. F. Rey's *The Real Abyssinia*; Carleton Coon's *Measuring Ethiopia*. Raymond L. Ditmars and William Bridges took a *Snake Hunter's Holiday*. Ford Madox Ford felt at home in *Provence*. A. R. Glen's *Young Men in the Arctic* went to Spitzbergen. Histories were: *The Conquest of the North Pole*, by J. Gordon Hayes, and *The Exploration of the Pacific*, by J. C. Beaglehole. Vic Hurley homesteaded in the Philippines, *Southeast of Zamboanga*. Alice O'Reardon Overbeck found a home in the Andes, *Living High*.

LITHUANIA, lith'û-â-ni-â. A Baltic republic. Provisional capital, Kaunas (Kovno). Vilna, transferred to Poland by the Council of Ambassadors in 1923, was still claimed by Lithuanians in 1935 as their true capital.

Area and Population. The area of Lithuania is 21,482 square miles and the estimated population on Jan. 1, 1935, was 2,476,154. Included in these totals is the predominately German and semi-autonomous Klaipėda (Memel) district, with an area of 933 square miles and a population of 149,273 on Jan. 1, 1934. Births in 1934 numbered 60,770; deaths, 35,789; marriages, 18,246. The estimated populations of the chief cities on Jan. 1, 1935, were: Kaunas (Kovno), 104,038; Siauliai, 23,877; Panevėžys, 20,960; Klaipėda (Memel), 37,523. About 80 per cent of the people were Roman Catholics, 9.5 per cent Protestants, 7.3 per cent Jews, and 2.5 per cent Greek Orthodox.

Education. Illiteracy was reduced from 32 per cent in 1923 to about 20 per cent in 1935. Enrollment in primary schools in 1933-34 was 266,795; in secondary schools, 20,781; in the University of Vyntantas the Great at Kovno, 4277. There were also various special schools.

Production. About 77 per cent of the working population is engaged in agriculture and but 10 per cent in commerce, industry, and transportation. In 1932 there were 6,474,000 acres of arable land, 3,060,000 acres of meadow and pasture, 75,000 acres of garden, and 2,544,000 acres of forest. Crop production in 1934, with 1933 figures in parentheses, was (in thousands of units): Wheat, 10,475 bu. (8192); rye, 26,331 bu. (21,731); barley, 11,663 bu. (10,647); oats, 26,163 bu. (22,776); potatoes, 91,606 bu. (67,035); linseed, 1015 bu. (823); flax, 47,796 lb. (39,971). Livestock in 1934 included 1,315,000 cattle, 1,288,000 swine, 1,310,000 sheep, and 571,000 horses. In 1933 there were 1136 industrial establishments, employing 25,131 workers. The principal industries were the manufacture of matches (42,667,000 boxes in 1934), meat and fish products, timber and wood products, tissues and yarns, machines and metallic wares, and leather.

Foreign Trade. Imports in 1934 were valued at 138,700,000 lits (142,176,200 in 1933) and exports at 147,200,000 lits (160,227,400 in 1933). Of the 1934 imports for consumption, Germany supplied 28 per cent; United Kingdom, 25.3 per cent; Czechoslovakia, 6.6 per cent; and the United States, 2.9 per cent. The percentage of the total value of exports taken by the chief customers in 1934 was: United Kingdom, 42.6; Germany, 21.6; United States, 3.2; Czechoslovakia, 3.0. Iron and steel and their manufactures, machinery, wool cloth, cotton yarn, and

coal, coke, and briquets were the chief imports; bacon, butter, wood pulp, and flax fibre were the principal exports.

Imports in 1935 totaled 127,200,000 lits; exports, 153,400,000 lits. Imports from the United States were \$350,013; exports to the United States, \$372,496.

Finance. Budget returns for the calendar year 1935 placed receipts at 260,400,000 lits and expenditures at 276,900,000 lits. Actual receipts in 1934 were 257,598,000 lits; expenditures, 251,760,000 lits. The public debt on Jan. 1, 1935, amounted to 91,813,000 lits (internal, 1,699,000), compared with a total of 116,525,000 lits on Jan. 1, 1934. The lit (par value, \$0.10 to Jan. 31, 1934, and \$0.1693 afterwards) remained practically at par until Oct. 1, 1935, when the gold standard was abandoned. See *History*.

Communications. The railways in 1934 extended 1435 miles. During the same year they carried 4,020,000 passengers and 1,853,000 metric tons of freight, earning gross receipts of 30,457,000 lits. Highways extended 19,450 miles; navigable waterways, 1606 miles. During 1934 622,802 net register tons of shipping entered the port of Klaipeda (Memel) in the overseas trade (600,646 tons in 1933).

Government. In 1935 the government was still in the hands of a small nationalist intelligentsia, organized as the Tautininkai party (Nationalist Union), which seized power by the military coup d'état of 1926. The parliament (Seimas) was dissolved Apr. 17, 1927, and no new elections had been held since. On Dec. 16, 1933, the Tautininkai party adopted fascism as a governing principle. President in 1935, Antanas Smetona, reelected for seven years on Dec. 11, 1931. Premier and Minister of Finance, Juozas Tubelis.

HISTORY

The Memel Controversy. Relations between Lithuania and Germany reached the point of open hostility during 1935, largely as a result of the triumph of Nazi principles among the German population of the autonomous territory of Memel (q.v.) and the efforts of the Lithuanian Government to suppress Nazi propaganda there. The Lithuanian-German struggle for supremacy in Memel broke out in 1933 and became steadily more violent during 1934 (see 1934 YEAR BOOK, p. 387). Additional bitterness was injected into the conflict by the court-martial proceedings in Kaunas commencing Dec. 13, 1934, against 123 Nazis from Memel accused of conspiring to reincorporate Memel in Germany and of murdering George Jesutis, one of their members, for admitting his part in the "conspiracy" to Lithuanian officials.

The trial ended Mar. 26, 1935. Four of the alleged murderers were condemned to death; two others received life imprisonment; the two leaders of rival Nazi groups in Memel were sentenced to prison for from 8 to 12 years; and about 70 other persons received shorter sentences. The remaining defendants were acquitted. Throughout the trial there were frequent violent anti-Lithuanian demonstrations in the Reich. Troops were concentrated on both sides of the frontier, and economic relations between the two countries came almost to a standstill. The announcement of the verdicts inflamed German opinion still further. The officially inspired agitation in the Reich assumed such a menacing aspect that Britain, France, and Italy, in an effort to relieve the tension, formally warned

Lithuania that her repressive measures against the Memellanders were incompatible with the autonomous rights granted them by the Memel statute of May 8, 1924.

These warnings induced the Kaunas Government to moderate its severity. The Lithuanian Supreme Court on May 17, while upholding the sentences on appeal, reduced the terms and fines fixed for most of those convicted. On May 18 President Smetona commuted the four death sentences to life imprisonment. The Germans in the Reich and Memel continued to complain of violations of the Memel Statute, however, and on April 19 Britain, France, and Italy jointly requested Lithuania to reintroduce representative government in the territory. Lithuania on May 2 agreed to do everything possible in this direction. On May 11 Governor Kurkauskas of Memel Territory called new elections for the Memel Diet for September 29.

The promulgation on August 17 of new electoral laws designed to disenfranchise members of the Nazi organizations in Memel provoked another outburst in Germany. Chancellor Hitler joined with other high officials of the Reich in denouncing Lithuanian sovereignty in Memel as "legalized robbery" and in protesting the alleged "maltreatment and torture" of pro-Nazi Memellanders. Britain, France, and Italy on September 12 again warned Lithuania that the elections must be fairly conducted. They received satisfactory assurances from the Kaunas authorities, who invited them to send representatives to observe the conduct of the balloting. The fairness of the voting was amply demonstrated by the overwhelming victory of the Germans, who captured 24 out of the 29 seats in the Diet. The popular vote was: German candidates, 55,716; Lithuanians, 12,925.

The Kaunas Government, obviously chagrined at the outcome, attempted to retain control of the Memel Directorate, or executive board, by securing the appointment of one of the five Lithuanian members of the Diet as President. The refusal of the German deputies to accept such an arrangement, backed by a sharp warning from Great Britain, finally led the Lithuanian Government to capitulate. On November 28 August Baldiszus, leader of the German party, was appointed President and he named three other pro-Germans to the other seats on the Directorate, leaving the Lithuanians unrepresented. The restoration of self-government to Memel did little to ease German-Lithuanian hostility, however. As the year closed the Lithuanians were protesting to the powers guaranteeing the Memel Statute that the German Directorate was ousting all Lithuanian sympathizers from Memel public services and attempting to eradicate all evidences of Lithuanian sovereignty. The Germans, on the other hand, were aroused by a Lithuanian court ruling that office holders in Memel must speak both German and Lithuanian.

Observers of European diplomatic affairs in 1935 were convinced that Lithuania occupied a crucial position as the prospective battle ground between Germany, Poland, and the Soviet Union. They believed that Hitler's first move toward expansion in the East would be to crush Lithuania and that the Memel situation offered a convenient opening for such a thrust. Aware of their danger, the Lithuanian authorities made several moves during 1935 toward liquidation of their old dispute with Poland over Vilna, but no definite agreement was reported. Lithuania also joined Estonia and Latvia in two conferences, held at Kaunas and Riga, respectively,

at which steps were taken to strengthen political and economic ties among these three members of the Baltic Entente (q.v.). See ESTONIA and LATVIA under *History* for these negotiations. The small Baltic states, however, were relatively powerless from a military standpoint. The Lithuanians sought a more effective counterweight to the menace from the Reich through the development of closer relations with the Soviet Union.

Domestic Affairs. These threatening developments abroad had direct repercussions upon economic and political conditions in Lithuania. The modified dictatorship over which Premier Juozas Tubelis had presided since the coup d'état of 1926 had pursued a conservative and orthodox economic and financial policy in the face of the world economic depression. Vigorously opposing proposals for inflation and devaluation of the currency as a way out of the depression, the government had adhered to the gold standard even at the cost of drastic deflation. Deflationary measures aroused much discontent, especially among the farmers burdened by high taxes, imposed to balance the budget, at a time when low prices for farm produce had greatly reduced their income.

In 1935 the German market—traditionally the most important and most profitable outlet for Lithuanian agricultural produce—was practically closed as a result of tension over Memel and of the Nazi drive for economic self-sufficiency. At the same time Britain placed additional quota restrictions upon imports of Lithuanian bacon. In order to find new markets for the farm produce barred from Germany and Britain, the Lithuanian state-supervised cooperatives exported their products at still lower prices, further reducing farm income. Discontent among the farmers became increasingly vocal during the summer. The farmers refused to deliver their products to the cooperatives and in the Suvalkija district they engaged in violent demonstrations which were repressed by the police only after several persons were killed and scores arrested.

During September the growing exodus of capital led to the rapid decline of the gold reserves and on October 1 the government was forced to abandon the gold standard and establish rigid control over foreign exchange transactions. Heavy armament purchases abroad by the government in preparation for the expected German invasion, coupled with the loss of export markets and the emigration of Jews to Palestine, had proved too great a strain upon the country's financial structure.

In an effort to safeguard the economic structure and allay agricultural unrest, the government on February 5 established a far-reaching system for the control of prices. On September 6 a reorganization of the cabinet was effected in a further effort at checking criticism. New Ministers took over the Interior and Agriculture portfolios. On November 1 Col. Stasys Dirmantas was appointed Minister of Defense. On November 6 two political parties which had led the attack upon the government—the Peoples' Socialist and Christian Democratic parties—were suppressed. Meanwhile the army high command was reorganized, with Lieutenant-General St. Rastikis as commander, and a number of laws were promulgated tightening up the national defense system.

Before the end of the year additional farm relief measures had been placed in effect. Land taxes were reduced 10 per cent. Interest rates were lowered and the period for the repayment of loans was extended. New commercial treaties were concluded

with Latvia, Estonia, Finland, Belgium, the Soviet Union, Austria, and Czechoslovakia to provide additional outlets for Lithuanian farm products. Representatives of Lithuanian colonies in all parts of the world met in Kaunas during the autumn and took steps to promote economic collaboration between Lithuanians abroad and the mother country.

See GERMANY and POLAND under *History*.

LITTLE, ARTHUR D (EHON). An American chemist, died at Northeast Harbor, Me., Aug. 1, 1935. Born in Boston, Dec. 15, 1863, he was educated in the public schools there and in Portland, Me., and at the Berkeley School, New York, and the Massachusetts Institute of Technology (1881-84). In 1884 he became associated with the Richmond Paper Co., as a chemist and acquired a thorough knowledge of the details of paper-making by the sulphite process, subsequently installing the new process in mills in Wisconsin and North Carolina. In the following year he went to Boston as a consulting engineer, first with Roger B. Griffin, and later with Dr. William H. Walker. In 1905 he formed the business of Arthur D. Little, Inc., with himself as president, and four years later became a director of the Arthur D. Little Industrial Corporation.

One of Little's particular interests was the utilization of industrial waste. He specialized in the chemistry of cellulose fibres and paper-making, and in these, his chosen fields, was considered the foremost authority in America. So deeply concerned was he with the problems of paper-making that in 1912 he built a laboratory where he could experiment in paper-making and paper and pulp-mill operation. Later in his career he became interested in the development of chrome leather tanning, in the electrolytic manufacture of chlorates, in petroleum extraction, and in the manufacture of artificial silk, and he invented many processes in their connection. During the World War he devoted his time to experiments in connection with acetone production, smoke filters, and other supplies for the Signal Corps and Chemical Warfare Service.

When the Canadian Pacific Railway undertook the Natural Resources Survey in 1916, Dr. Little was its organizer. He served as chairman of the subcommittee on chemistry of the Science Advisory Committee of the National Research Council at the Century of Progress Exposition held in Chicago in 1933. Elected a fellow of the American Academy of Arts and Sciences, the American Association for the Advancement of Science, and of the Chemical Society of England, Little was a member of the American Chemical Society (president, 1912-14); the American Institute of Chemical Engineers (president, 1919), and of the Society of Chemical Industry, London (president, 1928-29). He received many honorary degrees, and in 1931 was awarded the Perkin Medal of the American Chemical Society for his work in the fields of artificial silk and petroleum.

His publications included *Earning Power of Chemistry* (1911); *Industrial Research in America* (1914); *The Fifth Estate* (1925); *The Handwriting on the Wall* (1928).

LITTLE ENTENTE. The political and military alliance formed by Czechoslovakia, Rumania, and Yugoslavia in 1921 and 1922 and further extended and consolidated by the pact of Feb. 16, 1933 (see 1933 YEAR BOOK, p. 453). In 1934 two members of the Little Entente, Rumania and Yugoslavia, joined with Greece and Turkey in forming the Balkan Entente (q.v.). During 1934 and

1935 the Little Entente and Balkan Entente cemented their relations and tended increasingly to follow a joint policy in foreign affairs. See all of these states and AUSTRIA, BULGARIA, ETHIOPIA, FRANCE, GERMANY, GREAT BRITAIN, and POLAND under *History*.

LIVESTOCK. Outstanding in the livestock situation in 1935 was the unusually small supply of pork. Hog slaughter was the smallest for any year since 1910-11 and about 30 per cent less than last year. The inspected hog slaughter in the three summer months was the smallest for the period in more than 30 years. The decrease in pork supplies was reflected in an increased demand for beef and mutton.

Feed shortages due to the severe drought of 1934 were largely responsible for the decreased numbers and necessitated curtailment in the livestock carried during the fall and winter of 1934 to the lowest levels in years. The obligatory reduction in cattle and hogs reached a point where it was only possible to carry over a minimum number of foundation animals. The decrease of 7,600,000 head of cattle, including both dairy and beef, was the largest of any year on record. It was estimated in the spring of 1935 that the numbers of cattle on feed in the Corn Belt were 36 per cent less than in 1934.

The spring pig crop of 1935 in the United States was estimated at only 30,402,000 head, a decrease of 20 per cent over the small spring pig crop of 1934, and a decrease of 40 per cent over the spring pig crops of 1932 and 1933.

Hog numbers were not only low in the United States, but also in the importing European countries. The world shortage of pork raised meat prices to high levels, but with larger feed supplies available in the fall of 1935 there was evidence that the end of the decline in hog numbers had been reached. More favorable hog-feed price relationships occurred in the United States and Europe, and heavier farrowing was reported in the fall. With increased numbers of beef animals and hogs, meat prices declined in the winter to more normal levels, yet they continued considerably higher than in 1934.

In 1935, in the United States, range conditions were relatively poor at lambing time and feed production was low, resulting in heavy death losses and small lamb crops. Improved range conditions and increased feed production in the summer of 1935 probably increased the numbers of stock sheep in the western states. If not curtailed by grazing policies, inaugurated by the Grazing Administration of the Department of Interior under the Taylor Act for the control of grazing on the public domain exclusive of the National Forests, the trend in sheep numbers will probably be upward for several years.

Increased consumer-demand for meats in the late summer reacted especially on lamb prices, which advanced sharply, and prices of feeder lambs advanced more than slaughter lambs.

Although the production of beef in 1935 was about 10 per cent less than in the preceding year, it was nearly equal to the average production during the five-year period 1930-34. Nearly 15 per cent more mutton was slaughtered, but it was not sufficient to offset the low production of pork which was about 2,000,000,000 lb. less than in 1934.

During 1935 there were slaughtered under Federal inspection only 26,057,627 hogs as compared with 43,876,393 in 1934. About 1,500,000 more head of sheep were slaughtered, but the numbers of cattle and calves were reduced nearly 3 per cent to 9,665,840 and 5,679,399 head, respectively.

The harvest of feed crops during the year was

ample in relation to the numbers of livestock on hand, and pasture and range conditions were average or better.

On Sept. 1, 1935, there were only 324,785,000 lb. of pork in storage, which was only a little more than half of the five-year average holdings of pork on this date. Lard stocks on Sept. 1, 1935, totaling 53,716,000 lb. were compared with 167,155,000 lb. on that date in 1934, and 135,425,000 lb. for the five-year average. This situation reflected the shortage of pork products in particular, but meats in general. While it is difficult to obtain up-to-date data on per capita consumption of meats, it was estimated by the U.S. Bureau of Agricultural Economics that there was a decrease of about 20 per cent in total meat consumption during the first 12 months of the year as compared with 1934. This was due to reductions of 30 per cent in pork and 6 per cent in beef and veal, with an increase of nearly 12 per cent in the lamb and mutton consumed.

The long downward trend in horse and mule production appeared to be drawing to an end, and colt raising showed a sharp increase.

Heavy imports of dried eggs created considerable interest during the year. There were imported in 1935 a total of 601,925 lb. of dried whole eggs as compared with 1131 lb. during 1934. There were also large increases in the imports of dried yolk, dried albumen, and frozen yolks. The imports of these products amounted in 1935 to 3,952,664, 1,199,772, and 1,876,445 lb., respectively.

International Conditions. Ordinarily pork and lard are the principal livestock products entering into international trade from this country and therefore world hog production is of special domestic interest. American exports of pork products during 1935 amounted to less than half of those in 1934 and were smaller than for many years. The downward trend of recent years was accelerated by the restrictions on imports imposed by the importing countries taking the larger amounts of the American products, especially the United Kingdom and Germany. Reduced domestic supplies, largely resulting from the drought of 1934, following the attempts of the Agricultural Adjustment Administration to curtail pork production, together with the rapid increases in prices, were leading factors in bringing about the decline in American exports.

Lard exports of the United States showed a greater decrease than pork, declining from 431,237,367 lb. in 1934 to 96,354,609 lb. in 1935. The German market was practically closed to American lard through restrictions. Czechoslovakia ranked second only to Germany prior to 1930 as a Continental European consumer of American lard. However, trade agreements were made with nearby countries, and subsidies were offered to domestic producers to encourage domestic production. Belgium, The Netherlands, and other European countries imposed restrictions on imports of pork products.

In 1935, world hog numbers reached the lowest point in 9 or 10 years, and were the lowest in the United States that they have been for 50 years.

All classes of hogs, except brood sows, decreased in Germany in 1935 as compared with 1934, but an increase of 6 per cent in the number of bred sows, reported for farrowing in the fall, was expected to result in some increased pork production. Lard imports into Germany were only about half normal levels, due to import restrictions, unfavorable exchange, the fixing of maximum lard prices by legislation, forced substitution of other fats, and the

reduced American supplies from which Germany normally derives a large part of her lard. Over 65 per cent of the lard imported by Germany in 1935 came from Denmark. Bacon imports by Germany, which were also below those of the previous year, were largely from The Netherlands and Hungary. As a result of the small supplies of pork products, German import duties on live hogs and frozen pork were reduced to encourage the entry of additional amounts.

The British quota for imports of pork products continued in effect. For hams and bacon it was further restricted during the last quarter of the year by about 17 per cent as compared with 1934. To further encourage pork production in Great Britain there was some interest in subsidizing domestic production as in case of beef and lamb. The British market received considerably increased quantities of Canadian and New Zealand pork, and hog numbers in Great Britain increased from 3,507,000 head in June, 1933, to 4,526,000 in 1935.

Prior to 1934 the United States furnished over 90 per cent of the total lard imports of Great Britain, but in 1935 only a little more than half of the British lard imports were from this country. Unusually large quantities were received from the Danube Basin, Canada, Argentina, and other countries. Lard prices at Liverpool were more than twice as high as those prevailing in 1934.

Dependence upon Great Britain for a market for about 80 per cent of their pork in the form of bacon renders Denmark production particularly susceptible to British import policies. Hog marketing has been regulated for three years to meet the decreasing quotas by the aid of a hog census taken at frequent intervals. Bacon exports from Denmark amounted to 440,200,000 lb. during 1935 which was 11 per cent less than in 1934.

The Netherlands' hog production control programme also attempted to make hog marketing conform with British bacon import quotas. Hog numbers have declined so that in 1935 they were about half those of 1932.

In Switzerland where hog production has increased by 54 per cent in the last 10 years, the government established a production control programme for cattle, sheep, hogs, and poultry on Aug. 6, 1935, in order to bring livestock production into line with domestic feed production.

In recent years the United Kingdom absorbed approximately three-fourths of the world's beef exports. About half of the beef supplies of the United Kingdom are produced domestically with the nearly 9,000,000 head of cattle; whereas, the other half is imported chiefly as chilled beef from Argentina, Uruguay, and Brazil, and as frozen beef from Australia and New Zealand. From 15 to 20 per cent is received as live cattle from the Irish Free State. A programme of protection for the stimulation of domestic production was inaugurated in 1931 by means of tariffs, subsidies, and import quotas. The net result was a large increase in beef imports from Australia, Canada, New Zealand, Union of South Africa, and Rhodesia, where the chilled beef industry supplanted the production of frozen beef. Beginning Sept. 1, 1934, the British government paid a subsidy to home producers of beef of 5 shillings per cwt. on live animals, and 9 shillings 4 pence per cwt. on dressed carcasses. The subsidy was extended periodically, and finally continued to Oct. 31, 1936. It was expected that funds for the subsidy would be derived from a levy on imported beef.

Notwithstanding these conditions, New Zealand exported nearly three times as much beef from Oc-

tober to July, 1934-35, as during the corresponding period of 1933-34. Most of this went to the United Kingdom. Over 16,300 quarters of frozen beef and 24,474 bags of frozen boneless beef were sent to the United States in this period, against none in the previous year. The 1935 quota for beef and veal imports from Australia to the United Kingdom totalled 187,000,000 lb., which was a decrease of only 1 per cent over 1934 imports.

In Argentina there have been small increases for several years in beef exports, but there was a shift from frozen beef to canned beef. During the first 10 months of 1935 there was an increase of 18 per cent in the cattle slaughtered in Uruguay.

Cattle numbers in the European countries (Germany, France, Italy, and The Netherlands) reached high levels, and beef imports were below normal. According to the January, 1935, census of cattle in the Soviet Union, there was an increase of about 20 per cent in cattle numbers. Thus, practically all the major beef cattle-producing countries except the United States showed increases in beef cattle production in 1935.

Import restrictions on lamb and mutton similar to those on beef were applied by the British market. These limited imports from Australia and New Zealand. Exports of lamb from New Zealand, totaling 7,495,000 carcasses, were heavier than in 1934. The British quota for Australia was 207,000,000 lb. in 1935, an increase of nearly 14 per cent over 1934.

Research. The increased interest in stabilizing production to more closely approximate consumption needs makes more land available per unit of livestock fed, and consequently makes possible the utilization of greater quantities of pasture and roughage for the more economical production of all classes of livestock. As a result, more and more research was concerned with the nutritive values, including mineral and vitamin contents of pasture, forage crops, and hay. The calcium and phosphorus content of range plants was found by the New Mexico Agricultural Experiment Station to be low in certain areas of the state. This deficiency caused a high mortality in calves and retarded their growth. The Ohio Agricultural Experiment Station found that the vitamin G and B contents of alfalfa, clover, and timothy were correlated with leafiness, greenness, and protein content, and the amount of the vitamins decreased as the plant matured.

Many of the other State Agricultural Experiment Stations, and the U.S. Department of Agriculture, were engaged in studies of all phases of pasture problems, fertilization and care of pastures, and chemical studies of the pasture, range, and forage plants: digestibility and nutritive value of the plants for livestock; methods of management of livestock on pastures and ranges; and poison plants.

Special interest was aroused in animal breeding in connection with a survey of livestock herds and flocks by the U.S. Department of Agriculture to determine where superior livestock might be found that would breed relatively true for the superior qualities. While somewhat disappointing because of a lack of records to prove the transmission of the superior characters, the survey was especially valuable in calling attention to the importance of such records for livestock breeding operations.

The Russians made noteworthy advances in the practice of artificial insemination in livestock, although it may be considered still in the experimental stages. By the methods employed, superior rams have been used to fertilize several hundred ewes. Thus, the ram of special excellence may have a greater influence in improving the quality of the

breed. Some progress was also made in the United States and Canada on this problem, largely with dairy cattle and horses, but the method is especially well suited to Russian conditions of livestock production.

Changes in Personnel. Dr. H. C. McPhee, Senior Animal Husbandman in the Bureau of Animal Industry, was appointed Chief of the Division of Animal Husbandry of that Bureau, on January 1. Dr. E. W. Sheets was appointed Professor of animal husbandry at Mississippi State College of Agriculture.

Prof. J. L. Lantow, Head of the Animal Husbandry Department of the New Mexico Agricultural Experiment Station, resigned to engage in soil conservation work. He was succeeded by J. H. Knox, animal husbandman of the Texas Agricultural Experiment Station.

Necrology. Prof. James Dryden, a well-known poultry breeder and teacher, died on Feb. 5, 1935. Professor Dryden was connected, during his earlier life, with the Utah and Oregon Experiment Stations. He is generally credited with having produced the first hen to lay 300 eggs in a year, under official supervision, and the first hen to lay 1000 eggs in a lifetime.

L. Vinke, formerly animal husbandman at the Montana Agricultural Experiment Station, died on August 30.

W. H. Pew, manager of the Aberdeen Angus herd of Briar Cliff Farms, and from 1912 to 1918 Head of the Animal Husbandry Department of Iowa State College, died on September 26.

Bibliography. Among the more recent publications on various phases of livestock production may be listed the following: *American Society of Animal Production, Record of Proceedings of the Twenty-Ninth Annual Meeting, November 30-Dec. 1, 1934*, (Amer. Soc. Anim. Prod. Proc., 1935); *The Physiology of Domestic Animals*, by H. H. Dukes, with a chapter on "The Physico-Chemical Basis of Physiological Phenomena," by E. A. Hewitt, a part on "Reproduction," by G. W. McNutt, and a foreword by H. E. Bergman, (Ithaca, New York, 1935, pp. xiv + 643, figs. 169); *Reference Book on the Meat Packing Industry*, (Institute of American Meat Packers, Chicago, Dept. of Public Relations and Trade, Chicago, 1935); *Yearbook of the Horse, 1934*, (Ed. by R. F. Kelly, New York, Dodd, Mead, 1935); *Sheep Breeding and Wool Production in the Argentine Republic, Buenos Aires, 1934*, by P. Link, (New York, Macmillan, 1934); *World's Poultry Congress, 5th, Rome, 1933*, (Atti. Roma, Ministero dell' agricoltura e delle foreste, Direzione generale dell' agricoltura, 1934); *International Poultry Guide for Flock Selection for the More Popular Breeds and Varieties*, by L. F. Payne and H. M. Scott, (Kansas City, 1934); *Chickens*, by W. H. Kircher, (St. Paul, Minn., 1935); *Profitable Poultry Management*, by C. E. Lee, (Ed. 8, Cayuga, N. Y., 1935).

LODER, BERNARD CORNELIUS JOHANNES. A Dutch jurist, died at The Hague, Nov. 4, 1935. He was born in 1849 and received his degree at the University of Leyden in 1873. In that year he began the practice of law at Rotterdam, specializing in maritime and admiralty law. In 1908 he was appointed to the High Court of Justice of the Netherlands, a position he held until 1921.

Always interested in the law of the sea, he was one of the founders of the International Maritime Commission in 1896, and in the years 1905, 1909, 1910, and 1922 was a delegate to the diplomatic sea conferences as a representative of his Government.

He served as a member of the Netherlands delegation to the Paris Peace Conference which drafted the Treaty of Versailles in 1919, and, in the following year, on the Advisory Committee of jurists who met at The Hague to discuss the formation of a tribunal on the plans of the future World Court. On Sept. 14, 1921, he was elected a full member of the newly formed Court of International Justice (World Court), and on Feb. 3, 1922 was unanimously elected president for a period of three years. At the expiration of his term he refused the renomination because of his age. He resigned his judgeship in 1930.

Ever a peace advocate, Dr. Loder made every effort to substitute the conference table for the battlefield. It was his belief that the Permanent Court should be modeled on the lines of the Judicial Committee of the Privy Council in London. In March, 1923, he made a statement to *The New York Times* to the effect that American participation in the League would greatly enhance that tribunal's power. He served with distinction as president of the Conference of Neutrals in 1920, which organization proposed statutes for the Permanent Court of International Justice, and worked with Elihu Root in the carrying out of the plans.

In 1932 he became the first president of the International Federation of Journalists, a journalists' court of honor. Also, he was a member of the Permanent Court of International Arbitration and of the Council of the International Institute of Intellectual Coöperation.

LOEFFLER, CHARLES MARTIN TORNÖV. An American composer, died at Medfield, Mass., May 19, 1935. Born at Mulhausen, Alsace, Jan. 30, 1861, he studied the violin under Rappoldi and Joachim at Berlin and Massart and Léonard in Paris, and composition under Kiel and Guiraud. For a time he played with a private orchestra and subsequently with Padeloup's Orchestra in Paris.

Loeffler came to New York in 1881 and played there in orchestral concerts under Leopold Damrosch and Theodore Thomas. He joined the Boston Symphony Orchestra in the following year and from 1885 to 1903 shared the first violin desk with Franz Kneisel. That he might devote himself entirely to composition, he resigned this position. As a composer, his first work was a symphonic poem, *La Villanelle du Diable* (1889). This, and his early work, gave evidence of dependence on such masters as Wagner, Bach, Brahms, and Liszt, but subsequently he developed his own style which was held to be akin to that of D'Indy and Debussy by some critics, although others claimed that to classify his work with that of the French impressionists was inaccurate. His compositions were strongly imaginative and tended toward the mystical and idyllic. His most important work was *A Pagan Poem*, written for the orchestra and piano; this he rewrote three times before being satisfied.

His works included: *Divertimento* in A minor for violin and orchestra (1895); the symphonic poem, *The Death of Tintagiles* for orchestra and violé d'amore, after the marionette play by Maeterlinck (1897); *Divertissement Espagnol*, for orchestra and saxophone (1901); *Deux Rapsodies*, for oboe, viola, and piano (1901); *By the Waters of Babylon*, Psalm 137 arranged for female chorus (1902); *For One Who Fell in Battle*, a chorus in eight parts (1906); *Hora Mystica*, a symphony with music for four strings, written in memory of Victor Chapman who died in the early part of the World War (1916); *Memories of My Childhood*, a symphonic poem, which won \$1000 prize

of Chicago North Shore Festival (1923); *Fantastic Concerto* for orchestra and violoncello (1924); *The Canticle of the Sun*, by St. Francis of Assisi, arranged for voice and orchestra, which was commissioned and published by the Library of Congress (1925); *Evocation*, for women's voices and modern orchestra (1930); *Irish Fantasies* for tenor and orchestra (1933).

Mr. Loeffler was an officer of the Legion of Honor, a member of the National Institute of Arts and Letters and of the American Academy of Arts and Letters. In 1919 he was awarded the 11th gold medal of the National Institute.

LONDON NAVAL CONFERENCE. See NAVAL PROGRESS.

LONG, HUEY (PIERCE). An American senator and politician, died, the result of an assassin's bullet, in Baton Rouge, La., Sept. 10, 1935. Born in Winfield, La., Aug. 30, 1893, he attended the local school, worked on his father's farm, and at the age of 16 sold books and other goods throughout the rural section of the State. He won a scholarship to Louisiana State University, but could not accept it because it only included tuition. Subsequently, he attended the University of Oklahoma for a short time, but it was not until 1914 that he gave thought to his future and entered the Tulane University law school. He completed the three year course in seven months and persuaded the bar committee of the Supreme Court to give him a special examination for admittance to the bar. He was sworn in on May 15, 1915, and first practised at Winfield, but not being successful, went back to selling. In 1918 he settled at Shreveport and specialized in constitutional law.

His first political office was as a State Railroad Commissioner, and as plaintiff, witness, and counsel, was successful in his case of *Long v. the City of Shreveport* in a suit to reduce the transit fare to 5 cents, and thus began his long warfare against public utilities and the large oil companies. In 1921 he was elected to the State Public Service Commission, an outgrowth of the Railroad Commission, and two years later he became its chairman, and as such, prevented an increase of telephone tariff rates, was upheld by the Supreme Court, and succeeded in equalizing the grain rates for New Orleans.

He ran for Governor of the State in 1924 but was unable to defeat the powerful political groups of the State. He did, however, make a surprisingly fine showing, and four years later ran again, this time being elected. His administration was marked by turmoil and conflict, which terminated in his impeachment in 1929 on charges of bribery, misappropriation of State funds, and incitement to assassination. He was brought to trial on May 14, 1929, but his forces moved for an adjournment of the Senate *sine die*, and as the anti-Long group was unable to rally quickly enough, the forced adjournment ended the trial. Six months later proceedings were *nolle prossed*.

Cleared of these charges, Long firmly entrenched himself in the State by the establishment of a strong political machine. His influence with the rural voters was strong, both because of his early contacts with them and his emphasis on legislation affecting them, and their votes succeeded in keeping him and his machine in power. Under his rule varied public improvements were made, although the State's indebtedness was increased by \$85,000,000. New roads were built where none had been before; illiteracy was reduced by the establishment of night

schools, and providing text books free to children; a new State capitol was built; Louisiana University provided with a new medical building, and funds were obtained for a bridge to cross the Mississippi River at New Orleans.

Unable to succeed himself as Governor, Long now saw himself in the toga of a Senator, and in 1930, with the aid of his strong political organization, was nominated and elected. After his election, in order to prevent the lieutenant-governor, Paul Cyr, a political opponent, from becoming the governor, he refused to relinquish his seat, and appointed Alvin O. King as his successor. To enforce this appointment and to make sure that Cyr did not usurp his power he called out the National Guard. Not until Jan. 25, 1932, did he take his seat in the Senate, when his candidate, O. K. Allen was elected Governor.

As a senator, his tactics did not change. He would not follow Democratic leadership and filibustered for eight hours against the Glass Banking Bill. He repeatedly advocated the redistribution of wealth and the confiscation by the government of fortunes of more than \$5,000,000 left at death. At the Democratic convention of 1932 he supported Franklin D. Roosevelt, and in the election of that year supported John H. Overton as junior senator from Louisiana. After the election, sensational charges were made of coercion, bribery, and intimidation, and a Senate committee investigated but its findings were inconclusive.

Each year Long continued to strengthen his hold on the political fortunes of his State, but in 1934 suffered his first setback in the defeat of his candidate for Mayor of New Orleans by T. Semmes Walmsley. However, in the State primary elections, held later in the year, his candidate defeated the Walmsley ticket. He called out the National Guard in 1935 to protect him against threats of assassination, established martial law, and when it was lifted in July had complete control over Louisiana. Taxes, education, and every officeholder were under his domination, and municipal government was practically abolished. Upon the adjournment of the 74th Congress, August 27, he returned to attend the special session of the Louisiana Legislature to rush through bills giving him still more power. He obtained control of the State's election machinery; restrained the authority of the civil court; established a secret police, and won the right to call out the militia at any time and in any way he chose without interference.

In regard to national politics, he was in open rebellion against the Administration and did all in his power to hinder the President's plans. In punishment thereof, Louisiana was deprived of Federal patronage, and Long, in the closing days of the 74th Congress, retaliated by filibustering for 15 hours against the President's Deficiency Bill, which carried the appropriations for the Social Security programme, considered one of the most important of the Administration measures. His Share-the-Wealth Club movement, his strength in Louisiana, his growing interest in the political affairs of neighboring States—in 1933 he went in to Arkansas to assist in the reelection of Senator Hattie Caraway, his avowed intention of supporting a third party candidate in opposition to President Franklin Roosevelt, and his own White House aspirations made him a power to be reckoned with in the 1936 elections.

On September 8, as he was coming from a session of the Louisiana Legislature in the Capitol, Long was shot and seriously wounded by Dr. Carl

A. Weiss, Jr., who in turn was slain by Long's bodyguard. Two days later Senator Long died.

Since 1933, Senator Long published his own newspaper *The American Progress*, and was the author of *Every Man a King*, published privately in 1933. He issued millions of pamphlets to voters throughout his State concerning legislation. See LOUISIANA under *Political and Other Events*.

LORAINÉ, ROBERT. An English actor, died in London, Dec. 24, 1935. Born at New Brighton, Cheshire, Jan. 14, 1876, he was educated at the New Brighton high school. His first appearance on the stage was made in *The Armada* (1889), playing in the provinces. He made his début on the London stage in 1894 as Alfred Durncombe in *The Ne'er-do-Well* and played such other rôles as de Mauprat in the first act of *Richelieu* at the Criterion, July, 1895, on the occasion of his father's benefit; Tom in *The Prisoner of Zenda* (1896); Captain Hentzau in *The Prisoner of Zenda* (1897); Claudio in *Much Ado About Nothing* (1898), and D'Artagnan in *The Three Musketeers* (1899). At the outbreak of the Boer War in that year, Lorainé forsook the stage for the battlefield and served for two years with a machine guns corps, receiving the Queen's medal with three clasps.

After the War he came to America and made his first appearance in New York on Mar. 4, 1901, in *To Have and To Hold*. Returning to England he played in a revival of *Henry V* (1902). After playing several rôles he again came to America in 1903 and toured with Grace George in *Pretty Peggy*. He opened as John Tanner in *Man and Superman* in New York, Sept. 5, 1905, and so great was his success that for two years that was his only rôle. He brought this play to London in 1907, and subsequently played in *Arms and the Man* (1907); *Bellamy the Magnificent* (1908); *She Stoops to Conquer* (1909); *The School for Scandal* (1909); *The Rivals* (1910); and *Much Ado About Nothing* at Stratford-on-Avon (1910). Until 1911 he played varied rôles when he leased the Criterion Theatre and started on his career as a manager, first offering a revival of *Man and Superman*, Sept. 28, 1911, he himself playing John Tanner. Previous to this he had become attracted by the romance of the aeroplane, and in 1910 was one of the most daring of England's aeronauts, being the first to make a flight across the Irish Sea, Sept. 11, 1910.

After 1912, he again revived *Man and Superman* and brought the play to America. Subsequently, he returned to London, appearing in *A Place in the Sun* (1913) and *The Tyranny of Tears* (1914). At the entrance of England into the World War he joined the Royal Flying Corps and served until 1918, being twice seriously wounded. He received the Military Cross for conspicuous gallantry and skill; was made a Companion of the Distinguished Service Order, and was mentioned in dispatches six times. At the Armistice he retired as Lieutenant-Colonel.

The stage called him again, and in 1919 in Edinburgh he opened in *Cyrano de Bergerac*. Later in the month the play was brought to London, and in order to keep it running he took over the management of the Drury Lane Theatre, and subsequently the Duke of York's Theatre. In December he appeared again in *Arms and the Man*, and in 1920 was seen in *Mary Rose*, afterward playing varied rôles. In 1923 he again appeared in *The Prisoner of Zenda*, playing the parts of Rupert Rassendyle and King Rudolf. In the following year he played a revival of *The Way of the World*, and also ap-

peared in *Tiger Cats*, which he brought to America. Returning to London for a short time, he again returned to New York, playing in *The Man with a Load of Mischief* (1925). There he remained until 1926 when in the fall he returned to London and played in a revival of *Arms and the Man*. In 1926 he played Petruchio in *The Taming of the Shrew* for the Fellowship Players, and for the same organization appeared as Mercutio in *Romeo and Juliet*. In 1927 he was lessee of the Apollo Theatre, and appeared in *Othello* (1927); *Cyrano de Bergerac* (1927); *The Man Who Changed His Name* (1928). Among the productions in which he was last seen on the New York stage were: Strindberg's *The Father* (1931); O'Neill's *Days Without End* (1934) and *Times Have Changed* (1935). Lately he had appeared in motion pictures, notably in *S.O.S.*, and *Birds of Prey*.

LOUIS, JOE. See BOXING.

LOUISIANA. Population. On Apr. 1, 1930 (Fifteenth Census), 2,101,593; July 1, 1934, by latest Federal estimate, 2,166,000; 1920 (Census), 1,798,509. New Orleans had (1930) 458,762 inhabitants; Baton Rouge, the capital, 30,729.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1935	1,230,000	555,000*	\$30,580,000
	1934	1,160,000	485,000*	30,195,000
Sugar cane	1935	258,000	4,486,000 ^b	14,875,000
	1934	249,000	3,735,000 ^b	9,326,000
Rice	1935	382,000	16,808,000	10,589,000
	1934	394,000	15,957,000	13,085,000
Corn	1935	1,367,000	23,922,000	15,549,000
	1934	1,354,000	16,248,000	14,786,000
Sweet potatoes ..	1935	88,000	6,512,000	3,907,000
	1934	80,000	5,840,000	4,322,000
Hay (tame)	1935	218,000	279,000 ^b	2,483,000
	1934	204,000	269,000 ^b	2,771,000
Potatoes	1935	42,000	2,856,000	2,285,000
	1934	44,000	2,948,000	2,093,000

* Bales. ^b Tons.

Mineral Production. The production of petroleum rose to a total quantity of 32,294,000 barrels for 1934, exceeding the total for 1933 by 28 per cent. The gain occurred chiefly in the coastal district, which yielded 23,249,000 barrels, or more than 50 per cent above the district's production for 1933. The output of 1934 for the State fell little short of that for 1920, the record year, as to quantity.

The production of natural gas increased to 227,920,363 M cu. ft. for 1934, from 193,202,465 M for 1933. The Monroe and Richland areas led in yield of natural gas, but the Rodessa and Sligo fields increased their proportions of the State's production. Gas was derived from 26 distinct areas in all. Much of the product passed into pipe lines for distant consumption by customers of utilities, but 51,333,382 M cu. ft. were burned to yield 67,026,665 lb. of carbon black, and 63,000,880 M were treated to yield gasoline, producing 32,835,573 gallons.

Sulphur was produced in 1934 to the quantity of 229,830 tons, considerably less than the 321,492 tons of 1933, the year when the industry was resumed in the State on a big scale. The Freeport Sulphur Company furnished 153,362 of the total for 1934 from its plant at the salt dome of Grande Ecaille. The production of salt in the State increased to 567,289 short tons (1934) from 532,569 (1933), and in value to \$2,854,785 (1934) from \$2,345,208 (1933).

Education. Of some 400,000 white and 263,170 Negro inhabitants reckoned as of schoolgoing age, there were enrolled in the public schools, in the

academic year 1934-35, 296,029 whites and 172,621 Negroes. Among the whites 230,598 were enrolled in common schools or elementary grades and 65,431 in high schools; among the Negroes, 163,033 and 9588, respectively. The year's expenditure on public-school education, for white pupils, totaled \$13,298,871; for Negro pupils, \$1,740,063. Salaries of teachers averaged \$850.43 in the white group; in the Negro group, \$274.25.

Under Long's followers the government of the State not only greatly increased its authority over the public schools (see *Events*, below) but augmented the State's aid to the schools' support. State supervisors were set up, to start Statewide instruction in music, health, and physical education.

Charities and Corrections. The State's central administrative function with regard to institutions for the care and custody of persons was performed, under the laws in effect in 1935, by a Board of Charities and Corrections. The Governor, as chairman *ex officio*, and five other members composed this Board. Its authority over the State institutions was supervisory and did not extend to their management, which was conducted by separate respective bodies. The State Board was vested also with authority to visit privately maintained eleemosynary institutions, with supervision of the juvenile courts, and with the authority to approve or disapprove proposals of adoption.

The State institutions were: the Penitentiary, at Angola; Boys' Industrial School, at Monroe; Industrial School for Girls, at Alexandria; State hospitals for the insane, at Pineville and Alexandria; Milne Home for Destitute Girls, at New Orleans; Greenwell Springs Tubercular Hospital, at Greenwell Springs; State Colony and Training School for the Feeble-Minded, at Alexandria; Charity Hospital (general), New Orleans; Charity Hospital (general), Shreveport; School for the Blind (white and colored) and School for the Deaf (white and colored), both at Baton Rouge.

Legislation. The Legislature was called four times into special session to enact bills under the dictation of Huey Long. In February it put the police and fire departments of New Orleans under the control of State officials and enacted a compromise that Long had made with the Standard Oil Company on the previously imposed tax on petroleum. In April it required that all loans made by the PWA to localities in the State be handled through the Governor and the State Tax Board, gave the Governor power over all election machinery through the State's appointment of election boards, and required municipalities to obtain the State's approval before they might make compositions on their debts through proceedings in the Federal courts. In July the State was empowered to collect taxes in New Orleans, to control the employment of persons in that city's service, to rule on the employment of all teachers in the State, and to disregard the legal restrictions reserving the use of public funds for specific purposes. It was made a criminal offense, punishable by imprisonment, to employ Federal funds within the State for political purposes. The State was empowered to appoint the assistants of the (hostile) District Attorney of the Parish of Orleans. Sheriffs were discouraged, by an indirect restriction, from appointing deputies unsatisfactory to the State administration.

In September a session that assembled just before the assassination of Long enacted after his death a series of measures that he had sought. These included the creation of an offense, punish-

able by prison, consisting of the performance by a Federal employee of any act in violation of the Federal Constitution; the gerrymandering of an anti-Long judicial district; and provision for the release of State-collected taxes of New Orleans, to meet payrolls, through a designated body.

Political and Other Events. The year's chief occurrences were for the most part connected with Long's dictatorial control of the State, his death, and the ensuing strife to succeed him.

Long's Death. Huey Long (q.v.) was shot on September 8 as he left the Representatives' chamber in the State Capitol. Hit in the abdomen by a pistol bullet, he died on the 10th. His assassin was Dr. Carl A. Weiss, Jr., of Baton Rouge, son-in-law of Judge B. H. Pavy of the faction opposed to Long; it was this judge whose district was to be gerrymandered by a bill then pending (see *Legislation*, above).

Long was buried in the grounds of the Capitol with public ceremonies that drew some 100,000 people. The report that 80,000 viewed his body before the burial indicated the strength of the popularity that he had gained, mainly among the debt-ridden country people.

Long had asserted early in the year that he knew of a plot of political opponents to end his life and declared that two attempts had been made. His charge had been investigated by the Legislature. Some of his partisans sought after his death to fix the guilt of participation on plotters Weiss, the assassin, was riddled with bullets, in the very act of shooting, and died on the spot, without making a statement.

Opposition to Long. At the time of his death Long held greater power in his State than he had ever possessed before. Without formal authority over the Legislature or the State administration, he possessed the influence to dictate the passage of laws and the Governor's policy and acts. During much of the time when the Legislature was in session he was present in the Legislative chambers, directing the progress of his bills. The opposition were too few to offer any serious obstacle. The compliance of Governor Allen rendered Long, in virtue of Long's own laws, the master of thousands of public servants, of the system of elections, and of the affairs and moneys of the chief municipalities. He nevertheless had to face serious opposition in several directions. The State Supreme Court was not all his, the Federal courts in the State would not do his bidding, Mayor Walmsley of New Orleans clung to office, and the Federal Administration took a number of steps to Long's detriment.

The State Supreme Court bench included three Justices regarded as unwilling to do as Long wished. He threatened to have the Legislature impeach them, but this plan was announced in April to have been left in suspense, for possible later application. A Federal three-judge court at New Orleans ruled on March 22 that the State's tax of 2 per cent on the advertising carried by newspapers transgressed both State and Federal constitutions; and on August 30, that the act imposing certain rates at which pensions must be paid under employers' systems of voluntary pensions was also unconstitutional.

On a petition of one of Long's followers a friendly judge put the City of New Orleans under injunction on January 5 not to pay out any further moneys, save for interest on bonded debt. There followed legislative acts turning the city's taxes over into the State's hands and giving the State

power of appointment and removal over the city's servants, the direction of the police, and the payment of municipal salaries. These measures caused some of Mayor Walmsley's own supporters to press him to resign, but this he refused to do. An effort of Long's to promote mass meetings to ask Walmsley's removal failed.

The Federal Government provided funds in June, out of the "works progress" appropriation, to pay some 1200 employees of New Orleans. The PWA gave notice at various times that allotments made in Louisiana for works not yet started and even for works in progress would be canceled in view of adverse State legislation. Allies of Long were prosecuted in the Federal courts for alleged violations of the Income Tax Law, and State Senator Joseph Fisher, one of these, was sentenced to 18 months in prison.

Some of Long's opponents offered armed opposition to his rule, but it was scattered, casual, and scarcely formidable. A shutdown of the Standard Oil refinery at Baton Rouge at the beginning of the year, in response to the imposition of a State tax on petroleum, roused local sentiment. Some 200 men armed with shotguns seized the court house of East Baton Rouge Parish on January 25, but dispersed a few hours later. On the 26th National Guards awed about 100 armed men at Baton Rouge into surrender. The trouble at Baton Rouge was ended by a compromise over the tax on petroleum.

While no allegations of financial criminality were made against Long himself, it was reported, and he personally stated in the U.S. Senate, that he had received considerable emolument for acting as a special attorney of the State in making settlements with companies owing taxes in arrears. He was also retained by the Public Service Commission of the State in inquiries into public utilities' rates, conducted at the companies' expense.

Struggle for Succession. Upon Long's death in September, the Rev. G. L. K. Smith, one of his foremost followers, came forward as the leading advocate of the "share the wealth" movement that Long had originated. Smith, however, was reported to have been forcibly restrained from addressing a popular outdoor meeting on September 22, at Monroe, and Lieut.-Gov. James A. Noe then presented himself as candidate for Governor, to run in the primary of January, 1936. Later both Noe and Governor Allen were reported to have withdrawn in favor of Richard W. Leche. Representative Cleveland Dear was put forward as the old anti-Long group's choice for the candidacy.

Shipping was hindered at New Orleans in October, and numerous outbreaks of violence occurred, in the course of the strike of unionized longshoremen in the Gulf ports.

Officers. The chief officers of the State, serving in 1935, were: Governor, Oscar K. Allen; Lieutenant-Governor, James A. Noe; Secretary of State, E. A. Conway; Treasurer, J. S. Cave; Auditor, L. B. Baynard; Attorney-General, L. G. Porterie; Superintendent of Education, T. H. Harris.

Judiciary. Supreme Court: Chief Justice, Charles A. O'Neill; Associate Justices, John B. Fournet, A. T. Higgins, W. G. Rogers, John H. Land, H. F. Brunot, Fred M. Odom.

LUKEMAN, (HENRY) AUGUSTUS. An American sculptor, died in New York City, Apr. 3, 1935. Born in Richmond, Va., Jan. 28, 1871, he received his training at the National Academy of Design and Cooper Union, and later studied at the École des Beaux Arts in Paris under Falguière. Following his return to the United States, he became associated with the studio of Daniel Chester French, but also executed commissions of his own.

Lukeman's work was characterized by virility, individuality, and breath-taking size. He specialized in figures of heroic stature, of which his first were "Peace" and "Power" exhibited at the Buffalo Exposition in 1901. Also, at the St. Louis Exposition in 1904, he exhibited figures representing "Music," "Speed," "Heat, Power, and Light." Other of his works were four colossal marble statues for the Royal Bank Building, Montreal; four colossal statues for the Brooklyn Institute; War Memorials at Pittsfield, Mass., and Wilmington, Del.; the Masonic War Memorial, Elizabethtown, Pa.; Soldiers' Monument, Somerville, Mass.; Women of the Confederacy Monument, Raleigh, N. C.; U. S. Grant Memorial, San Diego, Calif.; Franklin Pierce Monument, Concord, N. H.; Straus Memorial Fountain, New York, and statues of Prof. Joseph Henry, Princeton University; Kit Carson for Trinidad, Colo.; Francis Asbury for Washington, D. C., and Drew Theological Seminary, Madison, N. J.; General Gregg, Reading, Pa.; Columbus, Custom House, New York; Gen. J. Z. George and Jefferson Davis for Statuary Hall, Washington, D. C.; heroic bas-relief portrait of Daniel Boone for Paris, Ky.; portrait statue of Elisha Yale for Gloversville, N. Y.; heroic bronze portrait statue of James Kennedy Patterson, first president of the University of Kentucky, for Lexington, Ky.—his last sculptural work.

In 1925, he was appointed to succeed Gutzon Borglum as sculptor of the Stone Mountain Memorial to the Confederacy. Scrapping most of Borglum's work, he set out to carve, on a mountain 3000 ft. long and 900 ft. high in De Kalb Co., Georgia, a panoramic scene giving honor to the commanders of the Confederacy during the Civil War. In the lead were Generals Lee and Jackson and President Jefferson Davis followed by the color bearers and other officers. The effect to be given was a review of the army by the commanders. On Apr. 9, 1928, the first completed part of this great work was unveiled by Mayor James J. Walker of New York at Richmond, Va. Financial troubles brought the project to a halt and for several years before his death Mr. Lukeman had done no work on the mountain.

LUMBER. See FORESTRY.

LUTHERAN CHURCH. A church that expresses itself in groups of religious bodies and synods that receive and hold the canonical Holy Scriptures of the Old and New Testaments as the inspired Word of God and the only infallible rule and standard of faith and practice and that declare the unaltered Augsburg Confession to be a correct exposition of the faith and doctrine of the Evangelical Lutheran Church. The membership of the church, while found chiefly in central and northern Europe and in the United States and Canada, is distributed throughout the world, there being in 1935 a total of about 83,000,000 members in 75,000 congregations, served by more than 50,000 pastors.

In the United States, as the result of mergers

and the formation of federations, the Lutheran Church expresses itself in practically a threefold equal division in the United Lutheran Church in America, the American Lutheran Conference (consisting of the American Lutheran Church, the Augustana Synod, the Norwegian Lutheran Church, the Lutheran Free Church, and the United Danish Church), and the Synodical Conference (consisting of the Missouri Synod, the Joint Wisconsin Synod, the Slovak Synod, the Norwegian Synod, and the Negro Missions). In addition there are the following minor religious bodies: Eielsen Synod, Church of the Lutheran Brethren, Danish Church, Icelandic Synod, Finnish Suomi Synod, Finnish National Church, Finnish Apostolic Church, and a number of non-synodical or independent congregations.

Third Lutheran World Convention. This convention with delegates from 22 countries met from Oct. 13 to Oct. 20, 1935, in St. John's Lutheran Church, 147 rue de Grenelle, Paris, France. Among those present as delegates were distinguished Lutheran archbishops, bishops, presidents, superintendents, and church leaders.

The executive committee was elected as follows: Bishop August Marahrens, Hanover, Germany; Bishop Hans Meiser, Munich, Germany; with alternates Dr. Carl Ihmels and Prof. Dr. E. Sommerlath, Germany; Dr. Alfred Th. Jorgensen of Copenhagen and Dr. Per Pehrsson of Gothenburg, Sweden, with Prof. Dr. Olaf Moe of Norway and Bishop Max von Bonsdorff of Finland as alternates, Drs. F. H. Knubel and Ralph H. Long of New York, N. Y., with Dr. A. R. Wentz of Gettysburg, Pa., and Dr. L. W. Boe of Northfield, Minn., as alternates. This executive committee organized itself with Bishop August Marahrens as president, Dr. F. H. Knubel as first vice-president, Dr. Per Pehrsson as second vice-president, Bishop Hans Meiser as secretary, Dr. Alfred Th. Jorgensen as treasurer, and Dr. Ralph H. Long, as assistant treasurer.

Statistics. The statistics for 1934-35 for the United States and Canada were as follows: Pastors, 11,996; congregations, 16,646; baptized membership, 4,624,134; confirmed or communicant membership, 3,127,765; communing membership, 2,522,706; church schools, 21,001; officers and teachers, 200,578; scholars, 1,909,433; value of church property, \$360,189,022; congregational expense, \$32,044,644; congregational benevolence, \$7,347,557; total expenditures, \$39,392,201. In 1935 in the United States and Canada the Lutheran Church maintained 25 seminaries, 29 colleges, and 62 junior colleges, academies, and schools, with a total enrollment of 18,571 scholars, 1491 instructors, endowment amounting to \$15,717,497, and property value of \$50,922,489.

Education. In the field of Christian higher education practically all the larger Lutheran Church bodies and groups have initiated a re-study of curriculums looking toward revision. A Lutheran education seminar was held in the summer of 1935 at the University of Minnesota under the auspices of the Committee on Higher Education of the American Lutheran Conference and under the direction of Dr. O. H. Pannkoek. This was followed by a conference for Lutheran seminary and college teachers at St. Olaf College, Northfield, Minn., during the Thanksgiving vacation in November at which most of the Lutheran colleges of the Middle West were represented and a Lutheran Higher Education Institute was organized. There has also been projected a Luther Academy of Religion and

Life which will hold its meeting in the summer of 1936 at the Wartburg Seminary in Dubuque, Iowa.

Missions. Lutheran inner mission institutions such as deaconess' homes, hospitals, old people's homes, orphanages, immigrants' and seamen's homes numbered 425 with an endowment of \$6,611,801 and a property value of \$52,123,495. During the year they sheltered, cared for, and ministered to 8318 children and 1,131,334 men and women, at an annual expense of \$12,397,329. In addition to the institution work, congregational and society inner mission work was done at an expense of approximately \$10,000,000.

The United Lutheran Church, through its Board of American Missions, aided 579 parishes, 656 congregations, 576 missionaries and workers, a confirmed membership of 111,644, a Sunday school membership of 85,030. The appropriations made by the board for salaries were \$313,502; its loans for church extension came to \$1,646,667. Contributions by congregations aided totaled \$1,192,687 for current and unusual expenses and \$146,047 for benevolences. The American Lutheran Conference and the Missouri Synod carried forward their home mission work during 1935 without regression, in 2865 congregations and preaching stations by 1672 pastors and workers.

The work of the American Lutheran churches in fields outside the United States and Canada was carried on principally in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana, in charge of 376 pastors serving 2870 congregations and missions. These had 293,489 baptized members, 140,731 confirmed members, 137,871 communing members, 3411 schools, 1402 officers and teachers, 145,473 scholars. The property value was \$4,387,250; local congregational expenses, \$17,693; benevolence, \$349,906; and total congregational expenditure, \$367,599. The income of the various foreign mission boards was \$1,348,228; the expenditures were \$1,266,935.

Publications. The church maintains 25 publishing houses, with a total property value of \$5,663,798. The official periodicals are: *The Lutheran* (United Lutheran Church), *Lutheran Standard* (American Lutheran Church), *Lutheran Companion* (Augustana Synod), *Lutheran Herald* (Norwegian Lutheran Church), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), *Ansgar Lutheran* (United Danish Church), *Lutheran Men* (American Federation of Lutheran Brotherhoods), and *National Lutheran* (National Lutheran Council).

Headquarters. The headquarters of the National Lutheran Council, in which the United Lutheran Church in America and the American Lutheran Conference cooperate, are at 39 East 35th Street, New York City, the executive director being the Rev. Ralph H. Long, D.D.

LUXEMBURG, lük'sem-bürg. A grand duchy adjoining Belgium. Area, 999 sq. miles; population (Jan. 1, 1934), 302,596. The birth rate for 1934 was 11.6 per 1000. Chief towns: Luxembourg (capital), 53,791 inhabitants in 1931; Esch-sur-Alz, 29,429; Differdange, 17,567; Dudelange, 14,657; Petange, 11,008.

Production and Trade. The production of cereal crops in 1934, in metric tons, was wheat, 28,900; rye, 13,400; barley, 4800; oats, 46,600. The output of iron and steel, in metric tons, for 1934 was iron ore, 3,828,308; pig iron, 1,955,258; steel, 1,932,377. Out of a total of 45 blast furnaces 21 were in use on Jan. 1, 1935. Trade statistics are included with those of Belgium by reason of the

Belgo-Luxemburg Economic Union ratified on May 5, 1922.

Finance. The strict control of foreign exchange, instituted in conjunction with Belgium on Mar. 17, 1935, was relaxed on April 28 and importers were able to buy foreign exchange to meet all obligations. On Apr. 1, 1935, the gold value of the Luxemburg franc was reduced 10 per cent and equaled 1.25 Belgian francs. The Luxemburg franc was worth \$0.0423 on July 30, 1935. By a decree of May 14, 1935, effective from April 1, the gold clause was repealed on rental and loan contracts and contracts covering supplies and sales but it did not cancel the clause covering payments in foreign currency, the index clause, or the merchandise clause.

Budget estimates for 1935: revenue, 317,694,094 francs; expenditure, 315,257,567 francs. On Jan. 1, 1935, the national debt was 773,700,000 francs.

Government. Executive power rested with the Grand Duchess who also held the right to organize the government. Legislative power rested partly with the Grand Duchess and partly with the Chamber of Deputies of 54 members elected by direct suffrage for six years. The Council of State of 15 members (chosen by the Grand Duchess for life) acts as the Senate. Ruler in 1935, Grand Duchess Charlotte.

LYNCHINGS. No progress can be reported in the handling of the ancient problem of lynchings in the United States and, indeed, if the total figure for 1935 be compared with that for 1934, it is apparent that there was some retrogression. In 1935, 20 persons were lynched, while in 1934 the number was 15. Of the 20 persons lynched, two were white and 18 were Negro. The offenses charged were: Murder, 7; attempted rape, 3; rape, 3; altercation with man, 1; activity in share-cropper organizing, 1; slapping a woman, 1; Communistic activity, 1. Mississippi led the list of states with 7 lynchings, followed by Louisiana with 4, Florida, Georgia, and Texas with 2 each, and California, North Carolina, and Tennessee with 1 each.

Thirteen of the persons lynched were in the charge of the law when they were taken in hand by mobs. Of these, 5 were taken out of jails, 6 from officers outside of jails, usually while being transported to a place of "safety," and 2 were shot to death in jail. On the other hand, there were 53 instances where officers of the law prevented lynchings. Nine of these were in Northern and Western States and 44 in Southern States. In 42 of the instances guards were augmented as a precaution, or the prisoner was removed to a place of safe keeping, and in 11 other instances armed force was used to repel the lynch mob. All told, 84 persons, 17 white and 67 Negro, were thus protected. The protection of prisoners already in the hands of the law would thus not seem to be too difficult a task when the will to do so is there.

The Costigan-Wagner Bill outlawing lynching, discussed in the YEAR BOOK for 1934, was defeated in Congress, the most persistently used argument against it being that the Federal government would be invading States' rights by passing such a law. This sentiment was especially appealing to Senators from Southern States. An analysis of some of the lynchings which took place in these same States during 1935 will cast light upon the nature of the social situations out of which lynchings spring. On Jan. 11, 1935, Jerome Wilson was killed in his cell at the Franklinton, Louisiana, jail. The sheriff's version of the event was as follows:

There wasn't any lynching. Some men got into the jail somehow along about three or four o'clock in the morning. They got a key somehow. Before they got in they shot Jerome Wilson through the window. . . . Then they went into the jail and sawed through the lock of Jerome's cell. . . . Some one beat Jerome over the head with a big hammer. . . . They took his body out and threw it on the road. . . . There wasn't any lynching.

The initial lynching in Mississippi, where seven occurred during the year, took place on Mar. 12, 1935. It was really an interstate kidnaping as well as a lynching, for the victim was transported from Tennessee. That a lynching was to take place was well-known in the neighborhood and indeed a reporter and photographer were able to journey 63 miles by highway from Memphis, Tenn., to the site of the deed, and arrive 40 minutes before it actually took place. The coroner's jury, however, concluded that the victim came to "his death by hanging at the hands of parties unknown" and the prosecuting attorney asserted that "So far as the proof is concerned, we don't know whether it was a hanging or a suicide."

The lynching occasioned by organizing activities among share-croppers, mentioned above, also took place in Mississippi. The victim was the Rev. T. A. Allen on whose coat was found one of the late Huey Long's "Share-the-wealth" buttons. His body was found at the bottom of a stream, but no official recognition of the crime was ever indicated on the part of local authorities. A particularly interesting set of reactions to a lynching party is that of the authorities of a Texas community. On November 12, two Negroes aged 15 and 16 were lynched after being accused of having raped and murdered a white girl. County Attorney O. P. Moore remarked that the crime was "an expression of the will of the people"; while County Judge H. P. Hahn was of the opinion that "The fact that the Negroes who so brutally murdered Miss Kollmann could not be adequately punished by the law because of their ages prevents me from condemning those citizens who meted out justice to the ravishing murderers last night." It is significant to note that the Senators representing these States—Louisiana, Mississippi, Texas—at Washington all opposed the Costigan-Wagner Bill under the banner of States' rights and that all alleged that the law officers of their respective States were entirely prepared to handle the problem in a proper fashion.

The most remarkable statement of the year on the subject was that of Sen. William E. Borah of Idaho, candidate for the Republican nomination for President. Senator Borah bluntly said that if he were elected President he would certainly veto a bill on the lines of the Costigan-Wagner Bill on the grounds of its unconstitutionality.

MACAO, ma-ka'ô. A Portuguese colony in South China. Total area, including the nearby islands of Taipa and Colôane, 11 sq. miles; total population (1927), 157,175 including 152,738 Chinese, 3846 Portuguese, and 591 others.

Trade. The transshipment of goods (mainly in the hands of the Chinese) was the principal business. In 1933, imports were valued at 30,040,698 patacas; exports, 12,495,165 patacas.

Government. The decree of May 9, 1935, provided that the fiscal year be changed to agree with the calendar year and approved the budget expenditure of 87,545,352 paper escudos (escudo equaled \$0.0449 on June 13, 1935) for the 18 months ending Dec. 31, 1936. The colony was administered by a governor (in 1935, Lieut.-Col. José Bernades de Miranda).

History. It was reported during the year 1935 that Pan American Airways had been granted the right to make Macao the terminus of its trans-pacific service.

MCGILL UNIVERSITY. A coeducational institution of higher learning in Montreal, Que., Canada, founded in 1821. The enrollment for the 1935-36 session was as follows: degree students, arts and science, 975; commerce, 176; engineering, 334; architecture, 39; medicine, 471; dentistry, 59; law, 65; library science, 20; graduate studies, 187; diploma students, 39; partial students, 187. At Macdonald College, an affiliated college at Sainte Anne de Bellevue, there were 85 degree students enrolled in the department of agriculture, 118 in the department of household science, and 97 in the school for teachers. The registration in the French Summer School, 1935, was 147, and in the 1935 Summer Library School, 14. The number of members on the teaching staff was 519. The endowment amounted to \$20,292,919, while the income for 1934-35 was \$1,897,592. Among the important gifts were \$24,000 from the Rockefeller Foundation for research in the departments of Medicine and Physics; \$10,000 from estate of Lillie E. Martin for scholarships, and \$12,000 from Carnegie Corporation for the library school. The library contained 455,000 volumes. Principal and Vice-Chancellor, A. E. Morgan.

MACKENZIE, DISTRICT OF. See NORTHWEST TERRITORIES (CANADA).

MACKENZIE, SIR ALEXANDER CAMPBELL. A British composer and conductor, died in London, Apr. 28, 1935. He was born in Edinburgh, Aug. 22, 1847, and at the age of 10 was sent to Sondershausen in Germany to study the violin under K. W. Uhlich and theory under Eduard Stein, who at that time was the conductor of the Sondershausen Ducal Orchestra, in which young Mackenzie played second violin. In 1862 he returned to Edinburgh, but soon went to London to study under Sainton, who advised him to try for a scholarship at the Royal Academy of Music. He won the King's Scholarship in 1862. While at the Academy he studied harmony under Charles Lucas and piano under F. N. Jewson, and at times played in theatre orchestras, as well as under Costa, the famous conductor of the time. In 1865, he returned to Edinburgh where he taught the violin and became a concert violinist, frequently playing his own compositions. For several years after his return to Scotland he remained a member of the orchestra of the Triennial Handel Festival at Crystal Palace. In 1873 he accepted the leadership of the Scottish Vocal Music Association, and also conducted at the Birmingham Festivals of 1864, 1867, 1870, and 1873.

The result of his many activities was a breakdown in health, and he was forced to go to Florence, where he remained for the greater part of 10 years. While in Italy he devoted his time to composition, and his best work dates from that period. From 1885 to 1886 he was conductor of Novello's Oratorio concerts, where he gave many notable performances. His Scottish rhapsody, *Burns*, the opera *Colomba*, and the oratorio, *Rose of Sharon*, produced at the Norwich Festival in 1884, added greatly to his prestige, and in 1888 he was appointed to succeed Sir George McFarren as principal of the Royal Academy of Music, London, and retired in 1924. Occasionally he directed the Royal Choral Society during the absence of Sir Joseph Barnby, and at his death in 1896, assumed the leadership for the remainder of the season. From

1892 to 1899 he conducted the Philharmonic Society Orchestra and introduced Tchaikovsky's *Pathetic Symphony* to a London audience. In 1903 he made a six weeks' tour of Canada.

Sir Alexander's music was at its best when he chose romantic subjects, and the Scottish themes of the majority of his work proved a happy choice, for in them he could give free rein to a high poetical standard and powerful and imaginative effort. Among his more important works may be included: *Rhapsodie Ecossaise*, No. 1 (Glasgow, 1880); *Canadian Rhapsody*, for orchestra (Philharmonic, 1905); the cantatas, *The Bridge* (Worcester Festival, 1881), *Jason* (Bristol Festival, 1882), *The Story of Sayid* (Leeds Festival, 1886), *The Dream of Jubal* (Liverpool Philharmonic, 1889), *The Witch's Daughter* (Leeds Festival, 1904); the operas, *Colomba* (Drury Lane Theatre by Carl Rosa Company, Apr. 9, 1883), *The Troubadour* (ib., June 6, 1886), and the comic opera, *His Majesty* (Savoy Theatre, Feb. 20, 1897); the orchestral ballad, *La Belle Dame Sans Merci* (Philharmonic, 1883); *Jubilee Ode* (Crystal Palace, 1887); suite for violin, *Pibroch* (Leeds Festival, 1889, played by Sarasate); music to *Ravenswood* (Lyceum Theatre, 1890); *Veni Creator*, for chorus, solo quartet and orchestra (Birmingham, 1891); Scottish concerto for pianoforte and orchestra (Philharmonic, played by Paderewski, 1877); suite for orchestra, *London Day by Day* (Norwich Festival, 1902).

Sir Alexander was knighted in 1895, and was the recipient of several music degrees. His memoirs, *A Musician's Narrative*, were published in 1927.

McLENNAN, SIR JOHN CUNNINGHAM. A Canadian physicist, died on the Boulogne-Paris train en route to Paris, Oct. 9, 1935. He was born in Ingersoll, Ont., Apr. 14, 1867, educated at Toronto and Cambridge universities, and became an assistant demonstrator in physics at the former in 1892 and demonstrator in 1899; then followed an assistant professorship in 1902, and full professorship in 1907. Three years before this he was appointed Director of the Physical Laboratory at the University. He retired in 1932 as professor emeritus and visiting professor. From 1930 to 1932 he was Dean of the School of Graduate Studies and Research.

Dr. McLennan's work was done chiefly in connection with electricity, his last researches dealing with the superconductivity of metals, which established the fact that when metal conductors reached a low enough temperature, resistance to the conduction of electricity practically vanished, and the current could pass and repass through the metal with no apparent loss of strength. In 1932, he was successful in an attempt to liquefy helium, which had been done once before, at the University of Leyden about 1908.

The recipient of many honors during the course of his career, Dr. McLennan received the Flavelle Medal of the Royal Society of Canada in 1926 and two years later the Royal Medal of the Royal Society, London. He lectured on the metric system for the Canadian Government in 1906 and was a scientific adviser to the British Admiralty in 1919. From 1916 to 1931 he served as a member of the National Research Council of Canada. He was a fellow of the Royal Society, London and the American Association for the Advancement of Science, and was President of the Royal Canadian Institute, 1916-17, and the Royal Society of Canada, 1924. In the birthday honors of June, 1935, he was created

Knight Commander of the Order of the British Empire.

His publications included many papers on radioactivity, electrical conduction in gases, production and liquefaction of helium, electric conductivity of metals at the lowest temperature, and spectroscopy.

MACLEOD, JOHN JAMES RICKARD. A British physiologist and Nobel Prize winner, died in Aberdeen, Scotland, Mar. 16, 1935. He was born at Cluny, near Dunkeld, Sept. 6, 1876, and received his education at Marischal College, Aberdeen, and at Leipzig. In 1899 he became associated with the London Hospital as a demonstrator of physiology, and in 1902, when he received the degree of Doctor of Public Health from Cambridge University, as a lecturer in biochemistry. From 1901 to 1903 he was McKinnon Research Scholar of the Royal Society. In the latter year he accepted the position of professor of physiology at Western Reserve University in Cleveland, O., where he remained until 1918 when he accepted that post, as well as that of dean of the medical faculty, at the University of Toronto. He resigned in 1928 to become Regius professor of physiology at the University of Aberdeen.

One of the foremost authorities in the field of physiology, Dr. Macleod early turned his attention to research, becoming particularly interested in the causation of the caisson disease, the biochemistry of carbamates, physiological glycosuria, and the respiratory centre. His laboratory at the University of Toronto drew to him the younger scientists, including Dr. Charles H. Best and Dr. Frederick Banting. Collaboration in their researches ensued, and in 1922, their claim that a pancreatic extract, insulin—named by E. Sharpey-Schafer (q.v.)—was efficacious in the treatment of diabetes was made public. Insulin was recognized as the rational treatment of diabetes, for, for many years it had been known that the removal of the pancreas in animals resulted in diabetes. It remained for Drs. Macleod and Banting, however, to extract insulin from the pancreas and to learn that the lack of it was the cause of the disease. So the administration of insulin supplied the patient with the substance that his own pancreas failed to give him.

The fact that insulin proved a controlling influence in the treatment of diabetes without an aftermath of partial failure, was deemed one of the outstanding triumphs of scientific medicine, and in 1923, Professor Macleod and Dr. Banting were awarded the Nobel Prize for their discovery. They shared the prize with Drs. Best and Collip, their assistants in the work. In recognition of his achievement, Dr. Macleod was in that year elected a fellow of the Royal Society and was Cameron Prize winner at Edinburgh.

He was affiliated with a number of scientific societies, being a fellow of the Royal College of Physicians, the Royal Society of Canada, the Royal Society of Edinburgh, and was a member of the American Association for the Advancement of Science and the American Physiological Society (president 1922).

Besides a number of technical papers on insulin, experimental glycosuria, and respiration published in the *Journal of Physiology* and the *American Journal of Physiology*, he contributed the article on "Insulin" to the 14th edition of the *Encyclopædia Britannica*, and was the author of *Practical Physiology* (1903); *Diabetes, Its Physiological Pathology* (1913); *Fundamentals in Physiology* (1916); *Laboratory Manual in Physiology* (1919); *Carbohydrate Metabolism and Insulin* (1926),

and *Physiology and Biochemistry in Modern Medicine* (7th ed., 1934). The last-named has become an international text-book.

MADAGASCAR. A French colony. Area, 241,094 sq. miles; population (1931), 3,571,517. Chief towns (with 1931 populations in parentheses): Tananarive, the capital (92,475); Majunga (20,000), Tamatave (15,022), Fianarantsoa (12,575), Tuléar (12,300), Diégo Suarez (12,300), Nossi-Bé (12,000).

Production and Trade. The main agricultural products (in 1000 metric tons) were coffee, 15 (for 1934-35); maize, 81.6 (1933-34); rough rice, 722.8 (1933-34); potatoes, 56.2 (1933-34); sugar, 8.6 (1934-35). Vanilla, manioc, tapioca, and lima beans were also produced. Livestock in the island (1932): 7,000,000 cattle, 500,000 swine, 255,000 sheep, 70,000 goats, 3000 horses, and 2000 ostriches. Mineral production (1933) was valued at 21,000,000 francs of which graphite (6800 tons) represented 8,200,000 francs; mica (245 tons), 2,330,000 francs; phosphates (1275 tons), 2,550,000 francs; precious stones, 1,015,000 francs. The forests contain many valuable timbers. In 1933, imports were valued at 368,511,000 francs; exports, 317,911,000 francs (franc averaged \$0.0501 for 1933). On Nov. 9, 1935, a regular weekly air service between France and Madagascar was inaugurated.

Government. The budget was balanced at 267,755,000 francs for 1935, and at 270,530,000 francs for 1934 (franc averaged \$0.0657 for 1934). The colony was administered by a governor-general assisted by a consultative council. A delegation of 24 French citizens and 24 natives meet once a year to examine budget proposals. The natives, in their relations with the government, were represented by chiefs. Governor-General, Léon Cayla (appointed in 1930).

Comoro Islands. An archipelago, comprising the islands of Mayotte, Anjouan, Grande Comore, and Moheli, forming a region under the general government of Madagascar. Area, 836 sq. miles; population (1931), 130,253. Capital, Zandzi.

MADDEN, SIR CHARLES EDWARD. A British admiral, died in London, June 5, 1935. Born on Aug. 5, 1862, he joined the navy in 1875, and in 1881 was commissioned sub-lieutenant. The following year (1882) he was appointed acting lieutenant of the *Ruby* and served during the Egyptian War. Promoted to lieutenant two years later (1885) he began to study torpedoes. Being appointed to the *Vernon*, the torpedo school ship at Portsmouth, as a first lieutenant and staff officer, he specialized in torpedo experimental work. Between 1884 and 1896 he served on the *Raleigh* and on the *Royal Sovereign* as a torpedo lieutenant, and in 1896, when promoted to commander, he served on the *Terrible* and the *Caesar*.

Promoted to captain in 1901, he was transferred, in the following year, to the *Good Hope* as flag captain to Sir Wilmot Fawkes, then commanding the Cruiser Squadron. When Captain (Admiral Sir) Henry Jackson was appointed controller in February, 1905, he took Captain Madden with him as his naval assistant. He was appointed naval assistant to Lord Fisher, the First Sea Lord, in 1906, and while serving in this capacity became recognized as a master in the duties of organization, and as such aided in establishing the fighting efficiency of the Fleet. In the following year he was named captain of the *Dreadnaught* and chief of staff of the Home Fleet. He served until December,

1908, when he was called to the Admiralty as private secretary to the First Lord.

From January, 1910, to December, 1911, Madden was Fourth Sea Lord of the Admiralty, and from January, 1910, to April, 1911, served as aide-de-camp to King Edward. Promoted to flag rank in 1912 as a rear admiral he was assigned to the 1st Division of the Home Fleet, and soon afterward transferred to the Fleet Battle Squadron. Appointed commander of the 3rd Cruiser Squadron at the end of 1912 he served until 1914, then was assigned to the 2d Cruiser Squadron.

On Aug. 4, 1914, Admiral Madden was appointed chief of staff to Lord Jellicoe (q.v.), his brother-in-law, who had asked for his services, and in position he was second only in importance to the commander-in-chief. He was responsible for the working of the tactical plans of the commander, and his duty to know the position of every squadron and ship, and to account for every indication of the movements of the enemy. For his good judgment, long experience, and his capacity for work, he was commended in the dispatches at Jutland.

In June, 1916, he was promoted to vice admiral and made Knight Commander of the Order of the Bath. He held the acting rank of admiral, and in November, 1916, on the reorganization of the Grand Fleet, was named to command the First Battle Squadron and became second in command of the Fleet. In April, 1919, when the Grand Fleet ceased to exist as such, he received the thanks of Parliament and a grant of £10,000 for his services and was created a baronet, and the command of the newly-organized Home and Atlantic Fleets was given to him—at that time the most important command on the active list. From 1922 to 1924 he was first and principal aide-de-camp to King George, and in the latter year was promoted to Admiral of the Fleet.

He succeeded Admiral Sir David Beatty as First Sea Lord and Chief of Naval Staff in 1927, and held that position until placed on the retired list July 31, 1930. The Order of Merit was conferred on him in 1931. He reached the age limit for retirement in July, 1929, but was persuaded to prolong his service until a more convenient time. During this interval he was retained on the active list of admirals of the Fleet. Sir Charles was the recipient of many decorations, both British and foreign.

MADEIRA, *ma-dē'ra*; *Port.* *ma-dā'ra*. An archipelago west of Morocco, known as the district of Funchal and considered an integral part of Portugal. Area, 314 sq. miles; population (1930), 211,601. Funchal, the capital, had 75,000 inhabitants.

MADOERA. See NETHERLAND INDIA.

MAGONIGLE, H(AROLD) VAN BUREN. An American architect, died at Bain Harbor, Vt., Aug. 29, 1935. He was born at Bergen Heights, N. J., Oct. 17, 1867, and studied architecture in the offices of Vaux and Radford; Charles C. Haight; McKim, Mead, and White; and Rotch and Tilden of Boston, joining the last-named firm while working for the Rotch Traveling Scholarship, which he won in 1894. In 1889 he was awarded the gold medal of the Architectural League. After two years abroad, he returned to New York and entered business for himself but was not successful. He obtained employment as a draftsman with Schickel and Ditmars, but left in 1901 to form a partnership with H. W. Wilkinson. From 1904 he practiced alone.

His work, which was sincere and emotional, was sometimes criticized for being too academic. It included many well-known monuments, among which

are the Maine and Firemen's Monuments in New York City; the McKinley Monument at Canton, O. (1907), his success being won in competition with long-established architects; the Schenley Fountain, Pittsburgh; the Peace Memorial and the Liberty Memorial in Kansas City, for which he carved the two colossal figures, "Memory" and "The Future." Also, he did the landscaping for this Memorial as well as for the McKinley Monument. His was the winning design for the Robert Fulton Memorial Watergate to be built in New York, but because of lack of financial support, the project was abandoned. He designed the United States Embassy and Consulate in Tokyo, the Arsenal Technical School in Indianapolis, Cornell Alumnus Hall, Ithaca, and the Fulton-Hudson Memorial, New York.

Mr. Magonigle was a member of the American Institute of Architects as well as of other architectural societies, and was an honorary president of the Japanese Society of Architects and a member of the Japan Society. In 1925 he was elected an Associate National Academician, and in 1930 received the gold medal of honor of the New York Chapter of the American Institute of Architects. He was the author of *The Nature, Practice, and History of Arts* (1924) and *Architectural Rendering in Wash* (1926).

MAHÉ. See FRENCH INDIA.

MAINE. **Population**. On Apr. 1, 1930 (Fifteenth Census), 797,423; July 1, 1934, by latest Federal estimate, 804,000; 1920 (Census), 768,014. Portland had (1930) 70,810 inhabitants; Augusta, the capital, 17,198.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Potatoes	1935	161,000	38,640,000	\$21,252,000
	1934	170,000	55,250,000	11,050,000
Hay (tame) ...	1935	1,001,000	898,000*	9,429,000
	1934	990,000	786,000*	11,790,000
Oats	1935	111,000	3,996,000	1,678,000
	1934	111,000	4,440,000	2,220,000
Apples	1935	893,000	893,000
	1934	556,000	623,000

* Tons.

Education. The length of the course through normal school was increased in 1935 to three years. Plans for altering the curriculum occupied a committee of normal-school faculty members. A State director of physical education was appointed. In Portland was established a junior college of business.

Charities and Corrections. In virtue of the administrative act of 1931 the Department of Health and Welfare, in 1935, performed the duties of a department of health, prison commission, directing board for correctional and divers other institutions, and administrator of pensions, poor relief, care for the blind and deaf, Indian welfare, guardianship of children, and paroles.

The State institutions were: State hospitals for cases of mental disorder, at Augusta and Bangor; Pownall State School (feeble-minded), at Pownall; State sanatoria for tuberculosis, at Hebron (post office Greenwood Mountain), and Presque Isle; Maine State Prison, Thomaston; State Reformatory for Women, Skowhegan; State Reformatory for Men, South Windham; State School for Girls, South Portland; Maine School for the Deaf, Portland; State Military and Naval Children's Home, Bath.

Legislation. The Legislature held its regular biennial session but did nothing about creating a

State Power Authority to assume the cost of the Passamaquoddy project (see *Events*, below), operate the completed works, and undertake to repay the Federal Government out of the possible resulting profits.

Political and Other Events. Preliminary work was started near Eastport on the project to build works for the production of electricity from the impounded tidal flow in Passamaquoddy Bay. About 2000 persons were put to work to prepare quarters and facilities for the greater force eventually to carry out the task of construction. The necessary initial allotment of \$10,000,000 of Federal funds was made by President Roosevelt on May 27. Army engineers were put in charge. The project called for the expenditure of some \$47,000,000, for which a corporation to be formed by the State was to give the Government bonds payable out of the anticipated earnings of the completed plant. The plan for such a plant was a modification of the scheme first broached by Dexter P. Cooper some 10 years earlier, which had subsequently been offered for legislative consideration in Maine from time to time.

The FERA investigated the State's administration of aid to the destitute unemployed in Maine and was reported to have demanded that officials in Kennebec and Androscoggin counties be prosecuted; the State authorities, however, maintained that the workers of the Maine Relief Administration were not employees of the State and that it was not responsible for their correct performance of their duty.

Textile mills in the State felt the pressure of processing taxes and a delegation headed by Governor Brann urged the Federal Government on April 29 to replace the processing taxes with a sales tax.

Officers. The chief officers of the State, serving in 1935, were: Governor, Louis J. Brann; Secretary of State, Lewis O. Barrows; Treasurer, George S. Foster; Auditor, Elbert D. Hayford; Attorney-General, Clyde R. Chapman; Commissioner of Education, Bertram E. Packard.

Judiciary. Supreme Judicial Court: Chief Justice, Charles J. Dunn; Associate Justices, Charles P. Barnes, James H. Hudson, Harry Manser, Guy H. Sturgis, Sidney St. F. Thaxter.

MAINE, UNIVERSITY OF. A coeducational State institution of higher learning at Orono, founded in 1865. The enrollment for the fall of 1935 was 1420, of whom 1034 were men and 386 were women. The registration at the summer session of 1935 was 473. The teaching members of the faculty number 172. The productive funds amounted to \$919,593, and the income for the year was \$1,323,004. The library has 117,000 volumes. South Hall, a cooperative dormitory for women, housing 36 students, was opened on Sept. 17, 1935. A gift of \$25,000, to be known as the Payson Fund and to be used as a loan fund and for scholarships, was announced. President, Arthur Andrew Hauck, Ph.D.

MALAY STATES. See BRITISH MALAYA; FEDERATED MALAY STATES; UNFEDERATED MALAY STATES; STRAITS SETTLEMENTS; BRITISH NORTH BORNEO; BRUNEI; SARAWAK.

MALDIV ARCHIPELAGO. See CEYLON.

MALTA. A British crown colony in the Mediterranean, 58 miles south of Sicily, comprising the island of Malta (95 sq. mi.), Gozo (26 sq. mi.), Comino (1 sq. mi.). Total area, 122 sq. miles; population (1931), 241,621. The civil population on Jan. 1, 1933, was 248,062. Valetta (capital) had

22,779 persons in 1931; including suburbs it had 48,240. Malta is an important link in British Imperial communications and is the base of the British Mediterranean Fleet.

Production and Trade. Wheat, barley, potatoes, onions, beans, cumin, tomatoes, grapes, and cotton were the main products. The value of agricultural production for 1933-34 was £624,441. There were 780 boats and 3500 persons employed in the fishing industry during 1933-34 and the fish catch was valued at £34,015. Lace, cotton, filigree, beer, and cigarettes were manufactured. The port of Valetta was entered by 1752 vessels (aggregating 4,393,383 tons) during 1934. In 1934, imports were valued at £3,469,035; exports, £575,089.

Government. For 1933-34, revenue amounted to £1,061,622; expenditure, £1,068,128. Budget estimates (1935-36): revenue (exclusive of £17,000 from the Colonial Development Fund), £1,109,028; expenditure, £982,839. After the suspension of the Constitution, Nov. 2, 1933 (See NEW INTERNATIONAL YEAR BOOK FOR 1932 and 1933) the Governor assumed personal control of the local government of the island. He also controlled the armed forces. Two Letters Patent, issued Aug. 21, 1934, and effective from Oct. 1, 1934, provided that English was to continue as the official language of the administration, without prejudice to the use of Italian or Maltese in addition when desirable; Maltese was to be the language of the law courts, except where the parties did not understand it, then Italian or English was to be used; all Governor's Ordinances were to be in Maltese and English only. Governor and Commander-in-Chief in 1935, Sir David Campbell.

History. With the development of the Anglo-Italian crisis towards the end of August, 1935, the strategic situation of Malta within 60 miles of the Sicilian coast made it one of the key positions in the threatened Mediterranean conflict. Beginning in August, the British sent large military and naval reinforcements to the island, greatly strengthened its defenses, and instructed the inhabitants in precautions against air raids. In October most of the dependents of the British soldiers in Malta were sent to England as a precautionary measure.

While the bulk of the population remained loyal to the British connection, the nationalist movement among the Italian element caused the British officials much concern. The nationalist agitation, which had caused political friction in Malta for several years, had led to the suspension of the Constitution in 1933. The discontent aroused in the island by the withdrawal of its autonomous rights was increased when the British on Sept. 14, 1935, instituted a drastic press censorship in connection with their military preparations. On October 10 the authorities deported seven prominent Italian residents of the island for anti-British activities. The British also made the teaching of English compulsory in the primary schools in place of Italian (Maltese was also recognized as a language of instruction). This action led 350 members of the Italian Chamber of Deputies on October 31 to interpellate Premier Mussolini as to what action his government intended to take to "defend the Italian language and culture on the island of Malta."

For the situation which produced the Anglo-Italian crisis, see ETHIOPIA, GREAT BRITAIN, and ITALY under *History*; LEAGUE OF NATIONS.

MAMMALS. See ZOOLOGY.

MANADO. See NETHERLAND INDIA.

MANCHOUKUO. A new state established under Japanese auspices on Mar. 1, 1932, and com-

prising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria and Jehol in Inner Mongolia. Capital, Hsinking (formerly Changchun). Ruler in 1935, Emperor Kangtê, enthroned Mar. 1, 1934.

Area and Population. According to an official estimate of March, 1935, the total area of Manchoukuo, including the South Manchuria Railway zone under Japanese jurisdiction, was 503,013 square miles. The population in December, 1934, was estimated at 31,339,411, including 434,002 in the railway zone. The total population included 30,444,253 Manchurians (Chinese, Manchus, and Mongols), 598,205 Koreans, 213,057 Japanese, and 83,896 others. Estimated populations of the chief cities on Dec. 31, 1934, were: Mukden, 526,879; Harbin, 419,479; Hsinking, 228,323; Antung, 194,230; Kirin, 143,250; Yingkow, 140,875. There were on June 30, 1935, 44,359 denationalized Russians, 21,272 citizens of the Soviet Union, 5054 naturalized White Russians, 1519 Poles, 459 Germans, 424 British, and 226 Americans.

Education. On May 1, 1933, 440,633 pupils were enrolled in primary schools, 27,882 in middle schools, 8068 in normal schools, 5069 in vocational schools, and 2121 in colleges. The number of schools open was: Primary, 7635; middle, 216; normal, 78; vocational, 53; colleges, 7.

Production. Ninety per cent of the population is settled in rural areas and about 85 per cent is actually engaged in agriculture. About 34 per cent of the total area is arable land and 44 per cent of the arable land was under cultivation in 1935. The value of agricultural production averaged about 650,000,000 yen annually. Estimated production of the chief crops in 1935 was (in metric tons): Soy beans, 3,995,000; kaoliang, 3,976,000; corn, 1,860,518; wheat, 826,000; millet, 2,916,000; rice, 261,000. Livestock estimates (1934) were: Cattle, 2,700,000; horses, 3,600,000; sheep, 4,900,000; swine, 9,800,000. The timber output in 1934 totaled 1,499,776 cubic meters. The value of marine products in 1934 was 1,021,143 yen. Mineral and metallurgical output in 1933 (in metric tons) was: Coal, 9,062,604 (11,700,000 in year ended Mar. 31, 1935); iron ore, 1,176,643; pig iron, 433,523; manganese ore, 750; gold ore, 17,811; coke, 476,278; oil shale, 2,683,440; crude oil, 87,076; magnesite, 71,376. The value of industrial production in 1933 was estimated at 196,362,262 yen, the chief lines being chemicals, food and drink, spinning, machinery and tools, gas and electricity, and ceramics.

Foreign Trade. According to press reports, Manchoukuo's imports in 1935 totaled 603,000,000 Manchoukuo yuan and exports 421,000,000 yuan. In 1934 imports were 593,562,248 yuan; exports, 448,426,567 yuan. The chief sources of 1935 imports and exports, in order of importance, were Japan, China, Germany, Great Britain, and the United States. The chief exports are soy beans and their products (228,119,000 yuan in 1934), millet, kaoliang, coal, pig iron. Cotton goods, machinery, and tools are leading imports.

Finance. The fiscal year, which formerly ended on June 30, was changed to coincide with the calendar year commencing Jan. 1, 1936. The Manchoukuoan general accounts budget for 1934-35 balanced at 212,000,000 yuan with the aid of Japanese loans. The budget for the short year from July 1 to Dec. 31, 1935, balanced at 104,998,700 yuan, excluding the supplementary budgets totaling 5,033,687 yuan and the special accounts (revenues, 131,518,108 yuan; expenditures, 97,991,292 yuan). The indebtedness incurred by the Manchou-

kuo Government up to Aug. 31, 1935, totaled 176,720,000 yuan (internal, 56,720,000; external, 120,000,000). In addition, outstanding foreign loans contracted by the former Manchurian régime amounted to 1,668,624,973 yuan.

The exchange value of the Manchoukuo yuan and the Japanese yen remained approximately equal at about \$0.2871 during 1935. Both were "managed" currencies, although the yuan was based on silver and the yen on gold. In November, 1935, the Japanese cabinet adopted measures for stabilizing the yuan permanently in relation to the yen.

Communications. The mileage of railways in Manchoukuo on July 31, 1935, was 5048.6 miles, an increase of 1364 miles since the Japanese assumed control in 1931. Of the total, 4136 miles were owned by the Manchoukuo Government, including the Chinese Eastern Railway purchased from the Soviet Union in March, 1935; 700 miles by the South Manchuria Railway Co.; and 213 miles by private interests. The gauge of the Harbin-Hsinking line of the Chinese Eastern Railway (renamed the North Manchuria Railway in 1935) was changed during the summer of 1935 from the old Russian gauge of 5 feet to the standard gauge of 4 feet 8½ inches to conform to the other lines. Highways suitable for motor traffic extended 3400 miles. Seventeen airlines were in operation in 1935 and there were air connections with the chief Korean and Japanese cities.

Government. The Constitution of Mar. 1, 1934, established a monarchical form of government. It invested the Emperor with "legislative powers with the approval of the Legislative Council" and empowered him to "determine the organization of the different branches of the government and appoint and dismiss government officials." He was authorized to declare war, make peace, conclude treaties, and exercise supreme command of the military, naval, and air forces. There is an advisory Privy Council of five members; an advisory Legislative Council appointed by the Emperor; a State Council, or cabinet, consisting of nine departments; a General Affairs Board, attached to the State Council, which supervises budgets and national policies; and a Supervisory Council under direct control of the Emperor, empowered to "conduct supervisory duties and audit the accounts." Of the 5700 members and employees of the central government in 1935, 3250 were Japanese. The actual power rested in the hands of the Japanese ambassador to Manchoukuo, who was also commander-in-chief of the Japanese forces in Manchoukuo and governor of Kwantung (q.v.). Gen. Jiro Minami was appointed to this post Nov. 27, 1934. The first Prime Minister of Manchoukuo, Cheng Hsiao-hsu, was succeeded on May 22, 1935, by Chang Ching-hui.

MANITOBA, mǎn'ī-tō'ba. A Province of Canada. Area, 251,832 sq. miles; population (1935 est.), 739,000 compared with 700,139 (1931 census). During 1934 there were 13,310 births, 5169 deaths, and 5296 marriages. Chief cities (with 1931

populations): Winnipeg, the capital (218,875), Brandon (17,082), St. Boniface (16,305), Portage la Prairie (6597). During the school year 1934-35, there were 4290 school departments with a total enrollment of 144,741 students of whom 19,999 were high school students. The University of Manitoba had 2642 full course students in the same year.

Production. The estimated value of field crops for 1935 was \$30,792,000 (\$49,761,000 in 1934) of which wheat (18,800,000 bu.) represented \$11,092,000; oats (32,937,000 bu.), \$5,929,000; barley (23,533,000 bu.), \$4,942,000; hay and clover (1,003,000 tons), \$4,684,000; fodder corn (365,300 tons), \$1,461,000; potatoes (137,400 tons), \$1,017,000. The 1934 milk output amounted to 523,438 short tons. Livestock (1934): 794,800 cattle, 242,000 swine, 216,000 sheep, and 296,000 horses.

Mineral production (1934) was valued at \$9,776,934, including gold (132,321 fine oz.), \$4,565,075; copper (30,867,141 lb.), \$2,290,126; zinc (47,264,342 lb.), \$1,438,538; silver (1,252,920 fine oz.), \$594,647. In 1935, the output of gold was 146,544 fine oz. valued at \$5,156,883. The fish catch (1934) was valued at \$1,465,358. Fur production (1933-34) amounted to 599,550 pelts valued at \$1,323,522. During 1933, from the 1073 manufacturing plants, with a total of 20,749 workers, the net value of products was \$46,711,175.

Government. For the year ended Apr. 30, 1935, revenue amounted to \$14,383,862; expenditure, \$14,224,427. Budget estimates (year ending Apr. 30, 1936): revenue, \$14,050,193; expenditure, \$14,083,067. Government was vested in a lieutenant-governor and a legislative assembly of 55 members elected for five years (38 Liberal-Progressives, 10 Conservatives, 5 Laborites, and 2 Independents, in 1935). In the Dominion Parliament, Manitoba was represented by 6 Senators and 17 members in the House of Commons. At the Dominion General Election of Oct. 14, 1935, 11 Liberals, 2 Conservatives, 2 Liberal-Progressives, and 2 belonging to the Coöperative Commonwealth Federation were elected to the House of Commons at Ottawa. Lieutenant-Governor in 1935, W. J. Tupper; Premier, John Bracken (Liberal). See CANADA.

MANUFACTURED GAS. See GAS.

MARIETTA COLLEGE. A nonsectarian co-educational institution at Marietta, O., founded in 1835. The total registration for the autumn term of 1935 was 376, of whom 233 were men and 140 women. The 1935 summer school enrollment was 33. The faculty numbered 33. The endowment amounted to \$1,309,426 and the income for the year was \$104,574. The library contained 107,889 volumes. President, Edward Smith Parsons, LL.D.

MARINE DISASTERS. In American shipping the most notable disaster in 1935 occurred on the night of January 23 when the S.S. *Mohawk*, under charter to the Ward Line, collided with the Norwegian freighter *Talisman* about five miles off the coast of Sea Girt, N. J. The *Mohawk*, bound for Havana, and carrying 53 passengers and a crew of 107, sank within half an hour, though all but 14 passengers and 31 members of the crew were rescued. Three weeks earlier, on January 2, the steamboat *Lexington* of the Colonial Line, bound from New York to Providence, was sheared in half by the freighter *Jane Christensen* in the East River near the Manhattan Bridge, New York. The two sections of the steamboat sank within 10 minutes. Though carrying a crew of 55 and 126 pas-

sengers, nearby tugboats and nearness to the shore permitted the rescue of all the passengers and all but five of the crew. On January 7, the S.S. *Havana*, of the Ward Line, enroute to Havana, with 51 passengers and a crew of 125, struck a reef off the Bahamas. Guided by a Coast Guard seaplane rescue vessels picked up life boats containing all passengers, except one who had died of heart failure, and 43 of the crew. The rest of the crew remained on the ship and were ultimately rescued. On September 1, blown from her course by a hurricane, the S.S. *Dixie* of the Morgan Line, struck a reef off the southeast coast of Florida. The 231 passengers and crew of 121 were all rescued, and the ship ultimately refloated.

Other major marine disasters of the year were:

February 18. The Chinese S.S. *Fulong* sank with a loss of more than 100 lives off Wuhuko.

July 3. The Japanese cruise steamer *Midori Maru*, crowded with holiday passengers, in a collision with a freighter, sank in the early morning. Of 166 passengers and a crew of 85, 104 lives were lost.

December 20. At Santos, Brazil, the Swedish freighter, *Britt Marie*, unloading a cargo of nitrate, blew up and sank at the dock. At least 31 persons were killed in the explosion and many seriously injured.

MARINKOVIĆ, VOYISLAV. A Yugoslavian statesman, died in Belgrade, Sept. 18, 1935, where he was born on May 1, 1876. He was educated for the law at the Sorbonne, Paris, and in 1901 entered the Serbian ministry of finance. Elected to the Skupshtina (the Serbian Chamber of Deputies) as a Progressive in 1908, seven years later he was sent as a Serbian delegate to the Financial Congress in Paris to plan the liquidation of the financial side of the Balkan Wars. In 1916 he served as a Serbian delegate to the Inter-Allied Conference also held in Paris. During the period from 1914 to 1917 he sat as a progressive member of the Coalition cabinet, resigning to aid in drafting the Corfu Declaration, which comprehended a kingdom of Serbs, Croats, and Slovenes, in which each of the three parts was to have its own constitution. He rejoined the cabinet in November, 1918, and in the following year was active in the formation of the Democratic Union.

Early in 1920, he served as minister for religious affairs in the cabinet of Vesnitch, and in the latter part of that year joined the Pashić cabinet as minister of the interior, remaining until November, 1921, and the fall of that cabinet. In a cabinet formed by Davidović in July, 1924, M. Marinković became minister of foreign affairs and held that office until October. He again held that office in the cabinet of Vukitchević from April, 1927, to July 4, 1928, and also in that formed by General Zhivković in January, 1929. Upon the resignation of the General in April, 1932, he formed a government, which fell in June of that year. In October, 1934, he entered the cabinet of Uzunović as minister without portfolio but failed to stand for reelection to the Skupshtina during May, 1935.

In the field of foreign affairs, Marinković was considered an astute politician, the crowning points of his career being the treaty of coöperation and mutual defense made with France in 1927, and the preservation of peace with Italy, particularly after the Albanian dispute of 1927, which threatened the peace of the country.

MARITIME PROVINCES. See NEW BRUNSWICK; NOVA SCOTIA; and PRINCE EDWARD ISLAND.

MARQUETTE UNIVERSITY. An institution of higher education for men and women, under Roman Catholic direction, in Milwaukee, Wis., organized as a college in 1881 and chartered

as a university in 1907. The total enrollment for the autumn of 1935 was 3446. The registration for the 1935 summer session was 696. The faculty numbered 336. Endowment funds amounted to \$2,582,201. The income for the year was \$937,783, which includes the value of the services rendered gratis by Jesuits in 1934-35. The library contained 75,434 volumes. President, the Rev. William M. Magee, S.J., LL.D.

MARSHALL ISLANDS. See JAPANESE PACIFIC ISLANDS.

MARTIN, FRANKLIN H. An American surgeon, died in Phoenix, Ariz., Mar. 7, 1935. Born in Ixonia, Wis., July 13, 1857, he attended the public schools of Wisconsin, and graduated from the Chicago Medical College (now the Medical School of Northwestern University) in 1880. After serving as an interne in Mercy Hospital, Chicago, he joined the staff of the South Side Dispensary as a gynecologist in 1883, and three years later became professor of gynecology at the Polyclinic Medical School, resigning from both positions in 1888 to become gynecologist at the Woman's Hospital. He was instrumental in founding the Charity Hospital in 1887, and in the following year he and Dr. W. F. Coleman established the Post Graduate Medical School.

In 1905, Dr. Martin started *Surgery, Gynecology, and Obstetrics*, which became one of the foremost medical journals in the world. He served as its editor from its inception, and in 1913 added to it *International Abstract of Surgery*, a leading journal. In 1932 he and his wife presented this journal, which included a building and its contents, to the American College of Surgeons. Also, he was associate editor of the *American Journal of Obstetrics and Gynecology*.

It was Dr. Martin's belief that the general public should be admitted more intimately into the confidence of the surgical profession in order to elevate its standards, and in 1910, to carry out his views, he established the Clinical Congress of Surgeons of North America, now known as the Clinical Congress of the American College of Surgeons. Out of this organization grew the American College of Surgeons, founded in 1913. Since its founding, Dr. Martin had been its director-general, and in 1928-29 acted as president. In 1918, the first scientific survey of hospitals of 100 beds or more was undertaken by the College, and out of the 692 investigated only 89 were found to comply with the minimum requirements of the College. The approval of the College was received by 2523 hospitals in 1934.

During the World War, Dr. Martin, as a colonel in the U. S. Army Medical Corps, served as a member of the Committee on Medicine and Sanitation of the Council of National Defense, remaining until 1921; and as a member (1917-18) of the General Medical Board of the Council he was active in organizing State and county committees of medical men and in founding the Volunteer Medical Service Corps. For his services, which included several months' foreign duty, he received the Distinguished Service Medal, and was made a Companion of the Order of St. Michael and St. George, and a Companion of the Order of the Crown of Italy. He was a founder, in 1919, of the Gorgas Memorial Institute of Tropical and Preventive Medicine, and also served as its chairman.

Dr. Martin engaged actively in the work of many medical associations, and was president of the American Gynecological Society, and was the author of *The Treatment of Fibroid Tumors of the Uterus* (1897); *Treatise on Gynecology* (1903);

South America from a Surgeon's Point of View (1923); a monograph, *Australia and New Zealand* (1924); *The Joy of Living—An Autobiography* (1933).

MARTINIQUE, mar'ti-nēk'. A French West Indian colony. Area, 385 sq. miles; population (1931), 234,695. Capital, Fort-de-France (43,338 inhabitants). Sugar, rum, cacao, pineapples, bananas, coffee, and tobacco were the main products. In 1933, total imports were valued at 191,821,000 francs; total exports, 200,505,000 francs (franc averaged \$0.0501 for 1933). For 1933 the budget was balanced at 97,665,730 francs. Government was under a governor assisted by an executive council, an elected general council, and elected municipal councils.

MARYLAND. Population. On Apr. 1, 1930 (Fifteenth Census), 1,631,526; July 1, 1934, by latest Federal estimate, 1,671,000; 1920 (Census), 1,449,661. Baltimore had (1930) 804,874 inhabitants; Annapolis, the capital, 12,531.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	541,000	18,935,000	\$13,254,000
	1934	515,000	16,995,000	14,106,000
Hay (tame)	1935	404,000	561,000 ^a	5,610,000
	1934	403,000	578,000 ^a	7,514,000
Wheat	1935	406,000	8,323,000	6,325,000
	1934	387,000	7,934,000	7,141,000
Tobacco	1935	34,000	26,350,000 ^b	5,138,000
	1934	32,300	23,418,000 ^b	4,403,000
Potatoes	1935	33,000	3,135,000	1,881,000
	1934	33,000	3,267,000	1,764,000

^a Tons. ^b Pounds.

Mineral Production. There were mined in the State some 1,650,000 net tons of coal in 1935, as against 1,627,112 for 1934. There were burned in byproduct ovens in the State, in 1934, 1,100,721 tons of coal. The ovens produced 784,539 net tons of coke, whereof the producers themselves consumed 685,877 tons in blast furnaces. These blast furnaces, employed in smelting certain sorts of iron ore imported from abroad, consumed 972,555 gross tons of such ores in 1934 and produced therefrom 704,850 gross tons of pig iron, as against 617,187 tons produced in 1933.

Education. The number of inhabitants of schoolgoing age (reckoned as between 5 and 18 years, inclusive) was stated for November, 1934, as 407,163. Those actually enrolled in the elementary and secondary public schools in the academic year 1934-35 numbered 295,477. Of these, 239,466 were in common schools or elementary grades, while the remainder, 56,011, were in high schools (the last four years of the course). The year's current expenditures for public-school education in the State totaled \$17,602,209. Teachers' salaries, for the year, averaged \$1400.

Legislation. The regular legislative session, which adjourned on April 15, authorized the issue of \$8,500,000 of State bonds, mainly for meeting deficit incurred in the fiscal year 1935. It raised the tax on collateral inheritances to 7½ per cent, from 5, and imposed a tax of 1 per cent on direct inheritances: these added taxes were to serve the charges on the new issue of bonds. A budget involving expenditure of \$62,327,751 over the ensuing two years was adopted. The State's tax on property *ad valorem* was set at 0.22 per cent. There was created a tax at 1 per cent of gross receipts on retail sales, to apply for a year (until the end of March, 1936) in order to cover the cost of State aid to the needy unemployed and of pensions for

the aged. An equivalent tax called a titling tax was applied to the special case of purchases of automobiles. The Chesapeake Bay Authority was created, to handle public works in the area of the Bay. The law as to pensions for the aged was altered, for harmony with the Federal Social Security Act.

Political and Other Events. The support of the destitute unemployed in the State continued through most of 1935 on a great scale. The cost of such support in 1934, as reported by the FERA in March, 1935, had been \$19,842,881; this came to some \$12 per capita of the population, the approximate rate for the country as a whole. The FERA contributed 74 per cent of the total for the State; of the remainder, the State government paid all but one-seventh, which came from subdivisions. The President, in his allocation of some \$900,000,000 of "work-relief" money among the States on Oct. 8, 1935, granted Maryland \$9,180,000, additional to earlier grants for public works.

Governor Nice, Republican, who took office in January, was in the uncommon position of having won a Governorship from a Democratic Governor in 1934. He held attention in 1935 as an active and severe critic of the "New Deal."

Officers. The chief officers of the State, serving in 1935, were: Governor, Harry W. Nice; Secretary of State, Thomas L. Dawson; Treasurer, Hooper S. Miles; Auditor, James L. Benson; Comptroller, William S. Gordy, Jr.; Attorney-General, Herbert H. O'Connor; Superintendent of Schools, Albert S. Cook.

Judiciary. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, Benjamin A. Johnson; T. Scott Offutt, William Mason Shehan, Francis N. Parke, Hammond Urner, Walter J. Mitchell, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. A coeducational State institution of higher learning at College Park and Baltimore, Md., founded in 1807. The enrollment for the autumn term of 1935 was 3401. The 1935 summer school had an attendance of 979. The faculty numbers 566. The total income from appropriations and other receipts, for the year ended Sept. 30, 1935, amounted to \$2,509,275. The library contains 99,586 volumes. During the year a new Arts and Sciences Building and a new Women's Dormitory were completed, and the Dairy Building was remodeled, at College Park. President, H. Clifton Byrd.

MASSACHUSETTS. Population. On Apr. 1, 1930 (Fifteenth Census), 4,249,614; July 1, 1934 (latest Federal estimate), 4,335,000; 1920 (Census), 3,852,356. Boston, the capital, had (1930) 781,188 inhabitants; Worcester, 195,311; Springfield, 149,900.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1935	348,000	483,000*	\$7,583,000
	1934	336,000	411,000*	8,056,000
Cranberries	1935	13,700	300,000*	3,450,000
	1934	13,700	290,000*	3,016,000
Apples	1935	2,418,000	2,418,000
	1934	1,435,000	1,808,000
Potatoes	1935	16,000	1,760,000	1,232,000
	1934	16,000	2,560,000	1,715,000
Tobacco	1935	3,500	5,020,000*	1,425,000
	1934	3,000	4,495,000*	1,237,000
Corn	1935	39,000	1,599,000	1,279,000
	1934	37,000	1,517,000	1,380,000

* Tons. * Barrels. ° Pounds.

Education. For the academic year ended with June 30, 1935, the number of inhabitants of school

age (reckoned as from 5 to 16 years) was stated as 828,665. The average number of those attending the public schools was 732,495; and the total of the enrollments of pupils in the public schools was 770,653. Of those so enrolled, 485,859 were in the elementary grades, 108,295 in junior high schools, and 176,499 in the other high schools. These enrollments ran lower for the elementary group and somewhat higher for the high schools than those of the year previous. The year's expenditures for public-school education in the State totaled \$68,661,142, of which \$66,094,532 went for support and \$2,566,610 for outlay. The salaries of all teachers, principals, and supervisors, for the year, were estimated to average \$1785. This average and the expenditures, except for outlay, somewhat exceeded those for the year before.

Charities and Corrections. The administrative system that continued in force in 1935 placed the State's central authority over each of several groups of institutions for the care and custody of persons in the hands of a corresponding, related department of the State government. A Department of Public Welfare, headed by a commissioner and an advisory board of six, gave assistance to some 346,000 individuals, at a cost of about \$11,000,000. The recipients included 4418 mothers and 13,479 children, helped under the mothers'-aid law. This department had custody (December 1) of 7703 children, wards of the State; it had charge of 3068 other minors, who were on parole from the State training schools. It granted State aid to the aged, supervised town planning, controlled housing regulations, supervised divers charitable bodies, and passed on proposed adoptions. It directed the State Infirmary at Tewkesbury (2973 inmates); Massachusetts Hospital School, Canton (293); Lyman School for Boys, Westborough (351); Industrial School for Girls, Lancaster (257); Industrial School for Boys, Shirley (305).

Connected with a Commissioner of Correction were: the State Prison, Boston; Massachusetts Reformatory, Concord; Reformatory for Women, Framingham; Prison Camp and Hospital, Rutland; State Farm, Bridgewater. Connected with a Department of Mental Diseases were: State hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Monson, Foxborough, Grafton, Wrentham, Gardner, Belchertown, Waltham, and Boston. The Department of Health had authority over five State sanatoria.

Legislation. The enactments of the Legislature included a law creating a system of insurance against unemployment, to provide payments to employees thrown out of work. This system was designed to qualify the State for the Federal subvention to such payments, offered in the Social Security Act (see UNITED STATES; Congress). A law was passed to repress subversive teaching; it required that all teachers in universities and schools, whether public or private, take an oath to support the Constitution of the United States and that of Massachusetts. Some of the close restrictions upon the serving of alcoholic beverages in the State's previously established system of licensed taverns were removed, with the effect that drinking places were allowed to revert more nearly to the type of the former saloons. The State House of Representatives passed a resolution condemning the Nazis' reported persecutions of inhabitants of Germany "on account of their religious faith and nationality" as "abhorrent to modern civilized nations."

Political and Other Events. Governor Cur-

ley, who took office in January, stirred the resentment of a class whose families had been long established in the State by asking for the abolition of the Governor's Council and by emptying many of the offices of the State in the early months of his term. He rejected in sharp terms on August 13 a protest of the German consul against the anti-Nazi resolution of the lower legislative house.

The application of the compulsory oath for teachers met with some opposition in October. Kirtley F. Mather, professor of geology at Harvard, declared in a public meeting that he would refuse to swear, but President Conant stated on October 4 that Harvard would conform with the law, and Mather and other objectors on the faculty thereupon took the oath.

Textile manufacturers in Massachusetts and adjacent States claimed that the AAA and its processing taxes had aggravated the trouble in their industry. Their active agitation against the processing taxes brought upon them the reproof of Secretary of Agriculture Wallace, who on April 17 charged them with "whining," raising a "smoke screen," and resorting to "false publicity." This was answered by mass meetings in Fall River and Salem and numerous declarations from business organizations. The receivers of one of the most seriously affected companies, the Hoosac Mills Corporation, employing some 4500 people in the State, had brought a suit against the requirement that they pay the processing tax on their cotton. The Federal Circuit Court at Boston, ruling in favor of the mills on July 16, held the processing taxes, as imposed under the original Agricultural Adjustment Act, invalid. Many other manufacturers hastened in consequence to sue out injunctions against these taxes.

Public support for the destitute unemployed continued at a high rate for much of the year; it was met largely from public sources within the State. As reported by the FERA on March 1, such support had cost \$72,966,811 for 1934. Of this the FERA had supplied 55.1 per cent and public bodies in Massachusetts all the rest except \$148,986 furnished by the State itself. The whole cost for 1934, coming to \$17.16 per capita, decidedly exceeded the corresponding rate for the entire nation, which was about \$12. This excess was largely attributable to the State's high proportion of persons looking to industrial wages for their livelihood; partly also it was attributed to the State's textile manufacturers' paying toward the Federal aid to farmers in other States, through processing taxes, with resulting difficulty to the industry in Massachusetts.

Officers. The chief officers of the State, serving in 1935, were: Governor, James M. Curley; Lieutenant-Governor, Joseph L. Hurley; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, Charles F. Hurley; Auditor, Thomas H. Buckley; Attorney-General, Paul A. Dever; Commissioner of Education, Payson Smith.

Judiciary. Supreme Judicial Court: Chief Justice, Arthur Prentice Rugg; Associate Justices, John Crawford Crosby, Edgar P. Pierce, F. Tarbell Field, Charles H. Donahue, Henry T. Lummus, Stanley E. Qua.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A nonsectarian institution for scientific and technical education in Cambridge, Mass., founded in 1861. The enrollment for the autumn of 1935 was 2540, including 522 graduate students. For the summer session, the registration was 1010. There were 248 members on the faculty and 284 other members on the active staff. The produc-

tive funds amounted to \$31,767,000, and the income for the year was \$3,395,000. The library contained 305,000 volumes. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

MASSACHUSETTS STATE COLLEGE.

A State institution offering collegiate training in the fields of agriculture, natural sciences, social sciences, and home economics, founded in Amherst in 1863. The enrollment for the autumn of 1935 was 1424, while the summer session had an attendance of 174. There were 215 members on the faculty. The income in 1935 amounted to \$1,193,905, of which \$986,375 was from State appropriations and \$207,530 from Federal appropriations. The library contained approximately 100,000 volumes. As a part of the Federal and State emergency building programme, two new major buildings were constructed—the Goodell Library and Thatcher Hall, a men's dormitory. President, Hugh P. Baker, M.F., LL.D.

MAUNA LOA, ERUPTION OF. See HAWAII under *History*.

MAURITANIA. See FRENCH WEST AFRICA.

MAURITIUS, mô-rish'ŭs; -rish'ŭs. A British crown colony. Its dependencies comprised many small islands (250 to 1200 miles away) of which the largest was Rodrigues. Area, 720 sq. miles; population of Mauritius (Jan. 1, 1935), 393,733; dependencies, 10,457 of whom 9111 were on Rodrigues. During 1934 there were 13,518 births, 10,069 deaths, and 1767 marriages. Port Louis, the capital, had 54,876 inhabitants in 1934.

Production and Trade. The output of sugar (the main industry) was estimated at 280,000 tons for 1935. Tobacco, fibre, tea, rum, coconuts, and pineapples were also produced. In 1934, exclusive of specie and bullion, imports were valued at Rs29,680,346; exports, Rs26,136,140 of which sugar (185,606 tons) accounted for Rs24,510,185 (rupee averaged \$0.3788 paper for 1934).

Government. For the fiscal year ended June 30, 1934, revenue totaled Rs16,567,110; expenditure, Rs14,634,339; public debt, £3,246,994 against which the sinking fund was £1,699,669. Government was administered by a governor assisted by an executive council, and a council of government consisting of the governor and 27 members (10 elected, 8 ex-officio, and 9 nominated). Governor in 1935, Sir W. E. F. Jackson.

MEAD-MCKELLAR AIR MAIL ACT.

See AERONAUTICS.

MECHANICAL ENGINEERS, THE

AMERICAN SOCIETY OF. An organization founded in 1880 to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 17 professional divisions—aeronautic, applied mechanics, fuels, hydraulic, iron and steel, machine shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, graphic arts, process industries, railroad, textile, and wood industries. The membership at the beginning of the fiscal year, Oct. 1, 1935, was 13,891.

The society has established local sections in 71 industrial centres of the United States to foster and promote the welfare of strong local engineering societies, inclusive of members of all branches of the engineering profession, together with architects and chemists. Also it has 112 student branches, with a total membership of about 3250.

There were held during the year 300 meetings of the local sections of the society, as well as meetings of the student branches and professional divisions. The major meetings, however, were the semi-annual

nual meeting, held in Cincinnati, Ohio, June 17-21, 1935, and the annual meeting, held in New York, N. Y., December 2-6.

During 1935 the society continued to participate in the Engineers' Council for Professional Development, an organization of a number of engineering societies, working toward improving the status of the engineer.

The society also assisted in relief work for unemployed engineers through the employment service operated by the civil, mining and metallurgical, electrical, and mechanical engineering societies, with offices in New York, N. Y., Chicago, and San Francisco. Its local work was carried on through the Professional Engineers Committee on Unemployment in New York and through similar agencies set up by local sections of the society, in co-operation with other bodies, in a number of other cities. The society is giving attention to the economic and industrial conditions affecting the employment of engineers.

The technical committees of the society carried on their work in research, standardization, and the formulation of safety, power test, and boiler codes and rules. The regular publications during 1935 were: *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and also issued monthly, with several supplementary sections containing the annual reports, necrology, and an index to all publications of the society for the year; and *Mechanical Catalog*.

The officers for 1935-36 are: President, William L. Batt; vice-presidents, James H. Herron, Eugene W. O'Brien, Harry R. Westcott, Alex D. Bailey, John A. Hunter, Robert L. Sackett, William A. Shoudy; managers, James A. Hall, Ernest L. Ohle, James M. Todd, Bennett M. Brigman, Jiles W. Haney, Alfred Iddles, James W. Parker, Wm. Lyle Dudley, W. C. Lindemann; treasurer, Erik Oberg; secretary, C. E. Davies; assistant secretaries, Ernest Hartford, C. B. LePage; editor, George A. Stetson.

The main office of the society is in the Engineering Societies Building, 29 West Thirty-Ninth Street, New York, N. Y. There is a mid-west office at 205 West Wacker Drive, Chicago, Ill., and a mid-continent office, concerned principally with the problems of the petroleum industry, at 213 Midco Building, Tulsa, Okla.

MECKLENBURG-SCHWERIN. See GERMAN.

MECKLENBURG-STRELITZ. See GERMAN.

MEDICAL ASSOCIATION, AMERICAN. A federation of the constituent, or State and Territorial, medical associations, founded in 1847 to "promote the science and art of medicine and the betterment of public health." Members of the association must be members of constituent associations; those in good standing, who have qualified as fellows, constitute the scientific assembly of the association. On Nov. 1, 1935, there were 99,604 members, of whom 62,675 were fellows.

The scientific assembly is divided into 16 sections, each having its own officers who serve for a year. These sections are: Practice of medicine; surgery, general and abdominal; obstetrics, gynecology, and abdominal surgery; ophthalmology; laryngology, otology, and rhinology; pediatrics; pharmacology and therapeutics; pathology and physiology; nervous and mental diseases; dermatology and syphilology; preventive and industrial medicine and public health; urology; orthopedic surgery; gastro-enter-

ology and proctology; radiology; and miscellaneous topics.

The eighty-sixth annual session was held in Atlantic City, N. J., June 10-14, 1935, the house of delegates, in which there are vested the legislative powers of the association, convening on June 10 and the scientific assembly the following day. At the section meetings leading authorities and investigators in the field of medical science announced and discussed the latest discoveries and methods in treating the sick. The scientific exhibit and the technical exhibits were also of great interest.

The officers elected for 1935-36 were: President, James S. McLester, Birmingham, Ala.; president-elect, J. Tate Mason, Seattle, Wash.; vice-president, Kenneth M. Lynch, Charleston, S. C.; secretary and general manager, Olin West, Chicago, Ill.; and treasurer, Herman L. Kretschmer, Chicago, Ill. The official publication is the *Journal of the American Medical Association*, Morris Fishbein, editor. Eight other scientific journals, each dealing with a special field of medicine, as well as *Hygeia*, a health magazine, are published by the association. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

MEDICAL JURISPRUDENCE. A sorry dichotomy has been fostered between two venerable professions—law and medicine. More unfortunate looms the animus between them because of their inherent interdependence in effecting society's greatest good. Without the assistance of medicine, jurists may grope endlessly after the solution of their innumerable problems, which solution is dependent upon medical data. Without the aid of law (whether through legislation or adjudication) many of medicine's foremost contributions to human welfare must remain ineffectual if not utterly inert.

Through Medical Jurisprudence the synthesis of these two important disciplines is gradually being effected. Medical Jurisprudence (as differentiated from forensic medicine with which it is not infrequently confused) considers the "application of expert medical knowledge to the needs of law or justice" (Horst Oertel).

Recent developments in Medical Jurisprudence will be considered under (1) Mental Unsoundness and the Criminal Law, (2) The Curtailment of Human Liberties, (3) The Adaptability of Scientific Tests to Legal Proof. In reviewing these advances due regard must be given to legal as well as medical literature, if any prognostic results are to be derived from the studies herein epitomized.

Mental Unsoundness and the Criminal Law. "The law," said Dean Harno, "if it is to do more than rattle dead bones, if it is to become a vital, useful social fact, must assimilate new truths and new thoughts. The law, since it is society's agency of authority, must interrelate the knowledge of the specialist into a thoroughly wrought and operating device for social service."

The spirit of this challenge underlies *The Family in Court* by City Magistrate Jonah J. Goldstein. In it we are reminded that "Each defendant is a human, with his own problems, his particular background, tradition, family relationships, and economic status," all of which factors constitute the real person. Delinquency should be met with proper psychiatric attention irrespective of the nature of the particular charge. Prevention being far more desirable than cure, more attention should be given the offender than the offense. The causes of delinquency—juvenile and adult—are as innumerable as they are varied. Parental maladjustment

and indifference, poverty, pathological conditions lead among the host of contributing factors. Inexcusable failure to recognize these factors not infrequently fosters the graduation of juvenile delinquents into adult penal institutions, whence emerge more recidivists than reformed convicts.

The majority of recidivists or habitual criminals, it is shown, are not wholly responsible and are more or less psychopathic. Independent researches (*The Laws Concerning the So-called Professional and Habitual Criminal*, by Dr. B. V. A. Roling) prove that by far the greater number of recidivists hale from the lowest strata of society. Punishment must give way to treatment and preventive detention must supersede penal servitude. Before the unscientific injustices of the penal codes and the barbarities of a retributive system can be effaced, the criminogenous structure of society must be improved.

Modifying the views of the Italian criminologist, Cesare Lombroso, Maudsley and his successors have shown the psychic forces in the individual to be more important in the production of the criminal than mere physical defects—as Lombroso had taught. The newer view definitely opposed the old metaphysical and legalistic attitude toward the criminal as a "perverse moral agent" and "deserving of the savage revenge of the society whose rules and institutions he has outraged."

Under the orthodox rule the sole test of criminal responsibility is knowledge of right and wrong, or of the nature of the action. Though still conceding that the etiology of many a mental disorder yet remains shrouded in ignorance and uncertainty and the rôle of these disorders in the transfiguration of personality is still unpredictable, the tendency of recent writings is markedly away from the categorical standards of medieval medicine. The criminal is now viewed by many as a patient requiring the care of a physician as surely as if he were a victim of insanity or tuberculosis. Criminality as an anti-social phenomenon is as readily discernible as is a diagnosable pathologic condition, and this though the disorder affecting the emotional life of the individual leaves his intellectual faculties comparatively unimpaired.

This deviation from the orthodox view of irresponsibility as promulgated in the opinion of the justices in the *McNaughten Case*, has not as yet secured general approval by our courts of last resort. The arguments for the tenacious adherence to the traditional test have variously been expressed as the uncertainty of medical science in its knowledge of and understanding concerning mental disorders—the almost insuperable difficulties in diagnosing genuine mental maladies—the dangers of simulation and malingering, and finally the necessity of safeguarding society generally as against the individual.

Law is dedicated to the promotion of the best interests of society at large. Psychiatry has, within the past half century and more especially during the past 10 years, proved to the satisfaction of many noted jurists that society can be safeguarded and the individual culprits rehabilitated, i.e. that the two objectives are not incompatible, if the factual basis of legal conclusions will be permitted to emerge from the medical sciences, as they are demanded to emerge from other branches of technical learning, engineering, accountancy, art, etc.

Given an understanding of the causes of insanity or acute psychosis as toxic and infective or metabolic, the insidious occurrence of mental disorders will be appreciated as perceptible factors in the perpetration of crime. As is pointed out by Dr.

H. Devine: "a chronic appendix, intestinal stasis and internal infections have all been found from time to time in cases of manic depressive and schizophrenic psychoses. There are times, however, when such chronic infections produce not only slowly developing mental changes but sudden disorders of mental life."

The rôle of emotional disorders in the production of sudden mental aberration cannot be overlooked. Continuing his summation of the acute psychogenetic psychoses, Devine further tells us that "many young people who in adolescence more or less suddenly present mental disorders are suffering from the difficulties of adolescence which are produced by the new forces which well up as a result of sexual maturation. The new balance of the endocrine glands, which must be assumed to take place at puberty, is not arrived at with equal swiftness by all young people. Those who are of a sensitive nature or who have stored up in the mind mental conflicts and who have in addition some abnormality of the sympathetic system, are the candidates for mental disorders when some psychical shock occurs which in the more healthy is quite inadequate to produce disaster."

In *Mentality and the Criminal Law* by O. C. M. Davis, M.D., D.Sc., and F. A. Wilshire, 1935, Kenny (*Outlines of Criminal Law* 12th ed.) is cited in vindication of the *McNaughten Rule* which "has been of immense assistance to judges in giving them a sound basis for their summing up and we submit in no way restricting their right of virtually extending the common law if any special circumstance indicates the necessity for so doing." Davis and Wilshire are of the opinion that "any statutory interference with this judicial privilege would be most detrimental to the furtherance of justice in criminal medico-legal cases."

"The questions put to the judges," says Kenny, "had reference, as we have seen, only to the effect of insane delusions and insane ignorance. But insanity affects not only men's beliefs, but also, and indeed more frequently, their emotions and their wills. Hence since 1843 much discussion has taken place as to the effect of these latter forms of insanity in conferring immunity from criminal responsibility. The result has been that though the doctrines laid down after *McNaughten's* trial remain theoretically unaltered, the practical administration of them affords a wider immunity than their language would at first sight seem to recognize."

"For many forms of insanity, which do not in themselves constitute those particular defects of reason which the judges recognized as conferring exemption from responsibility, are now habitually treated as being sufficient evidence to show that one or other of those exemptive defects are also actually present."

Uncontrollable or irresistible impulses as well as many clinically demonstrable forms of mental derangement have not been afforded the sanctuary of the *McNaughten Rules*—predicated as they are upon the perpetrator's knowledge of the nature and quality of the act and his understanding of its rightness or wrongness. For given no capacity to choose between right and wrong, if his cognitive faculty be present—he is still guilty. Said Mr. Justice Greer: "What I really told the jury was that the definition of insanity in criminal cases was the one laid down by the judges in *McNaughten's Case*, but that men's minds were not divided into separate compartments, and that if a man's will power was destroyed by mental disease it might well be that the disease would so affect his mental

powers as to destroy his power of knowing what he was doing, or of knowing that it was wrong. Uncontrollable impulse in this event would bring the case within the rule laid down in McNaughten's case."

In the recent case of *State v. Simenson*, 262 N.W. 638 (Minn. 1935) an uncontrollable impulse to commit a crime in the mind of one who is conscious of the nature and quality of the act and knows that it is wrong, is not a defense. Whereas in *Hargroves v. State*, 177 S. E. 561 (Ga. 1935) the court held that one is not criminally responsible, though endowed with sufficient reason to distinguish right from wrong as to a particular act about to be committed, where, in consequence of some delusion, his will is overmastered and there is no criminal intent, provided that the act itself is connected with such delusion.

By a liberal construction of the rule, Davis and Wilshire argue that "Since in all criminal trials the decision of the jury must depend upon their interpretation of the evidence before them, they might well consider the contention of an advocate that, since mind is indivisible, a prisoner shown to their satisfaction to exhibit any symptom of insanity, such as the possession of a delusion or uncontrollable impulse, could never in the strictest sense of the words, really fully comprehend the nature and quality of an act—still less its rightness or wrongness."

Alcoholism and Crime. The causal relationship between Alcoholism and Crime—because the tests are all too frequently predicated upon subjective data—is not easily ascertained. According to Lombroso, alcohol is a cause of crime "first, because many commit crimes in order to obtain drink; further, because men sometimes seek in drink the courage necessary to commit crime, or as an excuse of their misdeeds; again, because it is by the aid of drink that young men are drawn into crime; and because the drink shop is the place for the meeting of accomplices, where they not only plan their crimes, but also squander their gains. . . ."

Dr. A. Baldie, discussing tests of drunkenness, defines alcoholic intoxication as "the impairment of physical or mental faculties to such an extent as to render an individual unable to execute safely the occupation on which he is engaged at the material times. Drunkenness is a state of intoxication causing disorders of social behavior or helplessness. Since shock may ordinarily be mistaken for drunkenness, particular note should be made of the differences. In both the pulse is rapid, being weak in shock, but full and bounding in intoxication. The dilated pupil of moderate shock is sensitive to light, but in intoxication, the reflex is usually absent to ordinary light and the reaction to strong light is delayed."

Alcoholism has the deteriorating effect of disturbing coördination. To the undue amount of alcohol in either parent at the time of conception, Healy attributes degeneracy of the offspring. Averting this degeneracy is one of the most important functions of medical jurisprudence.

"As a defense to crime," concludes Smith (*Forensic Medicine*), "insanity induced by alcoholism has been grossly overrated and little reliable evidence has been produced to show that it is a causal factor in any type of insanity except the specific alcoholic insanities, delirium tremens, acute confusional insanities, Korsakow's disease and alcoholic dementia."

Alcoholism acts as a depressant to the central

nervous system. When the dosage is larger, there is a generalized depression resulting in unconsciousness, paralysis, loss of reflexes, and finally death. In smaller doses, it affects the higher centres of the brain. Inhibited impulses, repressed emotions under the influence of alcohol break through. Though less frequently than others, alcoholic psychoses are the cause of precipitating their victims into conflict with the law. Pathologic intoxications, caused by the individual's intolerance toward alcohol; delirium tremens, in which the patient is confused, disoriented, in constant fear and suffering hallucinations; acute hallucinosis, though clear mentally, he becomes apprehensive, and in chronic cases, develops delusions of persecutions; and finally Korsakow's psychoses with its memory defect, replaced by fabrications, little or no insight into his condition and eventual chronic deteriorated state.

Chronic alcoholism is the commonest cause of crimes growing out of sexual jealousy, especially those of a homicidal character. Excessive irritability and increased sexual desire of the alcoholic renders him suspicious of his wife's chastity. His suspicions having been focused upon one individual, every trivial incident is misconstrued to support his delusional belief. Threats of violence, if the woman will not confess, and repeated quarrels generally terminate in his murder of her. "Women with alcoholic insanity," Smith informs us, "generally do not kill their husbands, but often mutilate them or commit suicide."

Under the common law, drunkenness far from being an excuse was held rather to aggravate the offense. American decisions have indicated a tendency to admit drunkenness in evidence, not by way of justification or mitigation of the crime, but as throwing light upon the mental status of the offender. But the evidence to be admitted must be so complete that the defendant at the time of the commission of the crime was incapable of knowing right from wrong. Under statutory modification in some jurisdictions, the drunkenness to be admissible need not be such as to deprive defendant of all power of volition or all ability to form an intent."

The physiological action and effect of alcohol and the tests of drunkenness are ably discussed by Dr. Gerald Slot in the *Medico-Legal and Criminological Review*, October, 1935. In noting general demeanor of the drunken defendant he advises that allowance be made for shock of arrest, and diagnosis of other conditions when the patient is asleep or insensible. The conjunctivæ should be observed, the memory examined and coordination tested, and due consideration be given the fact that "there is no single symptom due to alcohol which cannot be caused by another condition."

From drunkenness to delirium tremens with its tremors and hallucinations born of insanity is a far cry. The English courts generally recognize that delirium tremens is a defense on the ground that it is a secondary, not primary, consequence of drinking. American courts regard it as settled insanity inasmuch as it is not voluntarily generated as a cloak for a particular crime and as a rule may be properly established by medical evidence. The state of the law in the future is forecast by R. U. Singh as not very hopeful. "A modification of the law," he agrees, "would bring into closer harmony moral and legal responsibility. But in view of the serious consequences to society of such a step, it is not likely that the future will witness any broadening of the scope of this defense except insofar as drunkenness comes to be treated as a disease.

There are inebriates who cannot help being such for reasons of a diseased condition of the brain induced by alcohol either voluntarily or on account of the heritage of a neurotic and unstable brain; and it is but fair that law should take as much account as it can in such cases of the factors that may modify or make impossible full responsibility by fettering or preventing normal volition."

Curtailment of Human Liberties. In its zeal to safeguard human liberties the law frequently defends them in the face of imminent social catastrophe. The doctrine of inviolability of the person will countenance no exception, the pleas of medical science to the contrary notwithstanding.

A scientific diagnosis of chronic alcoholism cannot be met with the imposition of penal servitude, for such sentence cannot deter the offender's return to his previous condition inasmuch as his previous condition remains unaltered. In the present stage of medical learning it can readily be predicted that a confirmed drug addict will commit whatever criminal offense may be necessary to satisfy his craving, nor is speculation indulged when one notes that venereal disease will spread infection. By virtue of recent psychiatric advances intermediate states of emotional instability, falling short of complete mental irresponsibility, are readily discernible as potential dangers. In his article on "Recidivism and the Courts" in the *Journal of Criminal Law and Criminology*, September, 1935, p. 368, Harold M. Metcalf points out that "approximately 80 per cent of the inmates of one Ohio penal institution were mentally defective."

The function of the law in such cases is to determine whether the act committed, upon which such punishment is predicated, comes within the statute and whether the accused had actually committed it. The determination of the adaptability of the punishment (i.e. sterilization, therapeutic castration, etc.) is best left to science. Such enhancement of the law's jurisdiction over the person predicated upon scientific determination of preliminary data is not a deprivation of right without "due process of law." If the distinction between normal and abnormal is a scientific reality, society has the right to be protected against the pathologic persons other than the insane, i.e. the psychopathic personalities. The fear of invading personal liberty has been permitted to hamper progress in segregating and preventing from becoming a general menace the feebleminded, the moron, the demented. Since the prevention of any form of disease necessarily involves a consideration of the factors giving rise to it, Dr. Edward Mapother in his lecture on the "Prevention of Mental Disorder," viewing the anomalies of innate make-up, the anomalies of the changes incidental to particular ages or epochs of life, exceptional mental experience—recent or remote—and gross physical influences, considers the advantage of legalized abortion over sterilization. "Legislation," he contends, "can only properly allow voluntary sterilization. The impossibility of defining conditions which are always transmissible militates against such compulsory sterilization as would be scientifically tenable. In the light of the public intolerance of eugenic sterilization, to have it legalized at all, it will certainly be necessary to advocate the association of permission with safeguards so numerous as to render any influence on the collective incidence of mental defect and disorder almost imperceptible." In the case of legalized abortion many of those whose progeny is undesirable would be far more likely to accept operation and all the trouble connected with it on account of an

actually forthcoming child than on account of purely hypothetical ones. . . . Far more might indirectly be achieved if abortion were legalized for economic reasons. It is conceivable that the community might some day revolt against the view that those who are unable to support themselves have an unlimited title to present to the community offspring which are reasonably certain to be on balance liabilities rather than assets.

The legal arguments for sterilization are thus synopsisized by Hinton and Weatherhead (1935): "Whenever the resultant advantage of an operation, whatever its nature, whether transfusion or diagnostic, etc., is greater than the disadvantage of pain, inconvenience, or loss caused by such an operation, then the operation appears to be legal. . . . This explains why therapeutic sterilizations are inside the law. The primary condition necessitating them is a pathological one and the advantages resulting therefrom are greater than the damage to the integrity of the body because the general health of the patient is affected. Where, however, the sole motive is eugenic, whether there is consent or not, it is generally felt that the operation would be illegal, because, it is argued, the intention is not to prevent a more serious disorder or improve the patient's health, but simply to relieve him of a certain amount of responsibility."

In his "Critique of Proposed 'Ideal' Sterilization Legislation," (*Archives of Neurology and Psychiatry*, April, 1935, p. 3), Dr. Abraham Myerson advises the State eugenicist seeking to enact a law requiring the sterilization of cacogenic persons (potential parents of socially inadequate offspring) that he needs must be not a scientist but a clairvoyant. Said Dr. Myerson:

"I know of no scientific data or technic by which the 'cacogenic' person could be detected, and one can only surmise that the proponents of 'ideal' legislation have in mind some technic of supernatural revelation, some crystal ball or Delphic vision, by which the potentialities of any person's germ plasma in the succeeding generations may be ascertained. . . . When the definition of potential parent of socially inadequate offspring is extended to include persons whose progeny do not necessarily show in themselves the inferior qualities but who would transmit them to a third generation, dogmatism becomes an arrogance."

In *Re Opinion of the Justices*, 162 So. 123, Ala. 1935, it was held that a State, in the exercise of its police power, may provide for the sterilization of the mentally diseased, insane, epileptic, mentally deficient, criminal, and delinquent persons, provided proper method is prescribed for ascertainment or adjudication of their status and that, when such status is legally ascertained, sterilization would not amount to "cruel and unjust punishment" within constitutional prohibition (Const. Ala. 1901, § 15).

We think [said the Court] that the sterilization of a person is such an injury to the person as is contemplated by the quoted provision—just as much so as to deprive him of any other faculty, sense, or limb—and that due process of law means that this cannot be done without a hearing on notice before a duly constituted tribunal or board, and, if this is not a court, then with the untrammelled right of appeal to a court for a judicial review from the finding of the board or commission adjudging him a fit subject for sterilization. This right the bill in question denies, or does not reserve; hence is unlike the Virginia statute (Acts 1924, c. 394) dealt with and upheld in the case of *Buck v. Bell*, 274 U.S. 200.

In "The Ameliorative Effects of Therapeutic Castration in Habitual Sex Offenders," (*Journal of Nervous and Mental Diseases*, July, 1935, p. 15; August, p. 180), Dr. A. W. Hackfield reports that for the past three decades "it has been customary at

the University of Zurich Psychiatric Clinic to subject such psychopathic personalities with perverse and inverse tendencies to therapeutic castration provided they presented no other grave psychopathic anomalies." The treatment consisting of a "reduction of the somatic sexual tension through removal of the sex glands so that even in certain cases the post-operatively demonstrable libido does not suffice in the face of normal volition and intellectual control to violate the existing social standards. . . . In properly selected and otherwise incurable male sex offenders, castration (aside from permanent commitment) may be regarded as the only dependable measure for social rehabilitation of such unfortunate individuals."

Acting in conjunction with the proved facts of preventive medicine, law exercises a far-reaching educative influence. Through current legislation, judicial interpretation of common law principles, and the broad powers of equity jurisprudence, laws were promulgated enlarging the schedule of occupational diseases to afford greater security to employees against the hazards of modern industry. In "Health and Human Progress," an essay in *Sociological Medicine* (1935), René Sand of the University of Brussels, reviewing industrial legislation from the edict of Rotari (643) through the functional economy of our own day, points to the improvements of the psychological atmosphere in industry as the most important contribution of industrial psychology. "Every thwarted instinct produces mental reactions manifesting themselves by instability, discontent, and revolt." Enlightened legislation has brought employer and employee together, increasing safety, preventing ill-health, and generally securing to industry the beneficent effects of preventive medicine.

International cooperation in checking illicit traffic in dangerous drugs has indirectly aided in the scientific curbing of crime, as has been pointed out by Quincy Wright in his article on "The Narcotics Convention of 1931" in vol. xxviii, *American Journal of International Law*, p. 475.

The international conventions to control the use of opium and narcotic drugs have been of interest to the United States primarily from the standpoint of their efficiency in combating an acknowledged evil. They also have a more general interest in that they illustrate methods of sumptuary regulation, of economic planning, and of international administration, perhaps capable of application in other fields. Finally, the application of these conventions has raised some problems of general international law. . . . Possibilities of evasion still exist, although the efficiency of administrative controls has been greatly developed since the 1912 convention. Each successive convention has been supplementary to those which preceded it.

In his lecture on "Prevention of Venereal Disease," Dr. L. W. Harrison compares the methods adopted by different countries in preventing venereal diseases through efforts to reduce the amount of extra-marital intercourse, the regulation of prostitution, the use of preventives against contact with infectious secretions during sexual intercourse, destruction of contaminated parts after exposure to infection, prophylactic general treatment after such exposure, and treatment of carriers.

Connecticut, in her new law (*Laws of 1935*, c. 276) follows suit by requiring that all applications for marriage license must bear a statement by a duly licensed physician that the applicant has submitted to a standard blood test.

The Law is a potent factor in man's struggle to improve environmental hygiene through the control of indigenous infectious disease, tuberculosis, and venereal disease, and through safeguarding the health of children and of expectant, parturient, and

nursing mothers. It now projects itself into the nebulous field of reducing accident incidence. In his investigation of accident proneness, Dr. Millais Culpin, through the pursuitmeter test (called æsthe-to-kinetic tests) found that they "yielded significant correlation coefficients between the scores and the accident rates." Through ocular muscle-balance tests he found that "hyperphoria was definitely related to the increased accident rate, while the percentage difference in accident rate between those with and those without eso- or exo-phoria was inconsistent; in one large group, persons with these defects actually had a lower accident rate than those free from them. Intelligence tests produced results that had no relation to accident incidence, but tremor, though occurring in only a few cases, was, as might be expected, correlated therewith." Though these tests are all objective and presumably independent of any personal bias, "psycho-neurotic symptoms—a not unimportant factor in precipitating accidents—has been determined by tests" directly measuring certain qualities regarded as essential to safe and efficient motor driving, i.e. reaction time, resistance to distraction, vigilance, judgment of speed, judgment of spatial relationships, confidence, road behavior, vision, etc.

The Adaptability of Scientific Tests to Legal Proof. The rôle of scientific evidence in the investigation and detection of crime and in identification in civil cases is today undisputed. As authority for this, contemporary writers cite the Federal district court in *Frye v. United States*, 293 Fed. 1013 (D. C. 1923) to the effect that:

Just when a scientific principle of discovery crosses the line between the experimental and demonstrable stages is difficult to define. Somewhere in this twilight zone, the evidential force of the principle must be recognized, and while courts will go a long way in admitting expert testimony deduced from a well-recognized scientific principle or discovery, the thing from which the deduction is made must be sufficiently established to have gained greater general acceptance in the particular field in which it belongs.

Blood Tests. In "Non-paternity Tests in Civil and Criminal Actions," Dr. Emil F. Koch, writing in *St. Johns Law Review* (December, 1934, p. 102), reminds the defenders of staid legal traditions that

Primarily, the solution of scientific problems is the province of the scientist and not of the lawyer; herein lies the confounding of law and medicine. It is erroneous to assume that the non-paternity test is the subject of fundamental controversy. National and international authorities in science are in agreement as to the technique, interpretation and application of the procedure. The expert, in stating the result of his test, is delivering a scientific, factual proposition to the courts; from this he derives his opinion as to the particular case at bar. The original link in the chain is factual and not an inference in the legal sense. Hence the argument against admission of such evidence as inference expires. The fact that the test operates in the negative is no objection to its admissibility and is in fact more susceptible of probative evaluation than alibi evidence which is concededly admissible. . . .

The importance of the evidence will be appreciated when it is considered that about half the men accused in paternity cases are not true fathers. In an illuminating article, Dr. Alexander Wiener in *Scientific Monthly* for April, 1935, on "Determining Parentage" discusses the constitution of blood. He explains that

the blood is made up of two main factions, the red cells which give the blood its color and a fluid called plasma or serum. In the human red cells there are two substances called agglutinogens A and B. If an individual possesses both of these substances in his blood cells, he is said to belong to group AB; if neither, he belongs to group O; if he possesses only A, to group A; and if he possesses only B, to group B.

The above human blood groups were discovered in 1900 by Dr. Karl Landsteiner of the Rockefeller Institute. The medico-legal application of blood grouping for the exclusion of paternity depends upon the following three important properties of the blood groups: 1, the blood group

of any individual can be determined at birth or shortly thereafter; 2, the blood group of any individual remains constant throughout life and does not change regardless of age, disease, medication, etc.; 3, the blood groups are inherited in accordance with Mendel's laws.

The application of this knowledge to legal problems is well illustrated by a recent case tried in the Court of Common Pleas of New Haven County in which a woman falsely accused the defendant of the paternity of her illegitimate child. Dr. Wiener's analysis of the bloods indicated that the man belonged to group A, the woman to group O, and the child to group B. Since the child possessed the agglutinin B not present in the mother's blood, the true father could belong to group B or group AB. Confronted with this evidence the plaintiff withdrew her charge and the man was acquitted.

Blood Pressure Test. In a recent Wisconsin case reported in the *Journal of Criminal Law and Criminology*, March-April, 1935, the Keeler-Polygraph was admitted, but only as a result of a stipulation and agreement between prosecution and defense counsel. The evidence was held admissible only for its corroborative effect and not as the sole indication of guilt. The reason offered by the court in *United States v. Frye* supra was that "we think that the systolic blood pressure deception test has not yet gained such standing and scientific recognition among physiological and psychological authorities as would justify the courts in admitting evidence deduced from the discovery, development, and experiments thus far made."

Fingerprints. Concealing identity by means of plastic surgery has recently aroused widespread interest since the post-mortem examination of the body of John Dillinger disclosed that efforts had been made to alter the bulbs of his fingers and that operations had been performed on his face in an effort to obscure his identity. Fingerprints unquestionably furnish an absolute method for establishing the identity of criminals and have long been recognized by courts of last resort. Thus in *U.S. v. Kelly* 55 F. (2d) 67, the fingerprints of the defendant arrested for selling a quart of gin in violation of the National Prohibition Act, were taken without his consent on the day of his arrest and before arraignment. To the defense that the right to take fingerprints was without statutory authority—Federal or State—and subjected "a possible misdemeanant before trial and conviction" to unnecessary indignity, the court said:

The appellee argues that many of the statutes and decisions in common-law States have allowed fingerprinting only in cases of felonies. But, as a means of identification it is just as useful and important where the offense is a misdemeanor, and we can see no valid basis for the differentiation. In neither case does the interference with the person seem sufficient to warrant a court in holding fingerprinting unjustifiable. . . . Fingerprinting is used in numerous branches of business and civil service, and is not of itself a badge of crime. As a physical invasion it amounts to almost nothing, and as a humiliation it can never amount to as much as that caused by the publicity attending a sensational indictment to which innocent men may have to submit.

But, unless the suspect is apprehended, sight recognition is all that remains on which the police may make an arrest. In "The Plastic Surgeon and Crime," Dr. Jacques W. Maliniak (26 *Journal of Criminal Law and Criminology*, November, 1935, p. 594) recounts the many obstacles in the way of sight recognition: manner of dress, gain or loss of weight, difference in expression, hair dyes, use of spectacles, addition or elimination of a beard or mustache, and possible resemblance between two utterly unrelated persons. By plastic surgery, the topography of the forehead, the prominence of the nose, the contour of adjoining parts, the chin and

the ears can be almost unnoticeably altered. The endo-nasal incisions on the mucous membrane following rhinoplasty, like the many other reconstructed alterations so readily accomplished by plastic surgery, intensify the difficulties attendant upon criminal identification. Warning the surgeon of his responsibility in such cases, J. Edgar Hoover (*Journal of the American Medical Association*, May, 1935, p. 1663) says:

With due consideration for the confidential relationship between doctor and patient, the surgeon should not permit himself to be used to further the ulterior motives of criminals seeking to evade apprehension. It has become increasingly incumbent on the plastic surgeon to scrutinize carefully the motives of patients in consulting him. The slight additional burden which this may impose is greatly outweighed by the public interest involved.

Retina. Because plastic surgery is being utilized to defeat justice—by changing facial contours, removing scars, etc.—fingerprints, urged Harold Cummins (25 *Journal of Criminal Law and Criminology* 982), should be supplemented by prints of the palms and soles, for such prints in the record would practically insure against a defeated identification, especially since fingerprints can be forged.

The more adequately to cope with this interference by plastic surgery, an adjunct to the fingerprint system has been devised and completed during the past year by Drs. Carlton Simon and Isadore Goldstein. This method is based upon the correlation of the optic nerve with the many variations of patterns made by the network of the blood vessels of the retina or background of the human eye. Discussing the significance of their discovery in the *New York State Journal of Medicine* (Sept. 15, 1935, p. 901), they say:

With the use of a retinal camera, an instrument that has been used for the diagnosis of various eye diseases, the optic nerve and the net work of blood vessels of the retina or background of the eye can be expeditiously photographed through the pupil of the eye. This requires no special medical skill nor experience, but is an easy mechanical procedure. Although such photographs were readily secured, there was no provision or contrivance by which the background of the eye, with its irregular patterns created by the branching of the blood vessels, could be charted, measured, and classified. For purposes of identification, it was necessary that various differences in individual eyes be noted in numerical values. . . .

What is true of the fingerprint system is also true of this new system, in that no two individuals have the same identification patterns. The many and the great variety of blood vessel configurations make it a mathematical certainty that no two retinal formations are identical. In thousands of photographs, none has been found the same. Age and disease may change in tortuosity the lumen of the blood vessels, but their position and their correlation remain unchanged through life, and, what is of greatest interest, they cannot be altered or effaced.

Sinus Prints. From Sir Logan Turner's study of *The Racial Characteristics of the Frontal Sinuses*, based upon an examination of 578 skulls, another method of individual identification is reported by Dr. Joseph Mayer in the *Virginia Medical Monthly*, December, 1935. According to Dr. Mayer, Dr. Thomas A. Poole, internationally known sinus specialist, having critically examined thousands of sinus prints

has found that no two sinus configurations are precisely alike, but he has also observed that there are in the sinus conformations various bases for classification of types and sub-types, which may, in the end, provide a simpler method for indexing and identifying a particular individual than is provided by the loops and whorls of the finger tips. For one thing, there is much more variation in the architecture of the sinus structures than there is in finger-tip patterns. For another thing, many more kinds of measurement can be applied to a sinus print. At least four basic sinus characteristics may be noted around which innumerable special measurements can be developed: (1) the height and breadth of the cavities; (2) the presence or absence of one or both of the frontals; (3) symmetrical or asymmetrical sinus positions; (4) the position and deviation of the septum.

So far as concerns the possibility of changing the sinus pattern with which the individual is born, there is absolutely no way of making alterations once the pattern is established, as long as the person remains alive. And, after death, there is no more durable portion of the bony structure than this very sinus configuration. It remains the same as long as the skull lasts.

See BIOLOGICAL CHEMISTRY.

MEDICINE AND SURGERY. Essential Hypertension, Surgical Treatment of. Essential hypertension is a disease whose prognosis is exceedingly grave. In patients below middle age it may run its course as rapidly and inexorably as a malignant growth. Medical treatment has had little to offer the victims of this malady. Recently it has seemed justifiable to attempt to control the progress of the disease by major surgical measures, and while the efficacy of this form of therapy is not yet definitely established, the early results are suggestively favorable.

The modern conception of essential hypertension, according to G. E. Brown in a recent review (*Ann. of Int. Med.* 9: 488, 1935) is that the fundamental abnormality is an "inherited hypersensitivity of the vasomotor mechanism," which eventually results in a hypertrophy of the muscular coat of the arterioles and an elevation of blood pressure. If the vasomotor nerve supply of a large proportion of the arteriolar bed should be interrupted, he points out, there would be reason to expect a decrease in blood pressure in those cases in which organic changes in the arterioles was not too far advanced. That vasodilatation of the extremities occurs after sympathetic ganglionectomy, which interrupts the path of the vasoconstrictor impulses, has been proved experimentally; and in fact ganglionectomy has been of value clinically in the treatment of certain types of peripheral vascular disease.

The problem of essential hypertension has been attacked surgically in three ways. The first method, based on the theory that increased amounts of epinephrine ("adrenalin") are associated with the production of the elevation of blood pressure, aimed at diminishing the secretion of the suprarenal glands by "denervation" or partial resection. There is no positive experimental evidence to support this theory, and Brown is inclined to believe that the proof that such procedures have any clinical efficacy is yet to be presented. Resection of the splanchnic nerves, which carry sympathetic fibres to the viscera, has been tried, but it has not yet been clearly shown that such procedures result in a definite lowering of the blood pressure levels and responses over a long period of time, although they may result in symptomatic improvement.

More promising results have been obtained by a considerably more drastic procedure, section of the anterior spinal nerve roots (anterior rhizotomy), which is based on the work of Bradford who showed in 1889 that stimulation of the anterior nerve roots from the level of the sixth dorsal to the second lumbar caused an increase in blood pressure—produced, we know now, by a constriction of the arterioles of the abdominal viscera. This operation interrupts all the sympathetic fibres below the diaphragm, including those to the lower extremity. It is also followed, of course, by paralysis of the muscles of the abdominal wall due to the severance of the motor fibres in the anterior root.

Heuer and Page in New York have, among others, been interested in this method of treating essential hypertension, and Heuer has briefly reported their experience with it (*Ann. Surg.* 102, 1073, 1935). At the time of the report (Feb. 13, 1935), nine patients had been treated by anterior

rhizotomy. There was one operative death, and one patient, whose operation had to be abandoned after only a few nerve roots were divided, died four months later. The remaining seven patients have done well, and have had a reduction of their blood pressure to practically normal levels. The first operation was done in May, 1934, so that at the time of their report, none of their cases had been followed as long as one year. There is no question, however, but that the early results are encouraging. In Heuer's experience, the paralysis of the abdominal muscles following rhizotomy has been of little consequence to the patient, and the only other disturbing result of the loss of sympathetic innervation was a transient paralysis of the bladder and bowel. The number of nerve roots sectioned varied in the different cases and in only one instance were all the roots from the sixth dorsal to second thoracic divided.

Brown points out that while the ultimate effects of anterior rhizotomy have not yet been determined, the only type of patient suitable for this radical form of therapy would be one below 50 years of age with marked hypertension, yet without evidence of renal, cardiac, or cerebral insufficiency; and further that in order to determine the ultimate value of the procedure careful and critical determinations of the blood pressure levels must be carried out over a long period of time.

Heart. Development of New Blood Supply to Heart by Operation. In a series of recent publications, Beck and his co-workers at the Western Reserve University School of Medicine have reported the results of their experimental studies on the production of a collateral blood supply to the heart, and have described the clinical application of their work in a small group of cases. (*Proc. Soc. Exp. Biol. and Med.* 32: 759, 1935; *Am. Heart Jr.* 10: 849, 1935; *idem* 10: 864, 1935; *Ann. Surg.* 102: 801, 1935.)

The heart is, as Beck points out, peculiarly vulnerable for two reasons to any interference with its source of nutrition and oxygen. Its blood supply is furnished by but two arteries, and these are of relatively small calibre (the right and left coronary arteries). It is possible that an additional, though certainly unimportant, source of blood is afforded by small vessels entering directly into the left ventricle ("Thebesian vessels"), and by anastomoses between the coronary arteries and small vessels at the base of the heart ("extra-cardiac anastomoses"). Furthermore, because of its envelopment in a smooth glistening membranous sac (the pericardium), the heart is effectually separated from the structures which surround it in the thorax, and in case of injury to the coronary vessels, cannot develop a collateral circulation except through the relatively avascular tissues at its base. For this reason, sudden complete occlusion of a coronary artery is almost always followed by irreparable damage to the myocardium. In the last two decades, the importance of arteriosclerotic occlusion of the coronary arteries as a cause of angina pectoris and of sudden cardiac death has been fully recognized, and its alarming frequency of occurrence noted. Beck's work, which promises to afford a new method of attacking occlusive coronary heart disease directly at its source, is therefore of considerable interest and importance.

The question which these workers posed was as follows: will it be possible by removing the mesothelial envelope which surrounds the heart and by joining adjacent fairly vascular structures directly to the exposed myocardium to cause new vessels

to grow into the heart muscle and thus create a new blood supply. That such might be the case was suggested by the fact that new blood vessels had been noted in experimentally produced adhesions between the heart and pericardium, and also clinically in cases of adhesive pericarditis. Furthermore, a few clinical cases had been reported in which complete occlusion of both coronary vessels had occurred, but apparently the process had been such a slow one that a collateral circulation adequate to maintain life had been developed through the extra-cardiac anastomoses previously mentioned.

In their first experiments, Beck and Tichey created a collateral vascular bed by removing the epicardium and the lining of the parietal pericardium, and then bringing the more vascular outer layer of the pericardium and the pericardial fat into contact with the denuded myocardium. These experiments showed, first, that new vessels did actually grow into the heart muscle, and second, that by virtue of the possession of this new source of blood supply, the heart could withstand the effects of complete occlusion of both coronary vessels (if the occlusion were brought about gradually). It was furthermore noted that in order for any significant vascular anastomosis to occur, a reduction of the normal blood flow to the heart was necessary. In other words, a need for the additional blood supply must be created before it would develop. This was brought about experimentally by the progressive compression of small silver clips placed about the coronary vessels.

Subsequent experimental studies by Beck, Bright, and Maltby dealt with the effects of approximating pedicle grafts of muscle from the chest wall to the heart, and with the use of the omentum as a source of blood supply. From these studies it was learned: first, that anastomosis between skeletal and cardiac muscle will readily develop if the normal blood supply to the heart has been reduced; second, that the collateral vascular bed thus created affords a partial, though not complete protection against sudden ligation of a major coronary vessel; third, that if the occlusion is brought about gradually, the protection is almost invariably complete; and fourth, that the collateral vascular bed, by transporting blood from one part of the myocardium where the supply is adequate to another part where the supply is inadequate, acts as an anastomotic bridge which will protect the heart from the very frequently fatal consequences of even localized ischemia. It was further observed that the adhesions to the heart, experimentally created, in no way interfered with its normal movement.

With these experimental observations in mind, Moritz and Beck studied the autopsy material in 94 cases of coronary occlusion. They found that the diagnosis in 80 of the 94 cases could be made during life. Furthermore, only 14 of the 94 cases died as a direct result of the first major coronary occlusion. In 37 of the 80 cases surviving the initial insult, the risk of the operation for creating a new blood supply was too great because of concomitant disease or continued cardiac incompetence. The remaining 43 would have been fair operative risks. And significantly enough, of this 43, only 7 died of causes other than subsequent coronary occlusion. They concluded, "These data, chiefly pathological, derived from the study of major coronary arterial occlusion, would indicate that there was a period after the first coronary occlusion in the lives of 43 individuals when the production of extra-cardiac

coronary collateral circulation might have been feasible and beneficial."

As a result of these studies, Beck decided he would be justified in attempting to create a new blood supply to the heart in a suitable patient suffering from coronary sclerosis. Such a patient was found, and he agreed to submit to the procedure, even though its novelty was explained to him. On Feb. 13, 1935, then, Beck undertook the first operation of its type ever performed on the human heart. The left pectoral muscle was mobilized by the division of its insertion, the thorax was opened, the pericardium was widely incised, the lining of the pericardium was roughened, the epicardium was removed with a burr, and then a pedicle graft of the pectoral muscles was brought into contact with the surface of the heart and sutured in place. Finally, the medial border of the divided pectoral muscle was sutured to the parietal pericardium, and the wound closed. The patient, a man of 48, stood the procedure well and made a good recovery. At the time of Beck's report seven months had elapsed since the operation, and the patient had apparently been definitely benefited. Whereas before operation he was subject to attacks of severe precordial pain on exertion, fairly typical of angina pectoris, since operation he had been entirely free of pain and had worked as a gardener.

The procedure has been subsequently applied in six additional cases. The second patient died one week after operation of a cause not clearly related to the operative procedure. The third and fourth patients seem to show definite improvement following the operation, though neither can be said to be "cured." Insufficient time has elapsed in the remaining cases to permit any estimation of the results.

Neuron Lesions, Upper Motor. The application in recent years of modern neurosurgical methods to the experimental study of the physiology of the nervous system has been productive of very fruitful results. This is particularly true in the case of the cerebral cortex which lends itself admirably to accurate extirpation studies. Several groups of workers, and of these notably Fulton and his associates of the Department of Physiology of the Yale University School of Medicine, have re-investigated the problems of cortical function by the use of these refined technical methods on the higher primates, and have described their results in clinical terms. Their work, which has thrown new light on many aspects of the physiology of the nervous system and which has, as well, served to clarify certain clinical problems, deserves notice in a review of this sort, even though it must necessarily be described in rather technical language. One aspect of their investigation deals with a form of paralysis, described as of the "upper motor neuron" type—a type exemplified by the hemiplegia associated with cerebral hemorrhage.

Loss of voluntary power may be due either to a disturbance of the central or the peripheral nervous systems. If the lesion involves the neuron having its origin in the anterior horn of the spinal cord and its termination in striated muscle, it is said to be of the "lower motor neuron" type; if the lesion involves any part of the pathway from the cerebral cortex to the anterior horn cell, it is said to be of the "upper motor neuron" type. The symptoms of the first type of lesion are those which occur when a motor nerve is cut. They are well understood. Fulton and Viets now point out that lesions of the second type are not as simple as formerly supposed—that injury to the premotor

projection area of the cortex is responsible for certain phenomena associated with paralysis of the "upper motor neuron" type. (*Jr. Am. Med. Ass'n.* 104: 357, 1935.)

As the result of experimental studies of the extirpation of localized areas of the cortex in monkeys and apes, as well as observation of the changes following therapeutic excision of cortical lesions in man (tumor, scar, etc.), they conclude that definite syndromes are associated with the premotor area as well as with the motor area which may be defined clinically. "Lesions restricted to the pyramidal tracts or to their cells of origin cause flaccid motor paralysis, muscle atrophy, transient depression of all reflexes, and the positive signs of Babinski and Chaddock. After complete destruction of the pyramids the signs of Babinski and Chaddock persist permanently but the paralysis, flaccidity, and reflex changes tend with time to disappear."

"Lesions of the premotor projection area of the cortex, which also mediate voluntary movements, give rise to spastic paralysis, disturbance of skilled movements, forced grasping, vasomotor disturbances, increased deep reflexes and the signs of Rossolimo, Mendel-Bechterew, and Hoffman. Forced grasping and vasomotor disturbances are transient, but disturbances of skilled movements, and the signs of Rossolimo and Hoffman tend to persist."

Stated in somewhat simpler terms, they have shown that voluntary motor power is mediated not only by the motor area of the brain, as formerly supposed, but by an area in the cerebral cortex immediately anterior to it, the so-called premotor area; and furthermore that each of these cortical areas is responsible for different aspects of normal motor function. The motor area (pyramidal system) is concerned with the contraction of individual muscles, while the premotor area seems to be concerned with the more complex contractile interrelationship between muscle groups (such as are associated with skilled movement of any sort), and with muscle tonus and vasomotor activity.

From the clinical point of view this study is important for two reasons. In the first place, the description of syndromes associated with each of these cortical areas may be of help in the localization of intra-cranial lesions (especially tumor). Furthermore, in cases of hemiplegia, it may offer help in determining the prognosis. By separating, in the general symptomatology of the hemiplegic patient, those components which are due to injury of fibres of the pyramidal system, from those due to injury of fibres from the premotor cortex, one may obtain some idea as to the relative degree of involvement of each. The prognosis is best when only fibres from the premotor cortex are involved by the hemorrhage, next best when the pyramidal system alone is involved, and worst of course when both sets of nerve fibres have been destroyed.

Poliomyelitis. Poliomyelitis is an acute infectious disease, the causative agent of which is a filterable virus as Flexner demonstrated in 1913. It attacks primarily children, and is characterized pathologically by destructive changes in the anterior horns of the gray matter of the spinal cord. These are responsible for the paralyses which usually attend the disease. Sporadic cases occur from time to time, but usually in the late summer or early fall there is an increase in the incidence of the disease. In 1935 the seasonal increase was so great as to definitely attain epidemic proportions. Previous major outbreaks in the United States occurred

in 1931, particularly in the East, and in 1934 in California.

According to statistics collected by the United States Public Health Service, during the four weeks ending June 15, 1935, 240 cases of poliomyelitis were reported, as contrasted with 92 the previous month. This represented a definitely greater than seasonal increase in the incidence of the disease. Almost half the cases reported (117) occurred in North Carolina, which apparently was the centre of the epidemic. In the next four weeks period (ending July 13) the number of cases reported had grown to 653. By August 10, the number of cases reported in the preceding period had increased to 1433, which was 38 per cent greater than for the same period in 1934, during which the epidemic in California had been in progress, and was one half as great as for the corresponding period in 1931 (Eastern epidemic). By this time the epidemic had spread widely along the Atlantic seaboard. Of the total of 3118 cases reported in the previous 16 weeks, 1955 or roughly two-thirds had been in North Carolina, Virginia, New York, and Massachusetts. The peak of the epidemic was reached in August. For the four weeks preceding September 7, 3625 cases were reported (three times greater than for the corresponding period in 1934, but less than the 4936 cases in 1931). For this period, 311 cases were reported from Michigan and 141 from Kentucky. By October 5, the epidemic had definitely begun to wane (2528 cases). By November 2, the number of cases reported had fallen to 1039, but was still 50 per cent greater than in 1934.

The question of vaccination against poliomyelitis is one which was of especial interest during 1935. Two investigators, Brodie of New York University and Kolmer of Temple University in Philadelphia, have prepared vaccines which they believe to be of value in the prevention of poliomyelitis. The efficacy of these vaccines has been sharply attacked and the safety of their administration questioned by Rivers and Flexner of the Rockefeller Institute and Leake of the United States Public Health Service. The available evidence seems inadequate to allow of any definitive opinion concerning either the safety or value of either of the vaccines in the prevention of poliomyelitis, but no doubt further experimentation and subsequent clinical trial will settle the issue.

Brodie and Parks pointed out that since in their experience convalescent serum is inefficacious in the treatment of preparalytic poliomyelitis, and since isolation to prevent contact infection is impracticable because of the probable high carrier rate, it would seem that the best means of controlling the disease would be with a vaccine. That immunization might be possible was suggested by the rarity of second infections in man and the known presence of antibodies in the serum of convalescent patients and experimental animals. Furthermore, the increased immunity enjoyed by adults is, they believe, due to exposure to the virus (with sub-clinical infections) and represents immunization by a natural process (*Jr. Am. Md. Ass'n.*, 105: 1089, 1935). For artificial immunization, the virus would have to be so attenuated as to be incapable of producing the disease, and yet still must retain its antigenic properties.

Brodie's vaccine was prepared by treating infectious monkey cord with solution of formaldehyde. He found that the virus (20 per cent suspension of cord) could be just inactivated by treating it with a 0.1 per cent solution of formaldehyde for 8 to 12

hrs. at 37°C. He previously had tried and abandoned the injection of subinfective doses of active virus because of the danger of infection, and of virus-serum mixtures because of the difficulty of exact neutralization. 5 c.c. of the formaldehyde-virus mixture proved sufficiently antigenic to produce a fairly marked degree of immunity in monkeys. That the vaccine was noninfective Brodie felt proved by the results of his animal experiments and by his experience with 2300 human immunizations.

Brodie and Park studied antibody formation in 75 children after immunization and found that antibodies could usually be demonstrated as early as one week after the injection of the vaccine. The antibody production reached its full development in three to four weeks, and in some cases persisted as long as eight months. It was greater in amount following two doses, than after one.

Kolmer, believing that a living though attenuated virus would be a more satisfactory immunizing agent than virus killed by chemicals (such as Brodie's), prepared a vaccine consisting of 4 per cent emulsion of spinal cord in a 1 per cent solution of sodium ricinoleate (*Jr. Am. Med. Ass'n*, 105: 1956, 1935). With this vaccine containing living, attenuated virus he succeeded in immunizing all of 42 monkeys with no ill effects, and noted a good antibody response. Next, 25 children varying between 8 months and 11 years in age were inoculated with three doses of vaccine at weekly intervals. There were no ill effects from the vaccination and 84 per cent responded by the production of antibody. At the time of his report 446 additional individuals had been safely immunized at Temple University Hospital. Kolmer's serum was sent to various physicians in 36 States during the recent epidemic, who administered it to approximately 10,000 persons, mostly children. No individual receiving three doses contracted the disease, but 10 receiving one or two doses did so. These probably represent cases in which the vaccine was given during the incubation period too late to abort the disease, Kolmer believes, though a very different view is held by Leake, as we shall see.

Concerning the safety of his vaccine Kolmer says, "attenuation of the virus in the vaccine along with the fact that the first dose is quite small per body weight, with an interval of at least a week for antibody production before the second and third doses are given, appears to constitute important factors in safety. Furthermore, it may be that the remote monkey passage virus used in the preparation of the vaccine is of greatly reduced infectivity for human beings and that subcutaneous injections represent a portal of entry unsuited to infection, since it is difficult to infect monkeys with straight virus by this route."

Papers by Dr. Brodie and Dr. Kolmer were presented before the 1935 meeting of the American Public Health Association in Milwaukee. The transcript of the proceedings of this meeting is not yet available, but according to a report in the *Journal of the American Medical Association* (105: 1275, 1935), the value of both vaccines was strongly deprecated in discussion by Dr. Rivers of the Rockefeller Institute and Dr. Leake of the United States Public Health Service. Rivers contended that the Kolmer vaccine was dangerous because of the presence of free virus, and that the value of Brodie's vaccine had not been demonstrated, and that theoretically it could be of no value.

Leake in a special article in the *Journal* (105: 2152; December 28, 1935) reported that 12 cases

of paralytic poliomyelitis had occurred at a suggestive interval after the injection of vaccine with a high fatality rate (50 per cent). That these are not merely chance occurrences of the disease is suggested, first by the number of cases reported. According to Leake paralytic poliomyelitis was not epidemic in any of the localities at the time of occurrence of these cases, and even "during the heaviest incidence of poliomyelitis in the community with the highest reported incidence, the expectation of paralytic poliomyelitis within three weeks following vaccination . . . was less than one-tenth of a case. . . ." Second, by the rather definite interval between injection and the onset of symptoms (6-14 days), which would seem very difficult to explain on a chance basis. And third, and perhaps most significantly, by the fact that "in every case in which the sequence is known, the level of the spinal cord affected corresponded to the extremity in which the injection was made, paralysis beginning either in the same limb or in the contra-lateral limb." Leake feels that the high mortality in this group of cases may be due in part to the fact that the part of the cord first involved (usually that which carries the nerve supply to the arms) lies so close to the nuclei of the muscles of respiration. He suggests further the possibility that a strain of poliomyelitis virus that has been subjected to prolonged monkey passage, with rather short incubation periods, is unusually virulent to man when injected into or beneath the skin. He further refers to the finding of Schultz and Gebhardt, that the appearance of neutralizing antibodies in the blood after the injection of the poliomyelitis virus is very uncertain evidence of parallel immunity to the natural disease.

Dr. Simon Flexner of the Rockefeller Institute, the discoverer of the virus of poliomyelitis and probably the leading student of the disease in this country, wrote a special article for *Science* (82: 420; November 1, 1935) in which he maintained that at present there is no evidence available that artificial immunization against poliomyelitis may be both safe and effective. His conclusion may be directly quoted:

1 No adequate evidence has been presented showing that through the action of physical and chemical agents the virus of poliomyelitis may be attenuated so as to preserve its immunizing properties, while being deprived of its potential paralyzing power

2 The available evidence indicates that virus exposed to injurious physical and chemical agents is either inactivated (destroyed) or merely reduced in concentration. When the virus is actually destroyed, it no longer possesses immunizing power; when it is reduced in concentration, it immunizes certain animals and may paralyze others. The proof that the treated active virus has not been attenuated is provided by the recovery of fully active virus from the paralyzed animals

3. No evidence exists showing that the passage of virus through monkeys removes its power to infect and produce paralysis in man. On the contrary, we possess convincing observations which show that an indeterminate number of passages of virus through human beings does not deprive it of its potential paralyzing effect when injected into monkeys.

Another interesting aspect of the pathogenesis of poliomyelitis relates to the rôle of the olfactory tract as a portal of entry for the virus. The *Journal of the American Medical Association* has presented a review of the recent work in this field (105: 1986, 1935). Flexner and Clark showed in their early work on poliomyelitis that monkeys could be successfully injected by intra-nasal instillation of the virus, and furthermore the virus has been recovered from the nasopharynx both in man and in the experimental animal. In 1934 Schultz and Gebhardt found that section of the olfactory

nerves with the electric cautery protected monkeys against the effects of intra-nasal instillations of the virus—rather clear evidence it would seem that the virus ordinarily gains access to the central nerve system by traveling up the olfactory paths. Lennette and Hudson have recently confirmed and amplified the work of Schultz and Gebhardt (*Proc. Soc. Exp. Biol. & Med.* 32: 1444; January, 1935). They found that not only did section of the olfactory tract protect against the introduction of the virus into the nose, but that protection was likewise afforded against the intravenous injection of the virus. Of five normal and five operated monkeys subjected to intravenous inoculation with the virus on three successive days, four of the control animals and none of the operated ones developed the disease. This suggested that following intravenous injection the virus was excreted from the blood stream into the nose, and there gained entry to the nervous system by way of the olfactory nerves. That this is actually the case is suggested by the fact that they were successful in finding the virus in nasopharyngeal washings following its intravenous injection.

Armstrong and Harrison have reported (*Pub. Health Rep.* 50: 725; May 31, 1935) that the intranasal insufflation of alum (1.5 c.c. of 4 per cent sodium aluminum sulphate) has a protective effect against infection with the poliomyelitis virus. Of 24 alum prepared monkeys, inoculated intranasally with the virus, only 6 died; whereas 16 of 20 controlled animals succumbed. The authors believe that their results are probably to be explained by a decreased permeability of the nasal mucous membranes produced by the alum, rather than by any antiseptic effect. It is conceivable that some such procedures as this may later prove to have clinical value.

It might be mentioned that at least one worker in this country, Toomey of Western Reserve University, feels that experimental poliomyelitis as produced by the intra-nasal or intra-cerebral injection of virus in monkeys is not at all comparable with the disease in man; and that both from its clinical course, and on experimental grounds, one must suppose that the virus has its portal of entry in the gastro-intestinal tract and reaches the cord by way of the sympathetic nervous system (*Science* 82: 200, 1935).

Ulcers. Etiology of Peptic Ulcer. The cause of so-called peptic ulcers, that is, chronic ulcers of the stomach and duodenum, is a problem which has attracted the interest of medical men since the time of John Hunter. In spite of the vast amount of work which has been done in this field, it must be admitted that the final answer is still unavailable. Yet, largely as the result of a renewed interest in the question during the past 15 years, certain facts concerning the pathogenesis of ulcer have become well established, and it seems that a promising beginning has been made towards the eventual solution of the problem. It now appears likely that we must look to the digestive action of the gastric secretion as the most important factor in the production of ulceration.

The editors of the *Journal of the American Medical Association* have recently given us an excellent historical résumé of the various theories which were advanced concerning the etiology of ulcer (104: 1637, 1935). Virchow and Hausen in 1853 suggested that occlusion of terminal blood vessels in the stomach caused small areas of necrosis which were susceptible to the digestive action of the gastric juice. Recent extensive histological studies of

material made available by the wave of enthusiasm, especially in Germany, for gastric resection in the treatment of ulcer has failed to confirm this view. Konjetzny, and others, failed to find any evidence of disturbance of blood vessels, but were impressed by the extensive inflammatory changes which they observed throughout the stomach, even in areas covered by normal mucosa, and advanced the theory that inflammatory gastritis and duodenitis were the most important factors in the production of ulceration.

Von Bergmann, and Eppinger and Hess, suggested that the ulcers were caused by spasm of localized areas of the stomach wall brought on by excessive nervous stimulation, but their "neurogenic-spasmogenic" theory has failed of confirmation in experimental studies. (There is, however, but little question that nervous factors play some part in the production of ulcer in man.)

Aschoff advanced a "mechanical-functional" theory. He pointed out that ulcers occurred most frequently on the lesser curvature of the stomach and in the duodenum, and attributed this to the fact that these areas along which, according to Waldeyer, most of the ingested food moves, are more exposed to mechanical and chemical trauma. More recent X-ray studies, however, do not support the earlier view of Waldeyer that the lesser curvature is the main gastric channel or "Magenstrasse."

The production of ulcers in the normal stomachs of experimental animals by measures which increase the amount of gastric juice and its digestive capacity have been reported by Burkle-de la Camp, who subjected animals to starvation and the injection of histamine, a powerful stimulant of gastric secretion. Likewise, Silbermann was able to produce ulcers by stimulating gastric secretion reflexly. He made esophageal fistulas in dogs, and gave them sham feedings, thus inducing the flow of gastric juice by psychic stimulation, while at the same time food was prevented from entering the stomach.

In this country, Dragstedt of the University of Chicago, one of the leading students of the ulcer problem, has come to a similar conclusion—that the digestive action of pure gastric juice is the chief factor involved in the production of ulcer. In an interesting paper presented at the annual meeting of the American Surgical Association he summarized the results of his experimental studies which have been carried on over a number of years. (*Ann. Surg.* 102: 563, 1935.)

That it is the digestive action of pure gastric juice, rather than that of the ordinary contents of the stomach, which is responsible for the digestion of living tissue was shown by an interesting series of experiments in which sections of various portions of the gastro-intestinal tract, and such viscera as the spleen, kidney, and pancreas, were sutured into a large defect in the stomach wall. In the case of the normal stomach, no digestion of the abnormally exposed tissues occurred. However, when these same tissues were sutured into a window in an isolated stomach pouch (so produced that it would be excluded from the ordinary gastric circuit, and therefore would contain pure, undiluted gastric juice), digestion occurred in every instance. The mucosa of the small intestine proved to be more resistant than the other viscera, and the mucosa of the proximal part of the intestinal tract more resistant than that of the distal, as might be expected because of its proximity to the stomach.

Furthermore, when pure gastric juice was caused to flow into the empty jejunum or ileum, as

it may experimentally by anastomosing an isolated stomach pouch to the small intestine, digestion of the bowel occurred. And finally, when the entire stomach was isolated from the gastro-intestinal tract, and the gastric juice was prevented from draining away promptly, digestion of the mucosa of the stomach itself occurred. Interestingly enough, the isolated stomach was found to secrete a very large quantity of gastric juice (2000 c.c. in 24 hours) with an acidity much greater than that of the normal fasting stomach (100-140 clinical units of acid against 30-60) and a pepsin content three times as great. Histological examination of the stomach wall of these animals showed a picture of chronic gastritis very similar to that which Konjetzny described as associated with ulcer in man.

The factor chiefly responsible for the digestive action of pure gastric juice on living tissue seems to be its high acid concentration rather than an increased pepsin content. So that, in Dragstedt's opinion, "peptic" ulcers might more properly be called "acid" ulcers.

If we grant that pure gastric juice is capable of digesting the stomach and duodenal wall, under what conditions may this digestion be expected to occur in man? Normally, digestion does not occur because pure gastric juice does not accumulate. It is neutralized by saliva, absorbed by ingested food, and probably neutralized by a reflux of alkaline pancreatic juice through the pylorus. Finally, in a normally motile stomach, food is passed on into the duodenum before it is saturated with acid. Anything which may disturb the emptying of the stomach, such as spasm or stenosis of the pylorus, will allow the gastric secretion to accumulate until its acid content may approximate that of pure gastric juice. It is Dragstedt's opinion that the major factor in determining the chronicity of ulcer near the pylorus is this factor of delayed emptying. Furthermore, any factor which causes a great increase in gastric secretion may act similarly.

The rôle of the nervous system in the production of ulcer is more difficult to define. That both gastric secretion and gastric motility are regulated, in part at least, by nervous impulses reaching the stomach through the vagus nerves is well known. Likewise the reflex stimulation of gastric secretion by the sight, smell, and taste of food has been appreciated for many years, and served as the basis of Pavlov's extensive researches on conditioned reflexes. It is conceivable that undue emotional stress may be a factor in the production of ulcer, either by increasing the amount of gastric secretion, or by inhibiting the motility of the stomach. Silbermann's studies, already mentioned, in which ulcer was produced by excessive psychic stimulation of gastric secretion in dogs seem quite pertinent in this connection. It is possible that in the interesting group of cases reported by Cushing in 1932 who developed acute peptic ulcers following operative trauma to the interbrain, injury to the vagus centres may have been the cause of excessive gastric secretion and subsequent ulceration. In spite of the fact that nervous stimuli may be involved in the production of peptic ulcer, Dragstedt feels that, since ulcers can be produced in portions of the gastro-intestinal tract whose central nervous system connections have been entirely severed, the immediate cause of the lesion is a local one.

Urinary Tract. Treatment of Infections by Ketogenic Diet. That the colon bacillus, a common invader of the urinary tract, cannot grow in very acid media has been known for some time.

This fact suggested that acidification of the urine by the administration of drugs might be a valuable procedure in the treatment of urinary tract infections, but W. M. Clark showed as early as 1915 that the concentration of acid in the urine could not be increased sufficiently by this method to completely inhibit the growth of *B. Coli*.

In 1931 A. L. Clark, then of the Mayo Clinic, tried the effects of a ketogenic diet in two cases of bacillary infection of the urinary tract. A ketogenic diet is one in which the supply of carbohydrate is so reduced that it is insufficient to completely oxidize the ingested fat. Fats normally "burn in the fire of the carbohydrates," but when the supply of carbohydrate necessary for their complete oxidation is not available (or cannot be utilized, as is the case in diabetes mellitus), acid ketone bodies (notably acetone, diacetic acid, and beta-hydroxybutyric acid), which are merely intermediate stages in the degradation of fat, are formed and are excreted in the urine. Prior to Clark's work tentative trials of the ketogenic diet had been made by Johnson, and Helmholtz had noted that the urine of a patient with epilepsy treated with a ketogenic diet apparently remained sterile for several days in spite of the fact that it had been voided in an ordinary container. At any rate, Clark was gratified to find that in both his cases the infection was quickly controlled. Since that time, numerous other investigators have confirmed his findings, the mode of action of the diet has been determined, and the limitation of the method pointed out.

The efficacy of the ketogenic diet in eradicating urinary tract sepsis has been found to depend upon the bacteriocidal action of beta-hydroxybutyric acid at a certain degree of acidity (Helmholtz, *Jr. Am. Med. Ass'n.* 105: 778, 1935). For this bacteriocidal action to occur the concentration of beta-hydroxybutyric acid must be as great as 0.5 per cent and the acidity of the urine as high as P_{H} 5.5. Relatively simple laboratory tests will show whether the necessary acidity has been attained, and in occasional cases it may be necessary to give in addition an acid forming substance by mouth (such as ammonium chloride).

In a recent review of his experience with this form of therapy, Helmholtz pointed out that although the colon bacillus is perhaps the most easily killed, the diet has proved effective in infections of the urinary tract caused by various other types of organisms and indeed has a wide applicability. There are certain conditions which may prevent the successful use of the diet. A few patients, especially children, will not tolerate the large amount of fat which the diet contains. Others, while tolerating the diet, do not seem to absorb enough of the ingested fat to produce the necessary degree of ketosis. In those with decreased renal function the damaged kidneys do not seem to be able to excrete a urine with a high acidity and a high concentration of beta-hydroxybutyric acid. And finally, even though a sufficient concentration is obtained, the presence of stones in the urinary tract seem to be an absolute obstacle to successful treatment.

The use of the ketogenic diet is reserved, then, for those cases of chronic urinary tract infection, not associated with the presence of stones, which have failed to respond to simple therapeutic measure. If the infection is associated with an obstructive lesion that can be remedied surgically, the diet may be a helpful adjuvant in the treatment.

Helmholtz divided his patients (all children) into two large groups, those with and without ob-

struction to the urinary tract. In the first group there were 24 cases. Of these, 15 responded quickly and satisfactorily, with complete sterilization of the urine, usually within 24 hours (although the diet was usually continued for a week or more). In 6 cases there was a marked tendency for these infections to relapse, so that several trials of the diet were necessary. In 3 cases the diet failed, because the necessary degree of ketosis could never be obtained.

The second group consisted of 21 patients with infections of the urinary tract associated with obstruction, usually the result of congenital anomalies. In this group the diet was successful in 6 cases, and the urinary tract remained free from infection after the diet was discontinued. In 5 cases, the urinary tract was sterilized temporarily, but after varying periods of time, relapse occurred. In the remaining 10 cases, the treatment was unsuccessful. In 5 the failure was to be explained by the presence of stones; in the other 5, by inability to secure a satisfactory ketosis (because of decreased kidney function, etc.).

It is apparent then, that the ketogenic diet has a definite, though limited place in the armamentarium of those who must treat urinary tract infections. The general use of the diet has been made easier by Clark who has recently prepared a simple form of diet which may be used in the case of ambulatory patients, and whose preparation does not require the services of a trained dietitian (*Jr. Am. Med. Ass'n.* 104: 289, 1935).

See BIOLOGICAL CHEMISTRY; LAW; MEDICAL JURISPRUDENCE.

MEMEL, mā'mel, or **KLAIPEDA**. A territory on the Baltic, including the city of Memel (population, 37,523 on Jan. 1, 1934) and the lower reaches of the Memel or Niemen River, which was detached from Germany by the treaty of Versailles and incorporated in Lithuania in 1924. Under the Memel Convention signed May 8, 1924, between Lithuania on the one hand and Britain, France, Italy, and Japan on the other, the predominantly German population of Memel Territory was guaranteed a large measure of local autonomy. Total area, 1099 square miles; population, 149,273 on Jan. 1, 1934. See GERMANY and LITHUANIA under *HISTORY* for political developments in 1935.

MENDEL, LAFAYETTE BENEDICT. An American biochemist, died in New Haven, Conn., Dec. 9, 1935. Born in Delhi, N. Y., Feb. 5, 1872, he was graduated from Yale University in 1891, and received his degree of Ph.D. in 1893. He held the Larned Fellowship at Yale from 1891 to 1894, and in the following year became a research student at the Universities of Breslau and Freiburg. He began to teach at Yale in 1892, and resumed in 1897 as assistant professor of physiological chemistry at Sheffield Scientific School, which marked the beginning of his distinguished career. He was promoted to full professor in 1903 and in 1921 was appointed Sterling professor of physiological chemistry at Yale. During 1923, Dr. Mendel served as Hitchcock lecturer at the University of California, and in 1930 as Schiff lecturer at Cornell.

From 1903, he was a member of the Board of Governors of Sheffield, of the Graduate School of Yale, and of the School of Medicine at Yale. Also, he was an adviser to the protein and nutrition division of the Bureau of Chemistry of the U.S. Department of Agriculture; a director of the Russell Sage Institute of Pathology, a member of the advisory board of the J. S. Guggenheim Memorial Fund, research associate at the Carnegie Institute

of Washington (1910), and a member of the council on Pharmacy and Chemistry of the American Medical Association. From 1917 to 1919 he served as the representative of the United States Food Administration on the inter-allied scientific food commission, and from 1930 was research associate in biochemistry at the Connecticut experiment station at New Haven.

Dr. Mendel's researches were particularly connected with the physiological chemistry of digestion and nutrition; protein metabolism; physiology of growth; vitamins, and accessory food factors. He was considered one of the foremost men in his field, and particularly outstanding among his contributions to the realm of chemistry were his researches in connection with the discovery of Vitamin A in 1913; the function of Vitamin C, and dietary factors that promote growth.

The recipient of many honors, he was awarded the Gold Medal of the American Institute of Chemists (1927) for his work of outstanding benefit to science, and the Conne Medal of the New York Chemists Club (1934). He was a member of the National Academy of Science; American Chemical Society; American Society of Biological Chemistry, president 1911; associate member of the American Medical Association; a fellow of the American Association of the Advancement of Science, and the first president of the American Institute of Nutrition, 1934.

A writer on scientific subjects, he contributed to many chemical journals, and was associate editor of *Chemical Reviews*, and editor of the *Journal of Biological Chemistry*, the *Journal of Nutrition*, and of *Chemical Monographs* of the American Chemical Societies. His own publications include: *Childhood and Growth* (1907); *Changes in the Food Supply and Their Relation to Nutrition* (1916); *Nutrition—The Chemistry of Life* (1923).

METALLURGY. In the reduction of ores to metals, and in the preparation of those metals for ultimate use, refinements of previously known processes, improvements in standard machinery, and a more general understanding of the fundamental physics and chemistry involved are to be observed rather than radical changes. Progress is most notable in the field of physical metallurgy rather than in processes of ore reduction; a mill or smelter 10 years old, and following the practice of that time, would not be greatly out of date today, but the producer of metals and alloys for industrial use would be greatly handicapped if he were obliged to confine his output to what was available in 1926. Variety and quality have been the aims of the up-to-date metallurgist in his effort to succeed in a competitive world, with the result that man is living in an increasingly metal age.

Ore Dressing. The time is passing when one can sit at a desk, study a description of an ore, and prescribe a suitable treatment process. Use is made of the same old riffles, blankets, jigs, tables, crushers; ball, tube, and rod mills; classifiers, dewaterers, agitators, flotation machines, and filters, but so many combinations have been worked out, and so many types of machinery of the various kinds are available, that the development of a flow sheet in a test plant is almost a necessity for efficient performance. Highest recovery of the wanted mineral or minerals, utilization of by-products if possible, minimum tailing losses, and the best physical character of the product must all be considered along with capital and operating costs. Microscopic examination of feed and products is a modern development that is almost always helpful.

Crushing of run-of-mine ore continues to be done in either jaw or gyratory crushers, with perhaps more improvements noticeable in machines of the latter type than in the former. Advocates of gyratories are arguing for their increased use for fine reduction, down to small fractions of an inch, thereby doing some of the work commonly done by ball mills, and more efficiently. It is now possible, by the use of secondary gyratories and vibrating screens in closed circuit, to afford a ball-mill feed of a maximum size of about $\frac{1}{4}$ inch.

Probably the most radical idea in crushing and grinding machinery in recent years is the Hadsel mill, referred to in previous YEAR BOOKS. Mechanical faults have now been obviated and several new installations have indicated that the machine will have rather wide application. Its acceptance has not so far resulted in much scrapping of old equipment, however. Some further progress, though not on a commercial scale, is reported in the explosive shattering of minerals by steam. In its present form, the process involves formation of a water film on the surface of an ore by condensation from steam at pressures of 250 pounds or higher. Upon release of the pressure, the water turns to steam and, having penetrated into the ore more or less, breaks it up along planes of low fatigue strength. The idea, as worked out in U.S. Bureau of Mines laboratories, is said to indicate a power cost of about one-fifth that of ball mills; lower upkeep; less slime production; differential shattering of the various component minerals which can then be separated more or less by screening; a dry product; and improved amenability to leaching. Commercial trial would seem to be warranted.

Popularity of the Symons cone crusher, especially the short-head type, for secondary or tertiary stage crushing continues. Use of the Newhouse crusher as a secondary crusher for medium-sized plants is also notable.

Grinding mills are now almost universally installed in closed circuit with heavy-duty classifiers. The length of the mills should be short and their diameter large, with extra large feed and discharge trunnions to accommodate circulating sand loads at least 10 times the new feed. Spiral feed scoops must be extra heavy, tipped with abrasion-resisting metal, and with renewable liners. Wattmeters will serve as a guide to correct loading. A constant-head tank for dilution water should be provided, and the dilution of the overflow should be checked frequently. A gravity flow to and from the mill and classifier should be provided, but where that is impossible, the sand at least should return to the mill by gravity. Further improvements have been made in Dorr classifier equipment, and it remains the most generally used of any, though the Hardinge countercurrent classifier is affording more competition. The Akins submerged type is also not uncommon. Of the Dorr machines, the Quad F type of bowl classifier, with its large raking capacity, introduced three or four years ago, has been generally accepted as a secondary classifier in closed circuit with tube mills.

Where the ore pulp is somewhat coarser, or is unmixed with water, many types of vibrating screens are available. Some of the latest are the Symons flat balanced screen; the TelSmith, with circular vibratory motion; and the Robins circular-throw balanced screen. Screens as fine as 400 mesh have been made available by making use of the process of electrodeposition.

In the new types of thickeners, the old-style bridge type of superstructure has been eliminated,

with a consequent reduction of the headroom required. Rake arms are now made that automatically adjust themselves to variations in the raking load. Use of shallow thickeners, with underdriven rakes, as classifiers for extremely finely divided pulps, has been proved successful in several mills.

Flotation is being applied in more and more gold mills, and extensive test work has been done in the large mills of the Rand, where that type of concentration has not heretofore been employed on a commercial scale. In many American plants, unit flotation cells are used to concentrate gold between the ball mill and classifier, though in some plants jigs or hydraulic cone traps are preferred for the same purpose. Corduroy blanket tables are also finding extended use for the recovery of free gold before cyanidation or flotation.

Flotation reagents are available in ever-increasing variety. Xanthate, one of the most popular, is now available in six forms—Z3 (potassium), Z4 (sodium), Z5 (amyl), Z6 (pentasol), the last two made from amyl alcohols; Z7 (primary butyl), and Z8 (secondary butyl). There is a Dixanthogen 4, 6, and 8. New Aerofloat reagents include Sodium Aerofloat "B," somewhat like the old Sodium Aerofloat but a better promoter for zinc; Nos. 203 and 243, improvements on the old No. 208, and acting as promoters for zinc and copper sulphides and free gold; and No. 244, which is somewhat cheaper than ethyl xanthate and is being used at the New Cornelia copper concentrator in Arizona. A series of complex higher alcohols, known as the du Pont frothers, are also now on the market.

Modern types of flotation machines include mechanical agitation to a great extent, the purely pneumatic type not being so popular as a few years ago. Among the new machines may be mentioned the Fagergren, the Booth-Thompson Agitair, the Geco, and the Mayer and Hale countercurrent machine. The new Geco machine has a flat rubber disk for a stirrer, with low-pressure air injected through a perforated rubber diaphragm beneath the disk.

With current high prices of gold and silver, many old tailing dumps are being re-treated. Also, because of improved metallurgical technique, re-treatment of base-metal tailings is often economically practical. Flotation is commonly employed in such work, the most important problem in this connection being proper conditioning of the pulp. Too often the time factor is neglected. Agitation tanks of the Pachuca type, using air for agitation, are employed, with the addition of the necessary chemicals for maximum efficiency in the subsequent flotation process.

In filtering equipment, the most outstanding recent development is the string filter, which is of the drum type, a multiplicity of strings removing the filter cake instead of a scraper accompanied by an air blow. The familiar Oliver type is now available in a form that carries the cake around to be blown off below the centre line, where gravity assists. A rubber-glass filter medium has been developed, of much greater homogeneity than the conventional canvas. Small pan filters are available where only small tonnages of concentrates are to be dewatered.

Pyrometallurgy. Research at the plant of the United Verde Copper Co., in Arizona, has developed an interesting process for the treatment of copper-zinc ores in which the two metals cannot be separated by mechanical concentrating methods. A basic-lined converter is the only furnace used, the ore being gradually fed as the molten material ac-

accumulates. Zinc is expelled as fume, copper accumulates as cuprous oxide, and iron as molten magnetite in the first part of the process, which is of an oxidizing nature. Reducing gas is then blown into the vessel, producer gas being appropriate, whereupon the rest of the zinc is volatilized as zinc oxide, the magnetite is reduced to ferrous oxide, and metallic copper, about 98 per cent pure, is formed. The necessary blast for the process is preheated by the exit gases, which are also hot enough to generate all the power needed, through the use of a waste-heat boiler. The gas can then be used for sulphuric acid manufacture. The zinc fume is adaptable as a raw material for electrolytic zinc, and the ferrous oxide for making high-grade iron. Though the process is not yet commercial, it is worthy of study by smeltermen generally.

In the more conventional zinc plants, installations of the comparatively new vertical retorts are continuing both in the United States and Germany. These, with fractional distillation columns (U.S. Patents Nos. 1,994,345-1,994,358, issued in 1935) are capable of making zinc of a purity of 99.99 plus, and are thus competitive with electrolytic plants. The original cost is less and they are perhaps more adapted to certain low-grade ores. Operating conditions, however, favor the electrolytic process, especially where extreme purity is demanded. An extremely pure metal is required for making zinc die castings, the field for which is expanding rapidly.

Galvanizing plants are making a much higher-grade product than a few years ago, the zinc coating being sufficiently thick to last for many years under normal conditions. Last year saw the completion of the first wire electroplating plant, using the Tainton process. Thorough cleaning of the wire in a fused alkali bath, the wire serving as a cathode in an electrolytic circuit the while, is an important feature of the process.

Practically nothing has been published in the last year on copper and lead smelting practice, the smelters having a bad case of nerves because of several patent infringement suits that have been brought against them, or threatened. No radical changes have been made. Probably the most interesting recent work has been in lead refining and in the field of flash roasting, whereby fine particles of sulphide ore are momentarily oxidized as the ore stream falls through a heated chamber. J. O. Betterton, at the American Smelting & Refining Co. plant at Perth Amboy, N. J., has made marked improvements in the elimination of impurities from lead bullion. The technique of recovering metals from scrap, especially old battery plates, has likewise improved greatly, but the smelters are keeping their methods to themselves.

In iron blast-furnace work, higher hot-blast temperatures may be mentioned, as high as 1800° F. being reported. High temperatures in open-hearth steel furnaces are also being recognized for best efficiency, which necessitates better refractories. Some furnace roofs have been equipped with thermocouples to give more complete information to the operators. More and more furnaces are being insulated up to the floor level. Roof insulation has been successful at some plants, less so at others. More rapid charging has been studied, this involving proper preparation of scrap, larger charging pans and doors, and dolomite machines. Natural gas has been increasingly used as fuel, now that it is available at so many centres of steel production. A little fuel oil may be added to improve luminosi-

ty and heat transfer. Copper stools are still in the experimental stage.

Bessemer steelmaking has held up well recently, and more attention is being given to it. The only new steel plant in England, at Corby, produces basic Bessemer steel exclusively.

High-quality cast irons are a metallurgical achievement of the recent past. Small proportions of nickel, chromium, or molybdenum have been found to add greatly to the desirable characteristics of the product, as does proper heat-treatment. Tensile strengths as high as 70,000 pounds per square inch have been secured. Cast iron is no longer merely cast iron; it is available in a large variety of forms.

Advances continue to be made as well in the field of alloy steels, products now being available to withstand almost every conceivable severity of service—shock, vibration, abrasion, corrosion, and high temperature. Among the metals most commonly used for alloying purposes are nickel, chromium, manganese (in excess of 1 per cent), molybdenum, tungsten, vanadium, copper, and silicon (above 0.5 per cent).

METEOROLOGY. An outstanding event in the field of meteorology during 1935 was the stratosphere flight of the balloon *Explorer II* on November 11. The official altitude figure of 72,395 feet was determined by the National Bureau of Standards in Washington from instrumental records of the flight, and marks the greatest height that man has attained above the ground. At the close of the year the scientific records of this flight had not yet been completely analyzed.

A. E. M. Geddes has carried out an investigation on the trend of temperature at Aberdeen, Scotland from 1870 to 1932. He finds that the mean annual temperature has slowly increased through this period. This conclusion agrees with that reached by J. B. Kincer two years ago when he made a similar investigation on a number of stations over the world. Geddes divided the year into four seasons and investigated the seasons separately. In this way he found that the trend in the mean annual temperature was due almost entirely to the trend of the winter season alone. This result has caused the opinion that the observed trend is due to city and village influences: thus their slow but steady growth and the more speedy removal of snow from them, and the more thorough manner in which buildings where people live and work are heated as compared with former years may cause the observed winter temperatures to be slightly but progressively higher than formerly.

By a new and sensitive analytical procedure, Paneth and Gluckauf have found that the proportion of helium begins to increase above 21 km.

METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN. A branch of the Methodist Episcopal Church, organized in 1843 as an anti-slavery and non-episcopal denomination. In 1935 it comprised 29 annual conferences. There were 745 churches, 854 ministers, 663 local preachers, and 25,193 members. The Sunday schools num-

bered 771, with 9426 teachers and officers, 48,553 pupils, and 7986 persons enrolled in the home department, and on the cradle roll.

The church maintained the following educational institutions: Houghton College in Houghton, N. Y., Central College in Central, S. C., Marion College in Marion, Ind., and Miltonvale College in Miltonvale, Kans. The foreign missionary department of the Missionary Society continued its work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and mountaineers of the South. The *Wesleyan Methodist*, weekly, is the official organ of the church. The officers are: President, the Rev. E. D. Carpenter; first vice-president, Rev. F. R. Eddy; second vice-president, Joe Lawrence; and secretary, the Rev. E. F. McCarty. Headquarters are at 330 East Onondaga Street, Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH.

The year 1935 marked some interesting anniversaries, some striking trends, some unique gatherings, and some forward looking movements that promised much in the future work of the Methodist Episcopal Church. In the sixth year of the depression, during which the Church had kept her doors open and her preachers employed, there were evidences of better days ahead.

Anniversaries. The Methodist Episcopal Church joined with other churches and the American Bible Society in celebrating the 400th anniversary of the printing of the Coverdale Bible, the first edition printed in English, the book which continues to be the best seller of the years.

On October 20, the Methodists and Moravians joined in Bethlehem, in celebrating the 200th Anniversary of the sailing from England of John and Charles Wesley and 26 Moravians who were to have a very strong influence on the two brothers—the Wesleys to work under Governor Oglethorpe in Georgia and the Moravians to strengthen the Moravian settlement at Bethlehem, Pa. On March 5, St. Paul's Church, New York City, celebrated the centennial of the dedication of their first building and on August 13, the Eighteenth Street Church the Centennial of the laying of their corner stone.

Steps Toward Unity. On December 30, the Rev. Jarrell Waskom Pickett was elected a bishop of the Central Conference in Southern Asia. On September 17, the Missouri Conference met in its annual session at Springfield, Mo., Bishop Charles L. Mead, presiding. At the same time and in the same city the Southwest Missouri Conference of the Methodist Episcopal Church, South, met under the presidency of Bishop John M. Moore. The two Conferences joined in their morning devotional services; their anniversary services in the interest of temperance, education, etc., their inspirational addresses; and the Sunday morning "Aldersgate" Service, commemorating the day in 1738 when John Wesley "felt his heart strangely warmed." But there were two services that stood out distinctly as the promise of better days to come. On Wednesday evening the two Conferences met together for the Communion service. Here the ministers and members of the two Churches knelt together and received the Communion emblems from the hands of Bishops Charles L. Mead and John M. Moore and Pres. John C. Broomfield of the Methodist Protestant Church. Again on Sunday afternoon the two Conferences met for a union ordination service. For the first time in nearly 100 years of divided Methodist history, 10 men

were ordained deacons and 4 men were ordained elders by the representatives of three great branches of Methodism in America. At the close of the evening service, addressed by Secretary Diefendorfer of the Methodist Episcopal Church, and the Rev. Ivan Lee Holt of the Church South and President of the Federal Council of the Churches of Christ in America, the Bishops read the list of appointments, each for his own Conference. From this union gathering, the preachers went out to their tasks more closely united than ever before and catching step as pioneers in the much hoped for union of the Churches.

In May, 1936, in Columbus, Ohio, is scheduled to be held the Quadrennial Session of the General Conference. This is the law-making body of the Church. In 1932 there were 848 Ministerial and Lay Delegates from 131 Conferences, of whom about 60 were women. In addition to its regular work, the General Conference of 1936 is to devote a great deal of time and thought to the report of the Committee on the Unification of the Methodist Episcopal, the Methodist Episcopal, South, and the Methodist Protestant Churches. Late in 1935 a Joint Commission of the three Churches submitted a plan of union to the Churches for their approval. The proposal is that, when the union of the Churches is complete, the new Church shall be called the Methodist Church. In the United States, the Methodist Protestants have 191,595 members, the Methodist Episcopal, South, 2,725,954, and the Methodist Episcopal, 4,296,288, or a total of 7,213,837. Including the Foreign Conference, the membership is over 8,000,000, with a Sunday School enrollment of nearly 6,500,000. The Primitive Methodists, with a membership of 12,000, have already expressed a desire to become a part of the new Church. When the union is effected it will make for a closer bond between the Home Church and the Methodist Churches that have been organized in Brazil, Japan, Korea, and Mexico.

Before the union is effected, a certain procedure must be followed. The question will be submitted to the General Conferences of the Methodist Protestant and Methodist Episcopal Churches in 1936. If the General Conference adopts the proposal, by a two-thirds vote, it will then be submitted to the Annual and Lay Conferences for their approval in 1937. In these Conferences, two-thirds of the members present and voting must concur in the action of the General Conference before it is finally adopted by the Church. In 1938, the proposal will be presented to the General Conference of the Methodist Episcopal Church, South, where the same procedure will be followed and where the same vote is necessary in the General Conference and the Annual and Lay Conferences. This will make possible a deciding vote by the end of 1939.

The Methodist Hymnal. On May 4, 1928, at Kansas City, Mo., a resolution was presented to the General Conference by Chester A. Smith of the New York Conference authorizing the appointment of a committee to revise the Methodist Hymnal which had been in use since 1905. The Church, South, accepted an invitation to cooperate in the revision and in 1931 the Methodist Protestant Church asked to be allowed to join the group. Dr. Robert G. McCutcheon of DePauw University, Greencastle, Ind. was elected editor-in-chief. The revision was completed early in 1935 and the first delivery of the Methodist Hymnal, the official hymnal of the Methodist Episcopal, the Methodist Episcopal, South, and the Methodist Protestant Churches, was made on October 1.

Bishops Meetings on Evangelism. Recognizing the need of more aggressive work in the saving of men for the kingdom of God, the Board of Bishops, through its Committee on Evangelism, planned a series of meetings across the continent to awaken a new interest in this, the real work of the Church. These meetings were to be the first in a series of meetings leading up to the 200th anniversary of John Wesley's "Aldersgate Experience." From November 25 to December 13, representatives of the Board of Bishops and others held meetings for addresses, round table discussions, and a study of the programme, message, and function of evangelism in New York, Philadelphia, Washington, Pittsburgh, Columbus, Indianapolis, St. Paul, Des Moines, Kansas City, and Denver. Of the opening meeting in New York it was said that this was the largest and most enthusiastic gathering of Methodist preachers and laymen that had ever assembled in the metropolitan area.

Necrology. Among those who answered the final roll-call of the Conferences in 1935 were Charles M. Boswell, Superintendent of the Philadelphia Methodist Hospital; James (Jim) Hoover, missionary, of Borneo; Lemuel H. Murlin, educator; Edward S. Ninde, pastor; I. B. Schreckengast, educator; David G. Downey, secretary of the Board of Sunday Schools and book editor of the Church; Frank Mason North, poet, administrator, and Christian statesman; and Jacob E. Price, one of the founders of the Epworth League and for 60 years an active pastor in the Church.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church, formed in 1845 over the question of slavery. In 1935 there were 47 conferences and missions, of which 41 were in the United States and 6 in foreign countries; 16,408 churches; 7933 traveling preachers and 4096 local preachers; and 2,771,240 church members. Sunday schools numbered 15,528, with an enrollment of 1,927,581 pupils. Contributions for all purposes in 1935 amounted to \$24,169,071. The denomination sponsored 87 educational institutions, including 47 universities and colleges, 7 academies, and 31 mission schools. Important periodicals are the *World Outlook* and the *Christian Advocate*.

The Commission on Internominal Relations and Church Union, having been by the last general conference authorized and empowered and directed to represent the Methodist Episcopal Church, South, in all questions of paternity with other denominations in the United States, held during the year several meetings with similar commissions from the Methodist Episcopal Church and the Methodist Protestant Church, and finally agreed on a plan of union which they propose to transmit to the respective general conferences of the three churches for adoption by the processes which they respectively require.

During the year, the church sponsored a great Young People's Conference which was held at Memphis, Tenn., in December, bringing together more than 6000 delegates besides several thousand visitors. Headquarters of the church are in Nashville, Tenn.

METROPOLITAN OPERA ASSOCIATION. See Music.

MEXICO. A federal republic of North America, comprising 28 States, two Territories, and the Federal District (Mexico City and 11 surrounding villages). Capital, Mexico.

Area and Population. With an area of about 767,198 square miles, Mexico had an estimated

population on Jan. 1, 1934, of 17,600,000 (16,552,722 at the 1930 census). The 1930 population included 4,620,880 Indians, 2,444,466 whites, and 9,040,590 of mixed race. Populations of the chief cities at the 1930 census were: Mexico, 960,905 (1,029,068 including villages added to the Federal District in 1931); Guadalajara, 184,826; Monterey, 137,388; Puebla, 122,914; Mérida, 110,183; San Luis Potosí, 91,883; León, 99,457; Toluca, 89,895; Aguascalientes, 82,184; Veracruz, 71,883; Tampico, 70,183.

Education. The 1930 census showed an illiteracy rate of 56 per cent; 51.18 per cent of the children of school age were attending school in 1932. Education is mainly under State auspices, the Federal Government maintaining the schools only in the Federal District and the Territories. In 1932 there were 5733 urban primary schools, with 959,286 pupils; and 13,719 rural primary schools, with 917,503 pupils. Besides 108 secondary schools, there were 415 vocational, normal, and professional schools. The eight universities include two in the Federal District and one each in Michoacán, Jalisco, Nuevo León, San Luis Potosí, Veracruz, and Yucatán. See *History* for developments in 1935.

Production. Agriculture is the main support of the population. In 1934 35,815,000 acres were under cultivation or in agricultural use, 64,222,000 acres were forest lands, and 9,880,000 acres of arable land remained uncultivated. Production of the chief crops in 1934 was: Wheat, 10,104,000 bu.; corn, 66,978,000 bu.; barley (1933), 3,156,000 bu.; rough rice (1934-35), 3,269,000 bu.; beans, 5,878,000 bu.; tobacco, 24,608,000 lb.; cacao, 2,343,000 lb.; coffee, 87,443,000 lb.; cotton, 209,000 bales (of 478 lb.) in 1934-35; sugar, 520,000,000 lb. in 1934-35; henequen, 72,000 lb.; chickpeas, 2,255,000 bu. Bananas and tomatoes are other important crops. Wool production in 1934 was estimated at 2500 metric tons. Mineral output in 1934 was (in metric tons): Coal, 630,000 (565,000 in 1933); petroleum, 5,711,000 (5,087,000); iron ore, 68,000 (78,000); pig iron and ferro-alloys, 27,000 (1933); steel, 76,000 (1933); copper, 44,300; lead, 166,300; zinc, 125,200. Output of other metals in 1934 (in kilograms) was: Gold, 20,572 (19,836 in 1933); silver, 2,306,168 (2,118,229); antimony, 2,667,726 (1,949,810); white arsenic, 7,859,722 (4,697,083); amorphous graphite, 3,898,007 (2,685,439); cadmium, 384,714 (1,291,867). Mexico's silver production is normally about 40 per cent of the total world output. The industrial census of 1935 showed 249,757 manual laborers employed in 8156 establishments, excluding all household industries lacking machinery and all establishments with an annual output of less than 7500 pesos. Annual wages paid laborers totaled 122,069,601 pesos.

Production of petroleum in 1935 was 40,234,902 bbl. (38,171,946 in 1934); silver, 2,345,460 kilograms (2,306,300 in 1934).

Foreign Trade. Mexico's imports in 1934 increased by 89,467,000 pesos, or 36.59 per cent, over 1933, while exports increased by 278,774,000 pesos, or 76.38 per cent. The total value of imports was 333,942,000 pesos (244,475,000 in 1933) and that of exports was 643,741,000 pesos (364,967,000 in 1933). Of the 1934 imports, the United States supplied 202,697,000 pesos (146,545,000 in 1933); United Kingdom, 35,956,000 pesos (21,753,000); Germany, 34,491,000 pesos (29,264,000); France, 16,612,000 pesos (16,481,000). Exports went principally to the United States, 333,604,000 pesos (174,871,000 in 1933); United Kingdom, 132,352,000 pesos (79,484,000); Germany, 40,972,000 pesos (27,365,000);

Belgium, 19,766,000 pesos (16,008,000). The value of the principal 1934 imports (in 1000 pesos) was: Passenger automobiles, 14,903; iron and steel pipes and joints, 11,764; rayon yarn, 12,360; gold and silver coins, 6229; lard, 5623; cotton thread, 4225. Exports by leading items were (in 1000 pesos): Petroleum and products, 156,888; gold, 109,004; silver, 98,058; lead, 56,506; zinc, 41,546; coffee, 27,457; henequen, 14,167; tomatoes, 10,087.

Preliminary 1935 trade returns placed imports and exports at 406,598,240 pesos and 750,291,771 pesos, respectively. United States statistics for 1935 showed imports from Mexico of \$42,325,621 (\$36,495,473 in 1934) and exports to Mexico of \$65,576,275 (\$55,061,282).

Finance. Budget estimates for 1935 placed Federal revenues at 275,800,000 pesos and expenditures at 275,795,000 pesos. The chief expenditure items (in pesos) were: War department, 62,000,000; education, 45,000,000; public debt service, 32,000,000; communications, 32,000,000; agricultural credit, 20,000,000. Final budget returns for 1934 showed receipts of 295,277,000 pesos and expenditures of 263,705,000 pesos, excluding 1,035,000 pesos pending payment. In addition there were extrabudgetary expenses in 1934 of at least 21,803,000 pesos.

By the decree of July 26, 1931, the monetary unit was changed from the gold to the silver peso. The average exchange value of the latter was \$0.2810 for 1933 and \$0.2774 for 1934. The moratorium on foreign debt payments declared in December, 1931, was continued during 1935. The public debt on Dec. 31, 1934, totaled 1,400,436,000 pesos (internal, 128,136,000; external, 1,272,300,000).

Communications. Mexico in 1934 had about 14,317 miles of railway lines, of which 7015 miles were operated by the National Railways and 3925 by the State governments. Highways extended 62,140 miles, of which only about 400 miles were surfaced. The 764-mile highway between Mexico City and Laredo, Tex., was completed in 1935, 10 years after the work was initiated. Air transportation in 1934 was provided by 15 companies, with routes aggregating 9618 miles, or 2602 miles more than in the previous year. In 1933 a total of 11,971 vessels of 1,277,429 tons entered Mexican ports.

Government. The Constitution of 1917, as amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for reelection. Legislative power rests with an elective Congress of two houses—a Chamber of Deputies of 170 members chosen for three years and a Senate of 58 members, renewed every six years. The National Revolutionary Party, organized by President Plutarco Elías Calles in 1928, controls the Government and Congress, there being no effective Opposition. President in 1935, Gen. Lázaro Cárdenas, who assumed office Nov. 30, 1934.

HISTORY

Calles Overthrown. The Mexican revolution received a new and powerful impetus in 1935 when President Cárdenas successfully challenged the power of Gen. Plutarco Elías Calles, who had exercised practically dictatorial control even after his retirement from the presidency in 1928. As leader of the National Revolutionary Party, Calles had made and broken successive Presidents and was responsible for the election of Cárdenas. The latter, however, showed signs of independence soon after his inauguration on Nov. 30, 1934, and the divergence of policy between the two leaders soon led to an open break.

The issue on which the showdown came was that

of the government's attitude towards labor. Known 10 years earlier as the forceful and highly effective leader of the revolutionary masses, Calles by a gradual transition had emerged as the champion of economic conservatism—the main support and spokesman of Mexican and foreign business and commercial interests. Closely allied with Calles was a group of wealthy politicians, landowners, and industrialists, whose interests were in direct conflict with the radical programme they professed as members of the National Revolutionary Party. They were strongly inclined to disregard the radical provisions of the Constitution giving labor decisive advantages in its relations with capital. Labor, by its high-handed and arbitrary abuse of its privileges, provided the Calles group with an excellent excuse for their attitude.

Cárdenas, however, stood on the letter of the Constitution and gave labor unqualified support. During the spring of 1935 the assurance of presidential backing produced a series of strikes among taxi and bus drivers, telephone workers, street railway employees, and workers in many other lines. These strikes greatly hampered all lines of business activity and harassed business men and industrialists, since the labor code provided for the closing of all shops in which strikes occurred pending a decision on the strike issue by a labor tribunal. On June 12 Calles brought to a head the conflict between radicals and conservatives which had been rapidly developing in the Cabinet and in Congress. In an interview with a group of Senators he criticized the "marathon of strikes" which was sweeping the country and denounced labor leaders for disturbing "the march of economic construction." While expressing friendship for President Cárdenas, he deplored the attempt to draw a line of division between his own and the latter's supporters in Congress on this issue, and tacitly warned Cárdenas that a similar development had led to the resignation of President Ortiz Rubio in 1932.

This statement was warmly acclaimed by the Mexican Employers' Association, the National Chamber of Commerce, and foreign corporations. But the labor organizations, supported by the students, announced that they would defend their constitutional rights by general strikes, if necessary, against "the possible implantation of a Fascist régime." Most of the politicians and some generals immediately climbed on the Calles bandwagon, believing that the fate of Cárdenas was sealed. But the President met the challenge boldly and decisively. He forced the resignation of his entire Cabinet, on which Calles adherents predominated, and dismissed a number of departmental chiefs and generals who were actively associated with Calles.

These moves, combined with the army's apparent support of Cárdenas, reversed the situation overnight. The majority groups of Congress announced their support of the President and the National Revolutionary Party named as its chief former President Emilio Portes Gil, a middle-of-the-road leader who espoused Cárdenas's cause. On June 17 Cárdenas appointed a new Cabinet of sober and hard-working men, said to be sympathetic to his radical ideas. On the same day General Calles left the capital for the northwestern State of Sinaloa, announcing that he left "full responsibility for public affairs with those who have them in their hands." Shortly afterwards he left Mexico for the United States, making it clear that he accepted his defeat. Calles undoubtedly had sufficient backing to have plunged Mexico into civil war had he wished to do so. His voluntary abdication was taken by

some of his admirers as an illustration of his sincere patriotism.

With Calles at least temporarily defeated, Cárdenas took active and sagacious steps to consolidate his position. During June and July he traveled throughout the country and by innumerable conferences with the leaders of labor and agrarian organizations enlisted their enthusiastic support. Amnesty for persons exiled for their religious or political views was proclaimed early in July. The censorship was lifted to a large extent, the great gambling resorts throughout Mexico were closed, a campaign inaugurated for control of the liquor traffic, and a more lenient attitude was displayed towards the Roman Catholic Church.

With the Federal powers firmly in his grasp, Cárdenas turned to deal with the State governments, many of which were notoriously corrupt and strongholds of Callistas. His first clash was with Tomas Garrido Canabal, the radical dictator of the State of Tabasco. The latter was anathema to Catholics, laborers, and liberals alike for his 15-year Fascist rule under which the church and the saloon were banished, political opponents ruthlessly crushed, and the labor and agrarian clauses of the Constitution openly disregarded. A close follower of Calles, Garrido had been included in the first Cárdenas cabinet and the subsequent activities of his Fascist Red Shirts had aroused widespread indignation and unrest (see 1934 NEW INTERNATIONAL YEAR BOOK, p. 423).

On July 20 a group of University of Mexico students, arriving in Villahermosa, the capital of Tabasco, to organize political opposition to Garrido, were met by Red Shirt machine-gun fire. Three were killed and others wounded. The news provoked nation-wide protest demonstrations, especially in strongly Catholic centres, and Cárdenas seized the opportunity to strike. He summarily supplanted the Governor and military commander of Tabasco with his own appointees, ordered the dissolution of the Red Shirts, and forced Garrido to take refuge in Costa Rica. This coup greatly enhanced the President's prestige and he used it during succeeding months to oust several other State Governors who were either strong Calles supporters, notoriously corrupt, or antagonistic to the interests of agrarians and industrial workers. Furthermore, in an apparent attempt to offset the predominant power of the army, he took steps to arm and organize the agrarian workers. The redistribution of the large estates was also resumed with additional vigor.

Cárdenas showed his radicalism, tempered with moderation, in other directions. His appointment of Señorita Palma Guillén as Minister to Colombia made Mexico the first Latin American country to honor a woman with a diplomatic post. After lack of funds and strife between right and left wing students had caused the University of Mexico to close indefinitely on September 11, the President withdrew most of the institution's autonomous powers, made it again dependent upon State aid, and ruled that socialistic education was required. The ruling was interpreted in a liberal manner and the university was reopened September 26. Later the same month the President sent a special message to Congress proposing a complete change in the system of higher education inherited from Spanish colonial days. Declaring that the existing system reflected all the vices and anachronisms of the social order, he urged that higher instruction be made available to the working class and the peons by means of free

tuition and the provision by the state to students of free lodgings, food, and clothing.

The tension engendered in Mexico by the Cárdenas-Calles clash was reflected in a fatal shooting affray in the Chamber of Deputies on September 11, in which two Deputies were killed and two wounded. The Cárdenas adherents, constituting a majority of the Chamber, charged that the shooting was planned by the Calles supporters to discredit the President. The following day the majority bloc voted to expel 17 minority Deputies. A rule against the carrying of guns in Congress also was adopted.

During October and November President Cárdenas was intermittently ill with fever contracted during his travels through tropical Mexico. Rumors that he would be forced to resign proved unfounded and in December he was reported as fully recovered. On November 30 he completed the reorganization of his cabinet by the appointment of Edward Hay, a former cabinet minister, as Minister of Foreign Affairs. About the same time the government authorized horse racing and dice and domino playing to be resumed at Tijuana and other border resorts which had been practically ruined by the President's order against gambling. On October 24 the President, clarifying his position regarding foreign capital in Mexico, invited alien investors to enter the Mexican investment field. He promised fair treatment and full protection as long as Mexican laws were strictly adhered to.

Church-State Struggle. The victory of Cárdenas over Calles was followed temporarily by a distinct moderation of the old struggle between the Roman Catholic Church and the state, which reached an acute stage during 1934 and the first months of 1935. On Feb. 12, 1935, the government had continued its attack upon the church by barring all religious literature from the mails. Early in March the Archbishop of the State of Durango protested "the innumerable outrages committed in that State which have not only violated the rights of the church but also the most elemental rights of citizens." On March 6 Archbishop Pascual Diaz, Primate of Mexico, was held under arrest for 21 hours and fined 100 pesos for confirming a group of children in alleged violation of the law. About the same time a clash between Red Shirts and Catholic students of the University of Guadalajara resulted in three deaths and injuries to seven others.

Tension between the government and the Catholics, particularly over the issue of socialistic education, was becoming more acute when the Cárdenas-Calles breach occurred. The elimination of Garrido and several other strongly anti-Catholic members of the cabinet and the appointment of Gen. Saturnino Cedillo, former Governor of the State of San Luis Potosí, as Minister of Agriculture served to lessen Catholic apprehension. Under Cedillo's rule San Luis Potosí had escaped the extremes of the religious struggle, and it was evident that he would exercise a liberal influence in the cabinet. Moreover, the President, while affirming his intention of enforcing the church laws, gave Catholic organizations a hearing which had previously been denied. In some of the strongly Catholic cities and States observers reported that the legal restrictions upon the church were no longer being enforced.

On September 4, however, the President approved a law nationalizing all churches and buildings used for public worship, including religious schools and the residences of bishops and priests. In October, 14 archbishops and bishops petitioned President Cárdenas on behalf of the entire Roman

Catholic hierarchy in Mexico, asking abrogation of the nationalization law and also amendment of four articles of the Constitution, namely, those imposing socialistic education, restricting religious freedom, confiscating church property, and restricting the number of clergy.

General Cárdenas rejected the petition in a sharply worded letter made public November 5. This exchange, while tending to restore the church-state dispute to a controversial plane, was accompanied by a renewal of violent conflict between government adherents and the opponents of socialistic education. Large and well-armed bands of rebels took the field in Jalisco, Sonora, and a number of other States and carried on guerrilla warfare against government officials and school teachers. Most of them were reported to have been broken up by Federal troops, after a number of serious encounters. A considerable number of priests and lay leaders of the Catholic defense movement were arrested by the government.

U.S.-Mexican Relations. The church-state conflict in Mexico led to repeated demands by Roman Catholic organizations in the United States for intervention by the United States Government. In January Sen. Robert F. Wagner of New York introduced a resolution in the U.S. Senate calling for the severance of trade relations with Mexico. In the House of Representatives there were demands for the breaking-off of diplomatic relations and the recall of Ambassador Josephus Daniels. Senator Borah of Idaho, referring to the "vindictive anti-religious policy of the present Mexican Government," called for an inquiry into "religious persecution and anti-religious compulsion and agitation in Mexico for the purpose of determining the policy of the United States in reference to this vital problem."

The Borah resolution was tabled by the Senate Committee on Foreign Affairs and the State Department took no action. In response to a demand from Martin H. Carmody, Supreme Knight of the Knights of Columbus, that the government halt "persecution of religion by the Mexican Government," President Roosevelt on November 17 emphatically declined. He said he would not permit the United States to "undertake a policy of interference in the domestic concerns of foreign governments and thereby jeopardize the maintenance of peaceful conditions."

The Gold Shirts. The appearance in Mexico of a Fascist organization, labeled the Gold Shirts, was the signal for counter-preparations by Communists and radicals. The rising hostility between Right and Left wing elements broke out in a serious clash between Gold Shirts and radicals in Mexico, D. F., on November 20, in which 5 persons were killed and 34 wounded. Two days later the Mexican Senate adopted a resolution asking President Cárdenas to dissolve the Gold Shirt organization.

The Silver Problem. The action of President Roosevelt in raising the price of newly mined domestic silver from 64.64 cents to 77.57 cents per ounce during April, 1935, had serious repercussions upon the Mexican monetary system. As the largest producer of silver, Mexico derived substantial benefits from the resulting rise in the price of the white metal. On the other hand the value of the silver in the peso appreciated so rapidly that it became profitable to melt down coins and sell them as bullion. The Mexican Government forestalled this tendency by a decree of April 26 requiring that all silver money be turned over to the Treasury and exchanged for notes. The peso then returned to its

previous level. A new 50-centavo coin, known as the *toston* (plural, *tostones*), containing a smaller relative amount of silver, was also issued.

Prosperity Returns. The increased price of silver was an important element in the economic revival which continued during 1935. Other factors were the heavy influx of tourists, chiefly from the United States, and the liberalization of credit by the Bank of Mexico and the National Bank of Agricultural Credit. By September, 1935, the government was running a substantial surplus and receipts for the entire year were expected to exceed expenditures by nearly 50,000,000 pesos. This development lent special interest to President Cárdenas's announcement of August 16 that payments on the foreign debt would be resumed as soon as possible. Meanwhile the government used part of its surplus to finance a number of infant industries and to establish semi-governmental enterprises designed to reduce retail prices of certain commodities, such as paper. The cooperative movement, which first received legal recognition through legislation effective in May, 1933, made rapid strides during 1935, 324 cooperative societies being formed in the first half of the year. The movement received vigorous support from the President and the government.

Macfarland, *Chaos in Mexico* (New York, 1935); *Renascent Mexico*, edited by Hubert Herring and Herbert Weinstock (New York, 1935).

MIAMI UNIVERSITY. A coeducational State-supported institution at Oxford, Ohio, founded in 1809. The enrollment for the autumn of 1935 was 2611. The enrollment in the summer sessions 1st term, 606; 2d, 259. The faculty numbered 199. The income from the State of Ohio, fees, gifts, and income on investments for 1934-35 was \$1,282,488. There were 131,500 bound volumes in the library. President, Alfred H. Upham, Ph.D.

MICHIGAN. Population. On Apr. 1, 1930 (Fifteenth Census), 4,842,325; July 1, 1934 (latest Federal estimate), 5,093,000; 1920 (Census), 3,668,412. Detroit had (1930) 1,568,662 inhabitants; Grand Rapids, 168,592; Flint, 156,492; Lansing, the capital, 78,397.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame) ...	1935	2,329,000	3,588,000*	\$21,887,000
	1934	2,373,000	1,914,000*	33,112,000
Corn	1935	1,476,000	51,660,000	30,996,000
	1934	1,392,000	33,408,000	27,060,000
Oats	1935	1,308,000	43,818,000	12,269,000
	1934	1,222,000	28,717,000	14,071,000
Wheat	1935	817,000	17,919,000	13,622,000
	1934	793,000	11,120,000	9,787,000
Dry beans	1935	540,000	4,806,000*	9,852,000
	1934	536,000	3,377,000*	9,287,000
Potatoes	1935	263,000	24,985,000	12,492,000
	1934	268,000	34,304,000	10,291,000
Sugar beets	1935	115,000	712,000*
	1934	117,000	999,000*	5,914,000
Barley	1935	201,000	5,326,000	2,450,000
	1934	188,000	3,384,000	2,403,000
Apples	1935	9,177,000	6,057,000
	1934	6,464,000	5,430,000

* Tons. * 100-lb. bags.

Mineral Production. The quantity of iron ore mined in the State rose to 5,039,144 gross tons (1934) from 2,433,949 (1933). The shipments of ore exceeded the production in both years, but the

excess tapered off in 1934. The quantity shipped attained 5,497,953 gross tons in 1934 as against 6,099,031 for 1933; the totals by value were \$15,646,165 (1934) and \$18,442,073 (1933). The reserves of iron ore as reckoned by the State's tax commissioners totaled 162,213,481 gross tons at the outset of 1935.

The mining of copper improved somewhat, attaining a total of 70,102,754 lb. of copper (1934), as against 68,999,174 for 1933; by value the yearly total rose to \$3,857,269 (1934) from \$2,998,600 (1933). Though the production of coal, some 631,000 net tons for 1934, did not suffice for coking operations on a great scale, the steel-using industries of the State tended to promote the increase of the production of coke. The quantity produced rose to 2,547,747 net tons (1934), from 2,341,081 (1933); the value of the total for 1934 was \$14,348,536. Coal to the quantity of 3,890,465 tons, brought from other States, was used in 1934 for coking. The coke, in its turn, was largely consumed in blast furnaces to produce pig iron, of which the output increased to 644,895 gross tons for 1934, from 407,011 for 1933; and the yearly value to \$9,987,451 (1934) from \$6,181,318 (1933).

There were mined, in 1934, 281,033 short tons of gypsum, by value \$2,469,222. The production of salt diminished slightly to 2,012,370 short tons (1934) from 2,090,254 (1933); by value, to \$5,470,684 from \$5,679,737. The production of petroleum exceeded records for the third successive year, attaining some 10,708,000 barrels for 1934.

Education. The latest collated statistics on the public schools were those for the academic year 1933-34. Inhabitants of school age (from 5 to 19 years, inclusive) on May 31, 1934, were reported to number 1,392,822. The year's average total of membership in the public schools was 961,043. Of this total, 640,695 belonged to the elementary schools and 320,348 to the high schools. Not to count service of debt nor capital outlay, the year's expenditure for public-school education throughout the State amounted to \$59,159,876. The salaries of teachers, for the year, averaged \$1152.29.

Legislation in 1935, by an act for State aid and a system of equalization for the public schools, much amplified the State's share in public education; the act guaranteed free tuition in high school to all qualified pupils.

Charities and Corrections. The State Welfare Department, the body having in 1935 the State's central administrative authority in matters of the care or custody of persons, originated in a statute of 1921. It had for its executive head a director (Fred L. Woodworth). Responsibility for the divers branches of its work was assigned among five commissions: the State Welfare Commission, State Prison Commission, State Hospital Commission, State Correction Commission, and State Institute Commission. The first of these had seven members, the others five each. The Director and all the commissioners held by appointment of the Governor, confirmed by the State Senate, until replaced.

The State Welfare Commission licensed and supervised institutions and agencies, not directly maintained by the State, such as maternity hospitals, boarding homes for children, and charities soliciting public support; it supervised homes for the aged, county infirmaries, jails, probation, juvenile parole, the operation of mothers' pensions, and the laws as to dependent and neglected children. The other commissions divided among them the supervision of 17 State institutions.

The State maintained the following institutions: the State Prison; Michigan Reformatory, at Ionia; Branch Prison, Marquette; Boys' Vocational School (correctional); Girls' Training School (correctional); Michigan Children's Institute (handicapped children); School for the Deaf; School for the Blind; Employment Institution for the Blind; hospitals for mental patients, at Kalamazoo, Pontiac, Traverse City, Newberry, Ionia, and Ypsilanti; Michigan Home and Training School; and Farm Colony for Epileptics. The inmates of all these institutions numbered 29,007 on November 1; the State prisoners alone, 7348; the correctional schools, 778; the mentally disordered, 13,734; those in the Home and Training School (plus some maintained outside, in a county institution), 4933.

Legislation. Among the acts of the Legislature were those revising the system of pensions for old people; permitting the territory of counties to be differentiated into zones subject to diverse regulation as to occupancy and use; requiring teachers in the schools of higher education to take an oath of allegiance to the United States; and requiring the sale of eggs by weight.

Political and Other Events. The revision of the State's system of pensions for the aged was rendered necessary by the failure, as a revenue-bringer, of the \$2 head tax that had been imposed to meet the cost of the system. It was reported in March that 2,755,100 of the 2,939,409 persons liable for this tax had not paid. The State Supreme Court upheld on October 12 the validity of the emergency banking act of 1933, as to discharging from debt a reorganized bank despite the refusal of a considerable depositor to accept composition. The decision was important, in that 195 institutions had been reorganized under the act. The centennial of Michigan's acquisition of Statehood was marked by the issue on November 1 of a special 3-cent postage stamp.

Economic conditions in the State were greatly improved because of increased activity in the automobile-manufacturing industry. The year passed without serious labor troubles in the State, among people engaged in that industry. However, the American Federation of Labor organized the International Automobile Workers' Union in Detroit.

The Rev. Charles E. Coughlin, Catholic priest and advocate of social measures, continued his broadcasts by radio to a great nation-wide audience and exerted a particular influence on opinion in his own State of Michigan. He was condemned, as it appeared, though not by name, in an address of Cardinal O'Connell of Boston on May 23 referring to "those who stir uprisings and create discontent in the hearts of the poor." Discontent in the area of Detroit took the form during the summer of a popular movement against the high prices for food and particularly for meats; the protest started among housewives in Hamtramck and grew to serious proportions. The movement was hostile impartially to the New Deal and to the meat packers. Disquiet among the wage-earning group was much checked by a prevalent improvement of wages in the automobile industry.

Elections. A State election for the choice of Judges and some other officers was held on April 1. While no major National issues were involved, the election of a chiefly Republican ticket by a strong Republican majority tended to confirm the partisan trend shown in the previous November. An election held in the 3d district, to fill a vacancy in the Federal House of Representatives, December 17, was

won by a supporter of the Townsend Old Age Pension Plan. The winner, Vernon W. Main, who was also the regular Republican nominee, gained a 2-to-1 majority over the vote for his two opponents.

Officers. The chief officers of the State, serving in 1935, were: Governor, Frank D. Fitzgerald; Lieutenant-Governor, Thomas Read; Secretary of State, Orville E. Atwood; Treasurer, Theodore I. Fry; Auditor, John K. Stack, Jr.; Attorney-General, Harry S. Toy; Superintendent of Public Instruction, Dr. Paul Voelker.

Judiciary. Supreme Court: Chief Justice, William W. Potter; Associate Justices, Nelson Sharpe, Henry W. Butzel, Walter H. North, Louis H. Fead, Howard Wiest, George E. Bushnell, Edward M. Sharpe.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women at Ann Arbor, founded in 1817. In 1934-35 the enrollment was 13,691. The registration in the 1935 summer session was 4066. The teaching staff was composed of 714 members. For current expenses, \$4,425,000 was received from the State, while approximately \$4,458,000 was derived from other sources. Gifts (included in the above) amounting to more than \$575,000 were received during the year, all for specified purposes; the larger part of this sum was intended for various research projects. Funds for the purchase of a carillon were donated by Charles Baird, '95, of Kansas City, Mo. In September, 1935, there was announced the gift of \$5,000,000 by the Horace H. Rackham and Mary A. Rackham Fund for the purpose of furnishing a building for the Graduate School and an endowment, the income of which is to be used to enlarge and improve the school's work. A very important action was taken by the State Legislature of 1935, which enacted a law preserving the principle of the old mill tax law, effective since 1867, whereby the University receives a continuing appropriation from year to year, based upon the valuation of taxable property in the State. Since the State property tax was abolished, however, the source of the University's appropriation is now the general fund of the State, rather than the proceeds of a property tax. The University libraries contained 926,396 volumes. President, Alexander Grant Ruthven, Ph.D.

MIDDLEBURY COLLEGE. A coeducational, nonsectarian college at Middlebury, Vt., founded in 1800. For the autumn term of 1935, 626 students were registered as undergraduates and 19 as graduates; of these 341 were men and 304 women. The enrollment in the special summer schools of French, Spanish, German, Italian, and English, conducted by the college, amounted to 618. There were 78 members on the faculty. The productive funds of the college in 1934-35 amounted to \$4,087,268.01, and the income for the year was \$330,878.11. Gifts to the college were \$21,651.55. The library contained 60,000 volumes. President, Paul Dwight Moody, D.D.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MID-TOWN TUNNEL. See TUNNELS.

MIDWAY ISLANDS. A group of islands in the North Pacific, some 1200 miles to the northwest of Hawaii. Area, 28 sq. miles; population (1930), 35. The islands contain a relay cable station and, in 1935, became a base of the transpacific air service of the Pan American Airways. By an executive order the islands were placed under the jurisdiction of the U.S. Navy Department.

MILITARY PROGRESS. During the year 1935 one had but to scan pictorial reviews in the

daily papers and magazines to note the far flung activities of all nations along the lines of military preparations on land, the sea, and in the air. *Get ready* has been the prevailing theme in all actions—civil and military—and the feverish haste in getting ready shows the tension and fear in the world.

The plebiscite over the strategical industrial area of the Saar determined overwhelmingly the desires of the population as to its future political status. France receives 60,000,000 gold dollars and 11 million tons of coal for her coal interest and Germany is to observe and protect the rights of all residents, whatever that signifies. The settlement of that question took from the realms of dispute one of Europe's most baffling sore spots.

The dispute between Italy and Ethiopia, the culmination of a series of border incidents early in the year, forced itself upon the attention of the League of Nations by the request of Ethiopia to halt Italian "aggression."

At the beginning of the year Europe's atmosphere seemed to be clearing and the tension of Germany's withdrawing from the League of Nations and the Disarmament Conference sensibly relaxed. The accession of the U.S.S.R. to the League and the settlement of the Saar and Hungarian-Yugoslav questions apparently increased the prestige of the League. When the League imposed sanctions in October on Italy after an almost unanimous agreement among its nation members that Italy was the "aggressor" there was no question that it had asserted its worth and power. See LEAGUE OF NATIONS.

The *Armaments Year Book* for 1935 issued by the League of Nations on June 24, 1935, gives what it calls the "minimum figures for the world's military expenditures." These show that the arms bill has risen 1,500,000,000 gold dollars at the old parity in the last ten years. The figures for the great powers for the year 1935 are as follows:

Great Britain	£.	107,000,000
France	franc.	10,623,000,000
Germany (1934)	marks	894,000,000
Italy	lire.	4,300,000,000
Japan	yen.	1,021,000,000
U S S R.	rubles	6,500,000,000
United States	dollars	902,000,000

The British figures do not include the dominions or colonies and the German figures are unusually low. The U.S.S.R. increase is the largest. The year book presents information for the first time on the military situation in the mandated areas, on anti-gas organizations, on military preparation and training for the young.

As the year closes Eastern Asia is very much embroiled. On Christmas Eve martial law was declared in the native district of Shanghai. Japan moved her marines into the city, using tanks to patrol the tense streets. In the north and west Japan's army and her influence press forward.

China. The Autonomy moves in North China became serious enough the latter part of November for the Great Powers to take notice. If carried through Japan will have executed another "forward pass" and five provinces having a combined area of 470,991 sq. mi. will have passed under Japanese control. The new situation drawing attention to the provinces of Chahar, Suiyuan, Shansi, Hopei, and Shantung is without doubt the programme Japan has been pursuing for several years. The importance of the move lies in the possible fate of China proper. Two reasons have been given for the move—to beat back a communist wave about

to engulf North China and Mongolia, and anti-Japanese activities must be curbed. Whichever is correct, if either, Japan's objects are clear—the removal of all remnants of Chinese administration in the northern provinces not amenable to Japanese influence.

See CHINA and JAPAN under *History*.

France. Early in the year the Air Commission of the Chamber of Deputies adopted a proposal authorizing reserve flying officers to be transferred into the active army for periods up to 10 years.

According to figures given by General Maurin the males born in 1915 numbered only 124,000 indicating that between 1936 and 1939 the number of men of military age would be only half the normal number of 240,000. On Apr. 23, 1935, 120,000 men born in 1914 began their departure for preliminary training barracks. The new conscript contingents brought the official estimate of soldiers stationed in France to 410,000. They are to serve 18 months—those to be called during 1936, the class of 1915, will serve two years.

France's military budget for next year was announced at 6,953,000,000 francs. An additional billion francs for defense, in view of "German massive rearmament," was approved on December 14 by the Chamber of Deputies.

A new decree in October enables the government to lift spy trials out of police courts and turn them over to military courts.

In the French manoeuvres it was disclosed that the new motorized army was found vulnerable to aeroplane attack. Dust clouds 15 miles away disclosed the troops' route of march—observers reporting they could count the number of trucks at an altitude of 12,000 feet. Planes swooped down within bombing range of the ground forces and disappeared before troops could retaliate.

During May, France and the U.S.S.R. signed a mutual assistance pact (see FRANCE under *History*).

Germany. Early in January the Reich Ministry of Defense published an article virtually announcing universal military service in Germany. In April, Hitler decreed compulsory army service in Germany.

Early in the year formal repudiation of the military clauses of the Versailles Treaty by the German government—together with a very material increase in the military and aerial forces—brought into the open a situation which had been developing for years. The increase in her army was entirely in keeping with the general increase in military forces and equipment taking place throughout the world.

The editor of *Jane's All the Worlds Aircraft* for 1935 provides striking evidence that the intensive aircraft rearmament is world-wide. He drew attention to the difficulties of compilation of data, due to the policy of secrecy on the part of army, navy, and air service authorities of all nations. In the section relating to Germany there is no reference to the types the new firms are constructing and comparatively little about the military aircraft the older firms are known to have produced. He points out that Germany now employs, in addition to established aircraft firms, makers of warships and locomotives to make aeroplanes.

According to Frank H. Simonds in the October *Current History*, Germany is the chief war threat of a general war in Europe. "No sensible Briton can question the fact that for his country the eventual menace now taking form in the North

Sea must be far more serious than the peril that has already arrived in the Mediterranean."

Great Britain. According to an announcement of the War Office on Dec. 22, 1935, Great Britain's "contemptible little army" is to undergo a sweeping modernization. Horse cavalry will virtually disappear from the regular army and armoured cars, light tanks and other equipment more suitable for modern warfare is to supplant it. The existing cavalry division and tank brigade are to be converted into a new mobile division with two mechanized cavalry brigades instead of one, each mechanized cavalry brigade will have an armoured cavalry regiment and will comprise two motor cavalry regiments instead of three.

In the reorganization, infantry battalions of the regular army will be converted into machine gun battalions and rifle battalions. The effect of the changes will be to create smaller, more wieldy divisions and increase the proportion of supporting arms compared with riflemen.

In *Jane's All the Worlds Aircraft* for 1935 we find—"The year 1935 has been particularly interesting because the British Government decided quite suddenly to expand the Royal Air Force to something like three times its size. The full result of that policy is not yet evident, because the details of the very latest airplanes and motors being built for the R.A.F. are not yet released for publication."

Since May when the two year expansion programme of the Air Force was announced, 165 machines have been added to the first line air establishment making the number of machines therein about 1180 according to the information given to the House of Commons Dec. 18, 1935.

Italy. In 1906 Great Britain, France, and Italy negotiated an agreement the preamble of which declared it to be the common interest of all three nations "to maintain intact the integrity of Ethiopia (Abyssinia)." The first article provided for their cooperation in maintaining "the political and territorial status quo in Ethiopia."

As a member of the League of Nations, Abyssinia contends that her independence is guaranteed in addition by the entire membership of the League. It is known that the immediate cause of trouble between Italy and Ethiopia was a trifling incident which under ordinary circumstances would have caused no more than mere diplomatic correspondence. It would appear that a deeper reason for Italy's actions may be found in her long cherished plan for a railway to unite her two east African colonies—Eritrea and Italian Somaliland.

On December 6, the League of Nations sanctions in their third week had so far failed to halt the war in Eastern Ethiopia or weaken the Italian determination to conquer Ethiopia.

Up to Dec. 15, 1935, after ten weeks of strenuous effort following months of preparation the Italian forces in Ethiopia have gone a very little way toward solving the problem that has faced them. In the north, despite lack of opposition, they have not yet penetrated so far as the small Italian forces did in 1895 and have failed to lure the enemy into battle under conditions in which superior armament might have material effect.

The moral impression produced by air bombardment has not been exploited by the Italian land forces pressing their advance before the effects subsided. These will be more difficult to recover now that hard experience has taught the Ethiopians to diminish the target. An exception on the southern front was in the significant success at Gorahai

achieved by a combination of sustained air bombardment and quick following up. See **ETHIOPIA** and **ITALY** under *History*.

On Nov. 28, 1935, Mussolini ordered about 2,500,000 Italian school boys to receive officers' training. A 30-hour obligatory military course in grade, intermediate, and university classes with examinations counting toward graduation has been included. Arms tactics, map reading, and modern courses in warfare were some specified topics.

Japan. On Nov. 30, 1935, the Japanese Cabinet approved the budget providing for military expenditures aggregating 1,038,000,000 yen of which the army receives 497,000,000. This is the largest army appropriation in the history of the Empire. The maintenance of the army in Manchoukuo takes 170,000,000 yen. See **CHINA** and **JAPAN** under *History*.

Philippine Islands. The National Assembly of the Philippine Commonwealth approved on Dec. 14, 1935, the Philippine Defense Act. It appropriated \$8,000,000 for military purposes including the customary \$3,500,000 for the constabulary and \$1,700,000 for the purchase of equipment. On Dec. 21, 1935, the Act was signed by President Quezon. The plan provides for universal military training contemplating 500,000 trained reservists by the time of complete independence in 1945. Filipino youths are to begin military training at the age of 10 years. The size of the regular army is to be 19,000 officers and men, 3500 of whom will be used for public purposes. See **PHILIPPINES** under *History*.

Turkey. On May 18, 1935, the Cabinet approved the plan of compulsory pre-military training for more than 500,000 Turkish children of both sexes with practical training to be given boys and girls who still have not reached their teens, all under the general staff of the Army. The number of reserve officers was also greatly increased.

Turkey has elaborated a draft plan to avoid violation of the various defense methods she agreed to renounce by the Treaty of Lausanne and for her rearmament. Turkey is to inform the League of Nations beforehand as soon as her plans are sufficiently advanced to become practicable. Great Britain and France have indicated their willingness to support the demands of Turkey but as the year closed nothing definite had been done.

U.S.S.R. During April of 1935, the Vice Commissar of War Tukhachevsky announced that the strength of the Red Army had been increased by 56 per cent in the last year. Walter Duranty, New York Times Apr. 28, 1935, pointed to four special features in connection therewith: (1), it is the largest standing army in the world, with a peacetime force of 940,000 men and that figure probably did not include railroad and frontier guards and special troops—long term enlisted men totaling 150,000 to 205,000; (2), the Red Army is now highly mechanized, well equipped, apparently efficient and well disciplined; (3), there is a general weakness of transport in the Soviet Union and (4), the Red Army is popular and privileged and is a school and training for life as well as an army.

The high command, staff college, and schools differ little from foreign systems. One feature is unique, the Political Administration. It includes the function of military intelligence but in addition the more related task of organizing and supervising the political, mental, moral, and physical training of the army from the top to bottom.

Tukhachevsky told the All-Union Congress that

the Red Army had been mechanized fourfold in the last four years—the gains in percentages—aviation 33 per cent; baby tanks 2475 per cent; light tanks 760 per cent; medium and heavy tanks 792 per cent; infantry machine guns 200 per cent; aviation and tank machine guns 450 per cent; heavy artillery 200 per cent.

Due to transportation difficulties permanent fortifications on both the western and eastern "fronts" have been erected and garrisoned with large effectives, hence the increase in personnel. The Red Army is really an instrument of national defense—not of aggression and all civil and military training is along defense lines—to protect against enemies.

In the army of the Soviet Union there were 2 or 3 women's battalions working in the signal corps—telegraph, telephone, and radio; about 12 women fliers and possibly 3 or 4 women officers. The much mentioned women's battalions and the like are purely volunteer organizations outside the regular army machine (Apr. 27, 1935, N. Y. Times).

Under date of Apr. 10, 1935, the Associated Press, Moscow, reported that 5,000,000 young Russians, both men and women, must make parachute jumps and study aeroplane motors. The order made "military and technical training compulsory for all young Communists, members of both sexes between the ages of 16 and 24 who belong to the junior organization of the Communist Party and young working people not affiliated with the organization." The training prescribed included "at least one jump with parachute from a parachute tower during 1935"; no less than 30 hours' study of aeroplane motors, training in marksmanship, and in some cases aeroplane and glider piloting. Anti-gas drills also were prescribed.

An interesting note comes out of the U.S.S.R. telling of the quick mobility of the Soviet Army's new offensive weapon—its parachute and aeroplane infantry. Commissar Voroshilov reported 11,200 men transported simultaneously by air during manoeuvre and safely landed with full light infantry equipment—more than one division in man strength. Three thousand members of that aerial army landed with parachutes coming down behind the lines of a theoretical enemy, all equipped with automatic rifles and light machine guns. Transport planes landed at the rate of 1000 men every 16 minutes and put on the ground 8200 more soldiers.

United States. The All-American Air Races at Miami, Jan. 10, 1935, showed new conditions in air manoeuvres and tactics. The attack plane is a low flier—its engines hushed by the use of collective rings for the exhaust. Coming over trees the planes will be upon one before he knows it. Their formations cover wide areas. In a moment they can deliver a heavy attack of machine gun fire and bombs and are swift enough to strike and get away again. Four of the guns of these planes are set in the wing and body structure, and one is set in the rear cockpit. The bombs are released by means of a trigger in the stick. One new type of parachute bomb can be dropped from 75 feet. There is a four second lag when dropped from 75 feet so that in those four seconds the attack plane has flown 600 feet beyond the point of explosion. The plane was a Curtiss A-123, two-place, low wing monoplane, 720 h.p. Wright Cyclone engine, with a top speed of 180 m.p.h. and a cruising speed of 150 m.p.h. with a full military load including 5 machine guns and 300 pounds of either fragmentation or chemical bombs.

The Air Corps system of instrument (fog) land-

ing has been successfully applied to high speed tactical aeroplanes.

On Jan. 2, 1935, the War Department awarded the contract for 35 basic training type aeroplanes at a cost of \$754,738. They are two-place, low wing monoplanes, powered by Wright Whirlwind 350 h.p. engines, with an expected cruise speed at better than 160 m.p.h. Very slow landing speed has been assured by the special trailing edge flap incorporated by the designer.

On Aug. 1, 1935, War Department records indicated that the regular army had 1196 aeroplanes of all types—350 pursuit, 130 bombers, 100 attack, 237 observation, 21 amphibian observation, 61 transport, 153 basic training, and 144 primary planes. The National Guard had 129 observation, the Organized Reserves 29 observation, and 53 primary training planes. There were under contract 110 attack, 71 observation, and 30 basic training planes.

On Dec. 17, 1935, the War Department awarded contract for 100 attack planes, with spare parts for 15 planes, at a cost of \$2,560,074. The type of attack plane contracted for has a top speed of 220 miles per hour. It is an all-metal, low wing monoplane with retractable landing gear, of two-place, single engine design. It is intended for operations against ground forces and in support of the land forces of the air force. It is built to operate unusually close to the ground and to take advantage of the natural defensive features of the terrain and to escape ground fire. It has a gas capacity of eight hours at cruising speed and a service ceiling of 20,000 feet. It should take off and clear a 50 ft. obstacle with full load within 1500 ft. It has four 50 cal. fixed machine guns, and one 30 cal. flexible machine gun mounted in the rear cockpit, and is designed to carry 20 of the smaller type of bombs or 4 of the larger type. Also to carry an alternate load of chemicals to be dispensed from tanks and is equipped with adequate transmitting and receiving radio equipment. This aeroplane incorporates devices to increase lift and drag in order to reduce the speed of landing and take off to approximately 60 miles per hour and to increase gliding angle above the normal. The crew consists of a pilot and rear gunner. Pilot controls the fixed guns which fire straight forward, and release of bombs and chemicals. Rear gunner's function is primarily to protect the aeroplane from the attack of hostile aircraft. It is powered with a Pratt Whitney two-row radial engine of 750 h.p.

Another contract was awarded by the War Department on Dec. 21, 1935, for 103 of the most modern bombers known to the United States, the cost to be in excess of \$9,046,000 with production started at once in two factories. The Douglas Aircraft Company of Santa Monica, Cal. is to build 90 twin engined, all metal, low winged monoplanes powered with two 850 h.p. Cyclone engines at a cost of approximately \$72,200 each. The Boeing Aircraft Corporation of Seattle, Wash. is to build 13 of the 4-engined "flying fortress" type of bombing planes. It is understood that the cost of each will be \$196,000.

On June 7, 1935, the bill providing for the increase of an additional appointment to West Point for each Senator and Congressman was signed by the President. As now provided each will have 3 appointments. There will be 5 from the District of Columbia, 132 from the United States at large, 40 from "honor schools" as designated by the War Department, in addition to the number now authorized to be appointed from the enlisted men of

the regular army and national guard and sons of deceased officers, soldiers, and marines (S.2105). The bill also provides for calling to active service annually 1200 reserve officers as follows: 50 per cent 2d lieutenants, 30 per cent 1st lieutenants, 15 per cent captains, and 5 per cent field officers.

The Thomason Act, H.R.6250, amending the National Defense Act, was approved by the President on Aug. 30, 1935. It authorizes the President to call annually for a period of active duty of not more than one year for one officer, not to exceed 1000 reserve officers of the combatant arms and the chemical warfare service in the grade of second lieutenant. Also, for the period of 10 years beginning July 1, 1936, the Secretary of War is authorized to select annually 50 officers from those who have received this training to be commissioned in the regular army. Money must first be appropriated however to make it effective.

Protests against compulsory military training in colleges attained such large volume that the Secretary of War deemed it necessary to comment thereon in his annual report to the President. He scored such protests as "based upon the fallacy that such training instills a spirit of militarism in the youth of America." The fight of the student organizations is over the making entry into the R.O.T.C. optional instead of compulsory. Notwithstanding, there was appropriated for the next fiscal year \$1,000,000 for extending R.O.T.C. units in public high schools and colleges.

Maj. Gen. Malin Craig was appointed Chief of Staff with the rank of General on Oct. 2, 1935. He graduated from West Point on Apr. 26, 1898.

A significant feature of the new proposal in connection with regimental infantry organization is the separation from infantry battalions of their machine gun companies, the segregation of the latter within each regiment as a consolidated unit in which will be included the mortar. In each regiment there will be three rifle or light battalions and one supporting or heavy battalion. The light battalion will have no weapon not readily carried by a marching soldier. Speedy motor trucks will provide transportation for the heavy unit. The purpose of the regrouping is marked increase in mobility. The change in organization is due to modern semi-automatic rifles and newly developed machine guns of very light weight. The battalion will possess a fire power greater than will the old machine gun company.

The problem of protection against gas raises the same difficulties with regard to mobility that it did 1000 years ago. The warriors of old incased themselves in suits of armor that eventually immobilized them. Later high powered rifles and machine guns and artillery drove them into the ground for protection. Larger tractor drawn artillery drove them deeper until finally the extensive underground system of trenches and dugouts of the World War and armies of millions became immobilized.

The development of chemical warfare reduced this protection and now there is demand for protection against chemicals. This involves protection from head to foot with hoods, masks, and protective clothing similar to the visored helmets and suits of armor of old. To evolve protective covering for modern armies is the real problem and its difficulty is the maintaining of mobility. So any protective covering must be of light material insuring easy movement when worn.

In submitting his last report as Chief of Staff General MacArthur stated that for the first time since 1922 "the Army enters a new fiscal year with

a reasonable prospect of developing itself into a defense establishment commensurable in size and efficiency to the country's minimum needs."

In the appropriation bill Congressional approval was given to increase the enlisted strength 46,250 and recruiting began on July 1, 1935. For economic reasons the entire increase is to be absorbed in the lowest enlisted grade, i.e. unrated privates at \$21 per month. The increase voted was intended to bring the strength of the army to 165,000 men but the Budget Bureau stepped in and withholding \$9,000,000 forced curtailment of recruiting so that by Dec. 31, 1935, the total strength was approximately 140,000.

The new promotion bill directs promotion to 1st lieutenant at the end of 3 years; to captain at the end of 10 years; no officer can reach the grade of lieutenant colonel with less than 20 years' service; nor to the grade of colonel short of 26 years' service. A more satisfactory flow of promotion has been aimed at in that legislation.

With \$10,000,000 made available by PWA motor vehicles for accomplishing a partial motorization in both the regular army and the national guard have been provided. Also \$6,000,000 for ammunition needs and \$7,500,000 for procurement of aeroplanes.

A procurement programme in modern tanks and combat cars has been initiated with 78 in production and 69 provided for. A total of 3340 of the new semi-automatic rifles has been authorized.

The existing motorization programme calls for a more sweeping substitution in the national guard than in the regular army principally for the reason that any set of conditions requiring the mobilization of the national guard would imply the establishment of a rather formal theatre of operations and because motorization would facilitate mobilization.

Officers and enlisted men of the army can now have their liquor, drink it in uniform, and have it on the military reservation. An obscure clause in the Liquor Control Bill passed by Congress on the last day of the session and signed by the President repealed the wartime restrictions.

MILK. See DAIRYING.

MILLS COLLEGE. A college for women in Oakland, Calif., founded in 1852. The enrollment in the autumn of 1935 was 551, while that for the summer session was 214. The faculty numbered 85 members. Ten tutors were in residence with the students and furnished preceptorial aid. The total productive funds amounted to \$1,553,724 and the total assets to \$4,485,319 while the gross income for the year ending June 30, 1935, was \$590,877. The library contained 67,500 volumes. President, Aurelia Henry Reinhardt, Ph.D.

MINERALOGY. With the close of the year 1935 the *American Mineralogist*, the official journal of the Mineralogical Society of America, completed its twentieth volume. It has occurred to the reviewer that this event, marking as it does the close of two decades of American progress in this science, should be commemorated by a summation involving not only the growth of this journal but the part that America has been taking in the development of mineralogical science.

During the last 20 years the *American Mineralogist* has grown from a mere "collectors' magazine" with a very limited circulation to an authoritative and widely read organ taking rank with similar European publications of 50 or more years' standing. The stimulation to mineral research that has resulted from an organ of such a high standard is reflected in the number of new species described from North American occurrences during the past

decade. In this period fully one third of the world's new minerals have been announced by American scientists in the pages of the *American Mineralogist*.

A useful paper in the field of determinative mineralogy is that published in the *Mineralogical Magazine* (of London) by J. Adam Watson on "Color reactions in the micro-chemical determination of minerals." In his endeavors to find a simple and yet accurate method for the determination of the elements involved in usual mineral composition, which he could employ in teaching his University of Edinburgh students, Professor Watson has succeeded in eliminating from the micro-chemical method much of the elaboration which up to the present burdened it. By employing 33 reagents, distinctive color reactions for 37 elements are obtained. The two tables that accompany Professor Watson's excellent paper are clear and eminently usable.

The new mineral species discovered during the year 1935 is average both in number and importance.

Among the rapidly increasing number of new African minerals, which have marked the recent economic exploitation of the "Dark Continent," are two new bismuth minerals, from Cape Province. A bismuth oxychloride, differing from daubreeite, but identical with the artificial Bi OCl, from Steinkopf, Namaqualand, has been named *bismoclite*. It occurs in pale grayish to creamy white crystalline masses.

A pale yellow earthy carbonate of lead and bismuth from Bokspuit farm, Langklip, Gordonia, has been named *bokspuite* from the locality.

Lusakite, a cobalt bearing silicate, related to staurolite on crystallographic grounds, was found in Northern Rhodesia, at an obscure locality about 80 miles east of Lusaka, the capitol of Northern Rhodesia, from which place it takes its name. Tabular, orthorhombic crystals of *lusakite* are black to deep cobalt blue in color. The province of Katanga, during 1935, added to the list of new mineral species a hydrous oxide of cobalt and copper, found at Mindigi, a small village on the southwest border of the province, and named *Mindigit* from the locality. It occurs in pitch black, shining colloidal crusts, coating hematite.

A new addition to the list of native alloys recovered from residues of platinum grains from the Ural Mountains of Russia, has been shown to be a solid solution of gold and osmium in isometric iridium. This new mineral that occurs in silver white, brittle grains has been appropriately named *aurosmirid* (*aur* + *osm* + *irid*). A new highly basic chloroarsenate of lead was discovered at the celebrated source of new and rare minerals, Langban, Sweden. The mineral occurs as pale sulphur yellow, cleavable scales associated with dolomite and hausmannite. It has been named *Sahlinite*, in honor of Dr. Carl Sahlin, a Swedish metallurgist.

The now famous locality of Scawt Hill, County Antrim, Ireland (for minerals previously found in this place see INTERNATIONAL YEAR BOOKS for 1929, 1930, and 1933), has furnished a new hydrous calcium aluminate, named *hydrocalumite*, in abbreviation of its chemical composition. The cleavage flakes which characterize hydrocalumite are colorless to light yellow, and vary in lustre from vitreous to pearly.

A new sulphate and carbonate of sodium has been found in drilling a bore hole at Sarles Lake, Calif., and was named *burkeite* in honor of Mr. W. E. Burke, who separated the artificial salt from the brines of Sarles Lake in 1919. The white orthorhombic crystals are often united in x-shaped twins.

Austinite, a new hydrous zinc calcium arsenate, from the copper workings at Gold Hill, Utah, occurs in minute colorless orthorhombic prismatic crystal, whose bisphenoidal symmetry gives right and left individuals. The mineral is named in honor of Prof. Austin F. Rogers of Sanford University.

A new hydrous copper molybdenum oxide has been named *lindgrenite* in honor of Prof. Walde-mar Lindgren, of Mass. Institute of Technology. Lindgrenite was found in the copper mine at Chu-quitamata, Chile. It occurs in green, tabular, mono-clinic crystals.

MINIMUM WAGE. The first interstate compact on minimum wage was signed on May 29, 1934, at Concord, New Hampshire, the following States participating: New Hampshire, Rhode Island, Maine, Connecticut, New York, Pennsylvania, and Massachusetts. This compact was entered into under Article 1, Section 10 of the Constitution and is an extension of the principle of this section from its common application to waterways, bridges, etc., to the field of labor legislation. The signing of the document was the consummation of a movement begun by the New Hampshire authorities in 1931. Underlying the effort is an aspiration to equalize competitive conditions among the signatory States with the idea of stabilizing industry. The compact does not supersede existing laws, but safeguards them.

Massachusetts and New Hampshire have enacted legislation to meet the standard of the compact. The original document has been filed with the Department of State in Washington and a certified copy sent to each State signing. A resolution authorizing the general application of the principle involved was introduced into the Seventy-fourth Congress but no action was taken on it.

This compact may be a way of propping up the sagging wage scales in certain low-wage industries, like the needle industries, which benefited materially from the NRA codes but which experienced a reversion when the codes were declared unconstitutional. Reports of field investigations made in the fall of 1935 indicate that these industries have abandoned the artificial bottom for wages established under the codes and fallen back upon competition as the standard which will determine payments.

Cuba. An interesting effort to use minimum wage legislation to prop up low wage scales was made in Cuba by Decree-Law No. 727, issued on Nov. 30, 1934, and extended by Law No. 22 of Mar. 19, 1935. Under this legislation minimum daily wages of \$1 in cities and in the sugar industry, and 80 cents in rural districts, were established. No exemption was allowed for either contract work or piecework if the work performed occupies at least eight hours in any single day. These latter two methods of employment had been resorted to under the Decree-Law in an effort to escape its provisions.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 31 student chapters in American colleges. On Nov. 15, 1935, there were 8041 members, distributed as follows: Honorary, 16; members, 5576; junior members, 852; associates, 614; student associates, 874; Rocky Mountain members, 104; and junior associates, 5.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the society during 1935 for notable work in the field of mining and metallurgy were: The William Lawrence Saunders Gold Medal, to James MacNaughton; and the J. E. Johnson, Jr., Award to Francis Marion Rich.

The institute publishes *Transactions*, an annual in several volumes containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly magazine; the *Directory*, which constitutes a "Who's Who" in the profession; and a series of individual technical pamphlets. In connection with three other societies it maintains the engineering societies library and an employment bureau. The officers elected at the 1935 convention were: President, Henry A. Buehler; vice presidents, Henry Krumb, Edgar Rickard, John M. Lovejoy, Paul D. Merica, and Louis S. Cates; treasurer, Karl Eilers; and secretary, A. B. Parsons. Headquarters are in the Engineering Societies Building, 29 West Thirty-ninth Street, New York City.

MINNEAPOLIS-ST. PAUL. See SEWER-AGE AND SEWAGE TREATMENT.

MINNESOTA. Population. On Apr. 1, 1930 (Fifteenth Census), 2,563,953; July 1, 1934 (latest Federal estimate), 2,602,000; 1920 (Census), 2,387,125. Minneapolis (1930) had 464,356 inhabitants; St. Paul, the capital, 271,606; Duluth, 101,463.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	4,507,000	148,731,000	\$66,929,000
	1934	4,507,000	76,619,000	58,230,000
Oats	1935	4,897,000	181,189,000	41,673,000
	1934	3,767,000	72,703,000	33,443,000
Hay (tame) ...	1935	2,468,000	4,319,000*	22,027,000
	1934	2,560,000	2,154,000*	30,802,000
Barley	1935	2,304,000	58,752,000	21,738,000
	1934	1,536,000	24,115,000	19,051,000
Wheat	1935	1,874,000	19,676,000	20,039,000
	1934	1,242,000	12,534,000	12,428,000
Potatoes	1935	334,000	28,390,000	11,356,000
	1934	334,000	23,380,000	8,651,000
Flaxseed	1935	607,000	6,450,000	9,675,000
	1934	580,000	3,480,000	6,020,000
Rye	1935	495,000	9,900,000	3,465,000
	1934	291,000	2,474,000	1,682,000

* Tons.

Mineral Production. The State's predominant mineral industry, the mining of iron ore, not only held the improvement made in 1933 but further augmented yearly production to 15,389,870 gross tons for 1934, from 11,948,596 for 1933. The product of 1934 had an average value of \$2.65 a ton. The year's production fell somewhat short of shipments; these totaled 15,768,418 tons, and by value, \$41,843,148. As estimated by the State tax commission the reserves of iron ore in the State on May 1, 1934, totaled 1,256,068,447 gross tons.

Education. Many teachers otherwise unemployed continued to receive support from the Federal Government, through the FERA, which furnished money with which they were paid to conduct classes in the education of adults. The number of teachers thus engaged approximated 800, as against 500 or 600 reported for the year previous. The 47,381 adult pupils received instruction in 6023 classes, conducted at 417 centres.

Enrollments of pupils in the school districts, for

the academic year 1934-35, totaled 556,022. Of these, 417,663 were enrolled for elementary instruction (inclusive of grades from 1 to 8); 126,182 were in high-school grades (through grade 12); 2041, in junior colleges; 10,136, unclassified. The year's expenditures for public-school education totaled \$40,454,837. The monthly salaries of teachers, except those in the three chief cities, averaged \$135 for men and \$85 for women.

Charities and Corrections. The State maintained supervision over institutions for the care and custody of persons, under the laws in force in 1935, through a State Board of Control. The board was composed of three six-year appointees, one by law a woman. Under this board were a number of administrative divisions, concerned respectively with children, the blind, soldiers' welfare, tuberculosis, the insane, and other fields.

The State institutions and their populations of Nov. 1, 1935, were: State asylums, at Anoka (1342), Hastings (1050), and Willmar (1466); State hospitals, at Fergus Falls (1937), Rochester (1516), and St. Peter (1953); School for the Feeble-Minded, at Faribault (2255); Colony for Epileptics, Cambridge (860); School for the Blind, Faribault (123); School for the Deaf, Faribault (309); State Public School, Owatonna (493); State Training School for Boys, Red Wing (337); Home School for Girls, Sauk Centre (290); State Reformatory for Women, Shakopee (73); State Reformatory, St. Cloud (996); State Prison, Stillwater (1459); Sanatorium for Consumptives, Ah-gwah-ching (353); Hospital for Crippled Children, St. Paul (231).

Legislation. The regular biennial session of the Legislature enacted a measure to provide pensions for old people. The measure was designed to qualify the State to receive from the Federal Government the subvention to such pensions offered under the terms of the Social Security Act (see *UNITED STATES Congress*). The Governor, however, signed a copy of the bill that did not correspond with its final form. On this account the State Attorney-General ruled that the act was null. A measure was passed to provide \$10,000,000 for use in the succor of the indigent during the ensuing two years. The sum of \$2,000,000 was appropriated for seed loans to be made to needy farmers, at not over \$300 each. For the cost of feeding livestock where feed had run short on account of the previous season's drought, an immediately available appropriation of \$500,000 was made on February 27, under pressure from farmers. The total of all appropriations for the two years ahead approximated \$74,000,000. The rate of the State tax was raised to the highest point in the State's history.

Governor Olson sought in vain to have the Legislature carry out his campaign proposals of 1934 for a "cooperative commonwealth." In opposing him it had to resist the importunity of thousands of the Governor's partisans, who beset the Capitol.

Political and Other Events. The grants of the FERA toward support for the unemployed in the State were suspended for a time in March, because the State had not yet made provision satisfactory to the Federal authorities for meeting part of the cost. There occurred agitations both in St. Paul and in Minneapolis, for more generous dispensations of public money for the unemployed. Two men were killed and some 30 wounded at Minneapolis on September 11 in an affray with the police, during the strike of employees of the Flour City Iron Works. Governor Olson ordered the

plant of this concern to remain closed until the strike had been settled.

Twelve persons sought as participants in the abduction of Edward G. Bremer, a banker of St. Paul, on Jan. 17, 1934, were run down by agents of the Federal Department of Justice. Brought to St. Paul, five were convicted under the Federal law and sentenced to various terms of imprisonment, of which the highest was for life.

Officers. The chief officers of the State, serving in 1935, were: Governor, Floyd B. Olson; Lieutenant-Governor, Hjalmar Petersen; Secretary of State, Mike Holm; Treasurer, Julius A. Schmahl; Auditor, Stafford King; Attorney-General, Harry H. Peterson; Commissioner of Education, John Gunderson Rockwell.

Judiciary. Supreme Court: Chief Justice, John P. Devaney; Associate Justices, Andrew Holt, Clifford L. Hilton, Royal A. Stone, I. M. Olsen, Charles Loring, Julius J. Olson.

MINNESOTA, UNIVERSITY OF. A coeducational state institution for higher learning in Minneapolis, founded in 1851. The 1935 autumn registration was 13,959, while the summer session enrollment for the same year was 4827. The faculty numbered 612, an increase of 24 over the previous year. The income for the year ending June 30, 1935, amounted to \$8,601,060. Gifts received during the year totaled \$218,715, including \$50,000 from the Rockefeller Foundation for the Institute of Child Welfare, \$45,000 from the Rockefeller Foundation to be used for a Fluid Research Fund, \$10,000 from the General College Carnegie Fund and \$37,618 from the Carnegie Foundation for the Advancement of Teaching for staff retirement allowances. The total of endowment funds for all purposes was \$11,886,970 on June 30, 1935. Additions during the year included a gift of \$255,000 from Josephine L. Merriam. Income from endowment funds for the year totaled \$256,885. The Indoor Sports Building was completed at a cost of \$350,000 and a terrace addition is being constructed this year at a cost of \$32,000. An addition to the Women's Gymnasium is also under construction at an estimated cost of \$95,000. The State Legislature appropriated \$87,000 for the building and equipping of a Hospital Addition. The Library contained 785,054 volumes. Chancellor, Lotus Delta Coffman, LL.D.

MINORITIES. See LEAGUE OF NATIONS; BELGIUM, CZECHOSLOVAKIA, FINLAND, GERMANY, POLAND, and YUGOSLAVIA under *History*; JEWS.

MISSISSIPPI. Population. On Apr. 1, 1930 (Fifteenth Census), 2,009,821; July 1, 1934 (latest Federal estimate), 2,057,000; 1920 (Census), 1,790,618. Jackson, the capital (1930), 48,282.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops in 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1935	2,622,000	1,260,000 ^a	\$71,379,000
	1934	2,485,000	1,143,000 ^a	71,419,000
Corn	1935	2,693,000	36,356,000	29,085,000
	1934	2,748,000	40,121,000	33,702,000

	1934	71,000	7,526,000	5,569,000

^a Bales ^b Tons.

Mineral Production. The production of natural gas diminished again, to 9,170,130 M cu. ft. (1934) from 9,557,962 M (1933). The supply remained abundant but output was limited to demand. Except for 163,901 M cu. ft. from the Amory field, all the product of 1934 came from the Jackson field,

of which the known extent was increased by drilling to some 7500 acres.

Education. The inhabitants of school age, as reckoned for 1933, numbered 834,670. The latest published statistics summarizing the operations of all the public schools dealt with the academic year 1934-35. The enrollments in the public schools, for that year, numbered 600,712. Of these, 538,912 were in common schools or elementary grades, and 61,800 were in high schools. The year's current expenditures for public-school education totaled \$10,703,662. The yearly salaries of teachers averaged \$460.

Legislation. The Legislature met in special session on October 1 and dealt with measures of economic emergency recommended by Governor Conner. It appropriated \$1,000,000 for making advances to counties, to help them pay arrears due to teachers in public schools; set up a plan of State aid to the indigent unemployed; reduced certain taxes; raised the tax-exempt value of homesteads to \$2500, from \$1000; granted five years' exemption from taxes to lines for the rural distribution of electricity from the system of the TVA; passed an act against corrupt practises, which was designed against abuses in elections; and appropriated \$1,800,000 for education, \$1,000,000 to retire hospital-building bonds, and \$700,000 for the support of the unemployable poor, through a newly-created board.

Political and Other Events. Advocates of the proposals of Huey Long of Louisiana, to distribute the wealth of the prosperous for the advantage of the poor, sought to gain political control of the State. Former Representative Paul B. Johnson, alleged to have the support of Long, ran for the Democratic nomination for Governor. Hugh L. White and three minor candidates opposed him. White campaigned as an opponent of Longism. The primary election, held early in August, having given Johnson a small plurality, insufficient for nomination, a "runoff" primary was held on August 27. White then obtained a majority of some 12,000 over Johnson. He thus gained the Democratic nomination, which in the absence from the State of any other organized party virtually assured his election.

Three northern counties suffered severely in January from a flood of the Coldwater River, which inundated nearly 100 square miles and drove out or marooned hundreds of families. A Negro was lynched near Slayden on March 12, another, at Wiggins on June 22, two, near Columbus on July 15, and one, near Oxford on September 17. A half-mile stretch of road surfaced with a layer of cotton, overlaid with a mixture of asphalt and fine gravel, was laid in September near Greenville, to test the merit of this type of highway. The Cotton Textile Institute encouraged the test. See **FLOODS**.

Officers. The chief officers of the State, serving in 1935, were: Governor, Sennett Conner; Lieutenant-Governor, Dennis Murphree; Secretary of State, Walker Wood; Attorney-General, Greek L. Rice; Treasurer, Lewis S. May; Auditor, Joseph S. Price; Superintendent of Education, W. F. Bond.

Judiciary. Supreme Court: Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowen, George H. Ethridge, W. H. Cook, V. A. Griffith.

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher learning at University, Miss., chartered in 1844. The enrollment for the autumn of 1935 was 1239, while that for the 1935 summer session was 382. There were 70 fac-

ulty members. The library contained approximately 40,000 volumes. The income (appropriation) for the biennium was \$317,000; students' fees amounted to approximately \$200,000. Chancellor, Alfred Benjamin Butts, M.A., Ph.D.

MISSISSIPPI RIVER. See **CANALS**.

MISSOURI. Population. On Apr. 1, 1930 (Fifteenth Census), 3,629,367; July 1, 1934 (latest Federal estimate), 3,678,000; 1920 (Census), 3,404,055. St. Louis (1930) had 821,960 inhabitants; Kansas City, 399,746; Jefferson City, the capital, 21,596.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	3,879,000	73,701,000	\$44,221,000
	1934	4,815,000	26,482,000	25,158,000
Hay (tame) ...	1935	2,280,000	2,677,000*	20,613,000
	1934	2,420,000	1,510,000*	23,707,000
Wheat	1935	1,904,000	24,176,000	20,308,000
	1934	1,522,000	21,281,000	17,876,000
Cotton	1935	307,000	200,000*	11,150,000
	1934	316,000	242,000*	14,941,000
Oats	1935	1,404,000	30,888,000	10,811,000
	1934	1,235,000	13,585,000	6,521,000
Potatoes	1935	54,000	4,212,000	2,738,000
	1934	46,000	1,380,000	1,214,000

* Tons. * Bales.

Mineral Production. The mines' production of lead totaled 90,493 short tons for 1934, as against 84,980 for 1933. The value of the lead mined in the State attained some \$6,700,000 for 1934. Mines in the State produced somewhat less than one-third of all the lead native to the United States that was mined in that year; the State maintained its position as the foremost producer of the domestic supply of lead. The less important recovery of zinc from the ores of the State increased to 7059 tons for 1934, from 5042 for 1933. The combined value of the lead, zinc, and some silver and copper shipped in 1934 from the mines in Missouri was \$7,348,028; for 1933 it was \$6,712,048.

Missouri's production of lime increased in yearly quantity to some 284,000 short tons for 1934, from 230,051 for 1933; in value, to \$1,510,000 (1934) from \$1,121,295 (1933).

Education. The sales tax adding some \$1,500,000 to the State's funds for aid to public schools, the grants of such aid, according to the *Journal* of the National Education Association, increased in 1935 by 40 per cent. Consolidations including over 100 small rural districts were reported.

Charities and Corrections. A Board of Managers of Eleemosynary Institutions held in 1935 a centralized administrative power with regard to the institutional care of sufferers from tuberculosis and from mental disorders. This Board received its authority upon the abolition of the earlier State Board of Charities and Corrections in 1933. Besides doing its institutional duties it functioned as a State commission for the blind and as a State commission for old-age assistance. It also performed the administrative duties as to child welfare, through a Children's Bureau.

The State's authority over its correctional institutions was exercised through a separate Penal Board.

Legislation. The General Assembly met on January 3. To qualify the State for Federal subvention under the Social Security Act (see **UNITED STATES: Congress**) it enacted a system of pensions for the aged. This system allowed pensions at not over \$30 a month for single persons or \$45 for man and wife, to those over 70 years of age who had not

adequate means of support. Recipients must have resided in the State for five of the last previous nine years; they might own property to the value of \$1500 each if single or \$2000 to the married pair. Additional allowance at death, of \$100 for burial, was made.

In order to provide the State's half of the pension payments the State's tax on merchants' sales was amended. Its rate was increased to 1 per cent of each sale. Previously payable by the seller, it was rendered payable by the purchaser to the seller, who must in turn deliver the proceeds to the State. Payment was required, approximately, to the nearest mill. This tax and the pension act both became effective on August 27.

A liquor act was passed, chiefly to render control over saloons effective. It required all holders of licenses permitting sale by the drink of any beverages stronger than 3.2 per cent beer to close at 1:30 A.M. on weekdays and at 12 midnight on Saturdays, and to remain closed all of every Sunday. Authorities were empowered to use search and seizure and to employ nuisance-and-abatement procedure.

Political and Other Events. As the law called on purchasers to pay sales taxes, from August 27, to fractions of a cent, and as the Federal Government had failed to coin the necessary mills, the State resorted to issuing tokens similar, in shape, size, and material, to the caps used on milk bottles; these were marked in denominations of one and of five mills, and were to be receivable in payment of the tax. According to report late in the year the sales tax was proving difficult of collection.

It was not possible to put the pensions for the aged into operation when the act granting them became effective. The failure of Congress to appropriate for the Federal contribution to the payments deprived the State of half the expected money, and slow revenue from the sales tax, as well as other demands on the proceeds, cut down the State's own contribution. Pension boards nominated by the Governor for the several counties were generally unable to act. There resulted disappointment among some 80,000 persons who had hoped for immediate income through the pensions.

The Federal and State expenditure for relieving the need of the destitute unemployed in Missouri cost \$28,927,118 for 1934. Of this the State's own payment of \$2,665,105 and its subdivisions' \$3,079,261 provided about one-fifth. The FERA, declaring that the Legislature had as yet failed to appropriate its proper share toward this expense for 1935, suspended its monthly grant on April 1. The later legislation to raise revenue was followed by renewed Federal grants.

Navigation of the Missouri River between Kansas City and the mouth, a stretch of some 400 miles, was opened for 150-foot barges in April. It had been rendered possible by Federal expenditure of a sum reported as about \$57,000,000 in improving the channel to assure 6 feet of depth at low water. The improvement had begun in 1924. The Federal Government carried on in 1935 a scheme to remove some 11,000 families from their homes in the Missourian Ozark uplands and resettle them in adjacent lowland communities. It took options to purchase their upland holdings for reforestation.

The State Attorney-General delivered in the spring an opinion asserting the right of the State to call outstanding debt for refunding at the then available lower rates of interest, prior to stipulated maturities. This disturbed the cities' credit; St. Louis was unable on May 28 to get bidders for an

issue of \$1,800,000, although earlier in the year it had placed a greater issue at prices to yield the takers less than 3 per cent. See FLOODS.

Officers. The chief officers of the State, serving in 1935, were: Governor, Guy B. Park; Lieutenant-Governor, Frank G. Harris; Secretary of State, Dwight H. Brown; Auditor, Forrest Smith; Treasurer, Richard R. Nacy; Attorney-General, Roy McKittrick; Superintendent of Public Schools, Lloyd W. King.

Judiciary. Supreme Court: Chief Justice, William F. Frank; Associate Justices, J. C. Collet, Ernest S. Gantt, Charles Thomas Hays, George R. Ellison, Ernest M. Tipton, C. A. Leedy, Jr.

MISSOURI, UNIVERSITY OF. A State institution of higher education in Columbia and Rolla, Mo., founded in 1839. The enrollment for all divisions for the first semester of 1935-36 was 4287, of whom 3256 were men and 1031 were women. The total enrollment for the 1935 summer session was 2041. There were 415 faculty members. The endowment amounted to \$2,059,096, while the total income from all sources was \$2,249,288. The libraries contained approximately 350,000 volumes. President, Frederick A. Middlebush, Ph.D.

MIZPAH. See ARCHÆOLOGY.

MOISSI, ALEXANDER. A dramatic actor of the German-Austrian stage, died in Vienna, Mar. 22, 1935. Born at Trieste, Austria, Apr. 2, 1880, of Italian-speaking parentage, he was attracted by the lure of the stage and began by playing small parts in a Bohemian theatre in Vienna. In order to succeed he was told that he would have to learn German, and in three months was able to play in German, the title rôle in *Cyrano de Bergerac*. From 1903 to 1905 he performed at the Landestheater in Prague, where he came to the attention of Max Reinhardt, who brought him to Berlin. In 1904 he appeared at the newly-opened Deutsche Volksbühne, but subsequently returned to Reinhardt's management.

He left the stage during the World War to serve in the German army, and at the close of the War, appeared in plays of Pirandello and Tolstoi in Paris and Geneva. Subsequently he went to Moscow with a Little Theatre Group, and there scored a success. In 1927 he made his New York début under Reinhardt's management, and returned the next season under that of Morris Gest and toured South America. He made a motion picture entitled "The Royal Box," but the venture proved unsuccessful. His death in March, 1935, prevented him from carrying out his intention of playing the rôle of Savonarola in a play of that name at the festival in Florence at the end of April, 1935.

One of the great tragedians of the German stage, in the early days of his career, he was accused of being an emotional actor rather than an intellectual one, but had overcome this by 1914. His voice was both compelling and amazing, and Alexander Woollcott wrote of it that "it is the most extraordinary voice that ever was heard in the theatre—a voice that can cut like a scourge or, at will, sink to a curious tiny whisper, of which the faintest breath can be heard to the innermost reaches of the Cathedral." His greatest success was made in Tolstoi's *The Living Corpse*, the morality play, *Everyman*, and Ibsen's *Ghosts*. Other important rôles in his repertory were those of Romeo, Hamlet, Faust, Orestes, Othello, Marc Antony, and *Cyrano de Bergerac*. Shortly before his death he was admitted to Italian citizenship by the Italian Government.

MONACO, mön'a-kō. A principality on the Mediterranean surrounded on its land sides by the French department of Alpes-Maritimes. Area, 370 acres; population (1933), 22,153. Chief towns: Monaco (capital), 2085 inhabitants; La Condamine, 11,787; Monte Carlo, 11,055. The gambling concession at Monte Carlo was the principal source of revenue. The budget estimates for 1933 balanced at 9,348,453 francs (franc averaged \$0.501 for 1933). Ruler in 1935, Prince Louis II.

MONEY. The table on page 455 from the 1935 annual report of the Secretary of the U.S. Treasury shows the distribution of the stock of money in the United States on June 30, 1935, with comparative totals for May 31, 1935, June 30, 1934, Oct. 31, 1920, Mar. 31, 1917, June 30, 1914, and Jan. 1, 1879.

MONGOLIA. A large, vaguely defined region of east central Asia bounded by China proper, Kansu, and Sinkiang on the south, Soviet Siberia on the north, and Manchuria on the east. It is divided politically into Outer Mongolia, an independent Soviet republic under the protection of the Soviet Union; Inner Mongolia, nominally comprising the Chinese provinces of Ningsia, Suiyuan, and Chahar, which in 1935 were partly under Japanese and partly under Mongol autonomous control; and Jehol and parts of Hsingan provinces in Manchoukuo (q.v.).

The area is roughly estimated at 1,875,000 square miles and the population at from 1,000,000 to 3,000,000, mostly Mongols but with an infusion of Chinese and Russians. The Mongols lead a semi-nomadic pastoral life and livestock raising is their main occupation. However Chinese settlers in Inner Mongolia and natives under Russian guidance in the north and northwestern parts of Outer Mongolia have developed agriculture. In the latter area industries for the manufacture of livestock products, equipped with Soviet machinery, have been started on a small scale. The chief products of Mongolia are furs, skins, hides, horns, and wool. The soil is fertile but needs irrigation to be productive. Some gold is mined.

Outer Mongolia. Russian sources estimate the area of Outer Mongolia at 596,177 square miles and the population at 767,000. The capital is Ulan Bator Khoto (Urga), with about 60,000 inhabitants. Trade, largely with the Soviet Union, is a government monopoly. In 1935 Mongolia ranked seventh in importance among the Soviet Union's export markets. All lands, forests, minerals, and marine products are collectively owned and the Mongol princes and Buddhist priests have been deprived of their privileges. Governing powers are vested in a parliament (the Great Huruldan), elected by universal suffrage, and in an executive committee of 30 members (the Little Huruldan). The Little Huruldan elects the President of the republic.

Inner Mongolia. During 1935 Chahar in Inner Mongolia was detached from the control of the Nanking Government through Japanese military action and diplomacy and incorporated in the Japanese-controlled Hopei-Chahar Political Council. The Japanese also extended their influence over the autonomous Mongol government established in 1934 over Mongol territories in Chahar and Suiyuan, with its capital at Pailingmiao.

History. The extension of Japanese control over Chahar and part of Suiyuan Province in Inner Mongolia during 1935 is described in the article on

CHINA under *History*. By the middle of 1935 Japan's penetration into Inner Mongolia and her occupation of Manchuria had completed the encirclement of the eastern and part of the southern boundary of Outer Mongolia. Outer Mongolia occupied a position of great strategic importance in connection with the mounting rivalry between Japan and the Soviet Union. As a Soviet protectorate it guarded the Russian flank. Its control by Japan would enable the Japanese to cut the all-important Trans-Siberian Railway in case of war with the Soviet Union. From their first contact with the Outer Mongolians the Japanese, acting through the Manchoukuoan army, displayed a determination to extend their control over that territory. The troops of Outer Mongolia, supported by the Soviet Government, offered equally determined resistance and commencing in January of 1935 a series of border clashes took place along the Mongolian-Manchurian frontier.

The first of these occurred at Khalkha Miao on the north shore of Lake Buir. The undefined state of the border enabled both sides to claim that they had been attacked on their own territory. Attempts to settle this dispute were obstructed by the Japanese demand that Outer Mongolia be opened up and that Japanese and Manchoukuoan subjects be permitted to travel, reside, and do business there. The Mongolians, fearing that these demands were intended to pave the way for eventual Japanese control, sought to restrict the negotiations to a discussion of the border incidents and the question of delimiting the frontier. This conflict of aims persisted throughout a Manchoukuoan-Mongolian conference which met at Manchuli on the northwestern border of Manchoukuo beginning June 3 and which collapsed in an atmosphere of hostility on November 27.

With Japanese and Russian advisers guiding the policies of the Manchoukuoan and Mongolian delegations, respectively, the conference was in reality an effort by Japan and the Soviet Union to determine how far each was ready to go to insure its possession of Outer Mongolia. The Japanese were reported to have threatened to take Ulan Bator Khoto by force unless Outer Mongolia consented to admit Japanese representatives to three Mongolian cities and formally recognized the government of Manchoukuo. This the Outer Mongolians refused to do, while the Soviet representatives made it plain that their government would support Outer Mongolia in case of a Japanese attack. In December, while Prime Minister Gendun and War Minister Demid of Outer Mongolia were conferring in Moscow with Soviet military and government officials, the Japanese occupied Kalgan on the caravan route from Peiping to Ulan Bator Khoto and serious new clashes occurred between Outer Mongolian and Manchoukuoan troops along the mutual frontier.

See CHINA, JAPAN, MANCHOUKUO, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*. Consult T. A. Bisson, "Outer Mongolia: A New Danger Zone in the Far East," *Foreign Policy Reports*, Nov. 20, 1935.

MONTANA. Population. On Apr. 1, 1930 (Fifteenth Census), 537,606; Jan. 1, 1920 (Census), 548,889. Helena, the capital, 11,803 (1930).

Agriculture. The table on page 456 shows the acreage, production, and value of the principal crops for 1935 and 1934.

Mineral Production. The metal mines produced in 1934 ores containing \$14,393,186 (revised total) in value of recoverable gold, silver, copper,

* Tons.

lead, and zinc. To this total, 97,822 oz. of gold contributed \$3,418,879; 3,958,000 oz. of silver, \$2,558,707; 63,250,000 lb. of copper, \$5,060,000; 61,000,000 lb. of zinc, \$2,623,000; and 19,800,000 lb. of lead, \$732,600.

The coal mines' yearly production rose somewhat sharply to the total of some 2,990,000 tons for 1935, from 2,565,702 for 1934. The output of petroleum increased to 3,786,000 bbl. for 1934, from 2,122,000 for 1933; it thus attained the highest yearly total subsequent to 1929 and exceeded any other State in its proportionate increase over the total of 1933. The increase in the production of petroleum in 1934 was due mainly to new production in the Cut Bank field, which was much extended. The natural-gas wells produced and distributed, in 1934, 15,020,613 M cu. ft. of natural gas; of the total, about 11,400,000 M cu. ft. went to domestic users in Montana and North and South Dakota, and about 3,600,000 M to smelters, a sugar-beet refinery, and other industrial consumers.

Education. Inhabitants from 6 to 21 years old were considered to comprise the population of schoolgoing age; this group was reported to number 159,789. Enrollments in the public schools in the academic year 1934-35 totaled 116,728. Of these, 83,995 were in common schools or elementary grades, and 32,678 were in high schools. The expenditures of the year for public-school education throughout the State amounted to \$10,990,084.

A legislative measure to bring about the greater concentration of the public-school system, into some 235 administrative units instead of the actual 2300, failed to be enacted but seemed likely to get further consideration at another legislative session. Classes for the education of adults continued in 1935, supported by Federal grants through the FERA.

Charities and Corrections. The central administrative powers over the State's institutions for the care and custody of persons, under the laws in effect in 1935, rested in a State Board of Charities. These powers were supervisory and advisory. The Board was composed of three members, appointed by the Governor for terms of six years each. A Bureau of Child Protection (Maggie Smith Hathaway, Secretary) performed extensive duties in the protection of minors.

Legislation. A system of pensions was enacted for the support of elderly persons without sufficient income; by this act the State expected to qualify for Federal subvention to State pensions of this character. The marriage law was altered, to require applicants for a marriage license to present medical certificates of fitness, based on physical examination; the tubercular and sufferers from other communicable or infectious diseases were disqualified from marriage. An individual drinking permit, obtainable for \$2, was required by act to be presented by persons seeking to buy liquor at the

State dispensing shops. The Legislature considered the proposal to disestablish counties having less than \$5,000,000 apiece in taxable property and to merge their territory in other counties.

Political and Other Events. Helena and a wide adjacent area suffered a destructive earthquake on the night of October 18, which killed two men and destroyed or damaged buildings in the city to the sum of nearly \$3,000,000. The Algeria Shrine Temple, reported to have cost approximately \$1,000,000, a new \$250,000 high school, and the county hospital were among the buildings most damaged. The earthquake was one of a series that started some six days earlier and continued, sometimes with severity, for some days after the main shock. See EARTHQUAKES.

The marriage law enacted by the year's session of the Legislature produced something of the nature of a marrying strike. The number of weddings in the State fell sharply. Petitions for a suspension of the law and a referendum were filed from county after county. Upon petition from 29 counties it was expected that the law would be suspended to await the result of a referendum to be held in November.

The Federal Treasury, which had a dispute with Montana as to whether the State's liquor monopoly owed a Federal income tax, made a ruling in March exempting the monopoly. This set a precedent for the cases of 11 other States that had engaged in the liquor traffic.

Officers. The chief officers of the State, serving in 1935, were: Acting Governor, F. H. Cooney; Attorney-General, Raymond T. Nagle; Secretary of State, Sam W. Mitchell; Treasurer, James J. Brett; Auditor, John J. Holmes; Superintendent of Public Instruction, Elizabeth Ireland.

Judiciary. Supreme Court: Chief Justice, W. B. Sands; Associate Justices, John A. Matthews, C. F. Morris, Ralph J. Anderson, Samuel V. Stewart.

MONTANA, STATE UNIVERSITY OF. A State institution for the higher education of men and women at Missoula, Mont., founded in 1893. The enrollment for the autumn of 1935 was 1920. In the 1935 summer session 852 students were registered. The faculty had 98 members. The income for the year amounted to \$425,000. There were about 225,000 volumes in the library, including government documents. Acting President, Fred C. Scheuch.

MORAVIANS. A religious denomination, formed in Bohemia in 1457 under the leadership of John Huss and Jerome of Prague. In 1741 Moravians, settling at Bethlehem, Pa., founded the first Moravian church in the United States, called also the Unitas Fratrum or United Brethren. There were later established the Evangelical Union of Bohemian and Moravian Brethren in North America and the Independent Bohemian and Moravian Brethren Churches. The doctrine of the denomination is evangelical, and in its polity it follows a modification of the episcopacy.

Unitas Fratrum. There are two coördinate provinces of this, the largest branch of the Moravian Church in the United States. The Northern Province, with headquarters in Bethlehem, Pa., has a provincial synod which meets every fifth year. The provincial synod of the Southern Province, whose headquarters are in Winston-Salem, N. C., meets every third year. On Jan. 1, 1935, the provin-

cial elders' conferences of these provinces reported 152 churches, 169 ministers, 26,466 communicant members (although the actual membership is estimated at 36,312), and 146 Sunday schools with 24,413 pupils. The Society of the United Brethren for Propagating the Gospel among the Heathen carried on its work in Alaska, Nicaragua, Honduras, the West Indies, Labrador, Surinam, the Himalayas, Unyamwesi, Central Africa, and South Africa, reporting in 1934 a missionary membership of 148,653. The denomination also maintained the following educational institutions: Linden Hall at Lititz, Pa.; Moravian College and Theological Seminary and Moravian Seminary and College for Women at Bethlehem, Pa.; and Salem Academy and College for Women at Winston-Salem, N. C. The official periodical is *The Moravian*, a weekly. The Rev. S. H. Gapp was president of the provincial elders' conference of the Northern Province in 1935. The provincial elders' conference of the Southern Province was headed by the Rt. Rev. J. Kenneth Pfohl.

MORGAN MINIATURES. See ART SALES.

MOROCCO. A region of northwest Africa, divided administratively into (1) the French Zone (area, 162,162 square miles; population, 1934 estimate, 5,500,000), including about 85 per cent of the total area and population; (2) the Spanish Zone (area, 13,125 square miles; estimated population in 1933, 720,273, including about 34,000 Europeans and 13,000 Jews); and (3) Tangier (q.v.). Of the French Zone population, about 5,067,743 were Moslems. The chief cities, with their 1931 populations, were: Marrakech, 195,122; Casablanca, 163,108; Fez, 112,463; Meknès, 57,004; and Rabat, the political capital, 55,348. The principal cities in the Spanish Zone are Tetuan, with 48,300 inhabitants in 1933; Alcazar, 35,600; Larache, 32,000; Melilla, 62,835; and Ceuta, 39,870.

In the French Zone there were, in 1933, 28,057 pupils in European primary schools, 15,028 in Jewish schools, and 12,782 in Moslem schools, besides 4424 in private institutions. In secondary schools 8200 were enrolled. About 95 per cent of the Moslems, 21 per cent of the Jews, and 10 per cent of the Europeans were illiterate. There is a French University at Rabat and Moslem universities at Rabat and Fez, with about 1000 students in all. The following statistics refer to the French Zone, unless otherwise specified.

Production. Agriculture and stock raising are the principal occupations. About 8,648,500 acres were under crops in 1933. Livestock in 1934 included 1,965,000 cattle, 8,086,000 sheep, 4,704,000 goats, 94,000 swine, 218,000 horses, 121,000 mules, 694,000 asses, and 154,000 camels. Wool production in 1933 was 12,200 metric tons. The 1934 crop yields (in thousands of units) were: Wheat, 38,918 bu.; barley, 49,826 bu.; oats, 1894 bu.; corn, 9688 bu.; linseed, 326 bu.; wine, 15,322 gal.; olive oil, 3332 gal. The estimated value of all agricultural production in 1934 was 2,293,000,000 francs. Production of phosphate, the principal mineral, was 1,286,796 metric tons in 1934.

In the Spanish Zone the same crops are raised as in the French Zone. Tunny fishing and livestock raising are important industries. Iron ore production in the Melilla district was 388,000 metric tons in 1933.

Foreign Trade. Imports of the French Zone in 1934 were valued at 1,319,700,000 francs (1,532,400,000 in 1933) and exports totaled 667,400,000 francs (600,200,000 in 1933). Cereals, eggs, fish, and vegetables were the chief exports; sugar, gaso-

line, tea, cotton goods, and automobiles the principal imports. France in 1934 supplied 42.9 per cent of the imports and purchased 50.3 per cent of the exports. Imports and exports of the Spanish Zone in 1934 were about 5,500,000 and 900,000 old U.S. gold dollars, respectively. In 1933 they were 76,018,506 and 14,030,892 Spanish pesetas, respectively.

Finance. Budget estimates for 1934 placed revenues at 1,418,549,885 francs and expenditures at 1,418,167,585 francs. The budget of the Spanish Zone for 1933 balanced at 50,271,261 pesetas, the receipts including a subvention of 25,872,725 pesetas from the Spanish Treasury. The public debt of French Morocco totaled 1,750,210,000 francs on Dec. 31, 1931.

Communications. In 1934 the French Zone had 1195 miles of railway lines, about 2342 miles of main highways (1381 miles of secondary roads), and air lines linking Casablanca, Tangier, and Rabat with France. In 1934 a total of 3800 vessels of 5,713,235 tons entered the French Zone ports, of which Casablanca is the most important. The Spanish Zone had about 72 miles of railway line besides a section of the Tangier-Fez railway. Highways extended about 65 miles.

Government. The Sultan of Morocco, who resides in the French Zone, usually at Rabat, exercises nominal executive authority, but his acts are subject to the veto of the French Resident-General. Sultan in 1935, Sidi Mohammed. French Resident-General, M. Henri Ponsot (appointed July 13, 1933). The Spanish Zone is administered by a Spanish high commissioner residing at Tetuan. Nominal authority is vested in a Khalifa, chosen by the Sultan of Morocco from a list of two candidates selected by the Spanish government. Khalifa in 1935, Sidi Muley Hassan Ben el Mehedi. Spanish High Commissioner, D. Manuel Rico Avello (appointed Jan. 23, 1934).

MORPHOLOGY. See BOTANY.

MORRIS, EDWARD PATRICK, FIRST BARON, LORD. A Newfoundland lawyer and statesman, died in London, England, Oct. 24, 1935. Born in St. John's, Newfoundland, May 8, 1858, he was educated at St. Bonaventura's College, St. John's, and the University of Ottawa. Admitted as a solicitor of the Supreme Court in 1884, he was called to the bar in 1885. In the same year, he entered politics as a Liberal member of the Legislature, and served until 1919. He was a member of the cabinet of Sir William Whiteway in 1889, and was acting attorney general for Newfoundland (1890-95). In 1898 he broke away from the Liberal Party over the Reid Railway contract and was instrumental in the carrying of that measure. He then became associated with the Independent Liberal Party (1898-1900) and the People's Party (1908). From 1902 to 1907 he was Attorney General and Minister of Justice in the cabinet of Sir Robert Bond.

Sir Edward was elected Premier of Newfoundland in 1909, and was returned to office in the general election of 1913, which hinged chiefly on the issue of the ministerial policy of rapid railway extension. He held this office until 1919, and during his administration great changes took place in the social and economic condition of the country, Newfoundland becoming one of the most prosperous and progressive of the British colonies.

In addition to these activities, Sir Edward served as a delegate to Ottawa to discuss terms concerning the entry of Newfoundland into the Dominion of Canada (1895); a delegate to the Colonial Of-

fice (1897-98); a delegate to the Colonial Office on the French Shore question (1901), for which service he was knighted in 1904; Newfoundland representative at the Imperial Defence Council (1909); counsel for the British Government in the North Atlantic Fisheries Dispute at The Hague (1910); delegate to the Imperial Conference and Coronation (1911); Privy Councillor (1911); member Imperial War Conference (1917); and member, British War Cabinet (1916-17).

After the World War, he took up his residence in England, and was vice chairman of the Imperial Mineral Resources Bureau since its founding. He was raised to the peerage in 1918, and was a Knight Commander of St. Michael and St. George (1913). Besides honorary degrees from the universities of Oxford, Cambridge, Glasgow, and Edinburgh, he received the Freedom of the City of Edinburgh, Manchester, Glasgow, and London. He edited *Newfoundland Law Reports, 1800-1900*, known as Morris' Reports.

MOTION PICTURES. United States. Perhaps the most important cinema event of 1935 was the manufacture in Hollywood of a film called *The Informer*. It has frequently been noted that the American screen, which is famous for its technical excellence, turns out a sizable succession of lively and entertaining photoplays, but rarely achieves anything that belongs in the domain of distinguished artistic achievement. In *The Informer*, a grim tragedy of the Irish Revolution adapted from the novel by Liam O'Flaherty, a picture was produced which definitely belonged among the finest of all cinema works, whether silent or audible, and which was regarded on all sides as standing among the great dramas of recent years. Done essentially in motion picture terms and without any attempt to make it a photographed stage play, *The Informer* was, among other things, a splendid example of the screen's ability to capture an atmospheric mood and maintain it with honesty and completeness. The direction of John Ford, the adaptation of Dudley Nichols, and the acting of an able cast, headed by Victor McLaglen in the title rôle, resulted in a photoplay that brought honor to the entire American motion picture industry.

The cinema of 1935 showed a considerable interest in the classics, and the works of Shakespeare and Dickens in particular. An elaborate production of *A Midsummer Night's Dream*, directed on a rather heavy-handed scale by Max Reinhardt, with James Cagney, Joe E. Brown, Jean Muir, Anita Louise, and Dick Powell in some of the leading rôles, was presented amid much critical and popular difference of opinion. It contained much visual beauty, a splendid use of the Mendelssohn score, and excellent playing in several of the parts, chiefly among the comedians, but on the whole the picture was not successful enough to reveal vast potentialities for Shakespeare in the cinema. In fact, Dickens proved a more successful screen writer. *David Copperfield*, with Freddie Bartholomew and Frank Lawton sharing the leading rôle, was a tremendously popular and artistic success, and so was *A Tale of Two Cities*, with Ronald Colman as the tragic Sydney Carton. *Great Expectations* and *The Mystery of Edwin Drood* were less successful, as, indeed, were the English-made versions of *The Old Curiosity Shop* and *A Christmas Carol* (known in the films as *Scrooge*). Hollywood once more revealed its vast

enthusiasm for the glories of the British Empire. One of the best pictures of the year was *Lives of a Bengal Lancer*, which was suggested by the well-known Yeats-Brown autobiography, but did not bother with that work's Indian mysticism. It was an enthusiastic, romantic, and exciting account of the glories of the White Man's Burden as represented by the heroism of the British troops along India's northwestern frontier. Done in a manner that combined the excitement of Kipling and the Rover Boys, it proved to be an enormously effective example of screen melodrama at its best. *Mutiny on the Bounty*, a brilliant sea drama, which dramatized the story of the famous rebellion in the English Navy in the later days of the 18th century, succeeded in whitewashing the British Admiralty by blaming the cruelties suffered by the mariners exclusively on the evil Captain Bligh. Thus it became a heroic saga of the heroism of English sailors, as well as an exceptionally striking motion picture. The performance of Charles Laughton as the sadistic Captain Bligh played a great part in the film's success.

Musical pictures became highly popular again. These works were of two kinds. The first usually starred Fred Astaire and Ginger Rogers and were of the light, frivolous, popular sort, with Mr. Astaire's dancing proving a particularly attractive feature. *Top Hat*, with a gay musical score by Irving Berlin, was the greatest success in this field, although the Astaire-Rogers *Roberta* was also an important hit of the season. The second group was brought into favor by the success of Grace Moore, the opera singer, and seemed in great part based on Hollywood's determination to provide cinema audiences with a sound musical education. In all of these films, the plot gave evidence of being chiefly devised to give the star a proper number of opportunities to sing some of the more popular and showy arias from grand opera. Lily Pons, Lawrence Tibbett, and Nino Martini were among the successful stars in this field. The popular singing-and-acting team of Jeanette MacDonald and Nelson Eddy played a great part in the success of a handsome and admirably staged production of Victor Herbert's *Naughty Marietta*. It was pointed out that the film provided Herbert with the sort of satisfying production that he had never been honored with on the stage during his lifetime.

Color photography came to the fore again in 1935, when a spectacular production of *Becky Sharp* was presented with Miriam Hopkins in the title rôle, with the sets by Robert Edmond Jones and the direction by Rouben Mamoulian. Although the color was attractively and dramatically managed, the story itself was not equally effective and it was thought in some quarters that the preoccupation with color slowed down the pace and the dramatic impact of the narrative. At least the film was not regarded as successful enough to warrant a rush of the producers to the process. The most popular and effective use of color was in the Walt Disney cartoon comedies. Already *The Silly Symphonies* had been done in variegated hues, but during the year Mr. Disney decided that even Mickey Mouse should appear in his natural colors. See PHOTOGRAPHY.

The screen's concern with current social ideas was intermittent, and when the pictures did go in for a treatment of such controversial topics they seemed to veer between a sort of milk-and-water liberalism and a jingoistic red-baiting. The most effective social film was *Black Fury*, which dealt with a strike in the coal fields. It attempted val-

Franchot Tone, Richard Cromwell, and Gary Cooper

iantly to please both capital and labor and suffered the usual fate of making enemies on both sides. It attempted a childish simplification of the causes of labor unrest, with the result that it completely convinced nobody. But it was a powerful and dramatic motion picture, for all of its faults, and when it got over its interest in the causes of labor conflict and presented its straightforward account of the history of a strike it was extremely effective. Of the anti-red assaults, the best known was *Red Salute*, which denounced the radical movement among college students but did it so ineffectively that it was successful neither as propaganda nor entertainment.

One of the innovations of the year was *The March of Time*, which was a combination of news reel, magazine story, and editorial commentary. Issued once a month, *The March of Time* attempted with considerable success to dramatize, with actual and fabricated scenes, various trends and movements in the news, from the invasion of Ethiopia and the French Fascist movement to conditions in the CCC camps and the Townsend plan. Since it was frankly editorial in its dramatization of the news, this new screen magazine was accused of being pro-Fascist, chauvinist, and, even, upon rare occasions, of being radical in its sympathies, but it continued to present effective accounts of controversial topical matters.

The attraction of the child stars continued unabated. Little Shirley Temple remained the most popular player in the cinema and every film company seemed determined to find a rival for her. None of the other baby players achieved anything like her success, although in the Temple film called *Bright Eyes*, another child, Jane Withers, who played the infant villainess of the story and passed her time being mean to America's current sweetheart, attracted almost more attention than the star. In later films there was an attempt to make young Miss Withers a sympathetic character, which so far has proved but moderately successful. In a picture called *O'Shaughnessy's Boy*, it was discovered that Jackie Cooper, child star of several years ago, had grown so much that a boy had to be found to double for him in the early episodes. Of the new boy actors, the most notable is the English Freddie Bartholomew, who made his cinema debut in *David Copperfield*.

The death of Will Rogers (q.v.) was regarded as the greatest film tragedy of the year. At the time of his death two of the Rogers pictures had not been released. They were *Steamboat 'Round the Bend* and *In Old Kentucky*. There was some slight debate as to whether they should be presented to the public, but the answer was a strong affirmative and the pictures proved highly successful at the box office.

Among the American films, not already noted, which were released during the year were *Ruggles of Red Gap*, *Ah, Wilderness*, *Clive of India*, *One More Spring*, *Sequoia*, *The Whole Town's Talking*, *The Wedding Night*, *Private Worlds*, *Les Misérables*, *China Seas*, *Alice Adams*, *Diamond Jim*, *The Dark Angel*, *She Married Her Boss*, *Mary Burns*, *Fugitive*, *So Red the Rose*, *Show Them No Mercy*, *Annie Oakley*, *Captain Blood*, *The Three Musketeers*, *The Scoundrel*, and *Anna Karenina*.

Among the prominent players of the year were Greta Garbo, Charles Laughton, Ronald Colman, Jean Harlow, Jean Muir, James Cagney, Merle Oberon, Janet Gaynor, Paul Muni, Charles Boyer, Robert Donat, Claudette Colbert, Shirley Temple,

Jane Withers, Freddie Bartholomew, Frances Dee, Frances Langford, Henry Fonda, Joan Crawford, Miriam Hopkins, Edward G. Robinson, Katharine Hepburn, Edward Arnold, Basil Rathbone, Claire Dodd, Victor McLaglen, Margot Grahame, Margaret Sullavan, Sylvia Sydney, Cecilia Parker, Errol Flynn, Rosalind Russell, and Jean Arthur.

France. The French film industry, in 1935, suffered a great loss when René Clair, its most distinguished director, deserted it temporarily to make pictures in England, but nevertheless it presented two greatly admired films in *La Maternelle* and *Crime et Chatiment*. The former revealed some of the best and most natural child actors ever seen on the screen.

Germany. The German cinema remained unstimulating, with the exception of a rather powerful film starring Emil Jannings, which used the story of Frederick the Great and his father for the purpose of presenting a Nazi parable of history, duty, and book-burning. The picture was called in America *The Making of a King*.

Great Britain. The year 1935 was marked by continued success of the British effort to invade the international cinema market. More and more British films were successful in the United States and more Hollywood film players were called to London to appear in films manufactured there. The most popular English photoplays shown in this country during the year were *The Scarlet Pimpernel*, *The Man Who Knew Too Much*, and *The 39 Steps*. The British were still inclined to be lethargic in their film story-telling, but their pictures revealed an increasing sense of the value of pace and vitality in the cinema.

U.S.S.R. The film studios of the Soviet Union, which had shown signs of being in a definite slump, sent four interesting motion pictures to America during 1935. *Chapayev* was an exciting military melodrama, which contained both heroism and humor. Both in it and in *Peasants*, an account of the struggle for collectivization in agriculture, the qualities, certainly not always found in the Soviet cinema, of rich comedy and even of a trace of compassion for the hated "class enemy" were to be discovered. *The Youth of Maxim* was the first part of what was planned as a trilogy and dealt with the unsuccessful revolution of 1905. Best of all was *The New Gulliver*, in which one live actor and several thousand remarkable puppets appeared in a humorous and richly imaginative satire that used Dean Swift as a springboard for its hearty comedy.

Awards. The newly-organized New York Film Critics voted *The Informer*, directed by John Ford, the best picture of the year, and awarded its gold medal to Cliff Reid, the producer. Charles Laughton was voted the best male performer for his work in both *Ruggles of Red Gap* and *Mutiny on the Bounty*, and Greta Garbo was selected as the best female performer for her work in *Anna Karenina*.

The annual awards of the Academy of Motion Picture Arts and Sciences went to Victor McLaglen for his work in *The Informer* and Bette Davis for her performance in *Dangerous*. *Mutiny on the Bounty* was judged the best film of the year.

The Institute of Amateur Cinematographs (Great Britain) awarded its annual gold medal to Alexander Korda for his direction of *Sanders of the River*.

MOTORBOATING. *El Lagarto*, George Reis's combination of a 12-year-old hull and an 11-year-old engine, was the marvel of the 1935 motorboating campaign, winning a third consecutive leg on the coveted Gold Cup, the most prized trophy

in the sport, and later in the year shattering all straightaway records for her class. Believed ticketed for the junk pile, because of the changes in the rules which permitted Gold Cup boats to be driven by 732-cubic inch piston displacement engines or by 625-inch motors, *El Lagarto* never ran better nor faster than in 1935 with her theoretically obsolescent equipment. Defending the Gold Cup in late July at Lake George, the *El Lagarto* leaped to an easy victory and two months later was officially timed at 72.727 miles an hour, 10 miles better than the standard, for a Gold Cup hydroplane class record.

A week later Herbert Mendelsohn's *Notre Dame*, the only new boat built for the class in a year of transition from old rules to the removal of virtually all restrictions, averaged 76.080 miles an hour in two dashes over a mile straightaway. *Notre Dame* was shoved by a super-charged 24 cylinder motor, and *El Lagarto* did not possess a supercharger. *El Lagarto* did not defend the President's Cup at Washington and the award went to *Notre Dame*. Victor Kliesrath's *Hotsy Totsy II* led a small fleet of Gold Cup craft for the Detroit Development Trophy, a race also missed by *El Lagarto*.

The big boats were more or less static in the year, the change in the rules discouraging to some extent the building. But the lack of activity in the big boat class was offset by the sudden interest in the 16-foot, 225-cubic inch hydroplanes. This class grew from 13 boats to 40 in the summer and Dr. Cecil Bagley's *Wilmer III* won the national title and had the best record in the class.

In the outboard field three veteran drivers, two of them amateurs, stood out. Fred Jacoby won the gruelling Albany-to-New York marathon under adverse conditions and rolled up a record total through the summer in his successful quest for the Townsend Medal, emblematic of the American outboard high-point championship. Lewis G. Carlisle repeated major triumphs in the Philadelphia Sir Thomas Lipton and Chicago Hearst Gold Cup events and also took the General Dawes Trophy at Marietta, O., and gained a pair of national titles at Tulsa, Okla. Another amateur, Sam Crooks, of Rumson, N. J., won his second leg on the national intercollegiate championship in leading Rutgers University to runner-up position to Yale in the team competition. He led a big field in the Delaware River marathon—Trenton to Philadelphia—and outscored all other amateurs in sanctioned races to win the Col. E. H. R. Green Trophy for the second time.

At the start of the year George Coleman, Jr., of Miami, Oklahoma, was holder of the speed mark for outboard racing at 61.75 miles an hour but midway through 1935, Jean Dupuy, a Frenchman, raised the mark to 65.21 at Paris. Coleman worked over his motor all summer and late in the year, at Lake Spavinaw, shattered Dupuy's mark, and set a new one of 69.383 miles an hour.

MOTOR CARRIER ACT. See UNITED STATES under Congress.

MOUNTAIN CLIMBING. See EXPLORATION.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women at South Hadley, Mass., founded in 1837. The registration for the autumn session of 1935 was 988 in residence, 25 attending Mount Holyoke College (freshman year) in Hartford, Conn. and three juniors in France and two in Germany. The faculty numbered 128. The endowment funds amounted to

\$4,733,278.05, and the income for the preceding year was \$1,154,489.48. The total amount of gifts and bequests during the year 1934-35 was \$547,949.80.

There were 140,000 volumes in the library, a large addition to which was constructed during 1934-35. President, Mary Emma Woolley, Litt.D., L.H.D., LL.D.

MOZAMBIQUE (PORTUGUESE EAST AFRICA). A Portuguese colony in East Africa. Area, 297,657 sq. miles; population (1934), 4,028,746. There were two administrative units (1) the government controlled Province of Mozambique (245,776 sq. m.) consisting of seven districts, and (2) the territory of Manica and Sofala (51,881 sq. m.) administered by the Mozambique Company under royal charter. Lourenço Marques, the capital of the Province, had 42,779 inhabitants in 1931; Beira, capital of Manica and Sofala, 23,694.

Production and Trade. Sugar, maize, cotton, sisal, copra, gold, and silver were the chief products. In 1933, imports were valued at 12,582,789 gold escudos; exports, 8,385,006 gold escudos. The United States, during 1935, supplied \$5,060,602 of the imports and received \$1,657,303 of the exports.

Government. A decree, of May 9, 1935, provided that future fiscal years should coincide with the calendar year and approved the budget expenditure of 327,853,805 paper escudos for the 18 months ending Dec. 31, 1936 (escudo equaled \$0.0449 on June 13, 1935). The Province of Mozambique was administered by a governor-general assisted by a governor in each of the seven districts. A governor represented the Mozambique Company in Manica and Sofala.

MUNICIPAL GOVERNMENT. Adoptions of the council-manager plan of government during the year brought the roster up to about 465, including a few counties. The total adoptions for the year were about 15 compared with 10 in 1934 and only 7 in 1933. The largest cities added to the list were Trenton, N. J., and Saginaw, Mich., with populations in 1930 of 123,356 and 80,715. The adoption at Trenton was the seventh in that State, long a stronghold of the commission plan; so strong that repeated attempts to get a general enabling act for the plan were defeated. The vote at Trenton stood 18,623 to 11,299, with all but one ward in favor of adoption and a tie vote in that. A new council of seven, in place of the five old commissioners, was elected on April 16, and soon afterwards appointed a city manager. Third in size of the new council-manager cities is Wheeling, W. Va. (61,659 population in 1930). It abandoned an inferior manager plan in 1929. Under the new plan the council is elected by proportional representation. Other city adoptions reported are: Ashland, Eastport, Oakland, and Rumford, Me.; Troy and North Troy, Vt.; West Hartford, Conn.; Grayling and Rockford, Mich.; Huron, S. Dak.; and Pittsburg, Calif. Five cities defeated the plan: Syracuse, N. Y., by the large majority of 31,318 to 18,441; Saratoga Springs, N. Y., and Beacon, N. Y. (the latter a second defeat); Raleigh, N. C. (heavy rain, with only 6250 voting out of a possible 15,000); and Braintree, Mass. (a "hybrid charter"). Of three attempts to abandon the council-manager plan two failed and one succeeded: Toledo, Ohio, voted on May 28, by 27,264 to 18,338, to retain a proportional-representation and manager charter adopted as recently as November, 1934, by a majority of 5225. A sixth attempt to abandon the council-manager plan at Kenosha, Wis., was defeated on April 1, by a majority of 2109 votes. The single abandonment was at San Rafael, Calif., where a

newly elected council rescinded a manager ordinance adopted in 1915.

County-Manager Adoptions and Defeats. Of four counties voting on the county-manager plan two voted yes and two no. Cuyahoga County, Ohio, which, including Cleveland, had a population of 1,201,455 in 1930, cast 166,181 to 148,306, for a charter providing for the election by proportional representation of eight councilmen and by preferential choice for a president, the council to take office on Jan. 1, 1936, and to appoint a manager. Litigation is in prospect, the county prosecutor holding that for adoption of the charter a majority of all the municipalities in the county was required. Cuyahoga County is the first county in Ohio to cast a vote in favor of the council-manager plan. Two other Ohio counties voting on the plan November 5 defeated it badly: Hamilton County (which includes Cincinnati), 103,946 to 60,849; Lucas County (including Toledo), 40,252 to 24,245.

County Consolidation. Legislation authorizing consolidation of two or more counties on a majority vote was passed by Wisconsin. A proposal to consolidate Duval County and the City of Jacksonville, Fla., which it is said would have made Jacksonville the largest city territorially in the world, was defeated on June 18. Only about 60 per cent of the legal voters went to the poles.

Bibliography. Salter, *Boss Rule*, (New York); Lepawsky, *Home Rule for Metropolitan Chicago*, (Chicago); Phillips, *Operation of the Council-Manager Plan of Government in Oklahoma Cities*, (Philadelphia); Ridley and Nolting, *The Municipal Year Book*, (Chicago, 1935).

MUNICIPAL OWNERSHIP. Litigation in the Federal Courts brought by electric utility corporations to prevent the Tennessee Valley Authority (TVA) from assisting municipalities in owning or operating electric light and power systems was a feature of the year. The first innings were won by the utilities in a district court but this decision was reversed by a circuit court of appeals. The suit was brought by the Alabama Power Co. to enjoin 14 cities of northern Alabama from borrowing money from the TVA for the construction of electric distribution systems. Judge W. I. Grubb of the Federal district court at Birmingham, Ala., granted a temporary injunction on February 9, which he made permanent on February 22. The Court of Appeals of the Fifth Circuit, at New Orleans, unanimously reversed Judge Grubb on July 17. In view of possible adverse action by the Supreme Court in this and other cases on final appeal Congress passed and on August 31 the president signed a bill amending the TVA act of 1933. Besides authorizing the TVA to sell surplus electric current the amendment empowers it to lend money to States, counties, and minor governmental units with which to acquire electric transmission and distribution lines. Meanwhile litigation to prevent another Federal agency from aiding municipal ownership of light and power plants was brought in the West and Southwest. The Kansas Gas & Electric Co. sought an injunction to prevent the city of Independence, Kan., from building an electric light and power plant with funds supplied by the Public Works Administration (PWA). On August 20 the Tenth Circuit Court of Appeals, sitting at Denver, Col., upheld a decision of a district Federal Judge denying the injunction. The appeals court, however, approved an injunction against issuing revenue bonds to pay for the plant and against diverting water works funds for the purpose. On the same date the first case of this general character reached the U.S. Su-

preme Court in an action brought by the Kansas Utilities Co. to stop the PWA from helping the city of Burlington, Kan., finance an electric plant. To facilitate an appeal to a higher court the Supreme Court of the District of Columbia, on October 14, dismissed three cases brought by utility companies to block PWA loans for electric plant construction. This action sent the three cases to the District Court of Appeals where a similar suit involving the town of Hominy, Okla., had already been argued. About the same time a like suit before the same court was in progress to prevent a PWA loan for an electric plant at Yorktown, Texas.

Gasworks, Water Works, and Subways. One of the privately owned gasworks of Indianapolis was bought by the city late in the year. A similar purchase of water works took place at Salem, Ore. The city of Newark, N. J., completed a subway in the bed of a disused canal and turned it over to a company for rapid transit service. New York City came nearer to its goal for a unified municipally owned and operated rapid-transit system. After long-continued negotiations a tentative plan was adopted in November under which the city would pay \$417,000,000 net for the privately owned subway and elevated lines within Greater New York. These would be united with the city's independently owned and operated subway. The whole would be turned over for operation to the Board of Transit Control. The present single five-cent fare would be continued, subject to change by the Board of Estimate and Apportionment.

Votes for and Against Municipal Electric Plants. Large majorities in favor of power and light plants at Albany, N. Y., and Camden, N. J., were cast on November 5. The voters of both the city and county of Albany were asked to decide (a) whether the mayor of Albany should appoint a committee with power to issue bonds for the construction of a new electric plant or the acquisition of an old one privately owned; (b) whether the county should spend \$25,000,000 for electric generating and distributing facilities outside of Albany. Camden cast a vote of 5 to 1 for a municipal electric light plant, compared with 2 to 1 in 1933. The earlier vote was declared illegal because the election petition had too few signatures. In Wisconsin a district electric light and power system for Burnett and Polk counties was authorized by a vote of 3227 to 1097. Of 28 towns and villages which voted 21 approved the project. This referendum was the first one held in Wisconsin under an enabling act passed in 1931. In New York City a proposed referendum vote on November 5 to decide whether the city should build an electric plant to supply part of the city and at the same time to serve as a "yardstick" to measure the justness of rates being charged by private companies was enjoined on the ground that the proposal did not comply with existing legislation. Defeat of a \$1,500,000 bond issue by Jackson, Miss., to build a plant to distribute electric current supplied by the TVA was registered by popular vote early in 1935. On December 3, Oxford, Miss., voted against buying current from the TVA for its city-owned light and power plant.

MUSIC. General News. Among the notable musical anniversaries of 1935 were the 250th birthdays of Johann Sebastian Bach (March 21) and George Frederick Handel (February 23), which were commemorated by organizations of all kinds in America and Europe during the first half of the

year. The most intensive celebration was in Germany, where the government sponsored a series of festivals which also took note of the 350th birthday (October 8) of Heinrich Schütz. The observance of the centenary of Camille Saint-Saëns (October 9), while also international, centred in Paris, where President Lebrun and Mme. Saint-Saëns were guests of honor at a gala performance of *Samson et Dalila* at the Opéra.

Among living composers, the seventieth birthday of Jean Sibelius (December 8) was extensively celebrated in Finland, where the entire season of the Municipal Symphony Orchestra of Helsinki had been planned by its conductor, Georg Schneevoigt, with this event in view. Armas Jarnefelt, the composer's brother-in-law, conducted a jubilee concert of his music in Helsinki on the day itself, and the *Uusi Suomi*, the principal newspaper of the Finnish capital, published a special Sibelius supplement with tributes from musically prominent persons all over the world. Orchestras in many other countries, especially in England and the United States, featured his music on their programmes during the autumn months.

The United States Government began to deal with the serious problem of unemployment among professional musicians on a national scale through the Federal Music Project, which began its activities in August and planned to give employment to the 18,000 musicians on relief rolls throughout the country. In places such as New York City, where an extensive series of free concerts had been supported from various official sources for two years, existing activities were continued and expanded, but there were parts of the country where little had been done, except by private aid, towards furnishing relief employment.

Nikolai Sokoloff, former conductor of the Cleveland Orchestra, was made national administrator, and the country was divided into 11 regions, each under a regional director. New York City, where a quarter of the unemployed musicians in the country were said to live, was made one of the regions.

In Europe, despite threats of war, musical activities were brisk. England had a prosperous musical year, while Paris again probably outranked other Western capitals in the numerical total of musical events of all kinds. In Germany it was estimated that there were 100 opera theatres in active operation. Musical affairs there had become relatively stabilized after the politically caused upheavals of the last two years, but on July 13, soon after the production of his opera *Die Schwiegsmutter*, Richard Strauss resigned his positions as president of the Reich Music Chamber and chairman of the League of German Composers. Peter Raabe and Paul Graener were appointed as his successors. "Old age and failing health," was Strauss's announced reason for this step, but it was believed that official disapproval of his collaboration in this opera with an Austrian-Jewish author, Stefan Zweig, was the real principal factor.

The troubled international political situation in Europe did not prevent an increasing amount of exchanges of visits by prominent organizations of various countries. The Paris Opera appeared in Florence in the "Musical May" festival, while the Florentine opera company came to Paris in June. In March, an Italian opera company appeared in Vienna while the Vienna State Opera's forces went to Rome. An increasing number of musicians from Western Europe and America included Russia in their tours.

A \$1000 prize competition offered by the Pade-

wski Fund of Boston for an orchestral work was won by Allen Arthur Wilman, of Chicago, and Normand Lockwood won the \$1000 prize for an orchestral composition offered by G. F. Swift, of Chicago. The Library of Congress, through the Elizabeth Sprague Coolidge Foundation, announced a \$1000 prize for a work for strings, and in September the National Broadcasting Company opened a contest, with a first prize of the same amount, for an American chamber music composition.

In February the noted violinist, Fritz Kreisler, revealed that 14 works previously listed as and generally believed to be his transcriptions and arrangements of manuscript works of various early composers—Porpora, Pugnani, Vivaldi, and others—were his own compositions. The announcement came in answer to a query from Olin Downes, music critic of the New York *Times*, who had been trying to locate one of the purported originals of these works, but Mr. Kreisler had already decided to list these as his own in the 1935 catalogue of his compositions. His reason for assigning them to relatively little known early composers dated, he said, from early in the century, when, as a young musician, he felt the need of enlarging the existing violin repertoire, but thought that it might be untactful to place his name too often on his programmes.

Artists. An unusually sudden rise to fame was experienced in February by Kirsten Flagstad, a Norwegian soprano who had been engaged by the Metropolitan Opera Association of New York for Wagner rôles after Frida Leider had decided not to return to America. In New York, little was known about her career and capabilities, except that she had sung in opera for many years at the State Theatre in Oslo, had also appeared in Sweden and, in Germany, had sung minor rôles in the "Ring" cycle in the Bayreuth festivals of 1933 and 1934.

Her first performance at the Metropolitan, as Sieglind in *Die Walküre* on February 2, revealed remarkable and unexpected vocal powers, and her second appearance, as Isolde on February 6, drew praise from the critics of a rarely equalled warmth for the remarkable quality and power of her voice and the dignity of her acting. She immediately became the principal box-office attraction at the Metropolitan for the rest of the season, and was engaged for an intensive three months' American concert tour in the fall before her return to the Metropolitan.

Igor Stravinsky began in January his first American tour in 10 years, conducting several of the principal symphony orchestras of the United States and also giving joint recitals with the violinist Samuel Dushkin.

Yehudi Menuhin, who celebrated his eighteenth birthday in January, spent most of the year in a round the world tour before beginning a year's retirement from the concert platform at his home in California. His recitals in Australia before capacity audiences, evoked critical encomiums surpassing in warmth even those previously bestowed upon him in America and Europe.

After some years of a decline from the peak figures of 1926-27, the number of song, piano, and violin recitals given in New York during 1934-35 showed a substantial increase over the preceding season. The autumn brought a remarkable number of piano recitals—39 up to December 1, as compared with 21 in the same period in 1934.

In the biennial Young Artists' Contest of the National Federation of Music Clubs, held in April at Philadelphia, first prizes were awarded to Mar-

garet Harshaw, contralto; Joseph Knitzer, violinist, and Rosalyn Tureck, pianist.

Choral Music and Associations. The Bach and Handel anniversaries naturally influenced the programmes of choral groups in both America and Europe. In the United States the B minor mass was probably the favorite choice among Bach's major works, followed by the *St. Matthew Passion*.

William Walton's oratorio *Belshazzar's Feast*, which had been heard in several other American cities in 1934, finally was introduced to New York on January 9 by the Schola Cantorum conducted by Hugh Ross. The number of European choruses touring the United States, including the Don Cossack Russian Male Chorus, which gave its 3000th concert on November 29 in New York, the Singing Boys of Vienna, and the Little Singers of the Wooden Cross from Paris, was increased by the arrival in October of the Moscow Cathedral Choir under Nicholas Afonsky's direction, which won a very favorable reception in its first American concerts.

Two important new Italian works had their first performances in Rome. Don Licinio Refice's *La Samaritana* was introduced in January in an Augusteo concert under Bernardino Molinari, and G. Francesco Malipiero's *La Passione* was first heard at the Augusteo in December.

Chamber Music. The major event of the year in the chamber music field was the seventh festival presented by the Elizabeth Sprague Coolidge Foundation at the Library of Congress in Washington, April 7 to 9. This began with a Bach-Handel programme played by a small orchestra of Rochester Philharmonic musicians under Howard Hanson's direction with John McCormack as the vocal soloist.

The Kolisch Quartet of Vienna made its American debut in the morning concert of April 8, introducing a work commissioned for this festival, Bela Bartok's fifth quartet. The Kolisch group, which was enthusiastically acclaimed, gave a few more concerts before returning to Europe, and was engaged for a longer American tour in the winter of 1936. In the evening the Paris Instrumental Quintet gave the public premiere of Malipiero's *Sonata a cinque*. An American programme, with the Gordon String Quartet and Frank Sheridan, pianist, as participants in quartets by Quincy Porter and Werner Janssen and a Stravinsky programme with the composer taking part occupied the concerts of the final day.

The Stradivarius Quartet of New York was re-organized in the fall, with Wolfe Wolfensohn and Alfred Pochon as its violinists, Marcel Dick as violist, and Iwan d'Archambeau, who, like Mr. Pochon, had been a member of the famous Flonzaley Quartet, as cellist. James Levey, who had been leader of the London String Quartet for many years, joined the Hart House Quartet of Toronto as its first violinist in the fall.

Festivals, American. The Eastman School of Music held its fifth annual festival of American music in Rochester, N. Y., from April 2 to 5, with Howard Hanson in general charge. The programmes included new instrumental music by Bernard Wagenaar, William Grant Still, Paul White, Gerald Keenan, Gardner Reed, Burrill Phillips, Herbert Inch, Bernard Rogers, Carl Eppert, and Gustave Soderlund. In the closing programme Robert Russell Bennett's ballet-opera *Endymion* had its first public performance.

The twenty-eighth festival of the Bach Choir of Bethlehem, Pa., May 17 and 18, was devoted to the

B minor mass and *St. Matthew Passion*, which had also been performed in a Bach festival at Reading, Pa., on April 27 and 28 under the direction of N. Lindsay Norden.

In the forty-second May festival at Ann Arbor, Michigan, Dr. Hanson conducted the world premiere of his *Drum Taps*, a choral setting of three poems by Walt Whitman, on May 15. Other major works performed in the festival, with Frederick Stock and Eric De Lamarer conducting the Chicago Symphony Orchestra, were Honegger's *King David*, May 16, and the original version of Mousorgsky's *Boris Godunoff*, in Calvocoressi's English translation, on May 19.

In the biennial May festival in Cincinnati, May 22 to 25, with Eugene Goossens conducting the Cincinnati Symphony Orchestra and festival chorus, the *Stabat Mater* by Martin G. Dummler, of Cincinnati, had its first performance on May 25. Granville Bantock's *Atalanta in Calydon*, in its first complete performance in the United States; Cyril Scott's *La Belle Dame sans Merci*, Bach's *St. Matthew Passion*, and Kodaly's *Psalmus Hungaricus* were the other important items in the festival repertoire.

In Detroit, from May 24 to June 2, 10,000 persons, representing 41 musical groups, took part in a large outdoor International Music Festival.

Albert Stoessel was again the director of the seventy-sixth festival at Worcester, Mass., September 30 to October 5, which closed with a performance of Puccini's *La Bohème* in English, with Metropolitan Opera principals. Bach's *Magnificat*, Elgar's *The Music Makers*, Hanson's *Drum Taps*, and Wolf-Ferrari's *La Vita Nuova* were the principal choral works performed.

Festivals, Foreign. With the presence of Arturo Toscanini, who conducted Beethoven's *Fidelio* and Verdi's *Falstaff* in addition to some of the Vienna Philharmonic Orchestra's symphony concerts, the annual festival at Salzburg, Austria, attracted much international attention and patronage, and the lodging facilities of the small city were severely taxed. The festival extended from July 27 to September 1. Bruno Walter conducted Wagner's *Tristan und Isolde*, Mozart's *Don Giovanni* and *Die Entführung aus dem Serail*. Felix Weingartner conducted Mozart's *Così fan tutte* and *Marriage of Figaro* and Josef Krips conducted Strauss's *Der Rosenkavalier*. Erich Kleiber, Adrian Boult, and Messrs. Walter and Weingartner shared the direction of the symphony concerts with Mr. Toscanini.

At Bayreuth 1935 was an off year, but the usual Wagner and Mozart festival was held at Munich from July 24 to August 27, with a repertoire of eight Wagner music dramas and six operas of Mozart. Hans Knappertsbusch and Paul Schmitz, of Leipzig, were the conductors. During the latter part of August, there was also a Strauss opera series.

The officially sponsored Bach-Handel-Schütz anniversary festival observances in Germany were shared by several cities. Berlin had a Bach Week May 4 to 11 and a Handel festival May 27 to June 1. In Halle, the composer's birthplace, there was a Handel festival from February 22 to 24 and another in June. A Schütz festival, including music by other early composers, was held at Dresden May 16 to 19, and Leipzig had its principal Bach festival June 21 to 24.

The year's principal Italian festival was the *Maggio Musicale* at Florence, beginning April 24 and continuing through May. In Pizzetti's opera

Orseolo, which had its world première, the choral writing was regarded as the strongest point. Other Italian operas presented under the direction of Tullio Serafin and Vittorio Gui were Rossini's *Mosè*, Bellini's *Norma*, and Verdi's *Un Ballo in Maschera*. The Paris Opéra presented Rameau's *Castor et Pollux* and a ballet programme. Bruno Walter conducted the Vienna State Opera's company and the Vienna Philharmonic Orchestra in Mozart's *Entführung* and Beethoven's *Ninth Symphony*. Bach's Brandenburg concertos were presented in two concerts under Adolf Busch's direction. The choral repertoire included Haydn's *The Seasons* and Verdi's *Mansoni Requiem*.

The thirteenth festival of the International Society for Contemporary Music was originally scheduled for Carlsbad, but finally transferred to Prague, after the Carlsbad municipal council had withdrawn its invitation. In the two orchestral concerts and two chamber music programmes held between September 2 and 6, a long list of works from all parts of Europe was presented, but none of these were regarded as of unusual importance.

In England, the annual Three Choirs Festival was held in September at Worcester where, owing to its associations with the late Sir Edward Elgar, his music occupied a considerable part of the programmes, including *The Dream of Gerontius*, *The Apostles*, and the cello concerto. The choral novelties were Dr. W. H. Harris's *Michaelangelo's Confession of Faith* and Dr. George Dyson's *The Apostles*.

In Australia the third City of Sydney Eisteddfod, in August, had over 10,000 entries in 235 sections for the various competitions.

Opera in America. The Metropolitan Opera Association of New York began the year facing the now annual problem of finding financial support for the next season. This was complicated by the need of finding a new general manager to succeed Giulio Gatti-Casazza, who retired at the end of the 1934-35 season in April after 27 years in this post. Campaigns to raise guaranty funds had been conducted through public appeals in 1933 and 1934, but it was doubted whether a third appeal would be effective.

Negotiations conducted with the Juilliard Musical Foundation, which had contributed \$95,000 to the Metropolitan in the last three depression years, resulted in reaching an agreement early in March. This provided that the Foundation would supply \$150,000 to underwrite the activities of 1935-36, including a regular winter season on the existing basis and a supplementary season, intended to give young American artists more opportunity than the regular season could offer, at popular prices in the spring of 1936.

The Metropolitan was required by the terms of the agreement to find an additional \$100,000 to underwrite the 1935-36 programme, to make further reductions in operating expenses, and to conduct a campaign to obtain a 10 per cent increase in the advance revenue from season ticket subscriptions. The agreement also provided for Juilliard representation on the Metropolitan's board of directors, and an opera management committee with members from both organizations.

Herbert Witherspoon, once a basso in the Metropolitan's artistic roster and later artistic director of the Chicago Civic Opera, was appointed successor to Mr. Gatti-Casazza as general manager, with Edward Ziegler continuing as assistant general manager. Edward Johnson, a leading tenor of the company since 1922, was also made an assistant

general manager, and was to have special charge of the supplementary spring season.

Mr. Witherspoon announced his intention of initiating various reforms, including more up-to-date operatic acting, improvements in the scenery and also a new deal in regard to the ballet, which had played a rather negative rôle in the last few years. He took up his new duties energetically, listening to 279 would-be members of the company in auditions and took an active part in the current efforts to stimulate new interest and support for the Metropolitan. On May 8, the directors decided that the subscription campaign had been sufficiently successful to justify going ahead with the plans prepared in accord with the Juilliard agreement. But two days later Mr. Witherspoon died suddenly in his office at the opera house. Edward Johnson was appointed his successor, and announced his intention of preparing for the new season, so far as possible, along the lines planned by Mr. Witherspoon, who had engaged 47 singers, including 9 newcomers, for 1935-36.

The regular subscription season of 1934-35 began December 22 and closed March 30. Of 128 opera performances 106, including 4 post-season presentations, were at the Metropolitan. The company gave 6 performances in Brooklyn, 2 apiece in Newark and Baltimore, and 1 apiece in Hartford and Rochester. Most of the post-season tour was devoted to a week in Boston.

In its home performances, the Metropolitan gave 37 operas, including 18 works in Italian 57 times, 11 in German (all but 2 by Wagner) 41 times, 6 in French 14 times, and 2 in English 4 times. Wagner was represented by 36 performances of 9 works; Verdi, by 19 performances of 6 works, and Puccini by 11 performances of 3 works. What with the box-office drawing power of the Norwegian soprano, Kirsten Flagstad (see under *Artists*) *Tristan und Isolde* was the season's most performed work at the Metropolitan, where it was heard 7 times. Including performances elsewhere, *Tannhäuser* and *La Bohème* tied for frequency of representation with 8 performances each.

The season's only actual novelty, produced January 24, was a one act opera, *In the Pasha's Garden*, with music by John Laurence Seymour, a Californian, and a libretto by H. C. Tracy based on a story in H. G. Dwight's *Stamboul Nights*. Lawrence Tibbett sang the title rôle of the Pasha and Ettore Panizza conducted. The opera met with scant favor from the critics, the music being regarded as derivative and static, while the libretto missed some of the dramatic possibilities of Dwight's story.

The only other new production, on February 23, was a pair of Italian *opere buffe*, Pergolesi's 200-year-old *La Serva Padrona*, new to the Metropolitan, and Donizetti's *Don Pasquale*, which had been out of the repertoire for 21 years. In *Don Pasquale* the principals were Lucrezia Bori, Tito Schipa, Giuseppe De Luca, and Ezio Pinza; Vincenzo Bellezza conducted. This production marked the Metropolitan's best work of the season outside of the Wagner list. In a revival of Strauss's *Der Rosenkavalier* Lotte Lehmann, Maria Olszewska, and Emanuel List sang the three major rôles for the first time in New York, and Mme. Lehmann was also heard for the first time at the Metropolitan in a revival of *Tosca*. Bellini's *La Sonnambula* and Verdi's *La Forza del Destino* returned to the repertoire with mainly familiar casts.

Besides Mme. Flagstad, the foreign débutants of 1934-35 were Dino Borgioli, Italian tenor, who made no more than a passing impression, and Anni

Konetzni, soprano of the Vienna State Opera, who did not do herself justice until her final appearance as Isolde on January 27. The American newcomers were Helen Jepson, who sang the soprano rôle in *In the Pasha's Garden*; Kathryn Meisle, contralto, an experienced artist, and Myrtle Leonard, contralto. None of these three had an extensive opportunity, but all were reengaged for 1935-36. Mary Moore, 21-year-old soprano and a native New Yorker, was indisposed at the time set for her début and appeared, in the regular season, only in a Sunday night concert.

Mr. Johnson began his preparations for the next season by a two-months' trip to Europe to seek new talent. During the next few months, he brought the vocal roster up to 79, only 4 less than the 1934-35 figure, the non-return of 23 artists, including the well-known veteran Roman barytone, Giuseppe De Luca, being offset by the engagement of 17 singers, of whom 11 were Americans, new to the Metropolitan, besides 2 artists, Edith Mason, soprano, and Marion Telva, who returned to the company after several years' absence. Except for engagement of Gennaro Papi, also a former member of the Metropolitan, to succeed Vincenzo Bellezza, the conductorial staff was unchanged. Wilhelm von Wymetal, senior, who had left the company in 1931, was asked to undertake his former position of stage director, but proved unable to do so owing to his health, and Leopold Sachse, formerly of the Hamburg Opera, was engaged in his stead.

The new general manager said frankly that financial limitations made it possible to undertake certain reforms only gradually. There was, however, some reorganization in the orchestra and chorus and the provision of new sets for the first two productions of the new season, *La Traviata*, December 16, and *Die Walküre*, December 18, by Jonel Jorgulesco, whose sets for *Don Pasquale* had won praise. A modern ventilation system was installed in the opera house.

The American Ballet Ensemble, with George Balanchine as ballet master, was engaged by the Metropolitan in August, and it was announced that separate ballet productions would again be included in the repertoire for the first time since 1927. Mr. Witherspoon's plans had contemplated the production of an American opera, but none had been chosen by the opening of the season. It was said that the new management had examined many American scores, but found that in the best of these a good score was hampered by a weak libretto, or vice versa, or that the production cost was estimated as too great for a season intended to be self-supporting. As finally chosen, the repertoire included no novelties or revivals of works that had been out of the repertoire for more than a few years. *Carmen* received a new production December 27, with Rosa Ponselle singing the title rôle for the first time. The 1935-36 regular season, like its predecessor, was to last 14 weeks.

Outside of its regular series, the Metropolitan sponsored a special performance on April 12 to celebrate the fiftieth anniversary of Walter Damrosch's New York début as a conductor. Mr. Damrosch conducted Act II of Beethoven's *Fidelio* and Act III of Wagner's *Die Meistersinger*, the latter in English with an American cast.

The principal American operatic novelty of the year, *Porgy and Bess* with music by George Gershwin and a book adapted from the dramatic version of Du Bose Heyward's story of life among the Negroes of Charleston, was produced by the Theatre Guild at the Guild Theatre in New York on Octo-

ber 10, after a short Boston run opening September 30. Alexander Smallens conducted, while the cast, except for the few representatives of white rôles, was composed of Negro singing actors. Their work and the stage direction of Rouben Mamoulian were warmly praised. Mr. Gershwin's score had its uneven points, and showed at times the effect of the composer's long association with the musical comedy field. But it proved at times highly effective both from a musical and a dramatic point of view, and was described by Lawrence Gilman in the New York *Herald Tribune* as "the most noteworthy thing that he (Gershwin) has given us." The opera was still running in New York at the end of the year.

The most noteworthy new foreign opera to be produced in America in 1935 was Dmitri Shostakovich's *Lady Macbeth of Mzensk* or *Katerina Ismailova*. The Cleveland Orchestra, conducted by the enterprising Dr. Artur Rodzinski, gave the first performance outside of Russia in Cleveland on January 31, and repeated it at the Metropolitan Opera House in New York on February 5, under the auspices of the League of Composers. The singers were members of "The Art of Musical Russia," composed mainly of Russian singers living in the United States; Anna Leskaya and Ivan Ivantsoff sang the principal rôles. In a praiseworthy, well coordinated production, the work caused some raising of eyebrows; the plot involved three murders and a seduction scene accompanied by some particularly descriptive music. The music in itself was found by several critics to be rather sterile and derivative, but the score showed unusual theatrical sense and ability for dramatic description.

The Russian company also gave the work in the Philadelphia Orchestra's opera series early in April, and produced *Boris Godunoff* in this series in January, besides giving six performances in New York on its own account in February and March.

Maria Malibran, a romantic opera in three acts with music by Robert Russell Bennett and book by Robert A. Simon, was first produced at the Juilliard School of Music in New York on April 8 with Albert Stoessel conducting. Mr. Bennett's well wrought, discreetly modern score tended to seek the background and abstain from melodic flights, perhaps to a somewhat undue extent.

Fritz Reiner and Alexander Smallens shared the direction of the Philadelphia Orchestra's opera series at the Philadelphia Academy of Music. This had been inaugurated in October, 1934, after the Metropolitan Opera Association had withdrawn from Philadelphia. Besides the two Russian operas mentioned above, the series included Verdi's *Falstaff*, February 1, Gluck's *Iphigénie en Aulide*, February 22; Mozart's *Marriage of Figaro*, March 15, and *Die Meistersinger*, April 24. Each opera was given three times. The Verdi and Mozart works were given in English, the latter in a new translation by the British authority on Mozart, Edward J. Dent. The performances of *Iphigénie*, with Mr. Smallens conducting, were the first in the United States; Cyrena Van Gordon sang the title rôle. In *Die Meistersinger* Fritz Wolff, German tenor, made his American début.

Artistically the series was successful and aroused unusual interest, in which the opportunity to hear opera with a first class orchestra, the unconventionality of the repertoire and various departures from routine ways, especially in the staging, were prominent factors. But the financial results were less encouraging, due in part to low admission prices,

and the deficit was reported to be about \$240,000. As a result opera was dropped as a regular feature for the following season, except for Borodin's *Prince Igor* in a special festival series on December 23, and Philadelphians began to negotiate for the Metropolitan's return. Four performances were finally arranged for, beginning with *Tosca* December 17.

Besides *Lady Macbeth*, the Cleveland Orchestra gave *Tosca* January 3 and 5; *Il Barbiere di Siviglia* March 7 and 9, and *Die Meistersinger* April 13 and 15. The 1935-36 opera series, beginning with *Der Rosenkavalier* October 31 and *Carmen* November 28, was reduced from six to four performances, but the first two productions were each repeated twice. The Cincinnati Symphony Orchestra, under Eugene Goossens, made its opera début with a Wagner series of four productions, including *Die Walküre* in November and *Tannhäuser*, in English, in December. The Detroit Civic Opera Company completed its first season in alliance with the Detroit Symphony Orchestra with a May series offering *La Rondine* in English, *Faust* and *Peter Ibbetson*. *Tosca* was produced in this series in November.

The Chicago Grand Opera Company, renamed Chicago City Opera Company, held its third season under Paul Longone's general management at the Civic Opera House from November 2 to December 7. One work, *Gale*, a one act opera by the English composer-pianist, Ethel Leginska, had its world première under her direction on November 23. Respighi's *La Fiamma*, first produced in Rome in January, 1934, was performed for the first time in the United States on December 2 with Richard Hageman conducting and Rosa Raisa, Joseph Bentonelli, and Carlo Morelli as the principals. Regarded as marking an advance over Respighi's previous operatic works, it was repeated on December 7.

The season began with Boito's *Mefistofele* in a revival with Ezio Pinza, of the Metropolitan, in the title rôle and Frank Forest, a young tenor from St. Paul, as Faust. Massenet's *Thais* was revived November 11, with Helen Jepson as its heroine, and Strauss's *Rosenkavalier* had a revival November 16 with Lotte Lehmann as the Marschallin. Apart from *Lohengrin*, *Don Giovanni*, and Puccini's *Turandot*, the other operas were chosen from the familiar Italian and French list. Mila Kocova, coloratura soprano of the Czech Opera in Prague, made her American début November 16 in *Rigoletto*. Gennaro Papi resigned as conductor in the third week of the season, and Mr. Hageman took over the production of *La Fiamma*.

The thirteenth season of the San Francisco Opera Association under Gaetano Merola's general management, from November 1 to December 2, was distinguished by the presentation of the four music dramas of Wagner's "Ring" cycle in order with Artur Bodanzky, of the Metropolitan Opera, conducting, and casts consisting mainly of Metropolitan artists, including Kirsten Flagstad. The latter part of the season was devoted mainly to Italian and French works, including Puccini's seldom heard *Suor Angelica*. A week of opera in St. Louis, beginning October 31, offered *Turandot* with Maria Jeritz, *Tristan und Isolde*, *Tannhäuser*, and *Faust*.

The touring San Carlo Company had a successful season extending well into the spring, and set out again on another long coast-to-coast tour, with Göta Ljungberg and Cyrena Van Gordon, both of the Metropolitan, as guest artists for its first few weeks.

As usual, the principal opera series in South

America was the annual winter season at the Teatro Colon in Buenos Aires, which began May 22 with Gluck's *Alceste*. An Argentine opera, *La Novia del Hereje* with music by Pascual de Rogatis had its first production in June, and Weinberger's *Schwanda* was introduced to South America in July. The varied repertoire included works such as Wagner's "Ring" cycle and *Tannhäuser*, Smetana's *Bartered Bride*, Mozart's *Don Giovanni*, Rabaud's *Marouf* and Moussorgsky's *Boris Godunoff*, besides standard Italian and French works.

Opera in Europe. The six weeks' season at Covent Garden in London was devoted mainly to music of Wagner and Rossini, including the latter's *L'Italiana in Algeri* with Conchita Supervia; *La Cenerentola* and *Barbiere di Siviglia*. Frida Leider, Lauritz Melchior, Max Hirs, Emanuel List, and Alexander Kipnis were among the principals in the Wagnerian list, including the "Ring" and *Tristan und Isolde*. *Schwanda*, a London novelty of 1934, was repeated, and large audiences went to *La Bohème* to hear the American soprano, Grace Moore, who had been specializing recently in motion pictures. Sir Thomas Beecham conducted most of the Wagner operas, while Wilhelm Furtwaengler made one or two guest appearances. Vincenzo Bellezza conducted the Italian operas.

In a short autumn series in Covent Garden, Sir Thomas conducted the first performance in England of Frederick Delius's *Koanga*, which has its locale in Louisiana, on September 23.

John Chrystie gave a second Mozart festival late in the spring at Glyndebourne, Sussex, presenting *The Marriage of Figaro*, *Così fan tutte*, *Die Zauberflöte*, and *Die Entführung aus dem Serail*. Popular-priced opera with a repertoire of notable variety and interest was again presented throughout most of the year in London by the Sadler's Wells company.

The first American composer to be represented at a French national theatre was Samuel L. M. Barlow, of New York, whose light opera *Mon Ami Pierrot* with a libretto by Sacha Guitry was first produced January 11 at the Paris Opéra-Comique, where Antoine Mariotte's *Gargantua*, written early in the century, had its première in February. A later novelty was Emanuel Bondeville's *L'École des Mairs*, adapted from Molière.

Reynaldo Hahn's Shakespearian opera *Le Marchand de Venise* had its first production at the Paris Opéra on March 29. Rameau's *Castor et Pollux* was revived in April, and taken by the Opéra to Florence for its May festivals, while the Florentines paid a return visit to Paris in June, giving *Norma* and the Verdi Requiem. Wilhelm Furtwaengler conducted Wagner operas in German in the Opéra's spring festival series. In October, while the Opéra observed the Saint-Saëns centenary with *Samson et Dalila*, the Opéra-Comique revived Saint-Saëns's *Phryné*.

One of the principal Italian premières of the year was that of Pietro Mascagni's *Nerone* on January 16 at the Teatro alla Scala in Milan with the composer conducting and Aureliano Pertile in the title rôle. The first season at the Royal Opera in Rome under the artistic direction of Tullio Serafin, formerly of the Metropolitan in New York, was regarded as successful. The season, which began Dec. 27, 1934, with Monteverdi's *Orfeo* in Giacomo Benvenuti's edition, was mainly devoted to familiar works. An arrangement announced in May provided for an artistic exchange between the Royal Opéra and La Scala, including productions, artists, settings, and technical staffs.

The centenary of the death of Vincenzo Bellini, September 24, was observed in the repertoire of most Italian opera houses, but particularly in his native city, Catania, where four of his works were presented in a winter series.

Clemens Krauss made his début as artistic director of the State Opera in Berlin on January 15 with a much lauded production of *Die Meistersinger*. Restaged productions of the "Ring" music dramas and of some of Strauss's operas followed. *Der Prinz von Homburg*, the 100th opus of Paul Graener, had its world première at the State Opera March 14. The German Opera House in Berlin, closed for five months for extensive renovation, was reopened with *Die Meistersinger* on November 15.

Richard Strauss's eleventh opera, *Die Schwiegertante Frau*, was first produced at the State Opera in Dresden on June 24, with Karl Böhm conducting and Friedrich Plaschke in the principal rôle of Admiral Morosus. Other important parts were sung by Maria Cebotary, Helene Jung, Mathieu Ahlersmeier, and Martin Kremer. Stefan Zweig's libretto was an adaptation of a comedy by Ben Jonson.

The opera, essaying a revival of the classic Italian *opera buffa* style, again exhibited Strauss's orchestral wizardry, and was regarded as both clever and extremely exacting. Parts of the score were praised for much beauty as well as constructive mastery, but the effectiveness of the first act was offset by the length of the second, and it was felt that considerable cutting would be needed to gain popularity.

In Munich, Mozart's early opera *La Finta Giardiniera* was produced January 13 at the Residenz Theatre with a new revision of the text by Siegfried Anheisser. The National Theatre began its 1935-36 season under Oscar Walleck as intendant with a considerably enlarged orchestra and chorus. Frankfurt's principal novelty of the year, Werner Egk's *Die Zaubergeige* with a book based on Bavarian marionette folk comedy, won praise in its première on May 22.

The opera *Caponsacchi* by the American composer Richard Hageman had its first performance in Vienna at the Volksoper on March 19 under the composer's direction. At the State Opera the veteran conductor Felix Weingartner, who had been appointed director in December, 1934, had his difficulties at first, as his predecessor, Clemens Krauss, had taken several of the State Opera's principals with him to Berlin. In the June festival weeks in this house, Mr. Furtwaengler conducted opera in Vienna for the first time in three years. Others appearing as conductors, in addition to Weingartner, were Bruno Walter and Victor de Sabata.

Orchestras, American. The ninety-third season of the Philharmonic-Symphony Society of New York (counting from the foundation of the original Philharmonic Society in 1842) closed April 28. Bruno Walter conducted for the first 2 weeks in January, and Arturo Toscanini was in charge for 10 of the remaining 15 weeks of the season. The other 5 were shared by Hans Lange and the young New York conductor, Werner Janssen.

Mr. Toscanini devoted 6 of his programmes to works of Brahms. He gave only 3 works new to New York, all by Italian composers. Mario Castelnuovo-Tedesco's cello concerto was played for the first time anywhere on January 31, with Gregor Piatigorsky as soloist. Two works by Carlo Sonzogno, of Milan, *Il Negro* for cello and orchestra, and *Tango* for orchestra with organ, were both

introduced to America April 18. Both inclining towards the jazz manner, they were warmly acclaimed by the audience, but came in for some severe critical comment.

What seemed the most promising new American work given by the Philharmonic-Symphony in 1934-35 was *Music for a Scene from Shelley* by Samuel Barber, a young Philadelphian, first performed under Mr. Janssen on March 24. Arnold Schönberg's concerto for string quartet and orchestra, based on Handel's concerto grosso, Op. 6, No. 7, was introduced to America under Mr. Janssen on March 21.

Otto Klemperer returned for his second Philharmonic-Symphony engagement for 13 weeks, October 3 to December 29. His first novelties were Schönberg's Suite for String Orchestra and Roy Harris's overture *When Johnny Comes Marching Home*, both of which had been first performed by Mr. Klemperer with the Los Angeles Philharmonic on May 18 and 11, respectively. The Schönberg suite, composed in California in 1934, was a conscious reversion to an 18th century style; New York critics found it rather sterile. Mr. Harris's overture on the familiar Civil War tune had been composed especially for recording, and was taken up by other American orchestras later in the fall.

Hans Lange, relieving Mr. Klemperer for a week, gave the world première of Robert McBride's *Prelude to a Tragedy* on November 20. On November 18, it was reported that Mr. Toscanini was planning to retire from the musical directorship of the Philharmonic-Symphony Orchestra, owing to his age, 68 in March, and the consequent need of lightening his activities. This left the orchestra facing a troubled future, as none of the many conductors sharing the last few seasons with Mr. Toscanini had proved able to come anywhere near duplicating his box-office appeal.

The training orchestra of the National Orchestral Association gave three world premières: Boris Koutzen's concerto for strings and five solo instruments, March 12; Leo Sowerby's cello concerto, April 2, and Nicholas Nabokoff's *Dances de Polichinelle*, April 30. Joseph Jongen's *Symphonie Concertante* for organ and orchestra and Shostakovich's ballet suite, *The Bolt* had their American premières in this series on April 2 and December 16.

The New York Women's Symphony Orchestra, conducted by Antonia Brico, made its début in an invitation concert at Town Hall on February 18. Three public concerts followed, and a 1935-36 series of six concerts at Carnegie Hall began November 12.

The Philharmonic-Symphony Orchestra again took part in the annual summer series at the Lewisohn Stadium of City College, where, in the course of 8 weeks there were 16 performances of 8 operas and about 12 evenings of ballet programmes. Most of these were conducted by Alexander Smallens, while José Iturbi and Willem van Hoogstraten shared the direction of the symphony concerts.

The "deep-lying differences" between him and the Philadelphia Orchestra Association's management and directors which had led Leopold Stokowski to present his resignation in December, 1934, were finally composed early in February after some reorganization of the board, and Mr. Stokowski agreed to conduct for most of the first part of the 1935-36 season and to return in the spring, when an extensive transcontinental tour was to follow the close of the regular Philadelphia season. Alfred Reginald Allen was appointed Arthur Judson's successor as manager. The guest conductors

in the first months of the year were Otto Klemperer, Eugene Ormandy, and José Iturbi. Fritz Reiner and Alexander Smallens, besides sharing the opera series, conducted a series of popular-priced Sunday night concerts.

The orchestra began its thirty-sixth season October 5, when Mr. Stokowski gave the première of Harl McDonald's second (*Rhumba*) symphony, a musical expression of sentiments aroused by a contemplation of present conditions. Other novelties in Mr. Stokowski's autumn concerts were *Etenraku*, old Japanese music arranged by Konoye, October 11; Tibor Serly's *Six Dance Designs*, October 19, conducted by the composer; Arkady Dubensky's *Tom Sawyer* overture, November 29; and, in its first American performance, Francis Poulenc's concerto for two pianos, December 27. Hans Kindler and Vladimir Golschmann were guest conductors for a week apiece. The sixth season of summer concerts in Robin Hood Dell, June 28 to August 27, included opera and ballet in addition to symphony concerts under a long list of conductors.

Serge Koussevitzky conducted most of the year's concerts of the Boston Symphony Orchestra. Adrian Boult, of the B.B.C. Orchestra of London, conducted two pairs in January, with programmes largely devoted to British music. Igor Stravinsky conducted the first American performance of his *Perséphone*, with text by André Gide, on March 15. Colin O'More and Eva Gauthier were the tenor and soprano soloists with the Cecilia Society's chorus.

Dr. Koussevitzky gave first performances of three American works, Alexander Steinert's *Concerto sinfonico* for piano and orchestra and Frederick S. Converse's *American Sketches*, February 8, and Nicolai Berezowsky's *Concerto Lucio* for cello and orchestra, February 22. David Stanley Smith, dean of the Yale University School of Music, conducted the première of his *Epic Poem*, Op. 35, on April 12.

Three symphonic excerpts from Alban Berg's second opera *Lulu* had their first performances in America in the Boston concerts of March 22-23. In New York, where Dr. Koussevitzky introduced these excerpts on April 4, they were repeated by the Philharmonic-Symphony under Klemperer late in November, and met with a wide variety of critical opinion. Filip Lazar was soloist with the Boston Symphony in the American première of his piano concerto, Op. 23, on March 8. In a festival commemorating the Bach and Handel anniversaries, April 19 to May 1, Bach's *St. John Passion* and B minor Mass and Handel's oratorio *Solomon* were the major offerings.

The orchestra's fifty-fifth season began October 11, when Roussel's *Sinfonietta* for strings was introduced to the United States. Another Roussel work new to America, his fourth symphony, was performed under Koussevitzky on December 27.

The Chicago Symphony Orchestra, completing its thirtieth season under Frederick A. Stock's leadership, observed the Bach anniversary with performances of the B minor Mass in January and the *St. Matthew Passion* in April. Igor Stravinsky conducted programmes of his works on January 17, 18, and 22. Samuel A. Lieberon's suite, *In a Winter Garden* was first performed under Mr. Stock on March 14, and music by Adolph Brune, David Van Vactor, Normand Lockwood, and Louis Gruenberg was introduced in an all-American programme on April 4. The orchestra's forty-fifth season began October 17. Some of its 1935 concerts were directed by the assistant conductor, Eric

De Lamarter, and one pair late in January by Sir Hamilton Harty.

One of the principal novelties of the year presented by the Cleveland Orchestra under Artur Rodzinski's direction was Ralph Vaughan Williams's symphony in F minor, which had its first performance outside of Great Britain December 19. The Cincinnati Symphony Orchestra continued under the direction of Eugene Goossens.

Owing to a long illness beginning soon after the close of the 1934-35 season of the Detroit Symphony Orchestra, Ossip Gabrilowitsch took a year's leave of absence, leaving the season to be shared by the assistant conductor, Victor Kolar, with several guests, including José Iturbi, Fritz Reiner, Werner Janssen, Vladimir Golschmann, Dr. Rodzinski, and Bernardino Molinari.

The 1934-35 season of the St. Louis Symphony Orchestra under Vladimir Golschmann's conductorship was stated to be the most successful in its history, and a similar report was made about the first part of the following season. Mr. Janssen made his St. Louis début as guest conductor November 22. The Minneapolis Symphony Orchestra, conducted by Eugene Ormandy, gave the world première of a *Secular Mass* for orchestra and chorus by the young American composer Paul Nordoff on March 29. The Kansas City Philharmonic Orchestra, under Karl Krueger, entered its third season in the fall free from debt.

Owing to failure to raise the required guarantee fund for the projected season of the San Francisco Symphony Orchestra, there were no regular symphony concerts through the winter. Having failed to reach a compromise with the musicians' union, the San Francisco Musical Association then suspended its activities, but the city government, aided by private contributions, arranged a series of spring concerts beginning March 27 under the direction of Alfred Hertz. A tax levy to aid the orchestra was provided in a charter amendment favorably voted upon on May 2. Plans for the winter of 1936 finally agreed upon by the Association, the city and the union provided for from 8 to 10 pairs of regular symphony concerts and a popular series of 10 concerts with Pierre Monteux as conductor.

During Otto Klemperer's absence in the east and in Europe, the Los Angeles Philharmonic Orchestra appeared under several guest conductors, including Iturbi, Gabrilowitsch, Stravinsky, Hertz, Basil Cameron, and Arnold Schönberg. Mr. Klemperer returned to close the season in May. Pierre Monteux was the conductor for the first three months of the 1935-36 season during Mr. Klemperer's absence in New York. The summer series in the Hollywood Bowl began July 16 and closed September 27, with Klemperer, Monteux, Iturbi, Molinari, Ernest Schelling, and Richard Lert among its conductors. The other Pacific Coast orchestras, those of Seattle and Portland, continued under the direction of Basil Cameron and Willem van Hoogstraten.

Ernest Schelling succeeded George Siemomn as conductor of the municipally sponsored Baltimore Symphony Orchestra. The National Symphony Orchestra of Washington, under Hans Kindler, made its first northern tour early in December, going as far as Ottawa. The Rochester (N. Y.) Philharmonic continued with its policy of guest conductors, while Howard Hanson conducted it in the notable American composers' series sponsored by the Eastman School of Music. Space precludes mention of the many other orchestras, of various sizes and ambitions, active in the United States during 1935.

Orchestras, Foreign. London continued to maintain three regular orchestras during 1935, the British Broadcasting Corporation's orchestra under Adrian Boult; the London Philharmonic under Sir Thomas Beecham, and the London Symphony under Sir Hamilton Harty and others. The London Philharmonic also played in the concerts of the Royal Philharmonic Society, which began its 124th season in October. Each of these orchestras also appeared under various guest leaders, including Sir Landon Ronald, Albert Coates, Felix Weingartner, Georg Szell, Nikolai Malko, Hermann Abendroth, and Erich Kleiber. Serg Koussevitzky conducted the B.B.C. Orchestra in May, and Arturo Toscanini made some enthusiastically acclaimed appearances with it in June.

For the second successive year, the B.B.C. Orchestra gave a winter series at Queen's Hall in January. The regular summer Promenade season, again under Sir Henry Wood, extended from August 10 to October 18. Among the novelties in this series were Arthur Bliss's *Film Music—1935*, Herbert Howells's *Elegy* for strings, David Stephen's *Coronach*, and three songs with orchestra by Alexander Mossolov.

Among new works presented in the regular season were an ambitious, but not particularly well received, symphony by the Russian composer Yuri Shaporin (B.B.C. under Coates, January 23), Gordon Jacob's oboe concerto (Royal Philharmonic under Beecham, in March), Vaughan Williams's symphony in F minor (B.B.C. April 10), William Walton's second symphony (played in part in a Courtauld-Sargent concert on April 1, and the first time in full in November by the B.B.C. Orchestra under Harty), Donald Francis Tovey's cello concerto (in a Courtauld-Sargent concert under his direction in November), and Arnold Bax's sixth symphony (Royal Philharmonic under Harty).

Paris continued to be the most prolific among European capitals in the number of active orchestras and the output of new works. The Pasedeloup Orchestra, under Albert Wolff, began in the fall an attempt to solve the difficulty of the simultaneous production of novelties by various orchestras by grouping such works into four special programmes. The other principal Paris orchestras were the Colonne under Paul Paray, the Lamoureux under Eugène Bigot, the Conservatoire under Gaubert, the Poulet under Georges de Lausnay, the Siohan under Robert Siohan, specializing in modern music, and the Orchestra Symphonique de Paris under Pierre Monteux. The Vienna Philharmonic paid a visit in the spring, and the Amsterdam Concertgebouw, under Willem Mengelberg, gave a Beethoven cycle in June. Toscanini, conducting a picked orchestra of French musicians, gave a series of concerts at the Opéra in November. One of his programmes included Luigi Cherubini's symphony in D which, it was believed, had never before been played in Paris.

Orchestral activities in Italy centred in Rome, where the winter series at the Augusteo, conducted by Bernardino Molinari and several guests, had a considerable proportion of works for chorus and orchestra.

Owing to Wilhelm Furtwaengler's retirement from his posts with the Berlin State Opera and Philharmonic Orchestra in December, 1934, due to his disagreement with the official opposition to modern music, the Philharmonic's winter series was shared by guest conductors. But, in April, Furtwaengler made his peace with Reichsführer Hitler, and was ardently acclaimed on his first ap-

pearance on April 25 in a special Philharmonic concert. He resumed his regular position with this orchestra in the fall.

The orchestras of Vienna pursued a relatively tranquil course with Bruno Walter, Wilhelm Furtwaengler, Felix Weingartner, and Sidney Beer among those who shared the leadership of the Viennese Philharmonic. Toscanini appeared as guest conductor with this orchestra early in December. In Amsterdam, a festival was held in the spring to celebrate the fortieth anniversary of Willem Mengelberg's conductorship of the Concertgebouw Orchestra. Vaclav Talich and a large number of guest leaders presided over the Czech Philharmonic Orchestra of Prague. One of the principal Spanish organizations, the Orquesta Pau Casals of Barcelona, found itself in impending financial difficulties in the autumn. Guarantees were arranged to carry it through the 1935-36 season.

Bibliography. A partial list of the books on musical subjects published during the year follows:

ÆSTHETICS AND CRITICISM Eric Clarke, *Music in Everyday Life*. (New York); Oscar Thompson, *How to Understand Music*. (New York); Olin Downes, *Symphonic Masterpieces*. (New York); Philip Hale, *Boston Symphony Program Notes*. (New York); Ralph Vaughan Williams, *National Music*. (New York); Howard D. McKinney and W. R. Anderson, *Discovering Music*. NATIONAL ACADEMY OF DESIGN. A society of American artists, established in New York City in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." After 1906, when the Society of American Artists merged with it, its membership represented all art tendencies except what it deemed the ultra-radical.

The Academicians elected at the annual meeting on Apr. 24, 1935, included: Jerry Farnsworth, Edmund Greacen, Victor Higgins, Frederick W. Hutchison, Guy Wiggins, Painters; Georg Lober and Attilio Piccirilli, Sculptors; William Mitchell Kendall, Architect; Allen Lewis, Worker in the Graphic Arts. The new Associates elected in 1935, included: Edward Bruce, Harvey Dunn, Louis Kronberg, Robert Philipp, Everett Shinn, Maurice Sterne, W. Lester Stevens, J. Scott Williams, Grant Wood, Painters; Gaetano Cecere, Hilda Kristina Lascari, Sculptors; Paul P. Cret, Arthur L. Harmon, Architects; Donald Shaw McLaughlan, George Wright, Workers in the Graphic Arts.

Jonas Lie for president of the academy in 1935; Charles C. Curran, corresponding secretary; Charles S. Chapman, recording secretary; and

Henry Prellwitz, treasurer. Headquarters are at Amsterdam Avenue and 109th Street, New York City, where there also is located the academy's school of design.

NATIONAL ACADEMY OF SCIENCES.

A body incorporated by Act of Congress in 1863 for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art, whenever called upon by any department of the United States Government. The membership is limited to 300 active members and 50 foreign associates. New members are elected by the academy on nominations from its 11 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and paleontology, botany, zoology and anatomy, physiology and biochemistry, pathology and bacteriology, and anthropology and psychology.

At the annual meeting held in Washington, D. C., Apr. 22-24, 1935, the following new members were elected: Norman Levi Bowen, Charles Manning Child, George Ellett Coghill, James Ewing, Merritt Lyndon Fernald, Harvey Fletcher, Ross Aiken Gortner, Earnest Albert Hooton, Jerome Clark Hunsaker, Walter Samuel Hunter, Dunham Jackson, Chester Ray Longwell, Harold Clayton Urey, John Hasbrouch Van Vleck, John Scott Haldane and Jules Bordet were elected foreign associates. There were presented the following gold medals: Agassiz Medal for Oceanography, to Haakon Hassberg Gran, of the University of Oslo, Oslo, Norway, in recognition of his contributions to knowledge of the factors controlling organic production in the sea; Henry Draper Medal, to John Stanley Plaskett, Director of the Dominion Astrophysical Observatory, Victoria, B. C., in recognition of his able and consistent labors in stellar radial velocities, and related studies energetically pursued for nearly 30 years; and Daniel Giraud Elliot Medal and honorarium of \$200, to James P. Chapin, of the American Museum of Natural History, New York City, in recognition of his work entitled, *The Birds of the Belgian Congo*, part i, published as a Bulletin of the American Museum of Natural History in 1932. August Vollmer, member of the staff of the Department of Political Science, University of California, and former Chief of Police of Berkeley, Calif., received the Public Welfare Medal for his application, in police administration, of scientific methods to crime detection and to crime prevention.

The academy's autumn meeting was held at the University of Virginia, Charlottesville, Va., Nov. 19-20. This was the first meeting of the Academy held in the South.

The *Proceedings*, issued monthly, are devoted to condensed reports of the most recent achievements in scientific research by members of the academy and its agent, the National Research Council, or by persons introduced by them. The officers in 1935 were: Frank R. Lillie, president; Arthur L. Day, vice president; Fred E. Wright, home secretary; Thomas Hunt Morgan, foreign secretary; Arthur Keith, treasurer. The academy building is at 2101 Constitution Avenue, Washington, D. C.

NATIONAL BOARD OF FIRE UNDERWRITERS. See FIRE PROTECTION.

NATIONAL CIVIC FEDERATION. THE. This movement was organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of an enlightened public opinion, and promotes legislation when desirable.

The federation continued in 1935 its work based

upon a previous inquiry into the relative merits of Public versus Private Operation of Municipal Utilities. The federation's Municipal Ownership Commission, which was composed of representatives of public utility interests, labor organizations, and economists and which studied the situation in Great Britain and the United States, reported unanimously in favor of private operation, provided there were adequate regulation. These findings were adopted by the federation as its policy on the subject. It is now furthering the study of "What is Adequate Regulation?"

In view of the intensified work of the Communist Party of the United States in industrial centres, its agitation among the unemployed, its determination to incite violence in industrial disputes, and its persistent interference with all efforts to reach equitable agreements between wage earners and their employers, the department on subversive activities continued its efforts to enlighten the general public upon the menace of the Communist movement to American institutions. The federation has made persistent efforts to induce the Federal Government to serve notice upon the Soviet régime to respect its solemn pledge, made as a condition of recognition, on pain of suspension of all relations with it until such time as it is scrupulously respected.

As there have been, since Jan. 1, 1934, criminal violations of our laws, the federation has advocated that there be invoked, in the interest of law enforcement, the Federal Act providing punishment for seditious conspiracy and the various State statutes penalizing criminal syndicalism and criminal anarchy. It has continued to urge that the Congress of the United States make sufficient and adequate appropriation to enable the Bureau of Investigation of the U.S. Department of Justice to be fully advised at all times of the activities of any party, group, or organization, which seeks the overthrow of the government of the United States by force, violence, or any unlawful means.

During the past year, the federation has furthered, in the field of labor and industry, conferences designed to gain cooperation between employers and trade unionists dealing with current controversies relative to the closed shop, the company union, and other contentious issues. The constant purpose of the federation is to aid in developing a *modus vivendi* which would serve to hasten industrial recovery.

Recognizing that the primary objectives of repeal were to promote temperance, to prevent bootlegging, and to collect reasonable Federal and State taxes, and that the growth and continuance of bootlegging since repeal has not only amounted to a public scandal but resulted in enormous losses of revenue to Federal and State governments through unpaid taxes on illicit liquor, the federation has made an exhaustive survey and report upon actual conditions, in the interest of the public welfare. It recommended to the Congress of the United States a proposed solution of the problem.

The woman's department continued its policy of carrying on studies and surveys relating to women in industry, while its lecture courses on current subjects have aided in formulating public opinion on a sound basis.

The officers of the federation in 1935 were: Elihu Root, honorary president; Ralph M. Easley, chairman, executive council; Archibald E. Stevenson, treasurer; Hayes Robbins, secretary; Samuel McRoberts, chairman, economic affairs; John Hays Hammond, chairman, department on active

citizenship; William R. Willcox, chairman, industrial welfare department; Sidney L. Weedon, educational director; Maude Wetmore, chairman, woman's department; Gertrude Beeks Easley, secretary, executive council. Headquarters of the National Civic Federation were at 570 Lexington Avenue, New York City.

NATIONAL COMMITTEE ON EDUCATION BY RADIO. See RADIO.

NATIONAL DEFENSE. See MILITARY PROGRESS; NAVAL PROGRESS.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of approximately 200,000 persons actively engaged in educational work or interested in the promotion of education. Its purpose is to "advance the interests of the teaching profession, promote the welfare of children, and foster the education of all the people." The Association was organized in Philadelphia and incorporated by an act of Congress in 1906. *The Journal of the National Education Association* is the official monthly publication.

The Association consisted in 1936 of 24 departments devoted to special problems in nearly every type of educational work. These departments are as follows: administrative women in education; adult education; art education; business education; classroom teachers; deans of women; educational research; elementary school principals; kindergarten-primary education; lip reading; music education; rural education; school health and physical education; science instruction; secondary education; secondary school principals; social studies; special education; superintendence; supervisors and directors of instruction; supervisors and teachers of home economics; teachers colleges; visual instruction; vocational education.

There are also more than 16 committees, including the Educational Policies Commission, at work on such problems as Federal aid for education, teacher tenure and retirement, rural education, economic status of the teacher, and social-economic goals.

The seventy-third annual convention of the Association was held in Denver, Colorado, June 30 to July 5, 1935. Special sessions were devoted to the needs of youth, economic status of the teacher, academic freedom, and other professional problems. The winter convention, under the direction of the Department of Superintendence, was held in St. Louis, Missouri, Feb. 22 to 27, 1936. The theme was "The Function of the Schools in the Democracy." The subject of the Yearbook prepared for discussion at this meeting was "The Social Studies Curriculum."

The officers for 1935-36 were: president, Agnes Samuelson, Des Moines, Iowa; executive secretary, Willard E. Givens, Washington, D. C.; secretary emeritus, J. W. Crabtree, Washington, D. C., and treasurer, R. E. Offenbauer, Lima, Ohio. Headquarters are at 1201 Sixteenth Street, N. W., Washington, D. C.

NATIONALITY. See INTERNATIONAL LAW.
NATIONAL KINDERGARTEN ASSOCIATION. An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the nation's children. The Association is supported entirely by private subscription. The money is used for the purpose of pro-

moting a knowledge of and an interest in the value of the kindergarten as an integral part of the public school system. Field Secretaries are employed in every state to keep this matter before the public and assist parents in having classes organized for their children. Because, during 1933 and 1934, curtailed budgets closed all of the kindergartens in nearly 200 cities and towns, work has been done by the Association in connection with men's and women's local organizations to have the kindergartens reopened on a cooperative basis. In many cases this has been successful.

The Association has been instrumental in securing the establishment to date of 2048 kindergartens. Where no adequate provision has been made in the school laws for the maintenance of kindergartens, the Association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 16 States. In this it has cooperated with such State organizations as the Congress of Parents and Teachers, Federation of Women's Clubs, Woman's Christian Temperance Union, American Association of University Women, American Legion, Federation of Labor, and Chamber of Commerce. From 1928 to 1932, through the generosity of its members, the Association was able to set aside a fund from which 52 communities which could not otherwise have opened kindergartens, received financial assistance. Since 1912 it has cooperated with the National College of Education in Evanston, Ill., which has trained students from every section of the country. It has also published, and distributed extensively, leaflets on methods and value of kindergarten extension. The Association's weekly articles on Home Education, issued without charge to the press and to Home Demonstration Agents, reached, in 1935, a combined circulation of more than 32,000,000. Periodicals in 52 countries printed them, 1128 publications using them in the United States alone.

The officers of the Association are: Maj. Bradley Martin, president; Hon. P. P. Claxton, honorary president; Miss Lena Madesin Phillips, vice president; Mrs. Roger C. Aldrich, secretary; Miss Bessie Locke, executive secretary; and Julian M. Gerard, treasurer. Headquarters are at 8 West Fortieth Street, New York City.

NATIONAL LABOR RELATIONS BOARD. See TRADE UNIONS.

NATIONAL MUNICIPAL LEAGUE. An organization which acts as a central clearing house for current information on improvements in government throughout the United States, founded in 1894 and incorporated in 1923. Its aim is to promote efficient and democratic government in city, county, state, and nation. Among its committees active in 1935 were those on liquor legislation, model tax collection law, new municipal programme, model administrative code, model state constitution, citizens' organization for municipal activity, citizens' participation in city government, county government, municipal standards, selection of the judiciary, model special assessments law, constructive economy in government, and personnel.

The 41st annual meeting of the league was held in Providence, R. I., Nov. 25-26, 1935. Its theme was "Forty Years of Progress." Coöperating in this conference were the National Association of Civic Secretaries and the Proportional Representation League. The officers elected for 1934-35 were: President, Harold W. Dodds, Princeton, N. J.; first vice-president, Marguerite M. Wells, Washington, D. C.; second vice-president, C. A. Dykstra, Cincinnati, Ohio; treasurer, Carl H. Ffor-

heimer; and secretary and editor of the *National Municipal Review*, Howard P. Jones. Headquarters are at 309 East Thirty-fourth Street, New York City.

NATIONAL RECOVERY ACT (NRA). See CHILD LABOR; LABOR; LAW; UNITED STATES; WOMEN IN INDUSTRY.

NATIONAL RECREATION ASSOCIATION. An association organized in 1906, under the name of the Playground and Recreation Association of America, for the purpose of uniting in a national movement the efforts made in various parts of the United States to provide safe and adequate areas where children might play under experienced leadership. In recent years, however, its work has expanded to include the community as a whole, a staff of field workers being maintained to assist cities in organizing year-round programmes for adults as well as for children.

The association carries on its work through such services as physical education, music, drama, park recreation, recreation for girls and women and for institutions, a bureau of colored work, and, in cooperation with the United States Department of Agriculture, a service to rural leaders. It conducts institutes for the training of recreation workers, and an annual Recreation Congress, which in 1935 was held in Chicago, and was attended by 1000 delegates. Its official magazine is *Recreation*, a monthly. The officers in 1935 were: President, Joseph Lee; treasurer, Gustavus T. Kirby; and secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

NATIONAL RESEARCH COUNCIL. An organization of American scientists, originally established in 1916 by the National Academy of Sciences for the purpose of coordinating the research facilities of the United States for work on war problems involving scientific knowledge, and reorganized in 1918 as a permanent body for the general encouragement of research in the natural sciences. The Council has close relationship with governmental scientific agencies, and has the formal recognition and cooperation of 76 national scientific and technical societies, its membership being composed mainly of appointed representatives of these societies.

The activities of the Council are conducted by seven divisions of a science and technology group and four divisions of a general relationships group. The science and technology group consists of divisions representing physics, mathematics, and astronomy; engineering and industrial research; chemistry and chemical technology; geology and geography; the medical sciences; biology and agriculture; and anthropology and psychology. The general relationships group consists of Federal, foreign, State, and educational relations divisions. Each division has a chairman and from 12 to 30 members, and maintains a number of administrative and technical committees.

Among the major undertakings of the council during 1935 were the administration of about 60 post-doctorate fellowships and a limited research aid fund; the issuing of a series of research monographs in the physical sciences, including parts of a treatise upon the *Physics of the Earth*; the editing of an *Annual Survey of American Chemistry*, the *Annotated Bibliography of an Economic Geology*, and *Child Development Abstracts*; and the sponsoring of research programmes including, among other matters, problems relating to highway construction, electrical insulation, fundamental problems of welding, hydraulic friction, the preser-

vation of books and records, isotopes of hydrogen, sedimentation, tectonics and stratigraphy, the measurement of geologic time, the chemistry and physiology of narcotic drugs, scientific problems of sex, a survey of tropical diseases, infectious abortion, the effects of radiation on living organisms, microbiology of the soil, ecology of grasslands, child development, psychological tests for automobile drivers, and American archaeology.

The general administrative officers of the council for 1935-36 were: Chairman, Frank R. Lillie, professor emeritus of embryology, University of Chicago, and president, National Academy of Sciences, Washington, D. C.; treasurer, Arthur Keith, geologist, United States Geological Survey; Executive Secretary, Albert L. Barrows. Headquarters: National Academy of Sciences Building, 2101 Constitution Ave., Washington, D. C.

NATIONAL RESOURCES COMMITTEE. In the United States, a committee, under the active direction of its Advisory Committee of three members, which has continued to discharge the duties of its predecessors, the National Resources Board and the National Planning Board, and has undertaken other investigations and studies specifically assigned.

In addition to its central staff and research sections, the Committee has had the able assistance of a number of special technical advisory planning committees composed of specialists from within and outside the Federal Government. Thus separate committees have been organized for fields of land use, water resources, science, minerals, regional planning, urban problems, and public works costs and responsibilities, which give a general idea of the broad scope of the activities of the National Resources Committee. The type of work ranges all the way from inventories of natural resources, fact finding surveys, and original research to specific recommendations and advice on such matters as coordination of Federal planning activities and public works programmes, the results of which are in most cases available in printed or mimeographed form. (See *Bibliography of National Resources Committee Reports and Circulars* [preliminary draft].)

In the field of *Regional Planning*, the National Resources Committee has made a valuable contribution through an exhaustive study by a special research committee, dealing with interstate compacts, Federal corporate authorities such as the Tennessee Valley Authority, regional organization of Federal agencies for planning, development, and administration, etc. The results are published in a report *Regional Factors in National Planning and Development*.

City and County Planning have received considerable impetus from the activities of State Planning Boards as well as indirectly through the emphasis which has been given to public works as unemployment relief. Another factor has been the availability to local planning agencies, of white collar relief workers through the FERA followed by the WPA. While no survey has been made since that reported fully in the "Eleventh Circular Letter" of the former National Planning Board referred to in the 1934 *INTERNATIONAL YEAR BOOK*, information available indicates that there are now in the United States approximately 900 city planning commissions, 350 county planning commissions, and perhaps 1300 cities in which zoning ordinances have been adopted. The National Resources Committee is planning to conduct another nation-wide survey of the status of city and county

planning and zoning during 1936 in cooperation with the State planning boards.

A few more States enacted special enabling legislation in 1935 for county planning and county zoning and while an increasing number of counties have comprehensive planning studies under way, it is of special significance that several counties scattered throughout the United States have undertaken also the preparation of a county zoning plan.

See CITY, NATIONAL, STATE, AND REGIONAL PLANNING; STATE PLANNING.

NATIONAL SAFETY COUNCIL. A co-operative association, devoted to the conservation of human life through a continuous campaign of accident prevention in industry, on the highway, in the home, and elsewhere. In 1935 there were more than 4000 members, including corporations, firms, individuals, public officials, schools, Chambers of Commerce, clubs, and civic organizations. About 70 per cent of the members were industrial concerns. Affiliated with the national organization were 51 local councils in as many communities throughout the United States.

During 1935 the council's activities laid especial emphasis on the highway accident problem. A fourth annual National Inter-City Traffic Contest was held, in which approximately 797 municipalities and 33 states participated. Educational work was intensified among urban schools throughout the country, and valuable engineering studies were made in highway safety.

The council publishes the *National Safety News* and *The Industrial Supervisor* for industries; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education*, for schools; *The Safe Worker* and *The Safe Driver*, for industrial employees. It also issues *Safe Practices* and *Health Practices* pamphlets for industry and carries on extensive work through 27 sections represented in the industrial division for the exchange of new ideas, new plans, and new practices among members.

The 24th annual Safety Congress was held in Louisville, Ky., Oct. 14-18, 1935. The officers elected were: President, Dr. C. H. Watson, medical director, American Telephone and Telegraph Company, New York City; vice-president for public safety, Hon. Harold G. Hoffman, governor of New Jersey, Trenton, N. J.; vice-president for safety councils, Mr. John B. Gibson, Western Electric Company, Chicago, Ill.; vice-president for engineering, Mr. A. S. Regula, executive secretary, Industrial Relations Counselors, Inc., New York City; vice-president for industrial safety, Mr. A. V. Rohweder, superintendent of safety and welfare, Duluth, Missabe and Northern Railway Company, Duluth, Minn.; vice-president for health, Dr. Hart E. Fisher, chief surgeon, Chicago Rapid Transit Company, Chicago, Ill.; vice-president for education, Mr. A. W. Whitney, associate general manager, National Bureau of Casualty and Surety Underwriters, New York City; vice-president for membership, Mr. R. T. Solensten, vice-president, Elliott Service Company, New York City; vice-president for public relations, Mr. D. D. Fennell, consulting engineer, Chicago, Ill.; vice-president for finance and treasurer, Mr. W. E. Worth, works manager of Twine Mills, International Harvester Company, Chicago, Ill.; managing director, Mr. W. H. Cameron, Chicago, Ill. Headquarters are at 20 North Wacker Drive, Chicago, Ill.

NATIONAL YOUTH ADMINISTRATION. See CHILD WELFARE; UNIVERSITIES AND COLLEGES.

NATURAL GAS. See GAS.

NAURU, nā'ōō-rōō. An atoll in the Pacific (166° E. longitude and 26 miles south of the Equator). Area, 8.43 sq. miles; population (July 1, 1934), 2677, including 164 Europeans.

Production and Trade. The main product was phosphate (363,680 tons exported in 1933); the production of copra is small. In 1933, imports amounted to £97,684 and consisted principally of food supplies, and machinery for the phosphate industry.

Government. Revenue and expenditure for 1933 amounted to £19,779 and £18,748 respectively. Nauru was mandated to Great Britain, Australia, and New Zealand by the League of Nations. Administrator in 1934, Com. R. C. Garcia.

NAVAL PROGRESS. The disturbed state of international relations in the Mediterranean, in Central Europe and in Eastern Asia, and in other quarters of the globe, served to intensify the preparations that each nation was making for the defense of its borders, its possessions, and its lines of vital communications. The volume of naval construction in progress among the smaller powers, as well as among the great nations reflected the general concern of each government for the safety of its own interests.

Men in the street the world over, as well as statesmen and naval personnel, looked forward with the keenest interest to the naval conference of the five great powers that met in London on December 9 to consider an extension or revision of the Washington and London treaties for the limitation of Naval Armaments.

The Washington treaties of 1922 signed by the United States, Great Britain, Japan, France, and Italy, were the first to establish the ratio principle of naval construction, and eliminated the factor of competition, in quantity at least, of battleships, battle cruisers, and aircraft carriers. Definite tonnage limits were established for each power and the limits set were in the ratio 5-5-3 for the three larger naval powers and approximately 1.75 for Italy and France. A considerable tonnage of capital ships built and building was scrapped by each of the powers, the United States making altogether the heaviest sacrifices in modern vessels.

The agreements reached in Washington, however, only momentarily checked competition and changed its direction toward other types of combatant vessels. After several unsuccessful efforts to restrict naval building in cruisers and smaller vessels the treaty of London was agreed to in 1930. This was ratified by the United States, Great Britain, and Japan only. It further reduced both numbers and tonnage in capital ships, and extended limitations to include cruisers, destroyers, and submarines. In general, the ratios regarding the larger ships were continued, cruisers were divided into two categories, 8-inch and 6-inch gun ships. Japan obtained an increased ratio in destroyers and gained full parity with the United States and Great Britain in submarine tonnage. This latter treaty also fixed the age at which obsolescent ships might be replaced by new construction and provided that no capital ship might be replaced before the expiration of the treaty in 1936.

The quotas established were based largely on the tonnage of the various types existing at the time except in the case of aircraft carriers and the so-called "treaty type" of 10,000 ton, 8-inch gun cruisers, which were non-existent before the Washington conference. As the signatory powers generally possessed battleships, battle cruisers, destroyers, and even submarines in excess of the prescribed

quotas, the new construction required was either in cruisers, or to replace average ships.

The American delegation to London for the 1935 conference was headed by Ambassador Norman Davis and included Under Secretary of State Phillips, and the Chief of Naval Operations, Admiral Standley. This group wished for continuance of the existing 5-5-3 ratio; a reduction, if possible, in the amount of naval construction, but no change in the strength of the American Navy without a corresponding change in the British and Japanese Fleets; and a continuance of existing treaty limits of 35,000 tons for battleships and 10,000 tons for cruisers. As a basis for discussion, Mr. Davis proposed a flat reduction of 20 per cent in all navies, but Admiral Nagano announced instantly that Japan rejected the proposal.

Great Britain stressed her need for cruisers (70 instead of 50) to defend her trade routes. She again proposed limitation of future battleships to 25,000 tons, although she was less insistent upon this point than formerly. As usual, she asked for abolition of submarines or, at least, a drastic limitation of size. This delegation also attempted to secure a "gentleman's agreement" to replace the ratio system, this agreement to include an advance exchange of details regarding building programmes.

Japan insisted that nothing else was to be discussed until naval parity was conceded to Japan, and at the same time she demanded a continuation of the existing agreement not to fortify the Pacific Islands.

France, greatly concerned over the Anglo-German naval agreement, and the increased tonnage to be expected in Germany's new navy, wished for an agreement that would improve her position. Retention of submarines as a "defensive weapon" was also an important item in the programme.

Italy strove for equality with France in total tonnage and for an agreement that would regulate the size of British and French Fleets in the Mediterranean.

Few international gatherings have opened with more barren prospects than did that one and on December 20, when the conference adjourned until January 6, there was little to record in the way of progress. Up to that time discussion had centred on two proposals, that of the Japanese for a common upper limit and the British suggestion that each nation lay down a definite statement of its future building programmes. Neither proposal appeared to offer possibilities of actual limitation of construction, or even agreement.

The Anglo-German naval conversations, during June, 1935, were much more productive of results. Germany agreed that her fleet should never exceed 35 per cent of the aggregate tonnage of the naval forces of the members of the British Commonwealth of Nations, and that this ratio should not be affected by the construction of other powers. She reserved the right, however, to invite an examination of the new situation in case "the general equilibrium of naval armaments should be violently upset." By a further provision the 35 per cent ratio applied not merely to global tonnage but to each category, though here again Germany reserved the right, while not exceeding the ratio in total tonnage, to build up to 45 per cent of the British tonnage in submarines.

France immediately informed the British government that she no longer regarded herself bound by naval treaty ratios, and that in the new conditions France must consider naval increases. The situation was not improved when Minister Eden

found himself obliged to deny France information as to the details of the future German naval programmes. These had been indicated to the British Admiralty, but with the understanding that they would not be divulged to France until that nation came forward with her own plans. This naval rapprochement with Germany undoubtedly brought Italy and France closer together. Among the Baltic States, particularly Poland and the U.S.S.R., there immediately developed strong agitation for naval increases; but no positive action was taken to offset the new German Navy.

In a strictly technical sense, the most important development of the year was the general realization that after a long holiday capital ships were again being constructed and that every indication pointed to an ever increasing number of such ships being laid down. In 1921 the builders' efforts were concentrated on means for providing armor to stop 16-inch shell, for compartmentation to neutralize the effect of torpedo or bomb, and other such problems for 30,000 or 40,000-ton ships. After the treaty of 1922, the cruisers and torpedo craft absorbed the attention of designers and builders—electric welding, superheated and high pressure steam, corrosion resisting steel, stowage and launching of aircraft were matters to be considered in saving weight and resulted incidentally in increasing the cost of 10,000-ton men-of-war to \$1500 and more per ton.

In December, 1932, when France laid down the *Dunkerque* of 26,500 tons to carry eight 13-inch guns in two turrets and to make 29.5 knots, a new era in capital ship construction had begun. The *Strasbourg*, a sister ship, was not laid down until two years later, and since then approval had been given to build two 35,000-ton ships to offset the *Littorio* and the *Vittorio Veneto* which the Italians laid down in 1934. After conclusion of the agreement with Great Britain, the Germans were prompt to commence work on two 26,000-ton ships.

The three leading naval powers were forbidden by treaty to lay down any capital ships before the end of 1936, but when the London Naval Treaty was signed each power already had several such ships over age and most of the others were approaching the limit of usefulness. Plans and specifications were being drawn in office and drafting room, and even should the present age limit be extended by treaty the time was virtually at hand when the building of many powerful heavily armed ships would be under way in all parts of the world.

There was a general recognition of the fact that aircraft had not made battleships obsolete, but that, on the contrary, they remained the basis of national defense. The most marked differences between the new battleships and the old promised to be increased speed—30 knots or more; more powerful anti-aircraft batteries; greater deck protection; and improved provisions for damage control.

* May replace *Furious*, *Eagle*, and *Hermes* (experimental ships). * Available to replace *Miyuki* sunk during 1934.

With the construction of new high speed battleships an accepted fact, naval authorities agreed that the day of the 10,000-ton, 8-inch cruiser was over. Such ships were deemed needlessly large for escort duty; and though not too large for fleet work their design was unsatisfactory for operations in a fleet with a battle line that might move at a speed nearer 30 knots than 20 knots. These cruisers with their heavy armament were valuable adjuncts of fleets as circumscribed as were those in existence under the Washington and London treaties; but their weak, shell-like hulls made them very vulnerable to enemy attacks, and no great power contemplated adding to the number already provided for.

The great powers unable to build new capital ships had expended immense sums modernizing those they had; but, at best, these modernized vessels would be definitely inferior to the new ships that were under construction in France, Italy, and Germany. The most significant features of the modernization work had been the installation of catapults, anti-aircraft batteries, and an increased amount of horizontal armor.

The tabulation on page 475 shows comparative data of the navies of the world in 1935. (See *Naval Progress, YEAR BOOK 1934* for construction each year since 1922.)

Argentina. One cruiser was ordered in England, approximate cost \$5,000,000. The unrest and mutinous spirit of a few years ago was completely under control; a plot by an ex-officer and some 20 men in Buenos Aires to seize a cruiser in the harbor was foiled and apparently had little if any support in the ship. American naval officers were assisting in the development of a naval war college. Progress in naval aviation was noted.

Australia. The budget for 1936 of about \$9,000,000 was a million dollars greater than for the preceding year. Personnel was increased from 3250 to 4100 including an increase of 38 officers. The naval reserve amounted to over 5000 men. Two sloops *Yarra* and *Swan* were to be built in Sydney.

Brazil. The new building programme included 2 cruisers, 10 destroyers, 6 submarines, and a number of auxiliaries. Nine of the destroyers were building in England; and a contract was let for construction of 6 submarines and 1 tanker in Italy. Payments were to be made in exports from Brazil to Italy.

China. Captain Morse, D.S.O., from the Operations Division of the Naval Staff of the British Admiralty was appointed head of the naval mission assisting in the reorganization of the naval forces. The cruiser *Ning Hai* built in Japan was the most modern ship in the fleet. A sister ship *Ping Hai* was laid down in Shanghai in 1931 but work was suspended in 1933. Construction was again undertaken in 1935 under supervision of Japanese engineers, and machinery and armament was being built in Japan. All work was to be completed in two years, total cost \$8,000,000. Characteristics, 2500 tons, 6 5.5-inch guns, 4 tubes, 2 A.A. guns, 1 plane; complement, 340 men. A naval academy in charge of two Japanese instructors was started at Futschau.

Denmark. Of the naval budget of 21,551,741 crowns, 1,665,000 was for new construction and 995,000 was for the naval air service. The destroyer *Ornen* was delivered, and satisfactory progress was reported on two 300-ton submarines building at the Copenhagen Navy Yard.

Estonia. Four destroyers were projected but details were not announced; two submarines or-

dered from Vickers were to have 620 tons surface displacement, 13.5 knots surface, 8.5 knots submerged. Total naval personnel was 1600.

Finland. Interest in the new submarine *Saukko* was largely due to reports that she was built from German plans, and that her single high speed engine with reduction gear was actually an experimental engine designed to be used in submarines later built in Germany.

France. The naval estimates for 1935 totaled 2903 million francs—an increase of 24 million over the revised 1934 figures. The budget presented in December for the next year amounted to only 1547 million francs, but actually for the purposes that those estimates covered there was considerable increase over 1935. The shipbuilding expenditures were to come from special credits; and an extraordinary armaments budget for national defense had already been noted. The long struggle of the Minister of Marine to gain full control of aviation in the Navy met with some measure of success. An aeronautical section was formed that had control of types of planes for naval usage, procurement, and upkeep although personnel matters largely remained with the Air Ministry. At sea there were about 30 planes in carriers, 25 in combatant vessels, and 20 served by a tender. A plane with folding wings was tried out on the super-submarine *Surcouf*.

In recent years the French developed two new types of vessels. The "Avisos" or dispatch boats, intended for service in the colonies and provided for comfort in the tropics, had hulls somewhat similar to flotilla leaders with an added platform over the main deck for protection from sun and rain. Tonnage 2000—dimensions 340' x 42' x 12'—speed 15 knots—radius 9000 miles—3 5.5-inch broadside guns and 4 small A.A. guns. The "Escorteurs de convois" were designed for the convoy duty which was such an important part of French naval plans. Tonnage 600—dimensions 265' x 25' x 10'—speed 35 knots, radius 700 miles at full speed; 2 3.9-inch guns, 4 1.5-inch A.A. guns, 4 torpedo tubes. The

2 new 35,000-ton battleships were to carry 12 13-inch guns and to have a speed of 30 knots. As with the *Dunkerque* they were to be built in a dock shorter than the ship, floated out, and the bow added afterwards. When the *Lorraine* was modernized the centre turret was replaced by a catapult and provision was made for stowage of two observation planes. A few destroyers and submarines were the only ships completed during the year. Important vessels under construction or appropriated for are listed in the accompanying table.

Great Britain. The naval estimates for 1935 amounted to £60,050,000 which was an increase over 1934 of £3,500,000. Of this increase about £250,000 was for speeding up new construction, £500,000 was for increase in the fleet air arm, and £2,500,000 in connection with the modernization programme. Provision was made for 95,000 personnel, an increase of 2000 over the preceding year, which had in turn increased 2000 over the year before that. The new construction programme called for 3 cruisers, 1 leader, and 8 destroyers, 3 submarines, 4 sloops, and various auxiliary vessels.

Despite the increase in personnel provided for in the budget it was announced in November that the authorized number had been exceeded and it was stated that supplementary estimates for that action as well as for other emergency measures would be submitted to Parliament. These increases were generally taken to be the result of operations in the Mediterranean. While no general change in the organization of the naval forces was made, the movement of vessels showed that a great part of the Home Fleet, including the heaviest ships, was sent to supplement the Mediterranean Fleet during the latter part of the year when the relations with Italy were strained.

The new ships, cruisers, destroyers, submarines, and auxiliaries delivered from the builders were all reported as typically excellent British ships with no marked or startling innovations. It was noted that an ever increasing number of ships carried aircraft and that multi-barreled anti-aircraft guns were being generally installed. Details regarding these guns were lacking but it was known that the rate of fire was extremely high.

The modernization programme for heavy ships continued, the *Repulse*, *Royal Oak*, *Malaya*, *Warspile*, and *Renown* being in the dockyards for that purpose. In September the keel was laid for a new aircraft carrier, the *Ark Royal*. Her probable time of completion was 1938. This was the first carrier laid down by the British since completion of the *Glorious* in 1930. It was expected that her general characteristics would be somewhat similar to those of the *Courageous*, although her tonnage was listed as 14,000 as against 25,500 for the latter; and the probable number of planes was given as 60 in comparison with 42. None of the British carriers was prepared to care for as many planes as are planned for in the American and Japanese carriers. Incidentally Great Britain had never seen fit to replace any of the carriers, *Furious*, *Eagle*, *Hermes*, or *Argus* listed as experimental ships and which she had ample authority to replace under the terms of existing treaties.

That country apparently was more concerned over deficiencies in other types. While conforming strictly to existing treaty provisions she let it be understood that with the expiration of the treaties in 1936 she expected to increase her cruiser strength to a point that she regarded as commensurate with her needs, and in the preliminaries of the limitation of armaments conference she inti-

mated that even during 1936 it might be necessary to invoke the so-called "escalator" clause which would entitle her to build above the treaty quota to offset the naval expansion of non-treaty powers. The specific object of such action would be to retain overage cruisers and destroyers that would otherwise have to be scrapped during 1936.

Mr. Baldwin indicated that a general rearmament programme would have to be undertaken and authorities estimated the cost as approximately one and a half billion dollars. The most costly items would be for replacement of battleships which might come to near forty million dollars each. Estimates showed that a prewar cost of about £115 per ton had increased to £216 or more. Important vessels under construction or appropriated for are listed in the accompanying table.

Germany. Unquestionably the most sensational naval event of the year was the renaissance of German sea power. For the preceding four years the reported naval expenditures approximated 190 million RM each year, and the personnel had gradually increased to 1600 officers and something over 30,000 men. With a definite abandonment of the restrictive naval provisos of the Versailles Treaty, and after reaching an understanding with Great Britain, Germany announced that her current building programme included 2 26,000-ton battle-

ships, 2 10,000-ton heavy cruisers, 16 destroyers, and 28 submarines. (The Versailles Treaty had particularly forbidden submarines to Germany and British acquiescence to this particular part of the programme occasioned general surprise.) The two battleships were to make 30 knots, and were to be driven by geared turbines rather than by Diesel engines. The armament was to be 9 or 12 11-inch guns, mounted in 3 or 4 triple turrets, 12 5.9-inch guns in the secondary battery, and 6 4.1-inch A.A. guns. They would carry 2 observation planes. Armor would be 9" side, and thick protective deck. The relatively light big guns caused much surprise, and clearly indicated the German preference for a high rate of fire to a heavier weight of metal in a salvo. The new 10,000-ton cruisers were to make 33 knots, carry 8 8-inch guns and 8 4.1-inch guns, and 3-pounders for A.A. battery. The destroyers were to be of 1625 tons, 36 knots, mount quadruple tubes, and carry five 5-inch guns of a new and improved type. Germany also built a number of patrol vessels of the so-called F-type that were somewhat similar to and an answer to the French *escorteurs* heretofore mentioned.

The new cruiser *Nurnberg*, last of the group to be constructed under the Versailles treaty provisions, was finished in November. Of 6000 tons with 9 5.9-inch guns, 4 3.4-inch A.A. guns, and 12 torpedo tubes she was not unlike the *Leipzig* completed four years before. The *Admiral Graf Spee*, third and last of the vestpocket battleships, was completed. A number of small submarines were put into service.

Greece. The government adopted a construction programme that called for 12 destroyers of 1000 tons each or less and 2 submarines. The building was to be spread over a five-year period, but no contracts were announced for the 4 destroyers and 2 submarines that were to be started in foreign yards in 1935. As the cruiser *Averoff* had been damaged by the Reds during the Venizelist uprising the *Helle* was sent to bring the king home.

Italy. The various decrees regarding naval and other expenditures caused considerable public confusion as to just what amounts were being spent on the Italian Navy. The amounts were unquestionably large as was evidenced by a decree in October allocating 414,000,000 lire additional for new construction, apportioned as follows: 1935-36 budget—285,000,000; 1936-37 budget—103,000,000; and 1937-38 budget—26,000,000; and another decree the same month setting aside 327,000,000 lire for constructing and filling new oil storage depots. Last reliable reports set the personnel of the Navy at 3000 officers and 50,000 men but that number might well have been exceeded in anticipation of a possible clash with the British Fleet.

The battleships *Giulio Cesare* and *Conte di Cavour* laid down in 1910 and completed in 1915 finished an extensive modernization. Their original tonnage was 22,000. They were extensively re-armored and regunned, substantial alteration was made to propelling machinery, and their speed increased from 22 to 26 knots. Modernization of two newer ships *Andrea Doria* and *Caio-Dulio* was in progress but had not been completed. At Naples a new dry dock was under construction to take care of the 35,000-ton battleships when completed. Its cost was reported as 50,000,000 lire. In addition, 4 floating dry docks were building, 2 of 1000 tons each; 1 of 1600 tons; and the fourth of 7500 tons. The building programme for the current year was 2 1600-ton destroyers, 2 615-ton torpedo boats,

1 2000-ton colonial dispatch boat, one 908-ton escort vessel, 1 56-ton torpedo boat.

In addition, the General Board recommended construction of 10 600-ton submarines; but final action was not taken on this recommendation which, if adopted, would bring Italy's tonnage of modern submarines up to 52,700 tons.

The naval air arm which was part of the Italian Air Force was strengthened and modernized. The number of planes on each battleship and cruiser was being increased to four. The 24 bomber and reconnaissance squadrons attached to the Navy were being increased to 30 squadrons with a total strength of 270 machines. An experimental Savoia flying boat was reported as carrying two 18-inch torpedoes. Important vessels under construction or appropriated for are listed in the accompanying table.

Japan. The naval budget for 1934-35 was finally fixed at 530,193,000 yen out of a total military budget of 1,021,470,000 yen which was 47 per cent of the total national budget. A slight increase of all these figures was expected for the next year, the total for the Navy approximating 552,000,000 yen. The number of officers and men was not fixed by legislation but by the naval authorities; the number in service was 101,460 of whom approximately 10,000 were officers.

Modernization work was proceeding apace in the battleships *Mutsu* and *Nagato*, the battle cruiser *Kongo*, and the aircraft carrier *Kaga*. The new cruisers *Mogami* and *Mikuma* joined the fleet late in the year. Their main battery of 15 6.1-inch guns was supplemented by 2 5-inch A.A. guns and 12 torpedo tubes. Speed was reported as 32 knots. In these ships, as in Japanese men-of-war in general, maximum armament was obtained at a sacrifice of cruising radius; and, in the opinion of many foreign authorities, at the expense of a certain degree of stability and seaworthiness. Their ships had narrow beam, light draft, light armor, heavy armament, and a very considerable amount of top hamper. This top hamper to mount searchlights, range finders, fire control installations, and the like would prove an excellent target for enemy gunners and in these sensitive ships might tend to reduce the steadiness of the gun platforms in bad weather, or during turns. The living conditions on board Japanese ships were markedly inferior to those on American and British vessels. The Japanese con-

structed an extraordinarily small submarine 36 feet long by 6 feet wide propelled on the surface by a 25 h.p. gas engine, and submerged by a 12 kw. motor. Its trial crew was four men. It was reported that it could stay submerged but four hours and that the maximum safe depth of submergence was 200 feet. The goal of naval air strength to be reached by 1936 was 1300 planes. There were approximately 800 in service at the beginning of the year. It should be remembered that in Japan as in the United States the naval air arm was under exclusive naval jurisdiction. Important vessels under construction or appropriated for are listed in the accompanying table.

		700	

Netherlands. A special committee on the composition of the East Indies fleet recommended 12 destroyers, 18 submarines, and 54 seaplanes. A minority recommended the continued maintenance of 3 cruisers that had hitherto been the dominant part of that force. The cruiser *De Ruyter* launched in May was to be a replacement in that force. In view of the committee reports this might be the last cruiser built for that purpose. The naval seaplanes were reported as very successful in cooperation with warships in the suppression of piracy in certain parts of the Dutch East Indies.

Norway. The estimates of 11,561,700 kroner were nearly one million greater than for the preceding year. About one-fourth of the amount was for building 2 torpedo boats and 2 gunboats. The 2 destroyers building at the Horten Navy Yard were being electric welded, would carry three 10-cm guns and make 30 knots.

Poland. Two 2000-ton destroyers were ordered in England; a mine layer of 2250 tons was building in Havre; and the six projected submarines were not ordered. The mine sweeper *Jaskolka*, the first man-of-war built in Poland, was placed in commission.

Portugal. In March, Lisbon announced a second construction programme of 5 destroyers and 3 submarines to be completed by 1939. This was in addition to the first programme of 14 ships under-

taken several years ago. It was reported that the new submarine *Delfin* had been rejected by the government until the builders brought her up to specifications in certain particulars. It was probable that others building would also have to be altered before acceptance.

Siam. The navy of Siam continued its rapid growth. In 1935 it had 352 officers and 4726 men. Four 370-ton submarines, the first for this country, were ordered from Japan at a cost of \$400,000 each, exclusive of armament. In addition to 2 torpedo boats already building a contract was signed for 8 torpedo boats and 2 mine boats to be built in Italy.

Spain. The new destroyer, *Almirante Antequera*, was placed in service in May, 1676 tons, 36 knots, 5 120-mm guns, 2 triple tubes. The government announced a \$65,000,000 five-year building programme. This was partially for defense of the Balearic Isles, and partially to aid unemployment. It included 10 400-ton submarines, 12 800-ton torpedo boats, 12 200-ton motor boats, 12 50-ton torpedo launches, and 12 other small craft.

Sweden. The 1935-36 estimates called for 39,666,000 kronor, an increase of four million over the last year, which was in turn an increase of four million over the preceding one. Considerable additional credits were made available in 1936 for overhaul of ships, for construction of two new destroyers, and for coast defense. A commission that had been studying the defense system for some years recommended a gradual abolition of capital ships and a concentration on light vessels and aircraft; the unification of defense command under a single general staff; and other measures to strengthen the land forces.

Union of Soviet Socialist Republics (Russia). The defense budget had mounted year by year and in 1935 exceeded one and one-half billion rubles but details regarding the navy were uncertain. A report from Oslo credited 4 cruisers, 7 submarines, and 3 gunboats with being under construction. Government papers announced that since 1931 there had been 1100 per cent increase in the coast guard fleet, 435 per cent in submarines, and 370 per cent in destroyers. It was reported that the keel of the sixtieth submarine was laid in the summer and that 10 more were placed on order. These were believed to be of about 800 tons—15 knot surface speed, 7000 miles cruising radius, carrying one 102-mm gun, and a large number of torpedo tubes. The submarine B-3 built in 1917 had a collision in Finland Bay and was lost with all hands.

United States. The appropriation act for the fiscal year 1936 provided \$457,805,211. Of this amount about \$100,000,000 was for shipbuilding including about \$20,000,000 for starting work on 24 new vessels that were not all laid down by the end of the year. An increase of the officer strength of the line of the Navy from 5499 to 6531 was authorized but officials estimated that it would be 10 years before the Naval Academy output would bring the officer strength up to the latter figure. An increase of enlisted strength to 95,000 was authorized and it was anticipated that the number would be further increased from year to year as new ships joined the fleet. In view of the rapid expansion in the naval air force and the difficulty in supplying pilots immediately, provision was made for training and employing young reserve officers on active duty for several years.

Substantial progress was made in providing for orderly increase in the strength of the Navy as contemplated by the Trammel-Vinson Act ap-

proved March, 1934. This Act authorized construction of vessels and aircraft to bring the Navy to the full strength allowed in the various categories limited by the treaties of Washington and London. With passage of the above mentioned appropriation act provision was made for starting work on all ships authorized by treaty except 35 destroyers and 14 submarines. It was expected that these would be asked for in future years, together with additional replacement construction as necessary to retire overage ships. In addition, the Navy Department drew up a 10-year programme for building necessary auxiliary vessels for the larger navy, that was to be presented to the next Congress. During the fiscal year 1935 there were 306 ships maintained in commission and operated at sea. The number included 15 battleships, 15 heavy cruisers, 10 light cruisers, 105 destroyers, 54 submarines, 4 aircraft carriers, 1 mine layer, 4 light mine layers, 13 patrol vessels, 83 auxiliaries; and, in addition, 156 small craft were operated for inshore work. There were 974 service aeroplanes on hand and 472 more on order.

On the night of February 12 the U.S.S. *Macon*, the only serviceable dirigible in America, was lost at sea while participating in fleet exercises. An investigation placed the cause of the casualty as a structural failure. The ship sank off the coast of California. All but two of her crew were rescued by vessels of the fleet.

In the spring, the entire fleet participated in one of the most extensive strategical and tactical problems ever attempted. The operating area included the Pacific Coast, the Aleutian Islands, the Hawaiian Islands as far west as Midway Island, and all the intervening ocean. Extensive use was made of submarines and aircraft and valuable information was obtained both as to their possibilities and limitations. Approximately 400 naval planes participated in the exercise and as a part of it 43 patrol planes flew in a massed flight from Pearl Harbor to Midway and there based on tenders while operating. Virtually the entire fleet entered Pearl Harbor to test the facilities of that place as a base.

As a part of the general development of national defense the Navy was actively engaged in the development of strategic naval bases in the Pacific, especially those in the Hawaiian Islands. Among the most important projects was a floating dry dock to cost \$10,000,000 capable of docking the largest vessels in the Navy. It was scheduled to operate normally at Pearl Harbor but might be used anywhere that sufficient depth of water for its operation could be found.

A detailed study was made of the organization and administration of the Naval Reserve and steps were initiated both to increase the size and to increase the amount of active duty training for most groups.

When the *New Mexico* and *Idaho* rejoined the fleet the original modernization programme was completed but the Navy Department was about to embark on a new one to strengthen the fleet. This included new fire control installations in the *Tennessee* and the *California*, and extensive improvements in the damage control equipment of those ships. The *Lexington* and *Saratoga* were to be brought up to date although complete details as to their requirements were lacking. Aside from improvement in damage control installations the facilities for handling planes were to be modified to take advantage of experiences of recent years, and to more nearly conform with the modern equipment being placed in the *Yorktown* and *Enterprise*.

Certain other vessels were to be improved, but no funds were to be spent on modernization of the smaller craft as they were all new or too old to justify any extensive expenditures.

Destroyers and submarines were the only important ships completed during the year. The former were of a new type but they were operating too short a time for conclusions to be drawn as to the extent of their superiority over the World War

type. The heavy cruiser *Quincy* was due for delivery, but she was twice delayed before leaving the builders' hands; a fire during the summer did extensive damage and later a test of important machinery resulted in serious injury from a loose bolt that got in the moving parts. Important vessels under construction or appropriated for are listed in the table on page 480.

Yugoslavia. Three new destroyers and a number of auxiliaries were being built in and for Yugoslavia by a French Company but the boilers and machinery were to be supplied by Yarrow at a cost of approximately \$1,500,000.

NAVIGATION. See SHIPBUILDING; SHIPPING; NAVAL PROGRESS; MARINE DISASTERS.

NAZARENE, CHURCH OF THE. Near the close of the 19th century, there developed a movement for the spread and conservation of scriptural holiness in organized church form in various parts of the United States. This movement was similar to that of the previous century, historically known as the Wesleyan revival. A closer affiliation of the several bodies in the United States culminated in the organization of the Pentecostal Church of the Nazarene in Chicago in October, 1907, by the union of the Church of the Nazarene, composed of 45 organizations mostly west of the Mississippi River, and the Association of the Pentecostal Churches of America, composed of 45 organizations east of the Mississippi River. In 1909 the Holiness Church of Christ, having 93 organizations, joined the merger. Ten years later the general assembly ordered the word "Pentecostal" dropped from the name.

In 1935 the Church of the Nazarene had attained a membership of 130,353, with 2254 organized churches. Of these 84 churches and 2704 members were in Canada and the British Isles. There were 2638 ordained and 1276 licensed ministers. The 2170 Sunday Bible schools had a total enrollment of 270,531. To the 1623 Young People's Societies belonged 56,964 members. The 741 Junior Societies had a membership of 17,505, and the 1923 Woman's Missionary Societies a membership of 37,452.

The general board has separate departments of foreign missions, home missions and evangelism, publication, ministerial relief, church schools, and education. Foreign missionary work is carried on in the Cape Verde Islands, South Africa, Palestine, Western India, China, Japan, Mexico, Central America, Peru, and Argentina. The department of education supervises its educational institutions: Eastern Nazarene College, Wollaston, Mass.; Olivet College, Olivet, Ill.; Southeastern Nazarene College, Nashville, Tenn.; Bethany-Peniel College, Bethany, Okla.; Bresee College, Hutchinson, Kans.; Pasadena College, Pasadena, Calif.; Northwestern Nazarene College, Nampa, Idaho; and Northern Bible College, Red Deer, Alberta. The department of publication issues the official periodical, the *Herald of Holiness*, through the Nazarene Publishing House in Kansas City, Mo.

The next meeting of the quadrennial general assembly will be held in June, 1936. There are 42 assembly districts. The general superintendents in 1935 were: The Rev. J. W. Goodwin, D.D.; the Rev. R. T. Williams, D.D.; the Rev. J. B. Chapman, D.D. The Rev. E. J. Fleming was general church secretary, and Mervel S. Lunn, general treasurer. Headquarters of the church are at 2923 Troost Avenue, Kansas City, Mo.

NAZIS. See AUSTRIA, CZECHOSLOVAKIA, DANZIG, DENMARK, GERMANY, MEMEL, SAAR, SWEDEN, and SWITZERLAND under *History*; JEWS; FASCISM.

NEBRASKA. Population. On Apr. 1, 1930 (Fifteenth Census), 1,377,963; July 1, 1934 (latest Federal estimate), 1,395,000; 1920 (Census), 1,296,372. Omaha had (1930) 214,006 inhabitants; Lincoln, the capital, 75,933.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	7,820,000	105,570,000	\$58,064,000
	1934	6,676,000	21,363,000	18,586,000
Hay (tame) ...	1935	1,710,000	2,957,000*	14,341,000
	1934	1,480,000	1,421,000*	22,310,000
Wheat	1935	3,080,000	39,472,000	33,398,000
	1934	2,310,000	15,838,000	13,279,000
Oats	1935	2,620,000	75,980,000	20,515,000
	1934	1,224,000	8,568,000	4,541,000
Sugar beets	1935	50,000	613,000*
	1934	60,000	549,000*	2,525,000
Potatoes	1935	126,000	8,694,000	4,782,000
	1934	115,000	3,450,000	3,002,000
Barley	1935	713,000	15,686,000	5,647,000
	1934	360,000	2,700,000	1,620,000
Rye	1935	500,000	7,250,000	2,828,000
	1934	182,000	728,000	568,000

* Tons.

Education. The inhabitants of school age, taken as including all between 5 and 21 years, were reckoned for the academic year 1934-35 as numbering 415,834. The enrollments of pupils in the public schools in the course of that year attained 312,355. Of these, 145,975 were in the graded elementary schools of cities and villages; 90,103 were in rural schools; and 76,277 were in high schools. The year's expenditures for public schools throughout the State totaled \$18,343,160. The yearly salaries of the teachers averaged \$844.29.

Charities and Corrections. The State maintained, in 1935, 17 institutions for the care and custody of persons. Their operation was directed by the State Board of Control, a body composed of three members, who held by appointment for terms of six years ending respectively in rotation.

The 17 institutions held, on Dec. 1, 1935, 7641 inmates. The institutions and the number of inmates in each were: Institution for the Feeble Minded, at Beatrice, 1206; Girls' Training School, Geneva, 192; Soldiers' and Sailors' Home, Grand Island, 207; Hastings State Hospital, Ingleside, 1509; State Industrial School, Kearney, 195; Hospital for the Tuberculous, Kearney, 151; Lincoln State Hospital, Lincoln, 1224; Orthopedic Hospital, Lincoln, 89; State Penitentiary, Lincoln, 911; Nebraska Industrial Home, Milford, 68; Soldiers' and Sailors' Home, Milford, 109; School for the Blind, Nebraska City, 60; Norfolk State Hospital, Norfolk, 1056; School for the Deaf, Omaha, 193; Reformatory for Women, York, 45; Home for Dependent Children, Lincoln, 120; Reformatory for Men, Lincoln, 306.

Legislation. Acting in advance of the passage of the Federal Social Security bill, the Legislature adopted a measure giving a broad grant of authority for what was designed to be a system of pensions for needy elderly persons, to conform with the requirements for the expected Federal subvention. It imposed a special tax of 1 cent a gallon on sales of gasoline, designed to raise \$3,000,000 in the ensuing fiscal year, to provide revenue for the pension system and aid to the unemployed, and it also assigned to the pension fund \$1,000,000 of the revenue derived from liquor taxes and all the proceeds of a head tax of \$2 imposed on persons between the ages of 21 and 50 years. However, a State Assistance Committee was created and endowed with much discretion in the dispensation

of \$4,000,000 expected from above-mentioned taxes over the ensuing two years, in coöperation with the Federal programmes for relief of the distress of the unemployed and for "social security."

The State's moratorium on the foreclosure of mortgages was extended for two years. This, the last regular session before the decreed advent of a unicameral Legislature, fixed the number of the successor chamber at 43 members. A proposed resolution in favor of the Townsend plan for Federal payment of high pensions to the elderly was defeated. The Federal act outlawing debt stipulations for payment in gold or its equivalent was supplemented by an act abrogating the gold clauses of debts both public and private owed in the State.

After much of the above-noted legislation for public aid to needy classes had been set aside by the courts (see *Events*, below) a special session held late in the year enacted measures to provide a temporary substitute. The administration of State pension funds was assigned to the State Treasurer. Out of \$5,113,000 a year allotted from the proceeds of a higher tax on gasoline, disbursements were allowed on the following scale: Not more than 1 per cent for cost of State administration, 24.52 per cent for relief of the needy unemployed, 1.56 for the blind, 57.27 for pensions to the aged, 15.56 for dependent children, 0.78 for crippled children, and 0.31 for child welfare.

Political and Other Events. The State Supreme Court in a decision rendered September 20 invalidated as unconstitutional the acts (see above) empowering the State Assistance Committee to allot and expend \$4,000,000 for divers purposes. The acts were held to delegate the legislative power. The decision held invalid the imposition of the special one-cent tax on gasoline, which had already realized about \$1,000,000; it left the State without the chief of intended resources to apply to cooperation with the FERA in supporting the destitute unemployed and for paying pensions to the elderly. The pension act itself was not touched by the decision, but the means for its application were in great measure destroyed.

The State had not contributed to the support of its destitute unemployed class in 1934, the FERA had granted thereto \$8,003,842, and the subdivisions \$2,195,317. In the Federal shift to "work relief" the President allotted to the State \$4,768,000 for work-making enterprises, out of the \$909,077,211 apportioned up to October 8. The State government was one of the few of those that more than met their expenditures of the two years ended with the fiscal year 1935. Its available balance in the general fund on June 30 was about \$750,000 higher than that of two years before. The State lived up to its constitutional prohibition of debt, issuing neither bonds nor the constitutionally permissible warrants in anticipation of receipt of taxes.

A flood in the valley of the Republican River on June 1 caused 86 or more deaths and widespread damage. A protracted strike among employees of the Omaha and Council Bluffs Street Railway Company led to Governor Cochran's declaring martial law in Omaha on June 16, ordering the company's cars removed from the streets, and ordering enforced arbitration. Former Governor Charles W. Bryan was elected mayor of Lincoln on May 7.

Officers. The chief officers of the State, serving in 1935, were: Governor, R. L. Cochran; Lieutenant-Governor, Walter H. Jurgensen; Secretary of State, Harry R. Swanson; Auditor, Fred C. Ayres; Treasurer, George E. Hall; Attorney-

General, William H. Wright; Superintendent of Public Instruction, Charles W. Taylor.

Judiciary. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, Edward E. Good, George A. Eberly, L. B. Day, Bayard H. Paine, Edward F. Carter.

NEBRASKA, UNIVERSITY OF. A State institution of higher education in Lincoln, Neb., founded in 1869. The enrollment for the autumn of 1935 was 6239. There were 2079 students enrolled in the summer session of 1935. The faculty numbered 351 full-time members. The permanent endowment fund amounted to \$960,927. The library contained 294,435 volumes. Chancellor, Edgar A. Burnett, D.Sc.

NECROLOGY. The following list contains the names of notable persons who died in 1935. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without text.

ABBOTT, ALEXANDER CREVER. American bacteriologist, died at Cape Cod, Mass., Sept. 11, 1935. Born in Baltimore, Md., Feb. 26, 1860, he took his M.D. degree at the University of Maryland in 1884 and later attended Johns Hopkins University (1884-87), the University of Munich (1887-88), and the University of Berlin (1888-89). Following his return to the United States in 1889 he became assistant in hygiene and bacteriology at Johns Hopkins University. In 1891 he joined the University of Pennsylvania where he served, successively, as assistant in charge of the laboratory of hygiene (1891-96), and professor of hygiene and bacteriology and director of the laboratory of hygiene (1897-1929). In Philadelphia he was appointed director of the division on pathology, bacteriology, and disinfection of the Bureau of Health, and from 1903 to 1909 was chief of that Bureau and president of the Board of Health. Also, during 1919-29, he filled the position of director of the University's school of hygiene and public health. In 1929 he retired as professor emeritus. Dr. Abbott was a member of the Association of American Physicians, the American Philosophical Society, the Society for Experimental Biology and Medicine, and wrote *The Principles of Bacteriology* (1892, 1921) and *The Hygiene of Transmissible Diseases* (1899, 1902).

ADAMSON, ROBERT. American business man and banker, died in New York City, Sept. 19, 1935. Born in Adamson's District, Ga., Mar. 31, 1871, he received a common school education, and then began a career in the newspaper field. After serving as editor of the Atlanta (Ga.) *Constitution*, he was associate editor of the Atlanta *Journal* and in New York, was political writer for the New York *World* (1899-1909). As the result of his assignment to the New York City Hall, as special reporter, he became secretary to Mayor William J. Gaynor in 1910. On the death of the latter in 1913 he continued to act in the same capacity for Mayor A. L. Kline. From 1914 to 1917, during Mayor John P. Mitchell's administration, he was fire commissioner of New York City and introduced many reforms in the fire department. Among these were the teaching of fire prevention, the elimination of wooden cars in the subways, and the motorization of fire trucks. After being defeated for the office of President of the Board of Aldermen in 1917 he became vice president of the International Arms and Fuse Co., president, and later director and member of the executive committee, of the Petroleum Heat and Power Co. In the banking world he was chairman of the board of directors of the National American Bank and on its merger with the Central Mercantile Bank and Trust Co., became vice president and director. In 1928 the latter united with the Bank of United States and Mr. Adamson retained his office, until the institution closed its doors in 1930. In the court proceedings that followed the failure of the bank, Mr. Adamson was not indicted. In 1934 he entered into a partnership with Ray D. Lillibridge and the late Karl K. Kitchen (q.v.) in a public relations firm. On the death of Kitchen in June, 1935, the partnership was dissolved and Mr. Adamson operated a firm of his own. He had been a director of the Argent Financial Corp., Alfred A. Knopf, Inc., the Empire Bond and Mortgage Co., the Fifth Avenue Association, and was a member of the New York State Chamber of Commerce.

ADDAMS, JANE, died May 21, 1935.

ADLER, HERMAN MORRIS. American psychiatrist and criminologist, died in Boston, Mass., Dec. 7, 1935. Born in New York City, Oct. 10, 1876, he received the A.M. and M.D. degrees at Columbia University in 1901. He became associated with the Harvard Medical School, serving successively as assistant (1907-09), instructor in neuropathology and psychiatry (1909-12), and assistant professor of psychiatry (1912-16). Also, during the latter period, he was chief of staff of the Boston Psychopathic Hospital. He removed to Chicago in 1916 where, under the auspices of the Rocke-

SIR CHARLES KINGSFORD-SMITH

feller Foundation and the National Committee on Mental Hygiene, he studied facilities for the detection and care of mental infirmities. In 1917 he was named a director of the Juvenile Psychopathic Institute, and in June of the same year, became criminologist for the State of Illinois by appointment of Governor Lowden. He retained this post up to 1930. During the World War, Dr. Adler served in the Medical Corps of the U.S. Army with the rank of major, and was occupied at that time with disciplinary psychiatry in military prisons. In 1919 he was invited to occupy the chair of criminology at the Medical College of the University of Illinois where he served until 1928, and where he was head of the department of social hygiene, medical jurisprudence, and criminology. He then joined the faculty of the University of California, where from 1930 he was professor of psychiatry. An adviser to the California Department of Institutions, he was a director of the Behavior Research Fund since 1926 and a member of the Harvard Survey of Crime and Law. A Fellow of the American Medical Association, Dr. Adler held membership in many medical and scientific societies. In his work on criminal investigation, he perfected the so-called lie detector, and wrote the section on medical science and criminal justice in the *Criminal Justice Survey* of the Cleveland Foundation in 1921, as well as contributing to various scientific journals on psychiatric and criminological matters. His work dealt principally with the personality and behavior difficulties and mental factors in criminology.

AGAR, JOHN GIRAUD American lawyer, died at New Rochelle, N. Y., Sept. 20, 1935. Born in New Orleans, June 3, 1856; educated at Georgetown University from which he was graduated in 1876, and from Columbia College Law School in 1880. Following his admittance to the bar of the State of New York he began to practice law in New York City. An independent Democrat he received the appointment of assistant United States Attorney for the Southern District of New York from President Cleveland in 1881, but resigned in the following year to devote his time to his law practice as senior partner in the firm of Agar, Ely, and Fulton. Agar's interest in the betterment of the civic affairs of New York was paramount, and in the election of 1891, he served as chairman of the campaign committee of the People's Municipal League. Largely through his efforts the measure adopting the use of the Australian ballot was passed. In 1896, Mayor Strong, a Reform mayor, appointed him a member of the school commission of the Board of Education and on this he served for three years. When he resigned he gave as his reason for doing so the fact that the city's educational policy was again in the hands of politicians and that things were as bad as they had been in 1896. Becoming president of the Reform Club in 1906, his administration was marked by an agitation for civic reform, particularly in regard to the tariff, currency, and municipal civil service in which Mr. Agar was greatly interested. He served on many committees concerned with civic affairs, and was vice president of the National Civic Federation in 1905, and president of the Municipal Art Society, 1908-09, and the National Arts Club, 1910. In 1931 he offered, through the National Arts Club, a prize of \$3000 for the best book on the subject, "The Soul of America." During the World War, Mr. Agar was a member of the War Department's Commission on Training Camp activities and served on the United War Work Campaign. An ardent conservationist, and for many years president of the Association for the Preservation of the Adirondacks, Mr. Agar, in 1927, led the fight against Amendment No. 7 to the State Constitution, which would permit a highway to be built over Whiteface Mountain, but the Amendment was voted and the road opened to the public on Sept. 14, 1935. In 1916 Mr. Agar was made a Knight of the Order of St. Gregory by Pope Benedict XV.

ALDIN, FRANK CHARLES WINDSOR. British painter and illustrator, died in London, Jan. 6, 1935. Born at Slough, Buckinghamshire, Apr. 28, 1870, he was educated at Eastbourne College and Solihull Grammar School. He then studied anatomy at South Kensington, and animal painting under Frank W. Calderon. His first drawing was published in the *Graphic* in 1891 and three years later he was commissioned to illustrate Kipling's *Jungle Stories* for the *Pall Mall Budget*. In 1889-1900 he painted a series of sporting prints in vivid colors, known as "The Fallowfield Hunt," which became so popular as to be reproduced by thousands in England and the United States. Among later notable drawings and paintings since were "A Dog Day" (1902) and "Twelve Hunting Counties" (1912). In 1910 he illustrated an edition of Dickens's *Pickwick Papers*. Although he did many landscapes, hunting scenes, and old inns, he was best known for his ability to portray dogs. Aldin made many drawings for the English illustrated weeklies, and for important books, becoming one of the best-known men of the day in his profession. The National War Museum purchased two of his pictures in 1918. He published *Handley Cross* (1912), *Painting Book* (1913), *The Farm Yard* (1913), *Jock and Some Others* (with R. Weylett, 1913), *Old Inns* (1919-20), *Old Manor Houses* (1923), *Cathedrals of England* (1924), *Ratcatcher to Scarlet* (1926), *The Romance of the Road* (1928), *Dogs of Character* (1930), *An Artist's Models* (1930), *Scarlet to M. F. H.* (1933), and *Who's Who at the Zoo* (with J. B.

Morton, 1933). His autobiography, *Time I Was Dead*, was issued late in 1934.

ALEY, ROBERT JUDSON. American mathematician and educator, died in New York City, Nov. 17, 1935. Born near Coal City, Ind., May 11, 1863, he began teaching in the local schools at the age of 15. During the summers from 1879-82 he attended Northern Indiana Normal School, now Valparaiso University, teaching school in the winter months. In 1882 he graduated from the College, and was appointed principal of the high school at Spencer, Ind. He held this position until 1887, with the exception of 1885 when he took a special course at Indiana University. In 1887 he became instructor in mathematics at Indiana University, meanwhile taking special courses, and graduating the following year, the first graduate to have majored in mathematics. He then became professor of mathematics at Vincennes University but returned to Indiana University in 1891. He taught mathematics there until 1909, except for the years 1894-95, when he was acting assistant professor of mathematics at Leland Stanford, Jr., College, and 1896-97 when he was Harrison fellow at the University of Pennsylvania, where he took his degree of Ph.D., writing on *The Geometry of the Triangle*. Professor Aley ran on the Democratic ticket for the office of State Superintendent of Schools in 1907, but was defeated. However, two years later he was elected and served until November, 1910, when he resigned to become the fifth president of the University of Maine. In 1921 he accepted a like position at Butler University in Indianapolis, which he held until 1931, when he retired as president emeritus. Always interested in the science of mathematics, particularly in relation to pure geometry, Dr. Aley served as mathematical editor of the *Inland Educator* and the *Educator-Journal* for many years, serving the last-named publication as editor-in-chief and president from 1903 to 1912. He was a frequent lecturer before teachers' institutes, and a member of many mathematical and scientific societies, as well as a fellow of the American Association for the Advancement of Science. From 1913 to 1916, he was president of the National Council of Education, and from 1916 to 1917, president of the National Education Association. He was the author of *Graphs* (1900); with O. O. Kelso, *Revision of Cook and Cropsy Arithmetic*, (1904), and with David A. Rothrock, *The Essentials of Algebra* (1904), and *Supplementary Problems in Algebra* (1912). With his son, Max Aley, he wrote a *Story of Indiana* (1912).

ALI IBN HUSSEIN. Former King of Hejaz, died at Bagdad, Feb. 14, 1935. He was born in Mecca in 1878, the eldest son of King Hussein of Hejaz. During his father's reign he bore the title Emir of Medina and served as a political aide in controlling all activities in Hussein's dominions. During the World War he was present at the siege of Medina and led auxiliaries against the Turks in Palestine. In 1924 King Hussein abdicated in favor of Ali, who in turn was compelled to give up his throne on Dec. 19, 1925. He took up residence with his brother, King Feisal of Iraq. During his brother's many visits to Europe he served as Regent until September, 1933, when his nephew, Crown Prince Ghazi, now King, became of age and was appointed Regent. During Ali's 10-year exile in Bagdad he was closely connected with the interests of Iraq.

ALLEN, CHARLES EDWARD. American diplomat, died at Gibraltar, Apr. 8, 1935. Born at Foster, Ky., Apr. 13, 1891, he received his education at Centre College, Danville, Ky. Before entering on a diplomatic career, he served in 1911-12 as principal of the high school at Mt. Sterling, Ky. He began foreign service in 1912 and two years later was appointed student interpreter in Turkey. His next assignment was that of consular agent at Adrianople in 1915-16. He then served successively as vice consul at Constantinople, 1916-17, as member of the American Consulate at Algiers, 1917-18, and vice consul at Nantes, France, 1918-19. After serving at Constantinople as vice consul and consul during 1919-21, and at Damascus as consul in 1921-23, he returned to Constantinople in the latter year and remained there until 1935. On the death of Richard L. Sprague, consul at Gibraltar in 1934, Mr. Allen succeeded to the post.

ALLEN, SIR JOHN SANDEMAN. British merchant and politician, died in London, June 3, 1935. Born in Croydon, Surrey, Sept. 26, 1865, he received his education at College School, Edinburgh, and in France and Germany. In 1882 he entered the marine insurance field with the Sea Insurance Co., Ltd. of Liverpool. Later he joined the Union Marine Insurance Company of which he became secretary in 1892, general manager in 1908, and deputy chairman in 1921. In the Liverpool Salvage Association, which he joined in 1892, he served as deputy chairman and, later, as chairman for four years. He retired in 1921 as marine manager of the Phoenix Assurance Company, and general manager and secretary of the Marine Insurance Company, to devote his time to public work. During the World War he served on the War Committee of the Chamber of Shipping as a representative of the Liverpool Underwriters Association. One of the marine insurance advisers at the Allied Conference which worked in Paris on the Peace Treaty schedule pertaining to enemy debts, he served also as chairman of the Marine Insurance Advisory Committee to the Controller of the Clearing House on enemy debts in 1920.

The following year he became a Conservative member of the Liverpool City Council, and in 1922, chairman of the Liverpool Chamber of Commerce. He was later named chairman of the Federation of Chambers of Commerce of the British Empire. Elected to the House of Commons in 1924 as a Conservative from the West Derby Division of Liverpool, Sir John was reelected to the post in 1931. As chairman of many commercial committees in the House, he stressed the importance of coastal shipping, and urged that it be recognized as an integral factor in the nation's transport system. In the summer of 1933, as chairman of the Joint East African Advisory Board, he visited the colonies and settled various situations that had arisen there. Sir John held the office of vice president of the Royal Empire Society, the Savings Bank Association, the West Lancashire Association for Mental Welfare (1924-27), chairman of the East African Board, the Commercial Committee of the House of Commons and the Coastal Trade Development Council. He was knighted in 1928.

ALLPORT, FRANK. American ophthalmologist and otologist, died in Nice, France, Aug. 3, 1935. Born at Watertown, N. Y., Feb. 22, 1857, he took his M.D. degree at the Chicago Medical College in 1876 and then studied at the University of Heidelberg in Germany. On his return to the United States he practiced general medicine for 5 years in Sycamore, Ill., and for the next 10 years specialized in ophthalmology and otology in Minneapolis. After serving as professor of clinical ophthalmology and otology at the University of Minnesota he went over to Northwestern University to serve in the same capacity. He was eye and ear surgeon for several railroads and served also St. Luke's Hospital, doing much work in industrial and mastoid surgery. Dr. Allport advocated the examination of school children's eyes and ears and is reputed to have been the first to cure vernal conjunctivitis. A former president of the Ophthalmology Section and chairman of the conservation of vision committee of the American Medical Association, he was also a former president of the Minnesota Medical Society, the Chicago Ophthalmology Society, and the Chicago Otology Society. He wrote *State Laws Concerning Eyes, Care of the Eyes*, and many bulletins on the subject.

AMES, CHARLES BISMARCK. American financier and lawyer, died at Meredith, N. H., July 21, 1935. Born at Macon, Miss., Aug. 1, 1870, he took his B.S. degree at Emory and Henry College, Virginia, in 1890 and his LL.B. degree at the University of Mississippi two years later. Admitted to the bar in 1892, he set up practice at Macon and continued there until 1899. In the latter year he removed to Oklahoma and in 1911 was appointed presiding justice of Division No. 1 of the Supreme Court Commission. He resigned the latter post in 1913 and returned to his law practice. During the World War he served on the Oklahoma State Council Defense and was Federal Food Administrator of his State. He was also chairman of the Oklahoma City Liberty Loan Committee. At the end of the war he became assistant to the United States Attorney General, serving in that capacity during 1919-20. During the latter period he displayed ability as an intermediary in labor disputes. Three years later he removed to New York City where he became general counsel and director for The Texas Company. During his association with this concern he was an ardent advocate for conserving the country's oil fields. He resigned from the latter company in 1925 and from 1928 to 1932 was vice president and a director in the Texas Corporation. In May, 1933, he became chairman of its Board of Directors. Mr. Ames was president of the American Petroleum Institute from November, 1932 to May, 1933. A delegate to the Universal Congress of Lawyers and Jurists at St. Louis in 1904 and to the Ecumenical Methodist Conference of the Methodist Episcopal Church, South, at Toronto in 1911 and at London in 1921, he was also a delegate to the Democratic Convention in 1920. In 1916 he was president of the Oklahoma State Bar Association.

AMES, HERMAN VANDENBURG. American educator, died at Philadelphia, Feb. 7, 1935. Born at Lancaster, Mass., Aug. 7, 1865, he graduated from Amherst College in 1888, and took additional courses at Columbia University the following year. In 1890 he received his M.A. degree from Harvard and the next year, his Ph.D. degree. From 1891 to 1894 he taught history at the University of Michigan, and in the latter year went to the universities of Leipzig and Heidelberg for further study. On his return to the United States he accepted an offer from Ohio State University to serve as assistant professor of history during 1896-97, and later joined the University of Pennsylvania as instructor in American constitutional history. He became assistant professor in 1903 and full professor in 1908. Named Dean of the Graduate School in 1907 he retained the post for 21 years. Dr. Ames edited *State Documents on Federal Relations, The States and the United States*, and wrote *The Proposed Amendments to the Constitution of the United States*, which received the prize of the American Historical Association in 1897; *Outline of Lectures on American Political and Institutional History during the Colonial and Revolutionary Periods* (3d ed., 1908); and *Syllabus of American Colonial History* (with Dr. W. T. Root, 1912). He was a member of the American Philosophical Society, American Political Science Association, Phila-

delphia Geographic Society, and the American Historical Association.

AMPHILL, ARTHUR OLIVER VILLIERS RUSSELL, SECOND BARON. English administrator, died in London, July 7, 1935. Born in Rome, Feb. 19, 1869, he was educated at Eton and New College, Oxford, and embarked on a political career in 1895 first as assistant private secretary to Joseph Chamberlain at the Colonial Office, where two years later he became Chamberlain's private secretary. In 1899 he received the appointment of Governor of Madras, succeeding Sir A. Havelock, and was the first man of his age (31) to be sent out to India in this capacity and the last to be appointed in Queen Victoria's reign. He proved to be an able administrator, and when Lord Curzon returned to England in 1904 Amphill was named acting Viceroy of India. On his return to England, in 1906, he became an ardent sympathizer with Indian settlers in South and East Africa. As chairman of Lord Marley's Advisory Committee, established in favor of Indian students in Great Britain, he devoted a great deal of his time to the students' welfare. During the War Amphill served as commander of battalions in the Leicestershire and Bedfordshire Regiments, serving also as Indian Labor Corps Adviser at General Headquarters on the Western Front. In 1919 he voiced his disapproval of, and voted against the Government of India Bill. He urged that Indians be treated as British subjects throughout the Empire, and was an active leader in the Indo-British Association which fought the 1919 Bill. In 1935 he again voted against the Government of India Bill. In Freemasonry he was second only to the Duke of Connaught, Grand Master of English Freemasonry. At the age of 21 he was named Provincial Grand Master for Bedfordshire and in 1908, Pro Grand Master of England. He filled the latter office up to the time of his death. Lord Amphill represented the British Government at the International Conference on the Sugar Bounties held in Brussels in 1898 and was a founder of the National Party, serving as president of its council in 1919. Among the honors bestowed on him were: Knight Grand Commander of the Order of the Indian Empire (1900), Knight Grand Commander of the Order of the Star of India (1904), and Knight of the Grand Cross of the Order of the British Empire (1917).

ANDERSON, HARRY BENNETT. American jurist, died at Jackson, Tenn., Apr. 9, 1935. He was born in Van Buren Co., Mich., Nov. 5, 1879. Educated for the law he took the LL.B. degree at Columbia University in 1904, and was admitted to the Tennessee bar in the latter year, then became a member of the firm of Brown and Anderson—an association that lasted until 1918. From 1904 to 1910 Anderson was a member of the Republican State Committee of Tennessee. During the World War he served as judge advocate of the 26th Division in France with the rank of lieutenant colonel from 1917 to 1919. After the War he returned to Tennessee and at Memphis served as a referee in bankruptcy. President Coolidge appointed him a judge in the United States District Court of the Western District of Tennessee in 1925, a post he held up to the time of his death. One of his last cases was that in which he ruled that the NRA was not empowered to fix prices. In 1930 charges were made on Judge Anderson's judicial career and brought before the Judiciary Committee which directed that they be dropped. Judge Anderson was a former president of the Tennessee Bar Association and the Memphis Chamber of Commerce.

ANDREADES, ANDREW, died May 29, 1935.

ANDREWS, REAR ADMIRAL PHILIP, U.S.N., RET. American naval officer, died in San Diego, Calif., Dec. 19, 1935. Born in New York City, Mar. 31, 1866, he was graduated from the United States Naval Academy in 1886. During the Spanish-American War he served on the *Bennington* and during 1904-06 with the General Board of the Navy Department. In the following year he joined the Bureau of Navigation, and during 1907-09 went to sea on the *Kansas*. In the early part of 1909 he was at the Naval War College at Newport, R. I., and from 1909 to 1911, served as aide to the Secretary of the Navy. In 1911 he returned to the Bureau of Navigation as its chief with the rank of rear admiral, and two years later, again served in Washington with the General Board. After commanding the *Montana* in 1913 and the *Maryland* during 1913-14, he was recalled from sea duty to take charge of the Naval Training Station at San Francisco. Assigned to the Naval War College at Newport again during 1916-17, he was appointed chief of staff of the Fifth Naval District in March, 1917. In January, 1918, he was named commander of the *Mississippi* and in September, 1918, was sent to the United States Naval base at Cardiff, Wales. In 1919 he was assigned to the United States Naval Forces on the Eastern Mediterranean and two years later returned to the United States where he was given command of the Navy Yard at Norfolk, Va. From January, to June, 1923, he was commandant of the Fifth Naval District and from 1923 to 1925, commander of the United States Naval Forces in Europe with the rank of vice admiral. In 1925 he returned to the United States and became commander of the First Naval District and the Navy Yard at Boston, Mass., with the rank of rear admiral. He was retired for age on Mar. 31, 1930.

ANDRIEU, PAULIN PIERRE, CARDINAL. French Roman

Catholic prelate, died at Bordeaux, Feb. 15, 1935. Born at Seysses, Haute-Garonne, Dec. 8, 1849, he was educated at the Seminary of Toulouse. Ordained to the priesthood in 1874, he became vicar of Rieumes. He served as secretary of the archdiocese of Toulouse and was raised to the bishopric as Bishop of Marseilles in 1901. Two years after his elevation to cardinal priest in 1907 with the Titular Church of St. Onofrio, he became Archbishop of Bordeaux and Primate of Aquitaine in succession to Cardinal Lecot. He came to be known as one of the most eloquent preachers in Southern France, and, in 1926, voiced his disapproval of the organization of religious lay groups with political doctrines. Cardinal Andrieu became dean of French cardinals in 1930 on the death of Cardinal Luçon of Rheims.

ARMSTRONG, ANDREW CAMPBELL, American educator, died at Middletown, Conn., Feb. 22, 1935. Born in New York City, Aug. 22, 1860, he graduated from Princeton University in 1881 and received the master's degree in 1884. The following year he graduated from Princeton Theological Seminary, and went to Germany where he attended the University of Berlin during 1885-86. On his return to the United States in the latter year he accepted the post of associate professor of ecclesiastical history at the Princeton Theological Seminary, and in the following year became instructor of history at the University. In 1888 he joined Wesleyan University where he was professor of philosophy until 1930 when he retired as professor emeritus. Professor Armstrong was president of the American Philosophical Association in 1915 and a member of the National Institute of Social Sciences. At the International Congress of Philosophy held in 1926 he was honorary secretary, and since that date, a member of the Permanent International Commission. Also, at the International Congress of Arts and Sciences held in St. Louis in 1904 he served as chairman of the section of metaphysics. While at Princeton he was associate editor of the *New Princeton Review* (1887-88) and cooperating editor of the *Psychological Review* (1904-09). Besides translating Richard Falkenberg's *History of Modern Philosophy* in 1893 and contributing to Baldwin's *Dictionary of Philosophy and Psychology* (1901-02) and to *Contemporary American Philosophy* (1930), he wrote *Transitional Eras in Thought* (1904).

ASTRID (SOPHIE LOUISE THYRA), QUEEN, died Aug. 29, 1935.

ATTEBURY, WILLIAM WALLACE, died Sept. 20, 1935. AVORY, SIR HORACE EDMUND, English jurist, died at Rye, Sussex, June 13, 1935. Born in London, Aug. 31, 1851, he attended King's College, London, and Corpus Christi College, Cambridge, receiving the LL.B. degree from the latter in 1874. Called to the Bar by the Inner Temple in 1875, he served in the Central Criminal Court in London and on the South Eastern Circuit. Named junior counsel to the Treasury at the Central Criminal Court in 1889, he became senior counsel 10 years later and capably discharged the duties of that office for 12 years. He became King's Counsel in 1901 and won distinction as a prosecuting counsel. Just before his appointment to the King's Bench Division in 1910, he had served as Commissioner of Assize on the South Eastern Circuit. When Justice Darling retired in 1924 Sir Horace succeeded him as senior judge of the King's Bench Division. In the latter capacity he sentenced Clarence Hatry, the swindler, and presided over Princess Yousouppoff's libel suit against the Metro-Goldwyn-Mayer film company in which she was awarded \$126,750 damages. He was reputed to have been expert in every branch of the law. Justice Avory was knighted in 1910 and appointed a member of the Privy Council in 1932.

AYLMER, LIEUT.-GEN. SIR FENTON JOHN, English soldier, died at Wimbledon, Surrey, Sept. 3, 1935. Born at Hastings, Sussex, Apr. 5, 1862, he was educated privately. In 1880 he joined the Royal Engineers and served in Burma during 1886-87. He took part in the Hazara Expedition of 1891, and for heroism during the storming of the Nilt Fort in Kashmir, in the Hunza Expedition of 1891-92, under the command of Col. A. Durand, he received the Victoria Cross. For services rendered while a member of an expedition sent to relieve Sir George Robertson, besieged in the British fort at Chitral in 1895, he was brevetted a lieutenant colonel. From 1912 to 1915 he served with the rank of adjutant general at headquarters, but in 1915 was sent to Mesopotamia as head of a division. In January, 1916, he took command of an expedition to relieve General Townshend at Kut-el-Amara, forced the Turks to retreat from Sheikh Saad on January 9 and from Wady on January 13, but failed to take Umm-el-Hanna on January 21. Townshend informed Aylmer that by rationing his men he could hold out for 84 days and further advance was postponed in order to receive reinforcements. The Turks were gaining in strength and on March 7, Aylmer decided on a surprise flank attack toward Shatt-el-Haj which failed and on March 12 he was superseded by General Gorringe. At the time of his death he held the rank of Colonel Commandant of the Royal Engineers. In 1907 he was created Companion of the Bath, and Knight Commander of the Bath in 1916 for his activities in the World War. Sir Fenton wrote *The Aylmers of Ireland* (1931).

BABBITT, FRANK COLE, American educator, died at Hartford, Conn., Sept. 21, 1935. Born at Bridgewater, Conn., June 4, 1867, he graduated from Harvard University in

1890, receiving the Ph.D. degree from that institution in 1895. During 1885-87 he taught in the public schools of Connecticut and, from 1890 to 1895, in a Boston private school. In 1895-96 he was selected for work in the American School of Classical Studies at Athens and at this time discovered the old Greek Theatre at Corinth. In 1896 he accepted a call from Harvard University to serve as instructor in Greek and held the post for two years. Thence he went to Trinity College, Hartford, Conn., where he served successively as instructor in Greek (1898-99) and professor from 1899. In 1931-32 Babbitt was visiting professor to the American School of Classical Studies at Athens. He held the office of president of the Classical Association of New England (1920-21); the American Philological Association (1926-27), and was a member of the Archaeological Institute of America and the American Association of University Professors. He wrote a *Greek Grammar* (1902), and translated Plutarch's *Moralia* (Loeb Classical Library) in 1927.

BABCOCK, EARLE BROWNELL, American educator, died in Paris, France, Mar. 1, 1935. Born in Saginaw, Mich., Sept. 12, 1881, he attended Columbia University, the Sorbonne, and the Collège de France. During 1903-05 he was an instructor in French and history at the Ethical Culture School in New York, after which he went to the University of Chicago where he served successively as instructor in French (1906-10) and assistant professor (1910-15). Then he accepted a call from New York University, where from 1915, he was professor of Romance Languages and Literatures. From 1915 to 1919 he headed that department and from 1922 to 1927 was dean of the Graduate School. From October, 1918 to January, 1919 he was a major in the American Red Cross and a director of the Paris school of the Red Cross personnel. Also, during 1920-21, he was stationed at Paris as director of the American University Union in Europe, and in 1925, was named assistant director of the European centre of the Carnegie Endowment for International Peace, with headquarters in Paris. In the latter capacity it fell to him to reorganize the work of the Centre after it had been disrupted by the World War, and in 1931 he proposed to enlarge the scope of the Centre's work. Important features of his duties were the collection of material on the status of world peace to be embodied in an international law library, the reporting of friction between nations, and the suggestion of methods to remove that friction. He served as president of the International Auxiliary Language Association, Inc. (from 1922); the Alliance Française of New York (1924-26), and the American Library in Paris (from 1925). A Fellow of the Royal Historical Association and of the American Association for the Advancement of Science, Babcock was a member of the American Historical Association, American Philological Association, and the Modern Language Association of America. He received the following honors: Officier de l'Instruction Publique, France (1911); Chevalier de la Légion d'Honneur, France (1924); Officier (1928); Commandeur du Phénix, Greece (1931); and Commandeur de la Couronne de Roumanie (1933).

BAKER, GEORGE PIERCE, died Jan. 6, 1935. BALDWIN, CHARLES SEARS, American educator and author, died Oct. 23, 1935 in New York City, where he was born Mar. 21, 1867. He received the A.M. degree from Columbia University in 1889 and two years later, took up the post of instructor in English at that institution. In 1895 he served as instructor in rhetoric there and later in the same year, accepted a call from Yale University where he became successively, instructor in rhetoric (1895-98), assistant professor (1898-1909), and full professor (1909-11). He returned to Columbia University in 1911 and since that date, held the chair of rhetoric and English composition. Professor Baldwin's publications include: *The Infections and Syntax of the Morte d'Arthur of Sir Thomas Malory* (1894); *De Quincey's Revolt of the Tartars* (1896); *The Expository Paragraph and Sentence* (1897); *A College Manual of Rhetoric* (1902, 4th ed., rev., 1905); *The English Bible as a Guide to Writing* (1905); *Essays Out of Hours* (1907); *Writing and Speaking* (1909); *Composition, Oral and Written* (1909); *College Composition* (1917, 1929); *God Unknown* (1920); *Ancient Rhetoric and Poetic* (1924); *Medieval Rhetoric and Poetic* (1928); *Introduction to English Medieval Literature* (1931), and *Three Medieval Centuries of Literature in England* (1932). Also, he edited *Specimens of Prose Description* (1895); *American Short Stories* (1904, Ger. ed., 1911); *Bunyan's Pilgrim's Progress* (1905), and *De Quincey's Joas of Arc and English Mail Coach* (1906).

BARBUSSE, HENRI, died Aug. 30, 1935. BARES, THE MOST REV. NIKOLAUS, German Roman Catholic prelate, died in Berlin, Mar. 1, 1935. Born Jan. 24, 1871, at Idenheim, near Trier (Treves) in Rhine Province, Prussia, he attended the Trier (Treves) Roman Catholic Seminary and took the doctorate degree at Breslau. Ordained priest in 1895, he returned to Trier Seminary as professor of theology, serving in that capacity during 1909-18 and from the latter date until 1928, was head of the Seminary. He became Bishop of Hildesheim in 1929, and four years later, on the death of the Most. Rev. Dr. Christian Schreiber, became Bishop of Berlin. At this time he displayed great courage and brilliance in resisting menaces

to the fundamental principles and ideals of the Roman Catholic Church, and fought for the rights of his Church in the Reich. He negotiated with the State on more than one occasion to interpret certain disputed articles of the Concordat. Ardently opposed to the Rosenbergian racial *Weltanschauung*, he was the author of many publications that expressed his views on this subject.

BARNES, EARL. American author and educator, died at New Hartford, Conn., May 29, 1935. Born at Martville, N. Y., July 15, 1861, he took the A.B. degree at Indiana University in 1889 and the M.S. degree at Cornell University two years later. He taught history at Indiana University in 1889 and from 1891 to 1897 held the chair of education at Stanford University. He lectured for the London Society for the Extension of University Teaching in 1900-01, and for the next 12 years served as staff lecturer for the American Society for the Extension of University Teaching. Mr. Barnes' publications included: *Studies in Education* (2 vols., 1897); *Where Knowledge Falls* (1907); *Women in Modern Society* (1912); and *Psychology of Childhood and Youth* (1914).

BARNHORN, CLEMENT JOHN. American sculptor, died Aug. 2, 1935, in Cincinnati, Ohio, where he was born in 1857. He attended St. Xavier College and then studied wood and marble carving under Henry L. Fry. Later he studied under Kelsae in Cincinnati, Bouguereau, Puech, Mercie, Ferner, and at the Julian Academy in Paris. After six months of study in Italy, he received honorable mention at the Paris Salon in 1895 for his "Magdalen." Five years later he was awarded a bronze medal at the Paris Exposition for the same work. His other awards consisted of honorable mention at the Pan-American Exposition, Buffalo, 1901; silver medal at the St. Louis Exposition, 1904. Barnhorn was said to have reached the peak of his career when he executed the ecclesiastical figures, the Crucifixion group and the St. Monica figure on the façade of the Church of St. Monica in Cincinnati. The latter work won for him the annual prize of the Samuel B. and Rosa F. Sachs endowment in 1929, which prize is awarded yearly for the outstanding achievement in the field of art. Mr. Barnhorn was the head of the department of sculpture at the Cincinnati Art Academy at the time of his death. His other works include: "Theodore Thomas" in the Cincinnati Music Hall; "Fountain" in Shortbridge High School, Indianapolis; fountain figure, Prince George Hotel, New York; "Fountain" Hugh High School, Cincinnati; "Magdalen," Cincinnati Art Museum; "Portrait Bust" Public Library, Cincinnati; "Madonna and Child" Cathedral façade, Covington, Ky.; "Fountain" Conservatory of Music, Cincinnati; 11 panels in Cincinnati Court House; "Portrait of Major C. R. Holmes," Cincinnati General Hospital, and the relief of Dr. P. S. Connor, Good Samaritan Hospital, Cincinnati. Mr. Barnhorn was a member of the Cincinnati Art Club and the National Sculptors Society.

BARRETT, CHARLES SIMON. American agriculturist, died at Union City, Ga., Apr. 4, 1935. Born in Pike Co., Ga., Jan. 28, 1866, he received a normal school education, and engaged in teaching and farming up to 1897 when he became an organizer among the farmers. Elected president of the Georgia Farmers' Union in 1905, the National Farmers' Union elected him to the same office in their organization in 1906 and he served for 22 years. During this period as many as 6000 business organizations came under the jurisdiction of the Union. President Theodore Roosevelt called him to represent Georgia at the First Governors' Conference held in Washington and he was appointed a member of the President's Country Life Commission. After declining appointment to the Industrial Relations Commission by President Taft, Barrett was named delegate to the Agricultural Institute at Rome by Secretary of State William Jennings Bryan. President Wilson appointed him a member of the Price Fixing Commission for the wheat crop in 1917, and in the same year he served as a member of the National Agriculture Advisory Commission. Mr. Barrett represented the National Board of Farm Organizations and the National Farmers' Union at the Paris Peace Conference of 1918-19, and was on the advisory council to the American delegates at the International Conference on the Limitation of Armaments. In 1924 he served as a member of the President's agricultural commission and four years later (1928), resigned his office in the National Farmers' Union.

BARTLETT, CLARENCE. American physician, died in Philadelphia, Aug. 26, 1935. Born in Brooklyn, N. Y., May 22, 1858, he received the M.D. degree from the Hahnemann Medical College and Hospital, Philadelphia, in 1879. During the next four years he was connected with the general dispensary department of the Hospital. On the creation of the department of nervous diseases in 1883, he became head of that section and in the following year lectured in the spring course on nervous diseases. Following his appointment as lecturer on mental and nervous diseases in the College in 1889, electrology was added to the lectureship. From 1890 he was neurologist to the Children's Homoeopathic Hospital in Philadelphia and to Hahnemann Hospital. In the Homoeopathic Medical Society of Pennsylvania he served as recording secretary (1883-85), corresponding secretary (1885-88), and president (1922). From 1883 he was assistant to the editor of the *Hahnemannian Monthly* for

five years, and in 1887 edited and published *Farrington's Clinical Materia Medica*, the shorthand notes of Dr. Farrington's lectures during 1876-80. His publications included: *Clinical Medicine—Diagnosis* (1903); *Clinical Medicine—Treatment* (1904); and *Practice of Medicine* (3 vols., 1923).

BARUCH, EMANUEL DE MARNAY. American physician, died at Valhalla, N. Y., July 1, 1935. Born in San Francisco, Feb. 22, 1870, he received the M.D. degree from the College of Physicians and Surgeons, Columbia University, in 1889 and later studied at the universities of Munich, Berlin, and Paris. In 1889 he established a practice in New York City. From 1892 he was professor of bacteriology and pathology at the University of the State of New York, professor of bacteriology and therapeutics at the Metropolitan Post-Graduate Medical School, and consulting physician to the Hospital for Deformities and Joint Diseases, and to the Philanthropic Hospital. A delegate to the International Tuberculosis Congress in Paris and Washington, D. C., also he represented the New York Medical Society, at the International Medical Congress held in London in 1913. Dr. Baruch received a number of decorations in recognition of his philanthropies. The writer of many articles on medical subjects, he produced also a play, *Judith and Arropherus*, in London in 1928 and in Darmstadt in 1929.

BARUS, CARL, died Sept. 20, 1935.

BÉLAND, HENRI SEVERIN. Canadian physician and legislator, died at Eastview, Ont., Apr. 22, 1935. Born at Louiseville, Que., Oct. 11, 1869, he attended Three Rivers College and Laval University. Four years after his election to the Quebec Legislature in 1897, he succeeded to the office of Mayor of St. Joseph. In 1902 he was elected to the House of Commons and reelected in 1904, 1908, 1911, 1917, and 1921. In 1909 he served as a commissioner at the Washington Conference to consider the conservation of the natural resources of the American continent, and in the same year was appointed a member of the Royal Conservation Committee. Béland was nominated to the King's Privy Council for the Dominion of Canada in August, 1911, and appointed Postmaster General by Sir Wilfred Laurier. The outbreak of the World War found Béland in Belgium where he enlisted with the Belgian Army with the rank of sergeant. When Canada entered the War he became a surgeon with the Canadian Medical Corps, and in 1915 was taken prisoner by the Germans and made to serve as an interne in their hospitals. Released in 1918 he returned to Canada, and in 1921 was appointed Minister of Soldiers' Civil Reestablishment and Public Health in the W. L. Mackenzie King Cabinet and in 1925 was nominated to the Senate. The late King Albert of the Belgians created him a Knight of the Most Distinguished Order of the Crown of Belgium. Also he served as president of the Canadian Medical Association.

BERG, ALBAN, died Dec. 24, 1935.

BERGMANN, CARL. German financier and economist, died in Berlin, Sept. 26, 1935. Born at Sommerda, he attended the universities of Geneva, Strasbourg, and Berlin. He began as a clerk in the Deutsche Bank in 1901 and was connected with it for 25 years. In 1919 he served as one of the representatives of the German Government before the Reparation Commission at Versailles, and the following year attended the financial conference of the League of Nations at Brussels. In 1921 he was present at the conference of the Allied Powers in Spa, Brussels, and London regarding reparations. In the same year he visited the United States, and attended also the reparations conference in Cannes. In 1922 he attended the international conference in Genoa and was present at nearly all the conferences held in London and Paris. In 1924 he retired from the Deutsche Bank and from all active connection with politics to become a partner in the banking firm of Lazard, Speyer-Elleszen in Frankfurt, which at the time was closely connected with Speyer and Co. of New York. Mr. Bergmann was the author, with Louis Loucheur of the *Micum* agreement under the Dawes Plan. He wrote *The History of Reparations*, which was published in the United States in 1928, and contributed to various financial periodicals.

BERKELEY, REGINALD CHEYNE. English playwright, died at Hollywood, Calif., Mar. 30, 1935. He was born in London, Aug. 18, 1890, and after attending the Bedford Modern School, went to New Zealand to matriculate at the University there. In 1912 he was admitted to the New Zealand bar and shortly before the outbreak of the World War, returned to England where he was called to the English bar by the Middle Temple. He served with the Rifle Brigade in the World War, receiving the Military Cross for his activity with that group, being promoted brigade major with Gen. George Carey's force before Amiens and general staff officer with the Fourth Army in 1918. Then he was transferred and served as brigade major with the 174th Infantry Brigade of the 59th London Division, and with the Second Infantry Brigade of the First Division. Returning to civilian life in 1919, he joined the staff of the League of Nations Union. He was London representative of the League of Nations Information Section in 1920, and joined the London office of the League on its formation in the following year. Elected to Parliament as Liberal member for Nottingham Central in 1922 he resigned the latter post. He represented the constituency until 1924 when he

resigned his seat to devote his time to writing. At the invitation of Winfield R. Sheehan of Fox Films, he came to the United States to write the screen version of *Cavalcade*. (See *NEW INTERNATIONAL YEAR BOOK* for 1932.) Mr Berkeley was best known for his books and plays. The latter include: *The Oilskin Packet* (with Bohun Lynch, 1917); *Decorations and Absurdities* (1922); *Unparliamentary Papers and Other Diversions* (1924); *The World's End* (a play, 1926); *The History of the Rifle Brigade in the Great War* (vol. 1, 1927); *Dawn* (1929); and the dramatic works: *French Leave* (1920); *Eight o'Clock* (1920); *Mr. Abdulla* (1926); *The White Château* (1927); *Listeners* (1928); *The Lady with a Lamp* (1929); *Machines* (1930), and *O.H.M.S.* (1931). At the time of his death he was preparing the second volume to *The History of the Rifle Brigade in the Great War*.

BERNET, JOHN JOSEPH American railway executive, died at Cleveland, Ohio, July 5, 1935. Born at Brant, Erie Co., N. Y., Feb. 9, 1868, he received a common school education. In 1889 he became a telegraph operator for the Lake Shore and Michigan Central Railroad. After serving as a train dispatcher from 1895 to 1901, he became successively trainmaster (1901-03); assistant superintendent (1903-05); divisional superintendent (1905), assistant superintendent, and general superintendent (1905-11). In 1911 he was sent to Chicago as assistant to the vice president of the New York Central lines west of Buffalo. In 1912 he became vice president of the Lake Shore and Michigan Southern, and in 1916 assumed the presidency of the New York, Chicago and St. Louis Railroad. When Mr. Bernet succeeded to the latter post the road had not been paying dividends on its common stock for 10 years and it was in general need of repair. During his term of office the road was changed from a double-track to a single-track line, and modern equipment and newer methods of operation were introduced. The operating revenue rose from \$23,969 a mile to \$44,867 a mile, and the freightage to 771 tons, almost doubling the original tonnage. The common stock rose in value from \$35 to \$200 per share and paid a dividend of 11 per cent. In 1927 Bernet joined the Erie Railroad in the same capacity and remained with that line until 1929. In this post he replaced the entire equipment of the road and had it operating on a profitable basis in a very short time. In 1929 the company began paying dividends on its preferred stock for the first time in 22 years. At the time of his death he was president of the Chesapeake and Ohio, Hocking Valley, and Pere Marquette Railroads, which three were brought together under a common management. Mr. Bernet was an outstanding figure in railroad development and advocated that the carrying of a greater load in less time and over a longer distance was more important than the mere speeding up of train movement. On the consolidation of the American Railway Association and the Association of Railroad Executives in September, 1934, Mr. Bernet was one of the five directors chosen from the East.

BLUNT-LIN, HERMAN, died Aug. 31, 1935

BICKNELL, ERNEST PERCY, died Sept. 29, 1935

BINGHAM, MAJ.-GEN. SIR FRANCIS RICHARD English soldier, died in London, Nov. 5, 1935. Born July 5, 1863, he entered the army in 1883, and from 1889 to 1892 was stationed at Aldershot with the 3d Infantry Brigade. In the latter year he was raised to the rank of captain and in 1893, served with the Egyptian Army. From 1893 to 1898 he was at Madras, India, and during 1894-1900 served with the Norfolk Artillery. In 1910 he was promoted to lieutenant colonel and from 1911 to 1913 was stationed at the Gunnery School as chief instructor. During the next three years he was at the War Office in the capacity of Deputy Director of Artillery with the rank of colonel. In 1916 he was a member of the Council in the Ministry of Munitions and the following year was raised to the rank of major general. Sir Francis had served throughout the World War, and in 1919 was sent to Germany as chief of the British section and President of the Sub-Commission for Armaments and Material on the Military Inter-Allied Commission of Control. Five years later he was named Lieutenant General of the Isle of Jersey and from 1925 to 1929, commanded troops in the Jersey district. In 1929 he was retired on pay. In recognition of his war services, Sir Francis was dubbed Companion of the Bath in 1915, Knight Commander of St. Michael and St. George in 1918, and in 1924, Knight Commander of the Bath.

BLACKETT, SIR BASIL PHILLOTT English financier, died near Giessen, Germany, Aug. 15, 1935. Born at Nottingham, England, Jan. 8, 1882, he was educated at Marlborough and University College, Oxford. Entering the Treasury in 1904, he became secretary to the Indian Finance and Currency Commission and served in that capacity during 1913-14. He also held the same post with the Capital Issues Committee in 1915. In October, 1914, he went on a special mission to the United States Government in connection with exchange problems arising out of the War. A member of the Anglo-French Financial Mission to the United States which raised the Anglo-French loan of \$500,000,000 in October, 1915, he was a member of the National War Savings Committee in 1916. He represented the British Treasury in the United States during 1917-19, and for the next three years was Controller of Finance in the Treasury. In 1922 he was named finance member of the Executive

Council of the Governor General of India, and held the post until 1928. Four years later he entered politics and contested Marylebone as a Conservative. Sir Basil held directorates in the Bank of England, the Imperial and International Communications, Ltd., Cables and Wireless, Ltd., Eastern and Associated Telegraph Companies, Marconi's Wireless Telegraph Company, Ltd., De Beers, Ltd., and was president of the British Social Hygiene Advisory Committee. Sir Basil was a Commandatore of the Order of the Crown of Italy; Officer of the Legion of Honor of France, and was created Companion of the Bath, 1915; Knight Commander of the Bath, 1921, and Knight Commander of the Star of India, 1926. He wrote *Planned Money* (1932) and *Great Events in History* (co-author, 1934).

BLAIR, SIR ROBERT English educator, died in London, June 10, 1935. Born Mar. 8, 1859, he took the M.A. degree at Edinburgh University and embarked on a teaching career. His first post was that of assistant master of Kelso High School where he remained during 1880-81. He served during the next two years in the same capacity at Aske's Hatcham School at New Cross, London, and in 1893 became head master of the Cheltenham School of Science and Technical School. Named inspector for the Science and Art Department of the North Scotland District in the following year he held the post until 1898. From this date until 1900 he served in the same capacity in the Scottish Education Department, and then became Chief Inspector of Technical Education in Ireland (1900-01). Following this he was appointed assistant secretary of technical instruction in the Department of Agriculture and Technical Instruction for Ireland. In 1904 he was appointed education officer of the London County Council and held the post for 20 years. During this period he aroused greater interest in technical and trade education, opened new schools, and urged that scholarship opportunities be made available to a greater number. Sir Robert was a member of the Mosely Education Commission to America in 1903 and held the office of president of the Association of Directors and Secretaries for Education, the National Association of Education Officers (1914), the Education Section of the British Association (1920), and of the Burns Club of London (1927-28). Also, he was a member of the Departmental Committee of the University of London, and of the Council of the Lord Kitchener National Memorial Fund. Sir Robert wrote *Some Features of American Education; The Relation of Science to Industry and Commerce*.

BLEYER, WILLARD GROSVENOR American educator, died at Madison, Wis., Oct. 31, 1935. Born in Milwaukee, Wis., Aug. 27, 1873, he received the B.L. degree in 1896, was a fellow in English during 1896-98, and in the latter year, received a Master of Letters degree from the University of Wisconsin. Also, in 1904, he received the Ph.D. degree from the same institution. During 1892-98 he was engaged in newspaper work, and two years later entered the educational field as instructor in English at the University of Wisconsin. In 1905 he became assistant professor of English, and in 1909, assistant professor of journalism. Associate professor from 1911 to 1916, he was full professor of journalism from 1916. Also, he served as chairman during 1906-19, and director, during 1919-27 of the course in journalism. Since 1927 he had been director of the School of Journalism at the University of Wisconsin. A special lecturer at the Wisconsin Library School from 1915, he held the same post in the American Library Association in 1922. Chairman of the National Council on Education for Journalism in 1923, he was chairman of the Council on Research in Journalism from 1924 to 1929. Professor Bleyer was a former president of the American Teachers of Journalism, the Association of American Schools and Departments of Journalism, and of the Wisconsin chapter of the American Association of University Professors during 1929-31. His publications included *Newspaper Writing and Editing* (1913, 1923, 1932); *Types of News Writing* (1916); *How to Write Special Feature Articles* (1919); *Main Currents in the History of American Journalism* (1927); and *Journalism* (1929). During 1904-13 he edited the *Press Bulletin* of the University of Wisconsin and in 1918, *The Profession of Journalism*.

BLOODGOOD, JOSEPH COLT American surgeon, died at Guilford, Md., Oct. 22, 1935. Born in Milwaukee, Wis., Nov. 1, 1867, he received the M.D. degree from the University of Pennsylvania in 1891. Appointed resident physician at the Children's Hospital in Philadelphia during 1891-92, he next served as assistant resident surgeon at Johns Hopkins Hospital, Baltimore, from June to November, 1892. In the same year he visited foreign clinics and hospitals and on his return to Johns Hopkins in 1893, became resident physician. He retained the latter post until 1897 when he became associate professor in surgery there. In 1929 he became professor of clinical surgery and from 1932 was adjunct professor of surgery. Also, he was chief surgeon of St. Agnes's Hospital. A Fellow of the American Association for the Advancement of Science, he was elected in 1924 a Fellow of the American College of Surgeons. In the World War he served with the Medical Reserve Corps with the rank of major. Keenly interested in the fight against cancer, Dr. Bloodgood instituted a systematic department of surgical pathology at Johns Hopkins and rendered great service when he instructed surgeons in

the best ways in which to diagnose the disease. For his work in the study of bone malignancy diagnosis and its treatment by X-ray and radium, Dr. Bloodgood received the gold medal of the Radiological Society of North America in 1929. He was a member of the general medical committee of the American Red Cross, of the editorial board in charge of surgical pathology of the American Journal of Cancer, of the advisory board of the Radiological Research Institute; Medical and Chirurgial Faculty of Maryland; American Surgical Association, Society of Clinical Surgery; American Medical Association; American Association of Pathologists and Bacteriologists, American Association for Cancer Research; American Society for the Control of Cancer, Radiology Society of North America; American Public Health Association; American Association of Hospital Social Workers; and Deutsche Gesellschaft für Chirurgie.

BLOSSOM, HAROLD HILL. American landscape architect, died at West Roxbury, Mass., Dec. 3, 1935. Born in Brooklyn, N. Y., Oct. 6, 1879, he received the B.S. degree from Amherst College in 1902, the M.A. degree in 1906, and the Master in Landscape Architecture degree in 1907, both from Harvard University. In the latter year he became associated with Olmstead Brothers, landscape architects in Brookline, Mass., and during his 12-year connection with the firm worked on the Atlantic and Pacific coasts. During this period he was assistant in landscape architecture to the Alaska-Yukon-Pacific Exposition at Seattle in 1908, and the Panama-California International Exposition of 1915. In 1919 he opened his own office in Boston, Mass., where he specialized in gardens and country estates. During 1926-27 he lectured at the Lowthorpe School of Landscape Architecture, Groton, Mass., and at the Cambridge School of Domestic Architecture and Landscape Architecture. In 1923 he was landscape engineer of the Connecticut Valley Park Commission, and in 1924, a member of the Connecticut Valley Regional Planning Board, by appointment of the governor of Massachusetts. Mr. Blossom received the Medal of Honor in landscape architecture from the Architectural League of New York in 1923. In the summer of 1932, he was an instructor in landscape architecture at Harvard University. A former president of the Boston Society of Landscape Architects and a Fellow of the American Society of Landscape Architects, also he was a member of the Architectural League of New York.

BOMPARD, MAURICE. French diplomat, died at Grasse, Apr. 8, 1935. Born at Metz, May 17, 1854, he received his education at the Collège de Saint Clément. Entering the administrative service he was assigned to the Préfecture of the Nord at Lille under the late M. Paul Cambon. When the latter went to Tunis Bompard went with him, and later became Secretary General of the Tunis Government. In 1889 he was named Resident General for Madagascar. Three years later he entered the Ministry of Foreign Affairs and became a department director. After serving as Minister to Montenegro for a brief period, he returned to Paris and became Director and Administrator of the Consular Service. In 1902 he was appointed Ambassador to Russia and remained there until 1907 when he was recalled because of friction between Russia and France over the latter's declaration of neutrality in the Russo-Japanese War. In 1909 he was named Ambassador to Turkey and while in that office faced the problems of the war between Turkey and Italy, the two Balkan Wars, and the German attitude before the World War. In 1914 diplomatic relations were broken off and he was called home where he served the Ministry of Foreign Affairs in an advisory capacity. He was selected head of the French delegation to the Lausanne Peace Conference in 1922 and 1923 as an expert on Turkish questions. From 1920 to his retirement in 1932, M. Bompard had been Senator for the Department of Moselle. His publications include: *La Législation de la Tunisie*; *La Politique marocaine de l'Allemagne*; *Le Traité de Björkoe*; and *L'entrée en guerre de la Turquie*.

BOSANQUET, ROBERT CARL. English archaeologist, died at Newcastle, Apr. 21, 1935. Born June 7, 1871, he received his education at Eton and Trinity College, Cambridge, and was Craven traveling student during 1895-97. In 1898 he excavated at Housesteads on the Roman Wall in Britain and, after acting as assistant director of the British School at Athens in 1899, served during 1900-06 as director. During his incumbency there he made such important discoveries as the temples of Artemis and Orthia, and Athena Chalkoikos and inscriptions that helped prove the dates of various events in Spartan history. His discoveries also helped to approximate the date of the Dorian arrival in the early part of the Age of Iron. A director of the Cretan Exploration fund, he supervised diggings in Crete in 1901 and in Laconia during 1905-06. Named to the chair of classical archaeology at the University of Liverpool in 1906, he retained the post until 1920. In 1916 he was an agent of the Serbian Relief Fund in Albania and Corfu and the following year in Macedonia. A member of the Royal Commission on Ancient Monuments in Wales and Monmouthshire, he also served on the Advisory Board on Ancient Monuments in England. In later years Mr. Bosanquet had devoted his time to farming and Romano-British archaeology. He was the author of *Borcovicium* (1904); *Phylakopi* (co-author, 1904); and papers in the

Annual of the British School at Athens, the *Journal of Hellenic Studies*, and the *Edinburgh and Quarterly Reviews*.

BOURGET, PAUL, died Dec. 24, 1935.

BOURNE, FRANCIS, CARDINAL, died Jan. 1, 1935.

BOWEN, CLARENCE WINTHROP. American publisher and historian, died at Woodstock, Conn., Nov. 2, 1935. Born in Brooklyn, N. Y., May 22, 1852, he graduated from Yale University with the A.B. degree in 1873, receiving the Ph.D. degree from that institution in 1882. After graduation he was stationed in Canada as correspondent for the New York Tribune and in 1875, joined the staff of his father's paper, the New York Independent—a religious journal—as European correspondent. He was the first to propose a celebration of the anniversary of the discovery of America, and while abroad, interviewed such personages as King Alphonso XIII of Spain, and the Duke of Veragua, a descendant of Columbus, in connection with the celebration. His efforts resulted in the Chicago Exposition of 1893. Three years later his father died and he became publisher of the Independent. He was active in that capacity until 1912 when he retired and devoted his time to writing. Dr. Bowen was a founder of the Yale University Club in 1880, Wolf's Head Society at Yale in 1883; American Historical Association in 1884; and the Manhattan Congregational Church in New York in 1896. He was treasurer of the American Historical Association during 1884-1917; president of the New York Genealogical and Biographical Society during 1907-31; president of the New England Society of New York during 1920-22; vice president of the Connecticut Historical Society and the American Anti-Quarian Society, corresponding member of the Rhode Island Historical Society and the Colonial Society of Boston, and member of the executive board of the Grant Monument Association. Dr. Bowen's publications include: *Boundary Disputes of Connecticut* (1882); *Woodstock, an Historical Sketch* (1887); *Memorial of Centennial of Washington's Inauguration* (1892); *History of Woodstock, Conn.* (1926), and *Genealogies of Woodstock Families* (6 vols., 1930-34).

BOYD, THOMAS (ALEXANDER). American author, died in Ridgefield, Conn., Jan. 27, 1935. Born in Defiance, Ohio, July 3, 1898, he was educated in the public schools there and left high school on the entrance of the United States into the World War to enlist in the Marine Corps. He served overseas throughout the War, and received the Croix de Guerre for Valor. He was honorably discharged, July 10, 1919. On his return to civilian life, he turned to newspaper work, and when his first novel was published in 1923, was serving as literary critic of the St. Paul News. This first novel, *Through the Wheat*, related to the War as seen through the eyes of a young American soldier. Then followed *The Dark Cloud* in 1924, another War novel, and *Points of Honor* (war stories, 1925); *Simon Girty, the White Savage* (1928); *Shadow of the Long Knives* (1928), and *In Time of Peace*, continuing the story of Sergeant Hicks, hero of his first novel, published posthumously in 1935. He also wrote biographies of *Samuel Drummond* (1925); *Mad Anthony Wayne* (1929); *Lighthorse Harry Lee* (1931), and *Poor John Fitch, Inventor of the Steamboat*, published posthumously in 1935.

BOYD, WILLIAM HENRY. American actor, died in Los Angeles, Calif., Mar. 20, 1935. Born in New York City about 1890, he attended the University of Virginia, and returned to New York where he decided upon a theatrical career. He joined a show at Brighton Beach, known as the *Boer War*, in which he played the part of a wild rider. When this show went to the St. Louis Fair, Boyd remained with it and on his return to New York in 1904, played the same rôle at the New York Hippodrome. He made his stage debut in *Peter Pan* with Maude Adams in 1905. Together with many appearances in stock companies, he played in *Get Rich Quick Wallingford* (1912); *Stop Thief* (1913); *Beverley's Balance* with Margaret Anglin (1915); *Our Mrs. McChesney* with Ethel Barrymore (1916); *The Fugitive* (1917); *A Kiss for Cinderella* with Maude Adams (1918); *Poker Ranch* (1920); *The Sporting Thing to Do* with Emily Stevens (1923); and his greatest success, as Sergeant Quirt in *What Price Glory* (1924). Before entering the motion picture field, he appeared in *Tenth Avenue* and *The Lady Lies*. The motion pictures in which he appeared include *The Benson Murder Case*, *The Spoilers*, *Derelict*, *Gun Smoke*, *City Streets*, *Murder by the Clock*, *The Road to Reno*, *State's Attorney*, *The House on Fifty-sixth Street*, *Transatlantic Merry Go Round*, and *The Lost City*.

BRADY, WILLIAM A., Jr. American theatrical producer, died at Colt's Neck, N. J., Sept. 26, 1935. Born in New York City in 1900, he attended Lawrenceville School and then chose a career in the theatre. Returning to New York he became associated with his father, and learned the fundamentals of theatrical production. His first efforts were *The Enchanted Cottage* and *Chains* in 1923. Then came *Nerves* the following year, and in 1925, he formed a partnership with Dwight Deere Wiman. Their first presentation was *Ostriches*, followed by *Lucky Sam McCarver* and *It All Depends*. In 1926 they produced *Little Elyot*, *The Masque of Venice*; *Devils*; *Seed of the Brute*, and *Hangman's House*. They became recognized with *The Road*

to *Rome* with Jane Cowl which opened in January, 1927, and which was followed by *The Dark*, and *The House of Shadows*. In the fall of the same year they presented *Women Go On Forever* with Mary Boland, and *The Command to Love*. After sponsoring Jane Cowl in *The Jealous Moon* and *Paolo and Francesca*, they produced *The Grey Fox*, *Judas*, and *A Most Immoral Lady* with Alice Brady. In April, 1929, they opened the *Little Show* at the Music Box Theatre, and inaugurated something new in revues. *The Second Little Show* appeared in 1930 and then the partnership was dissolved. Mr. Brady began producing independently, offering a revival of *Little Women* in 1931, and *We Are No Longer Children* in 1932. His last plays were *Hangman's Whip*, which he presented with George Kondeff, and *Too Many Boats*.

BRAINARD, CLINTON TYLER, American publisher, died at Winthrop, Me., Sept. 3, 1935. Born in Denver, Colo., Apr. 3, 1865, he was graduated from Harvard University with the A.B. degree in 1890. For the next five years he was engaged in the practice of law in Omaha, Neb., and at Creede and Cripple Creek, Colo. He entered the publishing business in 1895 with his own firm, the C. T. Brainard Company, in New York, and was next associated with H. L. Chapman in the *Mountford Press*, Boston, and with the Harcourt Bindery. In 1909 he became a member of Pearson's Publishing Co., and two years later, president and treasurer of the McClure Newspaper Syndicate, a post he held at the time of his death. During his incumbency of the latter position, he was credited with developing the organization into one of the most important of its kind. In connection with the McClure Syndicate, he served as editor of the *Washington (D.C.) Herald*, and as president of its publishing company from 1915 to 1919, when it was sold. In 1922 he succeeded in purchasing exclusive publishing rights to the memoirs of Kaiser Wilhelm II for which he paid \$250,000, and those of Herbert Henry Asquith, former premier of Great Britain. From 1915 to 1924, Mr. Brainard was president and treasurer of Harper and Brothers, publishers, and from 1916, of the Wheeler Newspaper Syndicate.

BRASLAU, SOPHIE, American contralto, died Dec. 22, 1935, in New York City where she was born, Aug. 16, 1892. She received a private education and then studied singing under Buzzzi-Peccia and Sibella. In November, 1913, she made her debut at the New York Metropolitan Opera House when she sang the rôle of Prince Feodor in *Boris Godunov*. From the time of her debut until 1920, when she took up concert work, she was a member of the Metropolitan Opera Company. In her concert work she was soloist with many symphony orchestras. Her most important operatic part was the title rôle in *Shanewis*. She sang leading contralto rôles in many operas and her repertoire consisted of concert programmes in many languages.

BRAUER, GEORGE RUGER, American clergyman, died in Englewood, N. J., May 3, 1935. Born in Newark, N. J., Feb. 20, 1871, he received his education at Columbia University, the Union Theological Seminary, and the University of Berlin. Two years after his ordination to the ministry of the Presbyterian Church in 1896, he was appointed missionary to the Adirondack Mission and during 1901-02 served as assistant pastor of the Rutgers Riverside Church in New York. From 1903 to 1910 he was pastor of the Setauket and Stony Brook Churches in Long Island, and in the latter year, took up the post of office secretary and treasurer of the College Board of the Presbyterian Church. From 1915 he was treasurer of the Church Election Fund Board of the Presbyterian Church, treasurer of the Gospel Mission to the Tombs in New York from 1916, secretary and treasurer of the Apostolic Institute of the Near East from 1918, and from 1924, custodian of mission property on the Board of National Missions, in charge of property in the United States, Alaska, Cuba, and Puerto Rico. Among other offices that he held were those of acting president of the World Association for Daily Vacation Bible Schools, and treasurer of the Home and Foreign Extension Funds and of the Daily Vacation Bible School Council. He was a member of the Clergy Association of New York.

BREASTED, JAMES HENRY, died Dec. 2, 1935.

BREVAL, LUCIENNE (BRENNERWALD), French opera singer, died in Paris, Aug. 15, 1935. Born at Mannedorf, Switzerland, Nov. 4, 1870, she studied music in Lausanne, Geneva, and in Paris at the Paris Conservatory under Warot, d'Obin, and Giraudet. She won first prize for opera in 1890, and made her debut at the Paris Opéra as Selika in *L'Africaine* in January, 1892. From the latter date she was the principal dramatic soprano of the Paris Opéra, save for two seasons during 1900-02 when she appeared in the United States and at Covent Garden, London. Mme. Bréval's repertoire consisted of almost 50 rôles, including Carmen, Salomé, Salammbô, and Aida. She sang in Holmes's *La Montagne noire* (1895); Guiraud's *Frédérigo* (1895); Vidal's *Burgonde* (1898); Massenet's *Grise-lidis* (1901); Erlanger's *Fils de l'étoile* (1904); Dukas's *Ariane et Barbe-Bleue* (1907); Massenet's *Bacchus* (1909); and Bloch's *Macbeth* (1910).

BRIDGEMAN, WILLIAM CLIVE BRIDGEMAN, First Viscount, of Leigh, died Aug. 14, 1935.

BROUGH, CHARLES HILLMAN, American administrator,

died in Washington, D. C., Dec. 26, 1935. Born at Clinton, Miss., July 9, 1876, he received the A.B. degree from Mississippi College (Clinton, Miss.) in 1893, and the Ph.D. degree from Johns Hopkins University in 1898. The following year he began his career as professor of history and economics at Mississippi College where he remained until 1901. Two years later he went over to Hillman College where he occupied the same chair for one year. He then accepted a call from the University of Arkansas to serve as professor of economics and sociology. He held that post until 1916. He entered politics the following year and was elected governor of Arkansas. He served in that capacity for two terms ending 1921. On the termination of his gubernatorial duties, he resumed his educational work, taking up a lecturing post at the University of Arkansas. However, he resigned the latter in 1932 to become agent for the Mutual Life Insurance Company of New York. The following year he was called to Washington where he served as chairman of the Virginia-District of Columbia Boundary Commission. Besides holding directorates in many companies, Dr. Brough was president of the Arkansas State Teachers Association (1913); the Southern Sociological Congress (1916-18); and the U.S. Good Roads Association (1919-24). His publications included *Irrigation in Utah* (1898) and *Studies in State Taxation* (1901).

BROWN, JAMES, American financier, died June 9, 1935, in New York City, where he was born, Apr. 28, 1863. He received his early education abroad and on his return to the United States, attended Columbia University. On his graduation in 1883 with the Bachelor of Science degree, he entered the banking business, and subsequently became a senior partner in the firm of Brown Brothers, Harriman, and Company. Mr. Brown negotiated the loan to the Republic of Nicaragua at the request of the United States Secretary of State in 1912, hoping to instigate a reform of that country's currency. Also, he organized a State bank there, served as president of Nicaragua's National Bank, and rebuilt the Pacific Railway. Later he was made a permanent member of the American Commission of the original Pan American Congress held in Washington, and chairman of the Committee for the Republic of Panama. During the World War he served his country in important financial negotiations with foreign nations. When he visited England in 1914, he represented the American bankers' committee in conferences with leading English financial officials. He was active in arranging the Dollar Commercial Export Syndicate Credits and also helped negotiate the \$500,000,000 joint loan for England and France. In 1922 he helped organize the Port of New York Authority, particularly in the phase of operating finances. From 1913 Mr. Brown was a leader in the Chamber of Commerce of the State of New York, and from 1924 to 1927, president of the British Empire Chamber of Commerce in the United States. In 1932 he was elected president of the New York State Chamber of Commerce and, while in that chair, advocated the reduction of municipal taxes. He held this office for two years. Also, he was a member of the Chamber of Commerce of the United States of America. A member of the executive committee of the Central Hanover Bank and Trust Company of New York, he held a similar post in the J. G. White Engineering Corporation. He was a trustee of the Atlantic Mutual Insurance Company, the Sun Insurance Company, Ltd. of London, the Northern Insurance Company, Ltd. of London, vice president of the Bangor and Aroostook Railroad, and a director and member of the finance committee of the Commercial Pacific Cable Company. Mr. Brown was a member of the Legion of Honor of France, Commander of the Order of the King of Rumania, a member of the American Academy of Political and Social Science, the Council of Foreign Relations, the Metropolitan Museum of Art, and the Alliance Française of New York.

BROWN, JOHN McMILLAN, Australasian educator and scientist, died at Wellington, New Zealand, Jan. 18, 1935. Born at Irvine, Scotland, in 1846, he attended Irvine Academy, Glasgow University, and Balliol College, Oxford. Shortly after the opening of the newly-formed Canterbury University College, in 1873, Professor Brown was invited to occupy the chair of English there and accepted. In 1885 he was offered a new English Literature Chair founded by Merton College, Oxford, but he declined the offer, preferring to retain his New Zealand post. In 1923 he was made chancellor of the University of New Zealand, becoming professor emeritus at Canterbury University College. Professor Brown devoted a great deal of his time to the investigations of Pacific Ocean problems, and maintained that Easter Island had at one time been the centre of an extensive empire, which he believed disappeared in the 17th century. His writings included seven separate series of lectures on Shakespeare's *The Merchant of Venice* and *Julius Caesar*, on Thackeray's *Henry Esmond*, on Carlyle's *Sartor Resartus*, on Shelley's *Prometheus Unbound* and *Adonais*, and on Milton's *Samson Agonistes*, *A Manual of English Literature (The Era of Expansion, 1750-1850)*, *Modern Education, Its Defects and Their Remedies*, *Riallato*, a satire on modern civilization; *Limanora*, a scientific reconstruction of society (published under a pseudonym in America); *Maori and Polynesian; The*

Dutch East; The Riddle of the Pacific, and Peoples and Problems of the Pacific (1927).

BROWNSON, REAR ADMIRAL WILLARD HERBERT, U.S.N., RET. American naval officer, died in Washington, D. C., Mar. 16, 1935. Born at Lyons, N. Y., July 8, 1845, he was graduated from the United States Naval Academy in 1865, and then was assigned to the flagship of the North Atlantic squadron. In 1868 Brownson was transferred to the Pacific station, but three years later returned to the Naval Academy. Appointed to the Coast Survey in 1882 he conducted deep sea investigations until 1884. After serving as inspector of hydrography from 1885 to 1889, he returned to sea duty as commander of the *Petrel* (1889-91). He was on board the *Dolphin* in 1892 and during the revolution in Brazil (1893-94), on the *Detroit* at Rio de Janeiro. Previous to his serving on the Board of Inspection and Survey during 1896-98, he had been commandant of cadets at the Naval Academy in 1894. During the Spanish-American War he was commanding officer on the *Yankee* and was promoted to the rank of captain in 1899. From 1900 to 1902 he commanded the *Alabama* and then returned to the Naval Academy in the capacity of Superintendent. He retained this post until 1906. In the meantime (1905) he had been promoted to rear admiral and with that rank commanded the Fourth Division of the Atlantic Fleet in 1906. In the latter part of the same year his command was transferred to a special service squadron. From commander-in-chief of the Asiatic Fleet during 1906-07 he became chief of the Bureau of Navigation. Although retired in July, 1907, he was kept on active duty in that Bureau by order of President Theodore Roosevelt. Following a disagreement with the President over the assignment of a medical officer as commander of a hospital ship, he handed in his resignation in December, 1907.

BRUNE, ADOLF GERHARD American composer, died in Chicago, Ill., Apr. 21, 1935. Born in Bakkum, Germany, June 21, 1870, he received his early musical instruction from his father and later studied the organ with E. Brennecke in Osnabrück. On coming to the United States in 1889, he settled in Peoria, Ill., where he became organist of St. Joseph's Church and the Cathedral. He removed to Chicago in 1894 where he studied piano-playing under E. Liebling and composition under B. Ziehn. From 1898 he served as instructor in musical theory and piano at the Chicago Musical College, and held teaching posts at the Columbia School of Music in Chicago, the Wisconsin Conservatory of Music at Milwaukee, and the Racine Musical College. Mr. Brune was former associate musical editor of the Chicago *Inter-Ocean*. Shortly before his death the Chicago Symphony Orchestra played *At Bernine Falls*, his last composition. He composed 4 symphonies (E flat, E minor, D, and A); 3 symphonic poems, *Lied des Sing-schwans*, *Evangeline*, *Ein Dämmerungsbild*; 4 overtures, *Symphonic Fantasy* in C; variations on a theme by Beethoven; *A Fairy Tale*; 2 concertos for piano and orchestra in C minor and F minor; a concerto for organ and orchestra in E flat minor; *Jerusalem*, a cantata for mixed voices and orchestra; 2 male choruses with orchestra, *Sungers Fluch* and *Saxons' War Song*; a mass, six parts; a cappella; Psalm 84 for ten parts; 6 string quartets; 2 string quintets; a string sextet; and numerous works for the organ and piano.

BRYAN, NATHAN PHILOMEN. American jurist, died at Jacksonville, Fla., Aug. 8, 1935. Born in Orange (now Lake) Co., Fla., Apr. 23, 1872, he was graduated in law from Washington and Lee University in 1895. Admitted to the Florida bar in the latter year he practiced alone in Jacksonville until 1899 when his brother, William James Bryan, joined him as junior partner. In 1905 he was appointed chairman of the board of control of the Florida State Institutions of Higher Education, and held the post for four years. The firm of Bryan and Bryan was active until 1907 when William was appointed to the United States Senate. He died, however, after three months in office, and Nathan was urged to take his place. Despite the latter's objections, he was appointed in February, 1911, and the following month was elected as a Democrat for the term 1911-17. Defeated for reelection in the latter year, he resumed his law practice, and in 1920 was appointed a judge of the Fifth Judicial Circuit of the United States Circuit Court of Appeals by President Wilson. Judge Bryan held this post at the time of his death.

BUCCLEUCH, JOHN CHARLES MONTAGU-DOUGLAS-SCOTT, SEVENTH DUKE OF SCOTLAND peer, died at Selkirk, Scotland, Oct. 19, 1935. Born in London, Mar. 30, 1864, he entered the Royal Navy as a cadet in 1877, becoming midshipman on the *Bacchante* in 1879, and lieutenant in 1883. Three years later he left the Navy to attend Christ Church College, Oxford. In 1895 he was elected Unionist Member of Parliament for Roxburghshire, and represented that constituency until 1906. He succeeded to the title on the death of his father in 1914 and, since 1915 had been Lord Lieutenant of Dumfriesshire. In 1926 he was named Lord Clerk Register of Scotland and Keeper of the Signet and three years later, was appointed Captain General of the Royal Company of Archers, the King's Body Guard for Scotland. Created Knight of the Order of the Thistle in 1917, he was made Knight Grand Cross of the Royal Victorian Order in 1934.

BUCKLE, GEORGE EARLE, died Mar. 13, 1935.

BULLOCK, SHAN F. English author, died at Chead, Surrey, Feb. 27, 1935. Born at Crom, Fermanagh, Ulster, May 17, 1865, he was educated at Farra School in Westmeath, and subsequently moved to England. He served as a clerk in the British Record Office at Somerset House for many years. His works dealt largely with life in Ulster, and were considered remarkable for their faithful delineation of Irish life. He was elected to the Irish Academy of Letters to succeed George Moore. His publications included: *The Atkward Squads* (1893); *By Thrasna River* (1895); *Ring o' Rushes* (1896); *The Chormer* (1897); *The Barrys* (1899); *Irish Pastorals* (1901); *The Squireen* (1903); *The Red Leaguers* (1904); *Dan the Dollar* (1905); *The Cubs* (1906); *Robert Thorne* (1907); *A Laughing Matter* (1908); *Master John* (1909); *Hetty* (1911); *Thomas Andrews, Ship-builder* (1912); *The Race of Castlebar* (with Miss Lawless, 1913); *The Making of a Soldier* (1916); *Mr. Ruby Jumps the Traces* (1917); *Mors et Vita* (1923); *The Loughsiders* (1924); *Gleanings* (1926); and his autobiography, *After Sixty Years* (1931).

BURKITT, FRANCIS CRAWFORD, English theologian, died May 11, 1935, in London, where he was born, Sept. 3, 1864. He received his education at Harrow and Trinity College, Cambridge. During 1904-05 he was lecturer in paleography at Cambridge University and from 1905 Norrissian Professor of Divinity there. Dr. Burkitt contended that Matthew's and Luke's Gospels are based on Mark and defended the general accuracy of Mark. His publications included *The Rules of Tyconius* (1894); *The Old Latin and the Itala* (1896); *Fragments of Aquila* (1897); *The Hymn of Bardaisan* (1899); *Early Christianity outside the Roman Empire* (1899); *Two Lectures on the Gospels* (1900); *The Gospel Quotations of S. Ephraim* (1901); *Early Eastern Christianity* (1904, Ger. trans. *Urchristentum im Orient*, 1906); *Evangelion da-Mepharreshe* (1904); *The Gospel History and Its Transmission* (1906, 3d ed., 1911); *Farthest Sources for the Life of Jesus* (1910, 2d ed., 1922); *The Failure of Liberal Christianity* (1910); *Syriac Forms of New Testament Proper Names* (1912); *Euphemia and the Geth* (1913); *Jewish and Christian Apocalypses* (Schweich Lectures, 1914); *Some Thoughts on the Athanasian Creed* (1916); *Three Hymns for Whitsuntide* (words and music, 1920); *Eucharist and Sacrifice* (1921, 2d ed., 1927); *Ecclesiastes* (verse, 1922); *The Early Syriac Lectionary System* (1923); *Christian Beginnings* (1924); *Donnellan Lectures on the Religion of Manichees* (1924); *Song of Brother Sun* (verse, 1926); *Christian Worship* (1930); *Church and Gnosis* (Morse Lectures, New York, 1932); *Jesus Christ An Historical Outline* (1932). He also contributed articles to the following: *Journal of Theological Studies* and the *Interpreter*; *Encyclopaedia Biblica* (1903); *Anglican Liberalism* (1908); *Cambridge Biblical Essays* (1909); the preface to the English translation of Schweitzer's *Quest of the Historical Jesus* (1910); *Encyclopaedia of Religion and Ethics* (1913); edited C. W. Mitchell's *S. Ephraim's Refutations of Mani* (1921); article in *Miscellanea Ehrle* (1924); *Revue d'Histoire franciscaine* (1925); *An Outline in Christianity* (1926); *Legacy of Israel* (1927); *S. P. C. K. Commentary* (1928); *Christianity in the Light of Modern Knowledge* (1929); *Franciscan Essays* (vol. II, 1932), and to the *Revue Bénédictine* (1934).

BURTON, ALFRED EDGAR, American educator, died in Gloucester, Mass., May 11, 1935. Born at Portland, Me., Mar. 24, 1857, he was graduated from Bowdoin College in 1878. In the following year he joined the United States Coast and Geodetic Survey as draughtsman and topographer. He accepted a call from the Massachusetts Institute of Technology in 1882 and served successively as an instructor, 1882-84; assistant and associate professor, 1884-96; and full professor of topographical engineering since the latter date. In 1902 he became the first dean of the Institute and served in that capacity until 1922 when he was retired as professor emeritus. Professor Burton was a member of the Massachusetts Topographical Survey Commission during 1895-1900 and in 1896 had charge of the expedition to North Greenland. Also, he accompanied the expedition to Washington, Ga., in May, 1900, to witness the eclipse, and the expedition to Sumatra in the following year. From 1905 he had been overseer of Bowdoin College. A Fellow of the American Academy of Arts and Sciences and the American Geographical Society, he was a member of the American Society of Civil Engineers, the Astronomical and Astrophysical Society of America, and the Boston Society of Civil Engineers. Besides editing the reports on the Greenland expedition of 1896-97, and the eclipse expeditions of 1900 and 1902 for the *Technology Quarterly*, he wrote *Pendulum and Magnetic Observations in Greenland* (1897).

BURTON, HENRY, South African statesman, died in London, England, Dec. 25, 1935. Born at Cape Town, South Africa in 1866, he received his education at St. Andrew's College, Grahamstown. Mr. Burton was attorney general in the government of John X. Merriman which was in office at the Cape of Good Hope up to the formation of the Union of South Africa. From 1910 to 1912 he was Minister for Native Affairs in the first cabinet of the Union under General Botha, and for the next eight years served as Minister of Railways and Harbors. He was Minister

of Finance from 1913-15, from 1916-17, and again from 1920-24. In the latter year he was raised to the Privy Council. Mr. Burton was a member of the Imperial War Cabinet in 1918 and the Imperial Conference and Imperial Economic Conference in 1923. Throughout his political career, he was a staunch Imperialist.

BUSH-BROWN, HENRY KIRKE. American sculptor, died in Washington, D. C., Mar. 1, 1935. Born in Ogdensburg, N. Y., Apr. 21, 1857, he received his general education in Newburgh, N. Y., and took up the study of art in 1874 under the tutelage of his uncle, Henry Kirke Brown, one of the most prominent American sculptors of the early school. After working with the latter for 12 years he went to Paris and to Italy for further study. Returning to the United States in 1889 he began work on the group for "The Indian Buffalo Hunt," which was exhibited at the Chicago Exposition in 1893. He then produced the equestrian statues of Gen. G. G. Meade and Gen. John F. Reynolds for the State of Pennsylvania. About a year before his death he completed a bust of the late Henry T. Rainey, former Speaker of the House of Representatives. His other works included the statue of Justinian on the Appellate Court House in New York; the group representing Truth at the Buffalo Exposition (1901); memorial tablet, Relief, at the Union League Club, Philadelphia; the decorative figures in the Hall of Records, New York; the equestrian statue of Gen. Anthony Wayne at Valley Forge, Pa.; memorial arch at Stony Point, N. Y.; memorial fountain at Hudson, N. Y.; Gray reserve statue at the Union League Club, Philadelphia; Mary Jemison statue at Letchworth Park, N. Y.; "The Spirit of '61" at Philadelphia (1911); The Lincoln Memorial at Gettysburg (1911); Union Soldiers' Monument at Charleston, W. Va. (1912); equestrian statue of Gen. John Sedgwick at Gettysburg, Pa.; the portrait bust of Henry Kirke Brown in the Hall of Fame at New York University, and the historical panels for the United States Post Office at Wellsville, N. Y. Mr. Bush-Brown excelled especially in the representation of animal figures which he executed with a high degree of realism. Bush-Brown was a member of the National Sculpture Society, the Architectural League, and the National Arts Club of New York of which he was a former president. Examples of his work may be seen in the Metropolitan Museum in New York, the Atlanta (Ga.) Museum, and the National Museum at Washington, D. C.

BUTLER, SIR RICHARD HARTE KEATINGE. English soldier, died at Shawbury, Shropshire, Apr. 22, 1935. Born Aug. 28, 1870, he received his education at Harrow and the Royal Military College at Sandhurst. In 1890 he joined the Dorsetshire Regiment and nine years later, fought in the South African War with the rank of captain. For his service in the Orange River Colony, the Transvaal, and on the Zululand border, he received the Queen's medal, with five clasps, the King's medal, with two clasps, and was brevetted major. During 1906-10 he was stationed at Aldershot with the rank of brigade major. Previous to his serving as brigade commander in 1914-15, he had been general staff officer, second grade, and during 1915-16, was major general on the General Staff of the First Army. When Haig succeeded Sir John French as commander-in-chief of the British forces in France and Belgium in December, 1915, he was instrumental in having Butler promoted to deputy chief of the General Staff on the Western Front. In the early part of 1918 he was given command of the Third Army Corps, a part of Gough's Fifth Army. He retained the latter command up to the signing of the Armistice. In the following year he received command of the Lowland Division on the Rhine, and in June returned to England where he became a divisional commander at Aldershot. Promoted to the rank of lieutenant colonel, April, 1923, he became General Officer Commanding, Western Command in June, 1924. This post he held up to June, 1928, and resigned from the service the early part of 1929. In recognition of his war services, Sir Richard was dubbed Knight Commander of the Order of St. Michael and St. George, and Knight Commander of the Bath. The French Government created him a Grand Officer of the Legion of Honor, and awarded him its Croix de Guerre. His other decorations included those of the Belgium Croix de Guerre, a commandery in the Order of Leopold, and the Distinguished Service Medal of the United States.

BUTTERFIELD, KENYON LEECH, died Nov. 25, 1935.

BYERLY, WILLIAM ELWOOD. American mathematician, died in Swarthmore, Pa., Dec. 20, 1935. Born at Philadelphia, Pa., Dec. 13, 1849, he received the A.B. degree from Harvard University in 1871 and the Ph.D. degree from the same institution two years later. From 1873 to 1876 he served as assistant professor of mathematics at Cornell University. He then joined Harvard University as associate professor of mathematics and in 1881 became full professor, serving as such until his retirement as professor emeritus in 1913. An early advocate of university teaching for women, Dr. Byerly was the first member of the Harvard faculty to agree to give courses for women, when the Society for the Collegiate Instruction of Women, which later became Radcliffe College, was founded in 1879. He served as chairman of the Academic Board of the College for more than 30 years and was an important factor

in the development of the institution. On the completion of the physics and chemistry laboratory of Radcliffe College in 1933, it was named William Elwood Byerly Hall in his honor. Professor Byerly was the author of *Elements of Differential Calculus* (1879); *Elements of Integral Calculus* (1881); *An Elementary Treatise on Fourier's Series and Spherical, Cylindrical and Ellipsoidal Harmonics* (1893); *Problems in Differential Calculus* (1895); *Generalized Coordinates* (1916), and *Introduction to the Calculus of Variations* (1917).

BYNG, JULIAN (HEDWORTH GEORGE) BYNG, FIRST VICOUNT, OF VIMY, OF THORPE-LE-SOKEN, died June 6, 1935.

CADBURY, DAME ELIZABETH MARY (MRS. GEORGE). English social worker, died Aug. 14, 1935. Born in London, about 1858, she received a private education in Germany and France. She was married to George Cadbury in 1888. From 1919 to 1924 she was city councillor of King's Norton Ward, Birmingham, and from 1925 was president of the National Council of Evangelical Free Churches. Also, for two years, she held the office of president of the National Union of Women Workers, and was Convener of the Peace and League of Nations Sectional Committee of the National Council of Women. Among the other offices she held included president of the Midland Division of the Young Women's Christian Association, vice president of the Rural Housing Association, National Liberal Association and of the Girl Guides Association, chairman of the Bournville Village Trust, and of the Birmingham Education Committee's Hygiene Sub-Committee. Among the honors conferred on Dame Cadbury were the Order of the British Empire in 1918, Justice of the Peace in 1926, and Dame Commander of the Order of the British Empire in 1934. Officer of the Order of the Hospital of St. John of Jerusalem, and the Order of Queen Elizabeth of the Belgians. Dame Cadbury was active in social and educational services, and published many papers on these subjects.

CAETANI, LEONE, DUKE OF SERMONETA. Italian linguist, died a British subject at Vancouver, B. C., Can., Dec. 25, 1935. Born in Rome, Italy, in 1869, he attended the University of Rome where he took the degree in ancient and Oriental languages and history. On the death of his father in 1917 he became head of the Old Roman house of Caetani. He traveled extensively in India, Africa, and the Near East to get material for his book, the *Annali Del' Islam*, a history of Islam in many volumes. This work led to his becoming a member of the Accademia Dei Lincei and the Athenaeum Club of London. Caetani, a prominent member of the Socialist party in the Italian parliament, had command of 11 languages, European and Oriental. During the World War he served as an artillery officer on the Dolomite sector of the Italian front and when Premier Mussolini wanted to reclaim the malaria-infested Pontine marshes, Caetani sold his land to the government and went to Vernon, British Columbia, where he became a British subject.

CAILLE, AUGUSTUS. American pediatricist, died in New York City, Oct. 10, 1935. Born at Madison, Ind., Apr. 1, 1854, he was graduated from the New York College of Pharmacy in 1873 and received the M.D. degree from the University of Wurzburg in 1877, and from the College of Physicians and Surgeons of Columbia University in 1881. He began the practice of medicine in New York in 1878, and from 1890 was professor of children's diseases in the New York Post Graduate Medical School. In 1887 Dr. Caille demonstrated Soxhlet's method of home sterilization for bottles, invented a perforated trocar for use in abdominal puncture and devised a scratch test for persons sensitive to the animal serum used in inoculation. He was a consulting physician to the New York Post Graduate and Lenox Hill Hospitals, the Isabella Home and Hospital, and the Sea Cliff Convalescent Home for Babies. Dr. Caille was a delegate to the International Medical Congress held in Berlin, and was a fellow of the American College of Physicians, which he helped to organize, the New York Academy of Medicine, and of the American Congress on International Medicine. A former president of the American Pediatric Society, he was a member of the New York County and State Medical societies and the American Medical Association. He wrote *Diagnosis and Treatment of Disease* (1906) and *Prevention and Treatment of Disease* (1918).

CAMBON, JULES, died Sept. 19, 1935.

CANA, FRANK RICHARDSON. English author and journalist, died in London, Jan. 9, 1935. Born at Brampton, Huntingdon, in 1865, he was educated at private schools in London, and then joined the Civil Service, being connected with the Ecclesiastical Commission. He later became a member of the editorial staff of the *St. James's Gazette*, and in 1903, began his association with the *Encyclopaedia Britannica*, serving as a departmental head until 1911. After editing the "Woman's Platform" of *The Standard*, he returned to the *Encyclopaedia* in 1914. In 1916 he became a member of the staff of *The Times*, and did much work for the *Times History of the War*, particularly in those sections that dealt with the African campaigns. Also he was consulted by the editors of the section dealing with Africa for the official *History of the War*. A geographer of wide and detailed knowledge, Mr. Cana was

a fellow of the Royal Geographic Society. He contributed to many editions of the *Britannica*, to newspapers and magazines, and published *Boers and British* (1899); *South Africa from the Great Trek to the Union* (1909); *Problems of Exploration: Africa* (1911); *The Sahara in 1915*; *The Great War in Europe*, and *The Peace Settlement* (1921).

CANNAN, EDWIN. English economist, died at Bourne-mouth, Hampshire, Apr. 8, 1935. Born in 1861, he received his education at Clifton and Balliol College, Oxford, and became lecturer at the London School of Economics in 1897. He served in the latter capacity until 1926. Also, during 1907-26, he held the chair of political economy at the University of London, retiring as professor emeritus in the latter year. At the University he had been dean of the faculty of Economics during 1900-04. His publications included: *Elementary Political Economy* (1888, 3d ed., 1903), *History of the Theories of Production and Distribution* (1893, 2d ed., 1903); *The Economic Outlook* (1912); *Wealth* (1914, 3d ed., 1928); *Money* (1918, 7th ed., 1932); *Coal Nationalization* (1919); *The Paper Pound of 1797-1821* (1920), *An Economist's Protest* (1927); *A Review of Economic Theory* (1929); *Modern Currency* (1931), and *Economic Scarcities* (1933). He edited Adam Smith's *Lectures on Justice, Police, Revenue, and Arms* (1896) and his *Inquiry into the Nature and Causes of the Wealth of Nations* (2 vols., 1904). He had been president of the Economics Section of the British Association in 1904 and 1931, and of the Royal Economic Society since 1932.

CAPPS, REAR ADMIRAL WASHINGTON LEE, U.S.N., RET. American naval officer, died at Washington, D. C., May 31, 1935. Born at Portsmouth, Va., Jan. 31, 1864, he was graduated from the United States Naval Academy in 1884. After serving on the *Tennessee* and on the staffs of Rear Admirals Luce and Jouett (1884-86), he was sent abroad on special duty, with the rank of ensign. While abroad he studied naval architecture at the University of Glasgow, and received the B.Sc. degree in 1888. Commissioned assistant naval constructor in the same year, he returned to the United States in 1889 and was assigned to the Navy Department, and then to Cramp's Shipyard, Philadelphia. From the Navy Yard in New York, where he served during 1889-92, he was assigned to the Bureau of Construction and Repair of the Navy Department, remaining until 1895. Promoted to naval constructor in the latter year, he was named superintendent of construction for the Navy at the Union Iron Works in San Francisco, and during 1898-99 was on the staff of Admiral Dewey, Commander-in-Chief of the Asiatic station. After superintending the raising of sunken Spanish warships, he became a member of the Board of Inspection and Survey at Washington where he served during 1899-1901. In the latter year he became head of the construction department of the New York Navy Yard and from 1903 to 1907, was chief constructor of the Navy, and chief of the Bureau of Construction and Repair. Three years after his reappointment to the post in 1907, he resigned and was then given a commission as chief constructor with the rank of rear admiral. In 1909, and again during 1910-11, he was sent abroad to study foreign dockyards. On special duty from 1916 as a member of the Navy Yard Commission, he held the office of president of the Navy Compensation Board from 1917, and of the Naval War Claims Board from 1925. He devoted several months of 1917 to activities connected with the Emergency Fleet Corporation. In 1913 he served as United States Commissioner at the International Maritime Conference held in London and while there, was chairman of the Conference Committee on Safety of Construction. In 1915 he was the Navy Department's delegate to the International Engineering Conference held in San Francisco, and chairman of the section on naval architecture and marine engineering. Although placed on the retired list in 1928, he was kept on active duty. President Wilson awarded him the Navy's Distinguished Service Medal "for exceptionally meritorious services in a position of great responsibility." In 1924 he was specially commended by President Coolidge for his services on the Naval Compensation Board during 1917-24. Admiral Capps was a former president of the Society of Naval Architects and Marine Engineers (1919-21).

CARPENTER, LOUIS GEORGE, died Sept. 12, 1935.

CARSON, BARON (LIFE PEER) OF DUNCAIRN, RT. HON. SIR EDWARD HENRY CARSON, died Oct. 22, 1935.

CASTLE, WILLIAM RICHARDS. Hawaiian lawyer, died June 5, 1935, in Honolulu where he was born, Mar. 19, 1849. He received the LL.B. degree from the Columbia Law School in 1873, and on his admittance to the bar, practiced in New York City for three years. He returned to Honolulu and became, in February, 1876, attorney general of the Kingdom of Hawaii. He served in the latter capacity for 10 months. In 1878 he was a member of the Hawaii Legislature, and again served in 1886, 1887, and 1888, acting as its president in the last two years. In 1893 he was annexation commissioner sent by Hawaii to Washington, and two years later, he was named Hawaiian Minister resident in Washington, D. C. On his return to Honolulu the following year, he was elected president of the Board of Education of the Republic of Hawaii, and while in office, instituted many educational reforms. Castle was a member

of the Hawaiian Bar Association, the American Bar Association, and the National Municipal League.

CAVANAUGH, JOHN WILLIAM. American Roman Catholic clergyman and educator, died at South Bend, Ind., Mar. 22, 1935. Born at Leetonia, Ohio, May 21, 1870, he took the Litt.B. degree at Notre Dame University in 1890. In the same year he served as professor of English in the freshman class at Notre Dame. Ordained to the priesthood in 1894, he served as associate editor of *Ave Maria* from 1894 to 1905, Rector of Holy Cross Seminary from 1898 to 1905, and professor of English literature from 1902 to 1906. He was named president of the University of Notre Dame in 1905 and held that office until 1919. During his incumbency of the latter post he effected important changes at the University, and increased the enrollment by several hundreds. He revised study programmes, added three new degrees, and erected new buildings. During 1919-20 he was professor of special English at Holy Cross College, Brookland, D. C., and then returned to Notre Dame as professor of English in 1920. He retained the latter chair until 1931. Father Cavanaugh was appointed chairman of the Compliance Board of the NRA, and appointed by the governor of Indiana, chairman of the State Commission of Liquor Control. Also, he was a member of the Rhodes Scholarship Commission for Indiana. He wrote *Priests of Holy Cross* (1904), *The Modesty of Culture* (1931), and edited the *Biography of Knute K. Rockne* (1931).

CHALMERS, STEPHEN. American author, died at Santa Ana, Calif., Dec. 14, 1935. Born at Dunoon, Scotland, Feb. 29, 1880, he was educated at the Dunoon Grammar School. In 1898 he went to Jamaica, W. I., and three years later became sub-editor of the *Kingston Daily Gleaner*. In 1902 he came to New York and served on the staff of the *New York Times* until 1906. Mr. Chalmers helped found the Stevenson Society of America and the Stevenson Fellowship of Los Angeles. He was a member of the Authors' League of America, League of Western Writers, and the Izaak Walton League. Besides contributing to several magazines, he wrote *The Vanishing Smuggler* (1909); *When Love Calls Men to Arms* (1910), *The Trail of a Tenderfoot* (1911), *A Prince of Romance* (1911); *Footloose and Free* (1912), *The Beloved Physician—Edward Livingston Trudeau* (1915), *The Penny Piper of Saranac* (1916); *Enchanted Cigarettes* (1917); *The Greater Punishment* (1920), *Don Quixshot* (1922), *Looking for Trouble* (1926), *The Hermit Thrush* (verse, 1927), *House of the Two Green Eyes* (1928); *Crime in Car 13* (1930), *The Affair of the Gallows Tree* (1931), *The Whispering Ghost* (1932), *Blood on the Heather* (1933), and *Campobello Days with F. I. R.* (1933).

CHAMBERLAIN, BASIL HALL. English scholar and Orientalist, died at Geneva, Feb. 14, 1935. Born at Southsea, England, Oct. 18, 1850, he was educated in France and England. After teaching at the Imperial University of Tokyo for 40 years, he retired as professor emeritus of Japanese and Philology. His combination of scholarship with a light and interesting style is perhaps most evident in his *Things Japanese* (1890, 6th ed., 1927, French trans., 1930). His other works include: *The Classical Poetry of the Japanese* (1880); *Translation of the *Kokin** (1883); *The Language, Mythology, and Geographical Nomenclature of Japan in the Light of Aino Studies* (1887), *Aino Folk Tales* (1888), *Lichuan Grammar* (1895), *Practical Introduction to the Study of Japanese Writing* (2d ed., 1905), *Handbook of Colloquial Japanese* (4th ed., 1907); *Murray's Japan* (1891, 9th ed., 1913, with W. B. Mason); *Japanese Poetry* (1910), *Huit Siècles de Poésie Française* (1927), *Encore est vive la Louisie* (1933); volumes in the *Japanese Fairy Tale Series*, and contributions to the *Transactions of the Asiatic Society of Japan* and of other Oriental societies.

CHAMBERLIN, JOSEPH EDGAR. American editor, died at South Hanson, Mass., July 6, 1935. Born at Newbury, Vt., Aug. 6, 1851, he received his education in Wisconsin, and became associated with the *Chicago Times* in 1871, on which he rose to the post of managing editor. Ten years later he went over to the *Newport (R. I.) Daily News* as editor and remained there until 1882. He was then associated successively with the *Fall River (Mass.) Daily Herald* (1882-84), the *Boston Record* (1884-86), and was a member of the *Boston Transcript* (1886-1901). After serving as assistant editor of the *Youth's Companion* during 1890-1901, he was literary editor, editorial writer, and art critic for the *New York Evening Mail* from 1901 to 1915. In the latter year he returned to the *Boston Transcript* in the capacity of editorial writer and remained with the newspaper until 1933. Mr. Chamberlin also conducted the "Listener" and "Nomad" columns in the *Transcript*. In 1898 he served as war correspondent in Cuba for the *New York Evening Post*. His publications include: *The Listener in the Town* (1896), *The Listener in the Country* (1896); *Life of John Brown* (in the *Beacon Biographies*, 1899); *The Ifs of History* (1907); and *The Boston Transcript—A History of Its First Hundred Years* (1931).

CHAMBERS, HENRY KELLETT. American editor and playwright, died at Great Neck, L. I., N. Y., Sept. 5, 1935. Born in Sydney, Australia, Nov. 28, 1867, he was educated at Newington College, Stanmore, Australia. (On coming to the United States in 1891 he settled in New York. Four years later he went to San Francisco, where he worked

for a time with the Hearst newspapers. Returning to New York in 1896 he became associated with the New York Sun and served as editor of the column, "The Sun's Rays." Mr. Chambers began writing for the stage and had his first play *Abigail* produced by William A. Brady in New York in 1905. His second effort, *A Case of Frenzied Finance*, was also produced by Mr. Brady in the same year, and in 1906, his dramatic version of *David Copperfield* was produced by Charles Cartwright. In the same year *The Butterfly* was produced with Lillian Russell in the leading rôle. His other plays included: *An American Widow* (1909) and *The Right to Be Happy* (1912). Mr. Chambers began his association with *The Literary Digest* in 1926, becoming editor of its *Spice of Life* department. He resigned from the latter position shortly before his death.

CHAMBERS, VICE-ADMIRAL SIR JOSEPH. English surgeon, died at Harrogate, Yorkshire, Sept. 22, 1935. Born in 1864, he received his education at Dublin University, and entered the Royal Navy in 1889 as a surgeon. During the South African War he was medical director of several naval hospitals, and during the World War, served as operating surgeon at the Royal Navy Hospital at Chatham. He was director general of the Medical Department of the Navy from 1923 to 1927 when he retired. In 1925, Sir Joseph acted as honorary physician to the King. Created a Companion of the Order of St. Michael and St. George in 1919, and Companion of the Bath in 1923, he was made Knight Commander of the Bath in 1926. Sir Joseph wrote many articles on surgery.

CHAMPNEYS, BASIL. English architect, died at Hampstead, Apr. 5, 1935. Born at Lichfield, in 1842, he was educated at Charterhouse School and Trinity College, Cambridge, where he won classical honors in 1864. He studied architecture under John Prichard of Llandaff, and began to practice in 1867. He built many important buildings, including the divinity and literary schools of Newnham College, the Archaeological Museum at Cambridge, Somerville and Mansfield Colleges and the Indian Institute and Robinson Tower at New College, Oxford, Butler Museum at Harrow, Rylands Library at Manchester, as well as many churches and schools. Champneys was more concerned over details than he insisted should be historically correct than that they be satisfactory from the formal point of view. He was presented with the Royal Gold Medal by the Royal Institute of British Architects in 1912. He was the author of: *A Quiet Corner of England* (1875), *Henry Merritt Art Criticism and Romance* (1879); *Memoirs and Correspondence of Coventry Patmore* (1900); *Retrospect and Memoir* (1911).

CHANEY, LUCIAN WEST. American biologist and statistician, died at Washington, D. C., May 6, 1935. Born at Heuvelton, N. Y., June 26, 1857, he received his education at Carleton College, Northfield, Minn. From 1879 to 1882 he served as high school principal and superintendent of schools in Faribault and Glencoe, Minn. In the latter capacity he was reputed to have been an early advocate of the use of the laboratory method in biological instruction in Minnesota. Mr. Chaney explored the Rocky Mountains of Montana and visited many glaciers, having one, Chaney Glacier, named in his honor. In 1882 he returned to Carleton College as instructor in biology and became professor of that subject the following year. Largely due to his efforts, the biological department of that institution was advanced to a high degree of perfection and the laboratory greatly improved by the installation of modern equipment. He retired in 1907, and took over the post of special investigator of industrial accidents for the United States Department of Labor. His reports to the latter were embodied in Volume IV of the "Conditions of Employment in the Iron and Steel Industry." He wrote *Guides for the Laboratory* (1886) and was the author of many bulletins of the United States Bureau of Labor. Mr. Chaney was a member of the First and Third National Conferences on Workmen's Compensation, and of the American Academy of Political and Social Science, the American Sociological Association, the Minnesota Academy of Science, and the American Association for Labor Legislation.

CHIDWICK, THE RT. REV. MGR JOHN PATRICK SYLVESTER. American clergyman of the Roman Catholic church, died Jan. 13, 1935, in New York City, where he was born Oct. 23, 1863. He was educated at St. Gabriel's School and Manhattan College, receiving the A. B. degree in 1883 and the A. M. degree in 1885. In 1883 he entered St. Joseph's Seminary at Troy, New York, and on his ordination as a priest in 1887, was assigned to St. Stephen's Church, New York City. Always interested in seamen, Father Chidwick, with three others, founded the Catholic Reading Room for Sailors in New York. In 1895 he was appointed a chaplain in the United States Navy, and three years later was assigned to the U. S. S. *Maine*. When that ship was blown up in Havana Harbor, he took a valiant part in the rescue work that followed and was commended by his Commander and by the Secretary of the Navy. Transferred to the cruiser *Cincinnati*, he served on it to the end of the Spanish-American War, and in November, 1898, returned to the United States. In January of the following year he was named chaplain of the Washington Navy Yard. He later served in the same capacity at the

New York Navy Yard, and on the battleship *New York*. He retired from the Navy in 1903 with the rank of commander. Assigned to St. Ambrose's Church, New York as pastor in 1904, he was appointed a chaplain in the New York Police Department two years later. In 1909 he was named president of St. Joseph's Seminary, now located in Yonkers, New York, and seven years later was made a Monsignor by Pope Pius X. Appointed Irremovable Rector of St. Agnes Church in New York in 1922, he became an Archdiocesan consultant the following year, and in 1924, was named president of the College of New Rochelle, New Rochelle, N. Y.

CHILD, RICHARD WASHBURN, died Jan. 31, 1935.

CIPPICO, COUNT ANTONIO. Italian statesman and author, died in Rome, Jan. 17, 1935. He was born at Zara, Mar. 20, 1877. He served at University College, London as lecturer during 1911-18 and as professor of Italian during 1918-25. In the World War he served with the Italian Army with the rank of lieutenant and won a decoration for valor. After the War he returned to London where he founded the first *Fascio di Combattimento*. He settled in Rome after his nomination as Senator of the Kingdom of Italy in 1923, and served as Italian delegate to the League of Nations Assembly during 1924-28. Also, he was a foreign correspondent of the Royal Literary Society. His publications include: *The Central Problem of the Mediterranean Sea Which Is Italy*; *Carme Umanistico*; *The Romantic Age in Italian Literature*, and translations into Italian of Aeschylus' *Orestia*, of King Lear, of Nietzsche's *Gaia Scienza*, and of poems by Keats, Shelley, and Whitman.

CITROEN, ANDRE GUSTAV, died July 3, 1935.

CLAPP, CHARLES HORACE. American geologist, died at Missoula, Mont., May 9, 1935. Born in Boston, Mass., June 5, 1883, he received the Ph.D. degree from the Massachusetts Institute of Technology in 1910. From 1905 to 1907 he was an instructor in geology and mining at the University of North Dakota, and at the same time, assistant state geologist. He removed to Massachusetts in 1907 and taught there to 1910 as an instructor in geology at the Massachusetts Institute of Technology. During 1908-13, he served with the Geological Survey of Canada. Professor Clapp occupied the chair of geology at the University of Arizona during 1913-16 and for the following five years, held the same chair at the Montana State School of Mines. After serving as president of the latter institution during 1918-21, he was called to the State University of Montana where he was president from 1921. During 1919-22 he was a director and geologist for the Montana Bureau of Mines and Metallurgy, assistant geologist with the U. S. Geological Survey during 1914-25, and a member of the American Association for the Advancement of Science, Geological Society of America, American Institute of Mining and Metallurgical Engineers, and the Montana Society of Engineers. Dr. Clapp was particularly interested in petrology and economic geology and published many papers on the subjects.

CLAPP, CORNELIA MARIA. American zoologist, died at Mount Dora, Fla., Jan. 1, 1935. Born at Montague, Mass., Mar. 17, 1849, she attended Mount Holyoke, Mass., then a girls' seminary, and graduated in 1871. In the following year she became instructor in mathematics there. Being instrumental in the formation of the department of Zoology at Mount Holyoke, in 1896 she was appointed professor and occupied this chair until her retirement as professor emerita in 1916. For years Miss Clapp was associated with Louis Agassiz in his scientific work, and during the summers of 1888-1902, she carried on investigations in the marine biological laboratory at Woods Hole, Mass., where she specialized in research work in embryology. In 1924 a new building, housing the science department at Mount Holyoke, was dedicated as Cornelia Clapp Hall in her honor. She received honorary degrees from the University of Syracuse and the University of Chicago, and was the first woman so honored by the latter institution. Also, she was the only woman trustee of the Marine Biological Station, and a fellow of the Naples, Italy Zoological Station. Her writings consisted of articles in technical journals on the subjects of biology and morphology.

CLARK, KATE UPSON (MRS. EDWARD PERKINS CLARK). American author, died in Brooklyn, N. Y., Feb. 17, 1935. Born at Camden, Ala., Feb. 22, 1851, she was graduated from Wheaton College, Norton, Mass., in 1869 and from the Westfield (Mass.) Normal School in 1872. In that year she accepted the post of teacher in Central High School, Cleveland, Ohio, where she remained a year. In 1874 she was married to Edward Perkins Clark. From 1882 to 1887, Mrs. Clark was the editor of *Good Cheer*, and conducted a department in the Philadelphia Press. Also, from 1892 to 1895, she edited *Romance*. In 1907 she became an editorial writer on the Brooklyn Eagle, as well as acting as literary editor of the Christian Herald and contributing to many magazines and religious weeklies. After the death of her husband in 1903, she began her lecturing career, giving courses at Columbia University, the Brooklyn Academy of Arts and Sciences, and on many of the Chautauqua Circuits. In 1907 she was appointed a trustee of Wheaton College, and was the founder and first president of the Wheaton Club in New York. Also, she helped

found the Women's Republican Club, and the Brooklyn Colony of the National Society of New England Women. She contributed articles to many magazines, including *St. Nicholas*, *Youth's Companion*, and the *Atlantic Monthly*. Her writings in book form included: *Bringing Up Boys* (1900); *White Butterflies* (1900); *How Dexter Paid His Way* (1901); *Up the Witch Brook Road* (1902); *Move Upward* (1902); *The Dole Twins* (1906); *The Adventures of Spotty* (1907); *Art and Citizenship* (1917); and *Teaching the Child Patriotism* (1918).

CODERRE, LOUIS Canadian jurist, died in Montreal, Jan. 30, 1935. Born at St. Ours, Que., Nov. 1, 1865, he received the L.L.B. degree from Laval University in 1892. Called to the bar in the same year, he became a partner in the firm of Primeau and Coderre. In 1904 the partnership was dissolved and he later served with the firms of Coderre, Cedras and Magnan, and Coderre, Fortin and Coderre. He entered politics in 1896 and became city attorney for St. Henri, retaining the post up to 1905. In 1897 he was attorney for Emard and from 1904 to 1910 was syndic of the Montreal bar. An unsuccessful candidate in the elections of 1908, he was elected in 1911 to represent Hochelaga in the House of Commons. Sworn a member of the King's Privy Council for Canada, he took up the post of Secretary of State in October, 1912, in Sir Robert Borden's Cabinet. Also, in February, 1913, he was named Minister of Mines in the same Cabinet. He retained both posts until he resigned in 1915. Later in the same year he was appointed Judge of the Superior Court of Quebec.

COHEN, JOHN SANFORD American editor, died in Atlanta, Ga., May 13, 1935. Born in Augusta, Ga., Feb. 26, 1870, he attended the United States Naval Academy during 1885-86, but resigned in the latter year to enter the field of journalism. His first newspaper experience was obtained on the *Augusta Chronicle*, and after a year or two, he went to Mexico where he joined Capt. William G. Raoul, builder of the Mexican National Railway. He returned to New York and in 1889 served on the staff of the *New York World*. He was in Georgia again in 1890, when he became a member of the staff of the *Atlanta Journal* as a reporter. He became successively political writer, Washington correspondent, chief editorial writer, managing editor, and in 1917, editor and president of the *Atlanta Journal Company*. Also, while in Washington, he served as secretary to Hoke Smith, Secretary of the Interior in President Cleveland's Cabinet. On the outbreak of the Spanish-American War, he became a war correspondent and sailed with Admiral Evans's fleet. Enlisting in the Third Georgia Volunteer Infantry, he was promoted to the rank of major. At the end of the War he served in Cuba with the Army of Occupation. Returning to his post on the *Atlanta Journal*, he helped promote the National Highway from New York City, through Atlanta, to Jacksonville, Fla., which was built under the joint supervision of the *Atlanta Journal* and the *New York Herald*. Also, he helped rebuild the greater Emory University in Atlanta and refound Oglethorpe University. Under his leadership, the *Atlanta Journal* was one of the first Southern newspapers to sponsor a Sunday morning edition, complete with magazine and rotogravure sections. The *Journal's* radiobroadcasting station, which operated under the call letters WSB, was one of the first erected in the South. Mr. Cohen's political activities were confined to the State of Georgia until 1924, when he was elected a Democratic National Committeeman. He held this office until his death. Appointed to the United States Senate by Governor Russell in April, 1932, to fill the vacancy caused by the death of Senator William J. Harris, he served in that capacity until the expiration of the term in 1933. In 1932, he accepted the appointment of vice chairman of the Democratic National Committee.

COHEN, JULIUS BEREND English chemist, died at Coniston, Lancashire, June 14, 1935. Born in Manchester, May 6, 1859, he attended Owens College, Manchester, and entered the works of the Clayton Aniline Company in 1880 where he remained for two years. He then went to Munich and received the Ph.D. degree from the University there. Following his return to Manchester in 1884, he was named demonstrator in chemistry at Victoria University, Manchester. In 1890 he joined the faculty of Yorkshire College where he was lecturer on organic chemistry. When the college became a part of the University of Leeds in 1904, he was invited to occupy the chair of organic chemistry. He held the post up to his retirement in 1924. During the World War Professor Cohen was responsible for the manufacture of many valuable drugs and from 1924 to 1932 served on the Chemotherapy Committee of the Medical Research Committee. In the Chemical Society he held the office of vice president in 1920, 1921, and 1925. Cohen was a member of the Local Government Board Committee on Smoke Abatement and was an associate member of the Chemical Warfare Committee. His publications include *Researches on Organic Chemistry*; *Theoretical Organic Chemistry* (1902); *Practical Organic Chemistry* (1910); *Organic Chemistry for Advanced Students* (2 vols., 1907-13); *Organic Chemistry* (1912); and *Smoke, a Study of Town Air* (1912).

Dr. Cohen was elected a Fellow of the Royal Society in 1911.

COLE, REAR ADMIRAL WILLIAM CAREY, U.S.N., RET. American naval officer, died on Mare Island, San Francisco, Calif., May 28, 1935. Born in Chicago, Ill., Aug. 23, 1868, he was graduated from the United States Naval Academy in 1889. During the Spanish-American War he served on the *Dolphin* and from 1901 to 1905 was chief engineer on the *Massachusetts*. The following two years were spent as inspector of equipment at Camden, N. J. He returned to sea as navigator on the *Kansas* during 1907-09, and as executive officer of the same vessel during 1909-10. Assigned to the naval Academy from 1910 to 1913, he returned to sea as commander of the *Monadnock* (1913) and of the *Helena* (1913-15). In the following year he was stationed in the Boston District as inspector of engineering material. At sea again in 1917, he commanded the *Frederick* and in 1918, the *Nevada*. Assigned to the United States Dutch mission ship in May, 1919, he was then transferred to the Bureau of Operations at the Navy Department in Washington in November, 1919. In April, 1922, he commanded the Special Service Squadron, and in August, 1923, became chief of staff of the United States Fleet. After serving as commandant of the Navy Yard at Norfolk, Va., in 1925, his command was transferred to Battle Ship Division Four of the Battle Fleet during 1928-29. The following year was spent with the Scouting Fleet with the rank of vice admiral and from 1930 to 1932, as commander of the 12th Naval District, San Francisco. He was retired for age on Sept. 1, 1932. Admiral Cole was a member of the Naval Institute, American Society of Naval Engineers, and the American Society of International Law.

COLLIE, SIR JOHN. English physician, died in London, Apr. 4, 1935. Born in 1860, he received his education at Aberdeen University. Elected a member of the London County Council, he served successively as assistant medical officer, medical superintendent of medical classes, and medical examiner and member of the Insurance Committee for London. Also, for a time, he served as an examiner in physiology and hygiene at the British College of Physical Education. During 1913-15 he was a member of the Royal Commission on Venereal Diseases, and during the World War, was named Director of Neurasthenic Institutions by appointment of the Minister of Pensions. At the time of his death he held the office of chief medical officer of the Metropolitan Water Board. Sir John was elected to Parliament in 1922 as National Liberal Member for the Partick Division of Glasgow and served in that capacity for one year. His various other appointments consisted of Director of Medical Services in the Ministry of Pensions, president of the Special Medical Board for Neurasthenia, and Home Office Medical Referee under the Workmen's Compensation Act. Knighted in 1912, he was made a Companion of the Order of St. Michael and St. George in 1918 and was Justice of the Peace for the County of London. His publications include: *Fraud and Its Detection in Accident Insurance Claims* (1912); *Malingering* (1913); *The Psychology of the Fraudulent Mind* (1913); *The Business Side of Medical Practice*; *Fraud in Medico-Legal Practice* (1932); *Workman's Compensation in Its Medical Aspect* (1932); and *Recent Advances in Medicine and Surgery* (1933).

COONTZ, ADMIRAL ROBERT EDWARD, U.S.N., RET., died Jan. 26, 1935.

COOPER, IRVING STEIGER. American bishop of the Old Catholic Church and theosophist, died at Glendale, Calif., Jan. 17, 1935. Born at Santa Barbara, Calif., Mar. 16, 1882, he attended the University of California during 1902-06, and then studied at Adyar, Madras, India. He was national lecturer for the Theosophical Society from 1908 to 1919, and served as national organizing secretary of the Order of the Star in the East from 1912 to 1919. He was ordained a priest of the Old Catholic Church in 1918, and consecrated regionary bishop of the Liberal Catholic Church for the United States the following year. He wrote *Methods of Psychic Development* (1911); *Ways to Perfect Health* (1912); *The Secret of Happiness* (1912); *Theosophy Simplified* (1915); and *Reincarnation, the Hope of the World* (1917).

COOPER, WILLIAM JOHN. American educator, died at Kearney, Neb., Sept. 19, 1935. Born at Sacramento, Calif., Nov. 24, 1882, he was graduated from the University of California in 1906, and became assistant in the Department of History at the University while in his senior year. He taught history and Latin at the Stockton High School during 1907-10, becoming, in the latter year, head of the history department in the Berkeley senior high school and four junior high schools. In 1915 he served as supervisor of social studies in the public schools of Oakland, and was named district superintendent of schools in Piedmont three years later. For five years, 1921-26, he was city superintendent of schools in Fresno, and in 1926, in San Diego. Governor Young appointed him State superintendent of Public Instruction the following year. He served in this capacity until 1929, when he was appointed Commissioner of Education by President Hoover. During his term of office, three national surveys of education were made, viz., the National Survey of Secondary Edu-

cation, the National Survey of the Education of Teachers, and the National Survey of School Finance, which made a profound impression on the educational world, and through his efforts, the Office of Education became more closely cooperated with the National Education Association, the American Council on Education, the National Catholic Welfare Council, and other organizations deeply interested in the advancement of education. Dr. Cooper resigned in 1933 to take up the chair of education at George Washington University. For eight months during 1917-18, he was the business manager of the War Department's Committee on education and special training for the Western States. A regent of the University of California, he also was director of superintendence of the National Education Association, and a member of the Federal Bureau for Vocational Education from 1930 to 1933. Also, he was a member of the American Association for the Advancement of Science, and the American Academy of Political and Social Science. Besides contributing to various periodicals, he wrote *Economy in Education* (1933).

CORMACK, JOHN DEWAR. Scottish engineer, died at Glasgow, Dec. 1, 1935. Born May 15, 1870, he was educated at Dumbarton Academy and Glasgow University. In 1892 he lectured on electrical technology at Yorkshire College, Leeds, and in 1896 became University assistant in engineering and lecturer in electrical engineering at Glasgow University. Invited to occupy the chair of mechanical engineering at University College, London, in 1901 he held the post until 1913, when he became regius professor of Civil Engineering and Mechanics at Glasgow University. In 1901 he was secretary of the International Engineering Congress held in Glasgow, and president of the Institution of Engineers and Shipbuilders in Scotland in 1933. During the World War he was active as chief contracts officer for military aeronautics (1915); and assistant controller of the Aeronautical Supply Department (1917); also, he served as a member of the British Mission to the United States (1917-19). A Fellow of the Royal Aeronautical Society, he was decorated a Chevalier of the Legion of Honor and created a Companion of the British Empire in 1919, and Companion of St. Michael and St. George in 1917.

CORRIGAN, JOSEPH EUGENE. American jurist, died in New York City, Jan. 9, 1935. Born in Newark, N. J., Sept. 16, 1874, he graduated from Seton Hall College, South Orange, N. J., in 1895, and received the LL.B. degree from Columbia University Law School in 1901. Starting practice in New York City in 1903, he served on the staff of the late William Travers Jerome, District Attorney, and in 1907 was appointed city magistrate by Mayor George B. McClellan, serving until 1930, when he was appointed chief magistrate for one year by Mayor James J. Walker. He realized his ambition on Apr. 1, 1931, when he was appointed to the bench of the Court of General Sessions by Gov. Franklin D. Roosevelt. He was reelected to the office in November, 1931, for a term of 14 years.

COSIO, MANUEL BARILOMÉ. See SPANISH LITERATURE.

COWEN, SIR FREDERICK HYMNEN, died Oct. 6, 1935. COY, EDWARD HARRIS (TED). American football star of the flying wedge days, died in New York City, Sept. 8, 1935. Born at Andover, Mass., May 21, 1888, he entered Yale University in 1906, becoming captain and fullback of the freshman team. He was a major factor in many of Yale's victories over Harvard and Princeton. His brilliant playing in 1907 in the 12-10 victory over Princeton, and the 12-0 victory over Harvard, established him as a pre-eminent player. Both Parke Davis and Walter Camp placed him at fullback position on their all-time All-American teams. In his senior year he was elected captain of the team, and in accordance with the prevailing custom, returned to Yale in 1910 as head coach. He then engaged in various commercial activities, until 1915 when he came to New York and joined the brokerage firm of Davies, Thomas, and Company. Four years after his retirement from that company, he went to California where he wrote sports for the San Francisco *News*. Returning to New York in 1930, he became associated with Smyth, Sanford, and Gerard, insurance brokers, and continued the connection up to the time of his death. Mr. Coy was married three times, his second wife being Jeanne Eagles, who came into her greatest prominence as Sadie Thompson in *Rain*.

CRAIG, CHARLES L. American public official, died in Sacramento, Calif., Aug. 6, 1935. Born at Arcola, Ill., Mar. 9, 1872, he was graduated from Washington University in St. Louis. At the age of 28 he came to New York City where he took up the study of law. In 1903 he received the LL.B. degree from the Law School of Columbia University, and on his admittance to the bar, became a partner in the firm of Hoadley, Lauterbach and Johnson. After the dissolution of that firm, he joined James A. Foley in the practice of law. His attacks on the Fusion administration of Mayor John P. Mitchell brought him to the attention of Charles F. Murphy, Tammany Chieftain. As a result, Craig was nominated for city comptroller, along with John F. Hyland for mayor, and Alfred E. Smith for President of the Board of Aldermen. Elected to the post in 1917, Craig aided and abetted Mayor Hyland until

1919, when they came to differences over the 1920 city budget. Reelected to the same office in 1921, he continued to save the city millions of dollars and proceeded to attack other members of the city administration. He was relieved of a jail sentence of 60 days imposed by Federal Judge Julius Mayer for contempt of court, remission of his sentence being authorized by President Coolidge on Dec. 4, 1923. Mayor Hyland, along with the rest of his ticket, was defeated in the Democratic primaries of 1925 and Craig was offered a nomination to the bench of the Supreme Court. He declined the nomination, however, and returned to private practice.

CRAIG, SIR MAURICE. English neurologist, died at East Preston, Sussex, Jan. 6, 1935. Born Mar. 29, 1866, he was educated at Caius College, Cambridge and at Guy's Hospital, affiliated with the University of London. In 1900 he was awarded the Gaskell Gold Medal. Appointed a physician for and a lecturer in Psychological Medicine, and Demonstrator in Psychology in Guy's Hospital two years later, he served until 1926. In that year he became consulting physician in Psychological Medicine, but from 1922 had been Bradshaw Lecturer on Mental Symptoms in Physical Disease at the Royal College of Physicians and Maudsley Lecturer on some aspects of Education and Training in Relation to Mental Disorder. At Cambridge University he held the post of examiner for Diploma in Psychological Medicine. Also, during 1920-22, he served on the War Office Committee on Shell Shock. At the meeting of the British Medical Association in 1925, Sir Maurice also served as president of the Section on Neurology and Psychological Medicine, and at the centenary meeting of the Association held in 1932, was president of the Section on Mental Disorder, and held additional offices in several other medical associations. Sir Maurice was knighted in 1921, and was named a Fellow of the Royal Society of Medicine. He wrote *Nerve Exhaustion* and a textbook on *Psychological Medicine*.

CROISSET, MAURICE. French classical philologist, died Feb. 15, 1935, in Paris where he was born Nov. 20, 1846. He was educated at the Lycée Louis-le-Grand. In 1876 he became professor of the Greek language and literature at Montpellier, and professor of the Greek language and literature at the Collège de France in 1893. He subsequently became a director of the Collège. In 1903 he was elected to the Académie des Inscriptions et Belles-Lettres, and in 1918 became president of the Association Guillaume Budé. Also, he was a grand officer of the Legion of Honor. He wrote *De Publica Eloquentia Principis apud Græcos in Homericis Carminibus* (1874); *Des idées morales dans l'éloquence politique de Démosthène* (1874); *Essai sur la vie et sur les œuvres de Lucien* (1882); *Aristophanes and the Political Parties at Athens* (Eng. trans. by James Loeb, London, 1909), and, in conjunction with Alfred Croiset, *Histoire de la littérature grecque* (5 vols.) and *Manuel d'histoire de la littérature grecque, la civilisation hellénique* (2 vols., 1922); and translated into Spanish, *Homérus' Ia Odyssea* (1921), and collaborated with his brother on a Spanish translation of *Euripides' Tragedias* (1921). Also, he edited and translated the first volume of the *Œuvres Complètes* of Plato, and the *Harangues* of Demosthenes (2 vols., 1924-25). In 1932 he published *La Civilisation de la Grèce Antique*.

CUSTANCE, ADMIRAL SIR REGINALD NEVILLE. English naval officer, died at Broadclyst, Devon, Aug. 30, 1935. Born in Belfast, Ireland, Sept. 20, 1847, he entered the navy in 1860 as a cadet, and served as a midshipman on the *Euryalus* at the capture of Kahding in 1862. Also he was present at the actions of Kagosima in 1863 and of Simnosaki in the following year. Promoted commander in 1878 from the *Excellent*—the gunnery school at Portsmouth—he became a captain in 1885, and with that rank served as assistant Director of Naval Intelligence during 1886-90. The next three years were spent as captain of the *Phaeton*, and from 1893 to 1895 he was naval attaché, serving first at Washington and later at Paris. Again at sea in 1895, he commanded the *Barfleur* in the Mediterranean up to 1898. The following year he was returned to the Naval Intelligence Department, this time as director, serving as such until 1902 when he returned to sea in the *Venerable*, second in command of the Mediterranean Fleet, with the rank of rear admiral. In 1907 he transferred his flag to the *Hibernia* and was second in command of the Channel Fleet. He retired from the Navy in 1912. Sir Reginald was the recipient of the Humane Society's silver medal in 1868 for saving the life of a marine artilleryman who had fallen overboard and was created a companion of St. Michael and St. George in 1900, Companion of the Victorian Order, 1903; Knight Grand Cross of the Bath in 1913. Among other honors conferred upon him were the Sacred Treasure of Japan, first class; and Grand Commander of the Redeemer of Greece. He wrote *War at Sea; Modern Theory and Ancient Practice* (1909) and *A Study of War* (1924).

CUTTING, IRONSON (MURRAY), died May 6, 1935.

CUTTING, STARR WILLARD. American educator and Germanic scholar, died in Brattleboro, Vt., Oct. 18, 1935. Born at West Brattleboro, Vt., Oct. 14, 1858, he received the A.B. degree from Williams College in 1881. After studying abroad at the universities of Leipzig and Geneva

during 1886-88, he returned to the United States for further study at Johns Hopkins University. He received the Ph.D. degree from the latter institution in 1892. During 1881-86 he was principal of the Deerfield (Mass.) Academy. He answered a call from the University of South Dakota in 1888 to be professor of modern languages, and held the post until 1890 when he went to Earlham College, Indiana, as professor of German and French. In 1892 he joined the faculty of the University of Chicago, serving successively as assistant professor of German (1892-94); associate professor (1894-1900); professor of German literature (1900-06) and head of the department of Germanic languages and literatures (1906-23). In the latter year he retired as professor emeritus. During 1901-02, Professor Cutting was president of the central division of the Modern Language Association of America. His publications include: *Der Konjunktiv bei Hartmann von Aue* (1894); a critical edition of Lessing's *Minna von Barnhelm* (1899); *The Modern German Relatives Das and Was* (1904); *Robert Wesselhoef, Jena Burschenschaft, German Revolutionary, and American Citizen* (1911); *Gutzkow and Young Germany* (1913); *An American Estimate of the Salient Features of Modern German Life* (1914); *Über Die Schriften des Jenaer Burschenschafters und Amerikanischen Arztes Robert Wesselhoef* (1917); *Heinrich von Treitschke's Treatment of Turner and Burschenschaft in His Deutsche Geschichte im Neunzehnten Jahrhundert* (1922).

CUVILLIER, LOUIS ANDREW. American public official, died in New York City, May 18, 1935. Born in Fairfax Co., Va., Feb. 4, 1871, he attended Georgetown University, Washington, D. C. He removed to New York where in 1907, he was elected to the New York Legislature. He served continuously until 1913, when he was defeated through his opposition to woman suffrage. However, he was again elected in 1919 and served up to the time of his death with the exception of a year's absence after his defeat in 1933. His knowledge of State government was reputed to have been greater than any other Democratic member in recent years. Cuvillier was ardently opposed to prohibition, and introduced bills to make the sale of beer and light wines legal in the State. He was a member of the Hofstadter Committee which investigated the affairs of New York City in 1932, and in 1935, he served on the Ways and Means Committee, the Public Relief and Welfare Committee, Judiciary Committee, and the Committee on the Affairs of the City of New York. His military activities consisted of service with the 71st Regiment of the New York National Guard in the Spanish-American War, and with the United States Army in the World War.

DALZIEL, JAMES HENRY DALZIEL, FIRST BARON. English publisher, died near Brighton, July 15, 1935. Born Apr. 24, 1868, he was educated at King's College, London. Beginning his journalistic career at the age of 16, he became London correspondent for the *Glasgow Times* in 1889. Three years later he was offered the candidacy for Kirkcaldy Burghs, which he accepted, and on his election as Liberal member, represented that constituency up to 1921. During the World War he was chairman of a committee that had charge of German prisoners of war. In the meantime (1917), he had acquired the *Pall Mall Gazette*, reputedly as an organ for Lloyd George, and after the War, inaugurated the *Sunday Evening Telegram*. As well as publishing the *Era* and the *Country World*, he was chairman and managing director of United Newspapers, Ltd. Knighted in 1908, he became a member of the Privy Council in 1912, and was raised to the barony in 1921. Lord Dalziel retired from active participation in journalism in December, 1922. He was a life governor of St. Georges Hospital and London Hospital.

DAMASCHKE, ADOLF WILHELM FERDINAND. German economist, died July 31, 1935, in Berlin, where he was born, Nov. 24, 1865. He received his education at the Teachers' Training School in Berlin, and became a teacher in public schools. His interest in social reform soon led him to give up his profession to devote his time to social problems. In 1892 he became editor of *Frei-Land* and in 1896, of the *Bodenreform*. In 1904 he served in the same capacity with the *Jahrbuch der Bodenreform*. A member of the Berlin seminary for public school teachers, he was appointed permanent counselor of the section dealing with home-lands in the Reich Ministry for public works. He was elected president of the league of German land owner reformers, which organization was built on his ideas to create new homes for the lower classes. In 1931 he was named Germany's candidate for the Nobel Peace Prize. With Naumann he helped found the National Socialist League for Land Reform. His publications include: *Die Bodenreform* (1923); *Ein Besuch in Bulgarien* (1923); *Zeitenwende* (1925); *Bibel und Bodenreform* (1929); *Geschichte der Nationalökonomie* (1929); *Völkische Redekunst* (1930); *Die Arbeitslosigkeit und ihre Überwindung* (1931), and *Bodenreform und Landwirtschaft* (1933).

DANA, CHARLES LOOMIS. American neurologist, died at Harmon-on-Hudson, N. Y., Dec. 12, 1935. Born at Woodstock, Vt., Mar. 25, 1852, he received the M.D. degree from Columbia University in 1877. For eight years after 1880, he was professor of physiology at the New York

Woman's Medical College. Also, in 1884, he occupied the chair of nervous diseases at the Medical School of Dartmouth College. After serving as professor of nervous and mental diseases during 1886-98 at the New York Post Graduate Medical School, he became, in 1902, on the formation of the Medical College of Cornell University, professor of nervous diseases. He retired from the chair in 1933. A visiting physician to Bellevue Hospital, he held the office of president in the American Academy of Medicine, the New York Academy of Medicine, and the New York Psychiatry Society. Dr. Dana, who was called the dean of American neurologists, was principally interested in public health, neurology, psychiatry, physiology, psychology, archaeology, the application of pathology to neuropathology, pathology of paralysis agitans, of combined sclerosis and of douloureux, cerebral localization of cutaneous sensations, alcoholism, and alcoholic meningitis. He wrote *Textbook of Nervous Diseases* (1892, 7th ed. 1908, 10th ed., 1929); *Peaks of Medical History* (1926), and was editor of the *Journal of Comparative Medicine* and associate editor of the *Medical Record*.

DANA, EDWARD SALISBURY, died June 16, 1935.

DANIELS, FRANK. American actor, died at West Palm Beach, Fla., Jan. 12, 1935. Born in Dayton, Ohio, in 1860, he received his education in the public schools of Boston. His first appearance on the stage was as the Sheriff in *Chimes of Normandy* at Chelsea, Mass., in 1879. After appearing at the Gayety Theatre in Boston, he went on tour for three years with the play, *An Electric Doll*, which was first produced in Manchester, England, in 1883 as *The Electric Spark*. Daniels made his first appearance on the English stage in the latter. Returning to New York the following year, he played the part of the Old Sport in *A Rag Baby*, with which he also toured for three years. In the latter rôle he established himself as an outstanding figure in comic opera. In 1887 he played the part of Packingham Giltedge in *Little Puck*, a play in which he appeared almost continuously for seven years. After appearing in *The Wizard of the Nile* at the Casino Theatre, New York in 1895, he played in *The Idol's Eye*, *The Amerc*, *Miss Simplicity*, *The Office Boy*, *Sergeant Brue*, *The Tattooed Man* and many other successful productions. His final appearance on the stage was in the rôle of Edward Pilfer in *Without the Law* in 1912 after which he retired from the theatre.

DAVID, FERNAND. French statesman, died in Paris, Jan. 17, 1935. He was born at Annemasse, Haute-Savoie, Oct. 18, 1869. Entering politics he was elected a deputy in 1898, becoming, in 1902, secretary of the Chamber of Deputies. He held this post for three years. In 1920 he became senator for Haute-Savoie. A member of the Left-Democratic group, he was Minister of Commerce in the Poincaré cabinet, 1912, Minister of Public Works in the Doumergue cabinet, 1913-14, and held the portfolio of Agriculture through the ministries of Briand, 1913; Viviani, 1914-15; Ribot, 1917; Painlevé, 1917, and Tardieu, 1930. In 1925 he was appointed General Commissioner of the International Exhibition of Decorative Arts. M. David was president of the National Office of Tourism; and of the Société Nationale d'Horticulture de France and Société Scientifique d'Hygiène Alimentaire, and was a member of the Académie d'Agriculture, and an advocate at the Paris Court of Appeals.

DAVIES, SIR WILLIAM. Welsh editor, died at Cardiff, Wales, Mar. 17, 1935. Born at Talley, Carmarthenshire, Wales, Oct. 7, 1863, he began his career as a journalist on the *Llanelli Guardian*. After serving as a reporter on the *Western Mail* in 1888, he became successively, editor of the *Evening Express*, and assistant editor and acting editor of the *Western Mail*. In 1901 he became editor-in-chief of that paper and held the post until his retirement in 1931. Also, during 1901-31, he edited the *Evening Express* and the *Weekly Mail*. A Fellow of the Institute of Journalists and former chairman of its South Wales Branch, Sir William was president of the Cardiff Cymrodorion Society (1919-20) and vice president of the World's Press Parliament which was held in St. Louis in 1904. Also, he served as one of the two vice presidents for Great Britain at the Press Congress of the World. In the World War he was a member of the Welsh Army Corps Committee. Governor of the University College of South Wales and Monmouthshire, he was also Justice of the Peace for Cardiff. He was knighted in 1921.

DAVIS, KATHARINE BEMENT, died Dec. 10, 1935.

DAY, CLARENCE. American author, died Dec. 28, 1935, in New York City where he was born in 1874. He received the A.B. degree from Yale University in 1896 and embarked on a financial career. He retired from that field to join the Navy, but, on being stricken with arthritis and facing a life of incapacity, he began to write. He was connected with the book department of the Metropolitan Magazine for a time, and his first literary effort was a series of magazine articles assembled into book form under the title *This Simian World* which was published in 1920. Then followed *The Crow's Nest* (1921); *Thoughts Without Words* (1928); *God and My Father* (1932); *In the Green Mountain Country* (1934), and in the summer of 1935, *Life With Father*, which proved to be his best seller. In less than six months, more than 114,000 copies of the work were sold.

DAY, HOLMAN FRANCIS. American author, died at Mill Valley, Calif., Feb. 19, 1935. Born at Vassalboro, Me., Nov. 6, 1865, he received the A.B. degree from Colby College in 1887. Two years after his graduation he became associated with the Union Publishing Company of Bangor, Me., as managing editor of their publications. Subsequently he entered the journalistic field, and was editor and proprietor of the *Dexter (Me.) Gazette*, later becoming a special writer for the *Lewiston (Me.) Journal*. Also, he served as Maine representative for the *Boston Herald*, and as managing editor of the *Lewiston Daily Sun*. From 1901 to 1904 he served on the staff of Gov. John F. Hill of Maine as military secretary with the rank of major. His writings include: *Up in Maine* (verse, 1900); *Pine Tree Ballads* (1902); *Kin O'Kandn* (1904); *Squire Phin* (1905, a novel which was later dramatized as *The Circus Man* and produced in Chicago in 1909); *Rainy Day Railroad War* (1906, 1913); *The Eagle Badge* (1908); *King Spruce* (1908); *The Ramrodders* (1910); *The Skipper and the Skipped* (1911); *The Red Lane A Romance of the Border* (1912); *The Landloper* (1915); *Along Came Ruth* (a play produced in New York in 1914); *Blow the Man Down* (1916); *Where Your Treasure Is* (1917); *Kavanaugh's Larc* (1917); *The Rider of the King Log* (1919); *When Egypt Went Broke* (1920); *All Wool Morrison* (1921); *Joan of Arc of the North Woods* (1922); *The Loving Are the Daring* (1923); *Leadbetter's Luck* (1923); *Clothes Make the Pirate* (1925); *John Lang* (1926); *When the Fight Begins* (1926); *Starwagons* (1928), and *Ships of Joy* (1932). Also he wrote motion picture scenarios.

DE KAY, CHARLES, died May 23, 1935.

DELANAY, SEIDEN PEABODY. American Roman Catholic clergyman, died in New York City, July 5, 1935. Born in Fond du Lac, Wis., June 24, 1874, he received the A.B. degree from Harvard University in 1896, and then studied at the Western Theological Seminary in Chicago. Ordained a priest of the Protestant Episcopal Church in 1899, his first post was that of curate in St. Paul's Cathedral in Fond du Lac. His next charge was at St. John's Church, Roxbury, Mass., and in 1900 he was appointed vicar of St. Stephen's Church in Menasha, Wis. After serving as rector of Grace Church, Appleton, Wis., during 1902-07, he became dean of All Saints Cathedral in Milwaukee. In 1915 he was transferred to New York as associate rector of the Church of Saint Mary the Virgin. He remained there until 1930, having, in the meantime (1929), become rector. In June, 1930, he entered the Roman Catholic Church and in September of the same year began study at Beda College in Rome. Ordained a priest of the Roman Catholic Church in Rome in 1934, he was made temporary chaplain at the Convent of the Religious of Jesus and Mary at Highland Mills, N. Y. He held the post up to February, 1935, when he retired because of illness. Father Delaney's publications include *Difficulties of Faith* (1906), *The Ideal of Christian Worship* (1909), *The Value of Confession* (1913), *The Religion of the Prayer Book* (1919), *Christian Practice* (1920); *The Parish Priest* (1926), and *Why Rome* (1930). Also, he translated Louis De Launay's *A Modern Pica for Christianity* in 1927.

DELFENBAUGH, FREDERICK SAMUEL, died Jan. 29, 1935.

DERBY, BISHOP OF (RT. REV. EDMUND COURTENAY PIARCE). English prelate, died at Derby, Oct. 13, 1935. Born in London, Dec. 17, 1870, he attended Christ's Hospital (Blue Coat School) in London where he won a scholarship to Corpus Christi College, Cambridge. He received the M.A. degree from the latter in 1896. Ordained to the Anglican Church, he became in 1899 assistant curate at St. James' Church in Muswell Hill, and from 1900 to 1906 was vicar of St. Benedict's, Cambridge. Also, during 1900-10, he held a classical lectureship at the University of Cambridge. Becoming dean of Corpus Christi College in 1901, he served in that capacity until 1914 when he became Master of the College. During his incumbency of the latter post (1914-27), he served also as vice chancellor of the University (1921-24). In 1927 he was elevated to the bishopric as Bishop of Derby. Active in the municipal affairs of Cambridge during his long term of residence there, he served successively as town councillor (1915); mayor (1917); county councillor (1919); county alderman (1923), chairman of the Cambridgeshire County Council (1927), and Cathedrals Commissioner (1931). Also, Bishop Derby was examining chaplain to the Bishop of Worcester and assistant secretary for examinations to the local Examinations and Lectures Syndicates (1910-14).

DESERVIERE, PABLO. Cuban statesman, died Dec. 20, 1935, in Havana, where he was born in 1854. After attending Columbia University in New York, he returned to Cuba to practice law. Appointed American Military Governor in 1899, he became, the next year, professor of civil law at the University of Havana. In 1911 he was president of the Exposition of Agriculture, Industry, Art, and Labor, and in 1913 he became a member of the diplomatic corps. Following his appointment as Envoy Extraordinary and Minister Plenipotentiary to Washington, he returned to Cuba and became Secretary of State in 1914. He served in that capacity until 1919. His last post was that of president of the Council of State, to which he was appointed by President Mendieta in November, 1935.

DEUTSCH, BERNARD S. American public official, died in New York City, Nov. 21, 1935. Born in Baltimore, Md., Sept. 25, 1884, he received the LL.B. degree from the New York Law School in 1904. From his admittance to the New York bar the following year, he continued to practice in the New York courts. His activity in the bar associations of the city brought him to the attention of Gov. Alfred E. Smith who appointed him to the New York State Municipal Court Commission in 1923. With Charles Evans Hughes, Henry W. Taft, and Samuel Seabury, he served on the ambulance-chasing investigation instigated by the Appellate Division of the Supreme Court in 1930. This led to the disbarment of several lawyers. In recognition of his services to the law, Mr. Deutsch was chosen in 1932 an independent candidate for Justice of the Supreme Court by all the bar associations in New York City. Although defeated he received 300,000 votes. In 1933 he was selected as candidate for President of the Board of Aldermen, with Fiorello H. LaGuardia for mayor on the Fusion ticket. Deutsch took office in January, 1934, and during his incumbency headed investigations of municipal affairs, sought a reform of the city school system, and served as mediator in many labor disputes. A leader in Jewish affairs, he attended the World Jewish Conference in Geneva, and helped form committees to investigate oppression of Jews in Russia and Germany. During 1927-30 he was president of the Bronx County Bar Association and served as chairman of its board of directors. A member of the executive committee of the New York State Bar Association, he was treasurer of the New York Conference on Legal Education and a member of the International Congress of Comparative Law and the American Association of International Law.

DE VRIES, HUGO, died May 21, 1935.

D'HESTROY, BARON EDMOND DE GAIFFIER. Belgian diplomat, died in Paris, France, July 20, 1935. Born May 30, 1866, he began his diplomatic career with a minor secretaryship and continued to be assigned to increasingly important posts, until 1904 when he was appointed Minister to Peking (Peiping). Eight years later he was recalled to Belgium to become a member of the Ministry of Foreign Affairs, in the capacity of Director of Political Affairs. As such, he informed Germany that his country would not allow the German armies to pass through Belgian territory en route to France. Appointed to the Belgian Legation in Paris in 1917, he was named Ambassador two years later when the legation became an embassy. He was called the dean of the foreign diplomatic corps in Paris, and figured prominently in all Belgian political affairs in the French capital after the World War. His last activity, in July, concerned Belgian recognition of Soviet Russia. Baron D'Hestroy was the recipient of the Grand Cross of the Legion of Honor.

DIELMAN, FREDERICK, died Aug. 15, 1935.

DINGWALL, ADAM. American publisher, died in New York City, Aug. 5, 1935. Born in Aberdeen, Scotland, in 1861, he migrated to the United States as a youth, settled in Kansas City, then moved to Chicago, and finally came to New York about 1910, when he became connected with the D. Appleton Company, and later with the Funk and Wagnalls Company. He was an able subscription book salesman, and for several years served as manager, secretary, and treasurer of the Current Literature Publishing Company Associated with William Wise and Company, he was general manager of *Current Opinion*, but in 1924 he founded the firm of Dingwall-Rock, Ltd., importers and publishers of the classics. He came into prominence in 1927 when he imported the Madrus-Mather version of *The Arabian Nights* which was subjected to censorship.

DINWIDDIE, ALBERT BLEDSOE. American educator, died in New Orleans, La., Nov. 21, 1935. Born in Lexington, Ky., Apr. 3, 1871, he received the Ph.D. degree from the University of Virginia in 1892, and during 1902-03 attended the University of Göttingen. He began his teaching career at the University of Virginia where, during 1888-91, he was an instructor. In 1891 he became principal of Greenwood (Va.) Academy, remaining there until 1893. Two years later he became first assistant at University School, Richmond, Va., and in 1896 was called to Southwestern Presbyterian University as professor of mathematics. He held the latter chair until 1906 when he began his long association with Tulane University. He served successively as assistant professor of applied mathematics and astronomy (1906-08), associate professor (1908-10), and full professor from 1910. During the World War he was director of war training at the University, and from 1910 to 1918 was dean of the College of Arts and Sciences. He relinquished this post in 1918 to become president of Tulane. During his term of office, a programme of expansion was formulated, and in 1920 he was successful in raising \$2,750,000 for the endowment fund.

DINWIDDIE, EDWIN COURTLAND, died May 5, 1935.

DIXEY, FREDERICK AUGUSTUS. English entomologist, died Jan. 16, 1935 in London, where he was born, Dec. 9, 1885. He received his education at Wadham College, Oxford, and at University College, London. In 1880 he became demonstrator of physiology at University College and served there until 1883. In the same year he went over to Oxford University where he remained until 1891. A former

curator of the Hope Collections at Oxford and former president of the Entomological Society of London and the Zoological Section of the British Association, he was also vice chairman of the Association of British Zoologists. Dr. Dixey's principal interest was the study of butterflies. Besides contributing to the journals of the Royal, Entomological, and Zoological Societies, he wrote *Necessity of Pain* (1888) and *Epidemic Influenza* (1892).

DODGE, WILLIAM DE LEFTWICHT. American painter, died in New York City, Mar. 25, 1935. Born at Liberty, Va., Mar. 9, 1867, he studied in Paris and Munich and entered first place in the examination for the Ecole des Beaux Arts. A former professor at Cooper Union and the Art Students League, Mr. Dodge was chief of color at the Sesquicentennial Exposition in Philadelphia in 1926. His principal works include decorations of the Café de l'Opéra, Paris, the Folies Bergères Theatre, murals for the Panama-Pacific International Exposition, and for the Flag Room of the capitol at Albany, N. Y., mosaics for the Hall of Records, New York, "Signing of the Peace" at Versailles, and "Taking of Fort de Vaux." Also, he did the Dome of the Administration Building at the Chicago Exposition, decorated the Empire Theatre in New York, the Waldorf-Astoria Hotel, the Academy of Music, Brooklyn, N. Y., and a panel for the Orlando (Fla.) County Court Mr. Dodge won many art awards, among which were: the Prix d'Atelier in Concours d'Atelier Gérôme, gold medal from Prize Fund Exhibition, 1887; medal at the Paris Salon, 1888, medal at the Chicago Exposition, 1893.

DOHENY, EDWARD LAURENCE, died Sept. 8, 1935

DOLE, NATHAN HASKELL, died May 9, 1935

DOMINIAN, LEON. American diplomat, died in Montevideo, Uruguay, S. A., July 25, 1935. Born in Constantinople, Turkey, Apr. 13, 1880, he received the B.A. degree from Robert College in Constantinople in 1898 and the following two years took special courses in geography and geology at the University of Liège, Belgium. After traveling in Turkey, he became field assistant to the U.S. Geological Survey in 1903 and the following year, instructor at the New Mexico School of Mines. During 1905-07 he was engaged in exploration and travel in the Southwest and Mexico and from 1907 to 1912 devoted his time to writing and research in New York City. He began association with the American Geographical Society in 1912 as geographer and editorial writer. In 1918 he conducted special investigations on boundary problems for the Department of State and for the next two years was active in the Honduras-Guatemala boundary mediation. In February, 1919, he was assigned to the American Peace Commission in Paris, France, and in August of the same year was appointed a special assistant in the Department of State. He was appointed lecturer in Georgetown University's School of Foreign Service in 1921, and six months later was named consul at Rome. In the latter capacity he was detailed for economic duty in Italy. Six years after his appointment as foreign service officer, class four, in July, 1924, he became consul general at Stuttgart, Germany. In 1934 he was transferred to Montevideo as first secretary to the United States Legation there. A delegate to many geological and scientific congresses, he held membership in the Association of American Geographers, American Oriental Society, and the American Association of Political and Social Science. Dominian, who became a naturalized citizen of the United States in 1913, was the author of *The Frontiers of Language and Nationality in Europe* (1917).

DONNELLY, FREDERICK WILLIAM. American public official, died at Summit, N. J., Sept. 25, 1935. Born in Trenton, N. J., Oct. 14, 1866, he received his education at the New Jersey State Model School in Trenton, and at the Episcopal College in Burlington, N. J. He began his career as a traveling salesman at the age of 17 and served during 1892-1907 as manager of his father's store in Trenton. From the latter date he was president of the Frederick W. Donnelly Company. Meanwhile, he entered politics and in 1909 was appointed to the Trenton Harbor Board. In 1911 he was elected first mayor of Trenton under the commission form of government. Reelected to serve throughout 1935, he resigned his office in 1932 after 21 years of service. A former chairman of the Sinking Fund Commission, he was Democratic candidate for the United States Senate from New Jersey in 1924. Mr. Donnelly held the office of president in the New Jersey Ship Canal Commission, New Jersey Rivers and Harbors Congress, the Trenton-Philadelphia-New York Waterways Association, the Mercer County Tuberculosis and Health League, and the League of New Jersey Municipalities.

DORSET, MARION. American chemist, died in Washington, D. C., July 14, 1935. Born at Columbia, Tenn., Dec. 14, 1872, he received the B.S. degree from the University of Tennessee in 1893 and the M.D. degree from Columbian (now George Washington) University in 1896. He began his association with the U.S. Department of Agriculture in 1894 as an assistant in the biochemical division, becoming, in 1901, assistant chief, and in 1904, chief of the division. During 1897-98 he was a demonstrator in bacteriology and pathology at George Washington University. Dr. Dorset was a co-discoverer of hog cholera serum and his work dealt principally with the etiology and prevention of hog cholera, chemistry, and biology of *Bacillus tuberculosis*, and

the chemistry and bacteriology of meats. A fellow of the American Association for the Advancement of Science, he was a member of the American Public Health Association, Society of American Bacteriologists, American Chemical Society, and the Czechoslovakian Academy of Agriculture.

DOUGLASS, LUCILLE SINCLAIR. American painter, died at Andover, Mass., Sept. 26, 1935. Born at Tuskegee, Ala., she received the A.B. degree from the Woman's College, Tuskegee, Ala., and during 1909-14 studied with Lucien Simon and René Menard in Paris. She then accompanied Alexander Robinson on field trips in Europe and North Africa. In 1921 she became a member of the editorial staff of the Shanghai (China) *Sunday Times*, where she remained until 1924. From the latter date she devoted her time to out-door painting and etching, specializing in scenes of the Far East. She made etchings of the ruins of temples at Angkor in the jungles of Cambodia at the request of the French Colonial Government for their exhibition in 1927. Also, from 1921 she lectured on the Far East and from 1925 to 1932 was active illustrating books on China and Angkor written by Florence Ayscough and Helen Churchill Candor. Her work is exhibited in the Metropolitan Museum and the Public Library in New York City, the Library of Congress and the Corcoran Art Gallery in Washington, D. C., the Rhode Island School of Design in Providence, the Museum of Fine Arts in Minneapolis, the Addison Gallery of Art at Andover, Mass., the Canadian National Academy in Montreal, the British Museum in London, the Musée Guimet in Paris, L'Ecole Française d'Extrême Orient at Hanoi, and in private collections in America, Europe, and China.

DRIFYUS, ALFRED, died July 12, 1935.

DUNAN, WILLIAM, died Mar. 7, 1935.

DUDLEY, HAROLD WARD. English biochemist, died Oct. 3, 1935. Born in Derby, Oct. 30, 1887, he attended Truro College and received the M.Sc. degree from the University of Leeds in 1910 and the Ph.D. degree from the University of Berlin two years later. In 1912 he came to New York as an assistant at the Herter Laboratory where he came under the influence of H. D. Dakin. The collaboration of these two men led to the discovery of the enzyme glyoxalase. He returned to England in 1914 and became lecturer in biochemistry at the University of Leeds. In the World War he served during 1915-18 as a lieutenant-major with the Royal Engineers. From 1919 he was biochemist at the Medical Research Council's Laboratories at Hampstead. Also, from 1924 to 1930, he was joint editor of the *Biochemical Journal*. Dudley was made an officer of the Order of the British Empire in 1919 and elected a fellow of the Royal Society in 1930.

DUFF GORDON, LUCY, LADY. English stylist in women's wear, died in London, Apr. 21, 1935. She was born in Canada in 1864, a sister of Elinor Glyn, the novelist. In 1893 she entered the dressmaking business in London and the following year adopted the trade name of Lucile. In March, 1900, she married Sir Cosmos Edmund Duff Gordon, and three years later sold her business to Lucile, Ltd. Through this transaction she acquired a large number of shares and in 1910 opened a shop in New York City. Of this she held the title of president. A great success at first, the establishment was raided the following year by customs officials who charged conspiracy to defraud the United States Government of customs duties. The New York firm went into bankruptcy in 1922 and two years later, the London firm failed. Lady Duff Gordon was regarded as one of the world's outstanding dress designers, but was an extremely poor business woman. She brought freedom and grace back to woman's clothing after the Victorian era, and was reputed to have effected such styles as the split skirt, and to make use of mannequins in fashion shows. She and her husband were among those rescued from the ill-fated White Star Liner *Titanic* in 1912. Lady Duff Gordon published her reminiscences in 1932 under the title *Discretions and Indiscretions*.

DUISBERG, CARL, died Mar. 19, 1935.

DUKAS, PAUL, died May 17, 1935.

DUNDONALD, DOUGLAS MACKINNON BAILLIE HAMILTON COCHRANE, TWILFTH EARL OF. Scottish soldier, died at Wimbledon, Apr. 12, 1935. Born Oct. 29, 1852, he received his education at Eton. In 1870 he entered the Second Life Guards and from 1884 to 1885, when he succeeded to the title on the death of his father, he was a member of the Nile Expedition and participated in Stewart's march across the desert for relief at Khartoum. He was present at the battles of Abu Klea and Goubat and commanded a transport of desert troops on the march to Metemeh. From 1895 to 1899 he commanded the Second Life Guards with the rank of colonel. After commanding the mounted troops of the South Natal Field Force at Colenso in the Boer War in 1899, he was active in the fighting at Tugela River with the second cavalry brigade and with them entered Ladysmith in February, 1900. In the same year he was promoted to the rank of major general for distinguished service. After commanding the Canadian Militia during 1902-04, he returned to England. Shortly after his promotion to the rank of lieutenant general in 1907, he retired. During the World War he served as chairman of the Admiralty Committee on Smoke Screens. In South Africa he formed the

first mobile machine-gun company used in that war. A special ambassador to the Peruvian Centenary in 1921, he published his memoirs in 1926 under the title, *My Army Life*.

DU PONT, ALFRED IRANKÉ. American financier, died in Jacksonville, Fla., Apr. 29, 1935. Born in Wilmington, Del., in 1865, he received his education at the Massachusetts Institute of Technology. With his cousins, he took over the E. I. du Pont de Nemours powder company in 1902 and immediately began to reorganize it. By the end of 10 years, during which time he served as vice president and general manager, the company's assets had grown from \$15,000,000 to \$82,000,000. Also, during his term of office, prismatic powder for use with large-calibre artillery was developed and the machine that made black powder was designed. Although he retired from active participation in the direction of the company in 1916, he continued to be the largest individual stockholder in the company. In the hope that international commerce might advance through trade exhibitions, he purchased the Grand Central Palace in New York City for exhibition purposes in 1918. Eight years later he removed to Florida and bought up enough land to become known as one of the largest land owners in Florida. Also, he became chairman of the Board of Directors of the Florida National Bank in Jacksonville. A keen advocate of the establishment of old-age pensions, he set up a system by which 1000 persons in Delaware received monthly pensions through his generosity, when such a bill failed to be passed in the Delaware Legislature in 1929. His philanthropies included the development of radium, at great expense, for use in the treatment of cancer.

EDISON, THOMAS ALVA, JR. American engineer, son of the distinguished American inventor, Thomas A. Edison, died in Springfield, Mass., Aug. 25, 1935. Born at Menlo Park, N. J., in 1876, he attended St. Paul's School in Concord, N. H., and then engaged in experimental work at his own laboratory in Burlington, N. J. His specialty was the improvement of internal combustion engines and he obtained patents for various devices he had perfected toward the improvement of this type engine. In 1918 he joined his father's company at Orange, N. J., and later became head of the research engineering department, a post he was holding at the time of his death.

EPSON, JOHN JOY. American banker and civic leader, died in Washington, D. C., July 15, 1935. Born at Jefferson, Ohio, May 17, 1846, he received the LL.B. degree from Columbian (now George Washington) University in 1868 and was admitted to the bar the following year. From 1863 to 1875 he was a clerk in the Treasury Department, and for the next six years was a patent attorney. He organized the Equitable Building Association in 1879, serving from that date to 1898 as secretary, and from 1898 up to the time of his death as president. Treasurer of the executive committee of the American Red Cross during the Spanish-American War, he was elected president of the Washington Loan and Trust Company in 1894 and during his term of office (1894-1917), the bank became known as one of the foremost institutions of its kind in the country. In 1900 he began his long association with the National Geographic Society, serving as treasurer since that date, and also, as a trustee. Mr. Edison held the office of president of the National Homoeopathic Hospital (1889-95), Civil Service Reform Association of the District of Columbia (1895-1907), and of the Washington Board of Trade (1900-01). He was chairman of the Board of Public Welfare for Washington during 1897-1929, and held the same post on the Capital Issue Committee of the District of Columbia during the World War.

EIDLITZ, ROBERT JAMES. American contractor, died May 17, 1935, in New York City where he was born, Mar. 25, 1864. On his graduation from Cornell University in 1885, he went to Berlin to study architecture. On the death of his brother in 1928 he became head of the building firm of Marc Eidlitz and Son, Inc. Among the more important buildings which this firm erected were the New York Stock Exchange, New York Clearing House, Western Union Building, Rockefeller Institute, American Telephone and Telegraph Building, the Harkness Memorial at Yale University, the Presbyterian Medical Centre, and the library of Columbia University. Keenly interested in numismatics, Eidlitz was awarded the American Numismatic Society's Huntington Medal in January, 1928, for his works, *Medals and Medallions Relating to Architects* (1927), and *Medallion Portraits of James Watts and Matthew Boulton* (1928).

EISEBERG, HARRY BELLEVILLE. American surgeon, died in New York City, Aug. 10, 1935. Born at Hoboken, N. J., Jan. 15, 1892, he received the M.D. degree from New York University and Bellevue Hospital Medical College in 1913. An instructor in anatomy at that institution from 1915 to 1918, he served during the next five years as surgeon there. From 1923 he was lecturer and assistant in charge of the department of experimental surgery. At the time of his death he was a member of the medical board of Harlem Hospital and consulting surgeon to Riverside, Lutheran, and Roosevelt Hospitals, the United States Marine Hospital on Ellis Island, and the North Hudson Hospital at Weehawken, N. J. Dr. Eisberg was an authority on intestinal obstruction and abdominal wounds and injury. A fellow of the American College of Surgeons and the New

York Academy of Medicine, he was a member of the American Medical Association and the Society of Experimental Biology.

ELLIOTT, CHARLES BURKE. American jurist, died in Minneapolis, Minn., Sept. 18, 1935. Born in Morgan County, Ohio, Jan. 6, 1861, he received the LL.B. degree from the State University of Iowa in 1881, and the Ph.D. degree from the University of Minnesota in 1888. After serving as legal writer for several publications in St. Louis during 1882-83, he removed to Minneapolis where he practiced law. In 1890 he was appointed judge of the Municipal Court, and three years later he sat on the bench of the District Court, Fourth District. After serving as associate justice of the Supreme Court of Minnesota from 1904 to 1909, he went to the Philippine Islands in the latter year to serve in the same capacity. From 1910 to 1912 he was a member of the Philippine Commission, also serving as secretary of the Department of Commerce and Police. Also, during 1890-99 he occupied the chair of corporation and international law at the University of Minnesota, and during 1911-12, was professorial-lecturer on constitutional law at the University of the Philippines. President of the Philippine Carnival Association in 1910 and of the Philippine Industrial Exposition in 1911, he held the same office in the American branch of the International Law Association. His publications include: *The United States and the North-eastern Fisheries* (1887); *The Law of Public Corporations* (1898, 2d ed., 1910); *The Law of Private Corporations* (1900, 5th ed., 1923); *Minnesota Practice* (1900, new ed., 2 vols., 1923); *The Law of Insurance* (1902); *The Philippines* (2 vols., 1917).

ELSENHEIMER, NICHOLAS J. German-American composer, died at Limburg, Germany, July 12, 1935. Born at Wiesbaden, Germany, June 17, 1866, he attended Heidelberg University, studying music with his father, and theory with G. Jakobsthal in Strassburg. He came to the United States in 1890 when he joined the Cincinnati College of Music as professor of piano, theory, and musical literature. He served in this capacity up to 1906. He came to New York City the following year, where, from that date, he was dean of the Granberry Piano School and choirmaster of St. Ignatius Church. His compositions include: *Die Weshe der Kunste* (a cantata for mixed voices and orchestra which was awarded the North American Sangerbund prize in 1899); *The Angels' Lullaby* (for vocal quartet, string quartet, and orchestra); *Belshazzar* (a dramatic ballad for tenor or soprano); *Humoresque* (for string orchestra), and *Eventide* (a chorus for female voices with string accompaniment).

EMERTON, EPHRAIM. American historian, died at Cambridge, Mass., Mar. 3, 1935. Born in Salem, Mass., Feb. 18, 1851, he received the A.B. degree from Harvard University in 1871, and the Ph.D. degree from the University of Leipzig in 1876. On his return to the United States in the same year, he became instructor in history and German at Harvard University and from 1878 to 1882 was instructor in history. In the latter year he took up the Winn professorship of ecclesiastical history, and held the chair until his retirement in 1918 as professor emeritus. With Dieterweg, H. B. Adams, and others, he wrote *Methods of Teaching History* (1883). His works dealing with the Middle Ages and the Early Reformation include: *An Introduction to the Study of the Middle Ages, 375-814* (1888); *Medieval Europe, 814-1300* (1894); and "Desiderius Erasmus" in *The Heroes of the Reformation* (1899). His later works include: *Unitarian Thought* (1911); *Beginnings of Modern Europe* (1917); *The Defensor Pacis of Marsiglio of Padua* (1920); *Learning and Living* (essays, 1921); *Humanism and Tyranny—Studies in the Italian Trecento* (1925). He translated the correspondence of Pope Gregory VII in 1931, and that of St. Boniface, three years later. A fellow of the American Academy of Arts and Sciences, he was a former president of the American Society of Church History (1920-21); and the Cambridge Historical Society (1921-27). Also, he was a corresponding member of the Institut Genévois.

EWING, CHARLES H. American railroad official, died at Melrose Park, Pa., Dec. 8, 1935. Born in Chester County, Pa., May 28, 1866, he was privately tutored in civil engineering and began his career with the Philadelphia and Reading Railway in 1883 as assistant engineer and supervisor. In 1892 he went over to the Central New England Railway (later the New York, New Haven, and Hartford) as division engineer, later becoming chief engineer. On his return to the Philadelphia and Reading in 1902, he served as division engineer and engineer in charge of maintenance of way. After being superintendent of the Atlantic City Railroad during 1910-12, he returned to the Philadelphia and Reading in 1913 as general superintendent. Three years later he became general manager, and the following year, 1917, vice president. When the Federal government took over control of the railroads in 1918, he was named Federal manager of the Philadelphia and Reading and the Central Railroad of New Jersey. In 1920 he again became vice president of the Philadelphia and Reading Railway, and on its reorganization as the Reading Company in 1924, he retained the office. He was elected president of the latter company in April, 1932, and on the acquisition of the Central Rail-

road of New Jersey by the Reading Company, became its president in June, 1933.

EWING, SIR (JAMES) ALFRED, died Jan. 7, 1935.

FARQUHARSON, JOSEPH. Scottish painter, died at Finzean, Aberdeenshire, Scotland, Apr. 15, 1935. Born in Edinburgh, May 4, 1846, he came under the tutelage of Peter Graham, the Scottish landscape artist, and attended the Royal Scottish Academy. He exhibited regularly at the Royal Academy in London from 1873. In 1880 he began study with Carolus Duran in Paris and in 1887, the Fine Art Society of London displayed 70 of his paintings at their exhibition. Elected to the Royal Academy in 1915, he was one of the five senior academicians. Mr. Farquharson, who was regarded as one of the greatest of modern landscape painters, is represented in the Tate Gallery, the art galleries of Manchester, Liverpool, Leeds, and other English cities, and in the Royal Institute of Painters in Oil. His "Joyless Winter's Day" (now in the Tate Gallery), was the most popular of his paintings.

FAWCETT, THE RT. REV. M. EDWARD. American bishop, died in Quincy, Ill., Sept. 18, 1935. Born at New Hartford, Iowa, Nov. 1, 1865, he received the A.B. degree from Upper Iowa University in 1886 and the Ph.D. degree from that institution in 1893. He then studied divinity at the Garrett Biblical Institute and entered the ministry of the Methodist Church. During 1894-96 he was pastor of the Grace Methodist Church in Quincy, Ill. In the latter year he resigned his pastorate to enter the Protestant Episcopal Church. He became deacon and priest in 1897 and took charge of the Church of the Redeemer in Elgin, Ill. From 1901 to 1904 he was rector of St. Bartholomew's Church in Chicago. He was consecrated third Bishop of Quincy in January, 1904, having been elected to the post in May, 1903. From 1917 he was chaplain of the Fifth Illinois Infantry with the rank of captain, and divisional chaplain of the 33d division of the United States Army. In 1919 he was president of the Quincy Chamber of Commerce and vice president of the Illinois State Chamber of Commerce.

FISHER, WALTER LOWRIE. American lawyer, died at Hubbard Woods, Ill., Nov. 9, 1935. Born in Wheeling, Va. (now W. Va.), July 4, 1862, he was graduated from Hanover College, Indiana, in 1883. On his admittance to the bar five years later, he practiced law until 1911 and after 1913 in Chicago. He was a member of the law firm of Fisher, Boyden, Bell, Boyd, and Marshall. During 1888-89 he was special assessment attorney for Chicago, and during 1906-11 and from 1914, special traction counsel. In 1911 he was appointed Minister of the Interior in President Taft's cabinet, and served in that capacity until 1913 when he returned to private practice. Mr. Fisher held the office of president in the Municipal Voters' League (1906), Conservation League of America (1908-09), and that of vice president in the National Conservation Association (1910-11), and the National Municipal League. His publications include: *Address on Alaskan Problems* (1911) and *Alaskan Coal Problems* (1912).

FITZMAURICE, EDMOND GEORGE FITZMAURICE, FIRST BARON, OF LEIGH, died June 21, 1935.

FLETCHER, J. S. English novelist and historian, died at Dorking, Surrey, Jan. 30, 1935. Born at Halifax in Yorkshire in 1863, he received a private education. His journalistic career was begun with contributions on rural life to such newspapers as the *Leeds Mercury*, the *Star*, the *Morning Leader*, and the *Daily Mail*, under the pseudonym, *A Son of the Soil*. Subsequently he became a special correspondent for the *Leeds Mercury*, and in 1893 was made assistant leader-writer for that paper, serving until 1898. He covered the coronation ceremonies of Edward VII in 1902 for the *Yorkshire Post*. Always interested in the history of his country, his first book was a historical novel, *When Charles the First Was King*, issued in 1892. Then followed *The Wonderful Wapentake* (1894); *Where Highways Cross* (1895); *Mistress Spilfire* (1896); *Life in Arcadia* (1896); *God's Failures* (1897); *The Making of Matthias* (1897); *The Builders* (1897); *The Paths of the Prudent* (1899), and *From the Broad Acres* (1899). On his retirement from the journalistic field, he devoted himself exclusively to historical writings and fiction which include: *A Picturesque History of Yorkshire* (3 vols., 1899-1900); *The History of the St. Leger Stakes* (1902); *Lucian the Dreamer* (1903); *David March* (1904); *Grand Relations* (1904); *The Threshing-Floor* (1907); *Daniel Quayne* (1907); *A Book about Yorkshire* (1907); *Mothers in Israel* (1908); *The Enchanting North* (1908); *Memories of a Spectator* (1912); *The Town of Crooked Ways* (1912); *Perris of the Cherry Trees* (1913); *The Marriage Lines* (1914); *The Annexation Society* (1916); *The Making of Modern Yorkshire* (1918); *Memorials of a Yorkshire Parish* (1918); *The Cistercians in Yorkshire* (1919), and *The Reformation in Northern England* (1925). He published his first detective novel, *Scarhaven Keep*, in 1920. Then followed other detective novels, including *Exterior to the Evidence* (1920), *The Root of All Evil* (1921); *In the Mayor's Parlour* (1922); *The Burma Ruby* (1923); *The Kang-He Vase* (1924); *False Scent* (1924); *The Mill of Many Windows* (1925); *The Stolen Budget* (1926); *The Green Rope* (1927); *The Matheson Formula* (1930); *Murder at Wrides Park* (1931); *Murder in the Squire's Pew* (1932), and *The Ebony Box* (1934). In 1932 he issued *Collected Verse*.

FOERSTER, ELIZABETH NIETZSCHE. German author, sister of the philosopher, Friedrich Nietzsche, died in Weimar, Germany, Nov. 8, 1935. Born at Rocken, near Lutzen, Saxony, July 10, 1846, she was the constant companion of her brother up to 1885, the time of her marriage to Dr. Bernhard Foerster, scientist and traveler, and her subsequent removal to Paraguay. Dr. Foerster died on a South American expedition in 1889, and she returned to Germany to take care of Nietzsche who had suffered a complete breakdown in health. They settled in Weimar and here she served as his secretary and nurse up to the time of his death (1900). In 1896 she became head of the Nietzsche Archive in Weimar and it was largely due to her efforts that his works were compiled and presented to the world. Also, she published his personal letters and wrote the following books on his life: *The Life of Frederick Nietzsche* (3 vols., 1895, 1897, 1904); *The Nietzsche Archive, Its Friends and Its Foes* (1907); *The Young Nietzsche* (1912); *The Lonely Nietzsche* (1913); *Wagner and Nietzsche at the Time of Their Friendship* (1914), *The Elderly Nietzsche* (1924).

FOREMAN, MILTON J. American lawyer, died Oct. 16, 1935, in Chicago, Ill., where he was born, Jan. 26, 1863. Educated in the public schools there, he entered the employ of Keith Brothers and Company, wholesale hatters, at the age of 12, remaining there until 1898. Meanwhile, he attended the Chicago College of Law at night. Following his admittance to the Illinois bar the following year, he became a member of the Chicago city council, continuing as such until 1911. Also, he served the city in other capacities, including chairman of the Street Railway Commission (1900-02), of the Committee on Local Transportation (1907-11); of the Chicago Charter Convention (1905-06), and as member of the Illinois Liquor Control Commission from 1934. At the time of his death, he was a member of the law firm of Foreman, Bluford, Krimley and Schultz. With the Illinois National Guard, which he joined in 1895, he served in the Spanish-American War as captain in the First Illinois Cavalry, and from 1906 to 1917, as colonel with the same group. In the World War he was a member of the 122d Field Artillery of the American Expeditionary Force, and in 1920, became major general, commanding the 33d Division. The following year he was raised to brigadier general, and in 1931, retired with the rank of lieutenant general. His decorations included the Distinguished Service Cross, Distinguished Service Medal, Silver Star Decoration with two clusters, of the United States, and commanderates in the French Legion of Honor and the Belgian Order of the Crown. Mr. Foreman was a former national commander of the American Legion.

FOSTER, FRANK HUGG. American theologian, died at Oberlin, Ohio, Oct. 20, 1935. Born in Springfield, Mass., June 18, 1851, he received the A.B. degree from Harvard University in 1873, and served, during the following year, as assistant professor of mathematics at the United States Naval Academy. On his graduation from the Andover Theological Seminary in 1877, he was ordained to the ministry of the Congregational Church. From 1877 to 1879 he was pastor at North Reading, Mass., going abroad in the latter year to study. In 1882 he received the Ph.D. degree from the University of Leipzig. On his return to the United States in the same year, he became professor of philosophy at Middlebury College and in 1884 was invited to occupy the chair of church history at Oberlin Theological Seminary. Eight years later he joined the faculty of the Pacific Seminary in California as professor of systematic theology. He then went to Olivet, Mich., where he served as pastor of the college there and of the village church. From 1907 to 1916 he held the chair of history at Olivet College, serving also during 1914-16, as professor of philosophy. In 1916 he was named professor emeritus of history and philosophy. Non-resident professor of biblical literature at Lake Erie College, Painesville, Ohio, in 1919, he was an instructor in the Hebrew and Greek languages at the Oberlin Graduate School of Theology during 1926-33. A former editor of the *Bibliotheca Sacra*, he translated Grotius' *Defense* in 1889, and wrote *Seminary Method of Study in the Historical Sciences* (1888); *Fundamental Ideas of the Roman Catholic Church* (1899); *Christian Life and Theology* (1900), and *A Genetic History of the New England Theology* (1907). Also, he contributed the chapter on Zwingle's theology in Jackson's biography of Zwingle (1901).

FOULKE, WILLIAM DUDLEY, died May 30, 1935.

FRANQUI, EMILE, died Nov. 16, 1935.

FROST, EDWIN BRANT, died May 14, 1935.

FULLER, SIR (JOSEPH) BAMFFYLDE. English administrator in India, died at Marlborough, Wiltshire, Nov. 29, 1935. Born Mar. 20, 1854, he attended Marlborough College. In the service of the Indian Government, he served as Commissioner of Settlements and Agriculture in the Central Provinces in 1885 and as additional member of the Viceroy's Council in 1889. In 1901 he became secretary to the Government of India in the revenue and agricultural departments and from 1902 to 1905, served as Chief Commissioner of Assam. He was appointed the first Lieutenant Governor of Eastern Bengal and Assam in 1905, but resigned from the post the following year because of the vacillating policy of the India Office. During the World

War he served as temporary major in the army ordnance department (1915), director of timber supplies (1917), and invented the anti-gas alarm which was used extensively on the Western Front. Among the honors bestowed on him were: Companion of the Order of the Indian Empire (1892), Companion of the Order of the Star of India (1902), and Knight Commander of the Order of the Star of India (1906). His publications include: *Studies of Indian Life and Sentiment* (1910); *The Empire of India* (1913); *Life and Human Nature* (1914); *The Science of Ourselves* (1921); *Causes and Consequences* (1923); *The Law Within* (1926); *Ethereal Energies* (1928), and *Some Personal Experiences* (1930).

GAILOR, THE RT. REV. THOMAS FRANK, died Oct. 3, 1935. GANIENE, GEORGE ETIENNE. American sculptor, died at Hendersonville, N. C., July 29, 1935. Born in Chicago, Ill., Apr. 26, 1865, he was a pupil of the Art Institute there, and exhibited his work at the Buffalo Exposition (1901); St. Louis Exposition (1904), and the San Francisco Exposition (1915). In 1909 he received the Shaffer prize, the highest award of the Art Institute of Chicago for ideal sculpture. Mr. Ganiene was the official sculptor for the State of Florida and was a former instructor and director of the sculpture department of Stetson University, De Land, Fla., and director of the department of sculpture at Rollins College, Winter Park, Fla. His principal works include: "Baby Head," John Vanderpoel Memorial Collection, statues of Lincoln at Webster City, Ia and Burlington, Wis.; "Lincoln Fountain," Lincoln Highway, Chicago, Ill.; the equestrian statue of Gen. Anthony Wayne at Fort Wayne, Ind.; "Lincoln" and "Douglas," Chicago Historical Society; "Lincoln Memorial," Starved Rock, State Park, Ill.; "Dr. Frank W. Gunsaulus Memorial," Armour Institute of Technology, Chicago, head of Lincoln and "Meditation," Milwaukee Art Institute; "The Debator," Omaha Society of Fine Arts, and "Innocence," Fine Arts Gallery, De Land, Fla.

GARDNER, EDMUND GARRATT. English educator and writer, died July 27, 1935. Born in London, May 12, 1869, he attended Gonville and Caius College, Cambridge. Interested in the study of Italian literature and history he devoted much of his time to research in Italian archives and to the study of philology. From 1910 to 1926 he was Barlow Lecturer on Dante at University College, and from 1919 to 1923, held the chair of Italian Studies at Manchester University. The next two years were spent at the University of London as professor of Early Italian Language and Literature. He remained there as professor of Italian during 1925-34, becoming in the latter year, professor emeritus. Among the honors bestowed on him were: Officer of the Order of the Crown of Italy, 1921, British Academy Serena Medallist, 1922, Fellow of the British Academy, 1925, Commendatore of the Order of the Crown of Italy, 1929, and Grand Officer of that order, 1935. His publications include: *Dante's Ten Heavens* (1898); *A Dante Primer* (1900); *The Story of Florence* (1900); *Desiderio* (1902); *The Story of Siena and San Gimignano* (1902); *Dukes and Poets in Ferrara* (1904); *The King of Court Poets* (1906); *St. Catherine of Siena* (1907); *The Cell of Self-Knowledge* (1910); *The Painters of the School of Ferrara* (1911); *Dante and the Mystics* (1914); *The Book of St. Bernard on the Love of God* (1916); *The National Idea in Italian Literature* (1921); *Dante* (1923); *Tommaso Campanella and His Poetry* (1923); *Italian Literature* (1927); *The Arthurian Legend in Italian Literature* (1930), and *Virgil in Italian Poetry* (1931). Also, he edited *Companion to Italian Studies* (1934) and *St. Francis and the Birds* (1935).

GARRISON, LIEUT. COL. FIELDING HUDSON, U.S.A., RET. American medical historian, died in Baltimore, Md., Apr. 18, 1935. Born in Washington, D. C., Nov. 5, 1870, he received the A.B. degree from Johns Hopkins University in 1890 and the M.D. degree from Georgetown University in 1893. From 1889 to 1922 he was assistant librarian in the Surgeon General's office in Washington, D. C. Appointed a lieutenant in the Medical Reserve Corps, he served during the World War with the rank of major, and retired in 1930 with the rank of lieutenant colonel. From 1930 he was librarian of the Welch Medical Library. He was editor of *Index Medicus* during 1903-27 and associate editor of the *Quarterly Cumulative Index Medicus* during 1927-29. He wrote *Josiah Willard Gibbs and His Relation to Modern Science* (1909); *Physiology and the Second Law of Thermodynamics* (1909); *Tevis Illustrating the History of Medicine* (1912); *An Introduction to the History of Medicine* (1913, 4th ed., 1928); *John Shaw Billings, a Memoir* (1915); *A Physician's Anthology* (with Casey A. Wood, 1920); *History of Endocrine Doctrine* (1921); *History of Military Medicine* (1922); *History of Pediatrics* (1922); *History of Neurology* (1925); *The Principles of Anatomic Illustration Before Vesalius* (1925), and *Medicine in Space* (1934).

GERLACH, HELMUTH VON. German pacifist, died in Paris, France, Aug. 2, 1935. Born at Monchmotschewitz, Silesia, Feb. 2, 1866, he was educated for the law. From 1893 he wrote on anti-Semitic subjects. He helped to found the National Socialist party in 1899 and represented Marburg in the Reichstag during 1903-06. He became Under Secretary of the Interior in 1918, but resigned the post in March, 1919. A co-founder of the Democratic party in 1918, he left it in

1922 because of its conservatism. A former president of the League for German Rights, he was one of the group exiled from Germany in 1933.

GIARDINO, FIELD MARSHAL GAETANO ETTORE. Italian soldier, died at Turin, Nov. 21, 1935. Born at Montemagno, Italy, in 1864, he received his education at the Modena and Torino military schools, and was commissioned a lieutenant of the Bersaglieri in 1882. He served in the African and the Libyan wars, and on the entrance of Italy into the World War, became chief of staff with the Second Army. In August, 1915, he was promoted to the rank of brigadier general, and in the following June, commanded the 48th Brigade which played an important part in the attack on Gorizia. After his promotion to lieutenant general in 1917, he was recalled to Rome in June of that year to become Minister of War. Three months later he was created a senator in recognition of his services to the Italian government. Appointed chief of staff to General Diaz, in November, 1918, he was in command of Italian forces at Vittorio, and in a general attack on the Austrian lines forced the enemy to retreat. Promoted general in 1919, two years later, he was appointed member of the Army Council. He served as Military Governor of Fiume from September, 1923, until it was annexed by Italy under the terms of the Italo-Yugoslav Treaty. A minister of State in 1923 he was created a field marshal in 1926. He served as delegate to the Versailles Peace Conference and was awarded the Order of the Annunziata. His publications include *Piccole Fatti nella Bufera* (1924) and *Rievocazione e Riflessioni di Guerra I-III* (1929-30).

GILES, HERBERT ALLEN, died Feb. 13, 1935.

GILES, PETER, died Sept. 17, 1935.

GILLET, FREDERICK HUNTINGTON, died July 31, 1935.

GILMAN, CHARLOTTE PERKINS. American author and lecturer, died at Pasadena, Calif., Aug. 17, 1935. Born at Hartford, Conn., July 3, 1860, she began her public career in 1860, thereafter lecturing on social subjects and writing articles in various periodicals. From 1909 to 1916 she edited the *Forerunner* magazine. Besides lecturing frequently in Europe, she was the author of *Women and Economics* (1898); *In This Our World* (verse, 1898); *The Yellow Wallpaper* (1899); *Concerning Children* (1900); *The Home, Its Work and Influence* (1903); *Human Work* (1904); *What Diantha Did* (1910); *The Man-Made World* (1910); *The Crux* (1911); *Moving the Mountain* (1911), *His Religion and His* (1923).

GLAZEBROOK, SIR RICHARD TETLEY, died Dec. 16, 1935.

GOMEZ, JUAN VICENTE, died Dec. 17, 1935.

GOSSEIN, L. L. T. See LENOTRE, GEORGES

GOTSHALL, WILLIAM CHARLES. American civil and electrical engineer, died in New York City, Aug. 20, 1935. Born in St. Louis, Mo., May 9, 1875, he began his career in 1892 with the Missouri Electric Light and Power Co., but later entered the service of the U.S. Government in the capacity of engineer in charge of work along 150 miles of the Mississippi River. He was locating engineer for the St. Louis and Eastern Railroad, and rebuilt the Cairo (Ill.) Electric Ry., the Grand Avenue Ry. in St. Louis, and was then appointed chief engineer of the Union Depot Ry. Co. of St. Louis. In the latter capacity he rebuilt the entire system and introduced the three-wire system on electric railways. In 1897-98 he changed the Second Avenue Ry. in New York City from horse power to a conduit electric railway. As president and chief engineer of the New York and Portchester R.R. Co., he figured in the development of high speed electric traction. This road was the first high speed railway to be built in the United States on a private right of way. Also, he engaged in the development of electric railways and in the purchase and rehabilitation of railroads in the United States, Europe, and Africa. A fellow of the American Association for the Advancement of Science, the American Museum of Natural History, and the American Geographical Society, he was the author of *Electric Railway Economics* (1914), and contributed the article on railway economics to the *Encyclopedia Americana*. A major in the Engineer Reserve Corps in 1917, he saw active service and was keenly interested in organizing and directing archeological excavations in the Near East.

GOULD, JAY. American sportsman, died at Margareville, N. Y., Jan. 26, 1935. Born at Lakewood, N. J., in 1889, he was graduated from Columbia University in 1911. In 1905 he became runner-up in the annual amateur court tennis tournament at Tuxedo, N. Y.; the next year, he won, and became American champion. He retained the title for 20 years (1906-26), at the end of which time he retired from competition. In 1907 and 1908 he won the amateur court tennis title of England, the only American to do so, and in the latter year, won the world title at the Olympic Games. In 1914 he defeated G. Frederick Covey of England, the recognized world open champion, becoming the only amateur court tennis player to have held an open title. In 1917, Mr. Gould staged a come-back and engaged in doubles contests, in which he was successful. Due to ill health he retired in 1932. Gould was reputed to have been the greatest amateur the game of court tennis had ever known.

GREELY, MAJ.-GEN. ADOLPHUS W., U.S.A., RET., died Oct. 20, 1935.

GREEN, ANNA KATHARINE. See ROHLFS, ANNA KATHARINE GREEN.

GREENDLINGER, LEO. American accountant, died en route to New York, Oct. 11, 1935. Born in Austria, Aug. 22, 1879, he attended the Royal Seminarium in Vienna and then took up the study of law. He migrated to the United States in 1900 and became engaged in the manufacture of fur. In 1904 he turned to the educational field and became vice principal of Paine's Business College in New York. During 1905-07 he was president of the South Brooklyn Business College, and in the latter year became editor of the C.P.A. Question Department of the *Journal of Accountancy*. During 1907-15 he was assistant professor of accountancy at New York University and from 1907 to 1912, a practicing and consulting accountant. In 1912 he began a long association with the Alexander Hamilton Institute, which he served first as director and treasurer, then as vice president in 1925, and general manager from 1929. His publications include: *Accountancy Problems with Solutions* (2 vols., 1909); *Graded Accounting Problems* (with R. H. Dennis, 3 vols., 1910); *Accounting Principles and Practice* (1910); *Financial and Business Statements* (1917), and *Retail Financing* (with Percy H. Johnson, 1927).

GREIN, J. T. English dramatic critic, died in London, June 22, 1935. Born in Amsterdam, The Netherlands, Oct. 11, 1862, he received his education in Holland, Germany, and Belgium. From 1888 to 1891 he served as dramatic critic of *Life* and later served on the *Sunday Special*, *Sunday Times* (1897-1918), *Ladies' Field* (1905-18), and *Financial News* (1911-14). From 1920 he contributed a column to the *Illustrated London News* and was dramatic critic on *Sketch*, a weekly. Also, he was London editor of the New York *Theatre Magazine*. In 1891 he founded the Independent Theatre and in 1901 introduced the German Theatre in London. Among other of his enterprises were the People's Theatre, founded in 1923, and the Cosmopolitan Theatre. From 1925 he served as Consul General and Commercial Attaché for the Liberian Republic in London. Mr. Grein celebrated the jubilee of his professional career in 1933, at which time he was created an Officer of the Order of Orange-Nassau. Other honors bestowed on him include: Officer de l'Instruction Publique of France, Knight Commander of the Liberian State Order, Knight of the Order of Leopold of Belgium, and Knight of the Order of St. Olav, first class, of Norway. He was the author of *Dramatic Criticism* (5 vols., 1899-1905); *A Dream of Charity* (1911); *Cameos* (1920); *The World of the Theatre* (1920); *The New World of the Theatre* (1924).

GRENFELL, HELEN LORING (Mrs. EDWIN I.) American sociologist, died in Denver, Colo., July 26, 1935. Born at Valparaiso, Chile, she received the M.A. degree from the University of Denver in 1904. She was married to Edwin I. Grenfell in 1889. Elected superintendent of schools in Gilpin Co., Colo., for three successive terms, she was also elected State superintendent of public instruction in Colorado three times, and served from 1899 to 1905. As State superintendent, she was largely responsible for increasing the school revenues by the leasing of State lands. Also, she revised and annotated the school laws. In 1909 she was appointed commissioner of the State Penitentiary and Reformatory and of the State Insane Asylum, and controlled the penal institutions of Colorado. She retained the post up to 1930. In 1918 she went to England as a member of the American Mission which was invited by the British government. While there she spoke on war issues and investigated war conditions in England and France. A delegate to the Democratic National Convention in 1920, she was vice president of the Colorado Equal Suffrage Association, and a director of the Colorado Prison Association and of the Colorado State Forestry Association for 14 years.

GROSSMITH, GEORGE, died June 6, 1935.

GRUBB, WILLIAM IRWIN. American jurist, died in Birmingham, Ala., Oct. 27, 1935. Born in Cincinnati, O., Mar. 8, 1862, he received the A.B. degree from Yale University in 1883, and took up the study of law at the Cincinnati Law School. On his admittance to the bar in 1884, he began practice in Cincinnati and then removed to Birmingham, Ala., where he practiced up to 1909. In the same year President Taft appointed him a United States District Judge in the Northern District of Alabama. In this capacity Judge Grubb ruled that the NRA was unconstitutional and handed down late rulings concerning the TVA and the PWA. He was a member of former President Hoover's Law Enforcement Committee appointed in 1929 to study crime and criminal law in the United States.

GRUENBERGER, ALFRED. Austrian cabinet officer and diplomat, died in Paris, France, Apr. 25, 1935. He was born in Karlsbad, Bohemia, about 1875, and entered the Austrian Civil Service in 1898. He embarked on a political career in 1920 when he was appointed Minister of Public Provision. In June, 1921, he became Food Minister and in this capacity, aided greatly in overcoming the postwar food crisis in Austria. In 1921 he took over the portfolio of commerce in the Seipel Ministry and from 1922 to 1924, was Minister of Foreign Affairs. In 1925 he was appointed Ambassador to France, and served until 1932. In the same year he resigned from the Austrian diplomatic corps and took up permanent residence in Paris.

GUENIOT, ALEXANDER. French surgeon, died in Paris, July 16, 1935. Born at Tignescourt, Department of Vosges,

Nov. 8, 1832, he received his education at Trinity College, Lamoignon. During 1863-65 he was chief of the Obstetrical Clinic, and from 1865 to 1894 served in the capacity of surgeon to several Paris hospitals. He joined the faculty of medicine at the University of Paris in 1869 and taught there until 1878. Dr. Guéniot was president of the Société de Chirurgie (1883), of the Société Obstétricale et Gynécologique at Paris (1888), of the Société Obstétricale of France (1895), and of the Académie de Médecine (1906). A prolific writer on medical subjects, he was the oldest member of the French Academy of Medicine and attained the age of 102 years.

GUERRA, JOSÉ SÁNCHEZ. Spanish premier, died in Madrid, Jan. 26, 1935. Born in Córdoba, June 30, 1859, he was educated for the law. He was a successful lawyer and journalist, first in Córdoba and then in Madrid. He entered politics in 1886 on his election to the Cortes where he represented a district of Córdoba. With the exception of one term, he held this seat continuously until Primo de Rivera established a dictatorship on Sept. 13, 1923. During 1903-04 he was Minister of Government (Interior) in the first Maura (Conservative) ministry, and from September, 1908, to October, 1909, was Minister of Promotion under Premier Antonio Maura y Montaner. Elected President of the Cortes in 1917, he retained the office up to Mar. 8, 1922, when he succeeded Maura as head of the government. He resigned from this post on Dec. 6, 1922. Meanwhile, on the death of Eduardo Dato, he became leader of the Conservative party in March, 1921. During de Rivera's dictatorship, Guerra served as director of the Madrid newspaper, *El Español*. In 1927, he entered into voluntary exile and planned a constitutional government. In February, 1929, an unsuccessful attempt at revolution was made, failure being due to the delay of Guerra's ship. The military commander at Valencia, believing the revolt to have fallen through, surrendered to General de Rivera. Despite his denials of any knowledge of the plot, Guerra was brought to trial by court martial on a charge of fomenting revolution, but was acquitted. On the collapse of the Spanish throne in April, 1931, a constitutional government assumed control, and he ran as a Conservative for leader of the Constituent Assembly, but was defeated by the Socialist candidate. He then retired. As a brilliant speaker in Parliament and as director of *La Iberia*, he established a distinguished reputation.

GUTELIUS, FREDERICK PASSMORE. American railway official, died at North Bay, Ont., Canada, Sept. 12, 1935. Born at Mifflinburg, Pa., Dec. 21, 1864, he was educated at Lafayette College, Easton, Pa., from which he received the C.E. degree in 1887. He began his career as engineer in charge of the construction of a sewer system in Englewood, N. J. (1887), becoming assistant engineer of the Pennsylvania Railroad's lines west of Pittsburgh (1888). After serving as assistant supervisor for that company in 1892 he went to Butte, Mont., where he engaged in hydraulic engineering during 1892-94. Next he became county surveyor in Silver Bow Co., Mont. (1895), and then went to Canada to take charge of the construction of the Trail Creek Tramway in British Columbia. There he served as general superintendent of the Columbia and Western R.R. and on its acquisition by the Canadian Pacific Ry. in 1898, became divisional superintendent. During 1910-12 he was general superintendent of the Canadian Pacific's eastern division at Montreal. In the latter year, the Canadian government appointed him general manager of the Canadian Government Railways and during his term a surplus of \$1,000,000 was realized from lines that theretofore had not paid operating expenses. Also, he was a member of the Royal Commission which investigated the construction of the National Transcontinental Ry. In June, 1917, he became vice president in charge of operation and traffic of the Delaware and Hudson Co. and when the government assumed control of the railroads, he was named Federal manager. From 1923 he was resident vice president of the Delaware and Hudson Co. He invented the smoke jack for railroad engine houses and made improvements on the farm gate.

GUTHRIE, WILLIAM DAMERON, died Dec. 8, 1935.

HAFKEN, LOUIS F. American public official, died in New York City, Dec. 25, 1935. Born at Melrose, Westchester Co., N. Y., Nov. 6, 1854, he received the C.E. degree from the Columbia University School of Mines in 1879. Named an engineer in the Department of Parks in New York City in 1883, he served in that capacity up to 1893. As commissioner of street improvements in the 23d and 24th wards of New York City which were later a part of the Borough of the Bronx, he effected many improvements and had street maps drawn and filed. On the creation of Greater New York in 1897, he was elected the first president of the Borough of the Bronx. He was reelected to the office in 1901, 1903, and 1905, and in August, 1909, six months before the expiration of his term, he was removed from office by Governor Charles Evans Hughes, after charges of maladministration had been preferred by John Purroy Mitchell and Ernest Yale Gallagher, Commissioner of Accounts. From 1918 to 1929 he was consulting engineer to the Borough.

HANSON, GEORGE CHARLES. American diplomat, died at sea, Sept. 2, 1935. Born in Bridgeport, Conn., Oct. 11, 1883, he received the C.E. degree from Cornell University in 1908, and entered the diplomatic service in the following

year. He began as student interpreter in China, and in 1911 was deputy consul general and later interpreter at Shanghai. In 1912-13 he was vice and deputy consul and interpreter at Chefoo, serving in that capacity at Dalny (1913-14), Tientsin (1914-15), and Newchwang (1915). After serving as consul at Swatow during 1915-17, he went to Chungking in the same capacity, and in 1918, to Foochow. From 1922 to 1931 he was consul at Harbin, and from 1931 to 1933 was consul general there. On the recognition of the Soviet government by the United States in 1933, he was sent to Moscow as the first United States Consul General. In February, 1935, he was assigned to Addis Ababa as First Secretary and Consul General, but illness prevented his taking up the post. Instead, he was sent to Saloniki as Consul General.

HARRIS, ABRAHAM WINEGARDNER, American educator, died Feb. 21, 1935, in Philadelphia, where he was born Nov. 7, 1858. He was graduated from Wesleyan University in 1880, becoming in the same year, a teacher of mathematics in Dickinson Seminary, Williamsport, Pa. In the following year he returned to Wesleyan University where he was tutor in mathematics and registrar during 1881-84, and instructor in history to 1888. He then became a member of the U.S. Department of Agriculture, serving first as assistant director of the Office of Experimental Stations, and as director in 1891. Two years later, he resigned to become president of the University of Maine. From 1901 to 1906 he was headmaster and director of the Tome School in Baltimore, and in the latter year, assumed the presidency of Northwestern University. He held this office up to 1916. In the same year he became corresponding secretary of the Board of Education of the Methodist Episcopal Church, and from 1924 was secretary of that body. Chairman of the executive board of the Religious Education Association from 1910 to 1916, he was president of the American Social Hygiene Association (1915-17), and vice president of the Committee of 15 of Chicago (1915-16).

HARRIS, CORRA MAY WHITE (Mrs. I. H.), American author, died in Atlanta, Ga., Feb. 9, 1935. Born at Farm Hill, Ga., Mar. 17, 1869, she received a private education. In 1887 she was married to the Rev. Lundy Howard Harris who died in 1910. Two years after her marriage she began writing for the *Independent*, and in 1905 first contributed her *Brasstown Valley Stories* to the *American Magazine*. From 1931 she wrote a column in the *Atlanta Journal*. Her publications include: *The Jessica Letters* (with Paul Elmer More, 1904), *A Circuit Rider's Wife* (1910), *Love's Second Husband* (1910), *Recording Angel* (1912), *In Search of a Husband* (1913), *Co-Citizens* (1915), *Making Her His Wife* (1918), *Happy Married* (1920), *My Son* (1921), *Daughter of Adam* (1923), *House of Helen* (1923), *My Book and Heart* (1923), *As a Woman Thinks* (1925), *Flapper Anne* (1925), and *Happy Pilgrimage* (1927).

HARRISON, RICHARD BERRY, American Negro actor, died in New York City, Mar. 14, 1935. Born in London, Ont., Canada, Sept. 28, 1864, he attended the public schools there. Embarking on a theatrical career in 1889, he began acting in Canada, subsequently touring the United States on the Chautauqua and Lyceum circuits as a dramatic reader. He then taught dramatic art in North Carolina for many years, and from 1921, was a teacher of dramatics and elocution at the Agricultural and Technical College at Greensboro, N. C. He came into prominence in 1930 when he appeared in the rôle of "de Lawd" in Marc Connelly's phenomenal success, *The Green Pastures*. (See THE NEW INTERNATIONAL YEAR BOOK for 1930 under *Theatre*.) Mr. Harrison played in that production over 1650 times. In 1931 he was awarded the Spingarn medal for the "most outstanding achievement among colored people" in 1930.

HASSAM, CHILDE, died Aug. 27, 1935.

HAZZARD, JOHN EDWARD, American actor and author, died at Great Neck, N. Y., Dec. 2, 1935. Born in New York City, Feb. 22, 1881, he received his education in the public schools there and first appeared on the stage in 1901 in *The Man from Mexico*. After touring with *The Two Orphans* in 1902, *The Yankee Consul* (1903-04), and *Mrs. Wilson* in 1906, he returned to New York in 1907 to appear at Wallack's Theatre in *The Hurdy-Gurdy Girl*, and in the following year, in *The Girls of Gottenburg* at the Knickerbocker Theatre. After touring with *The Candy Shop* in 1909, he played in *The Echo* at the Globe Theatre, N. Y., in 1910. Before going on tour with *Miss Princess* in 1913, he appeared in *The Red Rose*, *The Duchess*, and *The Gypsy*. In New York again, he made subsequent appearances in *The Lilac Domino* (1914), *Very Good, Eddie* (1915), *Miss Springtime* (1916), *La, La, Lucille* (1919), *The Night Boat* (1920), *Tangerine* (1921), *For Goodness' Sake* (1922), *One Kiss* (1923), *Bye, Bye, Barbara* (1924), the Gilbert and Sullivan piece, *H. M. S. Pinafore* (1926), and *The Houseboat on the Styx* (1928). Mr. Hazzard was co-author of *Turn to the Right* (1916), *Go to It* (1916), and *The Houseboat on the Styx*. He wrote *Nunkie* (1919), and for several years prior to his death, conducted a column, *Few Kind Words*, in the *Great Neck News*.

HEADLEY, ROWLAND GEORGE ALLANSON ALLANSON-WINN, FIFTH BARON, English civil engineer, died June 22, 1935 in London, where he was born Jan. 19, 1855. He received the B.A. degree from Trinity College, Cambridge, in 1878,

winning high honors in mathematics. After engaging in educational work, he served as editor of the *Salisbury Journal*. From 1885 to 1892 he was secretary to Sir F. Seager Hunt and in the latter year, he took up civil engineering. After engaging in foreshore protection work in Ireland, he went to India where he completed the road between Baramula and Srinagar in 1896. His one venture into politics was unsuccessful when he contested South Kerry in 1891. He was named engineer to the Arklow Harbor Commissioners in 1906 and five years later, he succeeded to the title. Lord Headley was converted to the Mohammedan religion in 1913 and subsequently became president of the British Moslem Society. After his pilgrimage to Mecca in 1923, he was privileged to use the prefix Al Hajj. Also, he was made a member of the Order of the Nahda of Arabia, first class, by the late King Hussein of the Hedjaz. A fellow and former president of the Society of Engineers, London, he was a member of the Institute of Civil Engineers of Ireland and received the following awards: Bessemer Premium of the Society of Engineers, London (twice), silver medal of the Royal Scottish Society of Arts (1900), and the silver medal of the Institute of Civil Engineers of Ireland (1902-03). His publications include: *Boxing, All England Series* (1888); *Boxing, 1stman Series* (1897); *Foreshore Protection* (1899); *Notes on Road Construction* (1901); *Proceedings of the American Society of Civil Engineers* (1902); *Self-Defense* (1903), *Youghal Foreshore Protection Works* (1903), *Sea Coast Erosion and Remedial Works* (1904), and *Submerged Chasm Cable, Groynes* (1906).

HEINTZELMAN, MAJ.-GEN. STUART, U.S.A. American soldier, died at Hot Springs, Ark., July 6, 1935. He was born in New York City, Nov. 19, 1876. On his graduation from the United States Military Academy in 1899, he was commissioned a second lieutenant in the cavalry and went to the Philippines where he remained during 1900-02. Also, he served in China, and from 1909 to 1912 was an instructor in the Army Service Schools, in which capacity he served again in 1914-16. In the following year, he was an instructor at Princeton University and on the entry of the United States into the World War, went abroad detailed to the operations section at General Headquarters until January, 1918. Six months later he was named chief of operations with the First Corps and in September of the same year, chief of staff with the Fourth Corps. Until it was demobilized in April, 1919, he was chief of staff of the Second Army. Following his return to the United States in July, 1919, he was named director of the Army War College, and from 1921 to 1924, served as assistant chief of staff there. Then he was assigned to the Command and General Staff School at Ft. Leavenworth, Kan., where he was commandant from 1929 to 1935. Meanwhile, in 1931, he was promoted to the rank of major general. In February, 1935, he assumed command of the Seventh Corps Area. His decorations include the Distinguished Service Medal of the United States, the Croix de Guerre of France, and commanderates in the French Legion of Honor and in the Order of the Crown of Italy.

HENDERSON, RT. HON. ARTHUR, died Oct. 20, 1935.

HENNING, EDWARD J., American jurist, died in Toledo, O., Sept. 6, 1935. Born at Iron Ridge, Dodge Co., Wis., Dec. 28, 1868, he received the LL.B. degree from Columbian (now George Washington) University in 1896. In the following year he established a law practice in Milwaukee. In 1901 he became assistant United States attorney for the Eastern District of Wisconsin, and during 1910-11, was United States attorney. In 1913 he removed to San Diego, Calif. From 1921 to 1925, he was assistant Secretary of Labor in President Coolidge's Cabinet and in this capacity, became prominent in his efforts to restrict the immigration laws. President Coolidge appointed him United States district judge for the Southern District of California in 1925. He retained the post up to 1930 when he became industrial relations counsel on the "Big Five" Motion Picture Theatre Circuits. From 1932 he practiced general law in Los Angeles, Washington, and New York City. Judge Henning was general counsel for the International Order of Moose and was head of the American delegation to the World Conference on Emigration and Immigration held in Rome in 1924. Also, in May, 1925, he was a member of the American delegation to the conference with Mexico held at El Paso to draft the border treaty.

HENNIQUE, LEON, French writer, died in Paris, Dec. 25, 1935. Born at Basse-Terre, Guadeloupe, French W.I., in 1851, he was educated in the French schools at Brest and Saint Quentin. A prolific writer, he collaborated with Huysmans and Iaudet, and wrote *La Dévouée* (1878); *Un Caractère* (1891), and the plays, *La Mort du duc d'Enghien* (1883), which was produced five years later, and *Jacques Danour* (1890).

HERFORD, OLIVER, American author, died in New York City, July 5, 1935. Born in England, December, 1863, he was educated at Lancaster College, England, Antioch College, Ohio, and studied art at the Slade School in London and at the Académie Julian in Paris. He illustrated his own books; the illustrations fittingly supplementing his individual and eccentric comicality and whimsicality. During 1932-33 he contributed to the "March of Events" section in the *New York American*. His publications include: *The Bash-*

ful Earthquake, and Other Fables and Verses (1898); *Alphabet of Celebrities* (1899); *A Child's Primer of Natural History* (1899); *More Animals* (1900); *Overheard in a Garden* (1900); *Rubaiyat of a Persian Kitten* (1904); *The Fairy God-Mother-in-Law* (1905); *The Astonishing Tale of a Pen and Ink Puppet* (1907); *Hearticulture* (1908); *Simple Geography* (1909); *Cupid's Fair Weather Book* (1909); *Peter Pan Alphabet* (1909); *Cupid's Encyclopedia* (1910); *Happy Days* (with J. Cecil Clay, 1911); *Kitten's Garden of Verses* (1911); *The Bishop's Purse* (with Cleveland Moffett, 1913); *The Mythological Zoo* (1914); *Jingle Jungles* (1915); *Confessions of a Caricaturist* (1917); *Cynic's Calendar* (1917); *The Laughing Willow* (1918); *This Giddy Globe* (1919); *The Herford Æsop* (1921); *Neither Here nor There* (1922); *Excuse It, Please* (1930); *Sea Legs* (1931), and *The Deb's Dictionary* (1931). His plays include: *The Devil, The Florist Shop, The Love Cure, and Con and Co*.

HIRSCHFELD, MAGNUS German eugenicist, died in Nice, France, May 15, 1935. Born at Kolberg, Germany, July 14, 1868, he attended Breslau, Strassburg, Munich, Berlin, and Heidelberg universities. He served as a physicist in Magdeburg in 1894, and in Charlottenburg during 1896-98. After further study in Paris, London, and Berlin, he became a sex-disease specialist. In 1908 he was joint editor of the *Periodical for Sexology*, and from 1910, practiced as a neurologist in Berlin. A co-founder of the Medical Society of Sexology in 1913, he helped found, five years later, the Institute of Sexology in Berlin which later came under the control of the Prussian State. In connection with the latter, he opened a Bureau for Matrimonial Advice in 1919. Also, he founded, with August Forel and Havelock Ellis, the World League of Sexual Reform, and later served as president of that body. In May, 1933, the Institute was closed by the government and Hirschfeld was exiled. He then removed to France. His publications include *Die Transvestiten* (2 vols., 1910-12); *Die Homosexualität* (1914); *Sexual Pathologie* (2 vols., 1917); *Sexual Zwischenstufen* (1922); *Sexualität und Kriminalität* (1924), and *Sexual-Katastrophen* (with L. Klaber and G. Lahardt, 1916).

HITCHCOCK, ALBERT SPEAR American botanist, died at sea, Dec. 16, 1935. Born at Owosso, Mich., Sept. 4, 1865, he received the M.S. degree from Iowa Agricultural College in 1886. In the same year, he became an assistant in chemistry at the State University of Iowa, and three years later, served in the same capacity at the Missouri Botanical Garden in St. Louis. In 1892 he was invited to occupy the chair of botany at the Kansas Agricultural College, but resigned the chair nine years later, to join the United States Department of Agriculture as assistant agrostologist. In 1905 he became systematic agrostologist and from 1924, was principal botanist in charge of systematic agrostology. He held the office of president in the Botanical Society (1914), the Botanical Society of Washington (1916), and the Washington Biological Society (1923). Dr. Hitchcock was an authority on the taxonomy of grasses.

HITCHCOCK, FRANK HARRIS, died Aug. 5, 1935.

HOCKING, SILAS KITTO English novelist, died in London, Sept. 15, 1935. Born at St. Stephen's, Cornwall, Mar. 24, 1850, he received a private education and was ordained to the ministry of the Methodist Church. He held pastorates in Pontypool, Spalding, Liverpool, Manchester, and Southampton, and before retiring from the ministry, in 1896, he turned to writing. In 1879 he wrote *Her Benny* which is his best-known book and still widely read in England. A prolific writer, he produced more than 50 novels, some of which are *Dick's Fairy* (1883); *Real Girl* (1887); *Where Duty Lies* (1891); *A Son of Reuben* (1894); *In Spite of Fate* (1897); *Gripped* (1902); *The Silent Man* (1906); *The Third Man* (1911); *Watchers in the Dawn* (1920); *The Mystery Man* (1930), and *Gerry Storm* (1934).

HOLMES, OLIVER WENDELL, died Mar. 6, 1935.

HOLTBY, WINIFRED English author, died in London, Sept. 29, 1935. Born in 1898, she attended Somerville College, Oxford. From 1926 she was director of the weekly, *Time and Tide*. Her best-known work was *Mandao*, a description of the coronation of Haile Selassie, Emperor of Ethiopia. Her last work, *Take What You Want*, was completed one month before her death. It was published in the United States under the title, *South Riding*. Her other publications include *Audrey and Wold*, *The Crowded Street*, *The Land of Green Gincer*, *Poor Caroline*, *Truth Is not Sober*, and numerous pamphlets.

HOPPER, (WILLIAM) DE WOLF, died Sept. 23, 1935.

HORTON, BRIG.-GEN. WILLIAM EDWARD, U.S.A., RET. American soldier, died at Governors Island, N. Y., Sept. 13, 1935. Born in Washington, D. C., June 28, 1868, he received the LL.B. degree from Georgetown University in 1892 and for the next five years was engaged in the practice of law in Washington. On the outbreak of the Spanish-American War, he was commissioned a first lieutenant and adjutant in the First District of Columbia Infantry and saw service in Cuba and the Philippines. When the United States entered the World War, he was appointed assistant to the Quartermaster General, in charge of construction service, with the rank of brigadier general. Since his retirement at his own request in 1929, he practiced law in Washington. General Horton was one of the most widely decorated officers in the Service, being the recipient of the Disting-

guished Service Medal of the United States and of numerous foreign decorations.

HOUGH, WALTER. American anthropologist, died in Washington, D. C., Sept. 20, 1935. Born at Morgantown, W. Va., Apr. 23, 1859, he received the Ph.D. degree from the University of West Virginia in 1894. He became connected with the United States National Museum in 1886 in the capacity of aid, thereafter serving as assistant curator of the ethnology division from 1896 to 1910, and curator of ethnology from 1912. Also, during 1920-23, he was acting head curator of anthropology there, and head curator from 1923. In 1892 he went to the Columbian Historical Exposition in Madrid as a member of the United States Commission, and was created a Knight of the Order of Isabella of Spain. A member of the J. Walter Fewkes's expedition to Arizona in 1896, he went to Mexico with Dr. J. W. Rose three years later, and made extensive explorations in the Southwest in 1901, 1904, and 1905. Dr. Hough was an authority on Eskimo lamps, Hopi ethnobotany and pigments, Korean ethnography, the Pueblo region of Arizona, and Malayan ethnography. In addition to being a corresponding member of the Society of Anthropology of Paris and the Swedish Society of Anthropology and Geography, he was a fellow of the American Association for the Advancement of Science and vice president of the anthropology section of that body in 1904. President of the Anthropology Society of Washington in 1908, he held the same office in the American Anthropology Association in 1923-24.

HUBBARD, THEODORA KIMBALL (MRS. HENRY VINCENT). American author, died at Milton, Mass., Nov. 7, 1935. Born at Newton, Mass., Feb. 26, 1887, she received the S.B. degree from Simmons College in 1908. She was married to Henry Vincent Hubbard on June 7, 1924. From 1911 to 1924 she was librarian in the School of Landscape Architecture at Harvard University, and from 1924 to the time of her death, was special adviser there. From 1929 she was editor of *Research*, the organ of the School of City Planning of Harvard University, and associate editor of *Landscape Architecture*. From April, 1918, to May, 1919, she was consulting librarian and chief of the Reference Library of the U.S. Bureau of Industrial Housing and Transportation, and was an expert on zoning information on Secretary Hoover's Advisory Committee on Zoning. She was a member of the committee on research of the President's Conference on Home Building and Home Ownership and of the American City Planning Institute. She wrote with J. S. Pray, *City Planning—a Comprehensive Analysis* (1913), and with H. V. Hubbard, *Introduction to the Study of Landscape Design* (1917, 4th ed., 1929). Also, *Landscape Architecture Classification* (1920), and *Manual of Information on City Planning and Zoning* (1923). Besides compiling *References on City Planning* in 1915 and editing the professional papers of Frederick Law Olmsted, Senior, she contributed the sections on town planning and landscape architecture to the *Encyclopedia Britannica*.

HULSEN, CHRISTIAN K. F. German historian and archaeologist, died in Florence, Italy, Jan. 19, 1935. Born at Charlottenburg, Germany, Nov. 29, 1858, he received his education at the University of Berlin where he studied under Mommsen. After engaging in teaching for several years, he succeeded G. W. Helbig as director of the German Archaeological Institute at Rome in 1887, remaining there until 1909. In the following year, he came to the United States as exchange professor at Columbia University, New York. Also, he lectured before the Archaeological Institute of America. From 1917 he held a professorship at Heidelberg University. He wrote *Die Thermen des Carcalla* (1898), *Forum Romanum* (1904); *Topographie der Stadt Rom in Altertum* (1897), *Die Thermen des Agrippa* (1910); *Il Libro di Giuliano di Sangallo* (1910); *Roms Antiken-garten* (1917), *Forum und Palatin* (1926), and *Le Chiese di Roma nel Medio Evo* (1927). Hulsén also contributed articles to German and Italian archaeological journals.

HUNTINGTON, JAMES OTIS SARGENT American clergyman, died in New York City, June 29, 1935. Born in Boston, Mass., July 23, 1854, he received the B.A. degree from Harvard University in 1875. He then studied at St. Andrew's Divinity School during 1876-79, and in the following year, was ordained a priest of the Protestant Episcopal Church. He was assigned to the Calvary Mission in Syracuse, N. Y., and in 1881, to the Holy Church Mission, where he remained up to 1889. In 1884 he founded the Order of the Holy Cross, a monastic order of the Protestant Episcopal Church and from 1921, was superior of that body. He wrote *How to Preach a Mission* and *The World of Prayer*.

HUSSAREK VON HEINLEIN, MAX, BARON Austrian cabinet officer, died in Vienna, Mar. 6, 1935. Born at Pressburg, May 3, 1865, he received the LL.D. degree from the University of Vienna in 1889. In 1892 he was a law clerk in the Ministry of Ecclesiastical Affairs and Public Instruction, and became professor of church law at the University of Vienna in 1895. In 1911 he was given the portfolio of Education and held it for six years. Appointed Chancellor of Austria in July, 1918, he held the post for three months. He was the author of many books on canon law.

HUTCHINSON, JOHN IRWIN. American mathematician, died in Ithaca, N. Y., Dec. 1, 1935. Born in Bangor, Me., Apr. 12, 1867, he received the Ph.D. degree from the Uni-

versity of Chicago in 1896. In 1894 he joined the faculty of Cornell University as instructor in mathematics, becoming assistant professor in 1903, and from 1910, full professor. A fellow of the American Association for the Advancement of Science, he was a former vice president of the American Mathematical Society, and during 1902-04, served as associate editor of *Transactions*. He was co-author with Virgil Snyder of *Differential and Integral Calculus* (1902), and *Elementary Treatise on the Calculus* (1912). Also, he wrote many reviews for mathematical journals, chiefly on hyperelliptic, theta, and automorphic functions, on algebraic surfaces and birational transformations.

IPPOLITOV-IVANOV, MICHAEL MICHAELLOVITCH, died Jan. 28, 1935.

ISHIKAWA, CHIYOMATSU. Japanese zoologist, died at Taihoku, Formosa, Jan. 17, 1935. Born in Tokyo in April, 1861, he was graduated from the College of Science in Tokyo in 1882, and continued his studies in Germany, receiving the Ph.D. degree from the University of Freiburg. Appointed a professor in the College of Science on his return to Japan, he was called to the chair of Zoology, Entomology, and Sericulture in the College of Agriculture in the University of Tokyo in 1890. As an author he wrote *Animal Evolution and Anatomical Guide*, besides writing numerous articles on zoological subjects.

JAGOW, GOTTLIEB VON. German Foreign Minister, died in Potsdam, Jan. 11, 1935. Born in Berlin, June 22, 1863, he was educated at the University of Bonn and became a lieutenant in the Landwehr. Entering the diplomatic service in 1895, he served as attaché at Rome. In 1897 he was named Secretary to the Embassy there and after serving as Minister to Luxembourg for a year, returned to Rome as Ambassador in 1909. Three years later, he assisted in securing the renewal of the Triple Alliance. He was recalled to Germany in 1913, to succeed von Kiderlen-Waechter as Minister of Foreign Affairs. In that capacity he had charge of diplomatic affairs leading up to the World War, and had to defend the attack on the *Lusitania*. For a time he was successful in restraining submarine warfare. In 1916 he resigned his portfolio and retired to private life. His *Ursachen und Ausbruch des Weltkrieges*, published in 1919, was a defense of the German policy during the War. Six years later, he published *England and the Outbreak of the World War*, in reply to Lord Grey's *Memoirs* (1925).

JELlicoe, JOHN RUSHWORTH JELlicoe, First Earl, died Nov. 20, 1935.

JENKINS, OLIVER PEBLES. American educator and ichthyologist, died at Palo Alto, Calif., Jan. 9, 1935. Born at Bantam, O., Nov. 3, 1850, he received the M.A. degree from Moores Hill College (Ind.) in 1872 and the Ph.D. degree from Indiana University in 1889. From 1876 to 1882, he was professor of natural science at Moores Hill College. Then, he taught at the Indiana State Normal School during 1883-86. In the latter year, he was invited to occupy the chair of biology at De Pauw University. On the opening of Leland Stanford University in 1891, he joined the faculty as professor of physiology and histology. He held the chair up to 1916 when he was retired as professor emeritus. Also, during 1892-1916, he was co-director with C. H. Gilbert of the Stanford Marine Laboratory. A fellow of the American Association for the Advancement of Science, he wrote the Indiana State Series of text books on physiology. Dr. Jenkins was an authority on the nervous system invertebrates and on Hawaiian, American, and Mexican fishes.

JOHNSTON, MOFFAT. Scottish actor, died at Norwalk, Conn., Nov. 3, 1935. Born in Edinburgh, Scotland, Aug. 18, 1886, he attended the University of Edinburgh. As a member of the F. R. Benson Shakespearean company, he made his first appearance on the stage in Manchester in September, 1905. Three years later, he played in *Much Ado About Nothing* at the Coronet Theatre in London. Before coming to the United States in 1922, he played numerous Shakespearean rôles in London, and served in the World War as a lieutenant with the Eighth Sherwood Foresters. His first New York appearance was in *Back to Methuselah*, at the Garrick Theatre. He subsequently played in *King Lear*, *Hamlet*, *The Little Angel*, *The Wild Duck*, *Accused*, *Cock Robin*, *Becky Sharp*, *An Affair of State*, *Berlin*, *Camille*, and in Sean O'Casey's *Within the Gates*.

JONES, WALTER. American physiological chemist, died Feb. 28, 1935, in Baltimore, Md., where he was born Apr. 28, 1865. He received the Ph.D. degree from Johns Hopkins University in 1891 and for the next four years, was engaged in teaching at Wittenberg College and Purdue University. Joining the faculty of Johns Hopkins University in 1895, he served successively as assistant and associate professor during 1895-1908, and as full professor of physiological chemistry from 1908 to 1927. In the latter year he retired as professor emeritus. A fellow of the American Association for the Advancement of Science, he wrote *Nucleic Acids* (1921).

JOVENAL, HENRI DE, died Oct. 4, 1935.

JUDD, EDWARD STARR. American surgeon, died in Chicago, Ill., Nov. 30, 1935. Born at Rochester, Minn., July 11, 1878, he received the M.D. degree from the University of Minnesota in 1902, and while serving his internship at

St. Mary's Hospital at Rochester, he came under the influence of Dr. Charles H. Mayo. In 1907 he became a surgeon at the Mayo Clinic and from 1918, was professor of surgery at the Mayo Foundation in the Medical School of the University of Minnesota. In later years, he was chief of the surgical staff of Mayo Clinic. Also, he was a surgeon at St. Mary's Hospital. A fellow of the American College of Surgeons and of the American Medical Association, he was president of the latter body in 1931-32. Dr. Judd was an authority on biliary, gastro-intestinal, and genito-urinary tracts, and the thyroid.

JUNGREN, OSCAR. Swedish-American engineer, died in Schenectady, N. Y., Sept. 24, 1935. Born at Landskrona, Sweden, Jan. 10, 1865, he received a degree in mechanical engineering from the Malmö Engineering College in 1885. On coming to the United States, he settled in New York where he joined the Edison Electric Co. in 1889. Two years later he began his association with the General Electric Co. in its Schenectady office. He was associated with W. L. R. Emmett in designing and constructing the first large Curtis turbine which was finished in 1903. Four years later he was named design engineer in the turbine department, and in 1922, consulting engineer in that department. He served in that capacity up to his retirement in 1934, and was engaged chiefly in the development of the electro-steam turbine. During his career he registered 130 patents for his inventions. In 1931 the General Electric Co. bestowed the Charles A. Coffin award on him for his work on turbine units.

JUNKERS, HUGO, died Feb. 3, 1935.

KELLNER, MAX. American theologian and Orientalist, died in Cambridge, Mass., Aug. 5, 1935. Born in Detroit, Mich., May 21, 1861, he received the M.A. degree from Harvard University in 1885, and after simultaneous study at the Cambridge Theological School, the B.D. degree in 1885. Then he joined the faculty of the latter institution, serving successively as instructor in Hebrew (1887-91), assistant professor of Old Testament languages (1891-98), and full professor (1898-1907). From 1907 to 1922 he was professor of the literature and interpretation of the Old Testament. In the latter year, he retired as professor emeritus. His publications include *The Prophecies of Isaiah* (1895); *The Standard Inscription of Ashurnasirpal* (brochure, 1895); *The Assyrian Monuments Illustrating the Sermons of Isaiah* (1900); *An Outline Study on the History of the Hebrews* (1901); *An Outline Study on the Old Testament Literature and Religion* (1902), and *Magic—Its Origin and Survivals* (1934).

KEMPE, HARRY ROBERT. English electrical engineer, died at Brockham, Apr. 10, 1935. Born in 1852, he attended King's College, London, and began a three-year association with Sir Samuel Canning. He subsequently worked with Sir Charles Wheatstone and Sir W. H. Preece who were pioneers of the British telegraphy service. In 1871 he joined the Postal Telegraph Service at Southampton and on his retirement in 1913, he was principal technical officer and electrician to the Post Office. Also, he was examiner to the late inventions committee of the Air Ministry. Besides publishing the *Engineer's Year Book*, he wrote *Handbook of Electrical Testing*; *The Electrical Engineer's Pocket-Book*; *Alternating Currents*, and many papers on electrical subjects.

KENDAL, DAME MADGE (MRS MARGARET ROBERTSON GRIMSTON), died Sept. 14, 1935.

KINGSFORD-SMITH, AIR COMMODORE SIR CHARLES EDWARD, was lost Nov. 7-8, 1935.

KINGSMILL, ADMIRAL SIR CHARLES EDMUND. Canadian naval officer, died on Grindstone Island, Rideau Lakes, Ont., July 15, 1935. Born at Guelph, Ont., July 7, 1855, he entered the British Navy in 1869 and saw service in the Sudan (1884) and in the South Pacific for the next five years. In 1894 he was given command of the *Blenheim*. In 1908 he became rear admiral and returned to Canada to take over command of the Marine Service there. On his retirement from the active list in 1910, he was named director of the Canadian Naval Service. He served in that capacity up to 1920. In 1917 he was promoted to the rank of admiral on the retired list. He was the only Canadian to hold the rank of admiral in the Royal Navy. Admiral Kingmill's decorations include the Egyptian medal, bronze star, Officer of the Legion of Honor of France and Grand Officer of the Order of the Crown of Italy. In 1918 knighthood was conferred upon him.

KIRBY, GEORGE HUGHES. American psychiatrist, died at Portsmouth, N. H., Aug. 11, 1935. Born at Goldsboro, N. C., Feb. 9, 1875, he received the B.S. degree from the University of North Carolina in 1896, and the M.D. degree from the Long Island College Hospital and Medical School, New York, three years later. Between the years 1902-27, he served in various capacities in clinical psychiatry, psychopathology, mental diseases, and as director of the New York Psychiatric Institute. Of these, his 10-year term as professor of psychiatry at the Cornell University Medical College was outstanding. He joined the faculty of the College of Physicians and Surgeons of Columbia University, and held the chair of psychiatry up to his retirement in 1933. A member of the Medical Corps, U.S.A., in the World War, he helped organize a unit for the care of soldiers suffering from mental or nervous dis-

orders. From 1919 he was a consultant in neuro-psychiatry for the U.S. Public Health Service. A former president of the American Psychiatric Association, the New York Neurological Society, and the New York Society of Clinical Psychiatry, Dr. Kirby was an authority on alcohol psychoses, race psychopathology, and manic-depressive psychoses.

KITCHEN, KARL KINGSLEY. American newspaper man, died in New York City, June 21, 1935. Born in Cleveland, O., Mar. 2, 1885, he was graduated from Cornell University in 1906 and began his newspaper career on the staff of the Cleveland *Plain Dealer*. Removing to New York City, he joined the *Evening World* for which he wrote the "Man About Town" column. When publication of that paper ceased, he went over to the New York *Sun* and there conducted a similar column up to 1933. In the next year he entered into a partnership with Robert Adamson (q.v.) and Ray D. Lillibridge in a public relations firm. Besides being the author of *The Night Side of Europe* and *After Dark in the War Capitals*, he traveled extensively and wrote many magazine articles and syndicated reviews.

KOLLE, WILHELM. German bacteriologist, died at Weisbaden, Germany, May 10, 1935. Born at Lerbach, Nov. 2, 1868, he attended the universities of Göttingen, Halle, and Würzburg, and received the M.D. degree in 1892. In the next year, he joined the Robert Koch Institute for infectious diseases in Berlin and during 1897-99, directed an expedition to South Africa where he studied the treatment of leprosy and rinderpest (cattle plague). Again, in 1900, he led a similar expedition to the Sudan at the invitation of the Egyptian Government. Six years later, he was invited to occupy the chair of bacteriology at the University of Bern. In 1915 he succeeded to the directorship of the Chemo-Therapy Research Institute at Frankfurt, and in addition, became director of the State Institute of Experimental Therapy. On the League of Nations Hygiene Committee, he served as a member of the permanent standardization commission for therapeutical and bacteriological medicine. At the time of his death, he was engaged in cancer research. Dr. Kolle was co-author of *Handbook of Pathogenic Micro-Organisms* (1902) and *Book for Experimental Bacteriology* (1904).

KONDOURIOTIS, PAUL, died Aug. 22, 1935.

KOOK, CHIEF RABBI ABRAHAM ISAAC IACOMEN. Zionist leader, died near Jerusalem, Sept. 1, 1935. He was born at Graiva, near Dvinsk, Latvia, about 1865. He became a rabbi at Busk, Russia, and in 1904, accepted a rabbinate at Jaffa, Syria. He began to rebuild the city of Tel-Aviv and, in the capacity of president of the People's Court, which exercised official authority over litigations involving Jews of Palestine, he came to be known as the modern Solomon of Palestine. He founded the Yeshiva Merkazit Olmait in 1922 and thereafter served as its leader. He came to the United States in 1924 to attend the Zionist conference. Chief Rabbi Kook was consulted in 1929 by British authorities about the Arab disorders in Palestine. In 1933, he ordered a world fast as a protest against the persecution of Jews in Germany.

KOSLOFF, PETER KISMITCH. Russian scientist, died in Leningrad, U.S.S.R., Sept. 27, 1935. Born in Smolensk, Russia, in October, 1863, he was educated in Russian universities, where he specialized in archaeology, paleontology, and the Asiatic languages. His first expedition was to Central Asia in 1883-85 and four years later, he visited Chinese Turkestan with Nikolai Prjevalsky, his teacher, and subsequently worked in eastern Tienchan and Nanchan. His first independent expedition to the Mongolian Desert was in 1899, when he discovered Khara Khot. There he found statues and relics, and books in an ancient dialect—Sissya. His chief aim was to find the tomb of Genghis Khan, and during 1907-09, he was exploring in the Gobi Desert. His exploration was interrupted by the outbreak of the World War, but he resumed his work on the end of that conflict, this time financed by the Soviet Government. Crossing the Gobi again in 1925, he discovered the graves of several Hunnish princes. A report of this expedition was issued by the Russian Academy in that year. In 1929, in a small monastery near Khara Khot, he found a royal tomb, thought by many to be the long-sought tomb of Genghis Khan. However, Kosloff was never certain that this was so.

KOSTER, ROLAND. German diplomat, died in Paris, France, Dec. 31, 1935. He was born at Mannheim, Germany, in 1885. He entered the Foreign Service in 1913, becoming attaché at the Ministry of Foreign Affairs. Three years later, he was named secretary to the German Legation at The Hague, and in 1920, was appointed Counselor and Chargé d'Affaires at the Legation in Brussels. Transferred to the Legation at Prague in 1923 he subsequently received the appointment of Minister to Norway (1928-29), and then became director of the personnel department of the Ministry of Foreign Affairs. In 1932 he was appointed Ambassador to France, and in that capacity, skillfully represented Germany in such delicate situations as the discussions with Foreign Minister Laval on the Saar question, and with Chancellor Hitler, German Foreign Minister Baron Constantin von Neurath, and Ambassador François Poncet, of France, on such matters as the

Locarno treaty, the Rhineland zone, and the possible return of Germany to the League of Nations.

KUHN, MAJ.-GEN. JOSEPH ERNST, U.S.A., RET. American soldier, died at San Diego, Calif., Nov. 12, 1935. Born at Leavenworth, Kan., June 14, 1864, he was graduated from the United States Military Academy in 1885 and from the United States Engineering School at Willets Point, N. Y., in 1888. Between the years 1889-1900, he served as engineer in charge of rivers, harbors, fortifications, and government buildings. Assigned to foreign duty in the Philippines, Japan, and China during 1903-05, he was military observer with the Japanese armies in 1904-05, and on his return to the United States the next year, was again assigned to engineering projects. He was occupied with the latter up to 1914 and the following year was sent to Berlin as military attaché at the United States Embassy there. In the United States again, he was given command of the 79th Division and served in Hawaii during 1920-23. He retired in 1925.

KUBYSHYEV, VALERIAN VLADIMIROVICH. Soviet public official, died in Moscow, U.S.S.R., Jan. 25, 1936. Born in Omsk, Siberia, in 1888, in 1904 he joined the Revolutionary Party, and was frequently imprisoned and exiled. In the Civil War against the Czechoslovaks and the Kolchaks, 1918-20, he served as a member of the Revolutionary Military Council, and in the following year became Soviet Plenipotentiary to Bokhara, and head of the State Electrification Committee. Subsequently he was secretary of the Central Committee of the Communist Party (1922); People's Commissar for Peasants' and Workers' Inspection (1923-26); chairman, Supreme Economic Council (1926-30); vice chairman, Council of People's Commissars (1927-29; 30-35), chairman, State Planning Commission, Gosplan (1931-34), which made him chief administrator of the second Five-Year Plan, and chairman, Commission of Soviet Control (1935). In the early days of the Soviet Government, Kubyshyev was considered one of the "big three" in Russian politics, the others being Stalin and Rykov.

LACHAISE, GASTON, died Oct. 18, 1935.

LARA, ISIDORE DE. English composer, died in Paris, France, Sept. 2, 1935. Born in London, England, Aug. 9, 1858, he studied the piano with H. Aguilar and made his first public appearance at the age of 13. After studying composition with Mizzucato and singing with Lamperti at the Conservatory in Milan, he received the Grand Prix for composition, and then returned to London where he composed songs and appeared as a singer. His operas, *The Light of Asia* and *Amy Robart* were produced in London in 1892 and 1893 respectively, *Mona* and *Messalina* in Monte Carlo in 1897 and 1899, *Le reveil de Bouddha* in Ghent, 1904, *Sanga* in Nice, 1906; *Solea* in Cologne, 1907; *Nail* in Paris, 1912; *Les trois masques* in Marseilles, 1913, and in Dusseldorf, 1913; *Le Vohier Blanc*, *Le Prince de Marocana*, and *The Three Musketeers*, all in Cannes. De Lara was made an officer of the French Legion of Honor, and a Commander of the Order of the Crown of Italy.

LAWRENCE, COL. THOMAS EDWARD, "LAWRENCE OF ARABIA," died May 19, 1935.

LEAN, CECIL. American actor, died in New York City, July 18, 1935. Born in London, Ont., Canada, July 7, 1878, he first came into prominence in 1903 when he played in *Miss Simplicity*. Going to Chicago in the same year, he appeared in *The Time, the Place and the Girl* at the La Salle Theatre. Returning to New York in 1908, he subsequently played in *Bright Eyes*, *The Military Girl* (his own work), and *The Man with Three Wives*. After appearing in London in 1914 at the Victoria Palace, he returned to New York the following year and played various rôles in *The Blue Paradise*, *Miss 1917*, *Look Who's Here*, *The Blushing Bride*, *Innocent Eyes*, *No No Nanette*, and *Everybody's Welcome*. His last appearance was in *The Bishop Misbehaves*. Mr. Lean was at one time associated with the late Florenz Ziegfeld and from 1912, appeared in many successes with his wife, Cleo Mayfield.

LEE, VERNON. See PAGET, VIOLET.

LENÔTRE, GEORGES (pseudonym of L. L. T. GOSSELIN). French author, died in Paris, Feb. 7, 1935. Born at Richemont, Lorraine, Oct. 7, 1857, he received his education at the École des Jésuites at Metz, and at the Collège de la Malgrange. Elected to the French Academy in 1932, he was a member of the Commission du Vieux-Paris, and the Société de l'Histoire de Paris et de l'Île-de-France. A historian of note, he was the author of many works on the French Revolution. His publications include: *La Guillotine pendant la Révolution* (1893); *Le Marquis de la Rouerie* (1898); *Mémoires et souvenirs sous la Révolution et l'Empire*; *Le Drame de Varennes* (1905); *Les Massacres de septembre* (1907); *Bleus, Blancs, et Rouges* (1912); *Les Noyades de Nantes* (1912), and *Prussiens d'hier et de toujours* (1915).

LEVI, SYLVAIN, died Oct. 31, 1935.

LEWIS, JOHN. Canadian journalist, died May 18, 1935, in Toronto, where he was born, Jan. 17, 1858. He abandoned the study of law to take up newspaper work in 1881 when he joined the staff of the Toronto *World*. From 1892 to 1902 he was editorial writer on the Toronto *Globe* and later

became editor-in-chief of the *Star*. In 1920 he served as editor of Liberal publications at Ottawa, but resigned the following year to return to the Toronto *Globe*. In 1925 he was summoned to the Canadian Senate. Senator Lewis wrote *British Diplomacy and Canada* (1907); *Democracy* (1908); *Life of George Brown* (1906, "Makers of Canada Series"); and *Mackenzie King, the Man, His Achievements*.

LICHTENBERG, LEOPOLD. American violinist, died in Brooklyn, N. Y., May 16, 1935. Born in San Francisco, Nov. 22, 1861, he began studying the violin with Beaudjardin and made his first public appearance at the age of eight. In 1873 he came under the tutelage of Henri Wieniawski and spent three years in Brussels with him. Then he studied under Lambert in Paris, and after further study with Wieniawski, won first prize at the Brussels Conservatory in 1876. Following his return to the United States, he was soloist with the Theodore Thomas concerts in 1877 and toured Europe during the next three years. Back in the United States, he played with the Boston Symphony Orchestra for a time and then settled in New York where he became head of the violin faculty of the National Conservatory of Music in 1899. He was a member of the Margulies Trio that came to rank with the foremost chamber-music organizations in the United States.

LIEBERMANN, MAX, died Feb. 8, 1935.

LIGGETT, LIEUT. GEN. HUNTER, U.S.A., RET., died Dec. 30, 1935.

LIGGETT, WALTER WILLIAM. American editor and newspaper publisher; assassinated in Minneapolis, Minn., Dec. 9, 1935. Born at Benson, Minn., Feb. 14, 1886, he attended the Minnesota Agricultural College during 1904-05, becoming, in the latter year, a newspaper reporter. In that field, he served successively as managing editor of the *skagway Alaska* (1908-10), the *Fargo (N. Dak.) Courier-News* (1917-18), and the *New York Call* (1922). Also, during 1923-25, he worked on various newspapers in New York and began free lance writing in 1925. From 1930, he was editor of the magazine, *Play Talk*. Liggett attacked the administration of Governor Olson in his *Midwest American*, which was established in Minnesota in October, 1933. This weekly was allied with the Farmer-Labor Party in Minnesota. His publications include: *The Frozen Frontier* (1926); *The River Riders* (1927); *Pioneers of Justice* (1930); and *The Rise of Herbert Hoover* (1932).

LIJ YASU. Former ruler of Ethiopia, died at Mount Cara Mouleta, November, 1935. Born at Wollo-Gallo, in 1897, he reigned between the years 1913-16, being deposed in the latter year for his leanings toward Mohammedanism, because of which he was excommunicated from the Ethiopian Coptic Church, and for his failure to overcome enmity with tribal chiefs. He was succeeded by his cousin, Ras Tafari, who became Haile Selassie I of Ethiopia. See *ETHIOPIA* under *History*.

LIMANTOUR, JOSE YVES. Mexican statesman, died in Paris, France, Aug. 26, 1935. Born in Mexico City, Dec. 26, 1854, he was educated for the law. Appointed Minister of Finance in the government of Porfirio Diaz he held the portfolio from 1893 to 1911. During his administration of the office, he effected many economic reforms, among which were the elimination of the alcabala, a tax on all sales of real estate and merchandise, the establishment of a monetary system on the gold basis, and the consolidation of railways into a national system controlled by the government. When the Diaz government was overthrown in 1911, Limantour left the country and settled in Paris. In 1907 he was elected to the French Academy of Science, the first Mexican to be so honored for his financial achievements.

LINDENTHAL, GUSTAV, died July 31, 1935.

LINSINGEN, GEN. ALEXANDER VON. German soldier, died in Hanover, June 5, 1935. Born at Hildesheim, Hanover, Feb. 10, 1850, he entered the Prussian Army in 1868 and was commissioned a lieutenant in the 17th Infantry Regiment the following year. He served in the Franco-Prussian War (1870-71) and received the Iron Cross. In 1909 he commanded the second army corps at Stettin with the rank of lieutenant general. In the World War he was active first on the Western Front, where he commanded troops in the battles of Mons, the Marne, and in the early fighting at Ypres. In 1914 he took over a command on the Eastern Front, aided the Austrians in the Carpathian Mountains, and defended the Austro-German front against the Russian advance. The crowning point of his career was reached when he recovered Galicia and took the fortress at Brest-Litovsk. He led his troops into the Ukraine in March, 1918, and was promoted to the rank of colonel general by the Kaiser. In June of that year, he was appointed commander-in-chief of Brandenburg. His plan to put down the revolution in Berlin, in November, 1918, by an airplane bombardment was thwarted by the War Ministry and he resigned and went into retirement in Stettin and Hanover.

LITTLE, ARTHUR D(ERON), died Aug. 1, 1935.

LOCATELLI, ACHILLE, CARDINAL. Italian prelate of the Roman Catholic Church, died in Rome, Apr. 5, 1935. Born at Seregno, Milan, Mar. 15, 1856, he attended the seminaries of Monza and Rome and was ordained a priest in 1879. He was sent to Spain as Papal Legate in 1884 and subsequently represented the Vatican in Brussels, Paris, and Vienna. Following his return to Rome in 1889, he

served as attaché to the Papal Secretary of State. In 1906 he was named Titular Bishop of Thessalonica. Then he went to South America where he spent 10 years as Intercuncio to Argentina, Paraguay, and Uruguay. In 1916 he was in Belgium in the same capacity, and in 1918, in Spain. On the elevation of Cardinal Achille Ratti to the papacy as Pope Pius XI in 1922, he was raised to the cardinalate and given charge of the Church of San Bernardo alle Terme. He became protector of the archconfraternity of Lombards and Cardinal protector of the Brothers of the Holy Family. Cardinal Locatelli was the author of two books on dogmatic theology.

LODER, BERNARD CORNELIUS JOHANNES, died Nov. 4, 1935.

LOEFFLER, CHARLES MARTIN TORNOW, died May 19, 1935.

LONG, HUEY (PIERCE), died Sept. 10, 1935.

LONG, RAY. American editor, died at Beverly Hills, Calif., July 9, 1935. Born at Lebanon, Ind., Mar. 23, 1878, he received a common school education and entered the field of journalism. In 1900 he joined the staff of the *Indianapolis News* as a reporter, becoming, five years later, managing editor of the *Cincinnati Post*. He served in that capacity on the *Cleveland Press* during 1908-10, and the following year, was associate editor of *Hampton's Magazine*. Between the years 1911-18, he was editor of various magazines, and from 1919 to 1931 was president and editor-in-chief of the *International Magazine Co.*, publishers of William Randolph Hearst's *International-Cosmopolitan*, *Good Housekeeping*, *Harper's Bazaar*, *Motor*, and *Motor Boating*. During 1931-32 he was chairman of the board of directors of Ray Long and Richard Smith, Inc., a book-publishing firm which went into bankruptcy in 1933. About this time he removed to Hollywood where he was editor of *Photoplay*, a movie magazine.

LORAINE, ROBERT, died Dec. 24, 1935.

LUKEMAN, (HENRY) AUGUSTUS, died Apr. 3, 1935.

LUMSDEN, DAME LOUISA INNES. Scottish educator, died at Edinburgh, Jan. 2, 1935. Born Dec. 31, 1840, she attended Girton College, Cambridge, where she remained as classical tutor during 1873-75. She became a member of the staff of Cheltenham Ladies' College in 1875 and two years later, was the first headmistress of St. Leonard's School, St. Andrews. She filled that post until 1882. Three years later, she became the first warden of University Hall for Women at the University of St. Andrews, and retired in 1900. Dame Lumsden was a member and chairman of two school boards in Aberdeenshire from 1888 to 1890, and was created Dame Commander of the Order of the British Empire in 1925. Also, she was a Governor of Girton College and a leader of the woman suffrage movement in Scotland. She wrote *Lessons in German*, "Position of Women in History" in *The Position of Women, Actual and Ideal*, "Education of Women in St. Andrews" in *Votive Tabella*, the Quincentenary Book of St. Andrews, *Memories of Aberdeen, a Hundred Years Ago*, and *Yellow Leaves, Memories of a Long Life* (1933).

LYON, DAVID GORDON. American Orientalist, died in Boston, Mass., Dec. 4, 1935. Born at Benton, Ala., May 24, 1852, he received the A.B. degree from Howard College, Alabama, in 1875, and the Ph.D. degree from the University of Leipzig in 1882. On his return to the United States he joined the faculty of Harvard University where he served successively as Hollis professor of divinity (1882-1910), and Hancock professor of Hebrew and other Oriental languages. He retired as professor emeritus of the latter chair in 1922. In 1891 he was named the first curator of the Semitic Museum. During 1906-07, he directed the American School for Oriental Study and Research at Palestine. A fellow the American Academy of Arts and Sciences, Dr. Lyon was recording secretary of the American Oriental Society during 1886-95, and president of the Society of Biblical Literature in 1910. He wrote *Keilschrifttexte Sargons Konigs von Assyrien* (1883); *An Assyrian Manual* (1886), and *Harvard Excavations at Samaria, 1908-10* (co-author, 2 vols., 1924). Also, he edited with George F. Moore in 1912, *Studies in the History of Religions*.

MCCADAMS, CLARK. American newspaper editor, died in St. Louis, Mo., Nov. 29, 1935. Born in Jersey Co., Ill., Jan. 29, 1874, he attended Shurtleff College, Ill. He became editor of the Alton (Ill.) *Republican* and subsequently joined the staff of the St. Louis *Post-Dispatch*, succeeding in 1929 to full charge of its editorial page on which he conducted for more than 20 years, the column "Just a Minute." Much of his own verse, especially his *Panetela* verses, so-called because of their slender construction, with two or three words to the line, also appeared on this page. During 1929-30, he was part-time instructor in journalism at Washington University. His chief avocation was the conservation of wild life, and as an authority on migratory birds, he was appointed on the Federal Advisory Board on Migratory Birds in 1913, and served as a member until 1932. Also, he was a founder of the St. Louis Artists Guild and its president from 1913. The study of archeology, another avocation from boyhood, led to the publication of his only book, *Archeology of Illinois*.

MACBETH, JAMES CRUICKSHANK HENDERSON. Scottish code expert, died in New York City, Mar. 21, 1935. Born in Aberdeen, Scotland, about 1877, he attended the University

there, and received the M.D. degree. In 1912 he became associated with the Marconi Wireless Telegraph Co., Ltd., in London and devised the *International Code Book*. An expert cryptographer, Macbeth was employed during the World War in deciphering code messages for the British Government. Later, for the Marconi Co., he came to the United States in the further development of commercial codes and in the issuance of the *Wireless Press*, a monthly publication of the company. Also, he became an authority on the game of bridge and was the author of *Common Sense in Auction*, as well as of an earlier work, *Cryptography*.

MCCLENAHAN, HOWARD. American scientist and educator, died in Winter Park, Fla., Dec. 16, 1935. Born at Port Deposit, Md., Oct. 19, 1872, he received the E.E. degree from Princeton University in 1895 and the M.S. degree in 1897. From the latter date, he served on the faculty of Princeton University in the successive capacities of instructor (1897-1902); assistant professor (1902-06), and full professor of physics (1906-12). Dr. McClenahan served as dean of Princeton from 1912 until his retirement in 1925, when he became secretary of the Franklin Institute, Philadelphia, and editor of the Institute's journal. Also, from 1930, he was director of the Benjamin Franklin Memorial and the Franklin Institute Museum. For his study of the relief needs of the Belgians during the World War, he was decorated with the Order of the Crown of Belgium in 1919, and in the same year, served as president of the Association of Colleges and Preparatory Schools of the Middle States and Maryland. He wrote *Laboratory Directions in Experimental Physics* (1906).

MCCRAE, THOMAS. American physician, died in Philadelphia, June 30, 1935. He was born in Guelph, Ont., Canada, Dec. 16, 1870, and after graduating from the University of Toronto in 1891, he took post-graduate courses in London, Edinburgh, Gottingen, and at Johns Hopkins Hospital in Baltimore. He became an associate in medicine at the last of these institutions in 1904, leaving in 1912 to occupy the chair of medicine at Jefferson Medical College, Philadelphia, where he remained up to the time of his death. In 1924 Dr. McCrae was Lumleian lecturer at the Royal College of Physicians in London, and in 1930, served as president of the Association of American Physicians. He collaborated with the late Sir William Osler in writing *Cancer of the Stomach*, and was editor of *Osler's System of Medicine and of Osler's Practice of Medicine*, in the original publication of which he collaborated with Dr. Osler.

MCCURDY, JAMES FREDERICK. Canadian Orientalist, died in Toronto, Mar. 30, 1935. Born in Chatham, N. B., Feb. 18, 1847, he attended the University of New Brunswick, the Theological Seminary at Princeton, N. J., and the universities of Gottingen and Leipzig. He taught Semitic languages at Princeton from 1873 to 1882, and from 1888 until his retirement as professor emeritus in 1914, he occupied the chair of Oriental languages at the University of Toronto. He was accredited with a reading knowledge of 20 Oriental languages. He directed the American School of Oriental Research in Jerusalem during 1911-12, and wrote *Aryo-Semitic Speech* (1881); *History, Prophecy, and the Monuments* (3 vols., 1894-96, 1901), and *Life of D. J. Macdonnell* (1897), as well as several commentaries on books of the Bible.

MCDONNITT, THE MOST REV. PHILIP RICHARD. American Roman Catholic bishop, died in Harrisburg, Pa., Nov. 11, 1935. Born in Philadelphia, July 12, 1858, he was graduated from La Salle College there in 1877, and then he attended St. Charles Borromeo Theological Seminary, Overbrook, Pa. Ordained to the priesthood in 1885, he served as assistant rector of the Church of the Nativity of the Blessed Virgin Mary in Philadelphia up to 1899 when he was named superintendent of the parochial schools of Philadelphia. Created a Domestic Prelate with the title of monsignor in 1910, he was named Bishop of Harrisburg in 1916. A former president of the American Historical Society in 1910, Bishop McDonnitt attained national eminence for his work in developing the educational system in Catholic institutions and in strengthening the Catholic press.

MACKEY, JAMES. American author and educator, brother of Percy Mackaye, the dramatist, died in Boston, Jan. 22, 1935. Born in New York City, Apr. 8, 1872, he received the B.S. degree from Harvard University in 1895. He was a research engineer in Boston for 28 years, and subsequently lectured in philosophy at Dartmouth College. He became known as an authority on mathematical philosophy, and presented to the American Philosophical Society at its 29th annual meeting, held at Columbia University in December, 1929, a radiation theory to replace the Einstein theory of relativity. During 1931-32 he was a lecturer in philosophy at Rollins College, Winter Park, Fla., and in 1932, was invited to the chair of philosophy at Dartmouth College. His works include: *The Economy of Happiness* (1906); *The Politics of Utility* (1906); *The Happiness of Nations* (1915); *Americanized Socialism* (1918); *The Logic of Conduct* (1924); *The Dynamic Universe* (1931), and *Thoreau—Philosopher of Freedom* (1931).

MACKENZIE, SIR ALEXANDER CAMPBELL, died Apr. 28, 1935.

M'KENZIE, DAN. British physician, died Nov. 19, 1935. He attended Glasgow University and after practicing general medicine for a time, he specialized in diseases of the throat, nose, and ear. He was president of the Otolaryngological (1926-27) and Laryngological (1929) sections of the Royal Society of Medicine and a fellow of the Royal Anthropological Society. A consulting surgeon to the Central London Throat and Ear Hospital, he was consulting Otolaryngologist to the French Hospital in London, and the Chiswick, Ealing, and Wimbledon Hospitals. Besides editing the *Journal of Laryngology* during 1911-20, he wrote *Diagnosis in Diseases of Throat, Nose, and Ear* (1908); *Diseases of the Throat, Nose, and Ear* (1920), and *Diathermy in Oto-Laryngology* (1930).

MACKENZIE, JOHN STUART. British philosopher, died at Chepstow, Dec. 6, 1935. Born near Glasgow, Feb. 29, 1860, he received the M.A. degree from Glasgow University in 1882 and then attended the universities of Cambridge and Berlin. In 1895 he was invited to occupy the chair of logic and philosophy at University College of South Wales and Monmouthshire, and retired as professor emeritus in 1915. President of the Moral Education League from 1908 to 1916, he lectured in India and America during 1920-23, and wrote *An Introduction to Social Philosophy* (1890, 2d ed., 1895), *A Manual of Ethics* (1893, 6th ed., 1929); *Outlines of Metaphysics* (1902, 3d ed., 1929); *Elements of Constructive Philosophy* (1917); *Outlines of Social Philosophy* (1918); *Fundamental Problems of Life* (1928), and *Cosmic Problems* (1931).

MCLEAN, ANGUS WILTON. American administrator, died in Washington, D. C., June 21, 1935. Born in Robeson Co., N. C., Apr. 20, 1870, he studied law at the University of North Carolina and established a practice in Lumberton in 1892. After serving as county attorney during 1892-1904, he formed a partnership with his cousin Neill Archibald McLean, and J. G. McCormick. Later he became senior partner in the law firm of McLean, Varser, and McLean. He organized and was president of the Bank of Lumberton from 1898 to 1914. Chairman of the Democratic executive committee of Robeson County in 1892 he was delegate-at-large to the Democratic National Convention of 1904 and 1912, and from 1916 to 1924 a member of the Democratic National Committee. During 1918-20 McLean was director of the War Finance Corporation in Washington and managing director of same in 1920-21. He served as Assistant Secretary of the Treasury and as a member of the Treasury's railway loan advisory committee in the same year. In 1925 he took office as governor of North Carolina for the term ending 1928, after winning the election by the largest majority ever given a candidate in that State. During his term of office he introduced prison administration reform and established a budget system. He was a former president of the North Carolina Bar Association and of the Scottish Society of America.

MCLENNAN, SIR JOHN CUNNINGHAM, died Oct. 9, 1935. MACLEOD, JOHN JAMES RICHARD, died Mar. 16, 1935. MADDEN, SIR CHARLES EDWARD, died June 5, 1935. MACONIGLE, H. (AROLD) VAN BUREN, died Aug. 29, 1935. MANNERS, CHARLES (SOUTHCOTE MANSERGH). English operatic bass, died in Dublin, I. F. S., May 3, 1935. Born in London, Dec. 27, 1857, he studied music with Dr. O'Donoghue in Dublin, at the Royal Academy of Music in London, and in Florence, Italy. He began his career with the D'Oyly Carte Opera Company in London, and made his first success in *Iolanthe*. From 1887 to 1890 he was the principal bass of the Carl Rosa Opera Company, and in the next two years, sang at Covent Garden and Drury Lane theatres in London. Soon after arriving in New York in 1893, he sang at the Seidl Orchestral Concerts and in 1896-97, was on a professional tour in South Africa. Later, with his wife, Fanny Moody, he organized the Moody-Manners Opera Company which presented grand opera in Great Britain and Ireland.

MARKBT, CURTIS FLETCHER. American geologist, chief of the U.S. Soil Survey, died in Harbin, Manchuria, in August, 1935. Born in Lawrence Co., Mo., July 19, 1863, he attended the University of Missouri and Harvard University. From 1890 to 1895, he was assistant geologist for the Missouri Geological Survey. In the latter year he joined the faculty of the University of Missouri, serving successively as instructor in geology (1895-97); assistant professor (1897-99), and full professor (1899-1911). He assumed charge of the Soil Survey of the U.S. Department of Agriculture in 1910, and from 1924 was chief of that division. He was pedologist for the Crude Rubber Survey in the Amazon Valley in 1923. Markbt received the American Geographical Society's Cullum medal in 1930.

MAKINKOVIC, VOYISLAV, died Sept. 18, 1935.

MAKLOWE, THOMAS. English newspaper editor, died at sea, Dec. 5, 1935. Born at Portsmouth, Mar. 18, 1868, he attended Queen's College, Galway, and the medical college of the University of London. Abandoning medicine for the newspaper field, he served first as a reporter, then as news editor, and in 1899, managing editor of the *Daily Mail*. During his régime, the *Daily Mail* published the Zinoviev letter (see NEW INTERNATIONAL YEAR BOOK for 1924,

p. 313). He retired in 1926 after more than 25 years as editor. From 1918 to 1926 he was chairman of Associated Newspapers, Ltd.

MARTIN, FRANKLIN H., died Mar. 7, 1935.

MATHEWS, JOHN ALEXANDER. American metallurgist, died at Scarsdale, N. Y., Jan. 11, 1935. Born at Washington, Pa., May 20, 1872, he received the M.S. degree from Washington and Jefferson College in 1896. Removing to New York in the same year, he became an assistant in assaying at Columbia University and received the Ph.D. degree from that institution in 1898. In 1900 he went to London and studied at the Royal School of Mines under Sir Roberts-Austen. Following his return to the United States, he became associated with the Crucible Steel Co. of America in 1902, as assistant manager of the Sanderson Works (1902-08), general manager and president of the Halcumb Steel Co. (1908-20), and as president of the Crucible Steel Co. (1920-23). From 1923 he was vice president and director of research for that concern. Among the honors bestowed on him were the Barnard Fellowship for Encouragement of Scientific Research (1900-01-02), the first award of the "Andrew Carnegie Gold Medal for Research" by the British Iron and Steel Institute (1902), and the Robert W. Hunt gold medal by the American Institute of Mining and Metallurgical Engineers (1928). Dr. Mathews was an authority on the metallurgy of iron and alloy steels, being keenly interested in electric furnace steel processes.

MAXWELL, BRIG. GEN. SIR ARTHUR. British banker, died in London, Jan. 20, 1935. Born in Belfast, Ireland, in 1875, he received his education in Dublin. Entering the Civil Service in 1893, he served in the Post Office until 1905 when he joined the banking firm of Glyn, Mills, and Co., in the capacity of secretary. In the World War he served successively as captain in the Eighth London Regiment, lieutenant colonel commanding the Eighth London and 23d London regiments, and as general officer, commanding the 174th Infantry Brigade. For his services in the War he was brevetted a brigadier general and received the Distinguished Service Order and the Order of St. Michael and St. George. For four years after 1920 he commanded the Second London Infantry Brigade of the Territorial Army, and from 1923 he was honorary colonel of the London Regiment. After the War he returned to Glyn, Mills, and Co., becoming managing partner in 1923. Two years later he was created a Companion of the Order of the Bath and in 1931, Knight Commander. President of the Institute of Bankers during 1931-32, he held directorates in the Union Bank of Australia, Ltd., the Royal Mail Steam Packet Co., and in several other shipping companies. He helped to reorganize the "Royal Mail Group" of companies.

MAYR, RICHARD. Austrian baritone, died in Vienna, Dec. 1, 1935. Born in Salzburg, in 1877, he studied at the University of Vienna and at the Conservatory. Although he had several earlier opportunities to appear on the stage, he did not make his debut until 1902, when he appeared as Hagen in *Gottterdammerung* at the Bayreuth Festival. Meeting with immediate success, he was made a permanent member of the Hofoper at Vienna, and became known as one of the greatest of Liedersingers of his time. He sang at the Bayreuth Festivals in the summers during 1908-14. In 1924, he made his first appearance in London in *Der Rosenkavalier* and his first New York appearance in *Die Meistersinger* in 1927.

MENDEL, LAFAYETTE BENEDICT, died Dec. 9, 1935.

MENDELSSOHN, FRANZ VON. German banker, died June 13, 1935. Born in Germany, in 1865, he studied law and then entered the banking business. In 1902 he became a partner in his father's firm, Mendelssohn and Co., and in the same year, served as Belgian Consul General in Berlin. He relinquished the latter post in 1913 to become a member of the upper house of the Prussian Diet. Chairman of the Committee of Trustees of the German-Dutch Financial Agreement, he was a member of the Provisional Economic Council from 1922. He was the first president of the German Group of the International Chamber of Commerce and held the same office, up to 1931, in the Berlin Chamber of Commerce and Industry, and of the Commerce and Industry Congress.

MENDENHALL, CHARLES ELWOOD. American physicist, died at Madison, Wis., Aug. 18, 1935. Born in Columbus, O., Aug. 1, 1872, he received the B.S. degree from the Rose Polytechnic Institute in 1894 and the Ph.D. degree from Johns Hopkins University in 1898. During 1894-95 he was an instructor in physics at the University of Pennsylvania and during 1898-1901, at Williams College. Then he joined the faculty of the University of Wisconsin and served successively as assistant professor of physics (1901-03), associate professor (1903-05), and full professor from 1905. His researches pertained to studies on the absolute value of gravity, high temperature measurements, and constants of radiation about which he wrote numerous important papers. A former president of the American Physical Society (1923-25), he was chairman of the division of physical sciences of the National Research Council. Also, he was fellow and former vice president in 1929 of the American Association for the Advancement of Science. He served in the World War as major in the science and

research division of the Signal Corps and Air Service.

MEYER, MAJOR HENRY CODDINGTON. American engineer, died at Montclair, N. J., Mar. 27, 1935. Born in New York City, Apr. 14, 1844, he received a private education. He served in the Civil War, and after being seriously wounded, in June, 1864, was promoted to the rank of major, awarded the Congressional Medal of Honor, and discharged for disability. In 1868 he organized the Henry C. Meyer Co., dealers in plumbing, glass, and steam fixtures, and founded the magazine, the *Sanitary Engineer*, in 1878. Major Meyer retired from business in 1882 to devote his time exclusively to his magazine, which was later named the *Engineering Record*. This periodical was the forerunner of the present *Engineering News-Record*. His interest in sanitary plumbing led to the passage of the Plumbing Laws of 1881. Another of his interests was the heating of railway cars by steam pipes. His *Water Waste Prevention*, published in 1884, did much toward reducing the prejudices frequently met by water-works authorities.

MICHURIN, IVAN VLADIMIROVICH. Soviet botanist, died at Michurinsk, U.S.S.R., June 7, 1935. Born in Pronsky Co., Riazan Province, Russia, in 1860, he attended the Riazan Gymnasium. After serving as a clerk for a time, he removed to Kozlov in 1875, where, eight years later, he bought a piece of land and began his horticultural activities. As a result of his experiments in hybridization and cross breeding, over a hundred new species of fruits and vegetables were obtained. In 1918 his farm came under the control of the People's Commissariat of Agriculture in the Soviet Government and came to the attention of Lenin in 1922 who placed the government's aid at Michurin's disposal. The Michurin Scientific Research Institute was founded in 1931, and he received the Order of the Red Banner, the Order of Lenin, and was given the title, Honored Scientist of the Republic. Also, the town of Kozlov was renamed Michurinsk in his honor.

MIELZNER, LEO. American portrait painter, died at Truro, Mass., Aug. 11, 1935. Born in New York City, Dec. 8, 1869, he received his art education at the Cincinnati Art Academy, Ecole des Beaux Arts, Julian Academy, and the Colarossi Academy in Paris, and studied under Kroyer in Denmark. During 1913-15 he was an instructor at the Art Students' League in New York. His work includes "Portrait of John Bassett Moore," Columbia University, N. Y.; "Portrait of Nathan Abbott"; "Portrait of Harlan Fiske Stone," Columbia University; "Portrait of Solomon Schechter," Jewish Theological Seminary, N. Y.; "Portrait of Moses Mielzner," Hebrew Union College, Cincinnati; "Portrait of Woodrow Wilson," Democratic Club, N. Y.; "Portrait of Elizabeth Milbank Anderson," Barnard College, N. Y. In addition, he is represented in the Metropolitan Art Museum, N. Y., the Boston Art Museum, and the Cincinnati Art Museum.

MILLER, FRANK AUGUSTUS. American art collector, died at Riverside, Calif., June 15, 1935. Born at Tomah, Monroe Co., Wis., June 30, 1857, he removed to California in 1872 and five years later, founded at Riverside, the Glenwood Mission Inn, a beautiful example of mission architecture. He enlarged it from time to time, always using rare artistic taste in building distinctive architectural features of the mission buildings. He gathered art treasures from all parts of the world for the mission, and in 1932, erected the latest addition, a chapel, which he dedicated to St. Francis of Assisi. In 1890 he built and, for 15 years thereafter, managed the Loring Opera House, and in like manner built and managed, also for 15 years after 1898, the Riverside and Arlington Electric Ry. In 1928 the Emperor of Japan decorated him with the Order of the Rising Sun for his efforts toward bettering relations between the United States and Japan.

MILLS, HARRIET MAY. American suffragist and social worker, died May 16, 1935, in Syracuse, N. Y., where she was born Aug. 9, 1857. She was graduated from Cornell University in 1879, and began her association with the New York State Woman Suffrage Association in 1892, taking part in the constitutional campaigns in New York in 1894 and in California in 1895. In the Suffrage Association, she served successively as recording secretary and lecturer (1892-96); organizer and lecturer (1896-1920), vice president (1902), and president (1910-13). In 1920 she was nominated the first woman to run on the Democratic ticket for Secretary of State of New York. Three years later she was appointed State Hospital Commissioner by Governor Alfred E. Smith, and in 1929, became assistant director of the State Democratic Bureau of Publicity and Information at Albany. In the State Democratic organization, she was associate chairman of the Democratic State Committee in 1922, and, at the time of her death, secretary of that Committee. Besides her political activities, Miss Mills organized one of the first Browning study clubs and was keenly interested in sociological work.

MITCHELL, CHARLES STANLEY. American banker, died at High Hill, N. Y., Aug. 13, 1935. Born in Rochester, N. Y., Apr. 20, 1882, he received a common school education and then entered the banking field. His first post was as a runner for the Astor National Bank in New York City. Then he became a teller in the Century Bank of New York and after a series of rapid promotions, was vice president of

the Century when it was united with the Chatham and Phenix. He resigned in 1924 to take the post of president with the Central Mercantile Bank. One year after he took office, the bank's total resources were increased by \$19,400,000. On the merger of the Central Mercantile with the Bank of United States in 1928, Mitchell became chairman of the board of directors. When that institution closed its doors in 1930, Mr. Mitchell ardently condemned the manner in which the affairs of the bank had been managed and, in the court proceedings that followed, all indictments against him were dropped. Mitchell did not resume business activity again until the early part of 1935 when he joined the firm of Tobey and Kirk, brokers.

MITCHELL, LANGDON ELWYN (pen name JOHN PHILIP VARLEY). American playwright, died Oct. 21, 1935, in Philadelphia, where he was born Feb. 17, 1862. After studying abroad for several years, he attended the law schools of Harvard and Columbia universities, and was admitted to the New York bar in 1886. Shortly after establishing a practice, he turned to writing. He is the author of the plays *In the Season*, produced in London in 1893; *Backy Sharp*, a dramatization of *Vanity Fair*, produced in 1899; *A Kentucky Belle*; *Step by Step*; *The New Marriage*; *The New York Idea*, produced in London in 1907; *The Kreutzer Sonata*, from the Yiddish of Jacob Gordon (1907), and *Major Pendennis*. His other publications include *Sylvian and Other Poems* (1884); *Poems* (1894); *Love in the Backwoods* (1896), and *Understanding America* (1927).

MLYNARSKI, EMIL Polish composer, died Apr. 5, 1935. Born at Kibarty in Suwalki, July 18, 1870, he received his musical education at the St. Petersburg conservatory where he studied the violin under Leopold Auer. He joined the orchestra of the Russian Imperial Musical Society at St. Petersburg in 1889, and later became instructor of violin at its Odessa branch. After touring Germany and England during 1890-91 as violin virtuoso, he was appointed conductor at the Warsaw Opera House in 1898. From 1901 to 1905 he conducted the Warsaw Philharmonic concerts and from 1904 to 1907, was director of the Warsaw Conservatory. On removing to London in 1908, he devoted his time to composing. During 1910-15 he was director of the Choral and Orchestral Union in Glasgow, and in 1919, he returned to his former posts in Warsaw as conductor at the opera and director of the Conservatory. He resigned the latter post in 1922. He came to the United States in 1929 to conduct the orchestras of the Curtis Institute and the Philadelphia Grand Opera Co. Also, he was a member of the faculty of the Curtis Institute of Music. He won the Paderewski prize at Leipzig in 1898 for his *Violin Concerto in D minor*. Also, he wrote the opera, *Eine Sommernacht* (Warsaw, 1923), and *Symphony in F*.

MOGYOROSSY, ÁRKÁD (ARCADIUS AVELLANUS). American Latinist, died in New York City, June 16, 1935. Born at Esztergom, Hungary, Feb. 6, 1851, he received his education in his native land and came to the United States in 1878. He settled in Philadelphia where, from 1894, he was editor and publisher of *Præco Latinus* (or *Latin Herald*), a Latin periodical for promoting the adoption of this language in speech. His publications include: *Palestra A Primer for Spoken Latin* (1893); *Arena Palæstræum* (1893); *Robinson Crusoe* (1897); *Medulla* (1898); *The Colloquia of Maturanus Corderius, the Teacher of John Calvin* (1904); *Fabula Tusculana* (1913) translations into Latin of Ruskin's *King of the Golden River* (1913), and *The Adventures of Captain Mago* (1914).

MOISSI, ALEXANDER, died Mar. 22, 1935. MONTAGUE, FRANCIS CHARLES. English historian, died at Oxford, Apr. 8, 1935. Born in London, Aug. 31, 1858, he received his education at University College, London, and Balliol College, Oxford. He was called to the bar in 1884 but in 1893 became professor of history at University College, London, and held office until his retirement as professor emeritus in 1928. Curator of the Indian Institute at Oxford during 1900-13, he was lecturer in modern history at Oriel College there from 1897 to 1923. His publications include *Limits of Individual Liberty* (1885); *Technical Education* (1887); *Life of Sir Robert Peel* (1888), and *Elements of English Constitutional History* (1894). Also, he contributed to the *Cambridge Modern History* (vol. viii, 1904) and Longman's *Political History of England* (vol. vii, "James I to Restoration," 1907), and edited Bentham's *Fragment on Government* (1891) and Macaulay's *Essays* (1903).

MOORE, FLORENCE. American musical comedy actress, died at Darby, Pa., Mar. 23, 1935. She was born in Philadelphia about 1887 and made her first appearance with her brother's stock company. She was married to Billy Montgomery in 1906, and together they formed one of the best known teams in vaudeville. Following her first Broadway appearance in New York City in *Hanky-Panky* in 1912, she subsequently played in *The Passing Show of 1916*; *Parlor, Bedroom and Bath*, which was her greatest success; *The Music Box Revue*; *The Greenwich Village Follies*; *Artists and Models*, and *The International Revue*.

MORGAN, JOHN LIVINGSTON RUTGERS. American chemist, died in New York City, Apr. 13, 1935. Born in New Brunswick, N. J., June 27, 1872, he received the B.S.

degree from Rutgers University in 1892, and the Ph.D. degree from the University of Leipzig in 1895. The next year he was an assistant in chemistry at Stevens Institute and in 1896, instructor in quantitative analysis at the Brooklyn Polytechnic Institute. He joined the faculty of Columbia University, and served successively as tutor in physical chemistry and chemical philosophy (1897-1901); adjunct professor of physical chemistry (1901-05), and professor from 1905. A fellow of the Chemical Society of London and of the American Association for the Advancement of Science, he wrote *The Theory of Solution and Its Results* (1897); *The Elements of Physical Chemistry* (1899, 5th ed., 1914); *Physical Chemistry for Electrical Engineers* (1906, 2d ed., 1909), and translated from the German of G. Helm *The Theory of Solution and Its Results* (1897).

MORRIS, EDWARD PATRICK, FIRST BARON, died Oct. 24, 1935.

MOSER, CHRISTOPHER OTTO. American agriculturist, died at Silver Springs, Md., July 11, 1935. Born in Dallas, Tex., May 29, 1885, he received the B.S. degree from the Texas Agricultural and Mechanical College in 1904, and served as State feed inspector for that institution the following year. He was a dairy expert with the U.S. Department of Agriculture at Washington, D. C., in 1907 and in the following year returned to the Texas Agricultural College as instructor in animal husbandry. In 1908 he organized the Moser Hygienic Dairy Co. of Dallas in which he served as president and general manager until 1912. In like manner he organized and managed the Coons-Moser Silo Co. (1910-15); North Texas Creamery Co. (1912-15), and the Moser Construction Co. (1910-15). He organized the American Cotton Growers Exchange in 1921 and served as secretary-manager (1921-25), and president and general manager (1925-30). From 1930 he was vice president and secretary of the American Cotton Cooperatives Association and vice president and secretary of the Cotton Stabilization Corp. Also he was president of the National Cooperative Council (1929-33); chairman of the American Institute of Cooperation (1929), and a member of the Texas Farm Bureau Federation (1919). Moser was a leading figure in the organization of the National Chamber of Agricultural Cooperatives, formed under the Hoover farm relief plan.

MULHOLLAND, WILLIAM. American hydraulic engineer, died in Los Angeles, Calif., July 22, 1935. Born in Belfast, Ireland, Sept. 11, 1855, he received his education at the Christian Brothers School in Dublin and came to the United States as a young man. Settling in California, he became a member of the Los Angeles Bureau of Water Works and Supply and from 1886, was superintendent and chief engineer of the Bureau. Also, he was chief engineer of the Department of Public Service in Los Angeles. He was best known for his work on the Los Angeles Aqueduct, the 250-mile water way which was constructed at a cost of \$24,500,000. Mulholland devised plans and estimates for this project and superintended the entire construction of it.

MURLIN, LEMUEL HERRERT. American clergyman and educator, died at Wayland, Mich., June 20, 1935. Born in Mercer Co., O., Nov. 16, 1861, he attended De Pauw University, graduating from its School of Theology in 1892 and from the Garrett Biblical Institute in 1899. He taught at Ft. Wayne College during 1877-86, entering the ministry in the latter year and becoming rector of Trinity Church at Ft. Wayne, Ind. He subsequently held various pastorates and returned to De Pauw University as instructor during 1891-92. From 1894 to 1911 he was president of Baker University, Baldwin, Kan., of Boston (Mass.) University (1911-25), and of De Pauw University (1925-28). He was a member of General Conferences of the Methodist Episcopal Church between 1900-1924, attending like conferences in London and Toronto.

MURPHY, CHARLES. Canadian senator, died Nov. 24, 1935, in Ottawa, where he was born, Dec. 8, 1863. He received the A.B. degree from the University of Ottawa, and after his call to the Ontario bar in 1891, he became associated with the law firm of Latchford and Murphy. From 1895 to 1902 he practiced alone, and in the latter year, joined the firm of Fisher and Murphy with which he was connected until 1910. In 1908 he was named a member of the Privy Council and in the same year, was elected to the House of Commons to represent County Russell. He was reelected in 1911 and 1917. From 1908 to 1911 he was Secretary of State, and in 1921, was appointed Postmaster General in the cabinet of Mackenzie King. He resigned from that post in 1926. In September, 1925, he was summoned to the Senate.

NAVIN, FRANK J. American lawyer and baseball club owner, died in Detroit, Mich., Nov. 13, 1935. Born in Adrian, Mich., Apr. 18, 1871, he graduated from the Detroit College of Law in 1897. In 1903 he interested Thomas H. Yawkey in baseball and persuaded him to buy the Detroit franchise in the newly formed American League. By 1907, Mr. Navin had obtained controlling interest in the Detroit Tigers and became its president. During his presidency the club won five American League pennants (1907-09, 1934, 1935) and in the last mentioned year the team won the World's Championship for the first time, defeating the Chicago Cubs. From 1919 he was a vice presi-

dent of the American League and for a short time in 1927 was acting president. The baseball park of the Tigers in Detroit was named for him.

NIENHAUS, CHARLES HENRY, died June 19, 1935.

NIEMAN, LUCIUS W. American newspaper publisher, died in Milwaukee, Wis., Oct. 1, 1935. Born in Bear Valley, Sauk Co., Wis., Dec. 13, 1857, he received a public school education and learned to set type. Subsequently he studied at Carroll College, and before he was 21 was reporter, editor, and managing editor of the Milwaukee *Sentinel*. In about the year 1878 he was invited to build up the *St. Paul Dispatch* and for about a year served as its managing editor. He returned to the *Sentinel*, and in 1882 the merger of Milwaukee's two papers opened a new field. Mr. Nieman acquired the Milwaukee *Journal* and by its fearless discussion of State and national affairs, its reputation as a powerful journal was early established, and it became one of the leading independent newspapers of the Northwest. In 1919, the *Journal* was awarded the Pulitzer Medal for "the most disinterested and meritorious service rendered by an American newspaper in 1918." Mr. Nieman relinquished active control of the paper about 1925.

NILES, WILLIAM WHITE American lawyer, died in Riverdale, N. Y., Jan. 12, 1935. Born at Waterford, N. Y., July 22, 1860, he graduated from Dartmouth College in 1883, and received his law degree from the Albany (N. Y.) Law School in 1886. In that year he was admitted to the New York bar and began the practice of law. He served one year in the New York Assembly (1895), and five years later served as counsel for the sub-committee on borough government of the New York City Charter Revision Commission, and drafted the chapter on borough government. Subsequently, he was a member of the Ives New York City Charter Commission and drafted the chapters on education, charities, and correction. In 1907, Mr. Niles conceived the idea of the Bronx River Parkway and drafted the law creating the Bronx River Parkway Commission, on which he served as vice president until 1925 when the Parkway was opened and the Commission disbanded. Appointed a member of the Taconic State Park Commission in 1927 he was elected chairman in 1930. From 1895 he served as a member of the board of governors of the New York Zoological Society, and was the secretary in 1926. The New York Society of Arts and Sciences awarded him its gold medal for his work on the Bronx River Parkway Commission.

NOETHER, EMMY German mathematician, died in Bryn Mawr, Pa., Apr. 14, 1935. Born in Erlangen, Germany, Mar. 23, 1882, she was educated at the University of Erlangen, and after receiving the degree of Ph.D., became an instructor in mathematics at the University of Göttingen. She remained at the University until 1933 when the "non-Aryan" campaigns of the Nazi Government brought her to America. She was invited to become associated with the department of mathematics at Bryn Mawr, and also lectured at the Institute of Advanced Study at Princeton University. Miss Noether was considered one of the world's ablest mathematicians, who made startling changes in algebra and revolutionized the style of thinking in that branch of science. After her death, the Emmy Noether Memorial Fund was established at Bryn Mawr for advanced work in mathematics.

NOONAN, TOM American evangelist, died in Brooklyn, N. Y., July 25, 1935. Born in New York City in 1878, he was a criminal at 16, and while imprisoned at Dannemora, N. Y., was impressed by a visiting preacher's words. After his release, he visited Mrs. Maud Ballington Booth in October, 1896, who found him work at Hope Hill, a country home for ex-convicts. In 1904 he went to Doyers Street, New York City, to take over the work of the Rescue Society, which had been established in 1893. For 32 years he labored there among the friendless and homeless and made the work of the Mission known throughout the country. He began to broadcast the mission service on Sunday afternoons in 1925, and after an interruption, the programme was resumed in 1929, with amazing success, and thousands of persons became interested in Tom Noonan and his work. In February, 1930, he conducted a revival meeting in Queens, New York. His work earned for him the title of "Bishop of Chinatown."

NORRIS, CHARLES American physician, died in New York City, Sept. 11, 1935. Born in Hoboken, N. J., Dec. 4, 1867, he was educated at the Sheffield Scientific School (1888) and at the College of Physicians and Surgeons (1892); also, studying abroad from 1894 to 1896. In the latter year he returned to the United States and became an instructor in pathology at Bellevue Hospital, New York City, which he held until 1904 when he received the appointment of director of the laboratory at Bellevue and Allied Hospitals. In 1918 he was made Chief Medical Examiner for New York City by Mayor John F. Hylan, his position being created as successor to the Board of Coroners. As chief medical examiner of the city of New York, he passed upon all the sudden deaths in the City, and after extensive research became an authority on wood alcohol, tetra ethyl lead, and carbon monoxide poisoning. At various times he taught in Cornell, Fordham, and New York

universities, and in 1934 received the gold medal of the New York Academy of Medicine.

NORTH, FRANK MASON American Methodist clergyman, died in Madison, N. J., Dec. 17, 1935. Born in New York City, Dec. 3, 1850, he graduated from Wesleyan College in 1872, and was ordained in the Methodist ministry in the following year. He held various pastorates, and was stationed in New York City from 1884 to 1887, when Calvary Methodist Episcopal Church was erected. In 1892, he became corresponding secretary of the New York City Church Extension and Missionary Society, and in the same year took over the editorship of *The Christian City*. Two years later he became corresponding secretary of the National City Evangelical Union of the Methodist Episcopal Church. He relinquished these three positions in 1912 to become corresponding secretary of the Board of Foreign Missions of the Methodist Episcopal Church, becoming secretary to the Council in 1924, and secretary emeritus in 1928. From 1912 to 1916 he was chairman of the executive committee of the Federal Council of the Churches of Christ in America, and president of the Council from 1916 to 1920. During his presidency he supervised reconstruction work in France and Belgium, and for his services was made a Chevalier of the Legion of Honor (1919), and Officer of Public Instruction, France (1920). Dr. North was the author of many hymns.

NORTHRUP, WILLIAM PERRY American pediatrician, died in New York City, Nov. 20, 1935. Born in Peterboro, N. Y., Jan. 11, 1851, he was graduated from Hamilton College in 1872, and taught Greek at Knox College, Illinois, from 1872 to 1876, when he left to take up the study of medicine. He graduated from the College of Physicians and Surgeons, New York, in 1878, and in 1893 became adjunct professor of pediatrics in University and Bellevue Hospital Medical College (New York University), three years later becoming a full professor, and after 1919, professor emeritus. Dr. Northrup was one of the first practicing pediatricians in New York City, and from 1919 was attending physician to the Presbyterian Hospital and consulting professor of its pediatric service. It was at this hospital that he introduced the first open-air hospital ward. He was also consulting physician to various hospitals throughout the city. In 1926 he retired from private practice. Besides contributing to medical journals on the open-air treatment of pneumonia, he was American editor for Ashley & Wright's *Diseases of Children* (1900), and of Nothnagel's *Encyclopedia of Practical Medicine*, Amer. ed., vol. iv (1902). He contributed the article on diphtheria to this last-named work.

OBRECHT, EDMOND M. Roman Catholic clergyman, died at Gethsemane, Ky., Jan. 4, 1935. Born in Stotzheim in the department of Bas Rhin, France, Nov. 13, 1852, he was educated at the Seminary of Strassburg. After service in the Franco-Prussian War, he entered the Seminary at Séz in Normandy and later studied at the Sorbonne, Paris. He entered the Trappist order in 1874 and was ordained priest in 1879. During the first year of his priesthood he was made vice procurator general of the Order. His first assignment in the United States was to New York, and in 1898 he was appointed Superior of the Abbey at Gethsemane, being elected Abbot by the members of the community in accordance with the rules of the Order. In 1904 he was appointed visitor and administrator of the Mariannhill Monastery in South Africa, which he visited annually until 1908. Also, he held that office for Palestine, China, and Japan. He was appointed special visitor and superior administrator of all the Trappist monasteries in the United States and Canada in 1925. The double anniversary of his 50 years in the priesthood and the 25th year of his rule of the Abbey was celebrated in 1924, and Pope Pius XI conferred the purple zucchetto, worn by Bishops of the Church, upon him.

OCHS, ADOLPH S (IMON), died Apr. 8, 1935.

O'CONNOR, THOMAS V (ENTRY) American labor leader, died in Buffalo, N. Y., Oct. 17, 1935. Born in Toronto in 1870, his parents moved to Buffalo in 1872, and after attending the public schools he obtained work upon the docks. He rose to be a master engineer and master, and his early interest in labor led to his election as president of the Licensed Tugmen's Association of the Great Lakes in 1906. Two years later he was elected president of the International Longshoremen's Association, and during his term made every effort to avoid strikes, particularly in 1919. He resigned in 1921 to become vice chairman of the United States Shipping Board. He succeeded to the chairmanship in 1924, was reappointed in 1926, and retired in 1933. Mr. O'Connor played an important part in shaping the policy of the American merchant marine, and was an advocate of the Jones-White Act of 1928. He was a member of the New York State Industrial Board in 1921, and of the advisory council of Lincoln Memorial University, from which he received the degree of LL.D.

OLDER, FREMONT, died Mar. 3, 1935.

OLSON, HARRY American jurist, died in Oak Park, Ill., Aug. 1, 1935. Born in Chicago, Aug. 4, 1867, he attended Washburn College, Kansas (1887-88), graduated from the Union College Law School in Chicago, and was admitted to the Illinois bar in 1891. From 1896 to 1906 he

served as assistant State Attorney for Cook Co., and then was appointed chief justice of the newly created Municipal Court of Chicago. He held this office until his defeat in 1930 when he retired to private practice. Judge Olson was considered responsible for the development of the Municipal Court, which was a revolution in Chicago's municipal system. In 1913 he established a psychopathic laboratory in connection with the Court, and with Dr William J. Hickson, its head, instituted a series of character tests, similar to intelligence tests. It was the Judge's belief that criminals had an incurable defect in the brain that was largely hereditary, and that by eugenics, the criminal population of the country could be wiped out. In the Republican primaries for Mayor in 1921 he was unsuccessful, and in 1925 served as a member of a committee of the American Law Institute which was to draft a model code of criminal procedure for recommendation to State legislatures throughout the country.

OSBORN, HENRY FAIRFIELD, died Nov. 6, 1935.

OWRE, ALFRED, died Jan. 2, 1935.

PACELLI, MARQUIS FRANCESCO. Vatican statesman, died in Vatican City, Apr. 22, 1935. Born in Italy in 1874, a brother of Eugenio, Cardinal Pacelli, Papal Secretary of State, he first came into prominence with the settlement of the Lateran Treaty creating the State of Vatican City in 1929. Signor Pacelli acted as a secret mediator between Pope Pius XI and Premier Benito Mussolini, and for over two years carried proposals and counter-proposals between the two principals. The Pope made him a Marquis for his services in this important matter. In 1926 he attended the 28th Eucharistic Congress at Chicago.

PAGET, VIOLET (pseudonym, "Vernon Lee"). English author, died in Florence, Italy, Feb. 13, 1935. Born in 1856, she settled in Italy in 1871, and at the early age of 24 published what was one of the first excursions into the little known 18th century—*Studies of the Eighteenth Century in England*. This was followed by various works, including *Euphonia*, essays on Renaissance (1884); *Renaissance Fancies and Studies* (1895); *The Spirit of Rome* (1905); *Gospels of Anarchy* (1908); *Laurus Nobilis* (1909); *The Tower of Mirrors* (1914); *Louis Norbert* (1914); *Satan the Waster* (1920); *The Golden Keys* (1925). Her latest work, *Music and Its Lovers* (1932), was considered one of the most complete of its kind. In 1924, Durham University made her Honorary Doctor of Letters.

PALLIS, ALEXANDER. A modern Greek scholar, died at Liverpool, Eng., Mar. 18, 1935. Born in Piræus, Greece, in 1851, he was educated at the Gymnasium and University of Athens, and for many years was associated with the firm of Ralli Brothers of Athens and Liverpool. In 1898 he became a naturalized British subject. Mr. Pallis first came into prominence with the publication of a modern popular version of the Gospel of St. Matthew in the *Akropolis*, an Athenian newspaper, which caused riots in the city, and led the Synod to prohibit all modern versions of the Greek Testament in Greece. He had long advocated the use of popular speech in literature in opposition to the affected literary language of his time. Other of his writings in Greek were: *The Four Gospels* (1902); *The Iliad* (1904); Euripedes' *Cyclops* (1906); translations of *The Merchant of Venice* and *Henry IV*; Sophocles' *Antigone*, and Kant's *Critique* (1904), and a collection of his own poetry (1907). His first publication in English was *A Few Notes on the Gospel According to St. Mark and St. Matthew* (1903), which was followed by part of the Iliad, an annotated edition of St. Paul's Sermon to the Romans, notes on St. John and the Apocalypse; notes on St. Luke and the Acts; a paper on Fascism, and a commentary on the seventh book of Thucydides.

PARKER, WALTER HENRY. British sea captain, died at Woking, Surrey, Nov. 7, 1935. Born in 1869, at an early age he was an apprentice on a sailing vessel, and rose through the grades to the command of a ship. In 1894, Parker joined the Royal Mail Steam Packet Co. and from 1906 commanded various of the line's boats. During the Boxer Rebellion, he served as acting lieutenant on H.M.S. *Hermione*, and in 1901 received the China Medal. During the World War, from 1915 to 1917, he commanded H.M.S. *Medusa* on patrol in northern waters, and subsequently acted as Commodore of the North Atlantic Convoys, being mentioned in both American and British dispatches for his success in running the German submarine blockade. In 1919 he was made a Commander of the British Empire. He returned to the merchant marine in 1920, and when the R.M.S.P. Co. acquired the White Star Line in 1927, he was given command of the *Homeric*, and in the following year of the *Olympic*. He retired in 1929. Subsequently he served as Nautical Assessor to the Court of Appeal and Home Office. Besides various works on nautical subjects, he wrote a biography, *Leaves from an Unwritten Logbook* (1931).

PARSONS, H(ARRY) DE B(ERKELEY). American consulting engineer, died in New York City, Jan. 26, 1935. Born in that city on Jan. 6, 1862, he graduated from Columbia University in 1882, and from Stevens Institute of Technology in 1884. In the following year he entered upon the practice of his profession, and six years later became professor of steam engineering at Rensselaer Polytechnic Institute in Troy, N. Y., retiring in 1907 as professor

emeritus. Mr. Parsons was consulting engineer for many projects, and served as a member of the New York State Voting Machine Commission (1898-1914); as chairman of the Commission of Street Cleaning and Waste Disposal of New York City (1906-07); with the Metropolitan Sewerage Commission (1908-14), and as consulting engineer for the New York City Board of Estimate in connection with the Catskill water supply (1909-11). During the World War he was in the district appraisal office at the Detroit Bureau of Aircraft Production. A member of various engineering societies, in 1925 he was awarded the Thomas Fitch Rowland Prize and in 1930 the Croes Medal. Besides contributing papers to technical publications, he wrote *Steam Boilers: Their Theory and Design* (5th ed., 1917); *Disposal of Municipal Refuse* (1906), and *Tidal Phenomena of the Harbor of New York*.

PAYNE, JOHN BARTON, died Jan. 24, 1935.

PEARSON, ALFRED CHILTON, died Jan. 2, 1935.

PECK, ANNIE S., died July 18, 1935.

PHOTIUS II MANIATES. Ecumenical Patriarch and Archbishop of Constantinople and New Rome, died at Istanbul, Turkey, Dec. 29, 1935. Born at Prinkipi in 1874, he was educated at a Greek school in Philippopolis, Bulgaria, and subsequently studied at the universities of Athens, Munich, and Lausanne. He entered the ministry of the Greek Church in 1902, became vicar of Philippopolis, and in 1906, upon the expulsion of the Greek Bishops, he was given charge of all the Greek communicants in Bulgaria. After 1914 he went to Constantinople, and in 1919 became head of the Pera community, holding the title of Bishop of Eirenopolis. Five years later he was promoted to Metropolitan of Philadelphia, and in the following year translated to Derkos, and on the death of Basil III Georgiades in 1929 was elected his successor. As such, he held leadership over five sees in Turkey, four in Italian Dodecanese, one in Prague, one in Sydney, one in New York City, and others in Finland and Estonia. From 1933, Photius' temporal power had been seriously curtailed by the edict of the Turkish Government laicizing schools and hospitals.

PILSUDSKI, JOSEF CLEMENS, died May 12, 1935.

PIRENNE, HENRI. Belgian historian, died at Brussels, Oct. 24, 1935. Born in Verviers, Dec. 23, 1862, he was educated at the universities of Liège, Paris, Leipzig, and Berlin. He began his career as a lecturer in mediæval history at Liège, in 1885, and in the following year was appointed to the chair of history at the University of Ghent from which he was retired as professor emeritus in 1930. An ardent patriot, he was interned in a German prison camp during the World War. Dr Pirenne was honored by many universities and learned societies throughout Europe, and in 1922 delivered a course of lectures on "The Origin of Cities in Western Europe" at Princeton University. In the following year he served as president of the 5th International Congress of Historic Sciences held at Brussels. His more important publications include: *Histoire de Belgique* (7 vols., 1900-32, in many editions); *Recueil de documents relatifs à l'histoire de l'industrie drapière en Flandre*, with G. Espinas (4 vols., 1906-24); *Les Étapes de l'histoire sociale du Capitalisme* (1914); *Souvenirs de captivité en Allemagne* (1920); *La Belgique et la guerre mondiale* (1929); *Bibliographie de l'histoire de Belgique*, with H. Nowe and H. Obreen (3d ed., 1931).

PONTING, HERBERT GEORGE. British explorer and photographer, died in London, Feb. 7, 1935. Born about 1871, he was educated at Wellington House College, Leyland. He went to California in 1900 and in the following year was a war correspondent for *Leslie's Weekly*, New York, with the American army in the Philippines. Also he served as a correspondent for *Harper's Weekly* with the first Japanese Army in Manchuria during the War with Russia, for which he received the Japanese Medal. His interest was early attracted by photography, and in 1909 he exhibited his photographs at the Japan-British Exhibition, and in the same year won the highest award at the Dresden International Photographic Exhibition. In the following year he was appointed photographer with Scott's last South Pole Expedition, serving until 1913. Upon his return he exhibited photographs of the Antarctic at the Fine Arts Gallery, London, and for many years lectured upon the subject of the Expedition. In 1933 he completed a motion picture record of the Expedition, which he synchronized with his own lecture upon the subject. He received the King George V Polar Medal and the Royal Geographic Medal for Antarctic Exploration. In 1918 he served as a member of the Spitsbergen Expedition. A contributor to both American and British periodicals, he was the author of *Fujisan* (1905); *Japanese Studies* (1906); *In Lotus-Land: Japan* (1910); *The Great White South* (1921).

POROVICS, ALEXANDER. Hungarian banker, died in Budapest, Apr. 15, 1935. Born in 1862, he was educated at Budapest University, and began his financial career in the office of the Hungarian Minister of Finance in 1882. He was Under Secretary of State in 1903, and three years later became a Deputy. In the second cabinet of Dr. Wekerle (1906-09) he served as a financial adviser, becoming a Privy Councillor in 1908. In the following year he was made Governor of the Austro-Hungarian Bank. In 1918 he again entered the political arena and served as Minister of Finance in Wekerle's third cabinet, but retired

after the Armistice. He was financial member of the Hungarian Peace delegation in 1920, and in 1921 served as president of the Provisional State Institute for the Issue of Currency Notes. With the aid of the League of Nations, the Hungarian National Bank was formed in 1924, and Popovics was appointed its president. He served thus until January, 1935, when ill health caused his retirement. From 1926 he was *ex officio* member of the Upper House and Chairman of the Financial Committee. He was the author of *Austro-Hungarian Finance During the War*, which was published in 1925 as one of the Carnegie Endowment Series.

POST, WILEY, died Aug. 15, 1935.

POUND, CUTHBERT WINFRED, died Feb. 3, 1935.

POWERS, (ARBA) EUGENE. American actor, died at Saranac Lake, N. Y., Jan. 7, 1935. Born at Houlton, Me., May 21, 1872, he attended Ricker Classical Institute in Augusta. In 1891, he made his debut at Boothbay Harbor, Me., in *British Born*. After playing in stock for seven years, he made his first New York appearance as Silas Toner in *The Village Postmaster* at the Fourteenth Street Theatre in 1898. He again spent years in stock and on tour, but after 1913, when he played Long Rogers in *The Painted Woman*, he scarcely spent a season without a rôle. In 1920, he appeared with Margaret Anglin in *The Woman of Bronze*, and his last engagement was as Admiral Battersby in *Red Planet* in 1932. Among those rôles which he considered his favorites were Mr. Lingley in *Outward Bound*, Sir Maurice Harpenden in *The Green Hat*, and Alexander Serebrakoff in *Uncle Vanya*, which he played in 1930. One of his last appearances was as Pandarus in the Players' Club revival of *Troilus and Cressida* in 1932, in which he surprised his admirers by his humorous characterization of the rôle, being usually cast in a more serious type.

PRATT, GEORGE DUPONT. American conservationist and philanthropist, died at Glen Cove, L. I., Jan. 20, 1935. Born in Brooklyn, N. Y., Aug. 16, 1869, he was graduated from Amherst College in 1893, when he obtained a position as a shop hand with the Long Island Railroad, later becoming assistant to the president, and from 1895 to 1900, superintendent of its ferries. In 1900 he became treasurer of the Chelsea Fibre Mills, and subsequently joined the firm of Charles Pratt & Co., which managed the estate of his father. Deeply interested in the subject of conservation, he was State Conservation Commissioner of New York from 1915 to 1922, and under his administration a comprehensive programme for improvements was inaugurated. For 10 years (1924-34) he was president of the American Forestry Association and endowed its work with \$100,000. A founder of the Boy Scouts of America, he was its treasurer from 1910, and in 1931 established the Daniel Carter Beard Medal for Boys of Kentucky. Also, he was a founder of the American Society of Medalists, vice president of Pratt Institute, Brooklyn, and a trustee of Amherst College, the Metropolitan Museum of Art, and the American Museum of Natural History.

PRYLOOKE, JAAKOFF. British author, died at Hastings, Sussex, Eng., Oct. 24, 1935. Born in Pinsk, Russia, in 1860, he was educated at the Rabbinical Seminaries at Slonim and Meer and at the Government College for Preceptors, Zhitomir. He founded the New Israel Movement at Odessa in 1881, and in the following year was pronounced a heretic by an official Jewish Assembly. He retained the leadership of this group until he emigrated to England in 1891. He then devoted considerable time to lecturing on Russia and woman suffrage in various countries, and in 1895 founded the Russian Reformation Society in London. Also, he was the founder and editor of the *Anglo-Russian Monthly* (1897-1914); founder of Russo-Scandinavian Press (1900); vice president, Anglo-Ottoman Society (1912); founder of French organization, (1913). In 1909 he became a naturalized British subject, and thereafter served as a delegate to various international congresses on peace and suffrage. A contributor to many periodicals, he wrote extensively in Russian, French, German, and English, his chief works in the last-named tongue being *Under the Czar and Queen Victoria*; *My Lady Bolshevik*, and *Some Timely Sex Philosophy in a Nutshell*.

PROKHANOFF, IVAN S. Russian evangelist, died in Berlin, Germany, Oct. 6, 1935. Born in Vladikavkaz, Russia, Apr. 17, 1869, he was educated as an engineer in Russia, Germany, France, and England. About 1900 he established the All-Russian Evangelical Christian Union, said to be the largest evangelical organization in Russia. Twice Dr. Prokhanoff was imprisoned by the Bolsheviks, and in 1928 left the country for good. From then on he spent most of his time travelling and collecting funds for the needy Christians in Russia. A prolific writer, he published, while in Russia, the periodicals *The Christian* and *The Morning Star*, and in New York, *The Gospel in Russia* (1927) and *The Faith of the Gospel* (1931). His autobiography, *In the Cauldron of Russia*, appeared in 1933.

PUPIN, MICHAEL IDOVSKY, died Mar. 12, 1935.

RABINOWITZ-KEMPNER, LYDIA. German bacteriologist, died in Berlin, Aug. 3, 1935. Born in Kovno, Russia, Aug. 22, 1871, she received the degree of Ph.D. from Berne University in 1894, and then joined the Institute for Infectious Diseases, where she studied under Robert Koch,

discoverer of the tubercle bacillus. Under his direction, she engaged in researches concerning the influence of heat on bacteria and pathogenic yeast specimens. She lectured in bacteriology at the Woman's Medical College of the University of Pennsylvania for three winters, beginning in 1896. Two years later she was married to Dr. Walter Kempner. In 1912 she was made a Prussian professor, one of the few German women to attain that rank. Upon the death of Koch, she joined the staff of the University Pathological Institute, remaining until 1920, when she was appointed director of the bacteriological department in the Municipal Hospital in the Moabit district of Berlin. She held this position until the advent of the Nazi Government. Besides contributing to scientific journals and editing *The Tuberculosis Review*, she wrote *The Presence of Tubercle Bacilli in Butter and Milk*; *The Infection of Milk of Tubercular Cows*; *Serum Reaction in the Tuberculosis of Humans and Cattle*; and, with Max Koch, a monograph on *Avian Tuberculosis*.

RANSOME, FREDERICK L (ESLIE). American geologist, died at Pasadena, Calif., Oct. 6, 1935. Born in Greenwich, England, Dec. 2, 1868, he graduated from the University of California and from 1893 to 1895 served there as a Fellow and teacher of mineralogy. He obtained his doctor's degree in 1896. After a year of teaching at Harvard University, he joined the United States Geological Survey as assistant geologist (1897-1900) and geologist (1900-23), being in charge of the sections of western areal geology (1912-16) and metalliferous deposits (1912-23). During this period of his career he also lectured on ore deposits at the University of Chicago (1907) and was Silliman lecturer at Yale (1913). In 1923 he returned to the educational world as professor of economic geology at the University of Arizona, and during his last year there he was Dean of the Graduate College. He joined the staff of the California Institute of Technology as professor of economic geology in 1927, and from 1928 also acted as consulting geologist to the U. S. Bureau of Reclamation and the Metropolitan Water District of Southern California. A member of many scientific societies, he was treasurer of the National Academy of Science (1919-24), and besides writing official monographs on geological subjects, was associate editor of *Economic Geology* and *American Journal of Science*.

RAYNOR, MORTIMER WILLIAMS. American psychiatrist, died in White Plains, N. Y., Oct. 5, 1935. Born in Syracuse, N. Y., June 20, 1879, he took his M.D. at Syracuse University in 1904. After serving his internship, he entered the service of New York State as assistant physician at the Hudson River State Hospital at Poughkeepsie (1907-17), subsequently becoming director of clinical psychiatry, Manhattan State Hospital (1917-23); assistant physician there (1923-24), and medical superintendent, King's Park State Hospital (1924-26). Also, he served as consulting psychiatrist and neurologist at various hospitals throughout the State. In February, 1917, he was appointed psychiatrist of the New York Department of Correction, the first to hold that position, but left to enter the Medical Corps. Among other offices Dr. Raynor held were those of assistant professor of psychiatry at the College of Physicians and Surgeons, Columbia University (1922-28) and professor of clinical psychiatry at the medical college of Cornell University from 1928. He left the service of the State in 1926 to become medical director of Bloomingdale Hospital, White Plains. He was especially interested in the parole system, social work, and medical service in State hospitals and prisons.

RAZZA, LUIGI. Italian public official, died in an airplane accident en route to Eritrea, Aug. 7, 1935. He was born at Vido Valentia, Dec. 12, 1892. After the World War he became a member of the Fascist organization. He joined the staff of *Popolo d'Italia*, Benito Mussolini's journal, in 1919 and subsequently became its editor, later editing *Liberta* in Trento. He took part in the Fascist march on Rome in 1922, and rose to general secretary of the Fascist Corporations in 1925. Later he was elected president of the National Confederation of Fascist Agricultural Syndicates; and was appointed High Commissioner for Migration and Colonization; and chairman of the Cyrene Colonization Corporation, as well as a member of the Fascist Council. Appointed Minister of Public Works Jan. 24, 1935, it was while on a mission to Africa in connection with this office that he met his death. He wrote *Aspetti e vicende del Sindacalismo* (1928); *La Confederazione Italiana dei Sindacati Fascisti de l'Agricoltura* (1929); *L'Organizzazione Scientifica del Lavoro Agricolo in Italia* (1929); *Problemi e Realizzazioni del Lavoro dell'Italia Rurale* (1930); *Le Migrazioni Interne in Italia nell'Anno* (1930); *Migrazioni e Colonizzazioni* (1932); *Le Migrazioni interne in Italia* (1932).

READING, RUFUS DANIEL ISAACS, FIRST MARQUIS OF, died Dec. 30, 1935.

REDWOOD, THE MOST REV. FRANCIS MARY. Roman Catholic prelate, died in Wellington, New Zealand, Jan. 3, 1935. Born in Staffordshire, England, Apr. 8, 1839, he was taken to New Zealand by his parents in 1842. On Dec. 8, 1854, he left for France to begin his studies for the priesthood in the Society of Mary (Marianists). He first attended St. Mary's College at St. Chamond, and then studied at Montbel near Toulon. Subsequently he taught at the

Marist College at Dundalk, Ireland, for a year and in 1864 made his religious profession and was ordained at Maynooth (1865). For several years he taught philosophy and theology in Ireland, but in 1874 was consecrated Bishop of Wellington. Returning to New Zealand, he framed the *Synodal Laws*, and became, as he says in his *Reminiscences* (1922) "so to speak, the founder of practical Canon Law in New Zealand." In 1885 he founded St. Patrick's College, and two years later was made the first Archbishop and Metropolitan of New Zealand. He attended the Eucharistic Congress at Chicago in 1926.

REED, SYLVANUS ALBERT. American inventor, died in New York City, Oct. 1, 1935. Born in Albany, Apr. 8, 1854, he was educated at Columbia, and received the doctor's degree in 1879. Then for a while he engaged in mining work in the West, but in 1885 entered the business world and became associated with various fire-insurance firms. Ten years later he founded the Fire Insurance Tariff Association. Becoming interested in aviation, he believed that thin metal propellers would be more effective than the thick wooden ones in use, and in 1915 began experiments to prove this. Successful tests were made in 1921 and the Curtiss Company bought his patents and began the manufacture of the new propeller. The Collier Trophy of the National Aeronautical Association was awarded to him in 1925 for "the greatest invention in aviation in America the value of which has been demonstrated by actual use," and in 1929 Columbia University conferred upon him the honorary degree of D.Sc. A trustee of the Institute of Aeronautical Sciences, Dr. Reed announced in December, 1934, the foundation of the Reed Award for aviation progress.

REESE, LIZETTE WOODWORTH. American poetess, died in Baltimore, Md., Dec. 17, 1935. Born in Baltimore County, Jan. 9, 1856, she was educated privately and at the age of 17 became a teacher. From 1901 to 1921 she taught English in the Western High School of Baltimore. Her first volume of poetry, *A Branch of May*, appeared in 1887, and thereafter, until 1909, various volumes came from her pen. Her best known poem, "Tears," appeared in *Scribner's Magazine* in 1899. Then she produced nothing until 1920, when *Spicewood* appeared, which was followed by *Wild Cherry* (1923); *Selected Poems* (1926); *Little Henrietta* (1927); *A Victorian Village*, prose autobiography (1929); *White April* (1930); *The York Road*, autobiography (1931), and *Pastures* (1933). In 1931 she received the degree of Litt D., from Goucher College, and the Mary L. Keats Memorial Prize. Her work has been likened to that of Edna St. Vincent Millay.

RENAUDEL, PIERRE. French Socialist politician, died at Palma, Majorca, Apr. 2, 1935. Born in Moigny, Seine Inférieure in 1871, he joined the Socialist Party in 1899. He edited *L'Humanité* from 1906 to 1918, and afterwards was director of *La Vie Sociale*. In 1914 he was elected a deputy from Var. During the World War he was a member of the Army Commission, and from 1925 to 1926 served as vice president of the Commission for Universal Suffrage. From 1933 he was the leader of the right wing of the Socialist group in the Chamber of Deputies, and was instrumental in causing a breach in the party which resulted in the formation of the Neo-Socialists, of which he was the leader. His opposition to Fascism caused a furore at the Inter-Parliamentary Union in 1932.

RICE, EDWIN WILBUR, Jr., died Nov. 25, 1935.

RICHET, CHARLES, died Dec. 3, 1935.

ROBBINS, WARREN DELANO. American diplomat, died in New York City, Apr. 7, 1935. Born in Brooklyn, N. Y., Sept. 3, 1885, he graduated from Harvard in 1908, and in the following year joined the diplomatic service, and served as secretary to the Ministers to Portugal and Argentina. He served successively as 3d secretary at the Embassy, Paris (1911-14); 2d secretary, the Guatemala Legation (1914-16); was transferred to the Division of Latin American Affairs in 1916; served as 1st secretary, Embassy, Buenos Aires (1917); 1st secretary, Embassy, Santiago, Chile (1918-21), and then appointed chief, Division of Near Eastern Affairs. From 1922 to 1924 he was counselor at the Berlin Embassy and from 1925 to 1928 held the same position in Rome. For two years (1928-30) he was Envoy Extraordinary and Minister Plenipotentiary to the Republic of El Salvador, when he was appointed minister plenipotentiary and White House ceremonial officer, and then Chief of the new Division of Protocol of the Department of State, one of the most exacting of diplomatic posts inasmuch as it handles all questions relating to diplomatic immunity. In 1933, President Franklin D. Roosevelt, a cousin of Mr. Robbins, appointed him Envoy Extraordinary and Minister Plenipotentiary to Canada, a position he held until his death.

ROBINSON, BENJAMIN LINCOLN. American botanist, died at Jaffrey, N. H., July 27, 1935. Born in Bloomington, Ill., Nov. 8, 1864, he was graduated from Harvard University in 1887, received the doctor's degree at the University of Strassburg two years later. In 1890 he was appointed an assistant at the Gray Herbarium at Harvard, and two years later became its curator. For three years, 1891-94, he taught German. In 1899 he became Asa Gray Professor of Botany at Harvard. He retired as emeritus professor in 1935 because of ill health. A botanist of high rank,

he was particularly interested in the classification and distribution of the spermatophytes of North America, Mexico, northern South America, and the Galapagos Islands, and under his able direction, the Gray Herbarium grew from a small laboratory to one of the world's largest botanical collections. Dr. Robinson was a member of many scientific societies, and was president of the Botanical Society of America in 1900. Besides editing many technical papers, he edited the 7th edition of Gray's *New Manual of Botany* (1908), and in 1929 the Massachusetts Horticultural Society awarded him its centennial gold medal.

ROBINSON, EDWIN ARLINGTON, died Apr. 6, 1935.

ROCCO, ALFREDO. Italian jurist and politician, died in Rome, Aug. 28, 1935. Born in Naples, Sept. 9, 1875, he taught in various universities, and in 1913 turned to journalism, and served on various publications, including *Tribuna*, *Dovere nazionale*, which he founded in Padua in 1914; the anti-Socialist review, *Politica*, 1918; and *Idea nazionale*, 1919-22. A member of the Chamber of Deputies from 1921, he was one of the founders and principal representatives of the Nationalist movement, and early joined the Fascist organization. He was under-secretary for Treasury and Pensions in 1922 and president of the Chamber during one of the most delicate periods in Italian parliamentary history (1924-25). Appointed Minister of Justice Aug. 15, 1925, he aided in preparing the Lateran Pacts establishing the State of Vatican City in 1929, and also in that year prepared the new penal code. When the government was reorganized in 1932 he lost this post, but was made Rector magnificus of the University of Rome, to which he had returned as professor of economic law in 1930. A specialist in Fascist labor legislation, he wrote *Economia liberale-socialista e nazionale* (1914); *Il fallimento* (1917); *La crisi dello Stato e i Sindacati* (1921); *La dottrina del Fascismo* (1925); *La trasformazione dello Stato* (1927); *Principi di diritto commerciale* (1928).

ROCHE, ARTHUR SOMERS. American novelist, died in Palm Beach, Fla., Feb. 17, 1935. Born in Somerville, Mass., Apr. 27, 1883, he attended Holy Cross College and studied law at Boston University. He practiced for a year and then turned to journalism. From 1910 he was a regular contributor to many magazines, and in 1916 published his first novel, *Loot*. He served in the Military Intelligence Service during the War. Mr. Roche was a prolific writer of magazine serials with sure-fire plots and, as one reviewer said, "no reader resistance." One of his most popular serials was *Penthouse*, which was produced later as a motion picture. His novels included: *Plunder* (1917); *The Sport of Kings* (1918); *Uncasy Street* (1920); *Find the Woman* (1921); *The Day of Faith* (1921); *Devil-May-Care* (1926); *What I Know About You* (1927); *The Wise Wife* (1928); *The Woman Hunters* (1928); *Marriage for Two* (1929); *Four Blocks Apart* (1930); *Rhapsody in Gold* (1931); *The Wrong Wife* (1931); *The Great Abduction* (1932); *Slander* (1933); *Conspiracy* (1934). Also, he wrote a play, *The Crooks Convention*, produced in 1929, and was co-author of another play, *A Scrap of Paper* (1917).

ROGERS, WILLIAM PENN ADAIR, "WILL," died Aug. 15, 1935.

ROHLFS, ANNA KATHARINE GREEN (MRS. CHARLES). American novelist, died in Buffalo, N. Y., Apr. 11, 1935. Born in Brooklyn, N. Y., Nov. 11, 1846, in 1867 she was graduated from Ripley Female College, Poughkeepsie, N. Y. Her first novel, *The Leavenworth Case* (1878), an excellent detective story, in which she combined remarkable ability in the construction of plot with considerable knowledge of criminal law, won immediate success, and was followed by many more in the same vein. Her later works included *The Fingree Ball* (1903); *The Millionaire Baby* (1905); *The House of the Whispering Pines* (1910); *Golden Slipper and Other Problems of Violet Strange* (1915); *Mystery of the Hasty Arrow* (1917), and *The Step on the Stair* (1922). She published also two books of poetry and a dramatization of *The Leavenworth Case* (1892).

ROSS, SIR JOHN. Irish jurist, died at Sixmiles Cross, Tyrone Co., Northern Ireland, Aug. 17, 1935. Born in Londonderry, Dec. 11, 1854, he was educated at Trinity College, Dublin, and was elected president of the University Philosophical Society in 1876, and auditor of the College Historical Society, 1877. Admitted to the Irish bar in 1879, he became Queen's Counsel and Bench of the King's Inns in 1891. From 1892 to 1895 he was a Conservative member of Parliament from Londonderry, and in the following year was appointed Judge of the High Court of Justice in Ireland, chancery division. He held this post until 1921 when he was made Lord Chancellor of Ireland. He was the last to serve as such, for the office was abolished by statute in December, 1922, with the formation of the Irish Free State. Sir John served also as commissioner of Charitable Endowments and Bequests, 1898; chairman and governor, Royal Drummond Institution, 1899; Commissioner of National Education, 1905. He was knighted in 1919, and published *The Years of My Pilgrimage* (1924); *Pilgrim Scrip* (1927); *Essays and Addresses* (1930).

RUSHTON, VICE ADMIRAL EDWARD ASTLEY ASTLEY-English admiral, died in an automobile accident at Upper

Adhurst, near Petersfield, Hants, July 18, 1935. Born in Liverpool in 1879, he entered the Royal Navy in 1893. Promoted to lieutenant, he was selected, in 1901, to specialize in gunnery, and subsequently served as gunnery officer on various vessels. From 1914 to 1918 he was second in command and commanding H.M.S. *Southampton* and H.M.S. *Melbourne* of the Grand Fleet, and saw service at Heligoland, Dogger Bank, and Jutland. For his work in the last-named battle, he was mentioned in dispatches, promoted to captain, and made a Commander of St. Michael and St. George. After the War, he was transferred to the Admiralty, and from 1922 to 1925 was director of the Royal Naval Staff College. For the following two years he was commander of H.M.S. *Malaya*, and in 1927 was appointed naval aide-de-camp to King George V., and promoted to rear admiral and created a Companion of the Bath. He was again given shore duty in 1928 serving as Director of Manning in the Admiralty, but in 1931 saw sea service as commander of the 2d Cruiser Squadron, which was the first British squadron to be invited to Germany after the War. Promoted to vice admiral, in 1932, in 1935 he became vice admiral commanding the Reserve Fleet.

RUSSELL, GEORGE WILLIAM ("AE"), died July 17, 1935. RUSSELL, JAMES SOLOMON. American Negro clergyman and educator, died in Lawrenceville, Va., Mar. 28, 1935. Born of slave parentage in Palmer's Springs, Va., Dec. 20, 1857, he attended Hampton Normal and Agricultural Institute (1874-78), and St. Stephen's Normal Training School, Petersburg, Va., (1878-82). Also, he studied at the branch of the Theological Seminary of Virginia at Petersburg (1878-82), and in the latter year became a deacon in the Protestant Episcopal Church and assigned to Lawrenceville, Va. He was ordained priest in 1887, and in the following year founded the St. Paul Normal and Industrial School at Lawrenceville. He served as principal of the school until 1929 when he retired as principal emeritus. He was elected suffragan bishop of the Diocese of Arkansas in 1917 and of North Carolina in 1918, the first Negro to be so honored, but declined both positions. He was arch-deacon of colored work in Southern Virginia, and received the degree of D.D. from the Theological Seminary of Virginia in 1917, the degree of LL.D. from the College of Liberia, Monrovia, Africa, in 1922, and the gold medal of the Harmon Foundation in 1928.

RYAN, MARTIN FRANCIS. American labor leader, died in Kansas City, Mo., Jan. 17, 1935. Born at Coldwater, W. Va., Oct. 23, 1874, he received a public school education, and in 1895 was employed by the Southern Pacific Railway. Later he became associated with the Atchison, Topeka, and Santa Fe Railway, and in 1903 served as a member of the executive board of the Brotherhood of Railway Carmen of America. He was elected vice president of the Brotherhood in 1905 and general president in 1909. From 1927 he was on the executive council of the Railway Employees' Department of the American Federation of Labor, and in the following year was elected treasurer of the Federation. One of the organizers of the Union Labor Life Insurance Co., he was its treasurer from 1927. In 1918 he was a member of the First Labor Mission to Great Britain and France, and in 1924, with Samuel Gompers, a co-delegate to the Pan-American Federation of Labor Convention in Mexico.

SAENGLER, GUSTAVE. American music editor, died in New York City, Dec. 10, 1935, where he was born, May 31, 1865. He studied violin under Richter, Meyer, and Damrosch, and composition under Muller, and in 1883 played with the Metropolitan Opera Orchestra and the Philharmonic and Symphony Societies. As assistant conductor to Furst at the Empire Theatre (1893-1909), he had charge of all the music used in Frohman productions and also prepared original music. He became associated with Carl Fischer as arranger, reviser, and translator of music in 1897, but the work grew so heavy that in 1909 he retired from the theatrical world. He edited *The Metronome* and *The Musical Observer*, and collaborated with Leopold Auer in *Graded Course in Violin Playing* and *Graded Course in Ensemble Playing*. Besides many pieces and songs, he wrote a Concertino in G minor, 5 Silhouettes, 2 concert solos, 3 Miniatures, and "New School of Melody."

ST. JOHN, CHARLES E. (DWARD). American solar physicist, died in Pasadena, Calif., Apr. 26, 1935. Born in Allen, Mich., Mar. 15, 1857, he graduated from Michigan Normal College in 1876. From 1885 to 1892 he was teacher of physics at Michigan Normal College, and during his last two years there attended the University of Michigan. He studied at the University of Berlin (1894-95) and in the following year obtained his Ph.D. at Harvard. He then became instructor in physics at the University of Michigan, and in 1897 assistant professor, and professor (1899-1908). From 1907 to 1908 he was dean of the College of Arts and Sciences at Oberlin College, and in the latter year became astronomer at Mt. Wilson Observatory of the Carnegie Institution. A member of many scientific societies, he was president of the International Commission on Solar Physics, contributed many articles on solar physics and observational evidence of relativity to technical jour-

nals, and wrote a *Revision of Rowland's Preliminary Table of Solar Spectrum Wave Lengths*.

SALAMANCA, DANIEL, died July 17, 1935.

SATTERLEE, FRANCIS LE ROY. American roentgenologist, died at Montauk, L. I., Dec. 3, 1935. Born in New York City, Feb. 4, 1881, he was graduated from the College of Physicians and Surgeons in 1903 and later studied at St. John's College, Annapolis. At the age of 15 he took the first American X-ray photograph, using the Crookes tube which had been installed in the New York College of Dentistry. His interest in the use of the X-ray led to his making many experiments, and he invented a protective lead shield used when making X-rays, and was the first to X-ray the mouth and teeth. Burns received during his experiments ended his surgical career in 1916, and in 1922 he was compelled to retire as radiologist of the Flushing and Greenpoint Hospitals.

SAVILLE, MARSHALL HOWARD. American archaeologist, died in New York City, May 7, 1935. Born in Rockport, Mass., June 24, 1867, he was a special student in anthropology at Harvard from 1889 to 1894, and engaged in field work under Prof. F. W. Putnam. His many fruitful explorations were chiefly made in Latin America, and he explored the Maya ruins of Copan, Honduras, for the Peabody Museum (1891-92); became assistant curator in the American Museum of Natural History (1894-1902), and explored Palenque (1897-98), the ruins of Mitla and Oaxaca (1899, 1902, 1904). From 1903, he was professor of American archaeology at Columbia University, and served as honorary curator, Mexican and Central American Archaeology, American Museum of Natural History (1908-10); as member of the staff of the Museum of the American Indian, Heye Foundation (1918-32); as a member of the staff of the American Museum of Natural History from 1933. In that year he was also honorary professor of the Museo Nacional, Mexico. A founder of the Cortes Society and president of the American Anthropological Association, 1926-28, he published many monographs on anthropological and archeological subjects and contributed to the *NEW INTERNATIONAL ENCYCLOPEDIA*. In 1924 he received the degree of Sc.D. from the University of San Marcos, Lima, Peru.

SCARBOROUGH, DOROTHY. American author, died in New York City, Nov. 7, 1935. Born in Mt. Carmel, Tex., she was graduated from Baylor University in Waco, Texas, and studied at the University of Chicago, Oxford University, and Columbia University, from which she received the degree of Ph.D. in 1917. She was instructor in English at Baylor University (1905-14), assistant professor (1916); instructor in English at Columbia University (1916-18); lecturer (1919-22); assistant professor (1923-31), and associate professor with classes in novel and short-story writing (1931-35). She served as a book reviewer on the *New York Sun* from 1917 to 1918. Besides contributing short stories and verse to magazines, she wrote *Fugitive Verses* (1912); *The Supernatural in Modern English Fiction* (1917); *From a Southern Porch* (1919); *In the Land of Cotton* (1923); *Impatient Griselda* (1927); *The Stretch-berry Smite* (1932); *The Story of Cotton* (1933), and edited *Famous Modern Ghost Stories* (1921) and *Humorous Ghost Stories* (1921).

SCHALL, THOMAS D. American Senator, died in Washington from injuries received when struck by an automobile, Dec. 22, 1935. Born in Reed City, Mich., June 4, 1878, he graduated from the University of Minnesota in 1902, and the St. Paul College of Law, 1904. Shortly afterwards he was blinded by an electric shock. In 1912 Mr. Schall was an unsuccessful candidate for Congress on the Progressive ticket, but was elected on a Progressive Republican ticket in 1914, and served until 1924. While a Representative he was a member of the House Committee on Rules and chairman of the Committee on Flood Control. During the World War he supported war legislation, and favored adjusted compensation for ex-service men. He was elected to the Senate in 1924 after a bitter fight, when he was accused by Magnus Johnson, his opponent, of violation of the Corrupt Practices Act. After several investigations he was exonerated. Antagonistic to the "New Deal," he opposed its measures in a series of vitriolic attacks.

SCHINDLER, KURT, died Nov. 16, 1935.

SCHUCKING, WALTER, M. A., died Aug. 26, 1935.

SCOTT, SIR (JAMES) GEORGE. English colonial administrator, died at Grafton, Eng., Apr. 4, 1935. Born on Dec. 25, 1851, he was educated at King's College School, London, the University of Edinburgh, and Lincoln College, Oxford. A war correspondent in Perak (1875-76), Burma (1879), and Tongking (1883-85), in the following year he joined the Burma Commission, and for his work was mentioned in dispatches, received a medal with two clasps, and was thanked by the Commander-in-Chief, and the Governor-General in Council (1888). He was a member of the Anglo-Siamese Boundary Commission (1889-90), superintendent, Northern Shan States (1891), chargé d'affaires, Bangkok (1893-94), British commissioner, Mekong Commission (1894-96). Called to the bar of the Inner Temple in 1896, two years later he was appointed British commissioner on the Burma-China Boundary Commission. He became superintendent and political officer of the

Southern Shan States in 1902, and retired in 1910. Created a Commander of the Order of the Indian Empire in 1892, he was knighted in 1901. He was an advocate of the separation of Burma from India and vigorous in his denunciation of the Government's neglect of Burma. An authority on Burma and the Burmese, he contributed to the *Encyclopaedia Britannica* and to Hastings' *Dictionary of Religion*, and was the author of *The Burman, His Life & Notions* (2 vols., 1882); *Burma, As It Was, As It Is, and As It Will Be* (1886); *The Upper Burma Gazetteer* (5 vols., 1901); *Burma, a Handbook* (1906); preface to and translation of Dautremere's *Burma under British Rule* (1913); *Burma, a History* (1924); *Burma, a Handbook of Practical Commercial and Political Information* (1925); *Burma and Beyond; A Ragbag of Races* (1932).

SEDGWICK, ANNE DOUGLAS (MRS. BASIL DE SELINCOURT). American author, died in London, July 19, 1935. Born in Englewood, N. J., Mar. 28, 1873, she was educated at home and abroad and from 1882 lived abroad. She studied painting in Paris and exhibited some of her work, but after her first novel, *The Dull Miss Archmard*, was published in 1898, turned to writing. Her work was characterized by fine workmanship and with the publication of *Tante* (1911) her talents were acknowledged. Subsequently she published *The Nest* (1912); *The Encounter* (1914); *A Childhood in Brittany Eighty Years Ago* (1918); *Christmas Roses* (1920); *The Third Window* (1920); *Adrienne Toner* (1922); *The Little French Girl* (1924); *The Old Countess* (1927); *Dark Hester* (1929); *Philippa* (1930). In 1931 *Dark Hester* was produced as a play in London, and she was made a member of the National Institute of Arts and Letters.

SEEBERG, REINHOLD. German theologian, died in Berlin, Oct. 24, 1935. Born in Porraer, Livonia, Russia, he was taken to Germany at an early age, and studied at Dorpat (1878-82) and Erlangen (1882-84). Then he became privat-docent and associate professor and university preacher at Dorpat (1885-89); professor of church history and New Testament exegesis (1889-94), and of systematic theology (1894-98) at Erlangen. Thereafter he was professor of the last-named subject at the University of Berlin, and Dean in 1918-19. Also, he was director of the Institute of Social Ethics and Missionary Work in Berlin, and until 1933, president of the Christian Social Alliance. His works included: *Der Begriff der christlichen Kirche* (1885); *Lehrbuch der Dogmengeschichte* (2 vols., 1895-98, 2d ed., 3 vols., 1907-13); *Grundriss der Dogmengeschichte* (1901); 3d ed., 1910; *Die Grundwahrheiten der christlichen Religion* (1902); 5th ed., 1910; Eng. trans., *The Fundamental Truths of the Christian Religion*, (1908); *Offenbarung und Inspiration* (1908, Eng. trans., *Revelation and Inspiration*, 1910); *Alte und neue Moral* (1910); *System der Ethik* (1911); *Vom Sinn der Geschichte* (1913); *Christliche Dogmatik* (2 vols., 1924-25), *Geschichte und Gott* (1928); *Augustinus* (1930); *Ethik der Bergpredigt* (1934).

SEIFZ, DON CARLOS. American editor, died in Brooklyn, N. Y., Dec. 4, 1935. Born in Portage, O., Oct. 24, 1862, he was graduated from the Liberal Institute, Norway, Me., in 1880, and began reporting for the *Brooklyn Eagle*, becoming Albany correspondent of that paper in 1887. Two years later he was city editor and served until 1891 when he became assistant publisher of *The New York Recorder*. Thereafter, he was managing editor, *The Brooklyn World* (1893-94); advertising manager, the *New York World* (1895-97); business manager (1898-1923), manager, *The Evening World* (1923-26). He was associate editor of *The Outlook* (1926-27) and of *The Churchman* (1929-32). The author of many biographical works and books on piracy and adventure, his more important include *The Buccaneers* (1912); *Artemus Ward* (1919); *Joseph Pulitzer; His Life and Letters* (1924); *Under the Black Flag* (1925); *Horace Greeley* (1926); *The James Gordon Bennetts* (1928); *Lincoln, the Politician* (1931); and *The Trial of Captain William Kidd* (1933). He was president of the Authors Club from 1923 to 1927.

SEMBRICH, MARCELLA (PRAXADE MARCELLINE KOCHANSKA), died Jan. 11, 1935.

SHARPEY-SCHAFER, SIR EDWARD ALBERT, died Mar. 29, 1935.

SHAW, EUGENE WESLEY. American geologist, died in Washington, Oct. 7, 1935. Born in Delaware, O., July 29, 1881, he graduated from Ohio Wesleyan University in 1905. He was an instructor in botany there during 1903-05, and held a fellowship in geology at the University of Chicago from 1905 to 1907. From 1907 to 1921 he was mostly connected with the United States Geological Survey, and had charge of the natural gas valuation for the U.S. Treasury (1918-19), and was chief of the sub-section on sedimentation (1919-20). From 1921 to 1929 he acted as a consulting geologist, and made extensive investigations for oil corporations, and in 1929 became chief geologist for the Iraq Petroleum Co., London. He was credited with the discovery of the principal bodies of petroleum in Iraq. A member of many scientific societies, he was an authority on natural gas production, and the author of many technical papers on the subject.

SHORT, WILLIAM HARRISON. American clergyman, died in Philadelphia, Jan. 10, 1935. Born near College Springs,

Ia., Dec. 4, 1868, he attended Amity College and Beloit College, and graduated from the Yale Theological Seminary in 1897. He was ordained in the Congregational ministry in that year, and held pastorates in the West until 1908 when he became secretary of the New York Peace Society, which he served until 1917. Always interested in the subject of peace, he was connected with many organizations, including the League to Enforce Peace (1915-23); the 20th Century Fund (1922-23); League of Nations Non-Partisan Association (1923-25). He served as a delegate to the International Peace Conferences in 1910 and 1912, and as a member of the Committee that drafted covenants for the League of Nations (1914-18; 1921). He was treasurer of Rollins College, Fla., from 1925 to 1927, and then became director of the Motion Picture Research Council, Inc. The author of many pamphlets on international subjects, he edited the *League of Nations Herald* (1923-25) and was the author of *A Generation of Motion Pictures* (1928).

SHORTT, THE RT. HON. EDWARD, died Nov. 10, 1935. SHOWERMAN, GRANT. American editor, died in Madison, Wis., Nov. 13, 1935. Born in Brookfield, Wis., Jan. 9, 1870, he was graduated from the University of Wisconsin in 1896. From 1896 to 1898 he was a fellow in Latin there, and for the next two years a fellow of the Archaeological Institute of America at the American School of Classical Studies in Rome. Receiving the degree of Ph.D. from Wisconsin in 1900, he became professor of the classics there, a position he held until his death. During 1922-23 he was a professor of the American Academy in Rome, and from 1923 to 1932 was director of the summer session of the Academy. A contributor to leading literary magazines and philological journals, he wrote *The Indian Stream Republic and Luther Parker* (1915); *A Country Chronicle* (1916); *A Country Child* (1917); *Horace and His Influence* (1922); *Eternal Rome* (1924), *Century Readings in Ancient Classical Literature* (1925), *Rome and the Romans* (1931). In 1914, he translated Ovid's *Heroides et Amores* for Loeb's Classical Library.

SIBERT, BRIG. GEN. WILLIAM LUTHER, U.S.A., RET., died Oct. 16, 1935.

SILVER, GRAY. American agricultural economist, died in Martinsburg, W. Va., July 28, 1935. Born in Whitehall, Va., Feb. 17, 1871, he was educated in public and private schools, and engaged in farming in Virginia, Illinois, and Arkansas, breeding shorthorn cattle and Shropshire sheep. He was a member of the Virginia State Senate (1907-15), lieutenant governor (1911-13); member State Tax Commission of Virginia (1926-27). He served as a delegate to the Democratic national conventions of 1920, 1924, and 1928, and in 1930 was a member of the Federal Unemployment Commission. Appointed a delegate from West Virginia to the American Farm Bureau Federation following its organization in 1919 Mr. Silver was director and member of its executive committee until 1926. He organized, for the Farm Federation, the influential agricultural bloc action in Congress from 1920 to 1926. A pioneer and leader in cooperative marketing in the United States, he was decorated by the French Government for his distinguished service in agriculture.

SIMON, ROBERT EDWARD. American realtor, died in New York City, Sept. 7, 1935, where he was born Aug. 4, 1877. Educated in the public schools and at City College, he entered the real estate field, and became a member of the firm of L. J. Phillips & Co., in 1894. He remained with them until 1905 when he became vice president of Henry Morgenthau Co. He was president of this company from 1913 to 1916, and left in 1919 to establish his own business. During a long career in real estate he made many notable sales an outstanding one among them being the sale of what is now Times Square to the Ochs interests. In 1925 he became president of Carnegie Hall, Inc., the owners and operators of the building. Mr. Simon was a director of the City Housing Corp., the builders of Sunnyside, a model community on Long Island; a member of the School Finance and Administration Commission of New York State (1926); a founder of Town Hall; and founder and president (1921, 1926-28) of the United Parents Association of Greater New York Schools. In 1930 he received the annual medal of *Parents' Magazine* for his services to child welfare and parental education.

SMITH, JEREMIAH, JR. American lawyer and financial expert, died in Cambridge, Mass., Mar. 12, 1935. Born in Dover, N. H., Jan. 14, 1870, he was graduated from Harvard in 1892 and from the Harvard Law School in 1895. Thereafter he served as private secretary to Justice Gray of the United States Supreme Court, and in 1896 entered the firm of Herrick, Smith, Donald, and Farley. During the World War he was a captain in the Quartermaster Corps, and served on the American Peace Commission in 1919 as counsel to the Treasury Dept. In 1924 Smith was appointed Commissioner General for Hungary by the League of Nations, and was given charge of the financial reconstruction of that country. The Hungarian National Bank was established and in two years his work was completed. Also, he was an assistant to the American experts who drafted the Young Plan in 1929, and was a member of the Financial committee of

the League of Nations, but resigned in 1931 because of ill health.

SMITH, JESSIE WILLCOX. American illustrator and painter, died in Philadelphia, May 3, 1935, where she was born. Educated privately she studied art at the Pennsylvania Academy of Fine Arts and under Howard Pyle at Drexel Institute. Miss Smith illustrated many books, particularly Stevens' *Child's Garden of Verses*; Kingsley's *Water Babies*, and *At the Back of the North Wind*. Also she was known for her illustrative work in many magazines and her cover designs on *Good Housekeeping*. In 1925 and 1927 she designed posters for the Welfare Federation of Philadelphia Her child subjects, of which she made a specialty, were very popular and displayed genuine love for and insight into child nature. She received the Mary Smith Prize of the Pennsylvania Academy (1903); silver medal, St. Louis Exposition (1904); Beck prize, Philadelphia Water Color Club (1911); silver medal, San Francisco (1915).

SMITH, SYDNEY. American cartoonist, died in an automobile accident near Harvard, Ill., Oct. 20, 1935. Born in Bloomington, Ill., Feb. 13, 1877, in 1895 he began drawing for the *Bloomington Sunday Eve*. Subsequently he worked on the *Indianapolis News Press*, and *Sentinel*, *Philadelphia Inquirer*; *Pittsburgh Post*, and *Press*, *Toledo News Bee*. In 1911 he joined the staff of the *Chicago Tribune*, and drew cartoons known as "The Bunk of a Busy Brain," "Self Made Heroes," "Light Occupation," and "Old Doc Yak." In 1918 he began to draw "The Gumps," a comic strip which achieved nation-wide fame. It was widely syndicated, and made Mr. Smith one of the highest paid cartoonists in the country. Also, he drew "Ching Chow," a Chinese character given to sage sayings. In 1924, he wrote *Andy Gump: His Life Story*.

SNETH, E. (IAS) HERSEY. American educator, died at New Haven, Conn., Dec. 20, 1935. Born in Mountville, Pa., Aug. 7, 1857, he graduated from Lebanon Valley College, Pa. (1881), Yale Divinity School (1884), and received the degree of Ph.D. from Yale in 1889. He began teaching at Wesleyan University, and in 1889 went to Yale University as lecturer on the history of philosophy (1889-91); instructor in philosophy (1891-93); assistant professor (1893-98), professor (1898), professor and organizer of the department of the philosophy of religion (1912-23); professor emeritus (1923). Dr. Sneath organized and edited *The Modern Philosophers Series* (6 vols.) and *The Ethical Series* (3 vols.), and was the author of many works on religion and ethics, including *The Ethics of Hobbes* (1898), *Philosophy in Poetry* (1904), *Wordsworth—Poet of Nature and Man* (1912), *Religious Training in the School and Home* (1917); *At One with the Invisible* (1921), *Religion and the Future Life* (composite vol., 1922), *Shall We Have a Creed?* (1925), *Evolution of Ethics as Revealed in the Great Religions* (composite vol., 1927); *America's Greatest Sonneteer* (1928), with others, *Religion as a Power in Human Development* (1934). In collaboration he wrote and edited *Golden Rule Series* (6 vols., 1913); *Manual of Moral Instruction for School and Home* (1913); *The King's Highway Series* (8 vols., 1917); *Sonar of Purpose* (3 vols., 1929), *A Child's Garden of Song* (1929).

SOOTHILL, WILLIAM EDWARD. English minister and Chinese scholar, died in England, May 14, 1935. Born in Halifax, Jan. 23, 1861, he became a missionary of the United Methodist Church in 1882, and until 1907 served at Wenchow, where he established churches, schools, and a hospital. From 1907 to 1911 he was president of the Imperial University of Shansi Province, and from 1911-14, president of the proposed University for China (United Universities' Scheme). He directed religious work for the Y.M.C.A. from 1914 to 1918; was a member of the China Indemnity Statutory Advisory Commission (1925); a member of Lord Willingdon's Delegation to China (1926), and visiting professor at Columbia University, New York (1928). In later years he was professor of Chinese at Oxford University, and crown representative on the Governing Body of the School of Oriental Studies, London Institution. His works include *The Student's Pocket Chinese Dictionary*, *The New Testament in Wenchowese*; *China and the West* (1925); *A History of China* (1927); *China and England* (1928); *The Lotus of the Wonderful Law* (1930).

SORLEY, WILLIAM RITCHIE. British moralist, died in London, July 28, 1935. Born in Selkirk, Scotland, Nov. 4, 1855, he was educated at the University of Edinburgh and Trinity College, Cambridge. From 1882 to 1887 he was lecturer on the Cambridge University Local Lectures Syndicate, and Moral Sciences Board, and for the next year was deputy for the Professor of Philosophy of Mind and Logic at University College, London. He then went to University College, Cardiff, where he remained until 1894, when he became professor of moral philosophy at the University of Aberdeen. In 1900 he became Knightbridge Professor of Moral Philosophy at Cambridge, and retired in 1933. He gave the Gifford lectures at the University of Aberdeen from 1913 to 1915. His published works include *On the Ethics of Naturalism* (1885, new ed., 1904); *Recent Tendencies in Ethics* (1904); *The*

Interpretation of Evolution (1910); *The Moral Life* (1911, 4th ed., 1930); *Moral Values and the Idea of God* (Gifford lectures, 1918, 4th ed., 1930); *Reconstruction and the Renewal of Life* (1919); *A History of English Philosophy* (1920); *Tradition* (Herbert Spencer lecture, 1926). Also, he edited various lectures of Professor Adamson: *Development of Modern Philosophy* (2 vols., 1903), and with R. P. Hardie, *Development of Greek Philosophy* (1908).

STARR, HENRY E. (ETER). American psychologist, died in New Brunswick, N. J., Nov. 2, 1935. Born in Middletown, Pa., Sept. 13, 1893, he graduated from Gettysburg College, in 1917, and received the degree of Ph.D. from the University of Pennsylvania in 1922. From 1917 to 1922 he was an instructor in chemistry and toxicology at the School of Medicine of the University of Pennsylvania, and instructor in Physiological chemistry (1922-24); and instructor in psychology in the College and Graduate School (1924-27). He became assistant professor of psychology at Rutgers University in 1927, and in the following year became professor and director of the mental hygiene clinic there. Specializing in clinical and abnormal psychology, Dr. Starr contributed to medical and psychological journals.

STEARNS, THEODORE. American composer, died in West Los Angeles, Calif., Nov. 1, 1935. Born in Berea, O., June 10, 1880, he studied at the Oberlin Conservatory of Music and the Wurzburg Royal Conservatory, Bavaria. He conducted the Cleveland, Ohio, High School Orchestra, and played the viola with Cleveland Philharmonic, and edited *The Etude* (1899-1900). He was music critic of the *Chicago Herald Examiner* in 1922, and of the *New York Morning Telegraph* (1922-26; 1927-28). In 1927-28 he received the Guggenheim Foundation Award for study in Germany, and from 1929 to 1931 arranged radio programmes for Mittel-Europa Rundfunk and in the United States. From 1932 he was professor of music and chairman of the department at the University of California. His musical works, besides many songs, include *Atlantis* (1929); *Endymion*, an opera produced at Hofgesmar, Germany (1896); *Indian Suite* (1898); *Snowbird*, a lyric episode produced at Chicago (1923) and Dresden, Germany (1928); *Suite Caprese* (1927) produced by Los Angeles Philharmonic Orchestra (1932); *In Death's Garden*, a symphonic poem (1930). In 1931, he published *A Story of Music*.

STEELE, RUFUS (MILAS). American author, died in Boston, Dec. 25, 1935. Born in Hope, Ark., Mar. 3, 1877, he graduated from the Pacific Methodist College at Santa Rosa, Calif., in 1896. Turning to journalism, he served as editor, the *Redding (Calif.) Free Press* (1900-02); writer (1902-04) and Sunday editor (1904-06), *San Francisco Chronicle*; Sunday editor, *San Francisco Call* (1906-12). He was editor of the Division of Films, U.S. Committee on Public Information (1918-19), and in 1927 became a coach in magazine writing at the University of Miami, becoming professor of English there (1929-31). From Sept. 1, 1931, he conducted "The March of the Nations" in the *Christian Science Monitor*. A lecturer and writer on motion picture making, aviation, outdoor life, etc., he wrote *Rule G* (1915); *Acres for Industry* (1919); *What's Right with the Movies* (1925); *What's Right with Florida* (1925); *Scar Neck* (1930).

STEEL-MAITLAND, SIR ARTHUR HERBERT DRUMMOND RAMSAY. English politician, died at Rye, Eng., Mar. 30, 1935. Born on July 5, 1876, he was educated at Rugby and at Balliol College, Oxford, where he won many honors. He entered politics as secretary to the Chancellor of the Exchequer (1902-05), and was appointed special commissioner to the Royal Commission on Poor Laws (1906-07) and was a joint author of its *Report on Relation of Industrial and Sanitary Conditions to Pauperism* (1907). He served in Parliament as Conservative member for East Birmingham (1910-18); for the Erdington division of Birmingham (1918-29); and for the Tamworth division of Warwickshire (1929-35). He was chairman of the Unionist party in 1911, and was parliamentary Under-Secretary for the Colonies (1915-17) and joint Under-Secretary of State for the Foreign Office and to the Board of Trade, as head of the Department of Overseas Trade. Knighted in 1917, Privy Councillor in 1924, he became Minister of Labor in November, 1924, and served until June, 1929. He visited the United States in 1933 as the guest of the Rockefeller Foundation.

STEPHENSON, NATHANIEL WRIGHT. American educator and historian, died at Pomona, Calif., Jan. 17, 1935. Born in Cincinnati, O., July 10, 1867, he graduated from Indiana University in 1896, and later studied at the University of Cincinnati (1888-89), and at Harvard (1889-91). He was an editorial and staff writer on the *Cincinnati Tribune* (1892-95), and literary editor of the *Chicago Commercial Tribune* (1898-1900). For three years (1895-98) he was instructor in English at Indiana University, and in 1902 he accepted the appointment of professor of History at the College of Charleston, where he remained for 21 years. He lectured at Yale in 1920, and in 1922 was visiting lecturer in American History at Columbia University, also lecturing at the Columbia Summer School in 1921 and 1922. In 1927 he was appointed to the chair of history and biography at Scripps College. He edited

Chronicles of America, Photoplays from 1922 to 1927, and was the author of *An American History* (1913); *The Spiritual Drama in the Life of Thackeray* (1913); *Lincoln* (1922); *An Autobiography of Abraham Lincoln* (compiled, 1926); *Nelson W. Aldrich* (1930); *Typical Americans and Their Problems* (1930); *A History of the American People* (1934). He contributed the article on Lincoln to the 14th edition of the *Encyclopædia Britannica*.

STOVALL, PLEASANT A. American editor, died in Savannah, Ga., May 14, 1935. Born in Augusta, Ga., July 10, 1857, he graduated from the University of Georgia in 1875, and entered newspaper work on the Athens (Ga.) *Banner*. Until 1891 he worked on the *Augusta Chronicle*, and in that year he became one of the owners of the *Savannah Press*, which he sold in 1931. He then became editor of the *Savannah Evening Press*. He served as a member of the Georgia House of Representatives from 1902 to 1906, and from 1913 to 1920 was Envoy Extraordinary and Minister Plenipotentiary to Switzerland. For his work there during the World War he was honored by the Belgian Government. He was Georgia chairman of the Woodrow Wilson Foundation (1921-22). In 1891 he published a *Life of Robert Toombs*.

STUART, FRANCIS LEE. American engineer, died at Essex Fells, N. J., Jan. 15, 1935. Born at Camden, S. C., Dec. 3, 1866, he was educated at Emerson Institute in Washington, D. C., and in 1892 obtained work with the Baltimore and Ohio Railroad. Subsequently he served on the Nicaragua Canal Commission (1898) and on the Isthmian Canal Commission (1900). He returned to the B. & O. in 1901, and in 1905 became chief engineer with the Erie Railroad, remaining until 1911, when he again returned to the B. & O. He resigned in 1915 to become a consulting engineer. During the War, he was chairman of the terminal port facilities commission of the War Industries Board, and a member of the Depot Board of the War Department (1917), and chairman of the budget committee of the United States Railroad Administration (1918). Among the many projects with which he was connected were: Cunard Project, New York Harbor; Hydro-Electric Power Commission, Niagara Falls, N. Y. (1920); Port Development Commission, Baltimore (1921); New York Port Authority, vice chairman, technical board (1921). Transit and Advisory Board, Philadelphia (1923); Great Harbor Committee of 200, Los Angeles (1924-25); Grant Power Survey Board of Pennsylvania (1924).

SUMNER, WALTER TAYLOR. American Protestant Episcopal Bishop, died in Portland, Ore., Sept. 4, 1935. Born in Manchester, N. H., Dec. 5, 1873, he graduated from Dartmouth College in 1898 and from the Western Theological Seminary, Chicago, in 1904. He was a deacon in 1903 and ordained priest in 1904. For three years (1903-06) he was secretary to the Bishop of Chicago, and from 1904 to 1906 pastor of St. George's Church there. He served as Dean of the Cathedral of Sts. Peter and Paul and as superintendent of the City Missions of the Protestant Episcopal Church in Chicago from 1906 to 1915 when he was made Bishop of Oregon. Always interested in the best interests of the community, the Bishop served on many civic committees both in Chicago and in Oregon, and in 1922 he opposed the enactment of an Oregon State Law to do away with private and parochial schools. SUNDAY, WILLIAM ASHLEY ("BILLY"), died Nov. 6, 1935.

SYMONS, MARK. English artist, died at Wokingham, Feb. 13, 1935. Born about 1887, he studied art at the Slade School in London, but did not exhibit his work until several years before his death. He was a sound craftsman, and although his landscapes were generally ignored, he was known for his delightful child studies and for a series of pictures depicting Christ in modern life. The best known of these was "Were You There When They Crucified My Lord?" which was accepted by the Academy in 1930 and caused a furor in art circles. Others in the series were "In the Street of the Great City" (1932), "The Last Supper" (1933), and "The Earthly Paradise" (1934). Other of his works include a Madonna at Downside Abbey, "Ave Maria," in the Reading Art Gallery, and "The Day After Christmas" in the Bury Gallery.

SYSONBY OF WONERSH, FREDERICK EDWARD GREY PONSOMBY, FIRST BARON. English official, died in London, Oct. 20, 1935. Born on Sept. 16, 1867, he was educated at Eton, and in 1889 was a 2d lieutenant in the Grenadier Guards. From 1893 to 1894 he acted as aide-de-camp to the Viceroy of India. Subsequently he served as Equerry, assistant keeper of the Privy Purse, and assistant private secretary to Queen Victoria (1894-1901); to King Edward VII (1901-10); equerry and assistant private secretary to King George V (1910-12); Keeper of the Privy Purse from 1914; Treasurer of the King from 1920. From 1928 he was deputy governor of Windsor Castle and Constable of the Round Tower. Sir Frederick served in South Africa (1901-02) and in the World War (1914-18) as lieutenant colonel, being mentioned in dispatches. He was raised to the peerage in 1935 and was the author of *The Grenadier Guards in the Great War* (1920); *Letters of the Empress Frederick* (1929), and *Sidelights on Queen Victoria* (1930).

TAYLOR, EDWIN CASSIUS. American artist, died at New Haven, Conn., Nov. 27, 1935. Born in Detroit, Mich., in 1874, he removed to New York in 1893 where he attended the Art Students' League. Then he studied under Kenyon Cox for seven years, becoming an instructor in the latter's studio. In 1908 he joined the faculty of Yale University as drawing instructor in its School of Fine Arts. From 1922 he was chairman of the Department of Painting and Sculpture, as well as serving as Street professor of painting and design. Under his direction, drawing and painting were developed into a five-year comprehensive course. Professor Taylor's portraits of Lee Lawrie and Oliver Ellsworth are well-known and he has had the distinction of training the last 11 Prix de Rome winners.

THOMAS, ANDRÉ ANTOINE. French philologist and historian, died in Paris, May 19, 1935. Born at Saint-Yrieix-la-Montagne, in Creuse, Nov. 29, 1857, he attended the École des Chartes and the École des Hautes Études in Paris and the École Française in Rome. He taught in the faculty of letters at Toulouse from 1881 to 1889, and then at the University of Paris where he became professor of French Literature of the Middle Ages and of Romance philology. In 1889 he founded at Toulouse the quarterly review, *Les Annales du Midi* which he edited until 1898. He became a member of the Institute of France and director of studies at the École des Hautes Études. A fellow of the Académie des Lincei of Rome and the Académie des Sciences of Copenhagen, he wrote *Les États provinciaux de la France centrale sous Charles VII* (1879); *Francesco da Barberino* (1883); *Essais de philologie française* (1897); *Mélanges d'étymologie française* (1902); *Le Comté de la Marche et le Parlement de Poitiers* (1910); *Chanson de Sainte-Foi d'Agen* (1925); *Jean de Gerson et l'éducation des Dauphins de France* (1930). Also, he was a collaborator on the *Dictionnaire général de la langue française* (1889-1900).

THOMAS, AUGUSTUS ORLOFF. American educator, died in Washington, D. C., Jan. 30, 1935. Born in Mercer Co., Ill., Feb. 21, 1863, he received the B.Sc. degree from Western Normal College in 1891, and the Ph.D. degree from Amity College, College Springs, Ia., in 1894. After serving as principal of schools in Cambridge, Neb., during 1891-93, he was superintendent of schools in St. Paul, Neb. for the next three years, serving in the same capacity in Minden (1896-1901) and Kearney (1901-05). In the latter year he founded the State Normal School at Kearney and was its president until 1913. During 1915-16, he was state superintendent of public instruction in Nebraska and was Commissioner of Education in Maine from 1917 to 1929. In the National Educational Association, he was president of the department of normal schools and chairman of the foreign relations committee. President of the World Federation of Educational Associations during 1923-27, he was its secretary general from 1931. He was the author of *Rural Arithmetic* (1916) and *A Boy's Choice of a Profession* (1921).

THOMAS, HERBERT HENRY. English geologist, died in London, May 12, 1935. Born Mar. 13, 1876, he attended Sidney Sussex College, Cambridge. From 1898 to 1901 he was an assistant in geology at Oxford and from 1901 to 1911, was a member of the Geological Survey. From 1911 he was petrographer to the Geological Survey, Department of Scientific and Industrial Research. Of the Geological Society, he was secretary during 1921-22, and vice president, 1922-24. He received the Geological Society's Murchison Medal in 1925 and was president of Section C of the British Association in 1927. Also, in the same year he was made a fellow of the Royal Society. A contributor to the *Quarterly Journal of the Geological Society*, he wrote many reports and pamphlets on geological subjects.

THOMAS, JOHN JENKS. American neurologist, died in Boston, Mass., July 17, 1935. Born in Columbus, O., Sept. 6, 1861, he received the M.A. and M.D. degrees from Harvard University in 1890, and then attended the universities of Heidelberg, Berlin, and Vienna. From 1893 to 1925 he was physician in charge of diseases of the nervous system at the Boston City Hospital and consulting physician there after 1925. At the Children's Hospital, he served as assistant neurologist (1893-1913); neurologist (1913-19), and consulting neurologist from 1919. At the Tufts College Medical School, he was instructor in neurology (1902-06), and after 1916 professor emeritus. Also, he was an associate in neurology at the Harvard Graduate School of Medicine. In the World War he was a consulting psychiatrist in the Medical Corps of the U.S. Army with the rank of major. A fellow of the American Association for the Advancement of Science, he was president of the Boston Society of Psychiatry and Neurology in 1911, and co-author of *Modern Treatment of Nervous and Mental Diseases*.

THOMAS, M(ARTHA) CAREY, died Dec. 2, 1935. THOMPSON, EDWARD HERBERT. American archaeologist, died at Plainfield, N. J., May 11, 1935. Born in Worcester Co., Mass., Sept. 28, 1860, he was graduated from the Worcester Technical Institute in 1879. Appointed American consul in Yucatan in 1885, he remained there in that capacity until 1909. He spent many years exploring the ruins of the Maya civilization, at one time devoting 14

months to the collection of material for the Peabody Museum to exhibit at the World's Fair in Chicago in 1893. He bought a plantation on the site of Chichen, and after rebuilding the original plantation house, converted it into a headquarters for a group of scientists. He discovered the "Hidden City" of Yucatan and uncovered the "Maya Venus," the mausoleum of the high priest, the Temple of the Painted Columns, and the ancient city of Old Chichen. After exploring the Sacred Well of Chichen, Itza, he found evidences of sacrificial rites held there, and in 1923, announced that he had also discovered there, bones of young women, Mayan jewelry, fragments of textiles, and weapons with jewelled finishings. He was the author of *Children of the Cave* (1929), and *People of the Serpent* (1932).

THOMPSON, WILLIAM GOODRICH. American lawyer, died at Chestnut Hill, Mass., Sept. 12, 1935. Born at Peacham, Vt., Nov. 16, 1864, he received the LL.B. degree from the Harvard Law School in 1891, and in the same year established a law practice in Boston. During 1893-95 he was assistant U.S. Attorney for the District of Massachusetts. From 1925 he was a member of the law firm of Thompson, Spring, and Mears. His best known case was the defense of Sacco and Vanzetti in 1927. His zeal and tireless effort in their behalf won for him the admiration of leading legal figures. He lectured at the Harvard Law School between the years 1912-34 on the subjects of brief making, preparation of cases, and practice.

THOMSON, ARTHUR. English anatomist, died at Oxford, Feb. 7, 1935. Born in London, Mar. 21, 1858, he attended the University of Edinburgh, being appointed in 1880, junior, and later senior, demonstrator in anatomy there. In 1885 he lectured on anatomy at Oxford University. At various times he was an examiner to the leading English universities, and during 1919-34, held the Lees chair of anatomy at Oxford University. Also, from 1900 to 1934, he was professor of anatomy at the Royal Academy. He represented Oxford University on the General Medical Council during 1904-29 and was a former president of the Anatomical Society of Great Britain and Ireland, of the Oxford Art Society, and of the Anatomical Section of the International Medical Congress held in London in 1913. He wrote *Handbook of Anatomy for Art Students*, *The Anatomy of the Human Eye*, and *The Ancient Races of the Theraid* (with D. Randall MacIver).

THOMSON, SIR FREDERICK CHARLES. Scottish politician, died in Edinburgh, Apr. 21, 1935. Born May 27, 1875, he attended University College, Oxford, and Edinburgh University, and was called to the bar of the Inner Temple in 1904. In the World War he served in Egypt with the Scottish Horse and in Salonika with the Lovat Scouts. In 1918 he entered Parliament as Conservative member for South Aberdeen and continued to represent that constituency until his death. From 1919 to 1922 he was parliamentary private secretary to Sir Robert Horne and for several months in 1923, was Junior Lord of the Treasury. In the same year he became King's Counsel, and during 1923-24, was Solicitor General for Scotland. From 1924 to 1928, he was Junior Lord of the Treasury in the ministry of Stanley Baldwin, and during 1928-29, and from September to November, 1931, he served as vice chamberlain to the Royal Household. From 1931 he was Treasurer of the Royal Household. He was created a baronet in 1929.

THORNE, G(ABRIEL) WISNER. American publisher, died at Spring Lake, N. J., July 13, 1935. Born in Newark, N. J., Sept. 16, 1849, he attended Newark Academy and then entered the newspaper field as a reporter on the *Newark Evening Call*. In 1876 he went over to the *Newark Journal* in the same capacity, and in 1880, joined the staff of the *Newark Sunday Call*. On the incorporation of the *Newark Call Printing and Publishing Co.* in 1899, he was elected its president. Previously he had been treasurer and editor-in-chief. He retained the office of president up to a short time before his death, and introduced a section of social news, a sports page, and a question and answer column in the *Call*.

THORNTON, WILLIAM MYNN. American educator, died at Charlottesville, Va., Sept. 11, 1935. Born in Cumberland Co., Va., Oct. 28, 1851, he was graduated from the University of Virginia in 1870, and after taking special courses in engineering there during 1871-73, taught at Davidson College, N. C. In 1875 he returned to the University of Virginia as adjunct professor of applied mathematics and civil engineering. He retired as professor emeritus in 1931. Also, while there, he served as chairman of the faculty (1888-96), and dean of the department of engineering (1904-25). He was U.S. Commissioner to the International Exposition held in Paris in 1900, and a member of the Jury of Awards for civil engineering at the St. Louis Exposition in 1904.

TILDEN, DOUGLAS. American sculptor, died in Oakland, Calif., Aug. 6, 1935. Born at Chico, Butte Co., Calif., May 1, 1860, he lost his hearing at the age of five and was subsequently educated at the State Institution for the Deaf at Berkeley, Calif. After graduation he remained there as a teacher until 1887. In that year he removed to New York where he attended the National

Academy of Design. Later, he studied under Ward, Flagg, and Mowbray, and under Chopin in Paris. From 1894 to 1900 he was professor of sculpture at the Mark Hopkins Art Institute of the University of California. Mayor Phelan appointed him honorary member of the committee on the artistic improvement of San Francisco. He was vice president of the first International Congress of the Deaf which he started during the World's Fair in Paris in 1889, thereafter serving as member of the committee on programme for the Second Congress at the World's Columbian Exposition in 1893, and for the Third Congress held in Paris in 1900. Tilden's best known works are: "Baseball Player" (1899, Golden Gate Park, San Francisco); "Tired Boxer" (1890, Olympic Club, San Francisco); "Indian Bear Hunt" (1892); "Football Players" (1893); "Native Sons' Fountain" (1894), and the "Mechanics' Fountain," both in San Francisco. His public monuments include: "Commemoration of the Admission of California into the Union"; "California Volunteers of the Spanish-American War"; the memorials to Junipero Serra in San Francisco, and to Senator Stephen M. White in Los Angeles. He received the following awards: Honorable mention at the Paris Salon, 1890; Medal of the Paris Exposition, 1900; commemorative gold medal of the St. Louis Exposition, 1904, and the gold medal of the Seattle Exposition (1894).

TOKONAMI, TAKEJIRO. Japanese statesman, died in Tokyo, Sept. 8, 1935. Born at Kagoshima, in 1863, he was graduated from the University of Tokyo in 1890, and entering the civil service, began his career at the Home Office. In 1901 he became Governor of Tokushima-ken, and three years later, was named Director of Local Administration. During 1911-12 he was Vice Minister, and in 1913, president of the Imperial Government Railways. Leader of the Seiyuhontō party, he held the portfolio of Home Affairs in the Seiyūkai Cabinet during 1918-22.

TOMLIN OF ASH, THOMAS JAMES CHESHVIRE, BARON. English jurist, died Aug. 12, 1935, at Canterbury, Kent, where he was born May 6, 1867. He received his education at New College, Oxford, and was called to the Bar of the Inner Temple and Lincoln's Inn in 1891. After serving as junior equity counsel to the Board of Inland Revenue and to several other official boards, he became King's Counsel in 1913, and five years later, was appointed to the Bench of Lincoln's Inn. In 1922 he became counsel to the Royal College of Physicians, and served during 1923-1929 as Judge of the High Court in the Chancery Division. Named Lord of Appeal in Ordinary in 1929, he was created a life peer and made a member of the Privy Council in the same year. Knighted in 1923, he was chairman of the Lord Chancellor's Committees on the reorganization of the royal courts of justice staff, and of principal probate registry and district probate registries (1919-22), Royal Commission on Awards to Inventors from 1923, Child Adoption Committee (1925), and many others.

TRUESDALE, WILLIAM HAYNES. American railway official, died at Greenwich, Conn., June 2, 1935. Born in Youngstown, O., Dec. 1, 1851, he received a common school education and between the years 1869-83, held various positions on railways. In 1883 he became an assistant to the president of the Minneapolis and St. Louis Ry., succeeding to the office of vice president in the same year, and president in 1887. During 1888-94 he acted as receiver for the same road. In the latter year he was third vice president and general manager of the Chicago, Rock Island, and Pacific Ry., rising to the first vice presidency in 1898. In March of the next year, he went over to the Delaware, Lackawanna, and Western Ry., of which until July 1, 1925, he was president and a member of the executive committee. From the latter date he was chairman of the board of managers. During his régime, the company paid its stockholders dividends far in excess of the original market value of the road. Truesdale was a vice president of the Chester R. R. Co., and the Mutual Life Insurance Co. of N. Y., and a director of the Western Union Telegraph Co.

TSUBOUCHI, YUZO. Japanese author, died in Tokyo, Feb. 28, 1935. Born in Aichi-ken, in 1859, he was graduated from the University of Tokyo in 1882, and in the same year, became a professor at Waseda University. He retained the post up to his retirement a few years ago as professor emeritus. Widely known as a novelist and dramatist, he translated all of Shakespeare's plays into Japanese. His other works include: *Miscellaneous Writings of Harukyo* and *Kiri Hsoka*.

TYLER, LYON GARDINER. American educator and author, son of former U.S. President Tyler, died Feb. 12, 1935, in Charles City Co., Va. where he was born in August, 1853. He received the M.A. degree from the University of Virginia in 1875 and during 1877-78, taught at William and Mary College. After serving as principal of the high school in Memphis, Tenn. from 1878 to 1882, he returned to Virginia where he practiced law in Richmond for the next six years. He was named president of William and Mary College in 1888, retiring in 1919 as president emeritus. A member of the State Board of Education (1903-07), he was chairman of the State Library Board

after 1915. Besides editing the *William and Mary Quarterly Historical Magazine* which he founded in 1892, and other historical works, he wrote *The Letters and Times of the Tylers* (1884, 3d ed., 1896); *Parties and Patronage in the United States* (1891); *Cradle of the Republic* (1900, 2d ed., 1906); *England in America* (1904), and *Williamsburg, the Old Colonial Capital* (1907).

ULYANOVA, ANNA ILYINICHNA YEIZAROVA. Russian Bolshevik, and sister of Nikolai Lenin, died near Moscow, U.S.S.R., Oct. 19, 1935. Born in Nizhni-Novgorod about 1864, she attended the gymnasium at Simbirsk (now Ulyanovsk) and subsequently the Bestuzhev courses in St. Petersburg. She commenced her revolutionary activities early and was first arrested and exiled in 1887 for her part in a plot to assassinate Czar Alexander III. Perhaps her most important achievement was the establishment of contact with her brother while he was in prison in 1896. She became associated with the Bolsheviks in 1903, and from that time held numerous committee posts in the Communist party, and for many years was connected with *Pravda*, the party newspaper. Arrested and imprisoned in 1916 and again in 1917, she was released by the revolutionary forces in October of the latter year, and from 1921 was a member of the historical research commission, Istpart, which was collecting the facts and history of the revolution. Also, she was the author of several books on Lenin.

UNWIN, THOMAS FISHER. English publisher, died in Midhurst, Sussex, Feb. 6, 1935. Born in London, Jan. 24, 1848, he was educated in the City of London School, and in 1882 founded the publishing house that bears his name. He was credited with having discovered Joseph Conrad, and published *Almayer's Folly* in 1895. A Liberal in politics, he was an active member of the National Liberal Club. Also, he was a joint founder and member of the First Council of Publishers' Association; joint founder and member of the First Committee of Friends of Russian Freedom. He served on the South African Conciliation Committee and was a governor of the London School of Economics. In 1884 he founded the Johnson Club.

URLUS, JACQUES. Dramatic tenor, died at Noordwijk, The Netherlands, June 6, 1935. Born in Hergenrath, Prussia, Jan. 9, 1868, he was brought to Holland by his parents. He began his musical studies at Utrecht, and continued them at Amsterdam under Averkamp and Nolthenius and at the conservatory. His debut took place in 1891 at the opera in Amsterdam, where he remained for six years. Engaged for the Leipzig Opera in 1900, he was invited to participate in the Wagner festivals at Bayreuth and Munich. He appeared at Covent Garden, London, in 1910 as Tristan, and in the following year in *Tannhauser*, appearing in *Parsifal* in 1914 and again in 1924. His American debut was made in Boston in *Tristan und Isolde* in 1912, and from 1913 to 1917 he was a member of the Metropolitan Opera Company. He appeared there again in 1923. Mr. Urlus was particularly known for his interpretation of Wagnerian rôles.

VAN SWERINGEN, MANTIS JAMES. American financier, died in Cleveland, O., Dec. 12, 1935. Born in Wooster, O., July 8, 1881, he received a public school education, and in 1907 joined his brother Orix Paxton Van Sweringen in the real estate business in Cleveland. From that time their careers were closely connected. They developed Shaker Heights, a Cleveland suburb, and entered the traction field through the building of a street car line connecting that suburb with the city of Cleveland. In 1916, they secured control of the New York, Chicago, and St. Louis Railroad (the Nickel Plate), 523 miles long connecting Buffalo with St. Louis, from the New York Central Railroad, and proceeded to develop it until it was one of the most powerful lines in the country. By 1924 their railroad empire was composed of the Nickel Plate, the Erie, the Chesapeake and Ohio, the Hocking Valley, and Pere Marquette railroads. In February, 1929, they acquired control of the Missouri Pacific and its subsidiary lines, which carried their system into the Far West, but the necessity for the spending of huge sums of money and the financial collapse of that year, seriously endangered their investment, and in 1933 the line went into bankruptcy. Late in 1935 they acquired partial control of their holdings, buying them back at auction. At the time of his death, Mr. Van Sweringen was chairman of the board of the Nickel Plate Railroad, vice president of the Allegheny Corporation, the chief holding company of their railroad interests, and vice president of the Chesapeake Corporation. See JOHN JOSEPH BERNET.

VEDDER, HENRY CLAY. American clergyman and educator, died in Chester, Pa., Oct. 13, 1935. Born in De Ruyter, N. Y., Feb. 26, 1853, he was graduated from the University of Rochester in 1873 and from Rochester Theological Seminary in 1876. In 1897 he received the degree of D.D. from the University. Dr. Vedder began his career as a member of the editorial staff of the *The Examiner*, a Baptist newspaper in New York in 1876, and in 1892 became its editor. Also, he edited the *Baptist Quarterly Review* from 1885 to 1892. Appointed to the chair of church history at Crozer Theological Seminary in 1894, he retired in 1926, and from 1929 was an editorial writer on the *Chester Times*. Besides contributing to

magazines, newspapers, and encyclopædias, he was the author of *Baptists and Liberty of Conscience* (1885); *A Short History of the Baptists* (1891; 1907); *The Dawn of Christianity* (1894); *A History of the Baptists of the Middle States* (1898); *The Baptists* (a volume in the *Story of the Churches* series, 1903); *Our New Testament—Where Did We Get It?* (1908); *Socialism and the Ethics of Jesus* (1912); *The Reformation in Germany* (1913); *The Gospel of Jesus and the Problems of Democracy* (1914); *The Johannine Writings and the Johannine Problem* (1917); *The Fundamentals of Christianity* (1921), which caused a controversy in the Church and led to cries of heresy; *A Short History of Baptist Missions* (1927).

VICTORIA ALEXANDRA OLGA MARY. English princess, the daughter of King Edward VII and Queen Alexandra, and a sister of King George V, died at Iver, Buckinghamshire, Dec. 3, 1935. Born in Marlborough House, London, July 6, 1868, she was educated privately. Unmarried, she was the constant companion of her mother, particularly after she became a widow, and upon her death in 1925, devoted herself to the work of the Alexandra Rose Day Fund, a memorial. Princess Victoria was an expert bookbinder, gardener, and photographer. Also, she was interested in needlework, the collection of old glass and silver, and was an accomplished musician and painter. During the World War she visited the British hospitals and camps both at home and abroad. While residing at Iver, she was lady grand president of the Iver Horticultural Society. She held the Imperial Order of the Crown of India (conferred by Queen Victoria, Aug. 6, 1887), Royal Order of Victoria and Albert, first class, and Dame Grand Cross of the Order of the Hospital of St. John of Jerusalem.

VINCENT, THE MOST REV. BOYD. American Protestant Episcopal bishop, died in Cincinnati, O., Jan. 14, 1935. Born in Erie, Pa., May 18, 1845, he graduated from Yale University in 1867 and in 1889 received the degree of S.T.D. from Berkeley Divinity School. A deacon in 1871 and priest in 1872, he served as assistant at St. Paul's Church, Erie (1871-72), rector, Cross and Crown Church, Erie (1872-74), rector, Calvary Church, Pittsburgh (1874-89). He then became coadjutor bishop of Southern Ohio, and in 1904, bishop, retiring in 1929. During his bishopric, he was presiding judge of the Court of Review of the 5th department of the Protestant Episcopal Church (1904), president of the Missionary Council of the 5th department (1907), and chairman of the House of Bishops (1910-16). He wrote *God and Prayer* (1897); *Our Family of Vincents* (1924); *The Pastoral Epistles for Today* (1930), and *Recollections* (1933).

VOLK, (STEPHEN ARNOLD) DOUGLAS, died Feb. 7, 1935. VOPICKA, CHARLES J. American manufacturer and diplomat, died in Chicago, Sept. 3, 1935. Born in Bohemia, Nov. 3, 1857, he was educated in the high schools and a business college of his native land, and came to the United States in 1880, settling in Chicago in 1881. Until 1889 he was in the real estate and banking business, and thereafter became an organizer and president of the Atlas Brewing Company. Civic minded, he served as a member of the West Side Park Commission (1894-97), of the School Board (1901-02), of the Board of Local Improvements (1902-04), the Charter Convention (1906), and the Chicago Board of Education (1927-30). In 1904 he was an unsuccessful candidate for Congress from the fifth district, Illinois. President Wilson appointed him Envoy Extraordinary and Minister Plenipotentiary to Rumania, Bulgaria, and Serbia in 1913, and he served until 1920, when he resigned. A diplomatic representative of the United States, he served also as adviser to England, Italy, Germany, Russia, Serbia, Rumania, and Turkey during the World War. For his work he received the Order of Mare Cruce, Rumania; the Order of the White Eagle, Serbia; and the War Medal, Czechoslovakia. In 1921 he published *Secrets of the Balkans*.

VOS, HUBERT, died Jan. 8, 1935.

VUVYAN, VICE AIR MARSHAL SIR VYELL. English naval officer, died in London, Sept. 30, 1935. Born in 1875, he entered the navy at an early age, and in 1897 served in the punitive naval expedition against the King of Benin, and received a medal and clasp. He served in various capacities until 1911 when he was appointed to the staff of the Royal Naval War College. In the following year he was War Staff officer, and in the next year assistant to the Chief of the War Staff. Called to active duty, he served in the Dardanelles in charge of the coordination of the sea, land, and air forces (1914-15) and was awarded the French Legion of Honor, the American Distinguished Service Medal, and was created a Companion of the Distinguished Service Order. After the War he was transferred to the Royal Air Force, and in 1919 was appointed second in command and air vice marshal. He retired in 1925 and was appointed one of the government directors of Imperial Airways. Made a Commander of the Order of the Bath in 1918, he was knighted in 1923.

WARD, ALBERT NORMAN. American clergyman and educator, died near Bel Air, Md., Sept. 22, 1935. Born in Harford Co., Md., Nov. 27, 1871, he received the B.A.

degree from Western Maryland College in 1895 and entered the ministry of the Methodist Protestant Church two years later. Then he held pastorates in Maryland and Washington, D. C., until 1913 when he became vice president of Western Maryland College. Relinquishing that office in 1917, he returned to a pastorate at Salisbury, Md., where he remained until 1919. The following year was spent as chancellor of the Kansas City University. Then he returned to Western Maryland College in 1920 as president and retained the office until his death. He served as one of 15 churchmen to negotiate for the consolidation of the Methodist Protestant and Southern Methodist branches of the church.

WARDE, FREDERICK B. American tragedian, died in Brooklyn, N. Y., Feb. 7, 1935. Born at Warrington, Oxfordshire, England, Feb. 23, 1851, he studied law but abandoned it for the theatre. He made his first stage appearance at Sunderland, England, in 1867, subsequently playing in Glasgow, Leeds, and Manchester. He came to the United States in 1874 and, after playing leading rôles at Booth's Theatre, New York, for the next three years, he began to star especially in Shakespearean tragedies in 1881. From 1893 to 1903 he was in partnership with Louis James. He lectured frequently on dramatic subjects after 1907. Returning to the stage three years later, he played in *Timon of Athens*, and *Julius Caesar*. About 1923 he retired from the stage and devoted his leisure to writing. He was the author of *The Fools of Shakespeare: An Interpretation of Their Wit, Wisdom, and Personalities* (1913), and *Fifty Years of Make Believe* (1920).

WATSON, SIR WILLIAM, died Aug. 13, 1935.

WELD, HERBERT English explorer, died Feb. 5, 1935. Born about 1852, he attended Queen's College, Oxford, and in 1891, travelled through Persia. Before he travelled through Cyrenaica in 1895, he led an expedition to Persepolis and brought back moulds of reliefs which are now in the British Museum and the Louvre. His researches there resulted in a plan of restoration. In 1899 he was in Somaliland and Abyssinia, bringing back mementos which he presented to the British Museum. During the Boer War, he served as a correspondent for the *Morning Post*, and in 1900, he was in Abyssinia again, exploring and mapping the course of the Blue Nile below Tsana. In 1922 he obtained permission to excavate Tell Aheimar, ancient Kish. In the latter undertaking he obtained thousands of inscribed tablets and museum pieces, which he gave to the Ashmolean Museum at Oxford. He wrote *Royal Chronicle of Abyssinia* and articles in the *Journal of the Royal Geographical Society*.

WELLER, THE MOST REV. REGINALD HEBER American prelate of the Protestant Episcopal Church, died at Aurora, Ill., Nov. 22, 1935. Born at Jefferson City, Mo., Nov. 6, 1857, he received the B.D. degree from the Nashotah (Wis.) Theological Seminary in 1884. Ordained a priest in the latter year, he held various charges in Wisconsin at Eau Claire, Waukesha, and Stevens Point between 1884-1900, being consecrated coadjutor bishop of Fond du Lac on Nov. 8, 1900. He was named Bishop of the Diocese of Fond du Lac in 1912 and remained there until 1933 when he retired because of failing health. In 1919 he toured Europe and Asia Minor, in the hope of bringing together the Anglican and Greek and Russian Orthodox churches.

WENT, FRIEDRICH AUGUST FERDINAND CHRISTIAN. Dutch botanist, died at The Hague, July 25, 1935. Born in Amsterdam, in 1863, he attended the universities of Amsterdam, Bonn, and Paris. From 1891 to 1896 he was director of the sugar cane Experimental Station in Java and in the latter year, was appointed to the chair of botany at Utrecht University. He was the Dutch government's delegate to the Pacific Science Conference held in Tokyo in 1926. A former president of the Central Organization for Applied Science in the Netherlands, Professor Went was the author of many text books on botany and plant physiology.

WERNER, ALICE. English educator, died at Welwyn Garden City, Hertfordshire, June 9, 1935. Born June 26, 1859, she attended Newnham College, Cambridge. During 1890-93 she worked on the *Review of Reviews* and from 1892 to 1900, was a contributor to the *Speaker*. In Africa during 1893-96, she started private classes for the study of African languages. On her return to England, these classes were transferred to King's College and nine years later, were recognized by the University of London. From 1911 to 1913 she did research work in British East Africa. At the School of Oriental Studies, she was a lecturer in 1917, and later, a reader. In 1921 she was invited to occupy the chair of Swahili and the Bantu Languages at the University of London. She retired as professor emerita in 1930. Created a Commander of the Order of the British Empire in 1931, she was made a Fellow of the Royal Anthropological Institute, and received the Anne Ewart Travelling Scholarship in 1911 and the African Society's silver medal in 1931. Her publications include: *A Time and Times* (poems, 1886), *The Captain of the Locusts, and Other Stories* (1899); *Chapenga's White Man* (1901); *Native Races of British Central Africa* (1906); *Introduction to the Study of African Languages* (1915), *The*

Language-Families of Africa (1916, 2d ed., 1925); *An Introductory Sketch of the Bantu Languages* (1919); *African Mythology* (1925); *Structure and Relationships of African Languages* (1929); *African Stories* (1932), and *Myths and Legends of the Bantu* (1933).

WHITE, DAVID. American geologist, died in Washington, D. C., Feb. 7, 1935. Born at Palmyra, N. Y., July 1, 1862, he was graduated from Cornell University in 1886, and in the same year, began his long association with the U. S. Geological Survey. In the latter, he rose to be senior geologist. Also, from 1903, he was curator in paleobotany at the Smithsonian Institution. An associate of the Carnegie Institution, he wrote many papers on geology and paleontology.

WHITLEY, JOHN HENRY, died Feb. 3, 1935.

WHITTAKER, THOMAS English author, died in London, Oct. 3, 1935. Born Sept. 25, 1856, he attended the Royal College of Science, Dublin, and was graduated from Oxford University in 1877. He contributed his first article to the *Mind* in 1881. His publications include *Essays and Notices, Philosophical and Psychological* (1895); *The Neo-Platonists: A Study in the History of Hellenism* (1901, 2d ed., 1918); *The Origins of Christianity, with an Outline of Van Manen's Analysis of the Pauline Literature* (1904, 4th ed., with Epilogue, 1933); *Apollonius of Tyana, and Other Essays* (1906); *The Liberal State* (1907, 2d ed., 1928); *Primer of Comte and Mill* (1908); *Schopenhauer* (1909); *Priests, Philosophers, and Prophets: a Dissertation on Revealed Religion* (1911, 2d ed., 1925); *The Theory of Abstract Ethics* (1916); *Macrobius* (1923); *The Metaphysics of Evolution* (1926); *Prolegomena to a New Metaphysic* (1931); *The Origins of Christianity* (1933), and *Reason: A Philosophical Essay with Historical Illustrations* (1934).

WILDER, WILLIAM HAMLIN American ophthalmologist, died in Chicago, Sept. 24, 1935. Born in Covington, Ky., Dec. 16, 1860, he received the M.D. degree from the Medical College of Ohio in 1884 and then attended the universities of Göttingen, and Vienna. In 1884 he established a medical practice in Cincinnati and on removing to Chicago in 1892, began to specialize in diseases of the eye. In 1907 he was named to the chair of ophthalmology at Rush Medical College, University of Chicago, from which he retired in 1926 as professor emeritus. A fellow of the American College of Surgeons, he was president of the American Ophthalmology Society (1918), the American Academy of Ophthalmology and Otolaryngology (1931), and collaborated on books on ophthalmology. In May, 1935, he received the Leslie Dana gold medal of the St. Louis Society for the Prevention of Blindness which is awarded annually for prominent work toward the conservation of sight.

WILEY, LOUIS B. American newspaper man, died in New York City, Mar. 20, 1935. Born at Hornell, N. Y., May 31, 1869, his family removed to Mt. Sterling, Ky., where he received a private education. He began his newspaper career in 1885 as a reporter. After serving in various capacities on different papers in Mt. Sterling, and Ft. Wayne, Ind., he returned to Rochester, N. Y., where he obtained employment on the *Post Express*. He went into business for himself, publishing and editing, during 1887-93, the *Tidings*, a weekly newspaper. Then he went back to the *Post Express* as business manager, and served in that capacity until 1895. Removing to New York City, he began his long association with the *New York Times* in 1896, and from 1906 was business manager of same. During his régime, in which he was assigned to the advertising and circulation departments, he played an outstanding part in building the *Times* up to its present standard. A founder and former president of the Genesee Society and of the Steuben County Society, he held directorates in many organizations and received the following foreign decorations: Commander of the Legion of Honor (France), Knight Commander of the Hellenic Order of George (Greece), Commander of the Crown of Italy, Officer of the Order of Leopold II of Belgium, Officer of the Order of the Crown of Rumania, etc.

WILLARD, REAR ADMIRAL ARTHUR LEE, U.S.N., RET. American naval officer, died in Washington, D. C., Apr. 7, 1935. Born at Kirksville, Mo., Feb. 21, 1870, he was graduated from the U.S. Naval Academy in 1891 and was commissioned an ensign two years later. He served on the *Machias* in the Spanish-American War and was on the *Mane* during 1903-06. Assigned to the Naval Gun Factory in Washington, D. C., during 1906-08, he next served on board the *Idaho* (1908-10), and from 1910-13, was at the Navy Yard in Washington, D. C. After commanding the *Hancock* during 1913-15, he was named captain of the yard at the Navy Yard, Washington, D. C. He was promoted to the rank of rear admiral in 1924. Six years later he commanded the scouting force of the U.S. Fleet with the temporary rank of vice admiral and before his retirement in 1934, commanded the Fifth Naval District at Hampton Roads.

WILLIAMS, WALTER, died July 29, 1935.

WILLYS, JOHN NORTH, died Aug. 26, 1935.

WILSON, FRANCIS, died Oct. 7, 1935.

WITHERSPOON, HERBERT, died May 10, 1935.

WOODROW, NANCY MANN WADDEL (Mrs. WILSON WOOD-

row). American author, died in New York City, Sept. 7, 1935. Born at Chillicothe, O., she was educated privately and began her career as an assistant editor on the Chillicothe (O.) *Daily News* (1896-97). She was married to James Wilson Woodrow in 1897. Removing to New York in 1900, she has since contributed to magazines, including *Life*, *Smart Set*, *McClure's Magazine*, *Cosmopolitan*, *Good Housekeeping*, and many others. Her publications include: *The Bird of Time* (1907); *The New Missioner* (1907); *The Silver Butterfly* (1909); *The Beauty* (1910); *Sally Salt* (1912); *The Black Pearl* (1912); *The Hornet's Nest* (1917); *Swallowed Up* (1922); *Burned Evidence* (1925); *Come Alone* (1929); *Moonhill Mystery* (1930), and *Pawns of Murder* (1932).

YUILL, I. T. COL. HARRY HOGG. Canadian mining engineer, died in Vancouver, B. C., Sept. 3, 1935. Born in Truro, N. S., July 3, 1886, he was educated at Truro Academy and at McGill University (B.S., 1909, M.Sc., 1910). During the years 1910 to 1915 he served as a mining engineer and manager of mining properties in Western Australia, South Africa, and China. With the outbreak of the World War he went to England, enlisted, and was made a 2d Lieutenant in the Tunnelling Section of the Royal Engineers. At the end of the War he was a lieutenant colonel, and appointed Controller of Mines for the First Army of the British Expeditionary Forces and Advisory Officer to the B.E.F. for production by French coal mines. For his services he was mentioned in dispatches five times, awarded the Military Cross, the Croix de Guerre, the Montenegrin gold medal for bravery, and made a Commander of the Distinguished Service Order. In 1919 he organized the reopening of the Belgian coal mines, and then returned to the practice of his profession as mining engineer. From 1928 he was general manager and representative in British Columbia for the Victoria Syndicate, London.

ZAMMIT, SIR TEMISTOCLE. Maltese chemist, died in Malta, Nov. 2, 1935. Born in 1864, he was educated at the University of Malta and in Paris and London. He was government analyst in the Public Health Department in Malta in 1890, and was curator of Valetta Museum there in 1903. From 1905 he was professor of chemistry at the University, and rector from 1920. He retired, and in 1926 became director of the Museum. He was a member of the Medical Fever Commission (1904-07), and from 1919 was an honorary fellow of the Royal Anthropological Institute of Great Britain and Ireland. He received the honorary degree of Litt.D. from Oxford, and the Mary Kingsley Medal of the Liverpool School of Tropical Medicine in 1920, and was knighted in 1930. He wrote *Malta: The Island and Its History* (1926) and *Prehistoric Malta—The Tarxien Temples*, the last an account of his explorations.

ZIMMERMAN, EUGENE. American political and comic cartoonist, died at Horseheads, N. Y., Mar. 26, 1935. Born in Basle, Switzerland, May 25, 1862, he was brought to America in 1869, and educated in the public schools. Successively, a farmer, a baker, and a sign painter, he showed an aptitude for cartooning and came to the attention of the editor of *Puck*, who employed him. He served on that magazine until 1885 when he became associated with *Judge*, and retired in 1913 to do free lance work. Also, he conducted Zim's Correspondence School of Cartooning, Comic Art, and Caricature. He illustrated books by Bill Nye and James Whitcomb Riley, and also a series of articles done by Nye for *Collier's*. Besides many text books on caricature, he wrote *Caricature, for Students of Comic Art* (1892-93), and in 1926 was elected president of the newly formed American Association of Cartoonists and Caricaturists.

NEGRI SEMBILAN. See **FEDERATED MALAY STATES.**

NEJD. See **ARABIA** under *Kingdom of Saudi Arabia.*

NEON, HEAVY. See **CHEMISTRY.**

NEPAL, ne-pól'. An independent kingdom in the Himalayas between Tibet and British India, under British influence. Area, about 54,000 square miles; estimated population, 5,600,000. Capital, Katmandu (population, about 80,000). The government is a military oligarchy. Reigning sovereign in 1935, Tribhubana Bir Bikram.

NETHERLAND INDIA. A group of large islands in the East Indies forming a colony of the Netherlands. Capital, Batavia, on the island of Java.

Area and Population. The area and population of the islands at the 1930 census is shown in the accompanying table from the U.S. *Foreign Commerce Yearbook 1935.*

NETHERLAND INDIA: AREA AND POPULATION

Group of islands	Area, sq. miles, 1930	Population, 1930	Density per sq. mile
Java and Madoera	51,032	41,718,364	817
Sumatra	164,148	7,677,826	47
Riouw-Lingga	12,235	298,225	24
Bangka	4,611	205,363	45
Billiton	1,866	73,429	39
Borneo:			
West district	56,664	802,447	14
South and east districts	151,621	1,366,214	9
Island of Celebes:			
Celebes	38,786	3,093,251	80
Manado	34,200	1,138,655	33
Molukka Islands and New Guinea	191,682	893,400	5
Timor Archipelago	24,449	1,657,376	68
Bali and Lombok	3,973	1,802,683	454
Total	735,268	60,727,233	83

The total estimated population on Jan. 1, 1934, was 63,500,000. Living births among the natives of Java and Madoera in 1934 numbered 1,166,337; deaths, 785,409. The 1930 population included 241,325 Europeans and 1,232,927 Chinese. The natives are predominantly Mohammedan but there are several million Christians and about 1,000,000 Buddhists. Populations of the chief cities in 1930 (all in Java except as noted) were: Batavia, 533,015; Soerabaja (Surabaya), 341,675; Semarang, 217,796; Soerakarta (Surakarta), 165,484; Bandoeng, 166,815; Djokjakarta (Jogjakarta), 136,649; Malang, 86,646; Palembang (Sumatra), 109,069; Makassar (Celebes), 84,855; Bandjermasin (Borneo), 65,698.

Education. A large proportion of the population is illiterate. School attendance in 1932-33 was Primary, vernacular education, 1,813,286; elementary education, with instruction in the Dutch language, 144,019, higher elementary and secondary, 17,331.

Production. Agriculture is the main occupation. The area under cultivation included 17,388,000 acres in Java and Madoera and 3,418,000 acres in the Outer Islands. Livestock in 1933 included 4,962,629 cattle, 3,293,440 buffaloes, 650,052 horses, 955,000 swine, 1,804,000 sheep, and 4,064,000 goats. Yields of leading crops in 1934 were (in thousands of units): Sugar (Java), 629 metric tons; rubber (exports), 384 metric tons; tea, 162,259 lb.; rice (Java and Madoera), 156,462 bu.; corn (Java and Madoera), 67,387 bu.; groundnuts (Java and Madoera), 327,163 lb.; cassava roots (Java and Madoera), 5976 metric tons; cinchona (European estates only), 18,519 lb.; sisal and agave (exports), 153,599 lb. The output of other crops in 1933 was (in thousands of units): Coffee, 234,666 lb.; tobacco (exports), 107,925 lb.; copra (exports), 1,076,000 lb.; citronella oil (estate production), 3371, lb.; palm oil (estate production), 247,255 lb.; kapok, 45,426 lb.

Mineral production in 1934 was (in 1000 metric tons): Coal, 1017; petroleum, 6042; manganese ore, 11.6; tin (metal content of ore), 20. Gold production in 1934 was 2129 kilograms; silver, 23,524 kilograms. The principal manufactures are refined sugar, petroleum, and rubber; milled rice; and vegetable and animal oils.

Foreign Trade. Imports for consumption in 1934 were valued at 293,657,000 florins (329,378,000 in 1933) and exports of Netherland India merchandise at 526,452,000 florins (470,349,000 in 1933). The comparative figures for 1929 were: Imports, 1,072,139,000 florins; exports, 1,446,181,000 florins. Exports of leading products by volume in 1934 were (in metric tons): Rubber, 384,000;

tobacco, 43,955; fibres, 59,671; tapioca, 145,626; coffee, 81,860; tea, 64,239; copra, 417,155; gum ropal, 10,280; tin, 10,674. Petroleum products exported totaled 37,115,306 bbl. (33,235,875 in 1933). The value of textile imports was 90,626,000 florins, with Japan supplying 67 per cent of the total value. Iron and steel imports were valued at 15,469,000 florins; chemicals, 14,936,000 florins; electrical apparatus, 3,320,000 florins. Japan, the Netherlands, Singapore, the United Kingdom, Germany, and the United States are the chief markets and sources of supply.

Finance. Exclusive of 11,500,000 florins received from the export tax on native rubber, the government in 1934 ran a deficit of 54,100,000 florins, as compared with deficits of 101,700,000 florins in 1933, 140,600,000 florins in 1932, and 145,500,000 florins in 1931. Ordinary budget estimates for 1935 placed receipts at 302,011,000 florins and expenditures at 382,803,000 florins. For 1936 the total estimates (ordinary and extraordinary) were: Receipts, 419,684,000 florins; expenditures, 465,931,000 florins. Although the budget was reduced by 300,000,000 florins in four years through drastic economies, the 1936 budget could be balanced only by imposing new taxes on the production of petroleum and rubber and by a further cut in payrolls and pensions.

The public debt at the close of 1934 totaled 1,509,000,000 florins (1,369,000,000 funded; 140,000,000 floating), compared with 1,512,000,000 florins in 1933. The florin exchanged at an average rate of \$0.4022 in 1932, \$0.5146 in 1933, and \$0.6738 in 1934.

Communications. State and private railways and tramways, extending 4652 miles, during 1933 carried about 75,643,000 passengers. Gross receipts were 54,504,000 florins and operating expenses were 45,144,000 florins. Motor highways aggregated about 36,000 miles on Jan. 1, 1935. The weekly air service between Amsterdam and Batavia was placed on a biweekly schedule in 1935. Air lines connected the principal cities of Java, Sumatra, and Singapore. A total of 13,960 vessels of 29,564,000 net register tons entered the ports of Netherland India during 1933.

Government. Administrative and executive authority is exercised by the Governor-General, assisted by an advisory council of five members and by the Volksraad (assembly). Both the Governor-General and the Council members are nominated by the Queen of the Netherlands. The Assembly of appointed and elected delegates shares limited legislative powers with the Governor-General. It consisted of 30 natives, 25 Netherlanders, and not more than 5 Orientals, such as Chinese and Arabs. Governor-General in 1935, Jhr. Dr. B. C. de Jonge, appointed May 8, 1931.

History. Netherland India failed to benefit from the widespread improvement in world economic conditions during 1935. Instead of the expected upturn, export commodity prices continued their downward trend, the general index for this category reaching the lowest level since prior to 1913. This situation was aggravated by a prolonged drought and the partial failure of crops, particularly in West Java, during the third quarter of the year. The cumulative effect was to reduce native purchasing power and general economic activity to the lowest level of the world economic depression. Monetary returns to native agriculturalists cultivating export crops declined 300 per cent between 1925 and 1933 and fell still further in 1934 and 1935.

The progressive decline in economic activity was not halted by the numerous and drastic "crisis" measures adopted by the government during the year to raise prices and protect local enterprises. These measures took the form of the restriction of production and exports of agricultural commodities, the control of imports by tariffs and quotas to protect local industry and commerce, and the extensive restriction and regulation of industry. The steps taken in 1934 to bar Japanese textiles and other foreign manufactures which competed with imports from the Netherlands also were extended. Illustrative of the regulative measures enacted during the year were those prohibiting the establishment of new dairies or the expansion of existing ones in one administrative district, licensing and controlling the printing trade, and regulating the cigarette industry with respect to the extension of plants, the introduction of new methods, and the use of domestic tobacco in cigarettes.

The additional restriction of tea exports by 5 per cent became effective Apr. 1, 1935. An ordinance empowering the government to regulate and control prices both of imported and domestic articles considered necessities of life, passed the Volksraad July 1 and went into effect August 28. Commencing August 24 a crisis foreign labor ordinance restricted the entrance of European, American, or other foreign intellectual workers. Early in September the Volksraad passed a bill imposing a sliding-scale export duty, for revenue purposes, to become effective Jan. 1, 1936, on rubber produced by estates (European plantations), on "native" rubber produced in regions where the existing special export duty on native rubber was not collected, and on rubber produced outside Netherland Indian customs territory proper.

In his message to the Volksraad of June 15, 1935, the Governor-General emphasized the importance of maintaining a share of imports from countries which are large buyers of Netherland Indian produce by the imposition of quotas and import licenses. He indicated that the government would pursue this policy actively during the crisis period. The budget submitted to the Volksraad the same day anticipated a deficit of 46,000,000 florins, against an estimated deficit of 9,000,000 florins in 1935. On March 28 the Netherlands Government announced a 50,000,000 florin Netherland Indian loan guaranteed by the Netherlands and bearing 3½ per cent interest. Of the total amount 20,000,000 florins was offered to the public, but only 3,000,000 florins were publicly subscribed.

The Japanese-Netherland Indian conference for the regulation of mutual trade relations, which had adjourned at Batavia in December, 1934, without accomplishment, was resumed at Kobe, Japan, on Jan. 25, 1935. The object of this conference was to regulate shipping between Japan and Netherland India but a dispute over the language to be used during the conference led to the collapse of the negotiations in March.

NETHERLANDS, THE. A constitutional monarchy of northwestern Europe. Capital, Amsterdam. Seat of the government, The Hague. Sovereign in 1935, Queen Wilhelmina, who succeeded to the throne Nov. 23, 1890.

Area and Population. With an area of 13,481 square miles of land and water, the Netherlands had an estimated population on Jan. 1, 1935, of 8,400,000 (7,435,565 at the 1930 census). In 1930 94 per cent of the population lived in urban communities of 2000 or more. Living births in 1934 numbered 172,214; deaths, 70,161; mar-

riages, 60,631. The chief cities, with their estimated populations in 1934, were: Amsterdam, 778,442; Rotterdam, 587,897; The Hague ('s Gravenhage), 469,161; Utrecht, 159,896; Haarlem, 126,740; Groningen, 111,240; Eindhoven, 96,863; Nijmegen, 87,808; Tilburg, 84,987; Arnhem, 82,363; Leiden, 72,414.

Education. Primary education is free and compulsory and there is practically no illiteracy. The primary school enrollment in 1933 was 1,267,934; secondary, 48,250; preparatory, 21,178; university, 10,678. There are four public universities (Leiden, Groningen, Amsterdam, and Utrecht) and four private and technical universities.

Production. The 1930 census showed 39 per cent of the working population engaged in industry, 20 per cent in agriculture, 12 per cent in commerce, and 9 per cent in transportation. In 1933 2,156,000 acres, or 25 per cent of the total area, was arable; 3,275,000 acres were meadow and pasture; 630,000 acres were devoted to woods and forests, and 293,000 acres to orchards and truck gardens. Livestock in 1934 included 2,627,000 cattle and 1,750,000 swine. The butter output in 1934 was 199,075,000 lb.; cheese, 256,615,000 lb. The 1934 crops were: Wheat, 17,196,000 bu.; rye, 16,291,000 bu.; barley, 4,546,000 bu.; oats, 19,803,000 bu.; potatoes, 91,490,000 bu.; sugar beets, 1,786,000 metric tons; beet sugar (1934-35), 232,000 metric tons; flax, 9,921,000 lb.

The production of mines and factories in 1934 included: Coal, 12,341,000 metric tons; lignite, 92,000 metric tons; briquets, 1,122,000 metric tons; cotton yarn, 52,910,000 lb.; boots and shoes, 13,200,000 pairs; margarine, 138,890,000 lb.; cocoa powder, 15,432,000 lb.; cocoa butter, 33,069,000 lb.; potato flour, 308,644,000 lb.; bicycles, 416,000; shipping tonnage launched, 47,000. Cotton and wool textiles, machinery, shipbuilding, shoes, iron and steel, cocoa and chocolate, and paper were the leading manufactures. The fisheries in 1934 yielded 212,400 metric tons of fish, valued at 16,900,000 florins.

Foreign Trade. Imports for consumption in 1934 were valued at 1,038,164,000 florins (1,209,229,000 in 1933) and exports of Netherland products at 811,814,000 florins (725,841,000 in 1933). Of the 1934 imports, Germany supplied 28.6 per cent; Belgium, 10.4 per cent; United Kingdom, 9.4 per cent; United States, 6.7 per cent; Netherland India, 5.6 per cent. Germany purchased 24.8 per cent of the exports; United Kingdom, 19.1 per cent; Belgium, 11.5 per cent; France, 8.1 per cent; Netherland India, 4.3 per cent. The chief imports, in order of value, were iron and steel, machinery, wood, textile fabrics; coal, coke, and briquets; corn, and chemicals. The leading exports, by value, were radio apparatus; coal, coke, and briquets; meat, game, and poultry; vegetable oils, cheese, condensed milk, eggs, textiles, and fresh vegetables.

In 1935 imports totaled 935,933,000 florins; exports, 675,104,000 florins. United States statistics showed imports from the Netherlands in 1935 of \$40,664,450 (\$28,440,070 in 1934) and exports to the Netherlands of \$48,539,865 (\$50,967,793 in 1934).

Finance. According to preliminary returns, the budget showed a deficit of 230,500,000 florins in 1933 (receipts, 762,000,000; expenditures, 993,500,000) and another deficit of 94,000,000 in 1934 (receipts, 848,100,000; expenditures, 942,100,000). The estimates for 1935 placed receipts at 963,300,000 florins and expenditures at 1,004,300,000 florins. The public debt on Jan. 1, 1935, totaled 3,362,303,000 florins (funded, 2,700,306,000; floating, 661,997,000), compared with 3,372,242,000 florins on

Jan. 1, 1934. The florin (guilder), par \$0.6806 U.S. currency in 1935, exchanged at an average of \$0.4029 in 1932, \$0.5172 in 1933, and \$0.6738 in 1934.

Communications. The Dutch railways, all owned by two private companies in which the government owned a controlling interest, had 2250 miles of line in 1933, which carried 50,113,000 passengers and 18,103,000 metric tons of freight. The gross receipts totaled 122,438,000 florins. There were also 4660 miles of navigable rivers and canals, about 3000 miles of highways, and air lines radiating from Amsterdam to London, Brussels, Paris, Hamburg, Malmo, and Batavia (Netherland India). Another air line connects Rotterdam and Berlin. The net register tonnage of vessels entering Dutch ports in the overseas trade with cargo in 1934 was 23,451,000 (22,135,000 in 1933). The Dutch merchant marine on June 30, 1935, aggregated 2,558,400 gross tons. Merchandise passing through Dutch ports in the direct and transit trade in 1935 totaled 77,600,000 tons.

Government. Executive power is vested in the sovereign and legislative power conjointly in the sovereign and the States-General (parliament). There is an Upper Chamber of 50 members elected by the Provincial States for six years and a Lower Chamber of 100 members, elected by direct suffrage for four years. Premier at the beginning of 1935, Dr. Hendrik Colijn, appointed May 24, 1933.

History. Under the guidance of its forceful Prime Minister, Dr. Hendrik Colijn, the Netherlands Government held stubbornly to its deflationary policy during 1935 despite the growing seriousness of the economic depression and a severe financial and political crisis. The general index of industrial production (Base 1929 equals 100) declined to 66.3 in 1935 from 69.8 in 1934. The average number of registered unemployed rose to a record peak of 384,691 for 1935 from 332,772 in 1934. Agriculture closed the year in definitely worse condition than in 1934. The value of agricultural exports in 1935 was estimated to be 400,000,000 florins less than in 1929, while the 1935 decline in exports of primary farm products was 15,000,000 florins, or 8 per cent, below the 1934 level. Foreign trade in 1935 had declined 28 per cent in volume and almost 64 per cent in value from the average for the years 1926-30. As compared with 1934, the 1935 imports fell 10 per cent in value and the exports 5 per cent.

The deepening of the depression was reflected in the decline in the vote polled by the government coalition in the Provincial Council elections held in 10 of the 11 Provinces on Apr. 18, 1935. The government parties secured 57.5 per cent of the votes cast, as against 61.9 per cent in 1933 and 67 per cent in 1931. The Liberals and Clerical Protestants suffered the heaviest losses. The National Socialists, favoring a Fascist dictatorship and a corporative state, made their definite entrance into the political arena by winning nearly 8 per cent of the total vote. The newly elected Provincial Councils in turn elected one-half of the members of the Upper Chamber of Parliament. Little change in the standing of the major parties in the Upper Chamber occurred. The Liberals lost one seat, and the National Socialists won two.

The Belgian financial crisis culminating in the abandonment of the gold standard and the devaluation of the belga on April 1 inaugurated a financial crisis in the Netherlands which continued intermittently until a definite restoration of confidence became evident in the last months of the year. A speculative raid on the florin, accompanied by

depreciation of its exchange value and a heavy outflow of gold, forced the Netherlands Bank gradually to raise its discount rate from 2½ to 4½ per cent during April. After a period of calm, the financial crisis was renewed as a result of the difficulties of the Swiss franc and the more serious threat of devaluation of the French franc. By July the outflow of gold was again in full swing, causing the Netherlands Bank to raise its discount rate to 6 per cent. It was accompanied by a significant flight of Dutch capital, which was transferred mainly into sterling and dollar accounts.

To restore the budget equilibrium and thereby renew confidence in the florin Premier Colijn proposed to make additional cuts in wages and salaries of government employees. At the same time he urged the extension of his deflationary programme to include a reduction of interest rates on loans and mortgages. These measures aroused further discontent in the Netherlands, particularly among government employees and wage earners. The Catholic party, fearing that its hold on Catholic workers would be undermined if it stood by the government on these measures, withdrew its support from the cabinet. On July 27 the Premier tendered his resignation, as he now lacked a majority in Parliament. The Queen requested Dr. P. J. M. Aalberse, parliamentary leader of the Catholic party, to form a new government. He was unable to secure the necessary support of other parties and accordingly Dr. Colijn was again called upon to head the government. The effect of the crisis was to enhance Premier Colijn's prestige and power. He was now able to force his deflationary measures upon the Catholics and other parties forming his government, even when they did not fully agree with him.

Dr. Colijn's triumph also produced a partial restoration of confidence in the florin. However, pressure for devaluation gradually increased and uncertainty as to the future of the florin raised a major barrier to the restoration of normal business activity. On September 16 the Netherlands Bank was again obliged to raise its discount rate to 6 per cent to check a new drain on its gold reserves. Premier Colijn continued doggedly to oppose devaluation, however. The Queen's address to the newly assembled Parliament on September 17 called for new deflationary measures in the form of increased taxation and governmental economies. At the same time the government pledged itself to provide adequate relief for the distressed and to extend its public works programme to absorb the unemployed. During the last quarter of the year the marked improvement in economic conditions in other countries aided the government's struggle to defend the florin. About 100,000,000 florins of expatriated gold returned to the Netherlands and at the close of the year business sentiment was more hopeful than at any time since the depression began.

Meanwhile the government had been making steady efforts to adjust the economic system of the Netherlands to the far-reaching changes required by the loss of important export markets for Dutch agricultural products in Great Britain and Germany and the continued restriction of foreign markets for Dutch manufactures. For several years agriculture had been heavily subsidized and in 1935 this policy was continued. The most significant trend, however, was the government-sponsored movement for further industrialization of the country. A number of factories were established with state funds to manufacture articles formerly

imported. The government hoped by these measures to absorb part of the unemployed. At the same time it aided manufacturers to eliminate unnecessary competition within the home market. A law was enacted providing that certain production and price control agreements would be obligatory for a whole industry when a majority of the individual manufacturers approved them.

To prevent the threatened bankruptcy of national shipping companies, the government extended non-interest-bearing credits aggregating 8,200,000 florins to support seagoing ships in actual operation. The advantage which Antwerp obtained over Dutch ports through the devaluation of the belga was counterbalanced by a reduction of Dutch pilot dues to 11 per cent of the 1933 rates.

A distinctly encouraging development was the signing at Washington on Dec. 20, 1935, of a reciprocal Netherland-American trade agreement, to become effective Feb. 1, 1936. The United States lowered its tariff duties on 41 Netherland products and agreed to keep a wide variety of other products on its free list. The chief concession made by the Netherlands was the agreement to buy 5 per cent of its domestic consumption of milling wheat or flour from the United States, provided the price and quality were approximately equal to other foreign wheat. The Netherlands also agreed not to raise tariff rates on many American products and to keep certain others on the free list. Special Dutch import monopoly fees were lowered on some American commodities, and enlarged quotas were granted for a number of American manufactures. On June 12 the Netherland Government signed a new transfer agreement with Germany which became effective July 1.

See MEDICINE AND SURGERY

NEUTRALITY. See INTERNATIONAL LAW; UNITED STATES

NEVADA. Population. On Apr. 1, 1930 (Fifteenth Census), 91,058; July 1, 1934 (latest Federal estimate), 94,000; 1920 (Census), 77,407. Carson City, the capital, had (1930) 1596 inhabitants; Reno, 18,529.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu	Value
Hay (tame) . .	1935	191,000	352,000*	\$2,006,000
	1934	166,000	201,000*	1,729,000
Wheat	1935	12,000	305,000	265,000
	1934	12,000	270,000	222,000

* Tons.

Mineral Production. The mines' yearly production of gold, silver, copper, lead, and zinc, forming much the greater part of all mineral production, by value, rose to \$12,186,234 for 1934, from \$5,452,300 for 1933. The chief components of the total for 1934 were: gold, 143,800 fine oz., in value \$5,025,810; silver, 2,850,000 oz., \$1,842,424; copper, 41,750,000 lb., \$3,340,000; lead, 21,500,000 lb., \$795,500; zinc, 27,500,000 lb., \$1,182,500.

Education. The Legislature having allotted \$100,000 (for 1935 and 1936), out of the receipts from liquor licenses, to the public schools, these were able in many cases, according to the *Journal* of the National Education Association, to augment curtailed salaries and yearly sessions.

Legislation. A State liquor law was enacted, providing a system of State revenue stamps through which was to be obtained a tax on sales

of liquor. The law went into effect on May 1, 1935.

Political and Other Events. Nevada ceased with September to receive grants from the FERA for the support of destitute unemployed persons. It had received \$2,330,618 in such grants in 1934. Economic improvement was mainly responsible for the decline in the need for public support. Sustained and expanding activity in the mining of silver and gold, particularly of silver, stimulated by the Federal bidding up of the price of the metal, was the main cause of this improvement. The raising of livestock was favored by spring rains and better markets. See **DUST STORMS**; **FLOODS**.

Officers. The chief officers of the State, serving in 1935, were: Governor, Richard Kirman, Sr.; Lieutenant-Governor, Fred S. Alward; Secretary of State, W. G. Greathouse; Treasurer, Dan W. Franks; Comptroller, Henry C. Schmidt; Attorney-General, Gray Mashburn; Superintendent of Public Instruction, Chauncey W. Smith.

Judiciary. Supreme Court: Chief Justice, Edward A. Ducker; Associate Justices, Ben W. Coleman, E. J. L. Taber.

NEVADA, UNIVERSITY OF. A coeducational State institution of higher education in Reno, Nev., founded in 1874. There was an enrollment of 973 students for the autumn term of 1935. The faculty included 78 members. The productive funds amounted to \$357,888, and the income for the year to \$576,235. The library contained 58,500 volumes. President, Walter E. Clark, Ph.D., LL.D.

NEW BRUNSWICK. A Province of Canada. Area, 27,985 sq. miles; population (1935 est.), 429,000 compared with 408,219 (1931 census). During 1934, there were 10,136 births, 4656 deaths, and 3040 marriages. Chief cities (with 1931 populations): Saint John (47,514), Moncton (20,689), Fredericton, the capital (8830). For the school term ended June 30, 1935, there were 1489 schools with a total enrollment of 84,536 students of whom 6043 were high school students.

Production. The estimated value of field crops for 1935 was \$15,509,000 (\$14,961,000 in 1934) of which hay and clover (716,000 tons) accounted for \$7,740,000; potatoes (221,200 tons), \$3,230,000; oats (6,238,000 bu.), \$2,745,000. Livestock in 1934: 226,700 cattle, 113,900 sheep, 70,800 swine, and 51,200 horses. The fish catch for 1934 was valued at \$3,679,970 of which sardines represented \$1,038,189; lobsters, \$812,045. Fur production (1933-34): 59,581 pelts valued at \$661,094 of which silver fox (13,962 pelts) represented \$514,213. Mineral production (1934) was valued at \$2,156,151 of which coal (314,750 tons) accounted for \$1,026,343; natural gas (625,601 M cu. ft.), \$306,005. Mineral production (1935): coal (333,559 tons), \$1,095,255; natural gas (608,600 M cu. ft.). During 1933, from the 800 factories, with 11,994 workers, the value of products was \$24,354,723 net.

Government. For the fiscal year ended Oct. 31, 1935, revenue amounted to \$6,342,491; expenditure, \$7,045,608; net public debt, \$53,351,139. Government was vested in a lieutenant-governor and a legislative assembly of 48 members (43 Liberals and 5 Conservatives were elected at the Provincial general election of June 27, 1935). In the Dominion Parliament the Province was represented by 10 Senators and 10 members in the House of Commons (9 Liberals and 1 Conservative were elected at the Dominion General Election held on Oct. 14, 1935). Lieutenant-Governor, Col. M. MacLaren; Premier, A. A. Dysart (Liberal). See **CANADA** under *History*.

NEW CALEDONIA. A colony belonging to France, consisting of the island of New Caledonia and the following dependencies: Isle of Pines, Wallis Archipelago, Futuna and Alofi, Loyalty Islands, and Huon Islands. Total area, 8548 sq. miles; total population (1931 census), 62,919. Nouméa (capital) on the island of New Caledonia, had 10,708 inhabitants.

Production and Trade. Coffee, copra, cotton, manioc, maize, tobacco, pineapples, nickel, chrome, cobalt, manganese, and iron were the chief products. The blast furnaces produced 5978 tons of nickel matte valued at 29,665,000 francs in 1933; chrome ore produced in the same year amounted to 50,100 metric tons. Livestock in the colony included 100,000 cattle, 5000 sheep, 8000 goats, 9000 horses, and 7000 pigs. In 1933, imports (consisting mainly of wine, coal, flour, and rice) were valued at 56,999,000 francs; exports, 47,999,000 francs (franc averaged \$0.0501 for 1933).

Government. The local budget for 1933 was balanced at 29,579,175 francs. The colony was administered by a governor assisted by a privy council, and an elective council-general of 15 members. Governor, B. Siaolous (appointed in 1933).

"NEW DEAL." See **BELGIUM, CANADA, GREAT BRITAIN, SWITZERLAND** under *History*; **UNITED STATES** under *Administration*.

NEWFOUNDLAND, nü'fün(d)-län'd'. A large island at the entrance to the Gulf of St. Lawrence, forming, with Labrador (q.v.), a British colony. Capital, St. John's.

Area and Population. Newfoundland, excluding Labrador, has an area of 42,734 square miles and a population estimated on Jan. 1, 1934, at 285,863 (259,259 at the 1921 census). The estimated population of St. John's in 1933 was 43,792, and that of other towns in 1921 was Harbour Grace, 3825; Bonavista, 4052; Grand Falls, 3769; Carbonear, 3320. In 1933 there were 97,509 Roman Catholics, 93,904 Anglicans, 79,195 members of the United (Protestant) Church, 1911 Presbyterians, 14,397 adherents of the Salvation Army, and 3358 of other denominations. Schools are conducted by religious denominations, there being 1133 schools, with 55,267 pupils, in 1932-33. Illiteracy is estimated at between 7 and 10 per cent.

Production. Fishing, the main occupation, is supplemented by farming, mining, manufacturing, and lumbering. The codfisheries in 1934 yielded 144,480,000 lb. of fish (the average catch during 1926-34 was 132,149,000 lb.). The 1935 seal catch was 143,031 (227,390 valued at \$324,792 in 1934). Hay, potatoes, turnips, and cabbage are the chief crops. Livestock in 1934 numbered 25,500 cattle, 7000 swine, 10,000 goats, 58,000 sheep, and 14,100 horses. The output of iron ore in 1934 was 728,000 short tons, valued at \$1,796,837; of lead and zinc concentrates, 496,000 short tons valued at \$1,841,716, of newsprint (in 1933-34), 259,000 short tons, valued at \$11,580,345.

Foreign Trade. For the year ended June 30, 1935, imports were valued at \$19,240,425 (\$16,305,562 in 1933-34) and exports were \$27,229,125 (\$26,791,503 in 1933-34). The chief sources of imports were: Canada, \$7,154,731; United States, \$5,700,234; United Kingdom, \$4,683,940. The distribution of exports was: To the United Kingdom, \$10,316,579; United States, \$5,171,646; Canada, \$2,183,624. Flour, textiles, coal, hardware, and provisions were the chief imports and codfish, cod and seal oil, wood pulp, paper, iron pyrites, seal skins were the leading exports.

Finance. The budget estimates for the fiscal year beginning July 1, 1935, balanced at \$11,896,698 (Canadian), with the aid of a subvention of £369,680 from the British Government. Actual returns for 1934-35 were: Receipts, \$9,580,749 (\$8,518,946 in 1933-34); expenditures, \$10,600,000 (\$10,166,812). The public debt on June 30, 1934, totaled £19,319,000. On June 30, 1935, it was £20,086,750. The unit of currency is the Newfoundland gold dollar, which in 1935 was equivalent to the Canadian dollar.

Communications. The Newfoundland railways in 1934 had 834 miles of line (government line, 750 miles). In that year they carried 127,397 passengers and 386,112 long tons of freight. About 880 miles of highway were passable to motor cars. A total of 1386 vessels of 1,150,510 net register tons capacity entered the ports during 1933-34 (1364 vessels of 1,050,681 tons in 1932-33).

Government. As a result of a grave financial and economic crisis, the Newfoundland and British parliaments in 1933 passed legislation through which Newfoundland temporarily relinquished its status as a self-governing dominion and became once again a British Crown Colony, governed by a commission of 6 members (3 from Newfoundland and 3 from the United Kingdom). The Commission, which assumed office Feb. 16, 1934, consisted of Sir John Hope Simpson (in charge of the department of Natural Resources), Thomas Lodge (Public Utilities), E. N. R. Trentham (Finance), all Britishers; and F. C. Alderdice (Home Affairs), William R. Howley (Justice), and J. C. Puddeste (Public Health), all Newfoundlanders. Governor and Commander-in-Chief in 1935, Sir David Murray Anderson, who assumed office Jan. 23, 1933. The appointment of Admiral Sir Humphrey Thomas Walwyn to succeed Sir David Murray Anderson, effective in January, 1936, was announced Sept. 30, 1935.

History. The commission of three Newfoundlanders and three Britishers which assumed charge of the government of Newfoundland in February, 1934, made substantial headway during that year in its effort to rescue the island from an acute economic and financial crisis (see 1934 YEAR BOOK, p. 513). In 1935, however, there was a definite slackening of the rate of recovery, with resultant discontent and a demand for restoration of the self-government voluntarily abdicated in 1933.

A report issued by the Commission in May, 1935, reported a marked increase in revenues, an increase in factory employment, and a reduction of the number on relief. Conversion operations carried out with the aid of the British Government had reduced the annual interest burden by 40 per cent. But even with this saving, rising revenues, and a subsidy from the British Treasury, the Commission had difficulty in balancing the budget. In 1935 the increase of foreign tariffs and quotas on fish and fish products further restricted the income of the islanders. The unprofitable shore codfishery resulted in a larger public relief roll during the winter of 1935-36. The storm of August 25, which cost 31 lives and wrecked 10 schooners and 150 fishing boats, was a further blow to the fishing industry.

In an effort to increase prices and revive the herring industry, the Commission restricted packing of the 1935 catch to the average production of the preceding three years. It also provided better credit and other facilities to fishermen. To solve the problem of permanent unemployment in St. John's, the settlement of part of the surplus laborers on the land was undertaken. At the same time the or-

ganization of relief was improved and a more varied diet was provided which eliminated the beri-beri prevalent among persons on relief during 1934.

Most of the Commission's schemes for rehabilitation of the island were of a long-range character, requiring several years to become effective. Certain elements of the population, led by former Finance Minister P. J. Cashin, were dissatisfied with the progress made, however, and at a public meeting in St. John's on October 30 they adopted a resolution calling for the restoration of self-government. The resolution was discussed before the British House of Commons in December. The Under-Secretary for the Dominions told the House that the complaint against the Commission was "not founded on any substantial basis" and that no action would be taken regarding it. The appointment of Vice Admiral Sir Humphrey Thomas Walwyn to succeed Sir David Murray Anderson as Governor and Commander-in-Chief of Newfoundland early in 1936 was announced in December, 1935. Sir David was appointed Governor of New South Wales.

NEW GUINEA, gin'i. The name of an island in the East Indies, and also of those territories in the western Pacific Ocean (including part of the island of New Guinea) mandated to Australia by the League of Nations. Total area of the island of New Guinea, 308,000 sq. miles; population, 1,000,000. See NETHERLAND INDIA; NEW GUINEA, TERRITORY OF; PAPUA, TERRITORY OF.

NEW GUINEA, TERRITORY OF. The territory administered by Australia under mandate of the League of Nations, comprising North-East New Guinea (The Mainland), 69,700 sq. miles; Bismarck Archipelago (consisting of New Britain, New Ireland, Lavongai, Admiralty Islands), 19,200 sq. miles; and the northern Solomon Islands (consisting of Bougainville, Buka, and adjacent small islands), 4100 sq. miles. Total area, 93,000 sq. miles; total population (June 30, 1934), 712,377 including 5453 non-indigenous, 456,924 enumerated natives, and an estimate of 250,000 natives in areas without government supervision. Rabaul (on New Britain) is the capital.

Production and Trade. The area under cultivation on June 30, 1933 (exclusive of native plantations) totaled 219,393 acres of which 211,719 were devoted to coconuts. Coffee, kapok, cacao, tobacco, native foods, and tropical fruits were also grown. Mining is confined to gold (257,511 oz. exported in 1933-34). For 1933-34, total imports (less specie) amounted to £932,731; total exports, £1,766,198 of which the main items were gold (£1,367,616), copra (£283,329), desiccated coconut (£81,562), and trochus, trepang, etc. (£24,882). Ships entered and cleared during 1933-34 aggregated 559,299 net tons.

Government. Revenue for 1933-34 totaled £350,358; expenditure, £348,817; public debt, £55,777. The territory was under an administrator aided by an executive council, and a legislative council empowered to make ordinances. Administrator in 1935, Brig. Gen. W. R. McNicoll. See EXPLORATION.

NEW HAMPSHIRE. Population. On Apr. 1, 1930 (Fifteenth Census), 465,293; July 1, 1934 (latest Federal estimate), 470,000; 1920 (Census), 443,083. Manchester (1930) had 76,834 inhabitants; Concord, the capital, 25,228.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1935	388,000	416,000*	\$5,325,000
	1934	382,000	375,000*	6,562,000
Potatoes	1935	10,000	1,200,000	900,000
	1934	10,000	1,850,000	999,000
Corn	1935	17,000	697,000	558,000
	1934	16,000	656,000	643,000

* Tons.

Education. The number of the State's inhabitants between the ages of five and sixteen years on Oct. 1, 1934, was reckoned as 91,086. In the year ending with June 30, 1935, there were enrolled in the public schools 78,689 pupils. Of these, 57,970 were in the elementary grades; those in high schools numbered 19,502; and there were 1217 pupils in evening schools. The expenditures of the year for public-school education totaled \$7,073,824, as against \$6,719,579 for the year previous. The salaries of teachers, for the year, averaged \$1935 among men in the secondary classes, \$1398 among men in the elementary classes, and \$1390 and \$1094 respectively for women in the corresponding groups.

Charities and Corrections. The Legislature's course in discontinuing the State Board of Public Welfare and creating a paid State Board of Welfare and Relief had the effect of uniting the administration of the State's ordinary activities for the care and custody of persons and its work in the field of support for the destitute unemployed. The new board was a paid body of three members, provided with a staff. To perform its double task it operated through two divisions. Of these, the Division of Welfare attended to the supervision of neglected, delinquent, and defective children, the inspection of State and other charitable and correctional institutions, mothers' aid, education and employment for the blind, and aid for the tubercular; the Division of Relief reimbursed towns and counties for half of their expenditure on poor relief.

The State provided care or custody for individuals in the following institutions: New Hampshire State Hospital (mental disorders), at Concord; Laconia State School (feeble-minded children), Laconia; New Hampshire Industrial School (juvenile delinquents), Manchester; State Prison, Concord; New Hampshire Soldiers' Home, Tilton; State Sanatorium (tuberculosis), Glencliff. A State appropriation provided means for putting in other places of treatment tubercular patients whom the Sanatorium could not take. Prison industries produced the State's automobile-license plates, did stone-cutting, and performed the State's printing.

Legislation. The regular session of the Legislature created a system of compulsory insurance against unemployment. Under this system persons losing employment were to receive determined sums during a period of idleness, out of a fund to which both employees and employers were required to contribute. The system applied to all industrial firms employing ten or more persons apiece and to all employees of such firms whose rate of pay did not exceed \$2500 a year. The plan was designed to conform with the qualifications for Federal subvention to State insurance against unemployment, under the Social Security Act (see UNITED STATES; Congress). A Board of Welfare and Relief was created, to administer both emergency aid and ordinary welfare.

Political and Other Events. In the expectation that plans under the Federal system of "work relief" would suffice for the support of the remain-

ing persons otherwise unemployed and employable, but lacking livelihood, the FERA stopped its monthly grants to the State at the end of September. Public support for the needy unemployed in 1934 had cost \$4,240,255, of which the FERA had paid nearly 60 per cent, the State government paying about nine-tenths of the remainder. The whole cost came to somewhat above \$9 per capita of the population, or approximately three-fourths of the corresponding rate for the Nation. Declining revenue and higher expenditure combined to cause the State a cash deficit of \$933,675 at the end of the fiscal year 1935. State aid to the needy unemployed was suspended in December.

The foremost industrial firm in the State, the Amoskeag cotton manufactory, which had formerly employed as many as 12,000 persons, suspended operations at Manchester for a great part of the year. In the apprehension that the long-established enterprise might be liquidated, Governor Bridges, August 9, appointed a committee to report on the situation. The committee's report, given out early in November, declared the State liable to suffer hardship in case of the loss of employment to the inhabitants involved; it attributed the difficulties of the mills to matters largely beyond the control of the Company and of the State, but it recommended the repeal of the State's tax on stock in trade, a tax deemed a handicap to manufacturing, and suggested a conference between Amoskeag's management and employees.

New Hampshire ratified in May the compact of New England States, New York, and Pennsylvania, executed in 1934, to provide uniform legislation as to minimum wages. As Massachusetts had ratified in 1934 the compact became valid for the two ratifying parties, except for Federal approval. See MINIMUM WAGE.

Officers. The chief officers of the State, serving in 1935, were: Governor, H. Styles Bridges; Secretary of State, Enoch D. Fuller; Treasurer, Charles T. Patten; Attorney-General, Francis W. Johnston (died October 14) and Thomas P. Cheney (thereafter).

Judiciary. Supreme Court: Chief Justice, John E. Allen, Associate Justices, Thomas L. Marble, Oliver W. Branch, Peter Woodbury, Elwin L. Page.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational State institution of higher learning at Durham, N. H., founded in 1866 in Hanover, N. H., and transferred to Durham in 1893. The 1935-36 enrollment was 1594, of whom 1134 were men and 460 women. The summer session had a registration of 343. The faculty and research and extension staff totaled 267. The endowment amounted to \$1,228,934 and the income for the year was \$1,339,265. A change in the division of the instructional year to semester basis was authorized by trustees to become effective in September, 1936. A Bureau of Appointments was established to cover all types of after-graduation employment and non-University undergraduate employment. The Alumni Fund plan of annual donations by graduates was established. A course in practical citizenship, including weekly lectures by State and national officers and leaders was added to the curriculum, and the department of sociology reorganized. The enrollment of New Hampshire non-residents in the law department was permitted temporarily. The library contained 82,165 volumes. President, Edward Morgan Lewis, LL.D., Litt.D.

NEW HEBRIDES, hēb'ri-dēz. A British-French condominium comprising a group of is-

lands in the South Pacific. Espiritu Santo, Malekula, Efate, Ambrym, Erromanga, Epi, Aoba, Pentecost, Maeovo, Gaua, Vanua Lava were the main islands. Total area, 5700 sq. miles; population, about 50,000 natives and 2318 non-natives. Vila, the capital, had 1200 inhabitants.

Copra, cacao, coffee, cotton, maize, sulphur, and vanilla were the main products. In 1934, total imports were valued at £75,993; total exports, £49,933; revenue, £10,719; expenditure, £23,362. Executive power was vested in a British Resident Commissioner (who was under the British High Commissioner stationed at Suva, Fiji Islands) and a French Resident Commissioner (subordinate to the French High Commissioner stationed at Nouméa, New Caledonia).

NEW JERSEY. Population. On Apr. 1, 1930 (Fifteenth Census), 4,041,334; July 1, 1934 (latest Federal estimate), 4,231,000; 1920 (Census), 3,155,900. Newark (1930) had 442,337 inhabitants; Jersey City, 316,715; Paterson, 138,513; Trenton, the capital, 123,356.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1935	208,000	339,000*	\$4,576,000
	1934	215,000	397,000*	6,352,000
Corn	1935	180,000	8,190,000	5,733,000
	1934	166,000	7,138,000	6,210,000
Potatoes	1935	50,000	9,750,000	4,388,000
	1934	50,000	9,050,000	4,796,000
Apples	1935	4,200,000	3,738,000
	1934	2,070,000	2,463,000
Peaches	1935	800,000	1,040,000
	1934	22,000	52,000
Sweet potatoes . .	1935	14,000	2,100,000	1,575,000
	1934	13,000	2,015,000	1,894,000

* Tons.

Mineral Production. Mines in the State produced, in 1934, ore containing 76,553 tons of zinc, as against 75,125 tons for 1933. The zinc obtained from the ore mined in 1934 had a total value of \$8,772,200. The minor production of iron ore in the State's northern area continued, rising to 138,685 gross tons for 1934, from 73,144 for 1933.

Education. There were enrolled in the public schools of the State, in the academic year 1934-35, 809,926 pupils. Of this total 40,546 were in kindergartens, 540,996 in elementary schools, 49,286 in junior high schools, 34,754 in senior high schools, 133,262 in four-year high schools, 1382 in post-graduate courses, and 9700 in special classes. Except for the elementary and kindergarten enrollments, the totals by groups exceeded those for the year before. The year's expenditures, exclusive of outlays, for education in the public schools totaled \$98,174,439, which included \$19,760,240 for service of debt. The year's capital outlays for public schools totaled \$1,944,602. The salaries of the 27,519 teachers, for the year, averaged \$1813.05, which was 15.9 per cent below the average for the year 1931-32.

High schools continued to encounter demand among unemployed alumni for postgraduate instruction. Effort was made in the northern part of the State, with aid from Federal funds, to offer particular provision for this group. Six counties, Essex, Middlesex, Monmouth, Morris, Passaic, and Union, maintained emergency junior colleges.

Charities and Corrections. A strongly centralized direction of public activity in the care and custody of persons, under the system in force in 1935, was vested in the Department of Institutions and Agencies. A Board of Control, composed of

nine appointed members, headed the Department, and a Commissioner (William J. Ellis), its appointee, was its chief executive officer. The Board appointed boards of managers for State institutions; coordinated institutional and other public activities in its field; established the administrative policies therein; supervised the management of the State institutions; prepared their budgetary requests; afforded them the service of a staff of experts; inspected private, county, and municipal institutions; ruled on transfers of persons in State institutions; supervised those paroled from State correctional custody; conducted institutional industries producing for the State's use; and administered State relief for the aged.

The State institutions within the Department and their populations of Oct. 31, 1935, were: State hospitals for mental patients, at Greystone Park (5020), Trenton (2722), and Marlboro (1700); for the feeble-minded, the State School (females, 1362) at Vineland, State Colony (males, 795) at New Lisbon, State Colony (males, 637) at Woodbine, and North Jersey Training School (females, 549) at Totowa; State Village for Epileptics (1413) at Skillman; Sanatorium for Tuberculous Diseases (463), Glen Gardner; State Prison (1246), Trenton; State Prison Farms at Leesburg (229) and at Bordentown (202); reformatories at Rahway (males, 752), Annandale (males, 412), and Clinton (females, 244); for juvenile delinquents, the State Home for Boys (524) at Jamesburg, and State Home for Girls (248), at Trenton; Home for Disabled Soldiers (53), Menlo Park; Home for Disabled Soldiers, Sailors, Marines, and Their Wives and Widows (162), Vineland. The State Board of Children's Guardians had charge of 28,642 cases. Aid to the blind was rendered by a State Commission for the Blind.

Legislation. A tax of 2 per cent on sales at retail, payable by the purchaser through the seller, was imposed. Its application extended to food, with the exception of milk; it was payable approximately to the nearest cent, and went into effect on July 1. This tax was the session's foremost subject of strife. Governor Hoffman sought it as needful to raising the means for meeting the State's share of the cost of the public support of the destitute unemployed; a strong division of his own fellow-Republicans forming the majorities in the Legislature opposed it. To enable the State to free funds for early use the State Sinking Fund Commission was authorized to market at private sale \$2,500,000 bonds of the Port of New York Authority that it held, for which it had failed to obtain bids by the ordinary method. The Governor was authorized to borrow from State funds at the rate of \$2,000,000 a month in order to tide the State over the immediate needs for money to help support the unemployed.

The existence of the State Milk-Control Board was extended for two years and its membership was increased. The Highway Commission of four members was abolished and replaced by a single commissioner to be appointed by the Governor. Teachers were required to take an oath of fidelity identical with that taken by Legislators and State officers.

A Banking Advisory Board was created, to consist of four members, and to suggest administrative steps and legislation for the regulation of banks. Banks were allowed to take their own stock as security for loans and to hold it in excess of the general statutory limit of one year. The writing of insurance on elevators and aircraft was per-

mitted. An act was passed to regulate the bonded debt of municipalities; it set for such debt a maximum of 7 per cent of a municipality's average assessed valuation, and it required reports to the State Auditor.

The right of individuals to sue for damages on the ground of alienation of affection, criminal conversation, seduction, or breach of contract to marry was abolished, as in a number of other States, under pressure of a movement against suits of a type commonly prone to abuse. It was forbidden to reveal illegitimacy either through public officials' giving information or through statements on birth certificates. It was made a misdemeanor, by a so-called anti-Nazi act, to circulate propaganda against religion, race, or creed.

A special session, called to meet October 25, repealed the sales tax.

Political and Other Events. The brief life of the sales tax was cut short by a combination of adverse influences, in which factional opposition to Governor Hoffman had a part. A Republican group that included the Rev. Lester H. Clee, speaker of the Assembly, pressed for meeting the cost of aid to the destitute by State economies, the diversion of other State funds, and the imposition of an income tax, as alternatives or in combination. This opposition, unsuccessful in the regular session, was renewed in the primary campaign. The Republican primary ticket carried many who sought nominations as advocates of the abolition of the tax. Although the tax had been paid for some 11 weeks without conspicuous check to trade, the primary election on September 17 brought heavy gains to its opponents. The Governor found himself forced a month later to call the legislative session that repealed the act. The outcome, not necessarily deplored by all the political figures in his party, was to diminish the prestige that he had won by his election in 1934.

The occasion that brought the sales tax was partly due to the FERA's demand that the State bear more of the burden of supporting the needy unemployed. In 1934, under the Democratic State administration of Governor Moore, the FERA had paid \$42,647,415, or over 85 per cent, of the total for this purpose, the State paying \$4,238,537 and its subdivisions \$2,296,066. Early in March the FERA called on New Jersey to contribute at the rate of \$2,000,000 a month as its proper share of the total.

In a brief interval between Governor Moore's leaving office to become United States Senator and the inauguration of Hoffman, Clifford R. Powell, President of the State Senate, succeeded as Acting Governor. In this capacity, on January 7, Powell exercised authority conferred in the creating act itself and proclaimed the immediate termination of the State's Industrial Recovery organization and of statutory State cooperation with the NRA. The State's recovery act, moreover, was declared unconstitutional by the State Supreme Court in a suit over a prior purchase of fuel oil, on January 23, shortly after its termination. The Court of Errors and Appeals held on May 17 that the act of 1934 to permit commercial dog-racing was unconstitutional. The State Public Service Commission ordered on April 25 that the Public Service Electric and Gas Company reduce its electric rates to the extent of \$5,176,566 a year, starting June 1; 65 per cent of the reduction was to be accorded to domestic customers.

Newark reported in September a somewhat higher percentage of collections, both of the current

year's taxes and of arrears, than for the same time a year earlier. Asbury Park, in default on its bonds and under the financial control of the State Municipal Finance Commission, was subjected to a Federal judgment for debt, requiring it to pay \$1,328,000 to certain of its bondholders by installments over 10 years. The bondholders not being residents of the State, the Court held that the Commission could not forbid their suit. Newark issued \$10,000,000 of bonds in February, with which it paid off its floating debt. Jersey City moved to effect a similar operation as to its short-term debts. A subway, built to divert trolley cars from the streets near the business centre of Newark, was put in operation on May 26; a new passenger station and bridge of the Pennsylvania Railroad, at Raymond Plaza, Newark, were opened on March 23. Trenton adopted, at a special election March 19, government by city manager and council.

Bruno R. Hauptmann, the accused in the abduction of the infant son of Charles A. Lindbergh, was tried at Flemington, convicted on February 13 of the murder of the baby, and sentenced to death. The execution of Hauptmann was put off by his counsel's steps for an appeal.

Officers. The chief officers of the State, serving in 1935, were: Governor, Harold G. Hoffman; Secretary of State, Thomas A. Mathis; Treasurer, William H. Albright; Comptroller, Frank J. Murray; Attorney-General, David T. Wilentz; Commissioner of Education, Charles H. Elliott.

Judiciary. Chancellor, Luther A. Campbell; Supreme Court, Thomas J. Brogan (Chief Justice), Thomas W. Trenchard, Charles W. Parker, Frank T. Lloyd, Clarence E. Case, Joseph L. Bodine, Ralph W. E. Donges, Harry Heher, Joseph Perskie.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem. For history see THE NEW INTERNATIONAL ENCYCLOPEDIA under *Swedenborgians*.

The General Church of the New Jerusalem. This body, which separated from the General Convention over the question of the divine inspiration of Swedenborg's writings, was organized in 1897 under episcopal government. Its headquarters are in Bryn Athyn, Pa., where it maintains a cathedral of unusual architectural interest and the Academy of the New Church, with departments from kindergarten to junior college and including also a theological and a normal school. On Jan. 1, 1935, the General Church had a world-wide membership of 2173. Of its 21 societies and five "circles," 16 were in the United States and Canada, three in England, and others in France, the Netherlands, Sweden, Natal, New South Wales, and Brazil, while a native mission was maintained in South Africa. The Church was served by three bishops, 35 pastors, and four ministers. Its official periodical is *New-Church Life*.

The General Convention of the New Jerusalem in the United States of America. In 1935 the General Convention consisted of about 6000 communicant members, united into 84 societies, territorially organized as 12 associations and seven independent societies. The ministerial membership

was 104. The Convention maintained the New-Church Theological School in Cambridge, Mass., Urbana College in Urbana, Ohio, and the Waltham School for Girls in Waltham, Mass. Among its periodicals were the *New-Church Messenger*, weekly, Brooklyn, N. Y.; *The Helper*, weekly, Philadelphia, Pa.; and *Victory*, monthly, Los Angeles, Calif. At the Convention's 114th annual meeting, held in Detroit, Mich., June 16-23, 1935, the Rev. Fred Sidney Mayer of Baltimore, Md., was reelected president; Ezra H. Alden, of Philadelphia, Pa., vice-president; Albert P. Carter, of Boston, Mass., treasurer, and Benjamin A. Whittemore of Boston, recording secretary.

NEW MEXICO. Population. On Apr. 1, 1930 (Fifteenth Census), 423,317; July 1, 1934 (latest Federal estimate), 437,000; 1920 (Census), 360,350. Santa Fe, the capital, 11,176 (1930); Albuquerque, 26,570.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1935	161,000	334,000*	\$2,906,000
	1934	156,000	283,000*	3,820,000
Cotton	1935	89,000	78,000*	4,645,000
	1934	90,000	89,000*	5,782,000
Corn	1935	285,000	3,848,000	2,886,000
	1934	136,000	1,088,000	1,153,000
Wheat	1935	124,000	1,036,000	939,000
	1934	125,000	711,000	650,000
Grain sorghums ..	1935	390,000	4,290,000	2,415,000
	1934	242,000	1,694,000	1,592,000
Dry beans	1935	110,000	302,000*	951,000
	1934	44,000	66,000*	370,000

* Tons. † Bales. ° 100-lb. bags.

Mineral Production. Coal produced totaled 1,382,000 net tons (1935), compared with 1,259,323 (1934). Petroleum increased considerably, to 16,915,000 barrels (1934), from 14,116,000 (1933) and made a new high record of annual production. Large wells were brought into production in the Cooper field, previously thought a producer of gas only. Gasoline was produced from natural gas, to the quantity of 21,900,000 gallons in 1934, which exceeded the total for 1933 by 14.4 per cent.

Education. For the academic year 1934-35 the number of inhabitants of school age was reckoned as 157,869. Enrollments in the public schools numbered 117,243. Of these, 99,996 were in common schools or elementary grades, and 17,247 were in high schools. The year's current expenditure for education in the State came to \$5,327,095; the total expenditure, to \$6,039,044. The annual salaries of teachers averaged \$969.

Charities and Corrections. The State government's administration of matters connected with the public care and custody of persons did not include in 1935 any central body holding general authority. The State Penitentiary was directed by a Superintendent. This Superintendent and five appointed members constituted a Board of Penitentiary Commissioners, who considered applications for parole or pardon and counseled the Governor as to their disposal. The Penitentiary's inmates averaged 567 in number for the year ended with June 30.

Legislation. A constitutional amendment, to exempt homesteads to a valuation not above \$2500 from direct taxation, was submitted to a referendum of the voters.

Political and Other Events. A riot of unemployed men at Gallup cost three lives on April 4. Ten of the alleged rioters were arrested on a charge of murder. Robert Miner, stated to be a

Communist leader, accompanied by a lawyer from Philadelphia, went to Gallup to aid the arrested men. On May 2 the two were found by Indians near the Tohatchi Reservation, and taken to the reservation's hospital, complaining that they had been abducted and beaten by masked men. The Civil Liberty and Labor Defense leagues later sought an investigation of the affair in Congress.

Officers. The chief officers of the State, serving in 1935, were: Governor, Clyde Tingley; Lieutenant-Governor, Luis C. de Baca; Secretary of State, Elizabeth F. Gonzales; Auditor, Jose O. Garcia; Treasurer, James J. Connelly; Attorney-General, Frank H. Patton; Superintendent of Public Instruction, H. R. Rodgers.

Judiciary. Supreme Court: Chief Justice, D. K. Sadler; Associate Justices, Andy Hudspeth, A. L. Zinn, Howard Bickley, C. R. Brice.

NEW ORLEANS BRIDGE. See BRIDGES; RAILWAYS.

NEW SOUTH WALES. A State of Australia. Area, 309,432 sq. miles; population (June 30, 1935 estimate), 2,644,760 exclusive of 9714 (1933 census) aboriginals (8485 half-caste and 1229 full-blood). During 1934 there were 43,335 births, 23,474 deaths, and 20,210 marriages. Chief towns (with 1933 census populations): Sydney (capital), 1,235,367; Newcastle, 104,491; Broken Hill, 26,921; Goulburn, 14,851; Cessnock, 14,387; Lithgow, 13,444. In 1934, the 3458 State schools had 382,641 students; the 755 private colleges and schools (exclusive of many business schools), 95,849 students; the University of Sydney, 3043 students.

Production. Wheat, barley, oats, maize, rice, sugar cane, tobacco, bananas, oranges, grapes, and apples were the main agricultural products. Live-stock in the State (1934): 52,104,000 sheep; 3,361,771 cattle, 532,028 horses, and 367,116 pigs. Production (1933-34): Wool, 486,152,493 lb.; butter, 147,963,411 lb.; cheese, 9,072,508 lb.; bacon and ham, 21,081,586 lb.; wheat (1934-35), 49,000,000 bu. Mineral production (1934) was valued at £7,769,138 including coal (£4,541,923), silver and lead (£2,200,000), gold (£307,662), and tin (£328,130). During 1933-34 the value of production from the 7818 factories, with 154,061 employees, was £54,042,154 (Australian £ averaged \$4.0095 for 1934).

Government. For the fiscal year ended June 30, 1935, revenue was £48,425,000; expenditure, £51,271,000; gross public debt, £337,101,000. Executive power was vested in a governor. Legislative power rested with a parliament consisting of a legislative council of 60 members, and a legislative assembly of 90 members elected for three years. Governor, Brig.-Gen. Sir A. Hore-Ruthven who was to be succeeded, during January, 1936, by Sir David Anderson. Premier, B. S. B. Stevens. The standing of the parties in the Legislative Assembly elected May 11, 1935, was: United Australia party, 37; United Country party, 23; State (Lang) Labor party, 30. See AUSTRALIA.

NEW YORK. Population. On Apr. 1, 1930 (Fifteenth Census), 12,588,066; July 1, 1934 (latest Federal estimate), 13,059,000; 1920 (Census), 10,385,227. New York City had (1930) 6,930,446 inhabitants; Buffalo, 573,076; Rochester, 328,132; Syracuse, 209,326; Albany, the capital, 127,412.

Agriculture. The table on page 532 shows the acreage, production, and value of the principal crops for 1935 and 1934.

Mineral Production. The production of coke increased to 4,089,708 net tons (1934) from 3,426,-

Crop	Year	Acreage	Prod. Bu.	Value
Hay (tame)	1935	4,023,000	5,475,000*	\$45,442,000
	1934	4,000,000	3,056,000*	56,797,000
Corn	1935	648,000	22,032,000	17,626,000
	1934	617,000	21,286,000	18,732,000
Oats	1935	844,000	25,742,000	10,297,000
	1934	836,000	23,408,000	12,874,000
Potatoes	1935	195,000	21,450,000	12,870,000
	1934	210,000	32,550,000	13,020,000

Buckwheat	1935	140,000	2,380,000	1,261,000
	1934	147,000	2,911,000	1,630,000

* Tons. † 100-lb. bags.

529 (1933); in value it rose to \$25,283,246, from \$19,232,209. There was a substantial production of pig iron, evidenced by blast furnaces' shipments of 961,679 gross tons (1934), as against 851,496 (1933); in value the shipments totaled \$14,621,274 (1934) and \$12,344,827 (1933). The iron ore mined in the State could supply but little of the raw material for this pig iron; but the production of iron ore rose to 244,962 tons for 1934, from 58,718 tons for 1933.

Some 3,800,000 barrels of petroleum were reported to have been produced in 1934, as against about 3,174,000 in 1933. Efforts were made, with much drilling and some success, to extend the still recent finds of natural gas in the State. Successful wells were driven in Oneida and Allegany counties. Some wells of substantial yield were driven in Steuben, Cayuga, and Lewis counties.

The producers' yearly sales of salt, 1,866,280 short tons for 1934, were at about the same level as the 1,847,696 tons of 1933; by value the total for 1934 was \$5,263,394. There were mined, in 1934, 391,408 short tons of gypsum, in value, \$3,922,529.

Education. The academic year 1933-34 was the latest for which the statistics as to the public schools had been summarized. For that year the number of the State's inhabitants not over 18 years of age was reckoned as 3,988,276. There were enrolled in the public schools, during the year, 2,296,868 pupils. Of these, 1,683,731 were in elementary grades or common schools; in high schools, 613,137. The year's expenditures for public-school education throughout the State totaled \$315,187,956, inclusive of expended proceeds of sale of bonds and certificates of indebtedness; exclusive thereof, the total was \$309,834,631. Of the latter total, current expenditure made \$254,345,337; service of debt, \$52,638,779; and capital outlay not defrayed by bonds, \$2,850,516. But the whole capital outlay (including sums raised by issue of bonds and certificates of indebtedness) came to \$8,203,840. The salaries of teachers, for the year, averaged \$2308.51. A State act of 1935 having rendered attendance at school, after September, 1936, compulsory up to the age of 16 years, the secondary schools engaged in planning for higher enrollments. "Emergency collegiate centres," 21 in number, had over 3300 students. See EDUCATION IN THE UNITED STATES.

Charities and Corrections. The central administrative authority as to the State's care and custody of persons, under the system in force in 1935, lay chiefly in three State departments, those of Social Welfare, of Mental Hygiene, and of Correction. The Department of Social Welfare (David C. Adie, Commissioner) included a directing body

of three members, the Board of Social Welfare. It administered the public allowances to the needy aged; supervised activities for the welfare of children, wayward minors included; exercised general supervision over county boards' grants of aid to dependent mothers; examined agencies for placing and for boarding dependent children; supervised the public medical institutions, except those for mental ill; supervised the counties' and localities' public homes (formerly almshouses) and other institutions for the care of dependent adults; handled matters of Indian welfare; performed duties on behalf of the blind; and administered five State institutions. These five were: for delinquent minors, the State Agricultural and Industrial School, at Industry, the State Training School for Boys, at Warwick, and the State Training School for Girls, at Hudson; the Thomas Indian School, at Iroquois; for soldiers, sailors, their wives, mothers, widows, and daughters, the State Women's Relief Corps Home, at Oxford.

The twenty mental hospitals maintained by the State were controlled by the Department of Mental Hygiene; these contained approximately 60,000 patients, not to count those out on parole. The correctional institutions were under the Department of Correction (Walter N. Thayer, Jr., Commissioner), while a Division of Probation dealt with the granting of probationary release from confinement. The State Prisons at Attica, Auburn, Clinton, Great Meadow, Sing Sing, and Wallkill contained 8126 prisoners on June 30, 1935; Elmira Reformatory, 1242; Westfield State Farm, at Bedford Hills, 202 in the reformatory section and 143 in the prison; institutions for defective delinquents, at Napanoch and Albion, 1223, the two hospitals for the criminal insane, at Beacon and Dannemora, 2209; the New York State Vocational Institution, at Cossackie, 309.

Legislation. The regular annual session of the Legislature passed several resolutions to amend the State constitution, in case of their second passage in the following year and subsequent ratification by popular vote. The proposed amendments included the increase of the duration of the terms of Governor and Lieutenant-Governor to four years; of the members of the Assembly (lower house) to two years; and rendering civil verdicts valid when supported by only ten of the twelve jurors in a case. Second passage was given a proposed amendment to alter the form of government for counties.

For the financial needs of the State the Legislature authorized (subject to approval at the polls) the issue of \$55,000,000 of the State's bonds in order to help meet the cost of support for the needy unemployed; appropriated \$10,000,000 from revenue to the same use; imposed or raised taxes in order to produce an additional \$55,750,000 a year, mainly through greater income taxes and an additional one cent a gallon on sales of gasoline; and appropriated \$40,000,000 for public works for which the State anticipated obtaining Federal grants.

With regard to the State organization, acts abolished the old State Council of Farms and Markets, through which the Agricultural Department was controlled by Republicans, and put that department under a single appointed commissioner, whereby it could be put under Democratic control; created a central detective bureau as part of the State police; set up a State Planning Board to study State policies with a view to consistency and forehandedness; required bipartisan boards of elections in those counties, mainly Republican, which had not had them; created a State Publicity Bu-

reau; and expanded the powers of the State Banking Board.

In the field of social legislation, a system of insurance against unemployment was instituted, to provide payments to persons losing employment, a fund to be created through a levy on employers, at a percentage (ultimately rising to 3 per cent) of their payrolls; attendance at school was required of the young until they attained the age of 16 years; the system of workmen's compensation was extended to cover cases of all diseases regarded as occupational; a trial by jury was accorded to every person who should be charged with having violated an injunction issued by a court in the matter of a labor dispute; and a special commission was created for the study of interstate compacts as to legislation affecting employees; the Schackno Act for the enforcement of industrial codes under the NRA, attacked on constitutional grounds, was amended in order to render it valid; and colleges, schools, and libraries receiving public support were forbidden to make discrimination against individuals.

Dealing with privately owned business and property, the Legislature prolonged for another year the State's moratorium on proceedings against delinquent mortgagors; created a separate Mortgage Commission to take over from the Superintendent of Banks the administration of the interests of owners of defaulted mortgage certificates (thus affecting some \$800,000,000, at par value, of such certificates), and directed the continuation of the previous Legislature's inquiry, by investigating committee, into alleged wrongful conduct of public utility companies.

In the concerns of New York City were enacted an extension, until June 30, 1936, of the city's authority to levy its emergency-meeting taxes; an extension, until Sept 1, 1938, of the time in which the city's directly owned subway need not charge a fare high enough to render it self-supporting; a requirement that the employees of this subway have vacations of two weeks every year with pay; authorization to the city to acquire the privately owned subways, create a single, merged, municipally owned system, and operate it through a Board of Transit Control, subject to orders from the existing Transit Commission.

Measures affecting special interests included permission of dramatic and musical performances for pay, on Sundays, subject to local permissive ordinances; and permission to the manufacturer of trademarked goods to stipulate in contracts with retailers the price at which the goods might be sold to consumers.

Touching the work of the courts, a measure was enacted to prohibit "ambulance-chasing," i.e., rushing to solicit injured persons likely to have a claim at law for damages, either on the part of lawyers seeking to represent the solicited person or on that of insurance companies seeking to settle claim; a lawyer's dividing his fees with a layman was forbidden; the old system by which, when a divorced husband had been condemned to civil imprisonment for non-payment of alimony, the charge of alimony continued to accumulate, was ended by a law stopping alimony for the term of the imprisonment; suits on account of injury to person or property were allowed to survive the decease of the defendant; the consorting of persons of evil reputation, essentially of criminals, was rendered *prima-facie* evidence of unlawful purpose; the courts were authorized to admit microscopic examination of blood as a test of paternity; the in-

dividual's right of civil action to recover damage for alienation of affection, criminal conversation, seduction, or breach of contract to marry was abolished. Promiscuous display of the uncovered person was made a criminal offense, by a so-called anti-nudist law.

Political and Other Events. Governor Lehman, who a year earlier had recommended the cessation or reduction of some State taxes, in the expectation that they would not be needed, found himself obliged in January, when offering his budget, to estimate a rise of the cumulative deficit to \$74,850,391 by the close of the fiscal year at the end of June. He attributed this rise to the failure of actual receipts from taxes to come up to expectations. He called for appropriations of \$284,080,804 for the fiscal year 1936 and for new taxation designed to produce \$55,750,000 in that year.

The Unemployed. The State's deficit for the fiscal year ended with June 30 did not reflect that part of the cost of its contribution to the support of the needy unemployed which was met through the issue of some \$40,000,000 of bonds. The cost of supporting the unemployed was strikingly high for New York, even as compared with the cost per capita among other States. For 1934 it attained \$274,403,079, or 18.54 per cent of the like expenditure, as reported by the FERA, for the whole country. The FERA paid 55.5 per cent of the cost in New York; local funds, more than one-fourth; and the State, less than one-fifth, expending \$50,322,160. The combined expenditure in the State exceeded \$20 *per capita* of the population, as against a corresponding rate of some \$12 for the whole country. The excess in the State's case arose partly from a higher proportion of needy unemployed persons than the country's average; partly, from a higher average cost of the necessities of life. The State's relief administration estimated that as late as in March, 1935, 2,200,000 individuals, fully one-sixth of the population, obtained public support. The State's recourse to issues of bonds to meet its share of this assistance, even while many less powerful States paid wholly or chiefly out of revenue, was partly due to a ready sale for New York's bonds at low interest.

Great efforts were made in the latter part of the year to supplant direct support in New York with the Federal Administration's scheme of "work relief." General Hugh S. Johnson, former head of the NRA, was put in charge of the task in New York City. The President allocated on October 8, to plans for "work relief" in the State, \$105,509,000 to become immediately available. The Federal authorities took direct charge of administering aid to all the needy except the unemployables, who were left to the State's organization. By the end of November the people dependent on public support had been in great part shifted to a wage-receiving basis.

Other State Matters. The State Court of Appeals upheld the law of 1934, imposing on public utility companies the cost of the Public Service Commission's investigating them, in a decision on July 11. It upheld on April 16 a law allowing the Milk Control Board of the State to let non-advertising sellers of milk charge less than the advertising companies. But the State's effort to fix the retailing prices for milk was imperiled by the Federal Supreme Court's decision of March 4, that the State had not power to prescribe the price that companies should pay for milk bought in other States and brought into New York. The Schackno Act, the State's act to provide conformity with the

NRA, was held unconstitutional by the State Court of Appeals on April 26; but the decision held only against the original act, as to which suit had been brought; not against the act as amended in the legislative session of 1935.

State action against public utility companies was vigorously pursued. Not only did the Legislature's investigation delve industriously into such companies' conduct, but in the administrative field the State Power Authority issued on March 4 a special report condemning the valuation set by the electric utility companies of New York City on their properties. The report proposed a valuation, as a basis for the rates that the companies might charge, of some \$450,000,000, whereas the companies had put forward a valuation exceeding this by some 62 per cent. The rates authorized in the course of many years of State regulation were declared to have yielded the companies excessive profits of a great aggregate sum.

Floods on July 9 followed heavy general rains exceeding 8 inches of precipitation in some areas. Damage to property, estimated to exceed \$10,000,000, occurred chiefly in the neighborhoods of Binghamton, Hornell, Ithaca, and Delhi. Federal and State authorities provided aid in the devastated areas. The Saratoga Spa was opened as a State-owned enterprise on July 26. The State-built highway to the top of Whiteface Mountain was opened on July 20. See **FLOODS**.

In the State elections on November 7, Republicans won a majority in the State Assembly (lower legislative house). A new bond issue to provide means for meeting the cost of aid to the needy was approved by popular vote. The vote also adopted three amendments to the State constitution; these provided for greater self-government for counties, the sufficiency of verdicts in civil cases when five-sixths of the trial jury should subscribe and the abolition of the additional liability of stockholders in State-chartered banking institutions, to double the par value of their stock.

Affairs of New York City. Another of the succession of commissions set up to draft a new charter for the government of the City of New York was appointed by Mayor La Guardia on January 13. It consisted of Thomas D. Thacher, chairman, and included Joseph M. Proskauer, Thomas I. Parkinson, Charles E. Hughes, Jr., S. John Block, Joseph D. McGoldrick, Charles G. Meyer, Frederick L. Hackenbush, and Mrs. W. P. Earle, Jr. The City's Board of Estimate voted for the year 1936 a budget calling for expenditure of \$613,369,407, divided into two parts, the first, totaling \$545,541,843 and styled the "tax-levy budget," was to be met by a slightly higher expected total of receipts from taxes; the second part, totaling \$67,827,564, was to come from "other funds." The sum appropriated in the budget as a reserve fund under the city's agreement with bankers that had lent it financial support was cut to \$10,500,000, from \$17,000,000.

The Board of Estimate voted on April 5 to repeal a municipal income tax that had been imposed but not yet put into effect. The city's chief new tax in 1935 was a levy on purchasers at the rate of 2 per cent on the prices of goods sold them. The State Court of Appeals held this sales tax valid, on July 11. Its yield, up to mid-year, fell short of expectation, though the Comptroller took legal steps to compel merchants, who collected the tax with their own receipts, to turn it in. A less stringent economic situation on the other hand helped collection of the ordinary taxes.

Large allotments were made to New York City by the PWA and the WPA for works intended to diminish idleness. General Hugh S. Johnson, who headed the administration of the WPA in the city for three months starting with July, did much toward shifting the unemployed from dependence on donated public support to paid work on public undertakings. He withstood a strike, supported by labor unions, against the WPA's paying less than union wages.

Mayor La Guardia's administration made headway with the proposal, which had hung fire for years, that the City buy control of the two privately owned subway systems, the BMT and the Interborough, to unite them with its own system. The city obtained late in the year an understanding on the subject with representatives of the BMT, conditional on the approval of the holders of the BMT's securities. This understanding was held open while the city sought a similar one with the Interborough; that company being in receivership and holders of securities at odds, the attainment of a definite understanding proceeded more slowly.

The Consolidated Gas Company, controlling companies purveying most of the electricity used in the city, sustained attacks from many directions. The Federal Government made preparations toward building a plant to supply its own local needs in New York City. The government of New York City voted to construct an electric generating system of its own. The State Court of Appeals, in October, denied it the right to carry out its plan; but in the meanwhile the company, further impelled by an adverse report of the State Power Authority, by a Legislative investigation, and by the Public Service Commission's moves to require it to lower its rate, offered in May a new schedule of rates reducing its revenue by an estimated \$7,566,500 a year. The Commission approved the schedule, which went into effect in August.

Governor Lehman appointed a special prosecutor, Thomas E. Dewey, to conduct an investigation by a grand jury, as to "rackets" and similar law-breaking enterprises in New York City. A project to hold a world's fair on a site bordering on Flushing Bay in the borough of Queens was broached in September and gained assurances of cooperation from the Board of Estimate, the exposition was to be held in the years 1939 and 1940.

The City began in July to subject sewage, formerly discharged into surrounding waters, to chemical treatment. It transported the resulting sludge, taken from settling tanks, 10 miles out to sea and dumped it. New Jersey invoked the Federal Supreme Court's order of December, 1933, restraining New York City from dumping garbage off the coast, to stop the similar dumping of the sludge. The Court held hearings on the new action of New Jersey in the autumn.

Officers. The chief officers of the State, serving in 1935, were: Governor, Herbert H. Lehman; Lieutenant-Governor, M. William Bray; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney-General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves.

Judiciary. Court of Appeals: Chief Judge, Frederick E. Crane, Associate Judges, Irving Lehman, John F. O'Brien, Irving G. Hubbs, Leonard C. Crouch, John T. Loughran, Edward R. Finch.

NEW YORK CITY. See **MUSIC; SEWERAGE AND SEWAGE TREATMENT; RAPID TRANSIT; TUNNELS; NEW YORK** under *Political and Other Events*.

NEW YORK, NEW HAVEN, & HARTFORD RAILROAD. See RAILWAYS.

NEW YORK UNIVERSITY. A nonsectarian and privately governed institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim school of aeronautics; at Washington Square, the graduate school, school of law, school of commerce, accounts, and finance, Washington Square college, school of education, school of retailing, division of general education; at the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The medical college is on East 26th St.; the dental college on East 23d St.; the school of architecture and allied arts, on Sixth Avenue at Bryant Park, and Nassau College at Hempstead, Long Island.

The enrollment for the year 1934-35 in all divisions of the university, after deducting all duplications, was 34,319, including college of arts and pure science, 1327; school of law, 1244; New York University College of Medicine, 592; college of engineering, 1903, graduate school, 1917; school of education, including both graduate and undergraduate divisions, 7014; school of commerce, accounts, and finance, including Wall Street division, 8126; Washington Square college, 5442; graduate school of business administration 1112; school of retailing, 487; college of dentistry, 516; school of architecture and allied arts, 745; the combined summer divisions (1935), 6222; division of general education and related courses, 6028.

The faculty of the university numbered 1786, including 201 professors, 118 associate professors, 194 assistant professors, and 773 instructors. The productive funds for the year 1934-35 amounted to \$9,091,864, and the income was \$294,595. The total income of \$6,934,554 was derived as follows: Student fees, \$6,016,876; dormitory rents, \$51,693; gifts, \$274,496, other income, \$296,892, and income from endowments, \$294,595. The libraries contained 437,598 volumes. Chancellor, Harry Woodburn Chase, Ph.D., LL.D.

NEW ZEALAND. A British dominion in the South Pacific. Capital, Wellington.

Area and Population. New Zealand has an area of 104,015 square miles, including some 600 square miles of outlying islands. The estimated population of New Zealand proper on Jan. 1, 1935, was 1,557,043, including 74,134 Maoris, compared with the 1926 census population of 1,408,139 (63,670 Maoris). The two main islands are North Island, with 1,003,180 inhabitants on Apr. 1, 1935, and South Island, with 550,650 inhabitants. About 51.6 per cent of the population lives in urban communities of 2500 or more. Estimated populations of the chief cities on Apr. 1, 1935, were: Wellington, 114,950; Auckland, 107,750; Christchurch, 92,900; Dunedin, 70,450. Living births in 1934 numbered 24,322; deaths, 12,527; marriages, 11,256; immigrants, 23,241; emigrants, 26,617.

Education. Less than 2 per cent of the population over school age is illiterate. Education is compulsory between the ages of 7 and 14. School statistics at the beginning of 1934 were: 2531 public primary schools, with 200,641 pupils; 309 private elementary schools, with 26,428 pupils; 137 native village schools, with 7340 pupils; 44 secondary schools, with 15,238 pupils; 81 district high schools, with 4389 pupils; 21 technical high and day schools, with 7149 students; 54 private secondary schools,

with 4063 pupils; and 10 Maori secondary schools, with 302 pupils. The University of New Zealand had four constituent colleges at Dunedin, Christchurch, Auckland, and Wellington, with 4806 students in 1933.

Production. Animal husbandry is the main industry. In 1930 there were 2,143,000 acres of arable land; 16,513,000 acres of grass and pasture; 411,000 acres of shrubs and bushes; and 13,000,000 acres of forests. The value of production in 1932-33 was: Pastoral, £20,400,000 (New Zealand currency); dairying, poultry raising, bee keeping, £21,200,000; agriculture, £8,900,000. Livestock in 1935 included 4,293,499 cattle, 29,076,754 sheep, 762,755 swine, and 272,986 horses. Production of the chief crops in 1933-34 was (in thousands of units): Wheat, 9036 bu. (5937 bu. in 1934-35); barley, 731 bu.; oats, 3243 bu.; corn, 373 bu.; peas, 698 bu.; potatoes, 4892 bu.; linseed, 25 bu.; grass and clover seed, 20,830 lb. The production of pork, bacon, and ham in 1933-34 was 89,608,000 lb.; dressed mutton and lamb, 531,083,000 lb.; beef, 293,042,000 lb.; veal, 954,410 carcasses; wool, 300,500,000 lb. Coal production in 1934 was 2,060,315 tons; gold, 4570 kilograms; silver (exports), 11,180 kilograms. In 1933-34 there were 5028 factories in operation, with 72,651 employees and a value of output of £71,770,872 (£68,138,000 in 1932-33).

Foreign Trade. General imports in 1934 were valued at £26,961,000 (£21,451,000 in 1933) and exports of New Zealand products at £46,771,000 (£40,409,000 in 1933). Leading 1934 imports were: Textiles, £6,621,187; motor cars and parts, £3,291,818; iron and steel, £3,092,121; petroleum products, £1,760,214; electrical machinery and apparatus, £1,339,643; other machinery, £1,321,645. The chief exports were: Wool, £12,516,425; frozen meat, £11,886,955; butter, £10,042,776; cheese, £4,694,459; hides and skins, £2,204,690; gold, £1,320,690. Of the total imports in 1934, the United Kingdom supplied £16,153,236; United States, £3,548,554; Australia, £3,529,635; Canada, £2,088,134; Netherlands India, £1,376,760. Of the exports, the United Kingdom took £38,629,240; Australia, £1,882,516; United States, £1,250,364; France, £1,228,699.

Imports in 1935 totaled about £35,796,000; exports, £46,056,000. United States imports from New Zealand were £10,351,421 (\$5,592,271 in 1934); exports to New Zealand, £15,610,238 (\$12,999,140 in 1934).

Finance. For the fiscal year ended Mar. 31, 1935, governmental receipts totaled £26,126,094 and expenditures £24,499,595, excluding accounts of the state railways, telegraph, and postoffice. The public debt on Mar. 31, 1934, totaled £302,791,996 (£282,622,958 on Mar. 31, 1933). The New Zealand pound, the unit of currency used in this article, has the same par value as the pound sterling.

Communications. The railways, practically all state owned, had 3320 miles of line in 1934. In 1934-35 they carried 19,654,467 passengers and 6,023,960 long tons of freight. Highways extended 50,930 miles on Jan. 1, 1935. Premier Coats announced in October, 1935, that arrangements had been completed for the inauguration in 1936 of an air service from the United States by Pan American Airways. Seventy airports and landing fields were under construction in New Zealand in 1935. During 1934 a total of 585 vessels of 2,633,861 tons entered the ports in the overseas trade. See AERONAUTICS under *Trans-Oceanic Air Service*.

Government. Executive power is exercised by the Governor-General, appointed by the Crown on recommendation of the Dominion Government.

Legislative power rests with the Governor-General and a Parliament of two chambers—the Legislative Council of 30 members appointed by the Governor-General for seven years, and the House of Representatives of 80 members, elected by general suffrage for three years. Prime Minister at the beginning of 1935, George William Forbes, heading a coalition of the Reform and United parties, with 24 Laborites and 9 Independents in Opposition. Governor-General, Viscount Galway, who assumed office in March, 1935. For changes in 1935, see *History*.

HISTORY

The Labor Victory. Despite the successful record of Prime Minister Forbes's Nationalist coalition government in guiding New Zealand safely through the world economic depression, the Labor party won a sweeping victory in the general election of Nov. 27, 1935. It captured 53 seats in the House of Representatives as compared with 24 seats formerly held, while the standing of the Nationalist coalition declined from 47 to 19 seats. Independents won 8 seats as against 9 in the previous House. The Democrats, a new conservative party organized to oppose the "socialistic" measures of the Forbes Government, won only 1 seat.

A new Labor Cabinet was formed on Dec. 5, 1935, with Michael J. Savage, leader of the Labor party, as Prime Minister and Minister of External and Native Affairs. Other members of the cabinet were: Minister without Portfolio, Mark Fagan; Education, Health and Marine, Peter Fraser, Attorney General and Minister of Justice, Henry G. R. Mason; Finance and Customs, Walter Nash; Internal Affairs and Pensions, W. E. Parry; Public Works and Transport, Robert Semple; Railways and Industries, Daniel G. Sullivan; Agriculture, W. L. Martin; Lands, F. Langstone; Labor, Employment, and Immigration, W. H. T. Armstrong; Mines, F. P. C. Webb; Postmaster General and Minister of Defence, F. Jones.

Discontent with the economies practised by the Forbes Government in balancing the budget and dissatisfaction with the extent of the Dominion's recovery under coalition rule appeared to be the chief reasons for the Labor landslide in both rural and urban communities. Labor campaigned on a platform calling for public control of credit through a national credit authority "whose duty it will be to provide a money service sufficient to give effect to the will of Parliament"; reemployment of all able-bodied workers in industry, public works, and services; guaranteed stable prices to farmers and others producing in accordance with the Dominion's requirements; the readjustment of mortgages on the basis of guaranteed prices. Government control of credit was to provide every person able and willing to work with a decent standard of living. Reciprocal trade agreements with other countries, minimum wages and salaries, national health insurance, a national superannuation and pension system, the fostering of secondary industries, reorganization of the school system, and restoration of salary and wage cuts, were other Labor planks. The semi-private corporation established by the Forbes Government in March, 1935, to ease the burden of rural mortgages was to be placed under complete state control. The Labor party stood also for close coöperation with the other members of the British Commonwealth of Nations and for support of the League of Nations for the maintenance of peace.

Two other important reforms proposed by the Labor party were the abolition of the 5 per cent

sales tax on wholesale transactions, and the restoration of the New Zealand pound to a parity with sterling. (The Forbes Government had arbitrarily fixed the New Zealand pound at 25 per cent under the pound sterling.) Labor's victory was followed immediately by a cancellation of orders for merchandise, in anticipation of the abolition of the sales tax, and by an inflow of funds seeking to profit by the expected appreciation of the local pound. Prime Minister Savage quickly announced that no immediate changes were contemplated in the sales tax and the exchange rate, and that when made the changes would be very gradual and at indefinite intervals. This statement had a stabilizing influence and Mr. Savage's reputation for moderation served further to allay business uneasiness. He called the new Parliament for early in 1936, stating that it would remain in session until the Labor programme was carried into effect.

A poll on the liquor question held at the time of the general election gave the following result: For continuance of the existing system, 347,486; for prohibition, 274,904; for State purchase and control, 59,546.

Relations with Britain. Prime Minister Forbes and Minister of Finance J. Gordon Coates spent four months in London during the year. Besides representing New Zealand at the silver jubilee of King George's accession to the throne, they conferred at length with British and other Dominion officials on provisions of the Ottawa Agreements, particularly with respect to the regulation of meat imports into Great Britain from the Dominions. As a result of these negotiations a temporary but satisfactory agreement on the meat question was concluded between the British Government on the one hand and the Governments of Australia and New Zealand on the other (see AUSTRALIA and GREAT BRITAIN under *History*). While in London, Finance Minister Coates arranged for the conversion on July 1 of £10,135,800 of New Zealand 5 per cent bonds maturing between 1935 and 1945 in a £8,000,000 issue at 3 per cent, maturing in 1936-61. The offering was greatly oversubscribed, applicants receiving only 23 per cent of their requests.

With her customary loyalty to the mother country, New Zealand joined wholeheartedly in supporting Britain during the crisis with Italy over Ethiopia (q.v.). On October 16 Prime Minister Forbes announced that his government had lent the cruiser *Diomedé*, of 4765 tons, to the British Admiralty at the request of the London government. New Zealand also joined in the application of League sanctions against Italy.

The Economic Revival. The steady improvement in economic conditions which became apparent in 1934 continued at an increased tempo in 1935. The basis for this recovery was the improved export prices for livestock and dairy products, upon which the Dominion's prosperity largely depends. The agreement with Great Britain ended uncertainty as to the future of the meat industry for a period of 18 months. Wool prices also increased and in the last quarter of the year the price of butter on the London market advanced to 125 shillings a hundredweight, as compared with an average value of 80 shillings for the year ended July 31. Unemployment declined, while building contracts, electric power consumption, sales tax receipts, government revenues in general, and imports from overseas all showed substantial increases.

The results of this widespread improvement were reflected in the budget proposals submitted

by the Forbes Government shortly after Parliament convened on August 29. Besides estimating a surplus of £NZ13,500 for the fiscal year, the budget provided for a 7½ per cent restoration in salaries of government employees; a reduction from 4.17 per cent to 3.34 per cent in the wage tax payable on all salaries and incomes; a substantial expansion of public works to absorb the unemployed; full restoration of old-age pensions; and a 7½ per cent increase to other pensions; and allowances to permanently unemployable ex-soldiers.

NICARAGUA, nīk'ā-rā'gwā. The largest in area of the Central American republics. Capital, Managua.

Area and Population. Nicaragua has an area estimated at 51,660 square miles and a population estimated in 1935 at 1,100,000 (668,119 at the 1920 census). Western Nicaragua contains about three-fourths of the population. The inhabitants are mainly of Spanish, Indian, or mixed blood, but there are many West Indian Negroes on the east coast. The chief cities, with their estimated populations, are: Managua, 50,000; León, 23,565; Granada, 18,066; Masaya, 13,763; Matagalpa, 10,271. The capital, destroyed by an earthquake in 1931, had been largely rebuilt by 1935.

Education. About 62 per cent of the people are illiterate. Enrollment in primary schools in 1932 was 22,573. Secondary education is in private hands. There are three universities, at Managua, León, and Granada.

Production. Agriculture, the main support of the population, is supplemented by lumbering, cattle raising, and mining. Bananas, coffee, sugar, corn, and coconuts are grown for export and cotton, corn, rice, and beans for domestic consumption. Banana shipments in 1934 totaled 2,686,000 bunches. The 1934-35 coffee crop was about 40,500,000 lb.; the cotton crop (1934), 800 metric tons; sugar exports (1934), 11,590,000 lb. The forests yield valuable cabinet and dye woods. Gold and silver are mined. A number of small establishments manufacture boots, shoes, straw hats, leather goods, soap, tobacco products, etc., for the domestic market.

Foreign Trade. General imports in 1934 were valued at 4,610,000 córdobas (3,814,261 córdobas in 1933) and exports at 5,230,000 córdobas (4,862,496 in 1933). Exports of coffee in 1934 (319,068 quintals) were valued at 2,374,480 córdobas, or 45 per cent of the total value of exports. Bananas accounted for 30 per cent of the exports. The value of gold exported in 1934 was 679,837 córdobas (414,554 in 1933), a 64 per cent increase. The United States purchased 49.7 per cent of all exports in 1934 and supplied 58.8 per cent of the total value of imports. Germany, Japan, and the United Kingdom were the other chief markets and sources of supply. The córdoba was equivalent to one U.S. dollar at par.

In 1935 imports totaled 5,072,876 córdobas. United States statistics for 1935 showed imports from Nicaragua of \$2,671,326 (\$1,668,286 in 1934) and exports to Nicaragua of \$2,434,383 (\$2,524,491 in 1934).

Finance. The government's actual revenues in the fiscal year 1933-34 totaled 4,214,000 córdobas (3,796,000 in 1932-33) and expenditures were 4,706,000 córdobas (4,233,000 in 1932-33). Exclusive of claims awards, the public debt on Jan. 10, 1935, totaled 8,194,000 córdobas (external, 2,317,000; internal, 955,000; floating, 4,922,000), compared with 10,006,000 córdobas on Feb. 28, 1934.

Communications. The state-owned Pacific Railroad is the main line in the country. It connects Corinto, the chief seaport of the west coast, with

León, Managua, Granada, Diriamba and several other interior towns. The total railway mileage was 366 miles. In 1934 there were some 150 miles of motor roads and 200 miles of cart roads. Air lines linked Managua, Bluefields, and Puerto Cabezas with the inter-American air network. Bluefields is the chief port on the east coast. A total of 403 steamers of 705,512 net register tons capacity entered the ports in 1934.

Government. The Constitution of 1913 vested executive power in a President elected for four years and legislative power in a congress of two houses—a Chamber of Deputies of 43 members elected for four years by popular suffrage and a Senate of 24 members elected for six years. The Deputies are renewed by halves every two years; the Senators by thirds every two years. President in 1935, Dr. Juan Bautista Sacasa (Liberal), who assumed office Jan. 1, 1933.

History. Gen. Anastasio Somoza, commander of the Nicaraguan National Guard, entered the race for the presidency in September, 1935, with the blunt statement that he would "eliminate all other candidates who bar my path." The cold-blooded murder of Gen. Augusto Sandino by members of the National Guard in 1934—a crime openly charged to General Somoza by Sandino's spokesman, Dr. Pedro José Zepeda—had removed perhaps the most formidable obstacle to Somoza's ambition (see 1934 NEW INTERNATIONAL YEAR BOOK, p. 523). In view of the circumstances surrounding Sandino's death, General Somoza's promise to "eliminate" all other rivals, published in *El Cronista* of León, caused a sensation in Nicaraguan politics.

Although Somoza's position as head of the National Guard and as a nephew of President Sacasa by marriage made him ineligible for the Presidency under the Constitution, he claimed the support of former President José María Moncada and other Liberals. Former President Emiliano Chamorro, a Conservative, also backed Somoza. Rival Liberal candidates included Vice President Rodolfo Espinosa, Foreign Minister Leonardo Arguello, and Sen Enoc Aguado. The elections were scheduled for November, 1936.

Signs of opposition to Somoza from other sources were not lacking. The explosion of the army supply depot in Managua in September, 1934, which left the government troops practically without ammunition, was attributed to conspirators desirous of ousting the National Guard commander. The charge that he dominated President Sacasa and the government's policy was widely circulated. José Antonio Lopez, former chief of the Managua police, was found guilty by court-martial of causing the explosion. In April, 1935, Capt. Abelardo Cuadra of the National Guard led some mutinous troops in a revolt against Sacasa and Somoza. The uprising was crushed and Cuadra and seven associates were sentenced to death. On May 1, however, President Sacasa commuted the death sentence of the eight prisoners and they received long prison terms instead. On May 20, it was reported that Somoza's adherents in the National Guard had presented him with a bullet-proof automobile as a token of their esteem. The following month news came from El Salvador that Gen. Pedron Altamirano, one of Sandino's lieutenants, was renewing guerrilla warfare against the Sacasa régime and that the government of El Salvador had balked the plans of a group of unemployed, who sought to cross the border into Nicaragua to join Altamirano.

Another source of discontent in the National

Guard and among government employees was the salary cuts imposed by the Sacasa Government during July in an effort to balance the budget and prevent the weakening of the córdoba on the exchange market. After Congress and the government departments had accepted pay cuts, it was announced that the budget was balanced for the first time in five years. The Exchange Control Commission, established in November, 1931, prohibited the circulation of foreign currency in Nicaragua on Feb. 1, 1935. On May 13 it declared a suspension of all foreign remittances, causing a temporary tie-up of all import and export business. In September the Commission announced that it would give preference in the allocation of exchange to requests for the importation of necessities.

The annual report of the American Collector General of Customs, Col. Irving A. Lindberg, pointed out that Nicaragua was one of the few Latin American countries which had not defaulted in the service of its foreign loans, despite the strain upon Nicaraguan finances imposed by the world depression, the Managua earthquake of 1931, and the withdrawal of the American marines. He reported that an arrangement had been made with the British bondholders' committee for reductions in the rate of interest and in the amount of amortization.

NICKEL. The consumption of nickel throughout the world in 1935 is estimated by the *Northern Miner* as 160,000,000 lb., of which the International Nickel Company sold 125,000,000 lb., Falconbridge 11,000,000 lb., and the rest of the world—New Caledonia, Norway, and others—24,000,000 lb. Canadian production in 1935, as reported by the Dominion Bureau of Statistics, was 139,194,348 lb., as compared with 128,687,340 lb. in 1934. Imports of nickel into the United States totaled 59,771,633 lb. as against 46,749,747 lb. in 1934, and were the highest since the peak of 1929 when the total import was 67,766,666 lb.

NIEHAUS, né'haus, CHARLES HENRY. An American sculptor, died at Cliffside Park, N. J., June 19, 1935. Born in Cincinnati, Ohio, Jan. 24, 1855, he received his early art education at the McMicken School of Design in Cincinnati, and in 1877 entered the Royal Academy at Munich. Upon the completion of his course in 1880, he won the first prize for his sculpture group, "Fleeting Time," and also the prize for any department of art—the first time ever awarded to an American. Returning to America in the following year he was commissioned to do the Garfield Monument in his native city, and this is considered his outstanding work.

The study of classical sculpture now took him to Rome, and his figure "Caestus," modeled at that time, was later purchased by the Metropolitan Museum of Art, New York. The year 1887 brought him back to America and he settled in New York and devoted himself to his work.

A rugged simplicity characterizes Niehaus' work, and his complete mastery of the human form enabled him to conceive and to put into being his ideal and heroic figures. As a result, talent is more forcibly displayed in his monumental works, which are always admirably sculptural in conception, simple and dignified in composition, and of severe purity of line and handling.

Among his better-known works may be mentioned the statues of Hooker and Davenport in the Connecticut State Capitol, Hahnemann in Scott Circle, Washington, considered a fine example of seated statuary, Lincoln at Muskegon and Buffalo, McKinley at Canton, O., General Forrest (eques-

trian) at Memphis; the monuments to Benjamin Harrison at Indianapolis, Beardsley at Bridgeport, and John Paul Jones in Washington; the bronze doors of Trinity Church in memory of John Jacob Astor, a fine example of delicate workmanship; the pediment on the Appellate Court Building in New York; the group, "Mineral Wealth" at the Pan American Exposition, 1901; "The Driller" on the Drake Monument at Titusville, Pa.; and also the monument to Commodore Perry at Buffalo; the statues of Zachariah Chandler and Governor Click at Washington; the Francis Scott Key Memorial in Baltimore (1922); the Soldiers' and Sailors' Memorials in Hoboken, Newark, and Hackensack, N. J.; the gold star memorial in Des Moines; and statues of Henry Clay and Ephraim McDowell in Washington. Also, he did fine portrait busts of Disraeli, Joseph Jefferson, and Rabbi Gustav Gottheil.

His work won him awards at the expositions of Buffalo (1901), Charleston (1902), and St. Louis (1904), and election to the National Academy in 1906.

NIGER, COLONY OF THE. See FRENCH WEST AFRICA.

NIGERIA, ní-jě'ri-a. A British territory in West Africa comprising the Colony (1381 sq. m.; pop. 316,773 in 1933) and the Protectorate (including, for administrative purposes, the British Cameroons mandate—34,081 sq. m.; pop. 781,115) divided into the Northern Provinces (281,778 sq. m.; pop. 11,316,938 in 1933) and Southern Provinces (89,515 sq. m.; pop. 8,129,318 in 1933). Total area, 372,674 sq. miles; total population (1931 census), 19,928,171. The chief towns were Ibadan with 387,133 inhabitants; Lagos (capital), 126,108; Ogbomoshó, 86,744; Kano, 75,914; Iwo, 57,191; Ede, 52,392; Oshogbo, 49,599; Oyo, 48,733; Abeokuta, 45,763; Ilorin, 40,552; Iseyin, 36,805.

Education. In 1933, there were 3268 schools (primary, secondary, and training) with a total enrollment of 196,500 pupils; in addition the 36,506 Koran schools of the Northern Provinces had 209,000 students. The Higher College at Yaba, with courses in medicine, agriculture, engineering, and teaching, was opened on Jan. 19, 1934.

Production. The main products were the same as the export items shown under *Trade* below. During 1934, gold produced totaled 37,500 oz. troy; the output of coal from the government mine at Enugu totaled 259,750 tons. Livestock in the Northern Provinces in 1934, based on the amount of Jangali tax collected, totaled 2,565,551 cattle, 1,490,069 sheep, 4,398,517 goats, 493,060 donkeys, 185,860 horses, 43,947 swine, 1972 camels, and 38 ostriches.

Trade. In 1934, exclusive of specie of £1,204,482, exports were valued at £8,851,199 and included groundnuts (244,886 tons valued at £1,860,267), palm kernels (289,442 tons, £1,590,647), cacao (77,981 tons, £1,290,437), tin ore (7528 tons, £1,243,722), palm oil (112,773 tons, £885,600), hides and skins (£715,491), cotton lint (117,044 cwt., £297,341); imports, exclusive of specie of £71,374, totaled £5,263,766 and consisted mainly of gasoline, kerosene, leaf tobacco, cigarettes, cotton piece goods, salt, and gin. Exclusive of specie, Great Britain supplied 58 per cent of the imports and received 46 per cent of the exports.

Communications. During 1934, 945 ships aggregating 1,791,643 tons cleared the ports. The Nigerian Railway, divided into two main lines, had 1905 miles of single track open line and 268 miles of sidings. Rivers and creeks formed the chief means of transportation; in addition there was an extensive system of roads.

Finance. For the year ended Mar. 31, 1934, including the Nigerian Railway, revenue amounted to \$6,750,407 and expenditure to \$6,898,816. Public debt on Sept. 30, 1934, was £27,822,582 against which the sinking funds totaled £4,915,225. The revised estimates for 1934-35, exclusive of railway figures but including the railway net deficit, show revenue of £4,376,002 and expenditure of £4,702,740.

Government. Nigeria is under the control of a governor aided by an executive council, and a legislative council which legislates only for the Colony and Southern Provinces but must sanction expenditure made from funds of the central government incurred in the Northern Provinces. Laws for the Northern Provinces are enacted by the Governor and Commander-in-Chief (Sir B. H. Bourdillon, appointed during June, 1935).

NITRATE. See CHILE.

NOBEL PRIZES. The Nobel Prizes for 1935 were presented in Stockholm by King Gustaf on December 10 to the following persons who, in accordance with the will of Alfred Nobel, Swedish inventor and philanthropist, were considered to have made the greatest contributions toward the progress of the world and the welfare of mankind. Hans Spemann (medicine), James Chadwick (physics), and Frederick Joliot and his wife, Irene Joliot Curie (chemistry). No awards were made in literature nor peace for the year. The awards in physics and chemistry are determined by the Royal (Swedish) Academy of Science; in medicine by the Caroline Institute (the faculty of medicine in Stockholm); in literature, by the Swedish Academy; and the peace awards by the Norwegian Storting. The value of the 1935 awards amounted to about \$42,000 each.

The award in medicine to Dr. Hans Spemann was in recognition of his discoveries in connection with embryonic evolution. Born in Stuttgart, June 27, 1869, he is professor of zoology at the University of Freiburg in Breisgau. His achievements have been mainly in experimental biology, resulting in the full development of frog's eggs, without fecundation, by mechanical and chemical stimulation.

Dr. James Chadwick, recipient of the award in physics, was born in Liverpool in 1891, and is assistant director of radioactive research at the Cavendish Laboratory, Cambridge, Eng. The award was in recognition of his discovery of the fundamental neutral particle, the neutron. Dr. Chadwick had been previously honored for this discovery in receiving the Hughes medal of the Royal Society in 1932.

The award in chemistry to Dr. and Mme. Joliot was made because of their pioneer success in making simple elements artificially radioactive. Mme. Joliot, better known as Irene Joliot Curie, is the daughter of Pierre and Marie Curie, joint discoverers of radium, for which they received the Nobel prize in physics in 1903. Mme. Curie, after the death of her husband, continued her researches and again received a Nobel prize, in chemistry, in 1911, for the isolation of radium.

NON-FEDERATED MALAY STATES.

See UNFEDERATED MALAY STATES.

NORMANDIE. See FRANCE under *Shipping*.

NORRIS DAM. See TENNESSEE.

NORTH CAROLINA. Population. On Apr. 1, 1930 (Fifteenth Census), 3,170,276; July 1, 1934 (latest Federal estimate), 3,301,000; (1920 Census), 2,559,123. Charlotte (1930), 82,675; Raleigh (the capital), 37,379.

Agriculture. The accompanying table shows

the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Tobacco	1935	624,000	561,060,000*	\$117,461,000
	1934	495,000	417,975,000*	119,155,000
Cotton	1935	932,000	585,000 ^b	33,199,000
	1934	951,000	629,000 ^b	38,741,000
Corn	1935	2,489,000	49,780,000	37,335,000
	1934	2,440,000	47,580,000	40,919,000
Hay (tame) ...	1935	743,000	652,000 ^c	9,519,000
	1934	765,000	699,000 ^c	12,932,000
Peanuts	1935	238,000	273,700,000*	8,758,000
	1934	248,000	272,800,000*	9,548,000
Potatoes	1935	83,000	9,130,000	6,391,000
	1934	92,000	10,672,000	6,510,000
Sweet potatoes .	1935	80,000	8,000,000	5,600,000
	1934	82,000	8,856,000	6,376,000
Wheat	1935	460,000	5,198,000	5,146,000
	1934	434,000	4,340,000	4,600,000
Oats	1935	215,000	4,730,000	2,649,000
	1934	207,000	3,519,000	2,287,000

* Pounds. ^b Bales. ^c Tons.

Education. The public schools were all kept open for a minimum of eight months in the year 1934-35. Teachers' salaries continued to be low, but in 1935-36 a 20 per cent increase was granted.

For the academic year 1933-34, the number of persons of school age inhabiting the State was reported as 1,090,287. During 1934-35 some 892,631 pupils were enrolled in the public schools. Of these, 736,138 were in common schools or elementary grades, and 156,593 were in high schools. The year's expenditures for 1933-34 for public-school education were: current \$18,296,364; total (including capital outlay), \$19,238,773. Again, the totals of expenditure ran sharply below those for preceding years. The salaries of teachers, for the year, averaged \$578.88.

Charities and Corrections. The State government, under the system in force in 1935, maintained a central supervisory authority over the State and county institutions for the care or confinement of individuals. The supervisory body was the Board of Charities and Public Welfare. This board, composed of seven unpaid members, was correlated with an executive head, the Commissioner of Public Welfare (Mrs. W. T. Bost). Under the Commissioner were three main divisions, of Child Welfare, of Institutions and Corrections, and of Mental Hygiene. The Board had duties of organization and oversight of county welfare units, the promotion of a specific programme of children's welfare, and the interpreting of State plans of welfare to Negro citizens.

The employment of convicts at work on roads, a feature of the penal system, was further modified as to method in 1935. Men sentenced to prison for 30 days or longer, some 8300 for 1935, were under the control of the Highway and Public Works Commission, with which a formerly separate State Prison Department had been merged. The support accorded to the destitute unemployed was dispensed by a State Emergency Relief Commission.

Some 25,000 inmates were distributed among the following State institutions: State hospitals (mental) at Goldsboro, Morganton, and Raleigh; Caswell Training School (mental defectives), at Kinston; Orthopedic Hospital, at Gastonia; State Sanatorium, at Sanatorium; School for the Deaf and Blind, Raleigh; School for the Deaf, Morganton; for juvenile delinquents—Eastern Carolina Training School at Rocky Mount, Stonewall Jackson Manual Training School at Concord, State Home and Industrial School for Girls at Samcand, Morrison Training School at Hoffman, and Industrial School for Girls at Efland; for criminals, apart from those under the Highway Com-

mission—the State Industrial Farm Colony for Women at Kinston; for the aged—Confederate Soldiers' Home, at Raleigh, and Confederate Women's Home, at Fayetteville.

Legislation. The Legislature set the rate of the sales tax on retailed merchandise at 3 per cent, extending it to foods but exempting fresh milk. It authorized the Governor to set up a system of insurance against unemployment, through a fund, in accordance with the Federal provisions for contribution to such insurance. After long dispute over the issue of ending the State's prohibition of traffic in alcoholic beverages, the legislators made a hasty final compromise; a law was enacted to permit any or all of 17 counties to authorize the traffic by referendum, to permit limited purchase of liquor, by each citizen in all these counties but one, even without the authorization of a referendum, yet creating no local or State power to tax the liquor traffic and no adequate system for restricting it to the specified areas.

Political and Other Events. The legislation on liquor, noted above, resulted from strong evidences of a shift in some parts of the State, away from the heavily prohibitionist vote of 1933. The economic position of the State, largely by reason of advantageous markets for the crop of tobacco produced in 1934, made sharp improvement. The price of tobacco fell to 18 cents a pound, however, in September, for the new crop, as against 27 cents a year before; this was ascribed to the AAA's having increased the permissible acreage for 1935.

The State's system of setting up convict camps to perform such tasks as road labor incurred criticism on account of flagrant instances of cruelty in the treatment of Negro prisoners. Two prisoners were reported at Charlotte to have been chained to doors for eight or ten hours at a stretch, and to have contracted gangrene of the legs, necessitating amputation. The *Charlotte News* having published this information late in March, the accused prison guards were arrested in April, on indictments of assault with intent to kill. See *DUST STORMS*.

Officers. The chief officers of the State, serving in 1935, were: Governor, J. C. B. Ehringhaus; Secretary of State, Stacey W. Wade; Treasurer, Charles M. Johnson; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, Clyde A. Erwin.

Judiciary. Supreme Court: Chief Justice, Walter P. Stacy; Associate Justices, Michael Schenck, Heriot Clarkson, George W. Connor, W. J. Brogden.

NORTH CAROLINA, THE UNIVERSITY OF. A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1935 was 2788, of whom 2499 were men and 289 women. In correspondence and extension courses 2072 were registered. The residence faculty numbered 220. The Department of History and Government was divided into the Department of History, headed by Dr. A. R. Newsome, and the Department of Political Science, headed by Dr. W. W. Pierson, Jr.; the College of Liberal Arts and the School of Applied Science were united under the title of College of Arts and Sciences, with Dr. A. W. Hobb as Dean. Other faculty additions during the year were: Dr. Edward Mack, head of the chemistry department, and Dr. A. E. Zucker, head of the German department. The endowment amounted to approximately \$2,000,000 and the budget for the year was \$1,366,-

177. The library contained 248,000 volumes. President, Frank Porter Graham, LL.D.

NORTH CENTRAL COLLEGE. A coeducational institution of higher learning at Naperville, Ill., founded in 1861. In the autumn of 1935 there was an enrollment of 520 students, of whom 324 were men and 196 women. There were 36 members on the faculty. The productive funds amounted to \$947,940, and the current income for the year was \$203,450. Gifts included a total of \$16,187 for endowment and permanent equipment. The library contained more than 20,000 volumes. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. Population. On Apr. 1, 1930 (Fifteenth Census), 680,845; July 1, 1934 (latest Federal estimate), 688,000; 1920 (Census), 646,872. Bismarck, the capital, had (1930) 11,090 inhabitants.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1935	8,040,000	53,772,000	\$49,692,000
	1934	3,782,000	21,196,000	20,721,000
Hay (tame)	1935	951,000	1,295,000*	5,180,000
	1934	1,093,000	435,000*	5,916,000
Corn	1935	1,205,000	21,690,000	9,760,000
	1934	1,401,000	4,904,000	4,414,000
Barley	1935	2,351,000	45,558,000	12,301,000
	1934	791,000	7,119,000	4,271,000
Oats	1935	2,183,000	54,575,000	10,915,000
	1934	766,000	8,886,000	4,088,000
Potatoes	1935	135,000	13,500,000	5,400,000
	1934	132,000	5,940,000	3,326,000
Flaxseed	1935	1,005,000	6,030,000	8,744,000
	1934	268,000	938,000	1,557,000
Rye	1935	911,000	12,754,000	3,571,000
	1934	198,000	1,030,000	670,000

* Tons.

Education. There were enrolled, in the year ended with June 30, 1934, 160,699 pupils in the public schools. Of these pupils, 128,007 were in the elementary grades or common schools, and 32,523 were in high schools. The expenditures of the year for public-school education in the State totaled \$9,538,569, of which \$873,782 was for service of debt. The salaries of all the 6433 teachers averaged, for the academic year 1933-34, \$73.66 a month. A State act of 1935 set up a State equalization fund, which with the already existing permanent school fund rendered the State the provider of one-fourth of the cost of the public schools.

Charities and Corrections. The aggregate population of seven institutions maintained by the State for the care or confinement of individuals, as reported in November, 1935, was 3436. Jurisdiction over these institutions was exercised by a State Board of Administration, composed of five members. Two of these served *ex officio* and three by appointment. The same Board conducted the State's educational institutions and had charge of the State Capitol and other property of the State. It had under it a Child Welfare Department, headed by a superintendent, to conduct State activities on behalf of minors.

The State's eleemosynary and correctional institutions were: School for the Deaf, at Devil's Lake; School for the Blind, Bathgate; Tuberculosis Sanatorium, Dunseith; Grafton State School, Grafton; Hospital for the Insane, Jamestown; State Training School, Mandan; State Penitentiary, Bismarck.

Legislation. A tax on retail sales, at the rate of 2 per cent of the price of the goods sold, was enacted. The tax was to go into effect on May 1. The proceeds of the tax were assigned to support for

the needy unemployed and to aid for the public schools, in equal proportions.

Political and Other Events. The State's new sales tax was approved in a referendum at a special election held on July 15. A similar law had been voted down in a referendum held in 1933.

The State benefited by much better crops in 1935. In consequence its economic position improved greatly, as compared with that of 1934. In that year, as was reported by the FERA, \$12,471,487 was spent for the support of the destitute unemployed, not to count certain special Federal expenditures to aid drought-stricken farmers; the FERA paid \$11,469,560 of the total, or 92 per cent, the State nothing, and its subdivisions \$1,001,927.

Ex-Governor Langer's partisans, seeking to open the way for his recovery of the office from which he had been removed, supported a plan for the removal of Governor Thomas H. Moodie, who had been elected in 1934 and inaugurated in January. A suit in *quo warranto* was brought before the State Supreme Court, questioning Moodie's title to the office on the ground that he had not resided in the State for five years and was therefore disqualified under a provision of the State constitution, inserted in the early years to shut out "carpet-baggers." The Court ruled that Moodie was not the lawful Governor and that the office devolved on Lieutenant-Governor Walter Welford. Welford assumed office, considered to that time a faithful supporter of Langer, he failed however to make way for the latter's plans to be reelected.

Langer carried to the Federal Circuit Court at St. Paul his appeal from his Federal conviction. That court set aside the conviction on May 7 and ordered the case against Langer to be retried.

Officers. The chief officers of the State, serving in 1935, were: Governor (acting), Walter Welford; Lieutenant-Governor, Walter Welford; Secretary of State, James D. Gronna; Auditor, Berta E. Baker; Treasurer, John Gray; Attorney-General, P. O. Sathre; Superintendent of Public Instruction, Arthur E. Thompson.

Judiciary. Supreme Court: Chief Justice, John Burke; Associate Justices, A. M. Christianson, A. G. Burr, James Morris, W. L. Nuessle.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education for men and women at University Station, Grand Forks, N. D., founded in 1883. The enrollment for the autumn of 1935 was 1675. The 1935 summer session had an attendance of 402. The faculty numbered 125. The income, derived from State appropriations, land grant funds, student fees, etc., amounted to approximately \$412,000. The library contained 96,019 catalogued volumes. The name of the college of liberal arts was changed to college of science, literature, and arts. President, John C. West, Ed.D.

NORTH-EAST NEW GUINEA. See NEW GUINEA, TERRITORY OF.

NORTHERN RHODESIA. See RHODESIA, NORTHERN.

NORTHERN TERRITORY (AUSTRALIA). A Territory of Australia. Area, 523,620 sq. miles; population (Mar. 31, 1935), 5061 exclusive of 19,424 (1933 census) aboriginals (18,643 full-blood and 781 half-caste). Capital, Darwin (1600 inhabitants on Jan. 1, 1935).

Production. Agricultural production was small but livestock rearing was important. Livestock in the Territory (Jan. 1, 1934): 859,867 cattle, 33,590 horses, 20,622 goats, 18,000 sheep, and 397 swine. Mineral output for 1934 was valued at £29,599 of

which tin represented £9566 and gold, £8124 (£ Australian averaged \$4.0095 for 1934).

Government. The territory was governed by an administrator aided by a deputy administrator at Stuart (Alice Springs), and was represented in the Australian House of Representatives by an elected member who took part in the debates but did not vote. Administrator, R. H. Weddell.

NORTHWESTERN UNIVERSITY. A coeducational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech in Evanston; and schools of law, medicine, dentistry, commerce, and journalism in Chicago. For the autumn term of 1935 there was an enrollment of 5840 full-time and 6931 part-time students. In the 1935 summer session 2870 students were enrolled. The faculty included 716 persons of the rank of instructor or above. The endowment as of June 30, 1935, was \$21,200,000, yielding \$983,000 in income; the total income for the fiscal year was \$3,775,000. In the various libraries of the university there were approximately 500,000 bound volumes and 200,000 pamphlets. President, Walter Dill Scott, Ph.D.

NORTHWEST TERRITORIES (CANADA). A vast area north of the Prairie Provinces and Hudson Bay, and east of the Yukon Territory; provisionally divided, for administrative purposes, into the districts of Mackenzie (527,490 sq. m.), Keewatin (228,160 sq. m.), and Franklin (554,032 sq. m.). Total area, 1,309,682 sq. miles; population (1931), 9723, including 4670 Eskimos and 4046 Indians.

Production. The value of the 229,665 pelts of fur-bearing animals taken in the year ended June 30, 1934, was \$1,505,077 of which white fox accounted for \$941,258. During March, 1935, the Department of the Interior at Ottawa reported that 2398 reindeer, which left the Kotzebue Peninsula, Alaska, over five years ago, had been delivered to the Kittigazuit reindeer station on the east side of the Mackenzie River. The government planned to teach the Eskimos how to raise reindeers. In 1934, 3100 milligrams of radium, 27,000 lb. of uranium salts, and 31,000 oz. of silver were produced by the refinery at Port Hope, Ontario, from pitchblende ore mined at Great Slave Lake in the Northwest Territories.

Government. For the year ended Mar. 31, 1934, expenditure for the government of the Territories totaled \$379,973. The Territories were governed from Ottawa by a commissioner, a deputy commissioner, and 5 councilors (all appointed by the Governor-General in Council).

NORWAY. A constitutional monarchy of northern Europe. Capital, Oslo. Sovereign in 1935, King Haakon VII, who was elected by the Storting (parliament) Nov. 18, 1905.

Area and Population. Norway has an area of 124,587 square miles (land area, 119,148 sq. miles) and a population estimated in 1934 at 2,871,000 (2,814,194 at the 1930 census). Living births in 1934 numbered 42,442; deaths, 28,120; marriages, 19,144. There were 406 emigrants in 1933. The leading cities, with their 1930 populations, were: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,458; Stavanger, 46,780; Drammen, 25,493. The national church is Lutheran. The school enrollment in 1931-32 was: Elementary, 402,539; secondary, 23,943; university, 5164.

Production. In 1930 about 32 per cent of the population was engaged in agriculture and forestry,

28 per cent in industry, 20 per cent in commerce and transport, and 7 per cent in fishing and whaling. Only 3,888,000 acres, or 5.2 per cent of the total area, is arable. In 1934 there were about 1,924,000 acres under cultivation, 549,000 acres of meadow, and 18,531,000 acres of forest. Production of the chief crops in 1934 was: Wheat, 1,204,000 bu.; rye, 395,000 bu.; barley, 5,307,000 bu.; oats, 12,146,000 bu.; potatoes, 29,414,000 bu. Livestock in 1934 included 1,294,497 cattle, 1,697,698 sheep, 550,000 swine, 181,325 horses, and 337,697 goats. The fish catch in 1934 was valued at 59,400,000 crowns (cod-fish, 24,100,000 crowns). Whale oil production for the 1934-35 season was 1,158,436 bbl. (1,186,942 in 1933-34) and the value was about 100,000,000 crowns (75,000,000 in 1933-34).

Mineral production in 1934 was valued at 24,779,000 crowns. Mine and factory production in 1933 was (in metric tons, except as stated): Pyrites, 865,576; iron ore, 473,863; silver, 7850 kilograms; feldspar, 11,343; pig iron, 29,251; ferro-alloys, 90,110; aluminum, 15,384; zinc, 44,948; mechanical wood pulp, 629,873; chemical wood pulp, 298,080; paper, 695,044,000 lb.; margarine, 106,145,000 lb.; beer, 10,530,000 gal.

Foreign Trade. General imports in 1934 were valued at 737,207,000 crowns (665,217,000 in 1933) and exports of Norwegian products at 569,997,000 crowns (549,783,000 in 1933). The percentage distribution of the general imports in 1934 by principal sources of supply was: United Kingdom, 22.9; Germany, 19.1; Denmark and Sweden, 16.5; and United States, 8.6. The United Kingdom took 24.3 per cent of all exports; Germany, 13.7; Denmark and Sweden, 11.5; and the United States, 9.6. The leading 1934 imports were iron and steel, mineral oils and greases, nonferrous metals, ships, coal, machinery, yarn, and cordage. The chief exports were (in 1000 crowns): Wood pulp, 11,984; fish and shellfish, in bulk, 10,596; Norway saltpetre, 6649; newsprint and other paper, 8378; aluminum, 3566.

In 1935, imports totaled 820,800,000 crowns; exports, 605,118,000 crowns. United States imports from Norway totaled \$16,500,717 (\$16,946,233 in 1934); United States exports to Norway, \$13,624,373 (\$11,231,813 in 1934).

Finance. The budget estimates for the fiscal year ending June 30, 1936, balanced at 436,950,000 crowns. Preliminary returns for 1934-35 showed receipts of 409,239,000 crowns, expenditures of 393,746,000 crowns, and a surplus of 15,493,000 crowns. In 1933-34 receipts were 376,588,000 crowns and expenditures 366,375,000 crowns. The public debt on June 30, 1934, totaled 1,526,000,000 crowns (domestic, 809,500,000; foreign, 716,500,000). The crown (krone), with a par value of \$0.4537 in 1935, exchanged at an average of \$0.18 in 1932, \$0.2143 in 1933, and \$0.2532 in 1934.

Communications. Railways on June 30, 1934, had 2407 miles of line (state, 2178; private, 229). In the preceding year they carried 17,794,000 passengers and 5,799,000 metric tons of freight, the gross receipts totaling 69,971,000 crowns. Highways on June 30, 1933, extended 24,106 miles. An air line connected Oslo with Gothenburg and Copenhagen. The Norwegian merchant marine ranked fourth among the world's fleets, having an aggregate tonnage of 3,968,000 on June 30, 1935. The net tonnage of vessels in the overseas trade entering the ports of Norway in 1934 was 4,393,000 (4,264,000 in 1933).

Government. Executive power is vested in the King, who acts through a cabinet responsible to the Storting (parliament). The Storting consists

of 150 members, elected for three years by universal male and female suffrage. When assembled, the Storting divides itself into the Lagting and Odels-ting, comprising one-fourth and three-fourths of the membership, respectively. The two sections function much as do the upper and lower houses of a bicameral parliament. Premier in 1935, J. L. Mowinckel (Liberal).

History. Norway's radical Labor party assumed charge of the government for the second time in history on Mar. 20, 1935, after the Agrarians had deserted the anti-Labor front established by the bourgeois parties in 1933 and joined with Labor to overthrow the Liberal ministry headed by Johan Ludwig Mowinckel. Premier Mowinckel was defeated in Parliament, 94 to 55, as a result of his stand against increased taxes. The new Labor Government was headed by Johan Nygaardsvold as Premier and Minister of Public Works. Other members were: Finance, Adolf Indrebo; Social Affairs, K. O. Bergsvik; Foreign Affairs, Halvdan Koht; Justice, Trygve Lie; Ecclesiastical Affairs and Education, Nils Hjeltnet; Commerce, Alfred Madsen; Defense, Fredrik Nonsen; Agriculture, Hans Ystgaard.

The first Labor Government, established in 1928, lasted only two weeks after it attempted to put into effect its programme of Marxian socialism. In 1935, as in 1928, Labor was curbed by its lack of a majority in Parliament. Dependent upon the support of the more conservative Agrarian party, Premier Nygaardsvold announced on March 21 that he would not attempt to inflate the currency and would keep the budget balanced. The budget was kept in equilibrium by a heavy increase in taxation. The budget estimates for 1935-36, as approved by the Storting in June, balanced at 436,950,000 crowns as compared with the estimates of 395,900,000 crowns in 1934-35. The increased expenditures were allotted largely for the relief of the fisheries, agriculture, and labor. To raise these additional funds, a new general sales tax of 1 per cent went into effect July 1, 1935. In September the Storting added a 2 per cent tax to the State tax of 6 per cent, and levied a crisis tax on corporations of 2 per cent, making the total tax 10 per cent. Individual income taxes were raised an average of 30 per cent on incomes up to 20,000 crowns and slightly less on larger incomes.

Despite some uneasiness aroused in conservative circles by the Labor Government's policies, the improvement in economic conditions inaugurated in 1934 continued during 1935, particularly in the last half of the year. The revival of domestic business was widespread and evenly maintained. Shipping activity increased notably and the Antarctic whaling expeditions had a successful season, with markedly better prices for whale oil. Earnings of the other fisheries increased by approximately 8,000,000 crowns to 67,000,000 crowns. Agriculture enjoyed its best year since 1929. The unsatisfactory condition of the forest industries was remedied somewhat by the quota agreement covering exports of pulp arranged between producers in Norway, Sweden, and Finland. There was a further increase in foreign trade, due partly to new or supplemental trade agreements concluded during 1935 with Poland, Italy, France, Denmark, Brazil, and Cuba.

For the annual conferences of the Foreign Ministers of the Scandinavian States, see DENMARK and SWEDEN under *History*.

NORWEGIAN LITERATURE. See SCANDINAVIAN LITERATURE.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution at Notre Dame, Ind., founded in 1842 for the higher education of men. The enrollment in the summer session of 1935 was 694, of which number 476 were religious, sisters of religious communities being permitted to attend. The enrollment for the first semester of 1935-36 was 2751. The faculty numbered 210. The endowment amounted to \$1,010,000, while the income for the year 1934-35, including student fees and departmental income, was \$1,341,348. The library contained 170,140 volumes. President, the Rev. John F. O'Hara, C.S.C., Ph.B.

NOVA SCOTIA, *nō'va skō'shya*. A Province of Canada. Area, 21,428 sq. miles; population (1935 est.), 527,000 compared with 512,846 (1931 census). During 1934 there were 11,310 births, 6008 deaths, and 3751 marriages. Chief towns (with 1931 populations): Halifax, the capital (59,275), Glace Bay (20,706), Dartmouth (9100), New Glasgow (8858). During 1935 there were 3286 departments in 1895 school buildings with 116,798 students enrolled including 17,076 of high school grade. The Province had nine universities and colleges.

Production. The estimated total value of field crops for 1935 was \$12,179,000 (\$12,995,000 in 1934) of which hay and clover (592,000 tons) represented \$6,512,000; potatoes (104,300 tons), \$2,086,000; turnips, etc., (166,850 tons), \$1,669,000, oats (3,100,000 bu.), \$1,488,000. The apple crop for 1935 was estimated at over 1,750,000 barrels. Livestock in 1934: 244,400 cattle, 145,300 sheep, 41,900 horses, and 41,600 swine. Fish production (1934) was valued at \$7,673,865 including lobsters, \$2,487,633; cod, \$2,068,566; haddock, \$1,042,000. Fur production (1933-34) amounted to 43,429 pelts valued at \$550,699 of which silver fox (11,007 pelts) represented \$456,791.

Mineral production (1934) was valued at \$23,310,000 of which coal (6,341,625 tons) accounted for \$21,860,000; gold (3525 fine oz.), \$121,613; gypsum (378,287 tons), \$488,044; salt (42,886 tons), \$191,917. Mineral production (1935): coal (5,822,180 short tons), \$20,161,403; gold (7967 fine oz.), \$280,359. During 1933, from the 1378 factories, employing 13,260 workers, the net value of products was \$27,499,505.

Government. The end of the fiscal year was changed to November 30. For the 14-month period ended Nov. 30, 1935, revenue amounted to \$10,640,860; expenditure, \$11,156,001; funded debt (Dec. 2, 1935), \$82,167,980; sinking funds, \$5,767,759. Government was vested in a lieutenant-governor and a house of assembly of 30 members (in 1935, 22 Liberals and 8 Conservatives) elected for five years by popular vote. The Province was represented in the Dominion Parliament at Ottawa by 10 Senators and 12 members in the House of Commons (at the Dominion general election of Oct. 14, 1935, 12 Liberals were elected). Lieutenant-Governor in 1935, W. H. Covert; Premier, A. L. Macdonald (Liberal).

NYASALAND (*nyā'sā-lānd'*; *nī-ās'a-*) **PROTECTORATE.** A British protectorate in East Africa. Land area, 37,596 sq. miles; population (1934), 1,603,914 including 1800 Europeans and 1401 Asiatics. The main settlements were Zomba, the capital (3000 inhabitants), Blantyre (6000), Limbe, Fort Johnston, Karonga, and Livingstonia.

Production and Trade. Coffee, tobacco, cotton, and tea were the main products. Livestock in the protectorate (1933): 198,082 cattle, 241,765 goats, 85,225 sheep, 69,682 swine. In 1935, exclud-

ing government stores and specie, imports totaled £601,390; exports, £754,824 of which tobacco represented £290,933; tea, £223,876; cotton, £204,851.

Government. For 1934, revenue totaled £560,552; expenditure, £571,674. Budget estimates (revised) for 1935 were balanced at £607,871. The protectorate was administered by a governor, aided by an executive council and a legislative council. Governor and Commander-in-Chief in 1935, Sir H. B. Kittermaster.

OATS. The 1935 production of oats in 29 countries reporting to the International Institute of Agriculture was estimated at 3,173,576,000 bu., 29.4 per cent more than the 2,453,289,000 bu. these countries produced in 1934 and only 1 per cent less than the average production for the five years 1929-33. The acreage reported, 92,986,000 acres, was 10.2 per cent above that of 1934 and 1.8 per cent below the average for the five-year period. The production of the leading countries, exclusive of the United States, the Soviet Republics, and countries of the southern hemisphere, was reported as follows: Canada 442,392,000 bu., Germany 369,967,000 bu., France 317,484,000 bu., Poland 176,727,000 bu., and Sweden 83,362,000 bu. The production of the Soviet Republics in 1933 was recorded as 1,061,915,000 bu. and the production of Argentina in the crop-year 1934-35 as 77,850,000 bu.

Estimates by the Department of Agriculture placed the 1935 oats crop of the United States at 1,195,435,000 bu. produced on 39,714,000 acres and at the rate of 30.1 bu. per acre. The crop was more than double the low yield of 525,889,000 bu. in 1934 but about 2 per cent below the average of 1,217,646,000 bu. for the five years 1928-32. The West North Central States produced over three-and-one-half times their crop in 1934 and the increase of 7,590,000 acres in that section over the 1934 area harvested mainly accounted for the increased acreage for the entire country. The yield per acre was two-tenths of a bushel below the five-year average and compared with 17.4 bu. in 1934 and 19.9 bu. in 1933. The average farm price toward the close of the calendar year was 27.9 cents per bushel compared with 41.9 cents, the average price received by farmers during the crop marketing season of 1934. On this basis the total value of the two crops was \$333,960,000 and \$252,157,000 respectively.

Oats were grown in all the States and the yields of those leading in production were estimated as follows: Iowa 205,137,000 bu., Minnesota 181,189,000 bu., Illinois 107,716,000 bu., Wisconsin 85,702,000 bu., and Nebraska 75,980,000 bu. During the fiscal year ended June 30, 1935, the United States exported 377,000 bu. of oats and 943,000 lb. of oatmeal and flaked and rolled oats in bulk and 12,909,000 lb. in packages. The imports for the period amounted to 9,321,000 bu. as compared with 131,000 bu. in the preceding fiscal year. As reported by the International Institute of Agriculture 13 exporting and 15 importing countries exported 71,744,000 bu. and imported 79,429,000 bu. during the marketing year Aug. 1, 1934, to July 31, 1935. The United States during this period exported 468,000 bu. and imported 15,074,000 bu.

OBERLIN COLLEGE. A nonsectarian institution for the higher education of men and women in Oberlin, Ohio, founded in 1833. The registration for the first semester of 1935-36 was 1672, while that for the summer session of 1935 was 127. The faculty had 181 members. The productive funds of the institution as of Aug. 31, 1935, amounted to \$18,149,822, and the income for the year was \$1,118,234. The library contained 366,396 bound and 225,374

unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

OBITUARY RECORD OF THE YEAR.

See NECROLOGY.

OCEANIA, FRENCH ESTABLISHMENTS IN. A French colonial possession in the Pacific, consisting of the following main groups of islands: Society, Marquesas, Tuamotu, Leeward (Iles sous le Vent), Gambier, Tubuai, and Rapa. Total area, 1520 sq. miles; population (1931 census), 40,392 including 29,757 natives. The main island was Tahiti (600 sq. m.; 16,781 inhabitants in 1931) of the Society Islands. Capital, Papeete (7061 inhabitants).

Production and Trade. Copra, sugar, rum, phosphates, bananas, oranges, mother-of-pearl, and vanilla were the chief products. In 1934, imports were valued at 20,133,000 francs; exports, 16,879,000 francs (franc averaged \$0.0657 for 1934).

Government. For 1933, revenue and expenditure were estimated to balance at 15,400,000 francs. The establishments were administered by a governor aided by an administrative council. Governor, Michel-Lucien Montagne.

OCHS, öks, ADOLPH S (IMON). An American publisher, died in Chattanooga, Tenn., Apr. 8, 1935. Born in Cincinnati, Mar. 12, 1858, he received his education in the common schools of Knoxville, Tenn., whither his family had moved in 1865. At the age of 11 he was a newsboy and later a printer's apprentice on the Knoxville *Chronicle*, serving until 1873, when he became a printer and compositor on various newspapers. Anticipating the growth of Chattanooga, he conceived the idea of establishing a newspaper there, but was forestalled by Frank M. Paul, then business manager of the Knoxville *Tribune*, whose assistant he was. Paul established *The Dispatch*, which failed, and Ochs, left behind as receiver of the paper, issued a city directory and established himself in the city.

He was then offered the Chattanooga *Times* for \$800 and the assumption of the paper's debts, about \$1500. Not having any such sum, he borrowed \$250 and was able to purchase a half interest, also assuming the debts. So valuable had the paper become within two years, that he paid off the debts and purchased the remaining half interest for \$5500. The strides he made were so rapid, and so closely was the paper connected with the city's growth that it earned the sobriquet, "The Times—that made Chattanooga," and upon the 50th anniversary of its establishment in 1928, Ochs was given the title "citizen emeritus."

Prior to his purchase of the New York *Times* in 1896, Ochs was offered the New York *Mercury*, but because of his disagreement with its policy, refused it. However, when he was informed that the *Times*, a once influential newspaper, but then rapidly declining, was in the market, and had convinced himself that he was able to handle such an undertaking, he commenced negotiations for its purchase and although beset with difficulties, overcame them, and became owner of the New York *Times*. In the announcement of his ownership made on Aug. 19, 1896, he said he would conduct "a high-standard newspaper, clean, dignified, and trustworthy, for thoughtful, pureminded people." His printing creed, "All the News That's Fit To Print" appeared for the first time on October 25.

Mr. Ochs continued to publish the paper under the political principles laid down by its original editors, and it was classed as Independent Democratic, an advocate of sound money and tariff reform. Under his able guidance, the newspaper

forged steadily ahead and at the time of his death had a daily circulation of 460,000 copies and on Sunday of 725,000 copies. To build up its value and prestige, he employed experts in various fields, purchased the best and newest mechanical equipment, and established national and foreign news bureaus second to none. In 1914 larger quarters were necessary and the new Times Building was erected on West 42nd Street, which section was later named Times Square after the building. Subsequently these quarters were outgrown and a new building was erected in the neighborhood, which in turn had additions built to it. Always up-to-date, the *Times* was the first American newspaper to publish (1914) a pictorial section printed by the perfected rotogravure process, and the first to receive a news service by wireless transmission. In 1918, it received the first Pulitzer Prize Award as "an outstanding example of enterprise in news-gathering," and in 1930 it was awarded the first gold medal of the University of Missouri for setting high standards in journalism.

In 1902, Mr. Ochs purchased the Philadelphia *Times* and the following year, the Philadelphia *Public Ledger*, which he consolidated with the *Times*. This newspaper, the Philadelphia *Public Ledger*, was published by him until 1912, when it was sold to Cyrus H. K. Curtis, the publisher of *The Saturday Evening Post*. Subsequently, Ochs contemplated forming a chain of newspapers, and intended buying the *Herald* from James Gordon Bennett, but Bennett's death put an end to the negotiations and Ochs decided to devote all his time to the *Times* rather than to a string of newspapers.

In addition to publishing the New York *Times*, the New York Times Company also issued *Current History*, a monthly brought into being during the early days of the World War to amplify the war material that could be covered by a daily paper, and continued as a digest of international events at the close of the War; *The Annalist*, a weekly financial review, and *The Mid-Week Pictorial*. In 1913, *The New York Times Index*, a cross-reference of all the stories in the newspaper, was begun.

Other phases of the publishing business were of interest to Mr. Ochs, and in 1926 he gave \$500,000 to the American Council of Learned Societies for the projection of the *Dictionary of American Biography* to be prepared over a period of ten years. Also, in 1928 he subsidized the *American Year Book* in order to insure its yearly publication.

In 1926, he initiated and organized a trust fund of \$5,000,000 for the Hebrew Union College of Cincinnati, which was founded by his father-in-law, and he was one of the founders of the Chattanooga-Lookout Mountain Park. From 1900 he was a director of the Associated Press. Honors came to him from many universities and societies, and in 1919 he was made a Chevalier of the Order of the Legion of Honor, France, and in 1924, an officer. The National Institute of Social Sciences awarded him its gold medal in 1927 for "developing and maintaining high standards of journalism," and in 1931, the Park Association of New York City awarded him its medal for his interest in park systems.

OGLETHORPE UNIVERSITY. An institution of higher education for men, founded in 1913 as a revival of the famous institution which existed in Milledgeville and in Atlanta, Ga., from 1835 to 1872. The enrollment for the autumn term of 1934 was 500. The 1934 summer session had an attend-

ance of 150. There were 31 members on the faculty. The income for the year amounted to \$120,000. The library contained 50,000 volumes. President, Thornwell Jacobs, LL.D., Litt.D.

OHIO. Population. On Apr. 1, 1930 (Fifteenth Census), 6,646,697; July 1, 1934 (latest Federal estimate), 6,836,000; 1920 (Census), 5,759,394. Among the cities, Cleveland (1930) had 900,429 inhabitants; Cincinnati, 451,160; Toledo, 290,718; Columbus, the capital, 290,564; Akron, 255,040.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1935	3,190,000	133,980,000	\$66,990,000
	1934	2,927,000	92,200,000	70,994,000
Wheat	1935	1,844,000	42,406,000	32,653,000
	1934	1,740,000	33,401,000	29,727,000
Hay (tame) ...	1935	2,373,000	3,196,000*	21,094,000
	1934	2,629,000	2,031,000*	29,043,000
Oats	1935	1,269,000	45,684,000	12,792,000
	1934	1,209,000	25,994,000	12,217,000
Potatoes	1935	121,000	12,826,000	8,337,000
	1934	109,000	11,445,000	6,409,000
Apples	1935	7,952,000	6,044,000
	1934	4,032,000	4,234,000
Tobacco	1935	24,300	21,986,000 ^b	2,203,000
	1934	22,300	24,250,000 ^b	2,674,000

* Tons. ^b Pounds.

Mineral Production. The yearly quantity of coal mined amounted to 20,610,000 net tons (1935) against 20,690,564 (1934). Coal to the quantity of 6,100,949 tons went into byproduct ovens, which yielded 4,296,338 net tons of coke (1934) as against 3,676,727 tons produced in 1933; in value the coke totaled \$19,001,985 (1934) and \$14,540,301 (1933). Nearly three-fourths of the coke of 1934 went into blast furnaces. Charged with ore from other States, these yielded 4,207,944 gross tons of pig iron. The blast furnaces' shipments, slightly lower than the yield in 1934, totaled 4,147,116 tons as against 4,188,142 tons for 1933; in yearly value, \$68,525,145 (1934) and \$60,995,721 (1933). There were produced, in 1934, 1,017,629 gross tons of Bessemer and 5,649,785 of open-hearth steel.

Wells in Ohio continued to yield a moderate supply of petroleum; in 1934 they produced 4,232,000 barrels, a trifle less than the total for 1933. An apparently important new source of natural gas, the Pultney Ridge field in Guernsey County, was developed in 1934. Addition to the production of natural gas in the State was timely, since public utilities not only were taking nearly all the available product of Ohio's wells but were importing about 45 per cent of their yearly requirements. Producers of salt sold or used 1,432,292 short tons in 1934, somewhat exceeding the total, 1,382,294, for 1933. The values of these quantities were \$2,721,167 (1934) and \$2,599,055 (1933). Ohio led the States of the Union in the production of lime; the producers sold some 549,000 short tons in 1934, as against 558,901 in 1933; by value, \$4,153,000 (1934) and \$3,353,102 (1933).

Education. The number of the State's inhabitants of school age was reckoned in 1934 as 1,544,379. In the academic year 1934-35 the enrollments in the public schools numbered 1,296,732. Of these, 954,656 were in common schools or elementary grades, and 342,076 in high schools. The year's expenditures for public-school education throughout the State totaled approximately \$87,000,000. The salaries of teachers, for the year, averaged \$1250.

Charities and Corrections. The Department of Public Welfare, which had been established in

1921, was in 1935 the State agency directing activities for the care and custody of persons. It administered a strongly centralized system of institutional control, operating 22 State institutions that housed among them a daily average population of some 36,243. It had at its head a Director (Mrs. Margaret M. Allman).

The State institutions thus operated were: for the mentally disordered, State hospitals at Athens, Cleveland, Columbus, Dayton, Lima, Cincinnati, Toledo, and Massillon; Ohio Hospital for Epileptics, Gallipolis; institutions for the feeble-minded, at Columbus, Orient, and Apple Creek; Ohio State Sanatorium, Mount Vernon; Ohio Soldiers' and Sailors' Home, Sandusky; Madison Home, Madison; Boys' Industrial School, Lancaster; Girls' Industrial School, Delaware; Ohio Penitentiary, Columbus; Prison Farm, London; Ohio State Reformatory, Mansfield; Ohio Reformatory for Women, Marysville; Bureau of Juvenile Research, Columbus.

Legislation. The regular session of the Legislature passed a budget of appropriations, which Governor Davey vetoed, regarding it as some \$7,000,000 too high. The question of finding revenue out of which to pay the State's share of pensions to the needy elderly inhabitants was left to a later session. The Mort plan, a scheme brought forward by the teaching interests was put before the Legislature, and occupied much of its attention. This plan called for the allotment of certain specific taxes to a fund for distributing \$48,000,000 a year, proportionately to the number of school-children, among school districts having scanty revenues. An effort was made to couple with the plan such provisions as would give the State greater control over the districts receiving and expending the money.

The State's Recovery Act was prolonged by enactment, to remain in effect as long as the NRA, of which it was the State auxiliary; the Governor signed the prolonging act, although the NRA had been declared unconstitutional shortly before.

Political and Other Events. Governor Davey took office in January. He met with difficulty in his endeavor to make the Legislature economize. In March he came into conflict with Federal Relief Administrator Hopkins. Hopkins rejected on March 9 a demand of Davey's that the FERA take over the administration of support for the destitute unemployed in the State. But only a week later, on the 16th, the President, stating that he had "evidence concerning corrupt political interference with relief in the State," directed Hopkins to take entire control. Hopkins, in doing so, charged that a "shakedown" had been effected, among firms selling to the State Relief Administration, in order to produce money to help pay the cost of Davey's political campaign of 1934. Davey had provoked the Federal Administration by previously charging that "the whole Ohio relief job . . . was full of waste and inhumanity." He retaliated on Hopkins by swearing out a warrant against him for criminal libel. C. C. Stillman, on whose responsibility the Federal charges were made, was appointed Federal Relief Administrator for Ohio. The Democratic State committee did not deny receiving alleged contributions, but maintained that there had been no indefensible solicitation.

Governor White, whose term expired early in January, reproduced a political phenomenon familiar in some other States by pardoning, in the last few weeks of his tenure, 76 convicts, including persons convicted of robbery, burglary, arson, or murder.

The Federal Supreme Court, reversing the State Supreme Court, held the low rates imposed on the West Ohio Gas Company invalid as yielding too little return. The State Supreme Court in a decision on June 12 declared the State's Recovery Act unconstitutional. Two former officers of the failed Union Trust Company of Cleveland, W. M. Baldwin and K. V. Painter, were sentenced on July 13 to long terms of imprisonment, for abstracting collateral on a loan to Painter.

The State halted payments of old-age pensions in September, because of the exhaustion of funds for the purpose. The construction of works to check floods in the Muskingum Valley at an anticipated cost of \$30,000,000 was begun by the State on January 5, with promise of \$2,000,000 of funds from State sources, \$22,500,000 from the PWA (part loan and part Federal grant), and \$6,000,000 from levies in the benefited area. Governor Davey, in effecting public economies, cut the biennial budget of Ohio State University by some \$1,200,000; in the resulting controversy, he alluded sarcastically to the cost of the University's activities in football, including State employment for star players.

Floods in the area of Zanesville caused damage estimated at \$5,000,000 on August 9. Strikes occurred at Toledo, in the Chevrolet works in April and in the Toledo Edison Company in June. Cincinnati, the most populous American city operated under a city manager, set its tax rate for the year at \$16.86 per \$1000; \$4.58 less than the previous year's rate. Cleveland, on the other hand, faced a deficit of some \$6,000,000.

Officers. The chief officers of the State, serving in 1935, were: Governor, Martin L. Davey; Lieutenant-Governor, Harold G. Mosier; Secretary of State, George S. Myers; Treasurer, Harry S. Day; Auditor, Joseph Tracy; Attorney-General, John W. Brickner; Director of Education, E. L. Bowsher.

Judiciary. Supreme Court: Chief Justice, Carl V. Weygandt; Associate Judges, Edward S. Matthias, Thomas A. Jones, Roy H. Williams, Will P. Stephenson, Arthur Day, Charles B. Zimmerman.

OHIO NORTHERN UNIVERSITY. An institution for the higher education of men and women at Ada, Ohio, founded in 1871, and under the direction of the Methodist Episcopal Church. The enrollment for the fall quarter of 1935 was 541. The 1935 summer quarter had an attendance of 235. The faculty consisted of 35 members. The productive endowment of the institution, as of June 30, 1935, amounted to \$456,217.58, and the income for 1933-34 was \$137,075.97. The library contained 18,300 volumes. President, Robert Williams, D.D.

OHIO STATE UNIVERSITY. A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the Autumn Quarter of 1935 totaled 11,417, distributed as follows: Graduate School, 936; Agriculture, 1096; Applied Optics, 150; Arts and Sciences, 2102; Arts-Education, 71; Commerce and Administration, 2197; Dentistry, 208; Education, 1986; Engineering, 1468; Law, 328; Medicine, 377; Nursing, 12; Pharmacy, 188; Veterinary Medicine, 298. There were in addition 4098 students registered in the Summer Quarter of 1935. The Faculty numbered approximately 975. The endowment amounted to \$1,204,029. The total income for the year was \$6,639,630, while the total expenditures were \$6,392,739. The library contained approximately 445,000 volumes. President, George W. Rightmire, LL.D.

OHIO UNIVERSITY. A State university for the higher education of men and women, founded at Athens, Ohio, in 1804. The student enrollment for the first semester of 1935 was 2500, of whom 841 were in the college of arts and sciences, 608 in the college of education, 892 in the University College, and 159 in evening and Saturday classes. The enrollment for the 1935 summer session of nine weeks was 1296 while that in the post-summer session of three weeks was 123 and the Adult Institute of four weeks was 29. The faculty numbered 229. The library contained more than 100,120 bound volumes. President, Herman G. James, Ph.D., LL.D.

OHIO WESLEYAN UNIVERSITY. An institution for the higher education of men and women in Delaware, O., under the control of the Methodist Episcopal Church, founded in 1844. For the autumn semester of 1935 the total enrollment was 1396. The faculty numbered 116 (an increase of 4). The productive endowment of the university amounted to \$3,556,600 and the income for the year 1934-35 for educational enterprises was \$432,381 and for auxiliary enterprises \$274,393. The library contained 148,132 volumes. President, Edmund D. Soper, D.D., LL.D.

OIL. See CHEMISTRY, INDUSTRIAL AND APPLIED; PETROLEUM.

OKLAHOMA. Population. On Apr. 1, 1930 (Fifteenth Census), 2,396,040; July 1, 1934 (latest Federal estimate), 2,475,000; 1920 (Census), 2,028,283. Oklahoma City, the capital, had (1930) 185,389 inhabitants; Tulsa, 141,258.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934.

Crop	Year	Acreage	Prod. Bu	Value
Cotton	1935	2,383,000	535,000 ^a	\$28,516,000
	1934	2,708,000	317,000 ^a	18,678,000
Wheat	1935	3,308,000	33,080,000	28,449,000
	1934	3,557,000	37,348,000	30,252,000
Corn	1935	2,308,000	31,158,000	18,695,000
	1934	2,117,000	11,644,000	11,528,000
Hay (tame) . .	1935	469,000	651,000 ^b	4,492,000
	1934	444,000	496,000 ^b	6,051,000
Oats	1935	1,430,000	37,895,000	10,990,000
	1934	1,300,000	20,150,000	9,470,000
Grain sorghum .	1935	1,645,000	12,338,000	7,403,000

	1934	40,000	2,760,000	1,739,000

^a Bales. ^b Tons

Mineral Production. The production of petroleum diminished to 180,624,000 barrels (1934) from 182,251,000 (1933). This was attributed in part to more effective public restriction of the output but more to the decline of the Oklahoma City field, furnishing more than one-fourth of the State's total; this field yielded some 5,300,000 barrels less in 1934 than in 1933, and was thought to have been harmed by excessive exploitation in its early days. On the other hand many new fields were developed in 1934, and two of these, the Fitts and the South Burbank, added materially to production. About two-thirds of the petroleum produced in 1934 was shipped to refineries outside the State.

No new fields producing natural gas were discovered in 1934, apart from those that produced gas with petroleum; but some 91 new wells driven in old gas fields tended to offset decline in production. The State authorities discouraged the burning of gas to produce carbon black and prohibited stripping the gasoline from gas, save that obtained from petroleum-yielding wells. Nevertheless, 356,500,000 gallons of gasoline were obtained from natural gas in 1934, 1 per cent less than in 1933.

Mines in the State produced in 1934 ore containing 107,772 short tons of zinc, well exceeding the 91,065 tons of 1933; the values of these quantities were \$9,268,392 (1934) and \$7,649,460 (1933). The lead in ore mined in the State totaled 16,747 short tons (1934) and 18,038 (1933); its value, \$1,239,278 (1934) and \$1,334,812 (1933).

Education. The number of the inhabitants of school age was reckoned for January, 1934, as 766,615. Those actually enrolled as pupils in the public schools in the academic year 1933-34 (with which dealt the latest collated data) numbered 665,478. Of these, 541,314 were in common schools or elementary grades (grades from one to eight), and 116,876 were in high schools. The total of expenditures for public-school education in the academic year was \$21,081,200. The salaries of the teachers, for the year, averaged \$882.

The latest legislation, according to the *Journal* of the National Education association, brought the State's share of the expense of the public schools up to 40 per cent. The State was to distribute both on the so-called needed-teacher basis and on that of equalization. Schools were to hold session for eight months a year at least.

Charities and Corrections. The institutions maintained by the State and by its subdivisions, for the care or confinement of persons, under the system in force in 1935, were directed separately; the State's Department of Charities and Corrections exercised the central administrative power, which was chiefly limited to supervision. It had at its head an elected Commissioner (Mabel Bassett). It made yearly inspection both of the State correctional and eleemosynary institutions and of those maintained by the counties and municipalities; and it inspected and licensed, year by year, institutions such as hospitals and orphanages that were not run by public authorities.

Legislation. The regular session of the Legislature authorized an issue of State bonds with which to redeem about \$12,000,000, the total of warrants that had been issued to meet the deficiency of the general fund through the two years ended with June 30. It passed and referred to the popular vote for approval a system of pensions at the rate of 15 dollars a month; and, also, several changes in the State constitution, one of them to abolish the clause forbidding women to hold the higher State offices. It enacted the authorization of a plan for State works to control floods. An appropriation of \$1,500,000 was made for the State's contribution to the cost of supporting the needy unemployed. A tax of three cents a package on cigarettes was imposed.

Political and Other Events. Governor Marland, who took office in January, urged upon the Legislature a scheme of extensive alteration in the scope of the State Government. His proposals included the imposition of income taxes and sales taxes to provide money for the State's contribution toward the support of the destitute unemployed and toward the cost of public schools; the creation of a planning board, a housing board, a board of flood control, and a board of new industries; and an appropriation of \$5,000,000 for the needs of these boards. The Legislature adopted only certain features of the scheme. See DUST STORMS.

A special election held on September 24 rejected a proposed constitutional amendment to permit women to hold the higher State offices. According to unofficial figures the popular vote apparently defeated the Legislature's proposed amendment to exempt homesteads from taxation and adopted an amendment for homestead-exemption that had been

proposed by popular initiative. A proposal to create a system of pensions for the elderly was adopted.

Officers. The chief officers of the State, serving in 1935, were: Governor, E. W. Marland; Lieutenant-Governor, James E. Berry; Auditor, C. C. Childers; Secretary of State, Frank C. Carter; Attorney-General, Mac Q. Williamson; Treasurer, Hubert L. Bolen; Superintendent of Public Instruction, John Vaughan.

Judiciary. Supreme Court: Chief Justice, Edwin R. McNeill; Associate Justices, Wayne W. Bayless, Earl Welch, James I. Phelps, N. S. Corn, Monroe Osborn, Thomas L. Gibson, Orel Busby, Fletcher Riley. Criminal Court of Appeals: Thomas H. Doyle, Thomas A. Edwards, James S. Davenport.

OKLAHOMA, UNIVERSITY OF. A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1935 totaled 5548, of whom 3739 were men and 1809 women. For the summer session of 1935, 1835 students were registered. There were 300 faculty members. The productive funds amounted to \$3,544,170, and the income for 1935-36 was \$1,826,372 (including two hospitals operated by the school of medicine). During the year 1935-36, \$250,000 was appropriated for a Business Administration Building; a PWA grant of \$204,000 was given for a Biological Science Building, and a 46-acre addition was made to the campus. The library contained 166,400 volumes. President, William Bennett Bizzell, Ph.D.

OLD AGE PENSIONS. At the meeting called by the Social Security Board at Washington in mid-December, 1935, the representatives of the several States were told that 39 States now have old age pension laws. This represents an increase of 14 during the year just passed, most of the new ones having come into existence since the passing of the Federal Act. To participate in the Federal funds to be made available, the States must meet certain conditions, chief among them the following.

(a) the plan must be State-wide and mandatory; (b) it must provide for State financial participation on or before July 1, 1937; (c) it must be in the charge of a single State agency and the administration and personnel policies must guarantee "efficient operation"; (d) the State residence requirement must not exceed five years; (e) United States citizens may not be disqualified by a ruling as to length of citizenship; (f) after January, 1940, the age limit must not exceed 65 years; (g) half of the sum recovered by the States from the estates of beneficiaries must go to the Federal government; and (h) the participation of the Federal government is limited to \$15 per month per beneficiary.

An examination of the statutes in effect on Oct. 1, 1935, made by the Federal Emergency Relief Administration for the Social Security Board, which currently lacks funds, disclosed that but 17 State statutes met the Federal requirements. From this it is obvious that a great deal of legislative activity in this field may shortly be expected.

Since payments from Federal funds are not to be available until 1942 a review of the operation of some of the existing State systems is in order. Writing in the *Monthly Labor Review* for August, 1935, Miss Florence E. Parker reported the situation as of 1934. During the year 8 States and 1 Territory were added to the list of governments having such legislation, bringing up to 56 per cent the proportion of the American population having old age protection. However, some statutes were not in effect, the operation of others was severely hampered by the lack of funds and administrative deficiencies; the lack of a mandatory requirement prevented complete coverage of the population

when none of these difficulties was encountered.

During 1934, however, 236,205 persons received pensions, an increase of approximately 120,000 over 1933, or above 100 per cent, but the benefits paid increased only 23 per cent, totaling \$32,313,515, resulting in a decline of the average monthly allowance from \$19.34 to \$14.69, or 24 per cent. It is interesting to note that even in the most liberal States the allowances were only about two-thirds of the legal maximum, 6 States paying allowances of \$20 a month or better and 14 less than \$10, the range being from 69 cents in North Dakota to \$26.08 in Massachusetts. In this connection it is important to note that State-aid or all-State systems were the most liberal in their payments and the smallest allowances were made when the counties bore all the cost. In 1934 about half of the payments made came from State funds. The study concludes that, "Judged by the three criteria of coverage, benefits, and proportion of persons of pensionable age being cared for, the systems of Arizona, Massachusetts, and New York ranked highest in 1934. At the other end of the scale were those of Idaho, Nebraska, Nevada, Utah, and Washington."

Additional sidelights on the operation of the State systems, drawn from various authoritative sources, go to amplify this picture. The Indiana law, which went into effect on Jan. 1, 1934, with a maximum allowance of \$180 a year, the lowest yet established, resulted in 5 counties paying no pensions, 5 paying less than \$3 a month, 30 between \$3 and \$5 a month, and but 6 over \$10, the average payment being \$6.13. The administration was in the hands of the county commissioners, only 14 counties having hired special workers, and of 39,304 applications, 21,769 were granted, with the result that by August, 1934, but 15.7 per cent of the Indiana population over 70 was on the rolls.

The operations in California, Massachusetts, New Jersey, and New York, for the first six months of 1935 have also been reported. The average benefits ranged from \$15.29 in New Jersey to \$24.31 in Massachusetts. All of these States have had a pension system for some time, that of California having been in operation for 5½ years. Yet in none of them has the peak of the load of beneficiaries been reached, it seems, for in California the pensioners are increasing at the rate of 300 a month and in Massachusetts at the rate of 400. A study of the Oregon system, initiated in 1934, showed an average allowance of \$10.64 a month. One out of every 85 men and one of every 250 women in the State applied for a pension and 52 per cent of all were 75 years of age or over. In Iowa, at the end of July, 1935, 10,200 persons were receiving pensions averaging \$13.41 a month and there was an eligible list of 20,000 on file, occasioned by the lack of funds.

From these notes it is obvious that the old age pension systems in operation are far from perfect and that even when brought in line with Federal requirements, they will still not meet the problem. It is, therefore, of the first interest to consider the extent of the problem as determined by the Committee on Economic Security and reported in its *Supplement to the Report to the President*. The population of the United States over 65 in 1930 totaled 6,633,805 of whom one-third were gainfully occupied and another third supported by others in whole or in part. The group will expand rapidly in the years to come, from 5.4 per cent of the population as of 1930 to 12.7 per cent in the year 2000, or from the number of individuals cited to 19,338,-

000. The problem, consequently, is a cumulative one.

It is emphasized in the foregoing analysis that the allowances currently granted are very low and it is at this very point that most of the agitation has centered since the passing of the Federal act. Thoughtful critics are concerned with the matter because the present allowances almost uniformly fall below the level of minimum subsistence. That adequate allowances should exceed that level may be taken for granted. The drive, therefore, is to raise them above that minimum, but this reasonable demand is drowned out by the clamors of the Townsendites whose plan was described, in its original formulation, on page 692 of the 1934 *New International Year Book*.

Townsend Plan. During 1935 the Townsend Plan suffered a mild change and as now presented proposes a \$200 a month allowance for all persons above the age of 60 who are not in gainful employment, do not have an unearned income of \$2400 a year, and have not been convicted of a crime. The Townsendites calculated that this will leave about 8,000,000 individuals eligible for the allowance, and that the total cost will be \$19,200,000,000 a year, the charge to be borne by the Federal government. This vast sum is to be raised by a 2 per cent tax on all commercial transactions, from buying a pound of butter to the purchase of a steel plant. The proponents argue that it is impossible to estimate how the plan will work from any available data, but they expect that it will multiply the commercial sales of the nation many times, provide jobs for millions of young people when the elderly withdraw from employment, and generally usher in unprecedented prosperity. On the other hand, opponents state that the plan is an economic impossibility which will bring commerce to a stand-still and that it presages the ruination of the land.

Foreign Countries. A survey of old age legislation in force in foreign countries as of 1933, made by the Committee on Economic Security, was found to fall in the following three categories (1) *Compulsory Contributory—General Coverage:* Austria, Belgium, Chile, Czechoslovakia, France, Germany, Great Britain, Greece, Hungary, Italy, Luxemburg, Netherlands, Poland, Portugal, Rumania, Spain, Sweden, U.S.S.R., Yugoslavia, (2) *Compulsory Contributory—Limited Coverage:* Argentina, Brazil, Cuba, Ecuador, Switzerland, Uruguay, (3) *Noncontributory:* Australia, Canada, Denmark, France. In some countries two systems operate to cover different categories of persons. The coverage in Great Britain for 1931 was, on both bases, 75.5 per cent of the population over 70 years of age.

OLDER, FREMONT. An American editor, died in Stockton, Calif., Mar. 3, 1935. He was born in Appleton, Wis., Aug. 30, 1856, and at the age of 13 worked as an office boy on the *Berlin* (Wis.) *Courant*. He learned printing and in 1873 went to San Francisco where he practiced his trade, becoming a compositor in 1884. Subsequently he joined the staff of *Alta California* as a reporter, and later became associated with other San Francisco papers in various editorial capacities.

In 1895 he became managing editor of the *San Francisco Bulletin*, a position he held for 24 years. When he joined that paper it was in a run-down condition, and in a year he had increased both its circulation and its advertising revenue. The paper under his influence became a crusader for civic reforms, and he devoted considerable time and space to fighting the influence of the Southern Pacific

Railroad in politics. The *Bulletin* favored James D. Phelan as a candidate for Mayor against the Railroad's man and after Phelan's election supported his fight against the gas company. They charged the company with extravagance in placing street lights, claiming that by placing so many the city was compelled to pay unnecessary charges. The paper agitated for a new charter to reduce gas expenses, and upon its adoption, the *Bulletin* was recognized as an influence on the political life of the city.

In 1901, the teamsters' union, which had been on strike, organized politically, and nominated Eugene E. Schmitz to run against Phelan. After a bitter fight, Schmitz was elected. The *Bulletin* suspected Schmitz and his henchman, Abe Ruef, of having collected graft and proceeded to obtain proof. Through the proprietor of a French restaurant who claimed that he paid Ruef \$10,000 when French restaurants were threatened with the loss of their license, they secured the evidence needed, and engaged Francis J. Heney as prosecutor. In 1906, the two were convicted of extortion, Schmitz being released on a technicality and Ruef imprisoned.

About this time, Older turned his attention to prison reform, and through him the interest of the *Bulletin* in the subject was secured. He organized a relief bureau to help paroled or freed convicts and frequently voiced strong disapproval of capital punishment. So interested did Older become in the subject of penal reform, that he sought the release of Ruef, whom he felt had been made the scapegoat. At the time of the trial of Thomas F. Mooney and Warren K. Billings, accused of bombing a preparedness day parade in San Francisco, July 22, 1916, he claimed that the State's witnesses were perjurers, and tried unsuccessfully to have the prisoners released. Pressure was brought to bear upon Older for his championship of this case, and he resigned in 1918.

He became editor of *The Call*, published by William R. Hearst, in that year, where he continued his fight against municipal evils, and in 1929 when the *Bulletin* and the *Call* merged, he became president and editor of the newly formed *San Francisco Bulletin-Call*. Mr. Older was known as a militant and ruthless fighter in his pursuit of public justice and honest administration of municipal government. In 1926 he wrote *My Own Story*.

OLYMPICS. A bitter wrangle ensued throughout 1935 on the Olympic question—whether the United States should send a team to Nazi and anti-Jewish Germany in 1936—a wrangle finally settled in December at the annual meeting of the Amateur Athletic Union at which the embattled delegates voted, by a margin of two and a half votes, to send a team to Berlin. But before the voting there was much talk—from experts on the Jewish problem, from pulpits, in the newspapers, and by the athletes themselves.

The German Olympic authorities assured the United States Olympic Committee that there would be no prejudice shown at the winter games at Garmisch-Partenkirchen nor at the summer games at Berlin and at the final voting, this assurance coupled with reports of Americans who had traveled in Europe recently brought about the decision to send a team to the games. Avery Brundage, chairman of the American Olympic Committee, was elected president of the A.A.U., succeeding Jeremiah T. Mahoney. Brundage was committed for participation and Mahoney led the rival forces. See **Jews**.

OMAN. See under **ARABIA**.

ONTARIO, ōn-târ'i-ō. A Province of Canada. Area, 412,582 sq. miles; population (1934 estimate), 3,596,000, compared with 3,431,683 (1931 census). During 1934 there were 62,234 living births, 35,119 deaths, and 25,874 marriages. Chief cities (with 1931 populations in parentheses): Toronto, the capital (631,207), Hamilton (155,547), Ottawa (126,872), London (71,148), Windsor (63,108), Kitchener (30,793). In 1935 there were 752,744 students enrolled in the day and night schools. The Province had five universities, an agricultural college, and the Royal Military College at Kingston (maintained by the Dominion Government).

Production. The preliminary estimated value of field crops for 1935 was \$132,845,000 (\$143,734,000 in 1934), of which wheat (14,419,000 bu.) represented \$10,004,000; mixed grains (33,821,000 bu.), \$11,837,000; hay and clover (5,383,000 tons), \$36,066,000; oats (87,700,000 bu.), \$25,433,000; alfalfa (1,519,000 tons), \$11,499,000; fodder corn, \$9,102,000; potatoes, \$7,878,000; barley (16,841,000 bu.), \$6,736,000. Livestock in 1934: 2,494,500 cattle, 1,177,900 swine, 962,300 sheep, and 563,700 horses.

Mineral production for 1935 (1934 figures in parentheses) was valued at \$159,044,887 (\$145,854,173), including gold, 2,220,171 fine oz., \$78,062,330 (2,105,341 oz., \$72,808,688); silver, 6,317,341 oz., \$4,069,573 (5,523,938 oz., \$2,600,393); nickel, 138,516,240 lb., \$35,345,103 (128,687,340 lb., \$32,139,425); copper, 239,483,489 lb., \$18,668,743 (191,676,060 lb., \$14,220,447); platinum metals, 190,107 oz., \$5,407,398 (200,109 oz., \$6,187,992). Ontario produces about 85 per cent of the world's nickel output. Fur production (1933-34): 805,630 pelts valued at \$2,230,030. The fish catch (1934) amounted to 15,615 tons valued at \$2,218,550. During 1933, from the 9844 factories, with a total of 225,810 employees, the net value of products was \$540,126,918.

Finance. The end of the fiscal year was changed from October 31 to March 31. For the five months ended Mar. 31, 1935, ordinary revenue was \$21,048,944; ordinary expenditure, \$31,489,616 (including \$8,192,673 for unemployment relief). Net provincial debt (Mar. 31, 1935): \$378,414,507. For the fiscal year ending Mar. 31, 1936 (10 months actual and 2 months forecast): ordinary revenue, \$79,014,076; ordinary expenditure, \$72,147,040 (exclusive of \$20,363,645 for unemployment relief). Budget estimates for 1936-37: ordinary revenue, \$72,283,814; ordinary expenditure, \$59,085,828 (exclusive of \$12,600,000 for unemployment relief).

Government. The Province was governed by a lieutenant-governor aided by an executive council, and a legislative assembly of 90 members (65 Liberals, 17 Conservatives, 4 Liberal-Progressives, and 4 others were elected in 1934) elected by popular vote for five years. In the Dominion Parliament at Ottawa the Province was represented by 24 Senators (appointed for life) and 82 members in the House of Commons (55 Liberals, 26 Conservatives, and 1 United Farmer were elected at the Dominion general election of Oct. 14, 1935). Lieutenant-Governor, Col. H. A. Bruce; Premier, Mitchell Hepburn (Liberal). See **CANADA** under *History*.

ORANGE FREE STATE. See **SOUTH AFRICA**, **UNION OF**.

ORE. See **METALLURGY**.

OREGON. Population. On Apr. 1, 1930 (Fifteenth Census), 953,786; July 1, 1934 (latest Federal estimate), 990,000; 1920 (Census), 783,389. Portland (1930), 301,815; Salem, capital, 26,266.

Agriculture. The accompanying table shows the acreage, production, and value of the principal crops for 1935 and 1934:

Crop	Year	Acreage	Prod Bu.	Value
Hay (tame) ...	1935	1,061,000	1,595,000 ^a	\$13,398,000
	1934	1,044,000	1,737,000 ^a	14,243,000
Wheat	1935	874,000	15,551,000	10,730,000
	1934	832,000	12,944,000	9,538,000
Hops	1935	26,000	24,700,000 ^b	2,955,000
	1934	23,000	19,550,000 ^b	2,932,000
Apples	1935	3,900,000	2,808,000
	1934	4,780,000	3,442,000
Potatoes	1935	37,000	4,810,000	3,367,000
	1934	44,000	5,720,000	3,032,000
Oats	1935	253,000	7,590,000	2,505,000
	1934	246,000	5,904,000	2,421,000
Barley	1935	127,000	3,302,000	1,519,000
	1934	98,000	2,597,000	1,506,000
Corn	1935	59,000	1,888,000	1,510,000
	1934	57,000	1,852,000	1,574,000

^a Tons. ^b Pounds.

Mineral Production. There occurred another considerable rise in the production of gold, to a total yearly value of \$1,813,000 for 1935, from \$1,178,220 for 1934. Of the 51,800 ounces of gold produced in 1935, about 16,000 came from the operations of nine dredges. The producers of gold, whether from lodes or from placer deposits, were numerous rather than large, 39 properties contributing 80 per cent of the year's production. The mining of some silver, copper, lead, and zinc, worth about \$118,000, brought the total value of the year's production of the five metals to \$1,931,358.

Education. The widespread use of warrants for meeting payments due from public-school districts that lacked sufficient current revenue continued in 1935. The situation changed, none the less, for the previously mounting total of the outstanding unpaid warrants of this sort became approximately stationary.

For the academic year 1934-35 the number of inhabitants of school age was reckoned as 256,780. Enrollments in the public schools numbered 201,422. Of these, 143,856 were in common schools or elementary grades, and 57,566 were in high schools. The year's current expenditure for public-school education in the State totaled \$13,268,711. The yearly average salary of the teachers, principals, and supervisors was \$867.15.

Legislation. The Legislature dealt with a number of recommendations made by incoming Governor Martin, for alterations in the organization of the State government. It created a State Planning Commission designed to study and advise upon matters of State concern, with a view to keeping the State beforehand with its problems and to harmonizing the divers features of its policy. The proposal to permit service of liquor by the drink was rejected.

Political and Other Events. A large number of the people of the State became believers in the merit of the Townsend plan, which had originated in the neighboring State of California, for Federal pensions at rates as high as \$200 a month for elderly people. Displeased with the failure of Governor Martin to urge the Legislature to ask Congress to enact the Townsend plan, an association of its advocates in Umatilla County threatened him in March with recall. Martin retorted by threatening the writers of the letter with prosecution under an act of 1933 against intimidating a State officer in order to influence him. Unsuccessful efforts were made later in the courts to remove Martin on the ground that he was a retired Major General of the

regular Army, and to prevent his simultaneously receiving retired pay and his official salary.

The State Capitol was partly destroyed on April 26 by fire; records of the ownership and description of forest lands, some 30,000 in number, were burned. A protracted strike of 12 weeks, carried on by the Sawmill and Timber Workers' Union in the Spring, had an adverse effect on activity in the lumber industry and on general business; it was settled by an advance of five cents an hour in the basic rate of wages, granted at the end of July, but without the establishment of the "closed shop." Oregon and Washington effected a provisional partition of the disputed waters near Chinook and Point Ellice, with regard to jurisdiction over fisheries, a source of trouble as Oregon alone permitted fish traps.
